HIPPIAS (2) of Elis, sophist, a younger contemporary of Protagoras (who lived c. 485-415), is vividly depicted in Plato's *Hippias Major* and *Hippias Minor*. He acquired great fame and wealth by travelling all over Greece as a teacher and orator, claiming competence in mathematics, astronomy, grammar, poetry, music, and the history of the heroic age, as well as in various handicrafts, and was frequently employed on State business by his native city. That his claims had a solid basis is indicated by the fact that he can probably be identified with the Hippias who discovered the *quadratrix*, the first curve other than the circle to be recognized by the Greek geometers. It was probably discovered in the attempt to solve the problem of trisecting the angle, but was subsequently used in the attempt to square the circle. Of his immense output, the following works are known by name: an elegy on the drowning of a chorus of boys from Messenia; a *συμπαγωγή* (probably archaeological in its contents); a *Τρωικός λόγος*; an *Ὀλυμπιονικίων ἀναγραφή*; *Ἑθνῶν ὀνομασία*.

Testimonia and fragments in Dicks, *Forstner* 1: 126-31.

W. D. R.

HIPPIATRICI are veterinarians, more strictly those who treat animals of the farm (Varro, *Rust.* 2. 7. 16: 'De medicina vel plurima sunt in equis et signa morborum et genera curationum . . . itaque ab hoc in Graecia potissimum medici pecorum ἵππιατροί appellati'). The *Hippiatrics* gave medical and surgical treatment in more difficult cases; ordinary diseases were handled by the farmers themselves. The so-called *Corpus Hippiatricorum Graecorum*, collected in the ninth century A.D., has

preserved only excerpts dealing with horse-medicine, hardly any of them earlier than the Christian era. The authors mentioned (Apsyrtus, Eumelus, Theomnestus, Anatolius, Hierocles, etc.) are only names. Of older books nothing is known. The treatise of the Athenian Simon (5th c. B.C.) and Xenophon's *Il. ἵππων* are written by gentlemen-amateurs, interested in horse-breeding or the selection of horses; Ps.-Aristotle, *Historia Animalium* 8. 21 f., treats of animal diseases from a more theoretical point of view.

Within the *Corpus Hippiatricorum* the semeiotics of diseases plays an important part; for 'animals cannot speak'. Cures consist in drugs and diet, the prevention of diseases is considered even more important than their treatment. Magical remedies are rejected, at least by physicians (for farmers cf. *Geoponica* xvi). All these features are reminiscent of human medicine; in fact, conclusions based on the observation of men seem valid for animals and vice versa. The great achievement of veterinary art is certainly dependent on the fundamentally agrarian character of ancient life and the resulting close contact with animals, but also on the fact that animal anatomy had been practised continuously since the fifth century B.C.

TEXTS. *Corpus Hippiatricorum Graecorum*, E. Oeder-C. Hoppe (Teubner, 1924-7) Latin translation, *Mulomedicina Chronis*, E. Oeder (Teubner, 1901), the original written about A.D. 400; MSS., G. Bjork, *Rev. Ét. Grec.* (1935).

MODERN LITERATURE. General survey, Sir Fr. Smith, *The Early History of Veterinary Literature* 1 (1919), antiquated in its literary data; survey on literature, G. Sartorius, *Isis* (1937). Date of collection not tenth century, as formerly assumed, Hoppe, op. cit. II, xv, relative chronology of authors, *ibid.* vi; cf. Bjork, *Uppsala Universitets Årsskrift* 1932, 1944, who also proves that Heraclides Tarentinus (2nd c. B.C.) did not write on veterinary medicine. L. E.

HIPPO REGIUS (near modern *Bône* in Algeria), a seaport no doubt first used by the Carthaginians; it already existed by the end of the fourth century B.C. As its name implies it was later a residence of Numidian princes. It became a *municipium* under Augustus, and later acquired colonial rights. In the late second century it became the centre of activity of one of the three *legati* of the proconsul of Africa. Augustine was bishop from 395 to 430, and died while the city was being besieged by the Vandals.

H. van M. Dennis, *Hippo Regius* (U.S.A. 1924); E. Marec, *Hippone* (Algiers, 1950), *Monuments chrétiens d'Hippone* (1958), L. Teutsch, *Das Städtewesen in Nordafrika* (1962), 163 ff. B. H. W.

HIPPOBOTUS (fl. late 3rd c. B.C.) wrote a philosophico-historical *Περὶ αἰρέσεων* and *Φιλοσόφων ἀναγραφὴ*, used by Diog. Laert. (Frs. catalogued by v. Arnim, *PW*, s.v.).

HIPPOCOON (*Ἱπποκόων*), in mythology, son of the Spartan or Amyclaeus hero Oebalus, and elder brother of Tyndareos (q.v.). He and his many sons drove out Tyndareos and his other brother Icarus from Sparta (Apollod. 3. 124). Later Heracles, offended at some action of Hippocoon, attacked and killed him and his sons (Alcman fr. 15 Bergk). H. J. R.

HIPPOCRATES (1), tyrant of Gela, succeeded his brother Cleander c. 498 B.C. Within seven years, by conquering most of eastern Sicily, he created a Gelonian Empire which he ruled as autocrat, prototype of the great Sicilian tyrants. He temporarily won for Gela a primacy among Sicels and Siciliots like that later enjoyed by Syracuse. Ruthless and cynical in war and political intrigue, he signally defeated the Syracusans at the river Helorus, but was restrained by Corinthian and Corcyrean diplomatic intervention from occupying Syracuse itself.

He fell in battle c. 491/90 B.C., fighting against Sicel Hybla.

11dt. bk. 7. Dunbabin, *Western Greeks*, 376 ff.; A. Schenk, *Graf von Stauffenberg, Trunakia* (1963), 157 ff. See ANAXIAS (1). A. G. W.

HIPPOCRATES (2), the Asclepiad of Cos, a contemporary of Socrates (469-399), though the most famous Greek physician, is yet the one least of all known to posterity. That he was of small stature, that he travelled much, that he died at Larissa is probable; more about his life and his personality cannot be ascertained.

According to Plato, Hippocrates claimed that one cannot understand the nature of the body without understanding the nature of the whole. That means, Plato adds, that one must ask whether the body is simple or multiform and, whatever the answer, then determine what is its power of acting on or being acted upon by other things. Thus, Hippocrates considered the body an organism; medical practice he based on the knowledge resulting from the comprehension of the scattered particulars into one concept and the division of the whole in turn into its natural species, or, to use Platonic language, on dialectic. Diseases he explained, as Aristotle's pupil Meno relates, by assuming that if food is not digested air is excreted from the remnants, invades the body, and causes illness.

Such a conception of medicine is not to be found in any of the so-called Hippocratic books, though these writings, dealing with all subjects of medicine, with prognostics, dietetics, surgery, pharmacology, with health and diseases, show the most widely different attitudes towards medicine. Being inconsistent in themselves they were never attributed to Hippocrates in their entirety; moreover, there is not a single book the authenticity of which was not disputed already in antiquity. Only fractions, and always different fractions, were ascribed to Hippocrates by later centuries according to their constantly varying conception of Hippocrates as a philosopher or a mere practitioner, a dogmatist, an empiric, a sceptic, a believer in the four humours or in the pneuma-theory, a surgeon or a theoretical scientist.

It seems likely that none of the books preserved under the name of Hippocrates is genuine. Their content does not agree with the pre-Alexandrian testimonies. Moreover, the authenticity of hardly any of them seems to be attested by good tradition; in this case one would expect unanimity of the critics at least in regard to one or a few books. It is probable rather that the writings came to Alexandria as the remnants of medical literature which had circulated in the fifth and fourth centuries, but that they were anonymous, as technical literature of that era commonly was. Philological criticism then attributed them to Hippocrates on the basis of what was considered Hippocratic doctrine in the various periods. But since the proof of genuineness depended on logical argument alone, not on tradition or testimonies, no general agreement could be reached.

All that can be said of the identity of Hippocrates, then, is that he is a physician whose works are lost, though he is not a mere name; his method and doctrine are known; he is the founder of scientific medicine in the Platonic sense; moreover, his fame has been recognized since Plato's time. If one asks what Hippocrates meant to the Greeks, the Middle Ages, the Renaissance, what he means even today, the answer is that by a complicated historical process he has become the embodiment of the ideal physician. See also ANATOMY and PHYSIOLOGY, § 3, MEDICINE II, IV-VII, SURGERY §§ 2, 3.

TESTIMONIES. Plato: *Phaedrus* 270 c-d; *Anon. Lond. ex Aristotelis Iatricis Menonius et alius medicus eclogae*, ed. H. Diels, *Suppl. Arist.* III (1893), v. 35 f. The meaning of these testimonies is much disputed. The above interpretation is maintained by L. Edelstein, *Problematika*

iv (1931); *PW*, Suppl. vi, 1317. The opposite theory. K. Deichgräber, *Abh. Berl.* (1933), II, as representative of meteorological medicine, pneuma-theory. M. Pohlenz, *Hippokrates* (1938); reviewed L. Edelstein, *AJPPh.* 1940. Concerning the interpretation of the *Phaedrus* passage see H. Cherniss, *Plato* (1950-7), *Lustrum* iv (1959), no. 700 ff.

All more recent attempts to identify any of the Hippocratic writings as genuine have failed to find general acceptance. As for the origin of the Corpus Hippocraticum, it has been suggested that it constitutes the library of the medical school of Cos, H. Diller, 'Stand und Aufgaben der Hippokrates-Forschung', *Jahrb. Akademie der Wissenschaften und der Literatur* (1959). Disregarding the fact that the existence of such a library remains conjectural, one would surely expect at least one or two books to have been included in the collection which could certainly be attributed to the greatest of the Cos physicians.

WORKS. Corpus Hippocraticum, *Œuvres complètes d'H.*, E. Littré, i-x (1839-61), Opera omnia i-ii, J. Ilberg-H. Kühlewein (Teubner, 1894-1902), not complete, L. Heiberg, *CMG* i, 1 (1927); *CMG* to be continued. Separate editions and commentaries. H. Cossen, *PW* viii, 1811. *Ilides*, *Περὶ καρδίας*, F. C. Unger, *Memorias* (1923); *Περὶ οὐρανοῦ*, K. Deichgräber, F. C. Schwyzler, *Hippokrates, Über Entstehung u. Aufbau d. menschlichen Körpers* (1935); *Oimox*, W. H. S. Jones, *The Doctor's Oath* (1924), L. Edelstein, 'The Hippocratic Oath', (USA 1943), A. J. Festugière, *Hippocrate l'ascétique médecin* (1948), *Hermitage*, W. Putzger (Gymnasium Würzen, 1914), cf. H. Diels, *Hermes* 1918.

L. E.

HIPPOCRATES (3) of Chios (c. 470-400 B.C.), mathematician, the first person to compose a book of *Elements of Geometry*, his work anticipated much of Euc. book 3, as well as some later parts of Euclid. He succeeded in squaring three out of the five 'lunes' which can be squared by means of the straight line and the circle; and he contributed to the problem of doubling the cube by reducing it to the finding of two mean proportionals.

Heath, *Hist. of Greek Maths.*, ch. 6.

W. D. R.

HIPPODAMUS of Miletus was the most famous Greek town-planner. He was born probably about 500 B.C. He did not invent or introduce to Greece the typical rectangular or 'gridiron' type of planning, but he seems to have shown skill and ingenuity in adapting the elements of the Greek city to this scheme (see TOWNS). Ancient authorities speak of his *nemēis* or allocation of sites. Towards the middle of the fifth century he planned Peiraeus for the Athenians, and boundary stones found there are probably evidence of his work (*JG* 12, 887 ff.; cf. *Hist.* 1964, 138). In 443 B.C. he went with the colony to Thurii (q.v.) and he may well have been responsible for its rectangular plan. Strabo (14. 2. 9) records a tradition that 'the architect of Peiraeus' planned Rhodes (q.v.), which was founded in 408 B.C. Most modern authorities reject this on the ground that the date is too late for Hippodamus, but it is not impossible. Aristotle (*Pol.* 2. 5) speaks of Hippodamus' foppish appearance, and his political theories, and notes that he thought that the ideal size for a city was 10,000 (i.e. probably citizens).

For bibliography see TOWNS; and F. Castagnoli, *Ippodamo di Mileto e l'urbanistica a pianta ortogonale* (1956).

R. E. W.

HIPPOLYTUS (1) (*Ἱππόλυτος*, i.e. 'loosed horse', wild driver or rider?), in mythology, son of Theseus by the Amazon Hippolyte (cf. AMAZONS). Hippolyte being dead, Theseus married Phaedra daughter of Minos (q.v.). Her character varies in Tragedy. Apparently in the (lost) *Ἱππόλυτος καλυπτόμενος* of Euripides and certainly in the *Phaedra* of Seneca she was a lustful and wholly unscrupulous woman; in the surviving *Hippolytus* of the former she is much more interesting, having intense

natural desires but a strong sense of modesty. Theseus being long absent (on his journey to the lower world, according to Euripides), Phaedra conceived a passion for Hippolytus, but he, being honourable (Euripides makes him anti-sexual), repulsed her. She thereupon hanged herself, leaving behind a letter which accused him. Theseus returned, read the letter, and would not believe Hippolytus' protestations of innocence. He banished Hippolytus and used one of the three wishes which his father (Poseidon, in this version; cf. ARGFUS) had given him in asking for his death. Poseidon sent a sea-monster which frightened Hippolytus' horses as he was driving away, and he was thrown from his chariot and dragged to death; Theseus learned the truth from Artemis too late.

In cult Hippolytus is associated with Aphrodite, who had a shrine *ἐφ' Ἱππολύτῳ* on the Acropolis at Athens; while at Troezen, the place of his death, he had a ritual including laments for him and offerings of hair from girls about to marry (Eur. op. cit. 1423 ff., Paus. 2. 32. 1); the local legend said that he did not die as above described but became the constellation Auriga, but this clearly is not early. Whether he was originally god or hero is disputed (Farnell, *Hero-Cults* 64 ff.).

The story that Asclepius restored him to life is as old as the *Naupactica* (Apollod. 3. 121); it led to his identification with Virbius (see DIANA) at Nemi (see Verg. *Aen.* 7. 765 ff., and Servius on 761).

W. S. Barrett, Introduction to Euripides, *Hippolytus* (1964).

H. J. R.

HIPPOLYTUS (2), c. A.D. 170-c. 236, Roman presbyter and (probably) rival bishop to Callistus of Rome (217-22) whom he regarded as compromised by heresy because of his opposition to Hippolytus' Logos doctrine. He died in exile in Sardinia under Maximinus' persecution. In 1551 a statue representing him in philosopher's dress was found at Rome (now in the Vatican Library). It gives a list of his writings and his table for calculating Easter. His chief work, *Refutation of all Heresies*, is planned to show how heresies are the offspring of Greek philosophical systems; it transcribes Sextus (q.v. 2) Empiricus and doxographic works, and has valuable fragments of Heraclitus (q.v.) and others. His chronicle of history from Creation to 234 (like his commentary on Daniel) was in part intended to quench apocalyptic expectations of the imminent end of the world.

H. C.

HIPPON, also called **HIPPONAX**, natural philosopher of the Periclean age, probably came from Samos. He treated water or the moist as the principle of all things, reasoning chiefly from observation on the semen of animals. He considered the soul (seated in the brain) to be derived from the semen and to be itself moist, and devoted special attention to the development of the human body from the embryonic state to maturity. Aristotle describes him as a second-rate thinker, probably because of his materialistic bias. He was lampooned as an atheist by Cratinus and this became his stock epithet in later writers.

Testimonia and fragments in Diels, *Vorsokr.* 1. 385-9 W. D. R.

HIPPONAX (fl. 540-537 B.C.; Pliny, *HN* 36. 11), iambic poet, of Ephesus, whence he was banished and went to Clazomenae. By making the iambic trimeter end with a spondee he invented the *σκάζων* or *χωλιαμβος*, and in this metre he wrote satirical, colloquial verse. Some of his fragments are concerned with his love for Arete (frs. 15-22), others with his quarrel with the two sculptors Bupalus and Athenis. The story was that they made a statue which caricatured him and were so distressed by his lampoons that they committed suicide

(Pliny, loc. cit., cf. frs. 1, 13, 15, 20). He also fell foul of the painter Mimnes (fr. 45). Polemon credited Hipponax with the invention of parody (Ath. 698 b), and frs. 77-8 show the existence of a poem in mock-heroic verse on the adventures of the glutton Eurymedontiades. Hipponax has a vivid, terse style and drew for his vocabulary on contemporary speech and at times on foreign words in Lydian and Phrygian.

TEXT E. Diehl, *Anth. Lyr. Graec.* i. 7, 74 ff.; with commentary, O. Masson, *Les Fragments du poète Hipponax* (1962). C. M. H.

HIPPOTHOON, in mythology, son of Poseidon and Alope daughter of Cercyon (Hyg. *Fab.* 187, who calls him Hippothoos); eponym of the Attic tribe Hippothoontes (Paus. 1, 5, 2; Ilarpocraton, s.v. Ἰλαρπη; Hesychius, s.v. Ἰπποθούωντιον). H. J. R.

HIRTIUS (PIV 2), AULUS (cos. 43 B.C.), since c. 54 B.C. an officer of Caesar, who sent him as envoy to Pompey in Dec. 50. In the Civil Wars he served in Spain, was possibly *tr. pl.* in 48, and was at Antioch in spring 47; in 46 he was praetor and next year governed Transalpine Gaul. After Caesar's murder he was consul designate, and Cicero induced him to take arms against Antony (43). With Octavian he raised the siege of Mutina, but was killed in the victory, receiving with his colleague Pansa (q.v.) a public funeral. Hirtius added to Caesar's *De Bello Gallico* an eighth book, and probably also wrote the *Bellum Alexandrinum* (q.v.); his correspondence with Cicero, published in nine books, and the draft for Caesar's *Anticato* have not survived. A notorious epicure, Hirtius was also a fluent and reasonably painstaking writer: his military competence was probably not as low as Quintus Cicero later pretended (Cic. *Fam.* 16, 27, 2). G. E. F. C.

HISPALIS or **HISPAL** (modern *Sevilla*), on the lower Baetis (*Guadalquivir*), is not mentioned before Caesar's Civil War. A ship-building and trading port, it received a modest colony of veterans from Caesar. A double colonization should not be inferred from its title *Julia Romula*, nor from the alternative names *Hispalenses* and *Romulenses*; the colony was, however, reinforced by Otho, and the town grew in size and importance. In the second century A.D. it rivalled Corduba (q.v.), and eclipsed the old port of Gades (q.v.). Lying on reaches navigable by the largest ships, close to some of the busiest mines, it handled the exports of the richest province of the West. Imperial procurators and agents of the *praefectus annonae* operated there. It had a bishop from the early fourth century or before, and later became the metropolitan see, occupied in the seventh century by St. Isidore (q.v.). M. I. H.

HISTIAEA, a city on the north-west coast of Euboea, with a rich plain facing Thessaly. It was said to have been founded from Thessaly by Ellopians, and in the Catalogue of Ships is characterized as rich in vines. It was sacked by the Persians after their defeat at Artemisium and subsequently joined the Athenian League. For their part in the Euboean revolt the Histiaeans were expelled by Athens in 447/6, and 2,000 cleruchs were established in the new colony, Oreioi, a deme of Histiaea; but the city with the new name was not demonstrably on a different site. The Histiaeans returned after the Peloponnesian War. They remained suspicious of Athens and supported Sparta until the Euboean War and after 357/6 they rejoined the Athenian League. The Macedonians took an early interest in this part of the island. The city was taken by Attalus II and the Romans in 199 and sacked. It later served Roman fleets. There are scanty Bronze-Age finds from the acropolis by the sea, slight Classical remains, and a Byzantine circuit wall.

L. H. Sackett and others, *BSA* 1966, 39 f.

J. B.

HISTIAEUS, tyrant of Miletus, rendered service to Darius during the Scythian campaign (c. 512 B.C.). He was presented with Myrcinus on the important coastal road near the later city of Amphipolis, but Darius growing distrustful invited him to Susa, where he held an honourable post as one of the 'King's Councillors'. Meanwhile his son-in-law Aristagoras (q.v. 1) ruled Miletus. They both seem to have co-operated in preparing the Ionian Revolt. After the destruction of Sardes (498) he was sent on his own request to pacify Ionia, but distrusted by both sides he was unsuccessful. He settled at Byzantium as a kind of pirate, and fought on his own account on the islands and in Asia Minor. In 494 or 493 he was captured and crucified. He probably was no more than an ambitious adventurer, though Herodotus' story relies too much on sources hostile to Histiaeus.

Hdt. bks. 4-6. A. Blannin, *CQ* 1959, 142; A. R. Burn, *Persia and the Greeks* (1962), M. Lang, *Hist* 1968, 24. V. L.

HISTORIA AUGUSTA. Title given by I. Casaubon (1603) to a collection of biographies of Roman Emperors, Caesars, and usurpers from A.D. 117 to 284 (Hadrian to Carinus and Numerianus). The present text is not complete, as there is a lacuna for the years 244-59. Though the work is modelled on Suetonius' lives of the XII Caesars there is no cogent reason to believe that it was a direct continuation of Suetonius and therefore originally included the lives of Nerva and Trajan. According to the complex manuscript tradition (which includes a family of MSS. (Σ) with interesting variants) the biographies were written by six different authors who lived in the time of Diocletian and Constantine. Some of the biographies are dedicated to Diocletian or Constantine, others to private persons. Four of the authors—Aelius Spartianus, Iulius Capitolinus, Vulcacius Gallicanus, Aelius Lampridius—say that they have written more biographies than those appearing in our present compilation. Only two authors—Trebellius Pollio and Flavius Vopiscus—do not profess to have written more than the extant biographies. The *Scriptores Historiae Augustae* (as the six are normally called) claim to have used many literary sources, only a few of which, such as Herodian, are extant. Furthermore, they quote about 130 documents (letters by Emperors, *senatus consulta*, inscriptions, etc.) which are unevenly distributed among the biographies. Lives of little-known Emperors and usurpers are filled with documents, whereas there is no document in the lives (which altogether appear more reliable) of Hadrian, Antoninus Pius, Marcus Aurelius, and Septimius Severus. This would be enough to raise suspicions. Indeed the *Historia Augusta* has never enjoyed great authority among scholars, although it is our only continuous account for the history of the Emperors of the second and third centuries. More radical criticism, however, was expressed for the first time by H. Dessau in *Hermes* 1889, 337, and his paper opened up a new era in the study of the *Historia Augusta*. Dessau contended that the *HA* was not written in the time of Diocletian and Constantine, but in the time of Theodosius, and that there was only one author behind the six names of the alleged biographers. One of his many impressive arguments was that the life of Septimius Severus, chs. 17-19, copies Aurelius Victor, *De Caesaribus* 20 (written in A.D. 360) and that the life of Marcus Aurelius 16, 3-18, 2 depends on Eutropius 8, 11-14 (written in A.D. 360). Since Dessau the so-called problem of the *HA* has involved five questions: (1) how many authors wrote the *HA*? (2) when was the *HA* written? (3) did the original text of the *HA* undergo later changes? (4) what was the purpose of the writer or writers of the *HA* in composing this work? (5) how many literary references and documentary quotations of the *HA* are forgeries?

Scholars of the last seventy-five years have been sharply divided in their answers to the first four questions, while they have been fairly unanimous in considering the literary references and documentary quotations as invariably suspect, where not altogether false. Whereas Mommsen suggested that an original text which had been written under Diocletian and Constantine was substantially revised under Theodosius I, some scholars (e.g. G. De Sanctis) have defended the Diocletianic-Constantinian date of the entire work. Other scholars have followed Dessau in the notion of a total forgery, but have proposed different dates: under Constantius II (H. Stern), under Julian (N. H. Baynes), in A.D. 394 (W. Hartke), in the early fifth century (O. Seeck, J. Straub), even in the late sixth century (A. von Domaszewski), though the last date is made very improbable by the fact that the *HA* seems to have been used by Q. Aurelius Symmachus (quoted in Jordanes, *Getica* 15. 85) towards the end of the fifth century. The problem of the alleged plurality of authors is also still unsolved, though recent research has emphasized the uniformity of style in all the lives. There is continued disagreement about the aims of the writer or writers. The *HA* displays pro-senatorial sympathies and does not approve of hereditary monarchy (though it shows great admiration for the descendants of Claudius Gothicus) nor of interference by the army in politics. But this is not enough to explain the work as a whole, especially if one regards it as a major forgery. Some scholars incline to think that the *Scriptores Historiae Augustae* were simply trying to entertain the reader by sensational and unscrupulous writing; others feel that the *HA* is a Pagan attack on Christianity. The theory that the author of the *HA* concealed his personality and time of writing in order to attack Christianity and to present Paganism as more tolerant has been developed by A. Alföldi and J. Straub and has received considerable support.

Best critical edition by E. Hohl (1927 with later reprints). Loeb text by D. Magie (1922-32). J. Casaubon's and Cl. Salmasius' notes are still invaluable. Cf. Th. Mommsen, *Hermes* 1890, 228 ff.; G. HISTORIOGRAPHY, GREEK. The discovery of inscribed tablets in Crete, at Pylos and elsewhere, and the decipherment of the so-called Linear B (see MINOAN SCRIPTS) prove that the habit of listing objects and recording events goes back in Greece (both on the islands and in mainland Greece) to the last centuries of the second millennium B.C. (at the latest). There is therefore no longer any need to argue at length about the likelihood of historical and chronographic material having been collected and listed by the priests at the main Greek shrines and by the authorities of the Greek city-states from an early date, however much one may doubt or dispute the accuracy and historical value of the lists and kindred material which have survived. Yet it was not from annalistic sources that Greek historiography arose. Historical writing only came into being with the awakening of the Greek mind under the influence of science and rationalism. Following the example of the Ionian physicists and geographers, the so-called *logographoi* (prose writers, as opposed to epic poets) assumed a critical

attitude towards the traditions of poetry and mythology, and thus created historical science. The greatest of the *logographoi* to our knowledge, the Milesian Hecataeus, was the first to submit tradition to the test of reason.

2. The followers of Hecataeus (Xanthus, Hellanicus, Scylax, etc.) either confined themselves to local history, or wrote general history (not Greek history exclusively) from a Persian standpoint. A noticeable exception was a contemporary of Hecataeus, Antiochus of Syracuse, who wrote a history of the Greek colonies in southern Italy and Sicily. Herodotus also may be styled a disciple of Hecataeus. He felt such admiration for the achievements of the Persian kings that he planned to write both a history of the wars they had waged and a geographical survey of their empire. Only at a later stage, when he fell under the spell of the Athenian democracy, did he realize the greatness of the victory of Greece over Persia, and made this the chief subject of his narrative. Even so, his account showed so much sympathy with the vanquished that later Greek writers, probably influenced by Isocratic panhellenism, did not hesitate to brand Herodotus as a friend of the barbarians.

3. The immediate success of Herodotus was great; but his history was too discursive to satisfy the literary taste of succeeding generations, and seemed remote from the problems of party politics and of Athenian imperialism which soon took the place of the Persian Wars as the centre of Greek political interest. These problems produced two new kinds of historical writing: (1) a 'scientific' account of the Peloponnesian War by Thucydides; (2) a violently biased propaganda, chiefly on the part of Greek conservatives, who cast their programmes into the mould of an idealized or merely fictitious past, and published pamphlets against the Athenian democracy (Pseudo-Xenophon) and its leaders (Stesimbrotus), as well as schemes of oligarchic constitutions (Critias, Theramenes, etc.). Meanwhile, a new branch of historical writing, the memoir, was created by Ion of Chios and others.

4. In the fourth century Greek historiography was influenced by the prevailing dissatisfaction with public life, the growing detachment from politics, and a renewed interest in foreign Powers (Persia and, later, Macedonia) which showed signs of becoming the deciding factor in Greek politics. It was the Asiatic Greek Ctesias who was chiefly responsible for the revival of interest in Persian history and civilization. Thucydides himself had prepared the way for these tendencies, for in the final draft of his *History* he had emphasized the bearing of moral ideas on history, and had shown that the subject of historical writing could not be confined to politics alone. His continuators, however, neglected his method of research and his accuracy and obeyed new masters, Socrates, Plato, and Isocrates. The latter, besides imposing new rules of style, taught the principles of panhellenism, while both Socrates and Plato laid down principles of morality as standards of political judgement. Xenophon, Theopompus (both of whom started at the point in the Peloponnesian War where Thucydides had left off), and Ephorus combined the two methods and created a new form of historical writing. Xenophon inaugurated a literary fashion in associating historical memoirs and romance (in the *Anabasis* and the *Cyropaedia*); his political partisanship and eulogistic rhetoric appealed to every class of reader and secured for his *Hellenica* a wide, though not wholly merited influence. Ephorus envisaged the history of the Greek peninsula as a unity, and was the first to write a complete account from the mythical age down to Philip of Macedon. The success of his work, which was to become the 'vulgate' of Greek history, is best attested by the fact that it was never repeated. In his principal work, the *Philippica*, Theopompus accomplished something equally unique in

Greek historical writing. Psychological insight into his protagonist, Philip, whom he saluted as the creator of a new age, moral and political discussions, geographical digressions in which he boasted that he had surpassed Herodotus, made of the *Philippica* perhaps the crowning achievement of classical and certainly the forerunner of Hellenistic historiography.

5. A more scientific if less ambitious school of historiography was founded in the fourth century by Cleidemus and Androtion, who wrote local histories of Attica (*Ἀτθίδες*) based on documentary evidence, and by Aristotle and Philochorus, who also collected and published records of public and religious institutions, games, and literary competitions. These research historians laid the foundations of Hellenistic scholarship and antiquarianism. But the principal historians of the Hellenistic age, disregarding documentary evidence and the technique of historical writing, aimed, as a general rule, not at being accurate and learned, but readable. The political and military accounts of the expedition of Alexander the Great written by official authors such as Aristobulus, Nearchus, and Ptolemy (on whom Arrian is chiefly dependent) were soon superseded by the highly rhetorical and romantic stories of Callisthenes, Onesicritus, and Cleitarchus, who founded the 'vulgate' tradition represented by Diodorus and Plutarch, as well as by Justin and Curtius.

6. In the third and second centuries the field of historiography was similarly divided between men of political and military experience, such as Hieronymus, Aratus, and Polybius, and writers who sought to entertain or to excite their readers by a pathetic or realistic style of narrative (Duris, Phylarchus). The latter school was more generally read; because of the prominence which it gave to outstanding personages, it was largely utilized by biographers and ultimately became the chief source of Plutarch.

7. Since no Hellenistic historian, with the exception of Polybius, survived the change in Greek taste and mentality towards the end of the first century B.C., Plutarch is indisputably the author who provides the best survey of the methods, peculiarities, and defects of Hellenistic historiography. Plutarch established the principle that history is the product, not of dry abstractions, such as economics, parties, climate, environment, etc., but of the will and the passions of individuals. Another feature of Plutarch's biographies, the equal measure of importance which he attached to Greek and to Roman personages, illustrates the readiness with which Hellenistic historians perceived the significance of the Roman conquests and influenced Roman culture and historical writing. Greek authors were the first to realize the problem and importance for world-history of the Roman Empire, and through them the Romans became conscious of the mission they were called on to fulfil. A far-sighted interest in the beginnings of Roman history was shown by Timaeus, a Sicilian Greek of the early third century, who coupled the history of his native island with that of Greece and Italy. Polybius, taking up the story where Timaeus left off, at the beginning of Rome's Punic Wars, made it the object of his work to bring home to his compatriots the military, political, and moral advantages which gave the Romans their victory and guaranteed its permanence. The providence of God had imposed on Rome the task of building an empire, and this empire was actually working out to the material and moral benefit of its subjects. This idea Polybius' continuator, Posidonius, also sought to convey; in his view, apparently, the commonwealth of God was reflected in the world-wide Roman Republic, and the unity of history was realized in the unity of the Roman Empire. The immense influence exerted by Posidonius is attested

by the revival of historical feeling which he promoted. Not only did he become the model and the chief source of universal historians and epitomizers, such as Diodorus and Nicolaus of Damascus, and of geographers such as Strabo, but he also suggested inquiries into less familiar fields. It was under his spell that interest in primitive or non-European races was felt and satisfied. In the Augustan age the literary critic, Dionysius of Halicarnassus, turned to explore the origins and early history of Rome. In a similar spirit Flavius Josephus, proceeding along the path paved by Philo, wrote under the Flavians a history of the Jews, in order to show the similarity of their civilization with that of the Greeks and Romans.

8. Hitherto Greek historians had merely tried to vie with their Roman counterparts. The Greek historians of the second century A.D. took advantage of the post-Neronian resurgence of the Hellenized East and gave their contemporaries a new knowledge of their past and a new stimulus to study contemporary problems. There thus came about a revival of interest in 'classical' authors, some historical criticism of them even by mere *littérateurs* such as Aelius Aristides, Herodes Atticus, etc., and eventually Libanius, and a renewed study of the methods and techniques of historical writing as practised by Thucydides and Polybius. There is evidence of this in Lucian's treatise 'How to write history'. Arrian recounted the story of Alexander the Great and his successors in the manner of a Herodotus or a Xenophon and in conscious opposition to the 'vulgate' of the romancers, such as Callisthenes and Cleitarchus, and the 'biography' of Plutarch. Above all Greek historians turned to Rome no longer to justify her origins and her sway, as Dionysius, Nicolaus of Damascus, Strabo, and others had done, but to record the wars of the Republic (so Appian of Alexandria) or to supply a sort of *pendant* to Livy by relating in Greek the whole course of Rome's history down to the era of the Severi (so Cassius Dio). These developments marked the entry of the Greeks and their culture into the Roman Empire, gave their interpretation of Roman history, and helped to preserve not only the records of the past but also the consciousness of a common bond in cultural affinities which was still felt by Byzantine scholars (e.g. Procopius). Through them, and sometimes through Latin authors such as St. Augustine and Orosius, who were the chief Western heirs of the Oriental and Hellenistic tradition of the cyclical succession of Empires, the methods of Greek historiography were transmitted to Christianity and played a part in forming the new conception of history which was required by Christian belief.

See the articles on individual historical writers.

TEXTS. The fragments of the lost Greek historians are collected in C. Müller, *Fragmenta historicorum graecorum* (FHG), 5 vols. (with a Latin translation, 1841 ff.), and F. Jacoby, *Die Fragmente d. griech. Historiker* (FGH) (with German and eventually English introductions, commentary, and notes, 1923 ff. in progress). The papyrus fragments (with the exception of the Hellenica Oxyrhynchica—see OXYRHYNCHUS HISTORIANS) have been collected by F. Hilabel (1923).

HISTORIOGRAPHY, ROMAN. The beginnings of Roman historical writing lie not solely in the pontifical tradition but in Hellenistic historiography. The first Roman historians, Fabius Pictor, Cincius Alimentus, Postumius Albinus, and C. Acilius, wrote in Greek to glorify Rome's foundation and justify her institutions and policy to the Hellenistic world. Their work thus comes under the class not of annalistic chronicles but of the Hellenistic histories. Political writers, not professional historians, *narratores*, not *exornatores rerum*, they fell short of Cicero's rhetorical standards (*De Or.* 2. 51-2; *Leg.* 1. 5), but their quality is reflected in the *ἐπιτομία* of Scipio Africanus (*Polyb.* 10. 9) and Scipio Nasica (*Plutarch*, *Aem.* 15 ff.). Their tradition inspired Polybius to analyse and set in its perspective the imperial rise of Rome, and their work was continued in Latin, in its same form, by Cato in his *Origines* (see ANNALS).

2. It was Cato, after Ennius, who inspired national historiography in Rome. The 'early' annalists, Cassius Hemina and Calpurnius Piso, began the systematic reconstruction of Roman history; and the study of pontifical law, cult and constitutional antiquities, public and private law, reflects the growth of historical consciousness, influenced by Stoic thought, which led to the publication of the *Annales Maximi* (c. 123 B.C.). This definitive work of documentary reconstruction and formal arrangement founded the annalistic historiographical *γένος*; the influence of Hellenistic theory furthered its development. Cn. Gellius probably first applied the rhetorical Isocratean methods to elaboration of the records; the immediate post-Sullan annalists, Valerius Antias and Claudius Quadrigarius, by free legalistic reconstruction and conventional rhetorical elaboration, fully established the literary form, which was accepted by Livy and adapted by the imperial annalists and Tacitus.

3. In contemporary historiography Polybius' work was continued by Posidonius, and his methods followed by Sempronius Asellio, Aemilius Scaurus and Rutilius Rufus wrote autobiography, Catulus and Sulla left *ὑπομνήματα*. Coelius Antipater introduced the historical monograph and Asiatic style; Hellenistic biography grew on the tradition of the *laudatio funebris* (q.v.). It may be said that all the Hellenistic historiographical *γένη* were established in Rome, with increasing literary independence, by the time of Sulla.

4. Sisenna practised the dramatic 'Peripatetic' art of Cleitarchus in his work on Sulla. Annalistic history continued with Macer, the democrat, and Tubero, the Caesarian. Contemporary history is represented by names from Cn. Aufidius to Tanusius Geminus. Antiquarian studies flourished with Nigidius Figulus and Varro, and Cornelius Nepos shows the advance of biography. Caesar's *Commentarii* represent the Hellenistic military *ὑπομνήματα* in Latin. The Caesarian and anti-Caesarian writings, the *Catonae* and *Anticatones*, mark the maturity of political propaganda.

5. It is in this setting that Sallust wrote and Cicero defined the tasks of Roman historiography. Sallust represents political analysis, associating Catonian archaism with Thucydidean *severitas*, and joining to rhetorical device the syntactical aggressiveness of his style. Cicero held the Hellenistic view that history, an 'opus oratorium maxime', should be based on the rhetorical Isocratean canons represented by Timaeus. These theoretical principles reflect their different historical purpose, Cicero justifying the tradition with dignity, Sallust attacking present corruption against the principles

of traditional morality. The issue in thought and in mode was defined, and Livy's Augustan idealism could follow Cicero, Tacitus draw inspiration from Sallust.

6. Augustan historiography marks the balance of Roman tradition and Hellenistic influence. Memoirs dealing with the end of the Republic are common, from Augustus himself to Tiro. Asinius Pollio practised independent criticism. Livy, on the one side, glorified the Republican tradition; Pompeius Trogus, on the other, set Rome in her Hellenistic perspective. To the Isocratean rules Livy adds elaborate rhetorical and dramatic effects, practising the fine psychological interpretation which had come to maturity in Rome from Hellenistic studies. Poetical colour makes his opening books the prose epic of Rome; the later books enshrine the annalistic tradition and adapt the form to contemporary history. Trogus avoided direct rhetoric.

7. The Augustan achievements were final in their own field. Fenestella might add antiquarian interest, L. Arruntius Sallustian style to the annalistic tradition, but Livy was followed, after Velleius Paterculus, only by the Epitome and its dependent writers. Trogus, unchallenged, was joined by Curtius Rufus, but Thallus, L. Cornelius, Bocchus, and Vibius Maximus led merely to Justin's Epitome. After the Republican work of Crematius Cordus, however, the imperial annalists appear: Aufidius Bassus, the Elder Pliny continuing his work, the Elder Seneca, and Bruttidius Niger; then Cluvius Rufus, Vipstianus Messalla, and Fabius Rusticus. Imperial rule increased biography, not only of the emperors but of their administrators, and memoirs were common. *Exempla* were published by Valerius Maximus and Hyginus. Ethnography and geography became popular, while rhetorical theory developed in declamation.

8. Thus the Roman historiographical *γένη* held their place in the first century, and Tacitus adapted them in unity of conception and stylistic mastery. Historical in his treatment of rhetorical theory, biography, and ethnography, he pressed these in their turn into the service of history. Roman in his central theme, traditional in his political judgement, he strove for dramatic concentration and psychological depth; to the annalistic conventions and rhetorical effect he added the *severitas* and syntactical aggressiveness of Sallust. Drawing on historical tradition and historiographical technique, he created a work of original genius.

9. Imperial biography attained its highest point with Suetonius, but after Marius Maximus it degenerated to the *Historia Augusta*. Roman historiography entered the age of epitome and chronicle: the handbooks of Ampelius and Julius Obsequens, chronographical work, the *breviaria* of Florus, Granius Licinianus, Aurélius Victor, Eutropius, and Festus. Ammianus Marcellinus alone shows historical quality in his continuation and imitation of Tacitus, but his technique and style, for all their power, betray his historiographical isolation. Meanwhile Julius Africanus had added Jewish to Hellenistic and Roman history in order to establish a Christian chronicle, and Eusebius made this work definitive as well as creating ecclesiastical history. Thus, Roman historiography passed to Hieronymus (Jerome) and Orosius, and supported Augustine's *City of God*, as it were, *sub specie aeternitatis*.

See ANNALS and the various writers mentioned; and HISTORIOGRAPHY, GREEK, for Hellenistic influences.

HOMER. The Greeks, with insignificant exceptions, believed that both the *Iliad* and the *Odyssey* were composed by Homer, but they had no certain or accepted facts about his life. His date was very variously given, as contemporary with the Trojan War (Tzet. *Chil.* 12. 183), soon after it ([Plut.] *Vit. Hom.* A 5), at the time of the Return of the Heracleidae (? Crates Theb. ap. Tatianum *Ad Gr.* 31), at the time of the Ionian wandering (Philostr. 194. 9), in the middle of the ninth century (Hdt. 2. 53), and 500 years after the Trojan War (Theopomp. *Hist. ap. Clem. Al. Strom.* 1. 117). This great divergence indicates that external evidence was lacking and that the Greeks knew little more than we do. If we try to date the poems by internal evidence, some facts emerge. Archaeology gives ambiguous results, but forbids an early date, since the sitting statue of *Il.* 6. 302-3 cannot be earlier than the eighth century, the shield of Agamemnon in *Il.* 11. 19 ff. may be even later, and the use of the phalanx in warfare (*Il.* 13. 131 ff.) may be later still. Even if we regard these passages as later corrections or additions, the *Iliad*, though it contains echoes of much earlier times in some matters, certainly does not describe the culture of the Mycenaean age as a contemporary document should. Literary evidence gives at least a *terminus ad quem* in the seventh century, when Terpander is said to have recited Homer at Sparta and echoes of him are to be seen in Tyrtæus (frs. 6-7, 21-8 from *Il.* 22. 71-6, fr. 8. 29-34 from *Il.* 16. 215-17), Semonides (fr. 29 from *Il.* 6. 146), and Alcman (fr. 1. 48 from *Il.* 9. 124, fr. 73 from *Il.* 3. 39). Archilochus seems also to give variations on Homeric phrases at fr. 65 (*Od.* 22. 412), fr. 41 (*Od.* 14. 228), fr. 38 (*Il.* 18. 309), and though the date of Hesiod is not known, he seems to be later than Homer, since *Op.* 159-60 may owe something to *Il.* 12. 23 and *Th.* 340 ff. to *Il.* 12. 20 ff. We may then perhaps place Homer before 700 B.C., though we must admit that there is always a possibility of his text having been altered and the indications of date being additions.

2. His place was a matter of dispute in antiquity. Of the different possibilities Chios and Smyrna are best supported. Chios was regarded as his home by Semonides of Amorgos (fr. 29), and it was there that the Homeridae lived and maintained his memory (schol. Pind. *Nem.* 2. 1), while Smyrna was supported by Pindar (fr. 279). The predominance of Ionic elements in Homeric language points to Ionia as Homer's home, and this is supported by hints in the poems, notably by similes which mention the Cayster (*Il.* 2. 459 ff.), the Icarian Sea (ibid. 144 ff.), and a Maeonian or Carian woman (*Il.* 4. 141-2), and by a certain geographical acquaintance with the Troad, the weeping Niohe on Sipylus (*Il.* 24. 614 ff.), and the towns of the Aeolic peninsula. Since in certain places (*Il.* 9. 4-5, 11. 305-8) he implies a shore facing west, he may have the Asiatic coast in his mind. On the other hand, in the *Odyssey* there is certainly some, not always exact, information about the islands round Ithaca and the Peloponnese, which may be due to personal acquaintance or more probably to hearsay. He seems on the whole to have lived in Ionia, since his apparent ignorance of the Dorians in the Peloponnese indicates that he knew little of it.

3. Other traditions of his life, embodied in the ancient *Lives*, are almost without value. The episodes in them are usually to be traced back to episodes in the *Iliad* and *Odyssey*. The tradition that he was blind is better founded, since bards were often blind and the Homeric *Hymn to Apollo* 172 speaks of a blind poet in Chios and may refer to him. His condition may well have resembled that of the bards in the *Odyssey* who earned a livelihood by singing lays at the courts of princes. In the *Iliad* and *Odyssey* the poet says next to nothing about himself. This may imply that he was of a social position inferior

to that of his patrons, and belonged to the class of *δημιοεργοί* (*Od.* 17. 383). His tastes may to some extent be seen in his similes, which are drawn from contemporary life and show an interest in humble people quite unlike the heroes and heroines of his poems, in handicrafts and agricultural pursuits, in animals and birds.

4. Our ignorance of Homer's date, place, and life has led to scepticism about his existence. It has been thought that the poems are collections of lays put together from different sources, or original poems much expanded and altered, or single examples of poems of which many different variants existed. The early arguments for such views, based on the belief that no man could have composed poems of such a length before writing was known, have now been dispelled by our knowledge of what memory can do when writing is not familiar. Other arguments, such as the presence of repetitions and inconsistencies, are less powerful when we realize that such poems were meant not to be read but to be heard, and that in such conditions the poet cannot be so exact about details as he can when he is helped by a written text. Still other arguments based on the varying treatment of the gods, of moral questions, of history and mythology, do not necessarily prove variety of authorship, since it is at least possible that Homer belonged to an old tradition which provided him with a very mixed collection of materials, on which he drew freely and not always critically.

5. On the other hand, the *Iliad* and the *Odyssey* each shows in itself the marks of a controlling and unifying poet. In the *Iliad* the whole poem hangs on the wrath of Achilles, and though many other episodes are introduced, this gives a unity to the whole. The last book picks up the themes of the first and shows the end of the wrath with which the poem began. The *Odyssey* shows what Ithaca was before Odysseus returned and then his return with his triumphant conduct of it. In each poem the characters are admirably consistent, convincing, and even elaborated—a trait unlikely if many hands have been at work. In each poem the language, rich, complex, and traditional though it is, seems to show no real differences between one section and another. The use of abstract nouns, of the digamma, of Aeolic forms, of patronymics, all seem to be spread equally through the whole work. Any extensive omission of a long passage from either poem in the belief that it is a later addition seriously impairs the structure and makes the plot less easy to understand. In both poems devices such as similes are used on a consistent plan, revealing the individual tastes of the poet and providing a variety where it is most needed in the narrative. Each poem shows that it is a whole and suggests that even if many hands have gone to its making, most of the poets preceded the actual author, who made use of their work but harmonized it according to his own ideal of composition.

6. These considerations do not prove that the *Iliad* and *Odyssey* were necessarily composed by the same poet. This has been doubted even by some who believe that each is itself the work of a single man. The Alexandrian grammarians who held this view were known as the 'Chorizontes'. There are certainly differences between the two poems, though not all are equally important. Much may be explained by differences of theme and of setting. The *Iliad* deals with war, the *Odyssey* with peace; therefore the social structure of life at Troy is different from that at Ithaca. The *Iliad* with its long accounts of battles is more monotonous than the *Odyssey*; therefore it uses many more similes to diversify its narrative. Many words appear in one poem and not in the other, but that is to be expected from two stories so different. The *Odyssey* has an element of fairytale almost lacking in the *Iliad*, but that is natural in telling of a

man's wanderings at the ends of the world. It places its emphasis on wits, while the *Iliad* places its on courage, but that does not mean that the poems were written in different ages; for a heroic age may well admire cunning as much as bravery, and in any case the cunning of Odysseus is already manifest and admired in the *Iliad*.

7. The *Odyssey* certainly looks as if it were composed to be a sequel to the *Iliad*. The events which fall between the two stories, the Wooden Horse, the sack of Troy, the returns of the Achaeans, the murder of Agamemnon, are all introduced, so that we have in effect a continuous narrative. Important characters of the *Iliad* who have no essential part in the story of Odysseus—Helen, Menelaus, Nestor, even Achilles and Aias—appear at one point or another, before or after death, in the *Odyssey*. The *Odyssey* closes with a second *Nekyia* in which the great ghosts of Troy make their last bow on the stage as if to make a finale to both poems. Moreover, these characters preserve their individuality from one poem to the other; Odysseus, though depicted on a far greater scale, is recognizably the same man that he was in the *Iliad*, Nestor is no less garrulous and reminiscent, Helen still shows wisdom learned in suffering. Both poems, too, are similar in structure, though the *Odyssey* shows an advance in its treatment of events which take place contemporaneously. In both we find similarities of technique, such as the way in which an action is first suggested and then postponed, the abrupt transition from one episode to another, the rapidity with which the final crisis comes when it comes, the slackening of tension after the crisis, and the quiet end. In both we find repeated lines and even passages which suggest that the poet, well instructed in his formulae, felt no qualms about using them when they suited his need. Compared even with Hesiod or the *Homeric Hymns* the *Iliad* and *Odyssey* seem to belong to a world of their own and suggest that they are the work of a single poet.

8. On the other hand, there are, undeniably, serious differences between the two poems. The *Odyssey*, at least in its second half, seems to lack the rapidity and force of the *Iliad*. The poet does not lead to his crisis with the same directness, and in the handling of it there is not the same immediacy of effect. The difference may of course be due to advance of years; Homer may have begun to fail in his later poem (as [Longinus] suggests, *Subl.* 9). Again, in the *Odyssey* the gods are not what they were in the *Iliad*. Certain episodes show the old gay touch, but their position is, on the whole, different, and in the relations between Odysseus and Athene we may perhaps see a new view of the ways of the gods with men. Finally, the *Odyssey* seems to take a different view of life from the *Iliad*. The Suitors are lower characters than anyone except Thersites, and their end, deserved though it may be, is conceived in a harsher and less tragic temper than that in which Achilles revenges the death of Patroclus on Hector. These differences can be explained either as the result of passing years on a single poet or as the work of a second poet who admired and imitated the poet of the *Iliad* but did not see eye to eye with him on all points. The first alternative seems more likely because the differences are outweighed by the similarities and are at least explicable if we assume the *Odyssey* to be the later of the two poems.

9. Even if we admit that a single poet composed both poems, we must also admit that he owed a very great deal to tradition. The extent of his debt may be seen in the many stories which he mentions but does not elaborate, showing that they were already known, in his use of standard epithets for his characters, who have often grown beyond them, in his inconsistent treatment of the gods, now as real moral forces, now as figures of comic relief, in the episodic character of his narrative, a

survival from the method of short narrative lays, in his language, which was never a spoken tongue, but, being drawn from different dialects and full of archaisms, artificial lengthening, synonyms, and alternative forms, shows the marks of many years given to its making. Above all, this traditional character is apparent in the important fact that Homer composes not with words but with groups of words or formulae. In almost every line we find a set of words that occurs elsewhere, often many times. This technique belongs to improvised verse. The poet who improvises must learn formulae before he can practise his art, and though there is no reason to believe that the *Iliad* and *Odyssey* were ever improvised, it is clear that their technique is derived from improvisation. Of these formulae many must have existed before Homer, and at times we may see traces of his indebtedness when a phrase is not perfectly suited to its context. But such formulae were no doubt altered and new formulae invented, and there is no reason to think that Homer took over all his from other poets. In fact the success of many parts of his poetry is unthinkable if he confined himself entirely to traditional phrases. So, too, in his plots we may find hints of an earlier treatment which is not his. In the poems which lay behind the *Iliad* Achilles seems actually to have mutilated Hector, but Homer avoids this and makes his hero give back the dead body to Priam. In the stories of Odysseus there must have been variants of the means by which he was recognized; in the *Odyssey* these are combined and worked into a single story. These earlier versions were obliterated by Homer and quite forgotten, but it seems next to certain that he used them and improved on them.

10. Even if Homer composed the *Iliad* and *Odyssey*, we cannot assume that we have them just as he left them. There are certainly interpolations in them. Some are not serious, others, like passages in *Od.* 11, may easily be detected. But it is quite possible that there are still others, though there is no sure way to mark them. The language, too, has certainly been altered from its first appearance, notably by the substitution of Attic forms due to the recitation of the poems at Athens and to the fact that Athens was the centre of the Greek book-trade. Other changes are due to the misunderstanding of archaic words and their distortion or replacement by others. And the text may have suffered more than this. If it was preserved, as is possible, in the oral tradition of the Homeridae, it cannot but have suffered seriously in the centuries between Homer's death and the appearance of the first texts in the time of Pisistratus. Even if it was written down much earlier and preserved with reverence as a sacred book, it may still have suffered serious changes. In any case it is not as we have it that the author left it, and we cannot confidently restore it to its original purity.

11. Whatever our views may be on the authorship of the Homeric poems, there is no doubt of their astonishing quality. They combine legends of a very distant past with a lively sense of the living scene, and though their characters are heroes and heroines, they are remarkably real. The story is told with a great simplicity, but this makes its episodes more dramatic, and in their greatest moments they contain some of the greatest poetry in the world. The plot moves with an unusual speed and the climaxes in both poems make an overwhelming impact. The rich, traditional language is ready for every occasion and, despite its richness, helps to maintain the essential simplicity. The poems are variously exciting, humorous, pathetic, and dramatic, and despite their fantastic elements never far from common humanity. The similes present a whole world of contemporary people and things which lie outside the actual heroic tale, and the description

of the shield of Achilles is surely the poet's vision of his own world as he knew it in war and peace. The poet or poets fully deserve their place at the beginning of European literature, since they have marked out for succeeding generations what the poetry of action and suffering ought to be.

For the allegorical interpretations of Homer, see ALLEGORY.

TEXT. *Iliad*, ed. T. W. Allen (1931), with prolegomena and full apparatus; *Odyssey*, ed. T. W. Allen (O.C.T., 1906).

COMMENTARY. *Iliad*, W. Leaf (1900-02); *Odyssey*, W. B. Stanford (1947).

CRITICISM. F. A. Wolff, *Prolegomena ad Homerum*² (1876), K. Lachmann, *Betrachtungen über Homers Ilias*¹ (1874); P. Cauer, *Grundfragen der Homerkritik*¹ (1921-1); E. Drerup, *Das Homerproblem in der Gegenwart* (1921), U. von Wilamowitz-Moellendorf, *Die Ilias und Homer* (1916); J. A. Scott, *The Unity of Homer* (U.S.A. 1921), C. M. Bowra, *Tradition and Design in the Iliad* (1930), W. J. Woodhouse, *The Composition of Homer's Odyssey* (1930), M. Parry, *L'Épithète traditionnelle dans Homère* (1928), M. HOMERIDAE, a guild devoted to reciting Homer's poetry (Pind. *Nem.* 2. 1, Pl. *Phdr.* 252 b) and telling stories about his life (Pl. *Resp.* 599 c, Isoc. 10. 65; the extant 'Lives of Homer' must ultimately derive from this source). Ordinary rhapsodes (q.v.) looked up to them as authorities and arbiters. They flourished in Chios, and it is said that they were originally Homer's descendants (Harp., s.v. 'Ὅμηριδαί, quoting Acusilaus and Hellanicus), but later admitted others, who foisted much of their own work on Homer (schol. Pind. *Nem.* 2. 1; see CYNÆTHUS). It was on them that Chios based its claim to Homer (Strabo 645, *Certamen* 13-15).

T. W. Allen, *Homer, the Origins and the Transmission* (1924), 42 ff. M. L. W.

HOMONOIA, agreement or concord between the members of a community. The bitter experience of faction in Greek States led to much theoretical praise of concord, also from early Hellenistic times to a certain amount of cult (altar at Syracuse, Livy 24. 22. 13; at Olympia, Paus. 5. 14. 9; inscriptional dedications, see Stoll in Roscher's *Lex.* i. 2701, 30 ff.), also quite common occurrence on coins (ibid. 2702, 31 ff.), which may or may not connote actual cult in the States issuing them. Hence the cult was occasionally projected into remote antiquity, as Ap. Rhod. 2. 717 ff., where the foundation of a shrine of Homonoia is ascribed to the Argonauts (q.v.). No doubt some of the dedications, etc., refer at least equally to Concordia (q.v.).

See in general Eiliv Skard, *Euergetes-Concordia* (1932), 67 ff.; W. W. Tarn, *Alexander the Great and the Unity of Mankind* (1933); and various references in the index to Nilsson, *GGR* ii. H J R.

HONESTIORES. The Romans made a broad distinction, which was at first social but acquired in the Principate and thereafter an increasing number of legal consequences, between an upper class usually termed *honestiores* and a lower class of *humiliores*. No legal definition of the two classes is found, and the allocation of an individual to one or the other was probably at the discretion of the court. The legal consequences lay in part in the private law, but were most marked in the criminal law, *honestiores* being subject to milder penalties than *humiliores* (rarely the death penalty, never death by crucifixion or *bestiis obicere*; *relegatio* (q.v.) in *insulam* in place of forced labour in the mines, etc.). The distinction is not the same as that drawn in the later Empire between *potentiores* and *tenuiores*. The legal relevance of the latter distinction lies not in privileges conferred on the *potentiores*, but on the contrary in the restrictions which

the legislator attempted to impose on their abuse of their wealth or position.

G. Cardascia, *Rev. Hist. de Droit* 1950, 305 ff., 461 ff. B. N.

HONESTUS of Corinth, author of ten epigrams in the Greek Anthology and some others discovered on stone near Thespiae, was apparently contemporary with Tiberius. His poems lack all but historical interest.

HONEY (μέλι, *mel*), the chief sweetener known to the ancients, who understood apiculture (cf. Varro, *Rust.* 3. 16) and appreciated the honey-producing qualities of flowers and localities. Hymettus honey was famed for pale colour and sweet flavour; Sicilian (particularly Hybla) as proverbially good; Corsican, harsh and bitter; Pontic, poisonous, inducing madness. Honey was used in cookery, confectionery, and medicine, and valued for its preservative qualities. Its religious associations derive from the notion that it is a *ros caelestis*, which bees gather in the upper air as well as from flowers (cf. Arist. *Hist. An.* 5. 22, 553²⁹). Poets repeat the fancy that it dripped from trees in the Golden Age. As celestial it possesses mystic virtues, was used in libations for the dead (see S. Eitrem, *Opferitus* (1915), *passim*), and in literature is given to infants to impart numinous qualities, as wisdom or eloquence (see H. Usener, *Kl. Schr.* iv (1913), 398 ff.). Bees fed the infant Plato with honey (Cic. *Div.* 1. 78; cf. A. S. Pease, ad loc.), and Zeus was called Melissaios from a similar legend of his Cretan birth.

HONORIUS, FLAVIUS, West Roman Emperor (A.D. 393-423), born in 384, was the younger son of Theodosius I (q.v.), who elevated him to the rank of Augustus in 393. He became sole ruler of the West when his father died in 395; but the effective ruler until 408 was Stilicho (q.v.). The main events of his reign thereafter were the sieges of Rome in 408-10, a period which Honorius spent safely in Ravenna, the occupation of Spain by the Vandals and other barbarians in 409, and the loss of control in Britain. In addition, numerous usurpers rose and fell. Honorius died without issue (423). He was one of the feeblest of all the Roman Emperors, and when he did intervene in politics his interventions were usually calamitous. E A T.

HONOS and VIRTUS. These abstractions, representing bravery in battle and its due reward, had three temples in Rome; one outside the Porta Collina (Cic. *Leg.* 2. 58), to Honos; one *ad portam Capenam*, dedicated originally to Honos by Q. Fabius Maximus Verrucosus in 234 B.C., then enlarged into a double temple to both by M. Marcellus (Livy 25. 40. 2-3; 27. 25. 7-9; 29. 11. 13), because two deities could not be worshipped in one *cella*; one somewhere near the Capitolium, built by Marius after defeating the Cimbri and Teutones.

HOPLITES (ὁπλίται) were the regular type of heavy-armed infantry in the Greek city-states. Citizens who could not maintain horses, yet had sufficient property to equip themselves with full personal armour, were required to serve as hoplites. In the later fifth century at Athens the hoplite qualification was regarded as equivalent to the old Solonian class of the *zeugitai* (q.v.).

The body-armour of the hoplite consisted of a helmet with nasal and cheek pieces, a breastplate, and greaves of bronze. The heavy bronze shield was his chief defence; it was circular or elliptical in shape and was usually secured on the left arm and hand by a central metal armband and a handgrip on the inner rim. The iron sword was short and straight; the spear, some 9 feet long, was held in the hand for thrusting. When in proper formation on their appropriate terrain hoplites were able to sustain effectively the assaults of archers or cavalry. But they were slow and heavy in attack, and when in difficult country or scattered they were easily defeated in detail.

HORAE, goddesses of the Seasons in Greek mythology. In Homer the Horae roll aside the veil of clouds from the gate of Olympus (*Il.* 5. 749; 8. 393), which is perhaps a mythological expression of the belief that they could give rain or heat. Hesiod (*Th.* 901) makes the Horae daughters of Justice and gives to them individual names, *Eunomia* (Good Government), *Dike* (Right), and *Eirene* (Peace). Commonly they are, however, regarded as goddesses who come with the changes of seasons and make flowers and plants grow. Their names and number vary from region to region. In Attica these names were *Thallo*, *Karpo*, and perhaps *Auxo*, referring to growth, flowering, and ripeness of vegetation (C. Robert, *Comment. in hon. Mommsen*, 143). These Horae of fertility had a place on the lips of peasants (*Ar. Pax* 1168). The Hesiodic Horae, who stand for ethical and political ideas, are mentioned in some later inscriptions (Kaibel, *Epigr. Gr.* 1110). Because they have the power to make things and beings grow and because the gifts of the Horae are pleasant, they are welcome guests at marriages and births of Olympians and heroes (Hes. *Op.* 75; *Hymn. Hom. Ven.* (vi), 5; Pind. *Pyth.* 9. 60; Paus. 2. 13. 3; Moschus 2. 164). When Hellenic religion develops to a more unified and intellectual state, the Seasons, whether three or four, are also called *Horae*. Spring, Summer, Autumn, Winter all bring their proper blessings and are depicted in art with appropriate attributes. The regularity of seasons was a favourite argument of Greek philosophers for the existence of a divine world order (Plato, *Epin.* 977 b; von Arnim, *SVF* i, no. 499, cf. Aratus, *Phaen.* 550). Seasons appear in Roman houses and on Roman tombs (F. Cumont, *Rev. Arch.* 1916, ii, p. 1). The Horae are associated with many deities, e.g. Demeter, Kore, Pan, Apollo, Dionysus, Aphrodite, and Helios, but only as subordinate companions. Philochorus describes some details of the cult of the Horae in Athens (*ap. Athen.* 2. 38; 14. 656). They were worshipped also in Argos and Olympia. In art, Horae are first shown on the François vase, without any individualizing attributes, whereas the later Season-Horae are carefully distinguished from each other by attributive plants and animals.

HORATII were, according to a popular tradition (probably independent of Greek literary influence), three Roman brothers in the time of Tullus Hostilius. Two of them were killed in combat with the Curiatii, three Alban brothers, while the survivor was tried, but acquitted on appeal, for the murder of his sister Horatia, betrothed to one of the Curiatii. An ancient ritual celebrated at the *Tigillum sororium* and traditionally explained as a commemoration of Horatia probably gave rise to the

story, unless it was invented as a precedent for the institution of the *provocatio ad populum* (see *PROVOCATIO*).

Ogilvie, *Comm. Livy* 1-5, 109 ff.

P. T.

HORATIUS (1, *PW* 9) **COCLES**, a Roman who traditionally held back the Etruscan army of Porsenna (q.v.) from the wooden Sublician bridge until it could be demolished, and then, despite his wounds, swam across the Tiber to safety. Polybius, however, records (6. 55) that Horatius was drowned. The story is probably an aetiological myth. Opposite the Sublician bridge, in the area consecrated to Vulcan, there stood an ancient statue of a lame, one-eyed man, erected traditionally to Horatius. In fact, however, it represented not the wounded Horatius but Vulcan (one-eyed as a sun god, and lame like the Greek Hephaestus, or rather because the primitive sculptor could not express the movement of the legs). The earliest allusion to the story is probably in Callimachus' *Actia* (4. 107 Pf.).

G. De Sanctis, *Riv. fil.* 1935 (contra, G. Pasquali, *Terze pagine stravaganti* (1942), 96 ff., and Walbank, *Polybius* i. 740 f.), Ogilvie, *Comm. Livy* 1-5, 258 ff. P. T.

HORATIUS (2) **FLACCUS**, **QUINTUS**, was born at Venusia (*Venosa*) in Apulia in Dec. 65 B.C. (*Epist.* i. 20. 26 f.); the day was the eighth (*Vita*). He died on 27 Nov. 8 B.C. (*Vita*). Horace says that his father's family was of servile origin, and that his father was an auctioneer, with a small-holding (*Sat.* i. 6). His father took him all the way to Rome for schooling under Orbilius (*Sat.* i. 6; *Epist.* ii. 1. 69 ff.). Horace then went to the university at Athens, and there was enticed by Brutus to serve under him as *tribunus militum* until the defeat at Philippi in 42 B.C. He returned to Italy to find his father's house and land gone in the confiscations; then, as he says with humorous exaggeration, *paupertas impulit audax ut versus facerem* (*Epist.* ii. 2. 41 ff.). But just as his education suggests more paternal wealth than Horace implies, so here humour conceals the reality: he obtained a pardon for his political indiscretion and purchased the post of *scriba quaestorius*, a keeper of records to the quaestors (*Vita*). Yet there is an important truth in the humour: Horace's poetical activity caught the attention of Maecenas to whom he was introduced by Virgil (*Sat.* i. 6). From this time (perhaps about 38 B.C.—*Epod.* i. 25-32; *Sat.* ii. 6. 53 ff.), Horace became an increasingly important member of a circle of writers who, through Maecenas, were collected under the patronage of Augustus. He frequently mentions his Sabine farm which was an early benefit of this patronage. He was able to refuse a request from Augustus to become his secretary, and the *Vita* preserves fragments of surprisingly jocular letters from the *princeps* to Horace: these facts are a measure of Horace's success in winning the confidence of the most powerful man in Rome. A less surprisingly warm relationship existed between Horace and Maecenas whose will contained the words (addressed to Augustus) *Horati Flacci ut mei esto memor*. As long as Maecenas was the intermediary between poets and Augustus this affection is reflected in the many poetic addresses to him; in Horace's later work, however, there is only one brief reference to Maecenas (*Carm.* iv. 11. 19). This need reflect no cooling of affection; poetic addresses, however friendly, were formalities, and, since Horace now addresses Augustus directly, the simplest explanation is that soon after 20 B.C. Augustus no longer felt the need of a patronage-secretary relationship between himself and certain carefully selected writers. Horace was successful with the great and he rose above his humble birth: he expresses pride in both achievements, but a cautious reader will note that an unflattering description of his

own personal appearance follows (*Epist.* i. 20. 19 ff.). Horace's self-revelation is often illusory.

WORKS

Epodes. Seventeen poems (eleven in iambs and six in a combination of iambs with dactyls) in professed imitation of Archilochus. Eight are invectives (3, 4, 5, 6, 8, 10, 12, 17), but only the joking attack on Maecenas (3) for giving Horace garlic concerns a real person (the identification by Porphyrio of Canidia in 5 and 17 as a Gratiada is both dubious since it could be an invention, and unhelpful since nothing is otherwise known of her). The feigned bitterness and ferocity, combined at times with obscenity (especially in 8 and 12), derive from Archilochus (e.g. with 10 cf. frs. 79 and 80 D.) or Hipponax (mentioned by Horace in 6). A poem of Archilochus seems to be the model for 2 (fr. 22 D.), sixty-six lines of which praise the joys of the country and then a surprise ending of four lines reveals that Albius the moneylender has been speaking. The rest of the *Epodes* look forward to the *Odes*: 11 and 15 are on love (treated rather amusingly), 14 explains to Maecenas that a love-affair has delayed publication of the *Epodes* and 13 makes preparations for a symposium. 1, 7, 9, and 16 are political, and, while they seem to have analogues in Archilochus (with 16 cf. Arch. frs. 52 and 54 D.), they represent something quite new in Roman poetry which Horace gradually evolved through the *Epodes* and *Odes*. Since 1 and 9 concern the battle of Actium, while 16 depends on Verg. *Ecl.* 4 (see *Hermes* 1938, 237 ff.), the *Epodes* range between 40 and 31 B.C. and were published about 30 B.C. Despite Horace's claim to have introduced the iambs of Archilochus to Rome (*Epist.* i. 19. 23 ff.), the composition and style of the *Epodes* display polished techniques derived from Hellenistic Greek poetry and particularly epigrams. The actuality of Archilochus is absent (as Horace says, *loc. cit.*), and, in this respect, Horace differed from Catullus who might otherwise be claimed as a predecessor (though Catullus, in spite of apparent similarities, is unlikely to have regarded Archilochus as his model).

Satires. Horace called the work *satirae*, but sometimes referred to the genre (especially together with the *Epistles*) as *sermones*. i. 5 (*iter Brundisium*) refers to an event of 37 B.C. and this is the only firm date. Book ii was published in 30 B.C. since ii. 6. 53-5 refer to events of late 31 B.C. Each book is formally homogeneous: in book i the author speaks and presents his views; in book ii all of the satires but one are written in the form of a dialogue. Book i contains ten satires (a fashionable number, cf. Virgil's *Eclogues*); book ii contains 8, no doubt because some of the satires are long and the bulk is about the same as that of book i (and of the twenty epistles in *Epist.* i and of *Epist.* ii if the *Ars Poetica* is added). Though Ennius and Pacuvius had written *satirae*, the Horatian form of the genre was the invention of Lucilius (q.v.). Horace's dependence on him extended to subjects and motifs (e.g. the *iter Brundisium* i. 5 corresponds to Lucilius' *iter Siculum*), but Horace's greatest debt was the autobiographical form: every aspect of the composition proceeds from and reflects the poet's own life—opinions, ideas, adventures, food, family, friends, literary criticism, and, particularly, views on morality. Horace's own view of Lucilius' work can be shown to develop, and the most adequate expression of it (ii. 1. 30 ff.) most closely corresponds to Horace's own method. The two satires (i. 7 and 8) which appear least autobiographical (though 8 contains Canidia: cf. *Epodes* 5 and 17) are perhaps earliest. The characters criticized are often traditional or invented (e.g. Gallionis, Maenius); or, again, unimportant or dead or both (Tillius, Priscus, Tigellius). Sustained biting satire of the Juvenalian type

is absent, and vicious personalities against the living, if present at all, are very rare. In this respect Horace differs from Lucilius, as also in the polished skill of his style and metre. The metre is a careful informalizing of the epic hexameter, which, like the style, is infinitely varied between the extremes of high epic and conversational laxity. Such a degree of stylistic flexibility is unknown outside the *Satires* and *Epistles* of Horace, and it is the product of careful artistry. Most characteristic of the composition is a fund of stories (*alvoi*), skilfully and pointedly told, that break and illustrate the flow of ideas. Perhaps most disconcerting and surprising is the humour that enlivens every subject, concealing the real mind of the writer, playing with equal ease over obscenities as over the pomposities of philosophers, and mocking the writer no less than his world.

Odes (*Carmina*). Books i-iii were published as a unit, framed between i. 1 in which Horace hopes to be placed in the canon of lyric poets and iii. 30 where he claims an immortal lyric achievement. The earliest datable ode is i. 37 (after Cleopatra's death in 30 B.C.) and the collection was probably published about 23 B.C. The collection was addressed to Maecenas. Horace claims the early Greek lyric poets, Sappho and Alcaeus, as his model, and he claims to be the first Roman to introduce their style and rhythms into Latin (the two highly idiosyncratic poems of Catullus 11 and 51 impair that claim no more than the slight similarities between Archilochus and Catullus impair Horace's claim in respect of the *Epodes*). In spite of this his stylistic debt to the polished techniques of Alexandrian poets is very great (as a comparison, e.g., of i. 10 with Alcaeus fr. 308 L. and P. will show), and odes like i. 5, 28, 30; iii. 22, 26 clearly owe much to the technique of Hellenistic epigrams. The scholiast Porphyrio says that i. 45 was modelled on Bacchylides, and the poem is unique among the *Odes* in treating an epic theme in straight narrative. The ode i. 12 is modelled fairly closely on Pindar, *Ol.* 2 and iii. 4 on *Pyth.* 1; while i. 23 is related to a fragment of Anacreon (fr. 39 D.). These odes are not truly lyric either in an ancient or a modern sense (see LYRIC POETRY, LATIN). Mostly, in imitation of early Greek lyric, they address individuals and are given a personal point of reference (sometimes highly contrived as in iii. 11 and 27); exceptions like i. 2 or iii. 6, which are closer to the technique of the *Epodes* (where Horace was prepared to address his countrymen in general), may be relatively early. There are eighty-eight poems in the collection, with the widest conceivable range of mood and topic. Some are hymnic in form or contain hymnic elements, like i. 10, 17 (combined with invitation), 21, 30, 32, 35; iii. 11, 13, 18, 21, 22, 26, 30. Others have the form of invitations or give orders for preparations for a symposium; this must have been a traditional poetic form (cf. Catullus 13) but Horace extended it and adapted it to accommodate serious reflections on life and politics in a great variety of ways: e.g. i. 7, 9, 17, 20, 26, 27, 28; ii. 3, 7, 11, 14, iii. 8, 14, 17, 18, 21, 28, 29 (in all of these—though in very different ways and with a great variety of tone—the occasion and structure are provided by the idea of a symposium). Another form is that of the *recusatio* (going back to Callimachus' refusal—prologue of *Alitia*—to write an epic poem): Horace made this into a poetic form in which, while explaining that he could not treat great political themes in his poetry, he treated them by a form of *praeteritio*: e.g. i. 6; ii. 1, 9 (where Horace urges Valgius to join him in praising the deeds of Augustus), 12. Horace's love-poems are (usually amusing) essays in a form of poetic composition rather than expressions of a human experience: i. 5, 8, 11, 13, 17, 10, 22, 23, 25, 30, 33; ii. 4, 5, 8; iii. 7, 9, 10, 15, 26, 27, 28. When addressing others his tone is teasing: when speaking of himself there

is no attempt to convey self-revelatory experience. Horace's most striking innovation was to introduce serious political statement into non-epic Roman poetry: such statements pervade all his poetic forms (not simply the so-called Roman Odes iii. 1-6) and the novelty may be characterized by comparing Catullus 34 with i. 21 which is modelled on it: Catullus concentrates on the traditional Greek hymnic forms and the actual prayer is the bald *Romulique . . . bona sospites ope gentem*. Horace concentrates his prayer on Apollo and the whole final stanza summarizes hopes for the present political situation. Many of the odes are complex, either combining several themes (e.g. i. 7, 9, 12; iii. 6, 11, 14, 24, 29) or making demands on the reader with a dramatic setting only gradually revealed by hints (e.g. i. 27, 28; iii. 8, 19). Horace's themes are often criticized as commonplace—life and death, etc. The criticism is too easy: it misses originality of treatment (e.g. i. 24 where the *consolatio* has a new vivid, almost colloquial, form) and originality of expression, in which usage, choice (including borrowings from prose: see Axelson in Bibliography), and order of words produce novelty in Roman poetry. The *Odes*, like all Horace's work, abound in illustrative *αἰῶνι* and portraits which are often the poetic core of an ode: e.g. iii. 5 (Regulus), iii. 6 (the modern girl and the young Italian of an earlier century), iii. 25 (the Bacchantes), iii. 29 (the Tiber in flood), i. 4 (simply a series of pictures), i. 25 (the old prostitute). A similar effect, on a smaller scale, is often achieved by a mythological reference, made with great economy (e.g. i. 28, 7 ff.), or a name that conjures up the great past of Rome or the sense of a far-off region or a loved and familiar place: these are often the more effective for their very lack of precision and detail (e.g. i. 12, 33 ff.; ii. 1, 25 ff.; iii. 14, 17 ff.; i. 22, 5 ff.; ii. 20, 17 ff.; iii. 4, 14 ff.; iii. 29, 5 ff.). Care and polish (*limae labor et mora*, *AP* 291) and technical excellence were Horace's ideals, but the effect of the *Odes* is seldom laboured.

Horace ceased writing lyrics after the publication of *Odes* i-iii; he resumed when he was commissioned by Augustus to write the *Carmen Saeculare* (a choral lyric in Sapphic metre to be performed by a choir of twenty-seven boys and twenty-seven girls) for the *ludi saeculares* in 17 B.C. The great marble inscription recording the ceremonies and the part played by Horace was found in 1890 (*ILS* 5050). The ode is addressed to Apollo, Diana, and the Capitoline deities; in the form of a prayer to them, the achievements of Augustus are reviewed. Horace continued writing lyrics, and *Odes* iv was the result; the latest datable ode is 6 (return of Augustus in 13 B.C.). There are fifteen odes and the collection is addressed to Paulus Fabius (q.v. 9) Maximus (aristocratic friend, almost relative, of Augustus). Some of the odes are similar to the earlier compositions: 7 (on Spring, cf. i. 4); 8 and 9 (on the power of poetry); 10 and 13 (love); 11 and 12 (invitations); 2 and 15 (*recusationes*). But serious treatment of political themes predominates, and the *Vita* says that 4 and 14 (*epinikia* for Tiberius and Drusus) were specially requested by Augustus. The style of writing and composition is more elevated, more nearly Pindaric, than the odes of i-iii; apart from this, what has been said of books i-iii applies also to iv. Of the 103 odes in the four books, 37 are composed in Alcaic stanzas, 25 in Sapphic, and 34 are in various forms of Asclepiad (the remaining 7 are mainly isolated examples). See *METRE, LATIN III*.

Epistles. The first book of *Epistulae* was probably published in 20 B.C. (i. 20, 26 ff.), if the reference to the Spanish victory of Agrippa (i. 12, 26) can be referred to a beginning of the campaign in 20 B.C. None is demonstrably earlier than 23 B.C. (13 refers to the presentation of *Odes* i-iii to Augustus), but some may have been written while *Odes* i-iii were still being

composed (cf. *Satires* and *Epodes*). Letters in verse had been written before, especially by Lucilius; but the *Epistles* of Horace are an original creation, a form of poetic composition which enabled him to treat any subject from a personal and subjective point of view. In i. 1 to Maecenas, Horace jokingly claims to have given up poetry in favour of the far more important philosophy; but such 'philosophy' as is found in the *Epistles* is of a very homespun, untechnical sort: how to get on with great men, the dangers of avarice, the excellence of the simple life, town versus country life, etc. None can be shown to be addressed to a fictitious person (but to Maecenas, Lollius, Aristius Fuscus, Tiberius, Horace's bailiff, Manilius Torquatus, Tibullus, etc.) and the epistolary form is often only casually indicated (most often by the mere geographical separation of Horace from his addressee, but sometimes by formal indications: e.g. 5, 30; 9, *epistula commendatitia*; 10, 1 ff., 49-50; 16, 4)—20 is an address to the book itself as if it were a slave for sale. The element of reality probably ceases here, and the occasion of each epistle is fictitious, a dramatic setting for the composition (e.g. i. 5 is an invitation and closely comparable to the examples of the form in the *Odes*): that is, the reader is never required by Horace to believe that he is reading a real letter, sent on a particular occasion and personal to the addressee, and Horace is at no pains to create such an illusion. The value of the form was that it provided Horace with a framework for informal, conversational composition; full expression could be given to the writer's personality and the writing has all the humour and lively variety of the *Satires*, with an equal fund of illustrative stories and portraits but with more stylistic polish and refinement.

Epist. ii. 1 to Augustus was written after 17 B.C. (132-7 seem to refer to *Carm. Saec.*) and probably after Drusus' Alpine victories of 15 B.C. (cf. 252 with *Carm.* iv. 14, 11 f.) but before the publication of *Carm.* iv. *Epist.* ii. 2, to Florus, was probably written in 19 B.C. while Tiberius was still in Armenia. Both are long (270 and 216 lines) and concern literature: ii. 2 is close to i. 1 and asserts Horace's reasons for concerning himself with philosophy, not lyric poetry; ii. 1 is about poetry in the context of the Augustan regime and surveys the earlier, still admired, literature of Rome in its relationship to society, asserting the merits of contemporary poetry. The conversational technique and the consequent absence of a strict logical framework combine to obscure the movement of thought in both these *Epistles*, a difficulty scarcely found in the shorter, less complicated *Epistles* of book 1.

Ars Poetica: this is another *epistle*, addressed to a Piso and his two sons, but by the time of Quintilian it had been given the more formal title (*Inst., Ep. ad Tryph.* 2, viii. 3, 60); it is not attached to the *Epistles* in the MSS. Its date and the identity of the Pisones are unknown (Porphyrio says he was the consul of 15 B.C.). If any weight can be given to the joking lines 301-9, they would most naturally suggest the context of *Epist.* i. 1 and ii. 2, i.e. about 19 B.C. and before 17 B.C. It is a most puzzling work and, despite its skill and humour, little is said about poetry that seems worthy of Horace. It concentrates heavily on the traditional literary genres of epic and drama, and it is hard to believe that what Horace says was intended to have relevance to the contemporary literary scene, except for the general exhortations to care and polish in style. Porphyrio says of it: . . . *congressit praecepta Neoptolemi τοῦ Πατριάρχου de arte poetica, non quidem omnia sed eminentissima*. Fragments of the fifth book of Philodemus' *Περὶ ποιημάτων* were found at Herculaneum, and they preserve some account, at second-hand, of the views of Neoptolemus. Various attempts have been made to show that Horace followed Neoptolemus

and that the structure of the *Ars Poetica* depends on him. In spite of this, it remains most probable that Horace constructed the work himself with the same informality and lack of framework as the other *Epistles*. It is impossible to estimate his debt to Neoptolemus, and statements of ancient commentators on such matters are apt to be untrustworthy. The work belongs to a context in which literary studies were still dominated by the work of Aristotle and by his exclusive interest in epic and drama: Horace adopted that point of view and what is original to him is the lively epistolary style and the humorous treatment.

HORSE AND CHARIOT RACES. In the four Panhellenic Festivals there were races both of driven and of ridden horses, and Pindar gives us the name of one race-horse, Pherenikos, belonging to Hieron of Syracuse, which won the race for single horses both at the Olympian and at the Pythian Games. This race, however, was only a sprint of under 6 furlongs, and was held of far less importance than the four-horse chariot-race which was the chief event of the day. The Hippodrome was a long rectangle of about 600 yards, with pillars at each end round which the horses turned. The chariots were light two-wheeled cars with a rail in front and at the sides; the driver wore a long white robe girt at the waist, and held a whip in his right hand, the reins in his left. In later times the fields were large, forty teams sometimes starting, but the distance was twelve laps, nearly 9 miles, and as accidents at the turning-points were frequent it is probable that few teams finished.

From the Greeks chariot-races passed on to the Romans, who found an ideal site for a race-course in the centre of Rome in the level space between the Palatine and Aventine hills. This *Circus* (q.v.) *Maximus* they gradually surrounded with permanent stands, which in the fourth century A.D. could hold over 200,000 spectators. Down the length of the course there ran a low wall—*spina*—ornamented with two obelisks, seven stone dolphins, and seven stone eggs. At one end were the twelve closed stalls—*carceres*—from which the chariots started when the presiding magistrate gave the signal; at the other was a wide semicircle where the chariots turned, the race being usually seven laps, and twenty-four races forming a full day's programme. The chariots were drawn by two, three, or four horses, the most important horse being that in the left-hand traces. The driver wore a short tunic, with the reins fastened round his body and a knife in his girdle to cut them in case of need, together with a cap bearing the colour of the faction which he represented. These factions were a Roman development; in Greece chariot-racing had been possible only for rich men, in Rome it passed into the hands of companies. There were four of these, distinguished by their colours,

white, red, blue, and green, the last two of which gradually absorbed the others. The Roman onlooker displayed his favourite colour and betted on it, and the rivalry between the blues and the greens became so intense that at Constantinople it led to the famous Nika riot.

HORSES. The horses of classical antiquity were derived from animals domesticated upon the northern steppes and brought into south-west Asia and the Mediterranean region from the early second millennium B.C. onwards. Zoologists now question the distinction between the western and eastern (Przewalski) wild horses and consider that ancient breeds differed because separate strains developed in different environments. Horse-bones are reported from Early-Bronze-Age sites in Macedonia, a Middle Helladic site in Messenia, and from Troy VI. Representations of horses were found in the Shaft Graves of Mycenae. The horse was brought to Anatolia probably by the Hittites and to Egypt perhaps by the Hyksos, and later reached Libya. Its arrival in Italy is not documented, but horse-bits are common in Villanovan graves. Horses were both ridden and driven in the second millennium B.C. The replacement of chariots by cavalry in war (early first millennium in the Levant; after 700 B.C. in Greece and Italy; later in Western Europe and North Africa) was made possible by severer bits as well as by better horses. The small, fine-headed horses portrayed in Greek and Etruscan art later degenerated, while the horses of North Africa and Illyria retained their primitive qualities. The large Persian horses noted by Herodotus appear at Persepolis as low, massive, heavy-headed animals. Roman cavalry horses are illustrated on Trajan's Column. The statue of Marcus Aurelius on the Capitol is mounted on a magnificent charger. Mosaiques illustrate other types of horses, including race-horses and hunters. No heavy draught horse was developed in antiquity, and the horse remained a rich man's possession, used for war, sport, and travel, but not for agriculture.

HORTENSIIUS (1, *PW* 7), **QUINTUS**, was appointed dictator in 287 B.C., despite his obscure descent, to reconcile the Orders after debts and usury had provoked the final secession of the *plebs* to the Janiculum. He carried a *Lex Hortensia* by which *plebiscita* were to be binding on the whole community and the Senate had to recognize such measures as legal before they were put to the plebeian assembly. Another *Lex Hortensia* (probably 287) provided that lawsuits should take place on the *nundinae*, when the peasants, taking advantage of the country-holiday, came to Rome on business.

HORTENSIIUS (2, *PW* 13) **HORTALUS**, **QUINTUS**, born in 114 B.C., was a son-in-law of Catulus (q.v. 2) and boyhood friend of Lucullus (q.v. 2) and Sisenna (q.v.), with whom he shared cultural interests and a love of luxury. One of the leading orators under Cinna (q.v. 1) and Carbo (q.v. 2) (associated with the latter in defending Pompey), he joined Sulla in time and was supreme in the lawcourts in the 70s B.C., using a florid and theatrical 'Asiatic' style (then new and exciting) and resorting to shameless bribery. Defeated by Cicero in the case of his friend Verres, he still remained an eminent orator and, after his consulship (69), a man of high standing

among the Optimates. He opposed Pompey's special *imperia* and joined Cicero in many political cases (especially those of Rabirius (q.v. 1), Sulla (q.v. 2), and Sestius (q.v. 3)), but looked down on him as a *novus homo*. Cicero, who distrusted him in his lifetime, after his death (50) paid him many tributes in his rhetorical and philosophical works, especially in the *Brutus*.

HORUS, usually called **Harpocrates** (Horus the child) by the Greeks, was originally a god of lower Egypt. His characteristics and his unique qualities as they were known to the Greeks came almost entirely from his role in the myth of Osiris. The myth is given in a late, hellenized form by Plutarch in his essay concerning Isis and Osiris. After the murder of Osiris Isis gave birth to a son, Horus, who, after many trials, succeeded in punishing the wicked Set (Typhon). Egyptian mythology dealt at length with the obstacles which the untried youth had to overcome, and, in later times, Horus the child drew the affections of the Greeks and Romans. There are a few dedications to Horus outside Egypt, and he is sometimes represented as a mounted warrior with the head of a hawk. In unnumbered instances, however, he appears as Harpocrates and is represented as a chubby infant with his finger held to his mouth. He is frequently represented within Egypt and outside as a baby being suckled by his mother Isis, less frequently as a youth with pomegranate or a child on a lotus flower. Harpocrates is usually found as a member of the cult of the Egyptian deities, along with Isis and Sarapis, his mother and father. Representations of him are almost innumerable, from rings and amulets to life-size statues of him as a youth. In his various forms he is at times identified with Heracles, Eros, and Apollo.

T A B

HOSTIUS, an epic poet, wrote about the *Bellum Histricum* of 129 B.C. Perhaps he dealt with contemporary events (as Naevius and Ennius had). There were at least three books and scanty fragments survive.

Morel, *FPL* 33 f.; Schanz-Hosius, § 61a.

HOUSES, GREEK. The houses of the archaic period and of the fourth and fifth centuries were simple in form and construction. The usual material was unbaked brick, often lime-washed externally, on a stone socle, with timber of course and terracotta tiles for the roof (though flat terraced roofs were also sometimes used, and thatch in early times). The poorest houses consisted of a mere couple of rooms; but usually there was a small courtyard (*aule*), which tended to be on the south side, giving the main part of the house a southward aspect. The courtyard was entered from the street by way of a porch (*prothyron*), and sometimes displayed an altar, of Zeus Herkeios. The arrangement of the rooms around it was informal and variable, without any attempt at symmetry. Greek houses presented a plain façade to the streets, broken by the door and a few small windows. Architectural interest was concentrated in the interior. In the better houses the courtyard might have a simple colonnade (*prostoon*) on one or more sides; complete peristyles are mostly Hellenistic, though there are several earlier examples at Olynthus. In a commodious house the rooms might include the *andron* (the main dining-room, more handsomely decorated than most), work- and store-rooms; a kitchen; a small bathroom; and a room or rooms set apart for the women (*gynaikonitis*). Many houses had a second story (hardly more), often no doubt with a

balcony; here one would find the bedrooms, and perhaps the *gynaikonitis*. Sometimes a room or a couple of rooms formed a separate unit, opening on the street, and serving as a shop. The same basic house-type could do duty not only as a dwelling but also as an inn, a factory, or warehouse for a family business, an elementary school, or a farmhouse. Country houses could be allowed a somewhat more spacious layout (see J. E. Jones, L. H. Sackett, and A. J. Graham, *BSA* 1962, 75 ff.).

Floors at ground level were of hard earth, except in a few important rooms. Walls might be plastered and painted in simple schemes, but were often left in bare brick. Water was provided by wells and underground rain-water cisterns, which supplemented the fountains built in the public places of the city. Efficient sanitation was non-existent. Heating was by means of hearths built of stone slabs set in the floor, and movable braziers. The smoke escaped by holes contrived in the roof, though in some Olynthian houses there is evidence of a flue-like arrangement. Furniture, even in the houses of the well-to-do, was sparse and simple by modern standards (see *Hesp.* 1956, 210, 212).

Olynthus (q.v.) in north Greece now provides the most plentiful evidence for houses of the fifth and early fourth centuries. On the South Hill was the older quarter, with irregular streets and small houses. On a plateau to the north an extensive new town was laid out in the latter part of the fifth century (see *TOWNS*), and here the houses were uniform and square (about 56 feet), in blocks of ten, though in interior arrangement there was still great variety and individuality. A constant feature is the *pastas*, a long room extending east-to-west across the whole width of the house, or nearly the whole, and opening southwards through pillars on the courtyard. A series of rooms opened on the *pastas* from the north. There was no single important room forming a nucleus as at Priene. A number of fifth- and fourth-century houses have recently been found on the fringes of the agora at Athens (*Hesp.* 1951, 135 ff.; 1959, 98 ff.; 1966, 51 ff.); these have a very general similarity to the Olynthian houses, but are simpler and more irregular.

More elaborate types appear in the Hellenistic period. The houses of Priene (q.v.) were more monumental in construction, with a greater use of stone. Most distinctive is a feature which may be a survival or revival of the ancient *megaron* (see *TEMPLES*), a dominant room opening on to the court from the north through a handsome columnar porch. The houses of wealthy merchants at Delos (q.v.) exhibit a greater degree of luxury, with elegant peristyle courts and elaborate mosaics in the chief rooms. Simpler houses stand side by side with these at Delos—there is no evidence that the residential segregation of classes was carried far in Greek towns; in some an external stairway led to a separate apartment on the upper floor.

There was no place for anything which could be called a palace in the normal Greek city of the fifth and fourth centuries. A curious example occurs at Larisa on the Hermus in north-western Asia Minor (cf. A. W. Lawrence, *Greek Architecture* (1962), fig. 138). Presumably the residence of a local ruler, it has several megaron-like units opening on to a court. In Hellenistic times more truly palatial residences appear. Houses recently excavated at Pella (q.v.), the capital of Macedonia, show on a splendid scale the features noted in the more elegant Delian houses; they were presumably occupied by very important persons. Another fine Macedonian palace was excavated at Palatitza several years ago; it has extensive suites of rooms grouped around a peristyle with sixteen columns on each side (plan, see *JHS* 1957, *Arch. Rep.* 1956, 18; *Arch.* 1957, 285). Hellenistic 'palaces' were essentially variations of a vastly extended and highly

elaborate form of a Greek type—the peristyle house. (See also PERGAMUM.)

Vitruvius (6. 7) describes a 'Greek house' which has two courtyards; in one, the *gynaikonitis*, the intimate life of the household goes on; another, the *andronitis*, is much more splendid, and contains dining-rooms. There are also suites of guest-chambers, gardens, and other amenities. This is no doubt based on a late Hellenistic type, and contrasts strongly, as far as our limited evidence goes, with the houses of the time of Pericles and Demosthenes.

R. E. W.

HOUSES, ITALIAN. In historical times, two types of town-house coexisted in Italy, the *insula* and the *domus*. The former was an apartment block, large, high, housing many families: the latter generally the home of a single family. The former was essentially an urban growth: the latter seems to have had its origin in quite different conditions, probably rural.

2. *Insula*. The *insula* was a natural growth from a row of shops or workshops lining a street, with living-quarters behind or above them. Cost of land drove first the humble, later the well-to-do (Cic. *Pro Caelio* 17), to build upwards rather than outwards. The use of timber and sun-dried bricks made for cheapness, though not for stability. The *insulae* acquired an unsavoury reputation as overcrowded (Mart. i. 117), unsightly, and insecure (Strabo 235). Until Augustus limited their height and Nero improved their building standards (Tac. *Ann.* 15. 43), the risk of fire and collapse was ever-present. However, the use of brick-faced concrete led to a vast improvement after Nero. In Rome of the fourth century A.D., the *insulae* outnumbered the *domus* by more than twenty-five to one. Actual remains in Rome are fragmentary, though plans are preserved in the *Forma Urbis Romae*. To see the *insula* in its varied character one must look to Ostia, where it developed later than in Rome though under Rome's influence. At least three types are found, viz. (i) a row of shops facing the street, with living-quarters behind or above. Such a row is found at Pompeii in the Sullan age (Via della Fortuna), and at Ostia in the late republican and early imperial age; such rows reached an imposing dignity, having upper balconies or porticoes over the pavement of the street; (ii) a double row of shops built back to back (Via delle Corporazioni at Ostia); (iii) rows of rooms or shops surrounding a central area. The rooms might face on the street or might be in a double series, one facing outwards, the other facing into the courtyard (Casa del Triclinio at Ostia). Many of the Ostian apartments are spacious, many-roomed, and well-lighted, in strong contrast to the picture of those in Rome painted by Martial and Juvenal.

3. *Domus*. Originally the *domus* had as its main feature an *atrium*, i.e. an unroofed or only partially roofed area with rooms round about, which were lighted from it and arranged along a central axis in a more or less stereotyped order (viz. the *tablinum* and its flanking rooms at one end, the *alae* separating the *tablinum* end from the rest, and small rooms on each of the sides and also flanking the door, which lay opposite the *tablinum*). The origin of the *atrium* is uncertain. The triple division of the *tablinum* and its flanking rooms may be related to the triple division of the *cella* of an Etruscan temple, and the whole house may derive from the Etruscans. The purpose of the *alae* is not clear: possibly under different conditions of life they were entrances, since in a number of Campanian *villae rusticae* entrances are found in this position. The earliest extant examples of *atrium*-houses

are found at Pompeii, e.g. Casa del Chirurgo (fourth to third centuries B.C.). This house, when first built, had no *impluvium* (a basin in the floor designed to catch rain-water). This feature is not found earlier than the second century, but thereafter became normal. In the absence of an *impluvium*, it is not known if the *atrium* of the Casa del Chirurgo was roofed. A century later a more imposing design is found in the Casa di Sallustio at Pompeii. The *atrium* had an *impluvium*, which implies that except for the *compluvium* (a rectangular opening in the centre of the roof) the area was roofed. The darkening of the *atrium*, caused by the roofing, was offset by large windows in the *tablinum* and adjoining rooms, which opened on a portico and overlooked a garden. The rooms on the street side were converted into shops, an innovation doubtless inspired by the plan of the *insula*.

4. *Foreign Influence*. Neither the *domus* nor the *insula* remained untouched by foreign influence. In the *domus* the most striking importation was the Hellenistic peristyle in the second century B.C. (a garden surrounded by a portico), which either was incorporated as an additional feature behind the *atrium* (Casa di Pansa, etc.), or superseded the *atrium* altogether. In the Ostian *insulae* Greek influence is suggested in type iii above (e.g. Casa di Diana). Behind façades of shops lies an open area with entrances from the street, surrounded by narrow corridors on several floors with rooms opening off them and on one side a large, high room, sometimes with two columns supporting the lintel—an arrangement which can be paralleled from fifth to third centuries B.C. from the Palace at Vouni, from Olynthus, Priene, and Delos.

At Ostia during the late Empire the independent *domus*, which had passed out of favour in the crowded conditions of Ostia's heyday, came into use once more; not, however, in the stereotyped form of the old *atrium*, but with new architectural features (stylized capitals, arches springing direct from columns) that looked forward to the Byzantine age and to the Middle Ages.

5. *Palaces*. The imperial palace in Rome began modestly under Augustus (Suet. *Aug.* 72) with a traditional *domus*, the remains of which may be seen near the Palatine; but it did not long remain on this simple scale. After the fire of A.D. 64 had cleared the ground, Nero built his fantastic *domus aurea* (q.v.) between the Palatine, Caelian, and Esquiline, artificially landscaped, with a central lake on the site of the future Colosseum. Remains of its lower stories survive and indicate rows of marble-lined rooms opening into colonnades, of inner chambers decorated with stucco paintings, of an octagonal room with vaulted ceiling, flanked by apsed chambers—an important architectural development. The Domitian palace on the Palatine was more compact in plan but no less grandiose in conception, with throne-room, peristyle, triclinium in the state apartments, all on a stupendous scale, repeating in an adjoining room the octagonal shape and double apse already mentioned, and an interesting series of private apartments, turned inwards for seclusion but with two stories of windowed galleries overlooking the Circus Maximus along the shallow arc of the façade. Next, chronologically, came Hadrian's villa at Tivoli, rambling for a mile over the lower Apennine slopes, an epitome in its architectural fancies of its builder's world-wide travels, out-vying Nero's *domus aurea* in its architectural richness, but with learning and intellect revealed in every contrivance. Finally, just outside the bounds of Italy, the palace of Domitian at Spalato, on the coast of Yugoslavia, a fortified camp in outline with barracks for the imperial guard, and the palace proper in place of the headquarters—throne room flanked by arches which spring direct from capitals and herald the romanesque, basilica, banqueting hall, temple, octagonal mausoleum, and, facing the sea, a great gallery running the entire

width with corbelled columns supporting an entablature. Here Roman palatial architecture said its last word. See also HYPOCAUST.

HUNS, a nomadic pastoralist people whose early history is unknown. They appeared in south-eastern Europe c. A.D. 370, destroyed the kingdom of the Ostrogoths in the Ukraine, and drove the Visigoths of Transdanubian Dacia into the Roman provinces in 376. Early in the fifth century they advanced into central Europe driving other barbarians into Italy and Gaul (see VANDALS); but details of their history in this period are lacking. They were ruled c. 430 by a certain Rua, who in 434 was succeeded by Attila (q.v.) and Bleda. After Attila's death (453) their vast empire was divided between his sons, who were defeated in 455 by a coalition of their subjects. The Huns were of little historical significance thereafter. In their heyday they were superb but not invincible horsemen — Aetius (q.v.) defeated them in Attila's lifetime (451) — and exploited their subjects mercilessly. They exacted enormous quantities of gold from the Eastern Empire, but failed to win any of its territory.

E. A. Thompson, *A History of Attila and the Huns* (1948), F. Althelm, *Attila und die Hunnen* (1951). E. A. T.

HUNTING (κυνηγεσία, *venatio*) was practised by the Greeks and Romans, but, except in Homeric times, not in a very sporting spirit. In Homer the animals hunted have a fair chance of escape and the hunter incurs a certain amount of danger, as Odysseus did when faced by the wild boar (*Od.* 19. 429-46). But in classical Greece the hunter ran little risk; hunting, as Xenophon tells us, meant chiefly pursuing hares on foot, with dogs and nets placed to catch the quarry, which was then dispatched with a club. In hunting the roe deer nets were used and snares in the form of a wooden clog, which caught the deer's foot and hindered its escape; another method was to catch a fawn and to entice the dam into the open — 'that is the moment to set the hounds on and ply the javelins'. In hunting the wild boar caution comes first: 'Provide yourself with Indian, Cretan, Locrian, and Laconian hounds, boar-nets, javelins, spears, and caltrops; also a company of hunters, for the task of capturing the beast is no light one.' The Romans followed the same methods; but under the Empire the hunting of big game for the arena became an important business. (See VENATIONES, DOGS.)

HYACINTHUS, a pre-Hellenic god worshipped at Amyclae. In historical times his cult was subordinate to that of Apollo, and a story was told that he was a beautiful boy whom the god loved, killed accidentally with a discus (in one version Zephyrus, who was Apollo's rival, blew the discus aside so that it struck Hyacinthus on the head), and mourned for, in token of which the

flower of the same name, a sort of iris, sprang from the boy's blood and is marked αἶα ('alas, alas!'; cf. AIAS 1). But the ritual of the festival, the Hyacinthia (Ath. 139 d ff.), the representation in local art of Hyacinthus as bearded (Paus. 3. 19. 4), the name of Artemis Ἰακυνθοτρόφος, and the pre-Greek *-nth-* of the name, all point to the truth. Various Dorian cities had months named after Hyacinthus.

See Rose, *Handb. Gk. Myth.* 142, 160; Farnell, *Cults* iv. 125, 264 ff., *Hero-Cults* 22, 27; Nilsson, *Mythoan-Mythoan Religion* (1950), 485 ff. Machteld J. Mellink, *Hyacinthos*, diss. 1943. Chief ancient references, besides those already given: Nic. Ther. 902 ff. and schol., Apollod. 1. 10-17; 3. 116; Palaephatus 46 (47).

H J R.

HYADES ('Υάδες, 'the rainers'), a group of five stars in Taurus, so named because their acronychal rising and setting (respectively 17 Oct. and 12 Apr. according to Eudoxus) are at rainy times of the year; absurdly called Suculae in Latin, as if from *ſc.* Mythologically they were nurses of Dionysus (q.v.; see Hyg. *Fab.* 182. 2 and Rose ad loc.); but the story, which seems to go back to Pherecydes, is very confused in the forms which we have. Another account (Hyg. *Poet. Astr.* 2. 21; schol. II. 18. 486; Eustath. 1155. 45 ff.) is that they are sisters who cried themselves to death when their brother Hyas was killed hunting.

H J R.

HYGIEIA ('Υγίεια), personified Health, usually said to be daughter of Asclepius (q.v.), and associated with him in cult. She is the most important of his attendants, having a cult at Titane (Paus. 2. 11. 6), apparently almost as honoured as his. In the Hippocratic oath her name follows immediately on his and before that of Panacea (Kühn, 1), and Licymnius (fr. 4 Diehl) addresses her as 'mother most high', curiously, for she is usually said to be virgin. The word occurs also as a title of Athena (q.v.; Plut. *Pericles* 13), earlier than the introduction of Asclepius to Athens. For further references see Nilsson, *GGR*, s.v.

H. J. R.

HYGINUS (1), GAIUS JULIUS; a Spaniard (according to another account, an Alexandrian brought to Rome by Caesar), a freedman of Augustus, appointed by him librarian of the Palatine Library (Suet. *Gram.* 20). A pupil of Alexander Polyhistor, he was himself a teacher and was a friend of Ovid, who addresses him in *Tr.* 3. 14. His writings, now lost, covered a wide range of scholarship: (a) a treatise *De Agricultura*, perhaps including the *De Apibus* cited by Columella; (b) a commentary on Virgil, cited by Gellius and Servius, apparently both exegetical and critical; (c) historical and archaeological works — *De familiis Troianis*, *De origine et situ urbium Italicarum*, *De vita rebusque illustrium virorum, exempla*; (d) works on religion — *De proprietatibus deorum*, *De dis penatibus*.

See Peter, *HRRel*; Funaioli, *Gramm. Rom. Frag.* See also SCHOLARSHIP, LATIN, IN ANTIQUITY.

C. J. F.

HYGINUS (2), *gromaticus*, of Trajan's time; author of treatises (1) on boundaries, (2) on types of land-tenure, (3) on land-disputes. He refers to another work not extant, a handbook of imperial land-regulations. A treatise *De limitibus constituendis* to which his name is attached is generally assigned to a later author. See BIBLIOGRAPHY under GROMATICI.

C. J. F.

HYGINUS (3). Two extant Latin works are attributed to a Hyginus who cannot be identified with Augustus' freedman or with the *gromaticus*.

(a) *Genealogiae*, a handbook of mythology, compiled from Greek sources, probably in the second century A.D. The work was abbreviated, perhaps for school use, and has suffered later accretions; its absurdities are partly due

to the compiler's ignorance of Greek. The usual title *fabulae* is due to the *editio princeps* of Micyllus (Basle, 1535), now the only authority for the text; the manuscript which he used is lost. See MYTHOGRAPHERS (ad fin.). Critical ed.: H. J. Rose, Leiden 1934.

(b) A manual of astronomy, based on Greek sources, possibly by the same author. C. J. F.

HYGINUS (4). To Hyginus Gromaticus there has been falsely attributed the incomplete treatise *De munitionibus castrorum*, a handbook of castrametation on a basis more theoretical than practical. Its date is disputed, and has been assigned to the later years of Trajan, to the first half of the second century, to the age of Septimius Severus, and to the third century. Of these the third-century date appears the most probable. See CAMPS.

EDITIONS Lange (1848); Gemoll (1879); A. von Domaszewski (1887). G. R. W.

HYLAS. Theiodamas king of the Dryopes attacked Heracles because the latter had seized and eaten one of his plough-oxen. After a desperate struggle in which even Deianira took part, Theiodamas was defeated and killed. Heracles spared his young son Hylas and made him his page. They went together on the voyage of the Argonauts (q.v., § 2), till the landing at Cios. There Hylas went to fetch water, found a spring, and was pulled into the water by its nymphs, who were in love with his beauty. Heracles stayed to look for him and the rest, after some discussion, went on without him; cf. DIOSCUR. It would seem that this story connects with a local custom, for Apollonius says (1354) that in his day the people of Cios still looked for Hylas. Ritual search for a deity, perhaps of vegetation, is not unfamiliar in the Greek world, see Athenaeus, 619 f (Bormos among the Marian-dyni), Rose, *Handb. Gk. Myth.* 118 (Britomartis). See Ap. Rhod. 1. 1177 ff. and schol.; Theocr. 13. H. J. R.

HYLLUS, in mythology, eldest son of Heracles (q.v.) by Deianira (Soph. *Trach.* 55, etc.) or Melite (schol. *ibid.* 54). See HERACLIDAE.

HYMENAEUS. It was customary at Greek weddings to cry 'Ἕμην ὦ ὦ Ἕμην ὦ ὦ Ἕμην ὦ ὦ Ἕμην' (Ar. *Pax* 1334 ff.; Catull. 61. 4, etc.; 62. 5, etc.). Rightly or wrongly, this was understood as an invocation of a being called Hymen or Hymenaeus, and various stories were invented of him, all to the effect that he was a very handsome young man who either married happily or had something happen to him on his wedding-day. See Sauer in Roscher's *Lexikon*, s.v. H. J. R.

HYMNS. A ὕμνος is any metrical address to a god, originally sung. The word is of doubtful origin, possibly non-Greek. It occurs once in Homer (*Od.* 8. 429), and a choral hymn to Apollo is described in *Il.* 1. 472-4. Hesiod speaks of winning a prize for a ὕμνος (*Op.* 651 ff.). Hymns were both lyric and hexametric, and Callim. *Lav. Pall.* may be based on earlier elegiac models. Although all choral lyric poetry seems religious in origin, and hymns were written by the well-known early lyricists (e.g. Alcaeus), the hexameter was in antiquity considered the earlier form. (Cf. esp. Pausanias, who knows of Olen, Pamphus, Orpheus, Musaeus, and Homer as hymn-writers.) The content was usually an accumulation of names and epithets of the god (suggesting an original element of magical compulsion), and recital to his deeds, followed by a short prayer. Hymns written to invoke a local god on special occasions must have existed from very early times. An example survives in the Elean invocation of Dionysus (Diehl, *Anth. Lyr. Gr.* ii. 206). Hexametric hymns mentioned by Pausanias

have the same local and ritual nature, and were sometimes written for private mystical groups, e.g. the Lycomid *genos* (Paus. 9. 30. 12). The Homeric Hymns (8th to 6th cc.) are literary rather than devotional, and the myth is the chief feature. The ascription to Homer suggests the aristocratic epic tradition, and they were probably delivered in competition by professional rhapsodes at festivals (cf. *Hymn. Hom. Ven.* (vi) 19). Geographically they are widely scattered. Lyric hymns tended to displace the hexametric (cf. Pindar's ὕμνοι and ἱαίαιες, and in the sphere of cult the paean to Asclepius found in four copies, J. U. Powell, *Coll. Alex.* 137 f.), but the hexameter survived for purposes of cult. (For ritual hymns in the classical period see also F. Adami in *Jahrb. f. cl. Phil.* Suppl. xxvi (1901), 215 ff.) Hymns were sung at Symposia (Pl. *Symp.* 176 a), as—according to his accusers—was Aristotle's paean in honour of Hermias (Diehl *l.c.* i. 117-19; for its literary genre see C. M. Bowra in *CQ* 1938, 182 ff. The Hellenistic period provides the hymns of Callimachus together with many cult-hymns from inscriptions, e.g. the paean of Isyllus to Apollo and Asclepius (Wilamowitz, *I. von Epidaurus*, 1886; cf. Powell and Barber, *New Chapters*, 46 f.). Some found at Delphi have musical notation, a valuable addition to the scanty evidence for Greek music. Epigraphical material increases in the Graeco-Roman age, especially from Asia Minor, telling, e.g., of guilds of ὑμνοῦδοί and their performances. The Palaikastro hymn to the Cretan Zeus, with interesting magical element (Diehl ii. 279 f.), is recorded in a copy made not earlier than A.D. 200, but reproduces a Hellenistic or earlier composition. In a series of pregnant prose sentences, which were reworked by later writers into hexametric and iambic form, the goddess Isis recounts her own virtues (W. Peek, *Der Isis-Hymnos von Andros und verwandte Texte*, 1930), illustrating the age's craving for revelation. From imperial times we have the prose hymns of Aristides, the directions of the rhetorician Menander for the writing of such compositions, and the hexametric hymns of 'Orpheus' (ed. E. Abel, 1885, and W. Quandt, 2nd ed. 1955), syncretistic and with a flavour of popular Stoicism, which were almost certainly written for a cult-society on the coast of Asia Minor (O. Kern in *Hermes* 1911, 431 ff.).

From Cleanthes onwards appears the philosophico-religious hymn, beloved of the Neoplatonists. Finally, the growth of superstition brought back the magical hymn in elaborate forms.

R. Wunsch, *PH*, s.v. 'Hymnos'; E. Norden, *Agnostos Theos* (1913), and, for early Roman hymns, *Aus altrömischen Priesterbüchern* (1919), including, 217 ff., a discussion of the Palaikastro hymn). W. K. C. G.

HYPATIA, lady learned in mathematics, astronomy, and philosophy (d. A.D. 415). Daughter of the mathematician Theon (q.v. 1) of Alexandria, she revised the third book of his *Commentary on the Almagest*. Commentaries by her on Diophantus and Apollonius are lost. Influential in Alexandria as a teacher of the pagan Neoplatonist philosophy, she was torn to pieces by a mob of Christians at the instigation of their bishop (later Saint) Cyril.

Edition of the *Commentary on the Almagest* by A. Rome, *Studi e Testi* 106 (Rome, 1943). See introduction, cxvi-cxxi. Socrates Scholasticus 7. 15 See also the letters of Synesius, her pupil. Gibbon, *Decline and Fall*, ch. 47. R. Hoche, *Philol.* 1860, 435 ff. G. J. T.

HYPERBOLUS (d. 411 B.C.), Athenian demagogue of humble origin. During the Archidamian War he was a prominent member of the radical war-party and became its leader after the death of Cleon. In 417 (according to some, in 415) an ostracism was held by which Hyperbolus expected to secure the removal of Alcibiades or Nicias, but they secretly allied against him, and he was

himself ostracized. He went to Samos, where he was murdered by oligarchical revolutionaries. He is condemned by Thucydides in unusually violent terms (8. 73); but, since he was the constant butt of comic poets, his influence must have been considerable. H. D. W.

HYPERBOREANS. A legendary race of Apollo-worshippers living in the far North, highly revered by the Greeks. (Earliest mention is Hes. *Cat.* fr. 49 Trav.; for their blessed existence see esp. Pind. *Pyth.* 10.) In Delphic legend Apollo spent the winter months with the Hyperboreans. Offerings from them arrived at the Delian shrine (Hdt. 4. 33), not brought by the Hyperboreans themselves (a myth gives the *aiton* for this), but passed 'from city to city' until brought to Delos by the men of Tenos. The name has been variously interpreted as 'beyond the North wind', 'beyond the mountains', and 'carriers round or over' (cf. the *περφερέες*, officials at Delos, Hdt. loc. cit.). W. K. C. G.

Various historical substrata to the legend of the Hyperboreans have been sought by modern scholars. Some have suggested that the line of stations by which the offerings of the Hyperboreans reached Delos was an actual trade route for amber in Herodotus' day. But we know from Callimachus that the offerings were ears of wheat (*Del.* 283-4). A different theory is that the wheat was sent as firstfruits to Apollo by some lost Greek colony in the cornlands of the lower Danube (C. T. Seltman, *CQ* 1928, 155). But the route by which the offerings travelled cannot be traced back beyond Epirus; their place of origin must remain conjectural.

J. Bolton, *Aristea of Proconnesus* (1962).

M. C.

HYPERIDES (Ἵππερίδης) (389-322 B.C.), son of Glaucippus, an Athenian of good family, who was uncompromisingly hostile to Macedon and was one of those originally demanded by Alexander in 335. At first a professional speech-writer, he made a name later as a prosecutor in public trials, beginning in 362 with an attack on Aristophan. In the 340s he sympathized with Demosthenes, and in 343 successfully prosecuted Philocrates. As a delegate to the Amphictionic Council he staunchly supported the claim of Athens to the presidency of the temple of Apollo on Delos. After Chaeronea he proposed extreme measures, including the manumission of slaves, for the public safety, and was impeached by Demades for illegality. Shortly before this he had proposed a decree to honour Demosthenes, but later he was one of the prosecutors of Demosthenes in the affair of Harpalus (q.v.), 324 B.C. After the death of Alexander, Hyperides was chiefly responsible for the Lamian War, and pronounced the funeral oration on the Athenian dead. The general Leosthenes, who was among the fallen, was his personal friend, and the speech deals mainly with him. After the battle of Crannon, Antipater demanded that Hyperides, together with Demosthenes and others of the war-party, should be surrendered to him. Hyperides was arrested and put to death (322).

WORKS. Although in antiquity of the seventy-seven preserved under the name of Hyperides no less than fifty-two were regarded as genuine, except for a few fragments Hyperides' work was unknown to the modern world until 1847. Between that year and 1892 papyri were discovered containing several of his speeches, in whole or in part, the most interesting being the all too fragmentary *Against Demosthenes*.

Hyperides was a pupil of Isocrates, whose influence may be traced in the exalted style of the *Epitaphios*, but in general tone he is more akin to Lysias. He borrowed words and phrases from Comedy, thus bringing his language into touch with the speech of everyday life. Linguistically his speeches have been studied in relation

to the rise of the *κωμῳδία*. [Longinus] *On the Sublime* draws attention to his wit, his suavity and persuasiveness, his tact and good taste. He can be sarcastic and severe without becoming offensive; his reproof often takes the form of humorous banter. He speaks with respect of his adversaries, and avoids scurrilous abuse. Ancient opinion ranked him second only to Demosthenes as an orator.

For general bibliography see *ATTIC ORATORS*.

 INDEX. H. Reinhold (in Teubner text). J. F. D.

HYPERION, a Titan, husband of his sister Theia and father by her of the Sun, Moon, and Dawn (Hes. *Theog.* 371 ff., cf. 134 f.). Often the name is used as an epithet of the Sun himself, as *Od.* 12. 133.

HYPNOS, the god of sleep in Greek mythology. Hypnos is fatherless, son of Nyx and brother of Thanatos (Hes. *Theog.* 211, 756). According to Hesiod he lives in the underworld and never sees the sun, but in contrast to his brother he comes softly and is sweet for men. In Homer, however, Hypnos lives on Lemnos and gets from Hera the Charis Pasithea as wife. He is human at first, but changes into a bird of the night before he makes Zeus fall asleep (*Il.* 14. 231 ff.). Throughout antiquity Hypnos was usually thought of as a winged youth who touches the foreheads of the tired with a branch (Verg. *Aen.* 5. 854) or pours sleep-inducing liquid from a horn. Myths about Hypnos are few: he helps to bury Sarpedon (*Il.* 16. 672) and is said to have fallen in love with Endymion whom he made to sleep with open eyes (Ath. 13. 564 c). He had a cult in Troezen (Paus. 2. 31. 3). In art, Hypnos carried by Nyx was shown on the Chest of Cypselus; on vases, he and Thanatos carry Memnon, Sarpedon, and human warriors to the grave. A beautiful Hellenistic statue known through several copies shows Hypnos gliding over the ground and pouring sleep-bringing liquid from his horn.

HYPOCAUST (ὑπόκαυστον, *hypocaustum*), a raised floor heated from below by a furnace (ὑπόκαυστος), a device applied c. 100 B.C. to baths (Val. Max. 9. 1. 1; Pliny, *HN* 9. 168) and occurring also in private houses by the time of Vitruvius (5. 10). During the first century A.D. box-tiles (*tubuli*) were introduced into walls and roof, permitting the development of Roman bathing from the simple Greek sweat-bath (*laconicum*) to an elaborately graded system (Celsus, *Med.* 1. 4; 2. 17). Heat was conveyed by radiation, the floors being carried upon many thin pillars, while walls were continuously jacketed (Sen. *Ep.* 90. 25; Pliny, *Ep.* 2. 17. 9 and 23). The furnace might also carry hot-water boilers (*alutina*, Vitruvius 5. 10). A second type, the channelled hypocaust, employed charcoal to heat large masses of masonry intersected by channels. While Pliny's Italian villa boasted few hypocausts, they were common in colder lands for heating living-rooms ('diacturum hypocaustarum', *Dig.* 32. 1. 55).

Acad. Rom.* 1956, 167 ff.; J. B. Ward-Perkins and J. M. C. Toynbee, *Archaeologia* 1940, 165 ff.; D. Krencker and E. Krüger, *Die Thermen Kaiserthermen* (1920). I. A. R.; S. S. F.

HYPOTHESIS (Greek). (1) Prefixed to plays. Nearly all Greek dramas have an introductory note giving an

outline of the plot and often other information; a number of them are in verse. They are of three main types, though they have become much confused in the course of transmission. Far the most important are those which are based on the introductions which Aristophanes of Byzantium seems to have prefixed to each play in his edition. These consist of a terse note on the subject-matter and of information on the production, etc., of the play derived from Alexandrian scholarship, especially the *Pinakes* of Callimachus, and so ultimately from Aristotle's *Didaschaliae*. No complete hypothesis of this type survives, but it can be seen that the following information was given in the case of tragedy: treatment of subject, if any, by other poets; the scene of action; the identity of the chorus and first speaker; the number of the play in chronological order; the date of production, success in the competition and names of competing plays; name of choregus. Sometimes critical judgements are added. The second type is of Byzantine origin and mainly for school use; they are verbose, full of elementary information, and many of those belonging to comedies contain garbled history. The third type is associated especially with Euripides. Each contains a competent summary of the plot keeping to the past tense throughout and supplying names for characters who are nameless in the play. These seem to have been intended as substitutes for the plays rather than as introductions and form a sort of mythological compendium. In addition to those which occur in the MSS. of the plays considerable fragments of the collection have been recovered on papyrus (POxy. 27. 2455, 2457; PSI 1286) grouped by initial letters in the same sort of quasi-alphabetical order as is found in the list of plays on the Ptolemy stone IG ii. 2. 992 and as is indicated by the numerals attached to plays in the Laurentian MS. of Euripides. They are a valuable source of information on lost plays. Since their date is probably of the first century B.C. they cannot be the same as those produced by Dicaearchus for Sophocles and Euripides (Sext. Emp. *Math.* 3. 3), which appear to have contained also investigations into the origin of the poet's subject-matter.

The hypotheses of comedies are on the whole better supplied with didascalical information. A number of them are the work of an atticizing writer, perhaps Symmachus, of early imperial times and they are similar to the hypothesis of Cratinus' *Dionysalexandros* (POxy. 4. 663). The portions of the hypotheses of Menander's *Hieraiai* and *Imbrioi* (POxy. 10. 1235) seem to be part of a complete set comparable to the Euripides hypotheses, but in the case of Menander in addition to the opening line of the play didascalical information is supplied.

Verse hypotheses, rare for tragedy, seem to have been regularly prefixed to comedies. Those of Aristophanes are all of ten lines, the two that survive for Menander, *Dyscolos* and *Heros*, are of twelve. The date of the papyri shows they are not Byzantine, but whether their language is Hellenistic is doubtful. The frequent ascription to Aristophanes of Byzantium carries no weight.

D. W. L.

(2) Hypotheses to the speeches of Demosthenes written by Libanius for the proconsul Montius, an enthusiastic admirer of Demosthenes.

(3) A particular case propounded for discussion in rhetorical schools, contrasted with a general question (*théais*) discussed in dialectical schools. The distinction is, however, not always observed.

H. Thom, *Die Thesis* (1932), 61 f.

J. D. D.

HYP SICLES of Alexandria, mathematician and astronomer (fl. c. 150 B.C.), wrote: (1) 'Book 14' added to Euclid's *Elements*. This contains interesting propositions and historical information about relationships between the regular dodecahedron and eicosahedron inscribed in the same sphere. (2) *On Rising-times* (*ἀναφορικός*), which adapts what is now known to be a Babylonian arithmetical scheme for computing the times taken by the individual signs of the zodiac to rise to the latitude of Alexandria. It is the earliest extant Greek work containing the division of the ecliptic into 360 degrees (*μοίραι*). Diofantus (ed. Tannery I, 470) quotes a definition of a polygonal number from a lost work of Hypsicles. Also lost is a work on the harmony of the spheres (Achilles, *Eisagoge*, ed. Maass, *Comm. in Arat.* 43).

EDITIONS. *Elements* Bk. 14 in Heiberg, *Euclid's Opera Omnia* v (Leipzig, 1888). *ἀναφορικός*, ed. V. de Falco and M. Krause, *Abh. Ak. Wiss. Göttingen, Phil.-hist. Kl.* 3 F, nr. 62 (1966), with German transl.

COMMENT. *Elements* Bk. 14, Heath, *Hist. of Greek Maths* i. 419 f. The rising-times, O. Neugebauer, *Exact Sciences in Antiquity* (1957), 158 ff. and Introduction to de Falco's edition. G. J. T.

HYP SISTRATES (probably 1st c. B.C.), historian, may be identified with the grammarian Hypsistrates of Amisus; he may have served Caesar, who freed Amisus in 47 B.C., as Theophanes served Pompey. His work was perhaps rather a history of the times than a local chronicle or *Ποιτικά*, and was possibly Strabo's source for Bosphoran affairs.

FGH ii B, 923; BD, 618.

A. H. McD.

HYP SIPLE. The women of Lemnos having neglected the rites of Aphrodite, the goddess plagued them with a foul odour. Their husbands left them in disgust and took to themselves concubines from Thrace; whereat the women planned to murder all the males on the island. The massacre was successful; but Hypsipyle, daughter of King Thoas the son of Dionysus, hid her father and managed to convey him out of the country. She governed Lemnos and received the Argonauts (q.v.) when they came. She and her women now dated with them (nothing more is heard of Aphrodite's curse), and Hypsipyle had two sons (see EUNEOS) by Jason. Some time after their departure she was captured by pirates and sold to Lycurgus king of Nemea, whose wife employed her as nurse to her child Opheltus or Archemorus. For the sequel, see ADRASTUS.

HYP SISTOS was, like Hypatos, a not uncommon title in Greece of Zeus as the supreme god, or as a mountain or sky god; it was popular in Macedonia. Theos Hypsistos seems generally to have been an unofficial synonym for Zeus Hypsistos. In the Orient Hypsistos was applied under the Empire to various native gods of Asia Minor and to the local Baals of Syria, many of whom were mountain divinities. Numerous bilingual inscriptions of Palmyra equate Zeus Hypsistos and the anonymous god 'whose name is blessed forever'. This cult was pagan but shows clear signs of Jewish influence (H. Seyrig, *Études syriennes* (1934-8), i. 98 f. = *Syria* 1933, 249 f.). The epithet is frequent in Hellenistic Judaism, and hellenized Jews and Gentile sympathizers could meet in a common cult of Theos Hypsistos, as at Gorgippia and Tanais. A Jewish background appears also in dedications and prayers for vengeance to Theos Hypsistos at Delos. But except where Jewish influence is indicated, its presence need not be assumed, and in general the term implies only a tendency to exalt one god to a pre-eminent position.

I

IACCHUS (*Ἰακχος*). A minor deity (*τῆς Δήμητρος δαίμων*, Strabo 10. 3. 10) associated with the Eleusinian deities and probably in origin a personification of the ritual cry *ἰαχὴ ὦ ἰαχῆ* (Ar. *Frogs* 316); cf. Hymenaeus (q.v.). The deity, the song of which these words apparently formed the refrain, and the day (Boedromion 19) on which his image was fetched to Athens from Eleusis with other holy things were all called by the same name, Ar. op. cit. 320, Hesychius, s.v. *Ἰακχος*; cf. MYSTERIES, PROCESSION. Iacchus was variously said to be the son of Demeter, of Persephone, and of Dionysus, or the consort of Demeter (refs. in Höfer, see below); in art he is seen torch in hand (cf. Ar. op. cit. 340 ff.) conducting the mystics, Deubner, plate 5. 1 (pinax of Ninnion). But, owing to the resemblance between his name and *Βάκχος*, the title of Dionysus, he is often identified with the latter, not only in literature (e.g. Eur. *Cyc.* 69, Verg. *G.* i. 166, Strabo, loc. cit.), but to some slight extent in cult; at the Lenaea, when the daduchos said 'Invoke the god' the congregation answered *Σεμελή! Ἰακχε πλουτοδότα* (Schol. on Ar. op. cit. 479). In Italy he was on occasion identified with Liber (q.v.), as in the temple of Ceres on the Aventine, where Ceres Liber and Libera are Demeter Iacchus and Kore.

L. Deubner, *Attische Feste* (1932), 73 f.; Höfer in Roscher's *Lexikon*, s.v. *Ἰακχος*; Nilsson, *GGR* 1, 59 f. H. J. R.

IALMENUS, in mythology, son of Ares and Astyoche; leader, with his brother Ascalaphus, of the contingent from Aspledon and Orchomenus at Troy (*Il.* 2. 511 ff.).

IAMBIC POETRY, GREEK. The word *ἰαμβος*, of unknown but probably Asiatic origin, is first used by Archilochus (fr. 20) and seems to refer to his own satirical verse written in the iambic metre. It is possible that he was not the first so to use it, since Aristotle (*Poet.* 4) regards the Homeric *Margites* as the first work in which it appeared. He considers that its use for such purposes as satire and ridicule was due to its nearness to common speech. Archilochus' debt to the *Margites* may be seen in his use of a line from it (fr. 103), but he certainly developed iambic satire in his own way and used it especially to portray his own likes and dislikes. So, too, he used iambic epodes and the trochaic tetrameter for similar purposes. He probably influenced Semonides of Amorgos, who used the simple iambic trimeter, and seems both to have shown less personal spite and to have been more dependent on traditional fables than Archilochus was. Hipponax, however, follows the Archilochean tradition in giving full vent to his hatreds and in using everyday language. His chief innovation was the substitution of the *σκιῶν* for the true iambic, but this did not alter his essential similarity to Archilochus. Satirical iambs were also written in the sixth century by Anacreon, though his fundamental good nature does not seem to have left him except in his lines on Artemon (fr. 54) which are not strictly iambic in metre, though their temper is violently satirical. These poets all belong to Ionia, and iambic verse, as they practised it, was characteristic of free Ionian life. Elsewhere it took rather different forms. In Syracuse the *ἰαμβιστοί* were a choir who carried *phalli* in honour of Dionysus (Ath. 181 c) and may have sung abusive songs, while the use of trochaics by Epicharmus in his early dramatic pieces indicates that he may have owed something to this tradition, while it must be to him and his kind that Attic comedy owed its use of iambic and trochaic verse. In

Athens the iambic and trochaic measures were used from about 600 B.C. by Solon to answer his critics and justify his political decisions. He shows little rancour or abuse, and his temper is quite unlike that of the Ionian iambic poets, but he probably owed the form to them. It was the best means available for personal controversy, and that, no doubt, was why he used it. His example does not seem to have inspired many followers in Athens, and though such work is attributed to Euenus of Paros, its real influence is to be seen in Comedy. A possible follower of Solon is Chrysogonus (fl. 408 B.C.), whose poem *Πολιτεία* was wrongly ascribed to Epicharmus (Ath. 648 d).

In the Hellenistic age the satirical iambic was revived with some success. Some oddities appeared, like Castorion's *Hymn to Pan*, in which each dipody in the trimeter ended with the end of a word (Ath. 454 f), and the riddles attributed to Panarces (Diehl, *Anth. Lyr. Graec.* 1. 3. 70), but the traditional use may be seen in Alcæus of Messene's political diatribes against Philip of Macedon (Euseb. *Præp. Evang.* 10. 3. 23) and the philosophical invectives of Timon of Phlius, Heraclides Ponticus, and Hermias of Curion. In this kind the most important practitioner was Callimachus, who wrote iambic, choliambic, and trochaic verses in the character of a new Hipponax, into whose mouth some of the verses are put. But he is less bitter than his predecessor, and the remains indicate that his *Iambi* were quite mild and humorous, with plentiful fables and discursions on varied topics. He seems to have widened the scope of topics for which the iambic metre was used, and his influence may be seen on Cercidas, whose scazons deal with topics of popular morality and make fun of pretentious speculations, and on Phoenix of Colophon, who wrote on such different matters as Ninus and the song of beggars in Rhodes. More primitive were the verses of Sotades, which belong essentially to this tradition and were famous for the scurrility and impropriety of their abuse. A new turn was given to iambic verse by Menippus of Gadara, who is best known through Varro's Latin adaptations and wrote criticisms of all manner of men and things, set his situations in fantastic backgrounds, and mixed verse with prose. In the Roman period iambic verse was put to new uses, some of them instructive, as when 'Scymnus' wrote his geography, Diodotus about plants, and Simylus about literature.

TEXIS Diehl, *Anth. Lyr. Graec.*; J. M. Edmonds, *Elegy and Iambus* (Loeb, 1931). C. M. B.

IAMBIC POETRY, LATIN. The use of iambic metres for personal invective and the censure of contemporaries is not widespread in Latin poetry, where the spirit of Archilochus and Hipponax is most often enshrined in Phalaecian hendecasyllabics and elegiac couplets (cf. Catullus, Ovid's *Ibis*, and Martial). The iambic senarius of the republican dramatists (cf. METRE, LATIN) was, indeed, used occasionally for non-scenic purposes, as by Pacuvius and others for epitaphs and by Volcarius Sedigitus for literary criticism; yet Lucilius (like Horace, Persius, and Juvenal) preferred the dactylic hexameter for satire and included senarii in his 28th and 29th books only. In the first half of the first century B.C. Cn. Matius introduced the scazon (limping iambic) in his *mimiambi* (in imitation of Herodas), and Laevius in his *Erotopaegnia* experimented with iambic dimeters, scazons, hendecasyllabics, and other metres; Varro also achieved a mastery

of the iambic trimeter in his *Menippeae*. The scazon found some favour with Catullus, Cinna, Calvus, and Bibaculus; and of the eight poems of Catullus in this metre, all except no. 31 contain some personal criticism or abuse. Horace avoids the metre, but it occurs twice in the *Appendix Vergiliana* (*Catal.* 2 and 5, both critical of *rhetores*) and occasionally in the salacious Priapea. Martial was not strongly attracted to the metre, though he employed it in seventy-seven of his poems with epigrammatic effect. The iambic trimeter appears in Catullus in three poems only—nos. 4 (not scurrilous), 29, and 52; and when (in hendecasyllabic poems: nos. 36, 40, 54, and fr. 1) he mentions his 'iambi', he probably has in mind the critical spirit of his attacks rather than the exact metres (trimeter or scazon) in which a few of them were made. Horace's claim (*Epist.* 1. 19. 23) to have been the first to introduce *Parii* (= Archilochian) *iambi* into Latin is therefore not unjustified; for all his *Epodes* (in which abuse, friendship, moralizing, and patriotism provide the themes) have iambic elements used in the manner of Archilochus; in nos. 1-10 the couplets consist of a trimeter followed by a dimeter, 11-16 show iambic and dactylic elements variously combined into couplets, and 17 is entirely in trimeters. In this type of poetry Horace had no real successor. In the *App. Verg.* three poems (*Catal.* 6, 10, and 12) are in trimeters and one (no. 13) in iambic couplets; all except no. 10 (a parody of Catullus 4) are vituperative. In the first century A.D. Phaedrus used iambs for his fables; but his 'trimeters' (like those of the maxims of the mimographer Publilius Syrus, 1st c. B.C.) admit spondee in the 2nd and 4th feet and so are nearer to the dramatic senarius than to the stricter forms employed by Horace. Seneca, who in his tragedies uses elegant trimeters in the dialogue and some dimeters in the lyric parts, is far removed from the spirit of the *ἱαμβος*; Martial, who might have made powerful use of iambs, almost entirely neglects the dimeter and trimeter; and the apotheosis of the iambic metres (especially the dimeter) is found in Christian poets such as Prudentius (*Cathemerinon* and *Peristephanon*) and the author of 'Veni creator spiritus'.

Texts of minor authors and fragments in E. Bachrens, *PLM*; W. Morel, *FPL*; F. Bücheler, *Carmina Lat. Epigraphica* (in A. Riese's *Anthologia Latina*). J. F. M.

IAMBlichus (1) (fl. c. A.D. 160-80), Greek writer of Syrian origin, author of a novel entitled *Babyloniaka* or *Rhodanes and Simonis*. The work (whose length is disputed: 16, 35, or 39 books) is now lost, but an abstract of it made by Photius (*Bibl.*, *Cod.* 94) and a few fragments preserved by the *Suda* suggest that the story presented all the compulsory ingredients of the genre (a couple of lovers are separated by events, and after going through innumerable hazards are at last reunited). The plot seems to have been richer in the adventurous element and more disjointed in structure than is the case with the extant novels; the language and style conformed to the canons of the Sophistic; characterization was poor.

Text. E. Habrich, *Iamblichus Babyloniacorum Reliquiae* (Teubner, 1900).

CRITICISM. Rohde, *Griech. Roman*, 388 ff.; Christ-Schmid-Stählin II. 2^o, 817 ff.; F. Altheim, *Literatur u. Gesellschaft im ausgehenden Altertum* (1948-50), I. 48 ff. (U. Schneider-Menzel); A. Lesky, *Gesch. d. griech. Lit.* 2 (1963), 921 ff. G. G.

IAMBlichus (2) (probably c. A.D. 250-c. 325), Neoplatonist philosopher, born at Chalchis in Coele Syria, studied under Porphyry in Rome or Sicily; later he founded his own school in Syria (? at Apamea). Extant writings: (1) *Περὶ τοῦ Πυθαγορικοῦ βίου* (*Vit. Pyth.*); *Λόγος προτρεπτικός εἰς φιλοσοφίαν* (*Protrept.*); and three treatises on mathematics (see bibliography: the authorship of *Θεολ. ἀριθμ.* is disputed). These five

formed part of a semi-popular encyclopaedia of Pythagoreanism. *Protrepticus* is a *catena* of extracts from earlier writers, and valuable as a source-book. (2) The 'Reply of Abammon to Porphyry's Letter to Anebo', a defence of ritualistic magic, generally known as *De mysteriis*, is attributed in our best MS. to Iamblichus, on the authority of a lost work of Proclus. The ascription, which Zeller doubted, is probably right (C. Rasche, *De I. libri . . . de myst. auctore*, 1911). Though ill-written and philosophically worthless, the book is a curious guide to the superstitions of its age. Iamblichus' lost writings include a *Περὶ ψυχῆς* (excerpts preserved in Stobaeus); a *Περὶ θεῶν*, used by Macrobius and Julian; an elaborate exposition of 'Chaldaean' theology; and a number of highly tendentious commentaries on Plato and Aristotle, much quoted by Proclus.

Iamblichus' extant works are superficial; but his successors credit him with important contributions to the architecture of the Neoplatonic system. On the other hand, he corrupted Plotinus' teaching by introducing theosophical fantasies from alien sources; and his tendency is to substitute magic for mysticism, *θεουργία* for the Plotinian *θεωρία*.

Pistelli (1894); *Θεολογούμενα τῆς ἀριθμητικῆς*, V. de Falco (1922), *De myst.*, text and transl. E. des Places (Bude, 1960). German transl. and comm. Th. Hopfner (1922).

IDEAS AND INFLUENCE. K. Praechter in *Genethliakon Roberti* (1910), 108 ff.; J. Bidez, *Rev. Ét. Gr.* 1910, E. R. Dodds, *Proclus' Elements of Theology* (1913), xix ff.; P. Merlan, *From Platonism to Neoplatonism* (1960), A. C. Lloyd in *Cambridge History of Later Greek and Early Medieval Philosophy* (1967), 294 ff., cf. bibliography under NEOPLATONISM. E. R. D.

IAMBULUS, author of a narrative now lost, excerpts of which are preserved in Diodorus (2. 55-60). Nothing is known about him, except that his name is Syrian. His work belongs, as Rohde has emphasized, to the genre 'Reisefabulistik' rather than to the novel proper, in so far as it does not seem to have contained any erotic element at all. It is a fantastic description of a journey, made by the author, through Aethiopia to a happy Island of the Sun (vaguely located in the South) whence, after a seven years' sojourn amongst the natives, Iambulus was expelled, finally to return home (Syria?) via India. The detailed description of the island (improbably identified by various scholars with Java, Bali, Ceylon, etc.), its inhabitants, and their customs, seems partly inspired by utopistic theories (of Euhemeristic-Cynic origin) then current (common property of women and many 'communitistic' social features are noted by Iambulus as established amongst the natives) and partly reflecting purely fabulous motifs which had been circulating amongst the Greeks since times immemorial (cf. the Hyperboreans, the *Insulae Fortunatae*, the Hesperides) and which were stimulated by the increased contacts with the East after Alexander's conquest.

Rohde, *Griech. Roman*, 241 ff.; R. von Pohlmann, *Gesch. d. sozialen Frage . . . in d. antiken Welt* (1925), II. 317 ff. (cf. also Register, s.v. Iambulos). Cf. Tarn, *Alexander* 411 ff., for possible influence on the Sun-State (Helipolis) which Aristonicus (q.v.) promised his followers (but see D. R. Dudley, *JRS* 1941, 96 f.). G. G.

IAMUS, legendary son, by Apollo, of Evadne (q.v. 1). She bore him while alone and left him in a bed of (?) gillyflowers (*ἰα*, hardly violets, for they were yellow and red, Pindar, *Ol.* 6. 55). Aepytus, her guardian, learning at Delphi what had happened, had the baby searched for, and found that he had been fed with honey by serpents. From the flowers he was called Iamus. Coming to young manhood, he prayed to Poseidon and Apollo, and the latter bade him go to Olympia; there he became a prophet and ancestor of the clan of the Iamidae, which continued at Olympia well into the third century A.D. (L. Weniger, *ARW* 1915, 53 ff.). H. J. R.

IAPETUS, in mythology, son of Earth and Heaven, father by Clymene the Oceanid of Prometheus, Epimetheus, Atlas, and Menoetius (Hes. *Theog.* 134, 507 ff.). His name yields no plausible Greek etymology, and it is far from unlikely that it is to be connected with that of Japhet son of Noah, both probably going back to some very old figure of Asianic mythology, variously handled by Greek and Hebrew tradition. H. J. R.

IAPYGIA, name given by Greek writers to the 'heel' of Italy, the region the Romans called Calabria (q.v.). Roman poets sometimes employed the name in imitation of the Greeks. Often Iapygia was used to include Apulia (q.v.) as well. The inhabitants of the region were collectively called Iapyges. E. T. S.

IASUS, IASIUS. These names seem to be etymologically identical, are perpetually confused, and occasionally are confounded with Iasion, Demeter's lover (see DARDANUS, DIME'TER). Apart from Dardanus' brother, they are borne by a number of persons, all totally insignificant and uninteresting, e.g. two early kings of Argos, Arcadian and also Boeotian heroes, etc.; list given by Hofer in Roscher's *Lexikon* ii. 88 f. H. J. R.

IAZYGES, a Sarmatian nomadic people, originally lived near the Lower Danube (Ov. *Pont.* 1. 2. 7 f.) but during the first half of the first century A.D. they migrated westward to occupy the plain between the Danube and Theiss (Pliny, *IIN* 4. 80). Domitian campaigned at least once against them (A.D. 80); under Trajan they became Roman allies, but later joined in the Marcomannic Wars against Rome. Wars also occurred in 283, 284, and 358. J. J. W.

IBERIA, (1) one of the ancient names for Spain (q.v.); (2) the name of the mountain-girt land (roughly coincident with modern Georgia) south of the Caucasus, north-east of Armenia, between the Black Sea and the Caspian. Its chief river was the Cyrus (*Kur*). The Greeks, after Pompey's exploration in 65 B.C., knew four entrance-passes: from Colchis by Scharapani; from the north by the Caucasian Gates (*Darul Pass*); from Albania by Derbent Pass; from Armenia through Kars. The people, organized in four classes (chiefs, priests, fighter-tillers, slaves), were subject probably to Persia and certainly to Mithridates VI. They were not included in the Roman Empire except occasionally as 'clients'.

Strabo 11. 491-2, 497, 500-1, 528, Ptol. *Geog.* 5. 9. 27 ff.; 8. 18. 2, 19. 1. 5. Cary, *Geographic Background*, 177. E. H. W.

IBYCUS, son of Phytius, of Rhegium, lyric poet of the sixth century B.C., whose *floruit* is given by the *Suda* as 564-561 B.C. and by Eusebius Jerome as 536-533 B.C. He seems to have begun by writing lyrical narratives in the style of Stesichorus, and fragments indicate that he told of the Sack of Troy (fr. 22), the Calydonian boar-hunt (fr. 9), and the birth of Athene (fr. 17). He also wrote about Ortygia (fr. 40) and told Sicilian stories (Acl. *NA* 6. 51). He left Sicily because, it was said, he refused to become a tyrant (Diogenian. 1. 207) and went to Samos, where he worked at the court of Polycrates (*Suda*, s.v. *Ἰβυκος*). To this period may belong his most striking fragments, notably those about love when he is getting old (frs. 5 and 6), and the lines to Euryalus (fr. 7). *POxy.* 3 (fr. 1) has been attributed to him, since it mentions Polycrates, but this has been questioned. If it is his, it is more probably concerned with the tyrant's son than with the tyrant himself, and seems to be a playful leave-taking of his earlier manner for the erotic poetry in favour at Samos. His works were collected in seven books and seem to have consisted largely of choral poems, of which some

were *encomia*, and personal love-songs, written in a great variety of metres. He has a rich and brilliant style, a vivid imagination, a great capacity for describing the emotions, especially love, and a real love of nature (frs. 33, 34, 36). He is said to have been killed by robbers, who were brought to justice by birds who saw the murder (Plut. *Garr.* 14; Antip. Sid. ap. *Anth. Pal.* 7. 745), and was buried at Rhegium (*Anth. Pal.* 7. 714).

TEXT. Page, *Poet. Mel. Gr.* 144-60.
CRITICISM. U. von Wilamowitz-Moellendorf, *Sappho und Simonides* (1913), 121 ff.; C. M. Bowra, *Greek Lyric Poetry* (1962), 241 ff. C. M. B.

ICARIUS or **ICARUS** (but the latter name is usually that of Daedalus' son (see DAEDALUS)), in mythology, (1) an eponym of an Athenian deme who received Dionysus hospitably when he came to Attica, and was given the vine. He made wine and gave some to his neighbours, who on feeling the effects concluded that they were poisoned and killed him. His daughter Erigone was guided by their dog Maera to his body and hanged herself for grief. In memory of her the festival of the Aiura was instituted, in which swinging played a part, and Aristaeus propitiated the shade of Icarus; in consequence, a pestilence on Ceos which had followed their reception of the murderers of Icarus ceased. Icarus became the constellation Boötes; Erigone, Virgo; the dog, Canicula (Procyon). See schol. *Il.* 22. 29; *Ilyg. Fab.* 130 and Rose ad loc.; *Poet. Astr.* 2. 4. (2) Father of Penelope (q.v.); *Od.* 1. 329 and often. 'Lyndareus induced him to give Penelope to Odysseus in return for the latter's good advice to make Helen's wooers take the oath (see HELEN). Icarus tried to induce them to remain with him in Lacedaemon, but, on the choice being left to her, she indicated that she would follow her husband to Ithaca (Apollod. 3. 132; Paus. 3. 20. 10). H. J. R.

ICENI, a British tribe in Norfolk and Suffolk whose coins suggest a Belgic aristocracy ruling an indigenous population. The following pre-Roman rulers are attested on the coinage: *Cans-duro*, *Anted*, *Eren*, *Aesu*, *Saemu*, and *Subidastu*. Under pressure from the Catuvellauni, the tribe voluntarily made a treaty with Claudius, but in 47 rebelled against forcible disarmament. Prasutagus was established as client-king until his death in 60 when the attempted suppression of independence by Roman officials caused the rebellion of the tribe under his wife Boudicca (q.v.). After the harsh suppression of this outbreak (from which economic recovery was slow) a self-governing *civitas* was created with *caput* at Venta (Caistor by Norwich) (*It. Ant.* 474. 6; 479. 10; *Rav. Cosm.* 103). The town remained small (35 acres within its third-century walls). Apart from a considerable local pottery industry, the *civitas* was agricultural with some evidence for wool production in the fourth century, but few villas. In the third century the coast was protected by a series of forts (Saxon shore), and there is evidence for Germanic settlements from early in the fifth.

R. R. Clarke, *Arch. Journ.* (1939); *East Anglia* (1960), chs. vi-viii; D. F. Allen, in *Iron Age in S. Britain* (coinage), C. F. C. Hawkes, *Arch. Journ.* 1949, 62 (Caistor), A. L. F. Rivet, *Town and Country in Roman Britain* (1964), 156 f. S. S. F.

ICILIUS (*PIW* 2), LUCIUS, a plebeian hero, though probably of patrician descent, betrothed to Verginia and leader of the second secession, has little claim to historical existence, but the *Lex Icilia de Aventino publicando* (traditionally dated 456 B.C.), the text of which was still preserved in Augustus' time in the Aventine temple of Diana (Dion. Hal. 10. 32. 4), is indisputably a genuine document of c. 450. The law provided allotments on the Aventine to the *plebs* either as agricultural or (very

probably) as building land. It was later attributed to Iclius merely because of his renown as a popular hero.

Ogilvie, *Comm. Laty* 1-5, 446 f.

P. T.

ICTINUS was one of a number of fine architects who worked at Athens in the time of Pericles, under the general direction of the sculptor Phidias (q.v.; cf. *Plut. Per.* 13). He designed the Parthenon (q.v.) in collaboration with Callicrates (q.v. 1), and with a certain Carphon, otherwise unknown, as co-author, wrote an account of it (*Vitr. Pref.* 7)—it was not unusual for architects to write about their work from this time onwards. He was also the architect of the temple of Apollo at Bassae (q.v.) in Arcadia. In spite of Pausanias (8. 41. 7-9), who implies a date in the 420s, Dinsmoor (*Architecture of Ancient Greece* (1950), 148, 154 ff.) believes that the temple was designed and begun before the Parthenon, about 450 B.C., though it was not completed till much later. Ictinus was also one of a series of architects—Coroebus, Ictinus, Metagenes—who worked at Eleusis (q.v.) on the 'Telesterion, the great hall in which the performance of the mysteries took place; the plan of the hall, with its rows of columns supporting the roof, was repeatedly modified.

R. E. W.

ICTIS, probably *St. Michael's Mt.* by Penzance. Identification with the Isle of Wight (even 'Thanet has been suggested) is not favoured. Diodorus (5. 22. 2, 4) records that the people of Belerium (*Land's End*) brought tin in wagons at ebb-tide to the adjacent island Ictis. Pliny (4. 104 from 'Imaeus) puts Ictis six days' sail inwards from Britain, perhaps confusing it with Vectis (*Isle of Wight*) or the Isles of Scilly.

Thomson, *Hist. Anc. Geog.* 145 f., 403.

E. H. W.

IDAEAN DACTYLS (*Δάκτυλοι Ἰδαίου*), literally the Fingers of Ida, but whether the Phrygian or the Cretan Ida and whether their name refers to craftsmanship, dwarfish size, or something else, the ancients were in doubt. The oldest mention surviving is in the *Phoronis*, ap. schol. Ap. Rhod. 1. 1120, which says they were called Celmis, Damnameneus, and Acmon, that they were big and powerful, wizards, servants of 'Adresteia of the mountains', presumably the same as Cybele or Rhea, Phrygians, and inventors of smithcraft. But Apollonius (*ibid.*) says they were Cretans, sons of a nymph Anchiale, who grasped handfuls of dust in her birthpains, or (the language is ambiguous) produced them by throwing handfuls of dust. More and divergent accounts of them in the schol., *ibid.*, and still more collected by Lobeck, *Aglaoph.* 1156 ff.; von Sybel in Roscher's *Lexikon*, s.v. 'Daktyloi'. For their dwarfish size cf. Paus. 8. 31. 3, and for their connexion with Heracles see HERACLES. See also MAGIC, § 4.

H. J. R.

IDAEUS, 'connected with Ida', and so (a) a title of Zeus (*Il.* 16. 605 ('Trojan) and on Cretan coins and (usually in a dialect form) inscriptions); (b) a stock name for sundry little-known Trojans or Cretans (list in Stoll in Roscher's *Lexikon* II. 95). (c) Magic name for a finger, perhaps the index (*PMG* IV. 455).

H. J. R.

IDAS, in mythology, son of Aphareus and brother of Lynceus. He was 'the strongest of men' (*Il.* 9. 558), and drew his bow against Apollo (*ibid.*). The reason, according to later authorities (Chest of Cypselus in Paus. 5. 18. 2; Apollod. 1. 60-1), was that after he had won his bride Marpessa from her father Euenus, son of Ares (add Bacchylides 10), Apollo in turn carried her off; Idas fought him and Zeus made peace by giving Marpessa her choice between them; she preferred Idas. He was one of the Argonauts (q.v.; Ap. Rhod. 1. 152 and often),

valiant but hot-tempered. He also took part in the Calydonian boar-hunt (Apollod. 1. 67), as was natural, for Meleager (q.v. 1) was his son-in-law (*Il.* 9. 556). Though his final encounter with the Dioscuri (q.v.) is variously told, Pindar (*Nem.* 10. 60) makes Idas kill Castor, while Lynceus, whose sight was preternaturally sharp, looks out for the approach of the twins. H. J. R.

IDMON, 'the knowing one', name of several skilful persons, especially a seer, son of Apollo or Abas (Ap. Rhod. 1. 139 ff. and schol.), who accompanied the Argonauts (q.v.) although he foreknew he would not return alive (*ibid.* and 2. 815 ff.); he was killed by a boar in the country of the Mariandyni.

H. J. R.

IDOMENEUS (1), in mythology, leader of the Cretan contingent before Troy (*Il.* 2. 645); of distinguished valour although older than most of the warriors (13. 210 ff., 361 ff.). He was of Minos' race and one of Helen's suitors (Hesiod, fr. 96. 16 ff. Rzsch). The story of Idomeneus's Vow (Stuth Thompson, S241) is told of him (Servius on *Aen.* 3. 121); in a storm he vowed to sacrifice to Poseidon the first thing which met him on his return. This was his son; fulfilling or trying to fulfil the vow he was forced to leave Cete for Italy because a pestilence broke out.

H. J. R.

IDOMENEUS (2) (c. 325-c. 270 B.C.), biographer and politician of Lampsacus, and friend of Epicurus (cf. Usener, *Epicurea*, frs. 128-38).

WORKS (*FGrH* 338). (1) *Περὶ τῶν Σωκρατικῶν* (Diog. Laert. 2. 20): fragments on the Socratic Aeschines. (2) *Περὶ δημαγωγῶν* in at least two books; fragments in Plutarch and Athenaeus concern leading Athenian politicians (3) *Ἱστορία τῶν κατὰ Συμβολήκην*, cf. *Suda* s.v. 'Idomeneus'. Following the Peripatetic, anecdotal method, Idomeneus reproduced much unrefracted scandal, perhaps attacking politicians whose ideas he disliked; after Hermippus he was not used.

F. W. W.

IDUMAEA was the arid country south of Judaea occupied by the Edomites in the fourth century B.C. when they were pushed westwards by the Nabataeans. Soon after 129 B.C. it was annexed by John Hyrcanus (see JEWS) and the inhabitants forcibly converted to Judaism. Adora and Marisa, both prominent Idumaean commercial centres since the third century B.C., were organized as cities and freed from Jewish control by Pompey (63: cf. ANTIPATER 6). In 40 Idumaea as a whole was incorporated in the kingdom of Herod (q.v. 1) the Great as a toparchy, and an attempt by an Idumaean noble, Costobar, in collaboration with Cleopatra to regain independence (c. 34) failed. After Herod's death Idumaea formed part of the ethnarchy of Archelaus (q.v. 4), which became the Roman province of Judaea in A.D. 6. Despite the Idumaeans' firm adherence to Judaism, they were not fully accepted by the Jews, who resented Rome's appointment of the Idumaean Herod as their king.

E. M. S.

IGUVIUM, modern *Gubbio* in Umbria. Although infrequently mentioned in ancient literature, Iguvium is famous for the Tabulae Iguvinae (q.v.). Constituting the largest corpus of liturgical texts from pre-Christian Europe, they are written in Umbrian, a language they reveal to be closely related to Oscan (q.v.). (See UMBRIANS.)

J. W. Poultny, *Bronze Tables of Iguvium* (U.S.A., 1959). E. T. S.

ILERDA (modern *Lérida*), Iberian city of the Illegetes in Catalonia, north-west of Tarraco (q.v.), on a steep rise over the Sicoris (*Segre*); a Roman *municipium* under Augustus. The Iberian and early Latin coinage displays a wolf; the municipal coins adapt its sex to the she-wolf

of Rome. Here, in 49 B.C., Caesar defeated Pompey's legates Afranius and Petreius (Caes. *BCiv.* 38–87). The city was largely ruined by the Frankish invasion of the third century. M I. H.

ILIAS LATINA (*Homerus Latinus*), a version of the *Iliad* in 1,070 hexameters. The ascription of the work (entitled merely 'Homerus') to Silius Italicus on the grounds of two acrostics (at the beginning and end) is untenable; but the author may be a Baebius Italicus. The allusion to the Julian house in 809 ff. precludes a date of authorship later than A.D. 68. Though important for its perpetuation of the *Iliad* during centuries ignorant of Greek, the work is in general a meagre epitome devoid of artistic merit, characterized by free and uneven treatment, a straightforward style thickly embellished with Virgilian and Ovidian echoes, and by heavy and monotonous versification.

TFXIS *PLM* II 3; F. Plessis (1885) J. Tulkiehu, *Iliomer u. die römische Poesie* (1900). A. H. W.

ILIONA (Ἰλιώνη), in mythology, eldest daughter of Priam and Hecuba (qq.v., Verg. *Aen.* 1. 653–4). Wife of Polynestor (see *HFYUBA*), she saved the life of Polydorus by passing him off as her son, Polymestor thus murdering his own child (*Ilyg. Fab.* 109, cf. Pacuvius, frs. of *Iliona*).

II J R.

ILIUM, an Aeolian foundation, established in the seventh century B.C. on the site of ancient Troy. Its importance derived from the famous temple of Athena (visited by Xerxes and Alexander), the centre, from the fourth century onwards, of a religious synedion. The landing of Livius Salinator (190) inaugurated cordial relations with Rome (though Ilium was sacked by Fimibia's unruly troops in 85); and the Emperors followed Julius Caesar's example in patronizing Ilium and its temple, because of the legend that the founders of Rome were of Trojan origin.

A. Bruckner, in Dorpfeld's *Troia und Ilion* (1902), II, 549. D. E. W. W.

ILLYRICUM, the territory of the Indo-European Illyrians. Their attacks on Adriatic shipping brought Roman intervention in the First and Second Illyrian Wars (228–9; 219 B.C.); see *TFUTA*, DEMETRIUS, 6. During the Second Punic War the Illyrian kingdom acted as a buffer State between Rome and Macedon, and at the peace after Cynoscephalae (197 B.C.) the Illyrians under Pleuratus II (206–180) were awarded some Macedonian territories. Under his successor Gentius (c. 180–168), however, piracy was revived and as an ally of Perseus of Macedon they suffered ignominious defeat from the praetor L. Anicius Gallus in 168 B.C. (Livy 44. 30–2). The settlement, by which the kingdom was divided into three parts, did not lead to a permanent Roman administration in Illyricum, and thereafter only sporadic campaigns by consuls or proconsuls are attested, chiefly against the Delmatae (see *DALMATIA*). In 59 B.C. Illyricum was allotted to Caesar along with Cisalpine Gaul and during the winters between his campaigns in Gaul he administered his province from Aquileia (Caes. *B.Gall.* 2. 35; 5. 1–2). During the Civil War the Illyrians sided with the Pompeians while the coastal settlements of Roman citizens (*conventus civium Romanorum*) supported Caesar. His legates were defeated more than once but during Caesar's dictatorship P. Vatinius made headway against the Delmatae. Later Octavian undertook limited campaigns in the area, mainly for propaganda and military reasons, against the Iapudes and Pannonians in 35 B.C., and against the Delmatae in 34–33 B.C. (cf. W. Schmitthenner, *Hist.* 1058, 169 ff.). After 27 B.C. Illyricum remained a senatorial province until Roman

control was advanced along the Sava valley to the Danube during the Bellum Pannonicum of 13–9 B.C. by Tiberius. The institution of Illyricum as an imperial province probably took place in 11 B.C. (Dio 54. 34. 4; for a list of legates 8 B.C.–A.D. 6 cf. R. Syme, *JRS* 1934, 130). In A.D. 6 the Breuci of the Sava valley and the Daestates of Bosnia revolted, carrying with them the rest of Illyricum. Reconquest was achieved by Tiberius, in the Sava valley in A.D. 6–8, in the southern interior in A.D. 9. It was probably in A.D. 9 that Illyricum was divided into two imperial provinces, known earlier as *Illyricum superius* and *inferius*, later Dalmatia and Pannonia (qq.v.). Under the Empire all the Danubian provinces (Raetia, Noricum, Pannonia, Dalmatia, Moesia, and Dacia) were grouped in a single customs-area, *portorium Illyricum*. From Diocletian onwards Illyricum denoted two dioceses, *Illyricum orientale* or *dioecesis Moesiarum*, *Illyricum occidentale* or *dioecesis Pannoniarum*.

PORTORIUM. A. Dobo, *Publicum portorium Illyriae* (Diss. Pann. II, 16, 1940). J J W.

ILLYRII, a large group of related Indo-European tribes, who occupied in classical times the western side of the Balkan range from the head of the Adriatic Sea to the hinterland of the Gulf of Valona and extended northwards as far as the Eastern Alps and the Danube and eastwards into some districts beyond the Balkan range. The name was properly that of a small tribe between Scodra and the Mati river, and it was applied by the Greeks and later by the Romans to the other tribes with which they had regular contact. Thus Illyris meant to the Greeks the southern part of the area, that neighbouring Macedonia, Epirus, and the Greek cities on the Adriatic coast and islands, and Illyricum meant to the Romans the whole area from the Eastern Alps to the hinterland of the Gulf of Valona. The earliest signs of Indo-European penetration into Illyris have been found at Pazhok in Central Albania, where chieftains of a 'Kurgan' culture were buried in mortuary chambers in large tumuli in the latter part of the third millennium, and there is ample evidence of seafaring and traffic in the southern Adriatic Sea in the second millennium, when piratical groups made settlements in Corcyra and in Leucas. The southwards expansion of Illyrian peoples into what is now Central Albania occurred probably in the tenth century. Later, people of a similar culture reached Vergina in the Haliacmon valley. Greek colonies were planted on the Albanian coast at Epidamnus (later called Dyrrachium (q.v.)) in the late seventh century, Apollonia (q.v.) in the early sixth century, and later at Lissus, and on the islands at Corcyra Nigra (*Korčula*), Issa (*Vis*), and Pharos (*Hvar*). Enlivened by Greek trade and ideas the Illyrian tribes, which were always warlike on land and sea, exerted continual pressure on Macedonia and Epirus and raided far into the Mediterranean Sea. Individual tribes became very powerful—in particular the Liburni, Dardani (q.v.), Ardiaei, and Autariatae—but they enslaved their neighbours and never created an effective combination of tribal states against a common enemy. When Macedonia became strong under Philip II (q.v.) and Epirus under Pyrrhus (q.v.), they occupied the southern part of Illyris. When the power of Macedonia and of Epirus declined, the Illyrians pressed southwards by land and by sea, and in particular the Ardiaean kingdom, based on the southern Dalmatian coast, expanded southwards to Scodra and Lissus under Pleuratus I (c. 260 B.C.) and under his son Agron. On the

death of the latter his widow Teuta (q.v.) was acting as regent for Pinnes when the first clash with Rome occurred. See **ILLYRICUM**.

L. H.

ILUS, in mythology, (1) son of Dardanus (q.v.; Apollod. 3. 140). (2) His grand-nephew, son of Tros and father of Laomedon (q.v.). He founded Ilium, being guided to the site by a cow (cf. **CADMUS**) and received the Palladium from heaven (ibid. 141-3).

IMAGINES. The wax masks of Romans who had held curule office were kept in cupboards in the atrium or *alae* of the family house with inscriptions beneath them, arranged and connected so as to form a family-tree. They received religious cult, and, on the death of a member who had held similar office, were worn by actors in the funeral procession. The custom lasted until well into the Empire, having acquired ethical and social significance. It helped in the formation of the *nobilitas* (q.v.). In the first century B.C. it was disputed whether all *gentiles* or only immediate descendants were entitled to keep masks. Condemned criminals seem to have lost the *ius imaginum*, active or passive (see, e.g., Cic. *Sulla* 88; Suet. *Nero* 37. 1). See also **PORTRAITURE**, ROMAN.

IMMUNITAS was the exemption of a community or an individual from obligations to the Roman State or of an individual from obligations to a local community. As regards Roman taxation, *civitates foederatae* or *civitates* declared *immunae* by a *lex* or *senatus consultum* were in theory permanently immune, though in practice, especially under the Empire, both statuses could be removed at will by Rome. Grants of immunity intended to be permanent were rare under the Empire; one example is Nero's proclamation of the *libertas* and *immunitas* of Greece—which was revoked by Vespasian. Temporary grants of immunity from taxation in special circumstances were not uncommon; they might be made either by the Emperor (*AE* 1916, 42) or by the Senate (*Tac. Ann.* 12. 61-3).

Immunity for life from Roman taxation could also be granted to individuals by *lex*, *senatus consultum*, or imperial decree (*SEG* ix. 8. iii) and might sometimes apply to the person's descendants in perpetuity (*CIL* 12. 588). Immunity from other State services—military services, forced labour, the provision of supplies to officials or soldiers, could also be granted, as by the edict of Octavian as Triumvir on the privileges of veterans (*FIRA* 12. 56).

Equally important was the question of immunity from local *munera*, to which adult male citizens and *incolae* of communities were normally liable (see *Dig.* 50. 5-6). *Immunitas* might be granted either by Rome or by the community. Apart from personal grants, there was general exemption under the Empire for such groups as shippers supplying corn to Rome, *conductores* (q.v.) and *coloni* of imperial estates, and local *philosophi*, *rhetoires*, and *medici*.

In the Roman army *immunae* were soldiers promoted from the ranks and released from ordinary duties to perform certain skilled tasks (*Dig.* 50. 6. 7). F. G. B. M.

IMPERATOR (αὐτοκράτωρ), a generic title for Roman commanders, became a special title of honour. After a victory the general was saluted *imperator* by his soldiers. He assumed the title after his name until the end of his magistracy or until his triumph. Sometimes the Senate

seems to have given or confirmed the title. The origin of this form of honour is unknown, but some religious meaning is possible (cf. the formula *Iuppiter imperator*). The first certainly attested *imperator* is L. Aemilius Paullus in 189 B.C., as the evidence about Scipio Africanus is uncertain. The title was assumed especially by proconsuls and gained new importance through Sulla before he was appointed dictator. The increasing influence of the army in the late Republic made *imperator* the symbol of the military authority. Sulla occasionally stated (and Pompey emphasized) that he was saluted *imperator* more than once. Caesar first used the title permanently, but it is doubtful whether in 45 B.C. he received from the Senate a hereditary title of *imperator* (as Dio Cass. 43. 44. 2 states). Agrippa in 38 B.C. refused a triumph for victories won under Octavian's superior command and established the rule that the *princeps* should assume the salutations and the triumphs of his legates. Henceforth, apparently, Octavian used *imperator* as praenomen (*imperator Caesar*, not *Caesar imperator*), perhaps intending to emphasize the personal and family value of the title. Thus the title came to denote the supreme power and was commonly used in this sense. But, officially, Otho was the first to imitate Augustus. Vespasian definitively converted the name *imperator* into a praenomen of the *princeps*. The formula *imperator Caesar* was sometimes extended to members of the family of the *princeps* who were associated with him in power. On the death of a *princeps*, or during a rebellion, the *salutatio* of a general as an *imperator* by an army indicated that he was the candidate of that body for the imperial dignity.

The use of the praenomen did not suppress the old usage of *imperator* after the name. After a victory the Emperor registered the *salutatio imperatoria* after his name (e.g.: Imp. Caesar . . . Traianus . . . imp. VI). From the second half of the third century the Emperor was deemed to receive a *salutatio* every year. The number of the salutations became practically identical with the number of the years of the reign.

Theoretically, governors of senatorial provinces, having their own *auspicia*, could assume the title of *imperator*. But the last instance of such a *salutatio* is that of Junius Blaesus (q.v. 2), proconsul of Africa in A.D. 22 (*Tac. Ann.* 3. 74).

IMPERIUM was the supreme administrative power, involving command in war and the interpretation and execution of law (including the infliction of the death penalty), which belonged at Rome to the kings and, after their expulsion, to consuls, military tribunes with consular power (from 445 to 367 B.C.), praetors, dictators, and masters of the horse. It was held later in the Republic by members of certain commissions (e.g. boards for the distribution of land, Cic. *Leg. Agr.* 2. 28) and by proconsuls and propraetors, who were either ex-magistrates or *privati*, on whom a special command had been conferred. Its application was increasingly restricted; first, when two consuls replaced the king, by the principle of *collegium*. Secondly, by the *Leges Valeriae*, traditionally assigned to 509, 449, and 300 B.C., and the *Leges Porciae*, probably of the second century B.C., magistrates were not allowed to execute Roman citizens at Rome without trial,

a prisoner at Rome having the *ius provocandi ad populum*. This right of appeal was extended, probably by convention and not by legal enactment, to Roman citizens on service with the armies and in the provinces. Thirdly, the *imperium* of pro-magistrates was generally restricted to the bounds of their *provinciae* (see further *PROVINCIA*). *Imperium* needed ratification by a *lex curiata*—a convention which persisted to the end of the Republic (Cic. *Leg. Agr.* 2. 26; *Fam.* 1. 9. 25). To a pro-magistrate or a *privatus cum imperio*, *imperium* was granted for a year at a time, or until his commission was achieved. Grants of *imperium* for a specified term of several years occur only at the end of the Republic, the earliest being the grant of *imperium* to Pompey for three years by the *Lex Gabinia* of 67 B.C.

2. Under the Republic, in the case of conflict, the *imperium* of a consul, who held twelve *fasces* (q.v.), could probably override that of a praetor, who held six. As between consuls and proconsuls, each of whom held twelve *fasces*, the consul could override the proconsul by virtue of the *auctoritas* of his office. Conflict in the same territorial sphere between proconsuls first arose in 67 between Pompey (in pursuit of pirates) and Metellus, proconsul of Crete; so in 57 B.C. the question of allowing Pompey, in virtue of his corn commission, to override other proconsuls was mooted, and Brutus and Cassius were actually granted *imperium maius* in the East by the Senate in 43 (Livy, *Per.* 122).

3. Octavian held *imperium, pro praetore* and later as consul, in 43, as triumvir from 42 to 33 B.C., and as consul in 31–23 B.C. (and, from 27, as proconsul of a large number of provinces). When in 23 he resigned the consulship and the *auctoritas* that went with it, his *imperium* was made *maius*, and could be exercised from within the city of Rome. This entitled him to interfere with authority in the public provinces (those of which he was not himself proconsul), as the Cyrene edicts (*JRS* 1927, 34 ff., 42 ff.) conclusively prove. By this same enactment or, if Cassius Dio 54. 10. 5 is right (as A. H. M. Jones has argued, *Studies in Roman Government and Law*, 1960, 3 ff.), by a further bill in 19 B.C., Italy was included within the field of his *imperium*. *Imperium* was granted to him for ten-year periods in 27 and 8 B.C. and A.D. 3 and 13, and for five-year periods in 18 and 13 B.C. It was voted to succeeding emperors at their accession by the Senate (Dessau, *ILS* 229, at Nero's accession), though the senatorial decree was probably ratified formally by a *lex curiata* (Gaius, *Inst.* 1. 5, 'lex de imperio').

4. This *imperium* should be dissociated from the *praenomen imperatoris*, which was used by Augustus; though refused by Tiberius, Gaius, and Claudius, it appears frequently in inscriptions, and from the Flavian period onwards it was in common use. It is probable that this *praenomen* was inherited by Augustus from Julius Caesar, who used *Imperator* (q.v.) as *cognomen*.

5. *Imperium* was recorded in a different sense in the titles which followed the emperor's name. Under the Republic a general, after winning a victory and being saluted by his troops, adopted the official title *Imperator* (q.v.) until he celebrated his triumph. Under the Empire the whole army fought under the Emperor's *auspicia*, and he, rather than the general who was his deputy (*legatus*), was accorded the *salutatio*. Emperors therefore recorded, among the titles which followed their names, the number of salutations which they had received, the first being the acclamation at the time of their accession. Claudius, for example, at the end of his life was *Imperator xxvii*.

6. *Imperium maius* was sometimes conferred on others besides the Emperor, for the creation of a single military command—in this way it was granted to Germanicus in the East in A.D. 17 (Tac. *Ann.* 2. 43) and to Corbulo

in A.D. 63 (Tac. *Ann.* 15. 25). If given for no such specific purpose, its recipient was indicated as a suitable successor to the Principate; in this sense it was granted to Agrippa in 18 B.C. (Cassius Dio 54. 12) and to Tiberius in A.D. 13 (Vell. Pat. 2. 121; Tac. *Ann.* 1. 3).

INACHUS, an Argive river and river-god, father of Io (q.v.). He was made judge between Poseidon and Hera when both claimed Argos, and decided in favour of Hera, whose cult he introduced (Apollod. 2. 13; Paus. 2. 15. 4–5); Poseidon therefore dried up his waters. He is often represented as a mortal, ancestor of the Argive kings, and therefore the earliest figure in Greek legend.

H. J. R.

INCUBATION denotes the practice common among the Greeks and Romans of sleeping within the precincts of a temple for the purpose of receiving a dream vision of the healing god, who would reveal a remedy for the sleeper's sickness or trouble. All gods could speak in dreams, but not all were thought capable of being induced by specific means to give an answer or perform a function. Some deities profoundly impressed visitors with their powers. At the oracle of Trophonius at Lebadea, for instance, one received a memorable emotional experience by descending into the earth and visiting the god (Paus. 9. 39). The technique of incubation was generally used for producing cures, although it could be used to regain lost articles or to receive desired information. The technique was akin to magic in that ritual acts coerced the deity to perform his healing function. Incubation was most widely used in the temples of Asclepius. The practice is attested for the cult of this deity at Epidauros (*IG* iv². 121–7); Pergamum and Smyrna (Aristides, *Sacred Orations*); Rome (*CIG* 5980); Lebeue (Hamilton, *Incubation* 69); Cos (Pliny, *HN* 29. 4, Strabo 14. 2. 19). The cult of Amphiaraus (q.v.) also fostered the practice, especially at Oropus (*Hermes* 1886, 91 ff. = *IG* vii. 235; Paus. 1. 34); Strabo (14. 1. 44) mentions the practice at the three Plutonia in Asia Minor; Ino had an incubation shrine near Thalamae in Laconia (Paus. 3. 26. 1), and the closely related Nemthea had one at Carian Castabus (Diod. 5. 63). Isis was credited with healing powers, and Sarapis was widely acclaimed as a deity who communicated cures in dreams. Before sleeping in a healing god's temple or *temenos* the incubant performed prescribed rituals designed to purify him and to ascertain the god's disposition. At Oropus he sacrificed a ram and slept that night on the victim's hide; Asclepius' clients apparently offered cakes and fruits, and slept on mattresses. Votive offerings frequently testify to cures produced by dream-revelations, and long inscriptions were set up which detailed at some length the miraculous cures that the deity performed. In some temples (in the temple of Sarapis at Delos for instance) there were official interpreters of dreams as well as aretalogists whose duty it was to sing the praises of the god. Many of the dreams and the miracles which resulted from them had no connexion whatever with cures or disease, though there must have been many cures recorded, especially cures of nervous ailments and mental complaints (see *MIRACLES*).

ANCIENT SOURCES. Notices and testimonies of incubation shrines of Asclepius are conveniently assembled in Edelstein, *Asclepius* (see *infra*); see also A. D. Nock, 'A Vision of Mandulis Aion', *Harv.*

INDIA. This country had early trade connexions with east Africa; but it remained unknown to Mediterranean peoples until the extension of the Persian Empire to the Indus and the voyage of Darius' admiral Scylax down the Kabul and Indus rivers and round Arabia to Suez (Hecataeus, frs. 244-9 Jacoby; Hdt. 3. 98 ff.; 4. 44). Even so, India remained a land of fable and wonders (as in the *Indica* of Ctesias, c. 400 B.C.); it was believed to lie in the Farthest East, yet Indians were confused with Ethiopians, and in popular belief India and Ethiopia formed one country. The conquests of Alexander (327-325) brought accurate knowledge of north-west India as far as the river Hyphasis (*Beas*), and vague information about the Ganges valley and Ceylon; and the voyage of Nearchus (q.v. 2) opened up a sea connexion with the Persian Gulf. Seleucus I perhaps penetrated to the river Jumna, but in 302 he relinquished India to the Mauryan king Chandragupta. He kept a resident named Megasthenes at Chandragupta's court in Patna, who published much detail about India (see MEGASTHENES, PALIBOTHRAS), and King Asoka (264-227) sent embassies to the Hellenistic kings. In the second century north-west India was reoccupied by the Greco-Bactrian rulers (see DEMETRIUS (9), MENANDER (2)); but the rise of the Parthian Empire separated India from the Greek lands, and invaders from Central Asia (c. 80-30 B.C.) obliterated the Greek principalities in the Indus valley. In the first century A.D. Chinese silk reached the Roman dominions through India, but land-communications with India remained irregular. The chief routes to India were (1) via Meshed and the Bolan or Mula passes, (2) via Merv, Balkh, Kabul, and Peshawar. For Roman connexions with Pakistan and Afghanistan, and especially on Sirkap (the old Taxila) and Begram, see R. E. M. Wheeler, *Rome beyond the Imperial Frontiers* (1955), 183 ff., and 'Roman contact with India, Pakistan and Afghanistan' in *Aspects of Archaeology*; A. C. Soper, 'The Roman style in Gandhara' in *ArtArch.* 1951, 311.

Sea communications between India and the Persian Gulf were probably maintained by the Seleucids, but were interrupted under Parthian rule. Direct travel from Egypt to India was impeded for long by the Arabs of Yemen, whose monopoly of trade was not seriously challenged by the Ptolemies, and the voyages of Eudoxus (q.v. 3) to India proved abortive. The Arab obstruction was removed by the imperious appetite of Rome for Eastern luxuries in the prosperous days of Augustus, and by the discovery of open-sea routes from Africa to India. In the first century B.C., or soon after, the periodicity of the monsoons in the Indian Ocean and the right seasons for navigation were discovered by Hippalus (q.v.), and direct crossings to various points of the western coast were subsequently established (Pliny 6. 96-100). Augustus received Indian envoys (Dio Cass. 54. 9), and Greek merchants organized a regular trade from Egypt. In Augustus' day 120 ships sailed to India every year, and under his early successors the drain of Roman money to pay for Indian imports caused passing anxiety (Pliny 6. 101; 12. 84), the main goals of visitors from the Roman world being the Chera, Pandya, and Chola kingdoms of Tamil south India. The principal imports to Rome were perfumes, spices (especially pepper), gems, ivory, pearls, Chinese silk. The Romans exported linen, coral, glass, base metals, 'Arretine' table-ware, wine in amphorae, etc., and also sent much gold and silver (and later copper) coin, of which large hoards have been found

in south India. Imitations (usually in terracotta for ornaments) of Roman coins have turned up, mostly in places included in the old Andhra Empire. Articles and remains of Roman origin have been found not only at the modern *Arikamedu* (see below), but also in the central Deccan plateau—at *Brahmagiri*, *Chandravalli*, *Maski*, and *Kondapur*; and at *Amaravati Sisupalgarhi*, *Nashik*, *Nevasa*, *Kolhapur* (or near it), *Akota*, and *Karvan*.

The chief marts on the west coast were Barbaricon (*Bahardipur*) and Barygaza (*Broach*) and, above all, the Tamil towns Muziris (*Cranganore*) and Nelcynda (*Kottayam*). Beyond Cape Comorin the Greeks visited Colchoi (*Kolkai*), Camara (*Kavripaddanam*), a trading-station now called *Arikamedu* two miles south of *Pondicherry* (R. E. M. Wheeler in *Ancient India* 2, July 1946, 17 ff.; J. M. Casal, *Fouilles de Virampatnam-Arikamedu*, 1949; Wheeler in *Aspects of Archaeology*, 1951, 354 ff.), *Poduce* (*Pondicherry?*), and *Sopatma* (*Madras*); a few reached the Ganges mouth and brought news of Burma, Malaya, and of the Thinae or Sinae (in S. China—see *SERUS*). Greek traders figure in Tamil literature as residents in many of the inland centres (A.D. 70-140). The Maldives and Laccadives were now discovered, Ceylon was circumnavigated (see *TAFROBANE*); and one Alexander, taking advantage of the Bay of Bengal monsoon, sailed past Burma and Malaya to Cochin China and even to China proper (Ptolemy 7. 1-2). See, e.g., *Bull. de l'École française d'Extrême-Orient*, xlv, fasc. 1, 1951, 75 ff., on excavations at *Or-go* in Indo-China; and *Aspects of Archaeology* 361, on discoveries made 40 miles up the river Mekong. Nevertheless, Greek geographers always underrated the extent of India's southward projection and exaggerated the size of Ceylon. From c. A.D. 200 direct Graeco-Roman trade declined, communications with India passed into the hands of intermediaries (Arabians, Axumites, Sassanid Persians), and India again became a land of fable to the Mediterranean world. The founders of Christian settlements in India were mostly Persians.

INDICTIO under the Principate meant the compulsory purchase of food, clothing, and other goods for the army and the court. Owing to the inflation of the mid third century the payments made for such purchases became derisory and were finally abandoned. From the time of Diocletian the term *indictio* was applied to the annual assessment of all levies in kind made by the praetorian prefects: the *indictio* declared the amount of each item (wheat, barley, wine, oil, clothing, etc.) payable on each fiscal unit (*caput*, *iugum*, etc.). From 287, indictions were numbered serially in cycles of five years, from 312 in cycles of fifteen years. The number of the indictment was regularly used for dating financial years (which began on 1 Sept.) and sometimes for dating other documents.

Jones, *Later Rom. Emp.* 448 ff.

INDIGETES or **-ITES**, **INDIGITAMENTA**. Both words, also the corresponding verb *indigitare*, are fairly common and there is no doubt that they mean respectively a class of Roman gods, a list of gods and their titles, and to address by the proper name or title.

Concerning their more exact meaning and relation to one another three views have been held. (1) Peter in Roscher's *Lexikon*, s.v., explains the *indigetes* as the *di minuti* (*Sondergötter*), deities of extremely limited function, as Cunina, who looks after the child in the cradle, Cinxia, who sees to the bride's girdle, etc. (2) G. Wissowa, *Ges. Abh.* 175 ff., refuted this. The *indigitamenta* contain names of other gods, including Apollo (Macrobius, *Sat.* 1. 17. 15) and the Bona Dea (q.v.; *ibid.* 12. 21). Furthermore (Wissowa loc. cit. 304 ff.), the lists of the *di minuti* show many features suggesting late grammatical learning, not early priestly lore. He explained the *di indigetes* as native gods, from *indu* + *it. gen.* an impossible etymology, but the latter half of the word could be explained ('*It.* von Grienberger, *Indogerm. Forsch.* xxiii. 337 ff.) as from root of *agere*, 'dwell'. *Indigitamenta* Wissowa supposed to be from *indu* + *tr. agh.* 'say'. Modifications of Wissowa's view are proposed by E. Goldmann (*CQ* 1942, 43) and H. Wagenvoort (*Roman Dynamism*, 1947, 90 f.). Both understand *indiges* as 'active within', though they interpret this differently. (3) C. Koch, *Gestirnerverehrung im alten Italien*, 1933, 78 ff., points out the absence of any sort of proof that the *indigetes* were native as distinct from foreign gods, or even an important class of deities. Starting from the cult of Sol Indiges he takes the epithet to mean 'ancestral' (but his proof is very unconvincing, see Rose, *Harv. Theol. Rev.* 1937, 165 ff.) and makes *indigitare* mean 'treat as an *indiges*', i.e. worship, *indigitamenta* the formulae of address in such worship. At present *indiges* seems of doubtful meaning, but the connexion of it with the other two words likely.

For recent discussion see Latte, *RR* 41

H. J. R.

INDUSTRY (Greek and Roman). Craftsmanship in wood, bone, shell, earth, stone, and leather, as well as use of colour for painting and of fire for cooking purposes, and the preparing of primitive tools are palaeolithic, craftsmanship in textiles, pottery, architecture, flint-mining, and ship-building neolithic. Metal-work and glass production began with the Bronze Age, and rationalization of craftsmanship by written prescriptions, exact measures, and weights in the Ancient Oriental towns. The Indo-European and Semitic tribes of the Neolithic and Cuprolithic Ages had wandering craftsmen who performed the more difficult work of larger households. The crafts of smiths originated in the Bronze Age, representing the first village artisan, with his own workshop in some places. The Ancient Oriental, the Minoan, and Mycenaean metal-workers, potters, ship-builders, brewers, weavers, leather-workers, artists, and doctors occupied more often special workshops, mostly provided for them by kings, temple-rulers, and wealthy owners.

2. Homer and Hesiod mention a considerable variety of craftsmen. But only the smiths had their own workshops, a standard which was gradually reached by potters and, perhaps, ship-builders in Corinth, Athens, and other towns during the eighth and seventh centuries B.C. The money economy of the sixth century produced the *ergasterion*, a workshop able to produce for the needs of expanding markets, with a number of slaves and free workers under the control of foremen. *Ergasteria* of potters, leather-workers, and smiths are known from paintings of sixth-century Attic vases. Many other branches of craftsmanship followed during the fifth and fourth centuries, primarily those producing for export and the military and naval requirements of the Athenian Empire and other States. Craftsmanship in metal, leather, wood, bone, and pottery therefore reached a higher economic and social standard, and was specialized to a higher degree. Craftsmen of the branches of leather manufacture (Cleon, Anytus, Lysias father of Iphicrates), pottery (Hyperbolus), and of work in metal, wood, and

bone (Cleophon, the fathers of Sophocles and of Demosthenes) could reach political and social honours in democratic Athens. Here we find shops with at least 20 to 30 slaves (owned by Demosthenes' father), yielding annually from c. 15 to 30 per cent of the invested capital. Division of labour is known in *ergasteria* which produced metal-work and from potters' shops, but was not usual everywhere. The craftsmen of Athens and other big towns seem to have sold more of their products to merchants and traders than to private customers. Only a few wandering craftsmen may have existed still in rural districts of Greece during the Classical period, the only exception being artists who roamed from town to town and from court to court. On the other hand, there existed wandering Greek metal-workers in the Persian Empire, in South Russia, Italy, and the Alps, who immigrated for longer or shorter periods and produced Greek merchandise on the spot. Specialized crafts of metal- and leather-workers, potters, dyers, musicians, and *fabri* (primitive all-round craftsmen), are ascribed by tradition to Rome under the kings. These craftsmen were organized in *collegia*, which were originally institutions with military obligations, but later of political and economic importance as well.

3. The Hellenistic age, and that of the later Roman Republic, produced a growth of the Greek *ergasterion* system which spread throughout the whole civilized world, and was introduced into textile and food production. Glass-blowing was invented c. 30 B.C.; several glass producers of the first century B.C. and a potter, Aristion, of c. 200 B.C., seem to have had workshops in more than one town. The Ptolemaic Empire combined the craftsmanship of the whole of Egypt in its industrial enterprises. The baths of Egypt, the production of papyrus scrolls, oil, perfumes, textiles (perhaps not woollen goods), and beer became government monopolies. The craftsmen of these trades became State employees, who were controlled by tax-farmers and government officials, received salaries and, in the oil production, a share of the profit for their work. The State issued a production schedule each year and provided the workshops with tools and raw materials. Privileges were granted to temples and to distinguished owners who combined large estates with commercial, industrial, and banking enterprises; but State control was even there not completely removed. Large enterprises for fish-curing, for the production of metal-work and of bricks, also belonged to the Ptolemaic State, which might be considered the greatest trust organizer in the Ancient World.

4. Craftsmanship in republican Rome developed on Greek lines during the second and first centuries B.C., periods of a considerable specialization and expansion of slave *ergasteria* throughout the whole of industry. The petty craftsmen often combined general retail trade with the sale of their own products. Another characteristic of Roman craftsmanship was the prevalence of great capitalistic enterprises which united different branches of industry with banking, commerce, and agriculture, and gave their slaves and freedmen the necessary capital for half-independent workshops. Among persons of this type we need mention only the Elder Cato, the publisher Pomponius Atticus, and Rabirius Postumus with his big *terra sigillata* workshops.

5. Organizations of craftsmen were more common during these centuries than in the Classical period. Those of the city-states had almost exclusively social and religious intentions. They were tools of the Ptolemaic Government for orders and concessions throughout the Egyptian countryside. The Roman *collegia* mixed so much in politics that they had to be dissolved or strictly controlled (see *CLUBS*).

6. The period of the Roman Principate saw craftsmanship of the Greek and Roman type with its specialization, *ergasteria*, and great capitalistic enterprises, spreading over the provinces of the Empire. The Egyptian monopolies were broken up or changed into monopolistic concessions for small districts farmed out to independent craftsmen. Nevertheless, remains of controlled economy were found throughout the whole Empire as a Hellenistic heritage, especially in mining districts, temples, and public domains. Gradually the craftsmen of public and private estates began to furnish the local markets of provincial districts with bricks, coarse pottery, cheap leather- and metal-work, *terra sigillata*, cheap textiles, etc., and even to supersede town craftsmen. A regulated economy began to grow in many small regions from the second century A.D. Finally, the State built up its own workshops for the needs of army, court, and administration, or commandeered private corporations of craftsmen for State purposes, and used them for the farming out of concessions and monopolies. During the crisis of the third century A.D. the craftsmen of whole regions became dependent on orders of the administration.

7. The Late Roman period, which begins with Diocletian, made this organized compulsion final. It did not mean a breakdown of technical knowledge; but the number of independent workshops decreased everywhere, and estate workshops and union between craftsmen and traders became the rule in the countryside of the Late Roman world. The State provided for its own requirements by establishing factories in all provinces and by regulating the more important *collegia* of craftsmen throughout the Empire. Sons had to follow their father's trade, and large taxes in merchandise had to be paid collectively by the corporations, which thus gained a new economic unity. Gradually they received privileges (especially during Justinian I's reign), which enabled them to influence prices, to buy raw materials cheaply for all members, to regulate production and sale, workshop capacity, and the number of their members. The guilds of Byzantium, which are known from the tenth century A.D. and preserved a fundamental nucleus of Graeco-Roman technique and craftsmanship, originated directly from these earlier corporations, and the Christian, Jewish, and Islamic guilds of the Middle Ages are doubtless either in historic connexion with Byzantine institutions or, what is more likely in some cases, with Late Roman and similar Sassanian corporations of the periods before the Germanic and Arabic conquests in West and East. See ARCHITECTURE, DYING, FULING, METALLURGY, MILLS, MINES, MONOPOLIES, POTTERY, SPINNING, WEAVING.

INFAMIA as a legal term embraces a variable number of disabilities (the common one being an incapacity to act or appear for another at law—*postulare pro aliis*) imposed

in a variety of circumstances. It is at root social, involving loss of *fama* or *existimatio*, but is given legal content by *leges*, *senatusconsulta*, imperial constitutions, or by the Praetor's Edict in specific situations, such as condemnation in ordinary criminal prosecutions, condemnation in civil actions for delict and in other civil actions in which the defendant was guilty of a breach of faith (partnership, guardianship, mandate, etc.), engaging in certain disreputable occupations. In classical law there is no single concept of *infamia* (or *ignominia*—the earlier word: see *Gai. Inst.* 4. 182), but in the law of Justinian there appears to be an attempt to generalize.

A. H. J. Greenidge, *Infamia in Roman Law* (1894) (out of date but still useful), M. Kaser, *Sav. Zeitschr.* 1956, 220. B. N.

INHERITANCE, LAW OF. (a) **GREECE.** In Greek law (as at Athens and Gortyn) intestate succession was favoured. The sons and male descendants of the deceased came first in order of succession. In default of them his brothers and their descendants inherited, and in the third place the sons of his grandfather and their male descendants. Ascendants were excluded if their descendants were living: a brother of the deceased excluded the father, an uncle the grandfather. Adoptive sons were treated on the same footing as natural ones. The claims of sons and male descendants could not be set aside by testamentary dispositions. In general, males excluded females in the same group of kinship. A daughter inherited only if no sons or male descendants of predeceased sons existed; she was obliged to marry the man to whom her father had destined her either in his lifetime or by will. Failing such disposition the next collateral could claim the daughter, together with her father's fortune. But if a son remained, the daughter had no right to succeed and could demand only a dowry, to be determined at her brother's discretion.

2. Wills (introduced into Attic law, according to tradition, by Solon) were allowed only when the testator had no sons; disinheritance was possible only in the father's lifetime by solemn declaration. Before Solon adoptions were used to achieve some of the purposes of a will; they continued to be common and were treated to some extent like wills. Wills were normally in writing and witnessed. Legitimate sons could take possession of the inheritance without any formality, and they had no right to refuse it; other relatives needed an official authorization.

3. (b) **ROME.** Roman law recognized a will as early as the XII Tables, and intestacy was in historical times considered reprehensible. The essential of a Roman will was the nomination of an heir (*heres*), or several jointly, on whom the assets and liabilities of the dead man should devolve as a whole (universal succession). Only then could other dispositions, such as legacies, take effect. The earliest will (obsolete before the end of the Republic) was a public act in the *comitia* (q.v.) *curiata* or before the army in battle array. The earliest private will (*testamentum per aes et libram*; probably after the XII Tables) was in form a *mancipatio* (q.v.) *inter vivos* of the estate to a friend (*familiae emptor*) with directions as to its disposal on the death of the 'testator'. In the classical law the *mancipatio* was a pure formality, the only effect of which was to give validity (but only after death) to the directions, now on wax tablets, which in fact constitute the will. (The *familiae emptor* is a man of straw.) The Praetor (see *EDICTUM*) went further, and in effect dispensed with the *mancipatio* by giving possession of the estate (*bonorum possessio*: cf. **LAW AND PROCEDURE, ROMAN**, II. 11) to anyone named *heres* in tablets sealed by seven witnesses (derived from the five witnesses and the *libripens* of the *mancipatio*, with the *familiae emptor*). Until Antoninus Pius this 'praetorian will' could be upset by a person entitled on intestacy, but thereafter it was fully effective.

In post-classical times *mancipatio* went finally out of use, and in A.D. 439 Theodosius II added to the Praetorian requirement of the seals of seven witnesses the further requirement that the testator should 'subscribe' the will. There was also a public will (Greek in origin), entered in the records of a court or deposited in the imperial archives, and (in certain circumstances) a holograph will (i.e. in the testator's own writing).

4. There was also a contrast between civil and praetorian law on intestacy. By the civil law only agnates (see *PATRIA POTESTAS*) were entitled: in the first place, *sui heredes* (i.e. those persons in the *patria potestas* of the deceased who became *sui iuris* on his death, males and females equally); secondly, if there were no *sui heredes*, the nearest agnates (e.g. brothers, sisters); finally, in early law, members of the *gens* (q.v.). The Praetor recognized the claims of cognates (blood relations), and gave *bonorum possessio* to categories of person neglected by the civil law, such as emancipated sons, cognates up to (usually) the sixth degree. Moreover, if those in one class or degree refused, those in the next class or degree could claim, whereas by the civil law this was possible only if there were no members of the earlier class or degree. Lastly, when no other entitled person existed or all of them had refused, *bonorum possessio* was given to the wife (or husband), by contrast with the civil law by which a wife was only entitled if in *manus* (q.v.) and therefore classed as a daughter. After various subsequent innovations, the law was radically reformed by Justinian (*Novels* 118 and 127) (see *CODEX*), who established an order of succession of descendants, ascendants, and collaterals on the cognatic principle.

5. The claims of some relatives were recognized even against the testator's will. By the civil law *sui heredes* must either be appointed heirs or formally disinherited in the will (and the Praetor extended this to emancipated sons, etc.), but if they were formally disinherited they had no claim. In the Principate, however, the court of the *centumviri* (q.v.) developed an additional remedy (*querela inofficiosi testamenti*) whereby certain close relatives, if they would have been entitled on intestacy and had without just cause been passed over or given less than a quarter of what they would have obtained on intestacy (*legitima portio*), could wholly or partially upset the will. They would thus usually obtain more than the *legitima portio*. Under Justinian's law, however, the complainant was in most cases allowed only his *legitima portio*. See also LAW AND PROCEDURE, ROMAN, I; FIDEICOMMISSUM, ADOPTION.

INIURIA in Roman law, apart from more general meanings (*Inst. Inst.* 4. 4. pr.), is either a delict in itself or an element in another delict (see *DAMNUM INIURIA DATUM*). As a delict in itself, it originates in the XII Tables (q.v.) which provided for retaliation (*talio*) for severe bodily harm (*membrum ruptum*), unless the aggrieved party accepted a money composition, and for money penalties for lesser injuries. By the later Republic the fall in the value of money had made these penalties derisory (Gell. *N.A.* 20. 1. 13) and the Praetor (see *EDICTUM*) intervened to grant a new action (*actio iniuriarum*), not for a fixed penalty but for damages. Thereafter further actions were introduced into the Edict to enable plaintiffs to obtain

damages for a variety of acts, such as public insults, affronts to the modesty of a woman, and, more generally, any attack on the reputation of another which might cause him to suffer *infamia* (q.v.). By the end of the Republic the jurists had held that these actions were merely particular applications of a general principle implicit in the original *actio iniuriarum*, that any wilful affront to the dignity of the individual was actionable. From this generalization grew the classical delict which embraced almost any contumelious disregard of another's rights or personality, and of which *Dig.* 47. 10 provides many illustrations. In the later law a criminal prosecution could also be brought. For assault and for forcible entry into a house a *Lex Cornelia* of Sulla (q.v. 1) had earlier introduced a (probably) alternative action, which was criminal in that it was tried by a *quaestio* (q.v.) but private in that it could be brought only by the person wronged.

INNOCENTIUS, gromaticus. An *agrimensor* of this name is known in A.D. 359 (Amm. Marc. 19. 11. 8), but the treatise said to be extracted from the work *De litteris et notis iuris* by Innocentius is of later date (probably 5th–6th c.). Commonly known as *casae litterarum*, it differentiates between thirty-nine types of estate (*casa* — *villa* or *fundus*); each is given a letter of the Latin or Greek alphabet, and the diagrams incorporate these letters together with distinguishing features of each estate. The language is of interest for the development of vulgar Latin.

INNS, RESTAURANTS. In primitive times hospitality towards strangers was universal. It remained common throughout antiquity, and men of social standing had guest-friends (*ξένοι, hospites*) in most places that they were likely to visit. In the Hellenistic and Roman world, with greatly increased travel (q.v.), these relations were very widespread. But as early as the fifth century B.C. there is evidence of the common existence of inns in cities and by the roadside. Standards varied enormously: in the cheapest, travellers had to provide their own food and linen, and even physical safety could not be taken for granted. Though hotels for better-class people existed—ambassadors might have to use them for purposes of state (Dem. 19. 158)—inns in general had a reputation for bedbugs, discomfort, rough-houses, and prostitution. Famous shrines in due course provided public accommodation, run either by the host city or by other cities for their own citizens—not always to their satisfaction. Herodotus (5. 52) was impressed with the government-controlled Persian posting-inns along the Royal Road. Classical Greece had no elaborate restaurants, but knew the *κάπηλος*, who sold wine and snacks and was proverbial for dishonesty.

In the Roman world conditions were similar. Men of standing tried to avoid using inns and were never seen in taverns or restaurants. They had their own *deversoria* along roads which they travelled frequently (e.g. to their country estates), or could use those of their friends. When they travelled further, they could expect hospitality (private or public) and, under the Empire, sometimes use the facilities of the postal service (q.v.). Yet—as in Greece—anyone might have to stop at an inn on a long journey (e.g. Horace's to Brundisium); and though innkeeping was classed among disgraceful trades, good and even luxurious establishments existed. Taverns were universally popular among the lower classes, many

of whom had no adequate cooking facilities at home, and became centres of their social life, often noisy and dangerous to public order. Various emperors passed legislation restricting the sale of prepared food and wine and, by building baths, provided alternative attractions.

In Pompeii taverns, restaurants, and inns (some with accommodation for animals) were common. The inns clustered near the gates and the town centre and were mostly kept by Orientals. In better-class places conditions would be pleasant, with *trichina* (q.v.) perhaps set out in a garden and musical entertainment and good food provided: archaeological evidence bears out the *Copa* (*Appendix Vergiliana*). The best hotels in Pompeii were converted upper-class mansions. In lesser places, a colourful inn-sign might go with two or three dingy rooms, and customers had to eat sitting on stools and sleep on hard and bug-infested beds. Female company—no doubt of varying standards—was universally provided if required. This accounts for the fact that innkeepers are classed with *lenones*.

PW, a vv 'Καταγύγιον', 'Παρθενεῖον', 'Κέντρος', T. Kleberg, *Hotels, restaurants et cabarets dans l'antiquité romaine* (1957), W. F. Jashinski, *CJ* 1964, 337 ff. E. B.

INSTITUTIONES were elementary textbooks of Roman law. The most renowned work of this kind is the *Institutiones* of Gaius (q.v. 2). Justinian took Gaius' book as the basis of his own *Institutiones*. This work, though primarily intended, like its model, as a students' manual, was given legislative validity from the same day as the *Digesta* (q.v.) (30 Dec. 533). It was compiled by Tribonianus (q.v.) and two of his collaborators in the *Digesta*, the professors Theophilus and Dorotheus. Apart from passages which record post-classical changes in the law (mainly by Justinian), it is a compilation of classical writings, the principal identifiable sources (apart from Gaius' *Institutes*) being Gaius' *Res cottidianae* and the *Institutes* of other jurists (Marcianus q.v., Florentinus, Ulpianus, q.v. 1).

INSUBRES lived north of the Po. The most powerful people in Cisalpine Gaul (q.v.), they frequently exercised dominion over the neighbouring Taurini, Salassi, etc. Their capital was Mediolanum (q.v.) (Strabo 5. 213). Livy (5. 34) represents them as Aedui (q.v.) who entered Italy via the Mont Genève Pass; but his account is untrustworthy. These Gauls, however, certainly established themselves about the Ticinus c. 400 B.C., and were henceforth called Insubres—probably a pre-Celtic name. About 232 B.C. they clashed with Rome. At Clastidium (q.v.) (222) Marcellus stripped the *spolia opima* from their king. In 218 the new Latin colony at Cremona (q.v.) and Hannibal's arrival incited them to fresh efforts, until finally they were subjugated in 194 (Polyb. 2. 17 f.; Livy, books 21–34). Subsequently they disappeared as a separate nation. Insubrian districts obtained Latin rights in 89, full citizenship in 49 B.C. For bibliography see CISALPINE GAUL. E. T. S.

INTERAMNA, modern *Terni*, in Umbria near the confluence of the Velinus and Nar (whence its inhabitants were called Nahartes). The *municipium* prospered amid its fertile surroundings and the Via Flaminia (q.v.) was diverted to serve it. E. T. S.

INTERAMNA LIRENAS, modern *Pignataro*, in Latium (q.v.) near the confluence of the Liris and *Rapido*. A Latin colony here (312 B.C.) helped contain the Samnites (q.v.). E. T. S.

INTERAMNIA, modern *Teramo*, in southern Picenum at the confluence of the *Vezzola* and the *Tordino*, town of the Praetuttin, whose name survives in *Abruzzi*.

E. T. S.

INTERCESSIO was the right of a Roman magistrate to veto a motion carried by another magistrate, provided the former was invested with *maior* or *par potestas*. It arose from the idea of magisterial collegiality, and was reputed to be a necessary precaution against any abuse of their power by magistrates. Only a dictator could not be obstructed by the *intercessio* of an official magistrate, since he had no equal or superior. The same principle was later applied to municipal administration. The tribunes of the *plebs*, as equal colleagues, also had the right of *intercessio* against one another; but their veto of magisterial decrees, comital enactments, and senatorial *consulta* was of a special kind and is unlikely to have had any basis in law. Like the 'right' of *auxilium*, the tribune's veto derived ultimately from the inviolability of his person and his consequent freedom to resist magisterial authority with impunity. General recognition of it as a tribunician prerogative probably accompanied or followed the absorption of the plebeian offices into the framework of a united State in the late fourth century. Annalistic references to its use in earlier times are therefore anachronistic. *Intercessio* was valid only within the sphere of civil legislation and within Rome, and fell into disuse when it was conferred upon the emperors, as a part of their *tribunicia potestas*. See also COLLEGIUM.

Mommsen, *Röm. Staater*, 1² 258 ff.; 1³ 290 ff. P. T., E. S. S.

INTEREST, RATE OF. The rate of interest in Greece and Rome is known from the fifth century B.C., throughout which the temple of Delos gave loans at 10 per cent. The Roman Republic fixed interest at 84 per cent (*fenus unciarium*) in the XII Tables and in c. 357 B.C. A *Lex Genucia* of perhaps 342 forbade usury completely; but this law, though re-enacted several times during the fourth, third, and second centuries, fell into disuse because it defied the laws of economics.

During the fourth century the interest on town mortgages in Athens amounted to c. 8 per cent, and on country mortgages to c. 6–12 per cent. Other loans brought from 10 to 33½ per cent, and on the average c. 12 per cent. A contemporary Delphic law fixed the interest of normal loans at 9 per cent, of small short-term loans at perhaps 25 per cent. In Persian Babylonia and Egypt, however, interest up to 40 per cent was paid during the fifth and fourth centuries, a rise of 100 per cent compared with the second millennium B.C. Safe investments in the Greek motherland brought 6 to 10 per cent during the third century, 24 per cent in the Hellenistic East of the same period, from 5 to 10 per cent in Egypt during the later second century.

The maximum rate of interest introduced by Lucullus and Cicero for their Asiatic provinces was 12 per cent. Nevertheless, 'political' interest rates of up to 48 per cent were asked for in Achaea, Asia, and Cilicia during this period. Sulla decreed in 88 B.C. a maximum of 8½ per cent, and the Roman Senate in 51 B.C. 12 per cent, a regulation valid throughout the Roman Empire for centuries. Interest in Rome during the first century B.C. and probably the first and second centuries A.D. was normally c. 6 to 10 per cent for safe investments, while loans in kind brought up to 50 per cent. Alexander Severus reduced the interest maximum for senators to 6 per cent. But business switched now to the unregulated loans in kind of 50 per cent and more.

The maximum rate of interest was increased to 12½ per cent. during the fourth century A.D. More capital seems gradually to have accumulated during the following

centuries, and Justinian I was able to fix the ordinary interest at below 6 per cent, that for trade investments at 8 per cent, for foreign trade and loans in kind at 12½ per cent, and that which senators were permitted to demand at 4 per cent. Bottomry loans (q.v.) were excepted from these and earlier regulations.

INTERPRETATIO ROMANA, literally, 'Roman translation' (Tac. *Germ.* 43. 3); the use of a Latin divine name, as Mercurius, to signify a foreign god, as Odin. This is merely a particular case of the assumption that all peoples worshipped the same gods; thus the Greeks regularly call Minerva Athena, and the Romans speak of Zeus as Iuppiter. Foreign divine names were hardly used unless no native equivalent could be found, as Apollo in Rome, or a foreign cult (e.g. Isis, Mithra) was adopted.

G. Wissowa, *ARW* xix (1916-19), 1 ff.; cf. H. J. Rose, *Roman Questions of Plutarch*, 53 ff. H. J. R.

INTERREX was originally the individual appointed by the senators on the death of a king to exercise provisional authority. Later, in the event of the death or resignation of both consuls before the conclusion of their year of office, *interreges* were successively appointed from each of the senatorial *decuriae* for five days each until the auspices were taken and the new consuls elected. The first of a series was debarred from conducting the elections. The *interrex* had to be a patrician and a senator. He exercised all the functions of the consulship, and was escorted by twelve lictors. The last known example of *interregnum* occurred in 43 B.C. *Interreges* also held temporary office in cities of Latin Italy until the dawn of the imperial age.

INVULNERABILITY. Such stories of invulnerable men or beasts as are found in classical mythology mostly conform to the Sigurd type, in which there is one vulnerable spot (see ACHILLES, ATLAS 1), or the Balder type, in which there is one thing which can wound (Nemean lion; own claws, Theoc. 25. 277. Caeneus, q.v.; (?) wooden pikes, Hyg. *Fab.* 14. 4 and Rose ad loc.).

O. Beuthold, *Die Unverwundbarkeit* (1911); and see MESSAPUR H. J. R.

IO, in mythology, priestess of Hera at Argos; usually said to be daughter of Inachus (q.v.). Zeus loved her, but to conceal her from Hera gave her the shape of a heifer. Hera asked to be given the heifer, which Zeus could hardly refuse; she set Argos (q.v. 1) to watch her. On his being killed by Hermes Hera plagued Io with a gadfly, which drove her out of the country. After long wanderings she came to Egypt, where Zeus restored her with a touch of his hand; hence the son which she bore him was called Epaphus (from ἐπάφρευ). For his descendants see DANAUS. See especially Aesch. *PV* 561 ff.; Ov. *Met.* 1. 583 ff.; Apollod. 2. 5 ff. Io was identified with Isis (q.v.); Apollod. 9); this in turn due

to Isis' identification with Hathor, who has bovine shape. Rationalizations of the story were current early, as Hdt. 1. 1. 4-5 (she was kidnapped by Phoenicians); Ephorus ap. schol. Ap. Rhod. 2. 168 (she was kidnapped and the Egyptians sent Inachus a bull for compensation). It has been suggested that she was originally a moon-goddess (hence the cow-horns), or a form of Hera (q.v.); see Engelmann in Roscher's *Lexikon* ii. 269; Farnell, *Cults* i. 209; Eitrem in *PW* ix. 1732 ff. H. J. R.

IOLCUS, a city of Thessalian Magnesia, situated on the northern shore of the Bay of Volo, where it was sheltered by Pelion (q.v.). It was celebrated in mythology as the home of Jason (q.v. 1) and the starting-point of the Argonauts (q.v.). Recent excavation has proved that Iolcus, with its harbour at Neleia, was the centre from which Mycenaean influence spread inland over most of Thessaly. A settlement there, which existed from the Early Helladic period, evidently developed and prospered throughout the Late Helladic period. Its principal building, covering a considerable area and presumed to have been a palace, was destroyed by some disaster in the first half of the twelfth century and was never replaced. The rest of the settlement, however, after being abandoned for a short time, soon revived, and the prevalence of Mycenaean influences suggests that some former inhabitants returned, doubtless reinforced by newcomers. Iolcus remained moderately prosperous in the Protogeometric period, but it lost its links with inland Thessaly, which had been overrun by northern invaders. Subsequently, though continuing to exist, it became an insignificant village, being overshadowed by Pagasae (q.v.).

V. R. d'A. Desborough, *The Last Mycenaeans and their Successors* (1964), esp. 127 ff. H. D. W.

ION (1), eponymous ancestor of the Ionians; his legend as we have it seems to be Attic in all its forms. He is the son of Creusa (q.v. 1), but his father, in the tradition followed by Euripides, is Apollo (Patroüs); elsewhere, as in Apollod. 1. 50, he is Xuthus, son of Hellen (q.v.). After the death of Erechtheus, Xuthus, Ion, and his brother Achaeus (q.v. 1) have adventures which vary from author to author and obviously have more to do with early ethnological theory than real tradition (see Stoll in Roscher's *Lexikon*, s.v., for particulars), but regularly Ion settles sooner or later in Athens and divides the people into the four traditional Ionian tribes, Hopletes, Geleontes, Argadeis, and Aigikoreis (named after his four sons, Eur. *Ion* 1575 ff.). For his use in religious propaganda by Athens in the fifth century, see J. P. Barron, *JHS* 1964, 37 ff. H. J. R.

ION (2), of Chios, but equally at home in Athens, Greek poet, was probably born about 490 B.C. He was on friendly terms with Cimon, whom he met, with Themistocles, at a dinner party in Athens about 475, and whose sociability he contrasted with the aloofness of Pericles; and in 462 he heard Cimon speak in the Assembly in favour of assisting Sparta when hard-pressed by her neighbours (Plut. *Per.* 5, *Cim.* 9, 16). Anecdotes record his meeting with Aeschylus at the Isthmian Games (Plut. *De prof. virt.* 8), with Sophocles at Chios in 441-440 when the latter was a general in the Samian War (Ath. 13. 603 c), and possibly with Socrates (Diog. Laert. 2. 23). He was fond of his wine and other pleasures—the satyric element which, as he said, virtue, no less than tragedy, needed to complete it (Plut. *Per.* 5). He died before 421 (Ar. *Pax* 835 and schol.). His first appearance as a tragic poet was about 451 B.C. (*Suda*, s.v.); in 428 he was defeated by Euripides when the latter produced the *Hippolytus* (Arg. Eur. *Hipp.*), but on another occasion

he won the first prize at the Great Dionysia for both tragedy and dithyramb, and in his delight made a present of Chian wine to every Athenian citizen (Ath. 1. 3 f.). The number of his plays was variously given as 12, 30, or 40 (*Suda*, s.v.). The known titles include, from the Heracleian cycle of legend, *Alcmene*, *Eurytidae*, and the satyric *Omphale*; from the Trojan, *Agamemnon*, *Laertes*, *Teucer*, *Φρουροί* (dealing with Odysseus' entry into Troy as a spy); and besides these, *Argivi*, *Phoenix* or *Caeneus*, and *Μέγα Δράμα* (a title unparalleled for a Greek tragedy); but fragments are few and insignificant (*TGF* 732-46). The Alexandrian critics admitted him to the *Canon*—their select list of outstanding tragic poets (Cramer, *Anecd. Par.* 4. 197, etc.); Aristarchus and Didymus wrote commentaries on his plays (Ath. 14. 634), and Baton (2nd c. B.C.) a monograph on him (Ath. 10. 436). In the treatise *On the Sublime* (33) he is described as a faultless and perfectly finished writer in the 'smooth style', but without the force and fire of Pindar and Sophocles. In addition to his tragedies he composed elegiac poems, epigrams, encomia, paeans, hymns, scolia, possibly a comedy, at least one cosmological work in prose, the *Τριαγμός*, in which he showed on Pythagorean principles the triadic structure of the cosmos, a history of the foundation of Chios (of which Pausanias 7. 4. 8 made use), and memoirs. These last are to us the most interesting of his works, especially on account of the long quotation given by Athenaeus 605 e in which he describes with lively detail an evening spent by Sophocles in Chios. No other Greek before Socrates is presented so vividly. The title *Ἐπιδημία* probably refers to the visits of distinguished characters to the island. Whether it is identical with the *Συνεκδημητικός* Pollux 2. 88 and the *Ἰππομήματα* schol. Ar. Pax 835 is uncertain. Ion appears to have had no immediate imitators in the genre that he had invented.

See A. von Blumenthal, *Ion von Chios* (1939), T. B. L. Webster, *Hermes* 1936, 263 ff.; F. Jacoby, *CQ* 1947, 1 ff., *FGH* 392.
A. W. P.-C., D. W. L.

IONIAN SEA (*Ἰόνιος*, *Ἰώνιος κόλπος*), a name used as an alternative to 'Adriatic Sea' for the waters between the Balkan Peninsula and Italy; no clear line of demarcation can be drawn between the two seas. The name 'Ionian', like that of 'Adriatic', was sometimes extended to include the sea to east of Sicily. M. C.

IONIANS (*Ἴωνες*, *Ἰάφρονες*), a section of the Greek people mentioned but once by Homer (*Il.* 13. 685, *Ἴαφόνες ἐλκεχίτωνες*), but important later, after the central part of the west coast of Asia Minor (still non-Greek in Homer) had become known as Ionia.

Ionia was colonized, according to early traditions, by refugees from the Greek mainland, flying before the Dorians and other tribes from north-west Greece (Mimnermus in Strabo, 634; Hdt. 1. 145-8; Thuc. 1. 12). Herodotus (1. 146-7) speaks of the mixed blood of the colonists, and adds that some of them took the women of the conquered Carians. All were, however, reckoned as Ionians 'who trace their descent from Athens and keep the Apaturia' (q.v.).

The claim of Athens to be the mother-city of all Ionians will not hold, as Herodotus himself says; and the eponymous ancestor Ion (q.v. 1) could only artificially be worked into the Athenian genealogies, themselves extremely artificial. But the Athenian claim to be the 'eldest land of Ionia' was as old as Solon, and long preceded any Attic claims to political predominance (Arist. *Ath. Pol.* ch. 5); and it receives confirmation from the appearance of some of the four ancient 'tribes' of Attica—the Aigikoreis, Hopletes, Geleontes, and Argadeis—in inscriptions from Delos, Teos, Ephesus, Perinthus (a Samian colony), Cyzicus and Tomi (Milesian colonies).

There may be some truth in the Athenian claim to have organized expeditions to Ionia.

The Ionic dialect, first known to us from Homer, was spoken (with local variations) in a compact region comprising the Cyclades, Ionia proper, Euboea, and Attica. The fact that inscriptions from Chios show some forms akin to the adjacent Aeolic and the surviving Aeolicisms in Homer—mostly *metri gratia* (εἶος, λαός, for ἔως, λέως, etc.), but also gratuitously (e.g. *Ναυσικάδα*, ὀράτο)—suggest that Ionic arose after the migrations, among the states whose culture-centre was at Delos. Its area was subsequently expanded by colonization.

A mixed race, descended in part from the Mycenaean peoples, and highly 'selected' amid the turmoil of the migrations, the Ionians, from about 750 B.C., developed precociously (see the brilliant picture in the *Hymn to the Delian Apollo*). Indeed, the whole initiation of Greek colonization (q.v.) and Greek rationalism belongs to them and to those neighbouring Greeks who came within their orbit. Throughout the East 'Yawanī' (Javan: Genesis x. 2) became the generic term for 'Greek' (cf. 'Frank' later). They were, however, exposed to attack from the Lydian and Persian monarchies, and the effort to throw off Persian rule, exercised through Greek 'tyrants', ended in ruin after a struggle of six years (494). Then came Athenian overlordship and the unmerited depreciation of Ionians as unmanly (Hdt. 1. 143; 5. 69; Thuc. 5. 9; 6. 77; 8. 25). To fifth-century Greek theory 'Dorian' and 'Ionian' corresponded to 'Nordic' and 'Mediterranean' in modern Europe (Hdt. 1. 56). The generalization that credited the former with more steadfastness, the latter with more intelligence, is in each case open to numerous exceptions: contrast the sobriety of Ionian Olbia or Massilia (Strabo 179-80; Dio Chrys. *Borysthenite Discourse*) with the unstable brilliance of Dorian Syracuse and Tarentum in Thucydides and Livy.

J. M. Cook, *The Greeks in Ionia and the East* (1962); G. I. Huxley, *The Early Ionians* (1966). See also CHIOS, IPHICRATES, MAGNESIA, MILETUS, PHOCAEA, PRIFNE, SAMOS.
A. R. B.

IOPHON, son of Sophocles, competed with frequent success, sometimes with his own tragedies, sometimes, it was suspected, with his father's (or at least with his father's help) (Ar. *Ran.* 73 ff. and scholia). He won the first prize c. 435 (cf. *Hesp.* 1943) and second prize in 428, Euripides being first and Ion third (Arg. Eur. *Hipp.*). The story that he tried to obtain control of his father's property by accusing him of senile decay, and that Sophocles disproved the charge by reading from the *Oedipus Coloneus*, is very doubtful (Vit. *Soph.*, etc.). He wrote an epitaph for his father's monument after his death (Val. Max. 8. 7. 12). He was credited with fifty plays (*Suda*, s.v.).

TGF 761.

A. W. P.-C.

IPHICLES, in mythology, twin brother of Heracles (q.v.), also called Iphiclus. He was Heracles' companion on some exploits and father of Heracles' better-known companion Iolaus. Two other children of his were killed by Heracles in his madness (Apollod. 2. 61 ff.; schol. on Lycoph. 38 and *Od.* 11. 269; Nic. Dam. fr. 13 Jacoby).

H. J. R.

IPHICRATES (c. 415-353 B.C.), Athenian general. A man of humble origin, he first won fame by commanding a company of pelstas who annihilated a Spartan division (390). During the Corinthian War he led successful raids from the Isthmus, and afterwards (386) took service as a mercenary commander in Thrace, where he married Cotys' daughter, and in Syria against the Egyptian rebel kings. After returning to Athens (373) he was sent to relieve Corcyra from a Spartan invasion. He succeeded, but caused dissatisfaction by failing to prevent Epaminondas

from invading the Peloponnese (369). He led the Athenian attempts to recover Amphipolis (367-364), but on his failure ceased to be *στρατηγός* and retired to Thrace. With his son Menestheus he commanded the Athenian fleet at Embata (355), and was afterwards prosecuted by his colleague, Chares, but acquitted. Two forensic speeches, now lost, were cited under his name (Dion. Hal. *Lys.* 12).

Iphicrates was notable as the general who first established the importance of peltasts (q.v.). He also had a reputation for strictness of discipline and the ingenuity of his stratagems.

Xen. *Hell.*, and Diod. bks 14-16 (*passim*); Nepos' 'Life' (poor); C. Rehdantz, *Vitae Iphicratis*, etc. (1845); *Prosop. Att.* 7717.

H. W. P.

IPHIGENIA (*Ἰφίγεια*), perhaps a by-form of Artemis (A. Iphigeneia at Hermione, Paus. 2. 35. 1; *Ἰφίγεια ἡ Ἀρτεμῖς*, Hesychius) (q.v.), but in mythology a daughter of Agamemnon. For some reason he was obliged to sacrifice her, either because he had vowed to sacrifice the fairest thing born in a particular year, and she was born then, or because he had offended Artemis by an impious boast (Eur. *IT* 20 ff., cf. IDOMFNEUS; Soph. *El.* 569, whereon see Jebb). She enforced this by delaying the fleet at Aulis with contrary winds until the sacrifice was made (Aesch. *Ag.* 184 ff. and elsewhere; the story is from the *Cypria*). Iphigenia was therefore sent for to Aulis, under pretext that she was to be married to Achilles before the fleet sailed (*Cypria*; Eur. *IA*), and led to the altar. Aeschylus (loc. cit.) implies that she was actually killed; but the story in the *Cypria*, followed by Euripides, *IT*, is that Artemis snatched her away, substituting a hind for her, and brought her to the country of the Tauri. There, according to the version followed by Euripides, she was Artemis' priestess, and by the local rite she had to superintend the sacrifice to the goddess of all strangers caught in the country. At length Orestes (q.v.) came there with Pylades, having been instructed that he could finally get rid of the Erinyes if he brought to Greece the Taurian image of Artemis. Both were taken prisoner, but during the preparations for sacrifice Iphigenia discovered who they were and under pretence of purificatory rites got them and the image away from the temple to the sea-shore, whence they escaped with the help of Athena. The image was duly brought to Halae in Attica (cf. *ATTIC CULTS*), where Iphigenia continued to be priestess, the goddess was given the title of Tauropolos, and a pretence of human sacrifice (a slight cut made in a man's throat) was kept up.

The local legend of Brauron said that the sacrifice of Iphigenia took place there, and that a bear, not a hind, was substituted for her (schol. Ar. *Lys.* 645, an interesting example of adaptation of a Panhellenic story to particular purposes; for the rite which it purports to explain, see ARTEMIS). Antoninus Liberalis, 27, says the surrogate was a calf, and that Iphigenia finally was made immortal and married to Achilles (q.v.) on Leuce.

P. Clément, *Ant. class.* 1934.

H. J. R.

IPHIS, in mythology, (1) father of Eteocles, one of the Seven against Thebes, and of Euadne, wife of Capaneus (q.v.). (2) A young Cypriot, who loved Anaxarete, a noblewoman of that island. She would have none of him, and he finally hanged himself at her door; she looked, unmoved, from her window, and was turned by Aphrodite into stone. The resulting image was called Aphrodite *prospiciens* (*ἐκκύπτουσα*?).

See Ovid, *Met.* 14. 698 ff., cf. Ant. Lib. 39 (from HERMESIANAX).

H. J. R.

IRENAEUS (c. A.D. 130-c. 202), sometimes called the first systematic Christian theologian, was born in Asia

Minor, had contacts as a boy with Polycarp of Smyrna, but spent most of his active life in Gaul, becoming bishop of Lyons c. 178. He was thus an important link between East and West, and intervened at Rome on behalf of the Montanists (see MONTANISM) at Lyons (177/8), and the Quartodecimans of Asia (190) who observed Easter (the Christian Passover) on Nisan 14 rather than the following Sunday. Only two of his numerous works survive, the vast anti-Gnostic *Adversus haereses* (mainly in a Latin translation) and the short *Proof of the Apostolic Preaching* (in an Armenian translation). His constructive exposition of Christian theology developed out of his critique of Gnostic systems, and was characterized by stress on the traditional elements in Christianity.

TEXTS. Ed. A. Stieren (Leipzig, 1848 53). W. W. Harvey (Cambridge, 1857), F. M. M. Sagnard and A. Rousseau (Paris, 1952-). J. N. D. K.

IRIS, the goddess of the rainbow, and for the most part hardly distinguishable from the natural phenomenon itself. She appears to have had no cult at all, being simply, when thought of as in human form, a messenger of the greater gods, presumably because the rainbow seems to touch both sky and earth. In Hesiod (*Theog.* 266 ff.) she is daughter of the Titan Thaumas and Electra the Oceanid, and sister of the Harpyiae (q.v.). According to Alcaeus (fr. 73, Lobel-Page; Plut. *Amat.* 765 e) she is the mother by Zephyrus of Eros, a conceit which means no more than that in moist spring weather men feel amorous; a few later writers catch it up. As messenger of the gods she is specialized to Hera in many of the later poets, e.g. Callim. *Del.* 228 ff., where she sleeps under her throne like a dog; Homer represents Zeus as her usual employer.

In her earliest appearances in art (François vase and other early sixth century Attic vases) she is wingless and dressed like Hermes in short *chiton* and winged boots. Later her dress may be long or short but she is always winged. She carries the herald's staff. As a lone traveller she is sometimes beset by satyrs or centaurs. Already on the Parthenon frieze she stands close by Hera.

IRON. The earliest specimens are mainly of meteoric origin, though smelted iron belonging to the third millennium has been found in Mesopotamia. Probably meteoric iron was used for Mycenaean jewellery, and Homer mentions it as a valuable metal. It normally contains much nickel. In the thirteenth century it was mined in Hittite territory, though it is unknown if the later famous Chalybes (q.v.) were its discoverers. It appears suddenly as the material for weapons in Greece in perhaps the eleventh century. The change was probably due to the failure of bronze-supplies, as in other countries the replacement was gradual. It was hardly an advance, as early iron was of uncertain quality. Homer speaks of an iron knife, but has no explicit reference to iron swords.

Greece possesses small iron-deposits, but the main sources in classical times were Elba and the Chalybes country behind Trapezus. The manufacture of iron articles was concentrated at Athens and the Isthmus States. As geographical knowledge extended, other sources became available. The magnetite sands of Thrace were used at an early date. Spanish iron was prized under the Roman Republic, and from about 40 B.C. Rome drew on the deposits of Noricum. The mines of inner Dalmatia are of later date. In many parts of Gaul are enormous slag-heaps, and British iron was used locally. Indian iron is mentioned, but cannot have been of economic importance. Egypt did not obtain iron before contact with Assyria; thence iron-working reached Mesoe

in the later centuries B.C. and was diffused fairly rapidly through barbarian Africa.

The furnaces of the ancients could not normally produce cast iron. Statues were made by chasing pure wrought iron. Weapons were of mild steel, which was produced without understanding the reactions involved. Quenching to harden is known as early as Homer, and certain waters were thought (without real reason) to be particularly suitable. The Romans understood intentional carburization and annealing, and by complicated damascening they produced blades which would not snap. They did not use water-power, and all iron-working was by hand. Semi-nomadic natives often reduced the ore in the mountains, and sold the blooms at cities or at military forts, where they were forged into tools.

ISAEUS (1) (c. 420–350 B.C.). Nothing is known with certainty about the life of this orator; it is even doubtful whether he was an Athenian by birth, and some ancient authorities call him a Chalcidian. Traditionally he was a pupil of Isocrates and a teacher of Demosthenes. His political views, if he had any, were never allowed to intrude into his speeches, which were all composed for delivery by others. All the extant speeches are concerned directly or indirectly with questions of inheritance. The earliest of these, if we follow Jebb (*Attic Orators* (1875) ii. 350), is *Or.* 5, which he assigns to the year 390 B.C., but a later date (372) is possible, in which case the earliest is 377. The date of the latest is c. 353.

WORKS. Of fifty speeches which the biographer (P.-Plutarch) considered genuine we possess eleven and the fragment of a twelfth. Six deal with disputed inheritance. Three refer to prosecutions for false witness in testamentary cases. *On the estate of Hagias* throws light on the Athenian law of collateral succession. In the *Euphiletus* the speaker appeals to have his name restored to the roll of his deme. Dionysius quotes a fragment from the *Eumathes* for comparison with the style of Lysias.

Isaeus is our chief authority for the laws of inheritance, in which he was an expert. In addition to his minute legal knowledge, he possessed a singular skill in stating a case, so that the most complicated pleadings assume, under his treatment, the appearance of lucidity. His language is comparable to that of Lysias for simplicity, but he uses a certain number of words which have a poetical association, and some few colloquialisms. Dionysius considered him artificial in comparison with Lysias, but the examples which the critic gives do not make this statement obvious. His efficiency is beyond question; to read his speeches is a fine intellectual exercise; but he makes no appeal to the senses.

For general bibliography see *ATTIC ORATORS*.

ISAEUS (2) (1st c. A.D.), Syrian rhetor, famous in Trajan's time at Rome for improvisation and for impassioned and epigrammatic utterance (Pliny, *Ep.* 2. 3; Juv. 3. 74).

ISAGOGIC LITERATURE denotes didactic compositions addressed to particular recipients and intended as an introduction (*εἰσαγωγή*) to the knowledge of a science or to the practice of an art or of an activity, administrative or political. It seems to be a form of writing first used by the Stoics. The word is used in Latin under its Greek form or latinized, *isagoga* (Gell. 1.

2. 6; 14. 7. 2; 16. 8. 1). Sometimes it is rendered by *institutio* or *introductio*. An author occasionally employs the method of question and answer, and often divides his work into two principal parts, *ars* and *artifex*: e.g. Quintilian books 2–11, *ars oratoria*; book 12, *orator*. But it is now impossible to make a clean distinction between *εἰσαγωγαί* and actual handbooks, *τέχναι*, *artes*. Works which have been assigned to the former category may well belong to the latter: Cato, Varro, Columella, their treatises on agriculture; Cicero, *Partitiones oratoriae*; [Q. Cicero], *Commentariolum petitionis*; Horace, *Epistula ad Pisones*, Vitruvius, *De Architectura*; Celsus, *De Medicina*; Frontinus, *De Aquis*; Quintilian, *Institutio oratoria*; Vegetius, *Epitoma rei militaris*.

L. Mercklin, *Philol.* 1849, Jahn, *Her. Sachs. Ges. Wiss.* 1850; E. Norden, *Hermes* 1905, 508 ff.; C. O. Brink, *Horace on Poetry* (1903), 22 ff. C. F., G. W. W.

ISAURIA. A small and wild country on the north face of Mt. Taurus. The Isaurians first appear about 125 B.C., when they murdered the Macedonian governor Balacrus. For this they were punished by Perdiccas; Diodorus (18. 22) speaks of their 'city' (Isaura) as full of silver and gold, 'as if it had long been prosperous'. Subsequently they maintained their independence as a community of villages, living largely by banditry, till they were subdued in 76–75 B.C. by Servilius (q.v. 1) Vatia, who thus acquired the cognomen Isauricus. Included first in the province of Cilicia (q.v.), then in that of Galatia, the country remained backward; of its two chief towns, Isaura Vetus and Nova, the former achieved the rank of a city under the early Empire, the latter not until the fifth century.

G. E. B.

ISCA, British river-name, hence applied to sites on rivers so called:

(1) Ptolemy's Isca (2. 3. 3), where he fixes the Second Legion (ibid. 14), is apparently a site on the Axe (Bradley, *Archaeologia* xlviii. 390).

(2) Modern Exeter on the Exe was occupied as a civil settlement under Claudius and became a walled town (earth-bank c. 150, stone wall c. 200), the capital of the Dumnonii, with trading connexions (A. Fox, *Roman Exeter* (1952)).

(3) Modern Caerleon on the Usk was probably from c. A.D. 75 the fortress of Legio II Augusta. Originally consisting of timber buildings surrounded by a clay bank, it was gradually rebuilt in stone, and its bank fronted with a stone revetment from 99/100 (*JRS* 1928, 211). During periods of reduced occupation in the second century its buildings decayed; but a complete overhaul occurred under Severus and his successors; a partial rebuilding is recorded 254–60 (*ILS* 537). The legion left Isca towards the end of the century. Christian martyrs Aaron and Julius may be realities (Gildas, 10), but an archbishopric is fabulous. Administrative buildings (including a hospital?), barrack-blocks, and, of extramural works, an amphitheatre and baths have been excavated.

Archaeologia Cambrensis lxxxiv–lxxxvii (1920–32), xc (1935); *Archaeologia* lxxviii (1928), 111 ff. (amphitheatre), V. E. Nash-Williams, *The Roman Frontier in Wales* (1954), 18 ff. C. E. S.

ISCHIA, ancient Pithekoussai (Pithecusae) and Aenaria (Inarime in Virgil and other poets), the largest island in the Gulf of Naples. It was settled, prior to the foundation of Cumae, by Chalcidians and Eretrians, presumably as a centre of trade with Etruria and as a port of call on the route to the metal-rich region of north-west Tuscany. The acropolis of the Greek town of Pithekoussai, on Monte Vico, was in use continuously from the eighth to the first century B.C., and had previously been inhabited in the Bronze and Iron Ages; sixth–fifth century Greek

temple terracottas have been found there. The eighth and seventh century tombs, revealed in the excavations started in 1952 in the Valle San Montano cemetery at the foot of Monte Vico, near Lacco Ameno, have produced vases and other objects imported from Corinth, Athens, Euboea, north Syria, Phoenicia, Egypt (a Bocchoris scarab may be compared to the Bocchoris vase from Tarquinii, q.v.), Etruria, and Apulia, including a vase (c. 730-720) inscribed with Greek verses mentioning the Homeric king Nestor, and another, depicting a shipwreck (the first example of Greek Geometric figurative painting found in Italy). Ischia was subject to volcanic outbursts and noted for its medicinal warm springs. Its clay, from the hills above Casamicciola, was the best available to the potters of Campania, and remained in general use on the island until after the Second World War.

D. W. R. R.

ISIDORUS (1), a Greek of Charax, near Tigris mouth, wrote c. A.D. 25 on Parthia and its pearl-fisheries (Ath. 3. 93 d), and to judge from Pliny, a general geographical work, a portion perhaps of which is the extant *Ἐναθμοὶ Περσικαὶ*, a meagre description of 'stations' from Zeugma on the Euphrates through Selucia, Ecbatana, Rhagae, Caspian Gates, Hyrcania, Parthia, etc., to Alexandria (Kandahar). The suggestion that he had been sent out by the Emperor Augustus to get information about Arabian coasts, and about Parthia for young C. Caesar (who was killed in Armenia in A.D. 4), rests on the assumption that Pliny in 6. 141 calls Isidorus 'Dionysius' by mistake.

GGM 1, 1xxx ff., 244 ff.; FGrH 781, W. Schoff, *The Parth. Stations of I of C.* (1914) E. H. W.

ISIDORUS (2) **HISPALENSIS**, bishop of Seville (c. A.D. 602-36), one of the most important links between the learning of antiquity and the Middle Ages. His chief works were: (1) *Chronica Maiora*, a history extending to his own times; (2) *Historia Gothorum*, preserved in two editions; (3) *De natura rerum*, (4) *Differentiae*, in two books, (5) *Quaestiones in vetus Testamentum*; (6) *Etymologiae* or *Origines* (now divided into twenty books), a widely used encyclopaedia which deals not only with the seven liberal arts but also with geography, law, medicine, natural history, prodigies, gems, foods, drinks, etc. (See ENCYCLOPAEDIC LEARNING). Though Isidore does not often mention his sources, it is clear that he gathered his information from a wide range of authorities (including Pliny and Suetonius).

Migne, *PL* lxxxi-lxxxiv, *Etymologiae*, ed. W. M. Lindsay (2 vols., 1911); M. Manitius, *Geschichte der lat. Lit. des Mittelalters* (1910-11), 1, 52 ff.; J. Pontaine, *Isidore de Seville* (1959) J. F. M.

ISIGONUS of Nicaea (1st c. B.C. or 1st c. A.D.), a writer of *paradoxus* (see PARADOXOGRAPHERS), who probably drew to some extent on Varro, and was himself drawn upon by Pliny the Elder.

A. Westermann, *Paradoxographi* (1830), 162 f., FGrH iii. 674.

ISIS, in Egyptian religion, was the wife of Osiris and the mother of Horus. In addition to her position as a national deity in Egypt, Isis acquired in the Hellenistic age a new rank as a leading goddess of the Mediterranean world. Her worship was established in Piraeus by the fourth century by Egyptians residing there. Most of the foundations of her cult in the Aegean area during this period, however, included her as a member of the new

Hellenistic cult of the Egyptian deities (q.v.) along with Sarapis, Harpocrates, and Anubis (qq.v.). Many of these cults in the Greek cities soon became public ones and were managed by priests who were magistrates of the State. Yet one finds attached to some of these public cults such groups as the *melanephoroí*, a fact which indicates that there probably was some sort of periodic ritual or ceremony carried on. The cult of these gods was highly Hellenized, at least in externals: the statues and temples are frequently Greek in design and execution, the priests, in Greece at least, are usually civic functionaries, and the language of the cult is Greek. The practices of the cult, such as incubation, the interpretation of dreams, festive banquets, and cult societies, have a Hellenic character, though there are Egyptian analogies for many of them. Herodotus had identified Isis with Demeter, but in the early Hellenistic age she is identified, via Hathor, with Aphrodite, with Arsinoë II the wife of Ptolemy II, and with later Ptolemaic queens. The plastic representation of her in Greece is almost uniformly Hellenic in character, portraying her with the ancient Egyptian head-dress, in a long garment with a characteristic knot of drapery on the breast. In her most Hellenic form she is shown with serene, ideal, and typically Greek features, with no head-dress, but a curl or braid of hair hanging down each side of her face. Isis came more and more to mean all things to all men. In the great hymns which celebrate her manifold accomplishments, virtues, and miracles, she is addressed as 'O Thou of countless Names', and is identified with many and varied goddesses. Although the cult of Isis had, in many instances in Greece, the external appearance of a typical public city-state cult, it had also, to some extent in Greece and in the West, the characteristics of a mystery cult as well. The range of experience involved in participation in the cult runs all the way from individual initiatory rites to the elaborate cult drama which celebrated the old myth of the death and resurrection of Osiris. At Rome, Pompeii, near Corinth, and probably at other places the elaborate mysteries of Isis were carried out. At the numerous other temples of Isis which we know in the Graeco-Roman world it is frequently difficult to say just what form the ritual of the cult assumed. Prominent among the characteristics of the cult of Isis which distinguished it from ordinary Greek and Roman cults were the appearances of an Egyptian professional priesthood, the regular ritual, the use of sacred water from the Nile, elaborate processions, penitents, dances, and the use of musical accompaniments. Certain festivals were of especial importance, one of the most significant being the Ploiaphesia which marked the opening of the season of navigation. That these Mysteries and their attendant ritual could awaken a deep religious emotion is testified by the conversion of Lucius which Apuleius describes (*Met.* book 11). Of all the temples of Isis known to us, the one at Pompeii is most perfectly preserved. Here we find at the top of a flight of steps a high platform upon which sacred rites were performed, a cistern for holding Nile-water, homes or cells for the priests, and many of the other arrangements necessary for the celebration of the worship. Although Sarapis and other deities of the group associated with Isis were worshipped in her temples, it is she who appears as the chief deity, occupying the place that Sarapis had frequently held in the public cults of Greece. The goddess Isis as she was presented in the Mysteries, however, must have drawn a more devoted and significant type of worship than was ever inspired by a civic deity. Not only are the statues and monuments of her worship found in all parts of the Roman Empire and her symbols quite commonly used on rings, gems, pins, and other jewellery, but many grave reliefs and tombs show representations of her symbols, particularly the *sistrum*

and the *situla*. The deceased, if a woman, was frequently portrayed on the funeral monument in the costume characteristic of the deity.

ANCIENT SOURCES. W. Peck, *Der Isishymnus von Andros und verwandte Texte* (1930). For the laeum at Pompeii see Mau-Kelsey, *Pompeii*¹ (1902), 168 ff. For other sources see under SARAPIS and EGYPTIAN DEITIES.

MODERN LITERATURE. In addition to the literature cited under SARAPIS and EGYPTIAN DEITIES the following are important: A. Erman, *Die Religion der Ägypter* (1934), W. Drexler, 'Isis' in Roscher's *Lexikon*; A. D. Nock, in *CAT* xii; R. Merkelbach, *Isisfeste in griechisch-römischer Zeit* (1963). T. A. B.

ISOCRATES (436-338 B.C.), Athenian orator of central importance. Although he lacked the voice and the confidence ever to address a large audience and so played no direct part in the affairs of the State, his written speeches, which presumably were of some influence on public opinion, provide us with a most valuable commentary on the great political issues of the fourth century. His system of education in rhetoric exercised a profound effect on both the written and the spoken word: his many pupils included the historians Ephorus and Theopompus (3), the attidographer Androtion, and the orators Hyperides and Isacus (1) (qq.v.). Judgements of his importance have variously treated him as the prophet of the Hellenistic world, and as the specious adulator of personal rulers, but, admired or condemned, he cannot be neglected in the study of his age.

I. LIFE. As son of a rich man, he studied under Prodicus, Gorgias (1) in Thessaly, Tisias, and the moderate oligarch, Theramenes. He was also a follower of Socrates (1) (qq.v.). Thus, while the Peloponnesian War was destroying both his father's fortune and his city's, he was receiving his education from teachers who included the critics of democracy and empire, and the effect was lasting.

In the 390s he turned his theoretical training to account and wrote speeches for others to use in the courts. Orations 16-21 belong to this early phase. Soon discontented with the profession of *logographos*, he began to train others in rhetoric. In *Against the Sophists* he advertised his principles, and of the early writings the *Helen* and *Bucaris* displayed his skill on themes already treated by others. It was perhaps in this period before the King's Peace that he opened a school on Chios. The *Panegyricus*, published in 380 after ten years of composition, was his version of a conventional subject celebrated by Gorgias and Lysias; its demand that the Greeks unite under the shared hegemony of Athens and Sparta was familiar, and the long period of composition suggests that it was intended to be an enduring masterpiece of its kind, not, as some have supposed, a topical plea for the establishment of the Second Athenian League. One of Isocrates' most distinguished pupils was Timotheus (q.v. 2) whom at some stage Isocrates had accompanied on campaign and served by writing his dispatches to the Athenian people, and as a result of Timotheus' successes Athens was able in 375 to make the peace which embodied the principle of the shared hegemony. Despite the fact that Persia's position in the peace was unchanged, Isocrates lauded it, perhaps partly on personal grounds, and began to address pleas, very similar in form to the *Philippus* of 346, to eminent individuals begging them to assume the lead against Persia, first Agesilaus, then Dionysius I, then Alexander (5) of Phraeae (qq.v.) (cf. Speusippus' *Letter to Philip* 13) and later perhaps Archidamus (cf. *Epistle* 9, of doubtful authenticity). Their reaction is not recorded, nor that of other Greeks, but the ambitious proposals of Jason (q.v. 2) of Phraeae suggest that Isocrates' pleas were to some not wholly impracticable.

In 373 when Thebes seized Plataea, he composed the *Plataicus* purporting to be a speech to the Athenian assembly urging reprisals, and this may have been a

sincere manifestation of antipathy to Thebes as a disruptive rival to Athens and Sparta. Likewise the *Archidamus* (366), the imagined speech of the future Spartan king about the Peace of 366/5, may reflect Isocrates' own inclinations. But other writings in this period can hardly be much more than rhetorical exercises, viz. the orations *To Nicocles* (c. 372), *Nicocles* (c. 368), and *Evagoras* (c. 365).

The failure of Athens in the Social War and the perilous financial position of the State in 355 stirred Isocrates to denounce in the *De Pace* the war policy of the imperialists as the way to bankruptcy, and to demand, in place of the limited peace being made with the allies, a Common Peace and the solution of economic difficulties by the foundation of colonies in Thrace: on the question of a Panhellenic crusade the speech is strikingly silent; the Persian ultimatum of 355 had ruled it out for the moment. The speech is a companion piece to the *Poroi* of Xenophon (q.v. 1); both writings illuminate the financial and foreign policy of Eubulus (q.v. 1). Shortly after in the *Aeropagiticus* Isocrates advocated return to a sober constitution under which the Arcopagus (q.v.) would exercise its ancient general supervision of all aspects of life: although some would ascribe the speech to the period before the Social War, it probably belongs to 354 when the supporters of Chares (q.v. 1) were beginning to raise their heads again, and in view of the impending prosecution of Timotheus Isocrates may have been in a gloomy mood about the future of Athens under its existing constitution. The treatise must have made a curious impression on his countrymen. Certainly by 353 Isocrates was very much on the defensive. By then he had amassed wealth unprecedented for his profession, and by the law of Perander (? 357) he had become liable to frequent trierarchies; challenged in 354/3 to an antidosis (q.v.), Isocrates had emerged from the court unsuccessful and, imagining himself as a second Socrates, felt moved to write his apologia in the *Antidosis* of 353, in which he criticized his rivals and gave some account of what he himself professed. This is the chief source of our knowledge of his system of education.

In 346 he published his most important treatise, the *Philippus*. Written between the voting of the Peace of Philocrates and Philip's intervention in Phocis, it expounded afresh the programme of the *Panegyricus* and called on Philip *προσστῆναι τῆς τε τῶν Ἑλλήνων ὁμονομίας καὶ τῆς ἐπὶ τοὺς βαρβάρους στρατείας* (§ 16) and to relieve the misery of Greece by planting colonies in the western satrapies of the Persian Empire (§ 120). In the following year, when Philip instead of beginning the crusade had got himself wounded in war against northern barbarians, Isocrates sent a further letter (*Epistle* 2) urging Philip to begin the campaign against Persia and so acquit himself of slanderous accusations about his real intentions; there is no suggestion here that Isocrates thought of a League of Corinth as the necessary instrument for Philip's *prostasia* of 'the concord of the Hellenes'. We do not know how Isocrates reacted to Philip's proposal to extend the peace brought in 344 by his old pupil Python, but shortly after the collapse of this diplomatic initiative in early 342, he began the last of his great treatises, the *Panathenaicus*, the completion of which was delayed by illness until 339. It was in part personal apologia, in part a comprehensive comparison of Athens and Sparta greatly to the glory of the former. Nowhere did he manifest any further interest in the great theme of the *Panegyricus* and the *Philippus*. Events had disappointed him and the epistles *To Alexander* (? 342) and *To Antipater* (? 340) were purely personal. One last effort remained. After discussion with Antipater (q.v. 1), when after Chaeronea he came to negotiate, Isocrates wrote an appeal to Philip (*Epistle* 3) to set about the

programme of the *Philippus*. The Peace of Demades was the answer, and at the time of the annual burial of the dead in autumn 338 Isocrates starved himself to death.

2. SIGNIFICANCE. In the realm of political ideas large claims have been made for Isocrates as the man who inspired Philip with the idea of attacking Persia, who envisaged not only the form of Hellenic league that established concord and defined the relation of Greece and the Macedonian kings but also the flowering of Greek culture in the Hellenistic world. These claims cannot be substantiated. The various writings addressed to Philip probably helped Philip to form a clearer idea of the nature and strength of the Panhellenist movement the support of which he needed, but that they did more is a conjecture against which Isocrates' own words in *Epistle 3* (§ 3) contend. His ideas about the partnership of Philip and the Greeks appear from the treatises to have been very imprecise, and the fact that he was said to have sent substantially the same epistle to Philip as to Agesilaus suggests that he sought little more than a good general for the campaign. As to the role of the new colonies, he appears not to have thought of a dispersion of Greeks beyond Asia Minor and far from the leavening of barbarity he spoke as if Greek cities would form separate free entities surrounded by barbarians, ruled as barbarians had to be ruled. For the colonies were to effect merely the removal from Greece of the impoverished, and he had no vision of the prosperity that could and did flow from the creation of new trading areas. On the other hand, Isocrates did provide answers to the two great problems of his age, viz. the discord within cities due to poverty and the discord between cities due to petty ambitions and rivalries, and one has only to compare the views of Plato and Aristotle to see that, naive as Isocrates seems, he was by far the most practical; neither of the philosophers explained how cities were to be kept from destroying each other and their plans for ensuring concord within the city by controlling the growth of population contrast unfavourably with Isocrates' proposals to settle in prosperity those whose poverty was the source of revolutionary violence.

Much has been made of the somewhat imprecise proposals for curing the ills of democracy in the *Areopagiticus*. It is to be noted that these proposals are part of a long tradition deriving from his early master, Theramenes, and found fulfilment in the arrangements of Demetrius (q.v. 3) of Phalerum. Isocrates was not alone. In his other writings the tone is very different, and this outburst may have been occasioned largely by the serious condition of Athens after the Social War.

In the history of education Isocrates has an important place. The details of his system remain somewhat obscure, but it would seem that his pupils received under his personal supervision a course of instruction which was neither purely speculative nor a mere training in rhetoric. His relation to Socrates and Plato remains matter for debate.

3. WRITINGS. Of the sixty orations extant under his name in Roman times, twenty-five were considered genuine by Dionysius (q.v. 7), and twenty-eight by Caecilius (q.v. 4). Twenty-one survive today; six are court speeches. Of the nine letters extant the authenticity of 1, 3, 4, and 9 has been questioned but never disproved.

The works of Isocrates represent Attic prose in its most elaborate form. Dionysius (*Comp.* 23) compared it to 'closely woven material', or 'a picture in which the lights melt imperceptibly into shadows'. He seems, in fact, to have paid more attention to mere expression than any other Greek writer. He was so careful to avoid hiatus that Dionysius could find no single instance in the whole of the *Areopagiticus*; he was very sparing even in the elision of short vowels, and crasis, except of *καί*

and *άν*, occurs rarely. Dissonance of consonants, due to the repetition of similar syllables in successive words, and the combination of letters which are hard to pronounce together, is similarly avoided. These objects are attained without any perceptible dislocation of the natural order of words. Another characteristic of the style is the author's attention to rhythm; though avoiding poetical metres, he considered that prose should have rhythms of its own, and approved of certain combinations of trochee and iambus. His periods are artistic and elaborate; the structure of some of the longer sentences is so complex that he overreaches himself; he sacrifices lucidity to form, and becomes monotonous. His vocabulary is almost as pure as that of Lysias, but while the simplicity of Lysias appears natural, the smoothness of Isocrates is studied.

For general bibliography see ATTIC ORATORS. Valuable brief account in G. Kennedy, *Art of Persuasion in Greece* (1963), 174 ff. Fairly full bibliography in E. Mikhola, *Isocrates, seine Anschauungen im Lichte seiner Schriften* (Helsinki, 1954), 297 f. Recent work on I is reviewed by U. Allam in *Athena e Roma* 1961, 103 ff.

INDEX. S. Preuss (1904).

G. L. C.

ISOPOLITEIA is a term that probably originated in the practice of granting citizenship to new citizens on terms of equality with older citizens and thus means practically the same as *politeia*. The word was used frequently in grants to individuals but also became a technical term, used both in documents and literature, for grants to the entire citizen body of a State and particularly for reciprocal grants between two States. This use of the term occurs first in the second half of the third century, though the institution existed earlier; a unilateral grant occurs as early as 405/4 B.C. (Athens to the Samians), and there were several reciprocal grants in the fourth century. Cities connected by *isopoliteia* were not merged but remained distinct, in fact *isopoliteia* is included in several treaties of alliance. Instead, the citizens of one State became potential citizens of the other; to become active citizens it was necessary to establish residence and be registered. For the others there were such privileges as *enktesis* (the right to own land), *epigamia* (the right to contract a marriage), and the right to trade without paying import and export duties. *Isopoliteia* was used extensively by Miletus and the Aetolians.

MODERN LITERATURE. C. Lécrivain in *Das -Sag.*, s.v. E. Szanto, *Das griechische Bürgerrecht* (1892), ch. 2; G. Busolt, *Griechische Staatskunde* (1920-6), index, V. Ehrenberg, *Greek State* (1960), 106 f.; J. A. O. Larsen, *Greek Federal States* (1968), 262 ff. J. A. O. L.

ISTER was the name given by the Greeks to the lower Danube. From a knowledge of its estuary, where they established a colony before 600 B.C. (see *ISTRIA* 1), the Greeks drew conclusions as to the size of the Danube. Hesiod mentioned it as one of the four great streams of the world (*Theog.* 337). Herodotus regarded it as the largest river of Europe and a northern counterpart to the Nile (4. 47-51). He correctly stated that it had a constant volume of water, but mistakenly assumed that its last bend was to the south and was quite in the dark as to its source. In the third and second centuries the Greeks probably ascended as far as the Iron Gates, but they remained ignorant as to the river's upper

course; perhaps misled by a vague inkling of the river Save, and by the name of the Histri in the hinterland of Trieste, they imagined that the Ister threw off an arm into the Adriatic. This error was corrected by the Roman advance from Italy into the Danube basin after 200 B.C.; the identity of the Ister with the Danuvius was probably established during Octavian's Illyrian campaign in 35 B.C. (Sall. *Hist.* fr. 79). See also DANUVIUS.

M. C.

ISTER of Cyrene (c. 250–200 B.C.), pupil of Callimachus. His chief work was concerned with the mythical period of Attica in at least fourteen books, quoted under various titles, *Συναγωγή τῶν Ἀθίδων, Ἀττικά*, etc. Contrary to the practice of the other attidographers, Ister in none of the fragments refers to the historical period, and there is no trace of any chronological arrangement. He was concerned with the earlier period of Attic history which in Androtion and Philochorus had receded into the background. Accounts of festivals and cults appear in widely different books, which suggests a subject system, perhaps by kings or localities. It was a compilation from the earlier attidographers dealing only with the mythical period, and the last in the series of *Ἀθίδες*. Another work (*Ἀττικά*) in four to five books also dealt with matters of interest in Attic history.

ISTHMA. The Isthmian Games were athletic competitions held at Corinth in honour of Poseidon, the prize being a crown of wild celery. According to one legend they were founded by Sisyphus, king of Corinth, to commemorate his kinsman the sea-god Melicertes Palaemon. The Athenians preferred the story that they were established by Theseus after he had killed the robber chief Sinis. This was one reason why the Athenians especially patronized the Isthmian Games, but there were others: the journey was easily made, Corinth was the pleasure city of Greece, and, although there was less parade, there were more amusements at the Isthmian than at the other three festivals. It was at the Isthmian Games in 412, when Athenians as well as Peloponnesians and others were present, that the Athenians heard of the trouble that was brewing in Chios (Thuc. 8. 10). They were definitely organized, as an international festival held in every second year, in 581 B.C.

F. A. W.; R. L. H.

ISTRIA (1) or **ISTRUS**, a Milesian colony, situated on a promontory (or island) south of the Danube estuary. Founded in 657 according to Eusebius, but late seventh-century material is the earliest revealed to date by the considerable excavations. These excavations, together with the inscriptions and coins, make Istria one of the best-known colonies of the Pontus. It traded extensively from the sixth century with most Greek commercial centres, notably Miletus, Rhodes, Samos, Chios, Thasos, and Sinope. It sent Greek goods, especially wine and oil, far into the interior, all over the Dobruja, up the Danube and beyond the river to the north. Its independence was ended by M. Lucullus, who brought it under Roman rule in 72 B.C. The city was occupied till early in the seventh century A.D.

A. J. G.

ISTRIA (2) or **HISTRIA**, a peninsula at the north-eastern extremity of the Adriatic, lying between Venetia and Illyricum and extending inland towards the Julian Alps. The Illyrian Istri inhabited the peninsula, eastward to the plateau of the Ciceria and Monte Maggiore, and to the river Arsia; the western strip of the Istrian peninsula was inhabited by the Liburni. The Istri were known

as pirates (Livy 10. 2. 4), but Rome did not interfere before 221 B.C., when the Istri seized a ship carrying corn. How far they were subdued then is not known, since the Second Punic War must have hindered the Romans from establishing their power in Istria. As the Istri showed a hostile attitude when Aquileia was founded, the Romans conquered them after capturing their chief settlement (178–177); however, they did not cease to threaten Aquileia thereafter, e.g. in 171 (Livy 24. 1. 5). In 129 B.C. the Istri were among a number of tribes in the north-east of Italy who surrendered to C. Sempronius Tuditanus (*Inscr. Ital.* xiii. 3. 90. Cf. *Ann. épigr.* 1953, 95). In 52 the Istri attacked Tergeste (*Trieste*), to whose aid Caesar sent troops (Caes. *B. Gall.* 8. 24); this was probably their reason for siding with Pompey in the Civil War. In the west their territory must once have reached the Timavus (Strabo 5. 9, 215 c), but the Formio was made the frontier in the first century B.C., no doubt because the Celtic Carni occupied the territory round Tergeste. Istria, which was part of Illyricum during the Republic, became part of Italy under Augustus and with Venetia formed *regio X*. The boundary with Illyricum was the river Arsia.

F. A. W. S.; J. J. W.

ISYLLUS of Epidaurus, author of six poems found inscribed at Epidaurus in a hand of about 300 B.C. Nos. I and III are dedications, the first in trochaic tetrameters, the other in an elegiac couplet followed by three hexameters. II is a hexameter poem in which the poet praises himself for the introduction of a procession to Phoebus and Asclepius to Epidaurus. IV is a poem to Apollo and Asclepius, and V a hymn in hexameters to Asclepius, in which the poet thanks the god for defending Sparta from the attack of King Philip, and which may refer to the war of 338 B.C. The poems have little poetical merit.

Powell, *Coll. Alex.* 132 b.

C. M. B.

ITALICA (modern *Santiponce* near Seville) was founded by Scipio Africanus as an outpost against the Lusitanians (206 B.C.). It received municipal status, probably from Augustus, possibly before; and it was the ancestral home of three emperors, Trajan, Hadrian (who made it a titular colony and largely rebuilt it), and Theodosius I. Its wealth is attested by the remains of the fourth largest amphitheatre of the Roman world, and by its coins, statues, mosaics, etc. (Seville Museum). The magnitude of its oil exports is indicated by the fragments of amphorae from Italica in the Monte Testaccio at Rome.

Conde de Aguilar, *Italica* (1929). A. García y Bellido, *Colonia Aelia Augusta Italica* (Madrid, 1960).

I. J. VAN N.

ITALY. The name *Italia*, probably a graecized form of Italic *Vitelia* (= 'calf-land'), was originally restricted to the southern half of the 'toe' but was gradually extended. By 450 B.C. it meant the region subsequently inhabited by the Bruttii (q.v.) (Theophr. *Hist. Pl.* 5. 8); by 400 it embraced Lucania (q.v.) as well (Thuc. 6. 4; 7. 33). Campania (q.v.) was included after 325, and by Pyrrhus' day Italia as a geographical expression meant everything south of Liguria and Cisalpine (q.v.) Gaul (Zonar. 8. 17); this area, however, only acquired political unity after the Social War. Cisalpine Gaul was not officially incorporated until Augustus' time when, accordingly, Italy reached its natural Alpine frontiers. Unofficially, however, whatever the administrative divisions, the whole

country south of the Alps has been called Italy from Polybius' time onwards. The Augustan poets also call Italy *Hesperia* (= 'the western land'), *Saturnia* (= strictly Latium), *Oenotria* (= strictly SW. Italy), *Ausonia* (= 'the land of the Ausones'), *Opica* to the Greeks: strictly Campania).

2. Italy's greatest length is roughly 700 miles; the greatest breadth of the peninsula proper is some 150 miles. Its long coast-line possesses comparatively few, mostly indifferent, ports, Genoa, Spezia, Naples, Tarentum, Brundisium, Ancona, and Pola being noteworthy exceptions. In compensation, however, Italy could exploit its central position to build a Mediterranean empire. Mountains, valleys, and plains in juxtaposition feature the Italian landscape. On the north are the Alps, a natural but not impassable frontier: the Carnic Alps pass is not formidable and the Brenner from time immemorial has been used by invaders attracted by Italy's pleasant climate, fertility, and beauty; the Alps actually are steeper on the Italian side. Between Alps and Apennines lies the indefensible North Italian plain watered by the Padus (q.v.). The Apennines (q.v.) traverse peninsular Italy, impeding but not actually preventing communications; the ancients' belief that they abounded in minerals was erroneous, since Italy only possessed some alluvial gold, copper (Etruria), iron (Elba), and marble (Liguria).

3. Despite fertile upland valleys the mountain districts usually permitted only a frugal existence. The plains, however, were amazingly productive, being enriched partly by volcanic activity (Euganean district in the north, Alban Hills in Latium (q.v.), Mons Vultur in Apulia (q.v.), the still-active Vesuvius in Campania), partly by fertilizing silt carried down by numerous rivers which in winter contained adequate amounts of water. (Northern Italy also possessed important lakes, but not central and southern Italy apart from Trasimenus, Fucinus, and water-filled craters like Albanus and Avernus.) Italy's natural products were consequently abundant and varied: olives, various fruits, cereals, timber, etc., even though some typically Italian products of today, e.g. oranges, were unknown in antiquity. The variety is explained chiefly by the varied climate, which is temperate if not cold in the mountains and northern Italy and warm if not hot in southern Italy. Possibly the ancient climate was slightly more equable; malaria was certainly less prevalent. Italy contained excellent pasturage; in many districts ranching supplanted agriculture. Also its seas abounded in fish.

4. Italy was thus well adapted to support human life and attract invaders, and actually did so from very early times. Traces of Neanderthal not to mention palaeolithic man have been found, while remains of neolithic people, chalcolithic *terramaricoli* (see *TERRAMARA*), and iron-using Villanovans (q.v.) are copious. Long before the rise of Rome Italy was well populated and civilized from end to end. On the east coast were Illyrian immigrants: Veneti (?), Picentes, Messapi (qq.v.); these occasionally penetrated to the west. Hardy Sabelli (q.v.) and the related Umbrians and Volsci (qq.v.) held and tended to expand from the mountainous central regions. The southern coast-lands comprised Magna Graecia (q.v.). In the north Gauls began to settle c. 400. Various peoples inhabited the west: Ligurians, who were possibly of neolithic stock and originally held a wider area; Etruscans; Latini and the related Falisci and Hernici (qq.v.); Aurunci-Ausones and Oenotri (= Sicels?). These various peoples differed greatly from one another in race, language, and civilization, and Italy's mountainous configuration accentuated and perpetuated their mutual divergencies.

5. But ultimately they were united under the hegemony

of Rome. Her political unification of Italy, however, was a protracted task finally accomplished only in Augustus' day. The romanization of Italy took much longer and, indeed, was never fully achieved.

6. After unifying Italy Augustus divided it into eleven administrative districts.

- i. Latium, Campania, Picentini district.
- ii. Apulia, Calabria, Hirpini district.
- iii. Lucania, Ager Bruttius.
- iv. Region inhabited by Samnites, Frentani, Marrucini, Marsi, Paeligni, Aquiculi, Vestini, Sabini.
- v. Picenum, Praetutini district.
- vi. Umbria, Ager Gallicus.
- vii. Etruria.
- viii. Gallia Cispadana.
- ix. Liguria.
- x. Venetia, Istria, Cenomani district.
- xi. Gallia Transpadana.

This arrangement lasted almost unaltered until Constantine's time, when the islands were customarily included in Italy.

ANCIENT SOURCES. Strabo's detailed description (bks. 5 and 6) is good, *inter alia* it corrects Polybius' assertion (2. 14) that Italy is triangular. Pliny's account (*HN* 3. 38-132) is based on Augustus' *Commentaries*. Pomponius Mela (2. 58-71), Ptolemy (lib. 3), and the *Liber Colomarum* are less important. Amongst others Varro (*Rust.* 1. 2. 1 f.), Virgil (*G.* 2. 136 f.), Dionysius of Halicarnassus (1. 36 f.), Propertius (3. 22. 17 f.), Pliny (*HN* 37. 201 f.), and Rutilius Namatianus (2. 17 f.) extol Italy's beauty and fertility. Roads are described in the *Itineraries* (q.v.), especially the Antonine *Itinerary* (4th-c. copy of a work of c. A.D. 212) and Peutingerian Table (q.v.) which is probably based on Caesarius' world-map of A.D. 366. See, too, the separate articles *VIA APPIA*, etc.

For epigraphic finds, see *CIL* xi and *Inscriptiones Italiae* (Italy: 1912-), for archaeological, *Notizi degli Scavi, Monumenti Antichi, and Forma Italiae* (1928-).

ITHACA (*Ἰθάκη*) is one of the loveliest islands in Greece. Deep bays cutting into steep hills provide scenery which might well inspire a poet. The English excavations have shown not only that Ithaca was more important than her neighbours in both Homeric and Odyssean times, but that she was the staging post for Corinthian trade to Italy, up to and perhaps even after the foundation of the colonies. The Northern Museum houses striking Early Bronze Age vases from the settlement near Stavros. A fallen-in cave at Polis Bay was occupied from Bronze Age to Roman times. Inscriptions to Athena, Hera, the Nymphs, and Odysseus show its religious nature. There were some Mycenaean vases, much Protogeometric material, and bits of twelve splendid Geometric tripods, one on wheels, which must recall the tripods brought by Odysseus (*Od.* 13. 13, 217, 363 ff.). A Mycenaean house was found nearby, and there were Mycenaean sherds all round the slopes of the bay along with Corinthian graves. The Museum at Vathy contains the finds from another rich shrine on the shoulder of the hill Aetos. W. A. Hurlley called the piles of stones and Protogeometric sherds 'cairns'. No human bones were found, the sherds were not burnt, and the patches of black earth beside them were barren of offerings; so probably they were fallen roofs. Many of the vases were too grand to belong to huts, and as Protogeometric sherds were also scattered round the archaic *temenos*, a Protogeometric temple seems a possible solution. One still wonders why

the shores round the excellent harbour of Vathy are devoid of antiquities and why Ithaca played no part in Classical Greece.

Excavation reports in *Archaeologia* xxxiii (1849); *BSA* xxxi, xxxiii, xxxv, xlii, xliii, xlviii (1930-51), P-K *GL* 2. 2. 491 ff. S. B.

ITHOME, a prominent and easily fortified mountain rising isolated in the Messenian plain (2,646 feet), was the rallying point of the Messenians in their struggles for independence against Sparta. In the first Messenian War they held it for twenty years; on its fall they lost their freedom. In the rising of the helots against Sparta in the fifth century it was fortified and became a chief centre of resistance. Epaminondas founded the town of Messene on its west side, fortifying it with some of the finest extant Greek walls, which include part of Ithome as an acropolis.

Tyrtaeus, *Thuc.* 1. 101-3. F. Kiechle, *Messenische Studien* (1950), 72 ff., 82 ff.; G. L. Huxley, *Early Sparta* (1962), 34 ff. For problems of chronology, N. G. L. Hammond, 'Studies in Greek Chronology' (i) 'The Third Messenian War', *Hist.* 1955, 371 ff.; D. W. Reece, *JHS* 1962, 111 ff. T. J. D., R. J. H.

ITINERARIES, dealing with land routes after the manner of *periploi* (q.v.) i.e. giving distances along roads, with varying amounts of information, were common in the Roman Empire: copies were kept in libraries and sections exhibited on stone. Some survive in fragments, but few written itineraries are known, chief of them the *Itinerarium Antoninianum*, which may be a late third-century collection of routes used for troop movements, proceeding by *manstones* (see *ANNONA* and *POSTAL SERVICE*). An *Itinerarium Maritimum* is preserved together with it. The *Ravenna Cosmography* (c. A.D. 700) includes an itinerary following a geographical disquisition, all based on earlier sources (see *Bonner Jahrb.* 1963, 238 ff.). The Peutinger table (q.v.) is a map based on an itinerary. The fourth-century *Bordeaux* (or *Jerusalem*) *Itinerary*—it treats the journey between the two places—is one of many guides for Christian pilgrims; written in descriptive form, it gives annotation as well as distances.

Itineraria Romana, 1 (ed. Cuntz, 1920), 2 (ed. Schneitz, 1940); *FW*, s.v. 'Itinerarien', 'Karten'; D. van Berchem, *L'Annone militaire* (1937), 166. For a new find see A. Deman, *Das Altertum* 1965, 115 f. E. B.

ITINERARIUM EGERIAE (PEREGRINATIO AETHERIAE), an account by a nun, Egeria (or, less probably, Aethria), of her pilgrimage to the East, including Constantinople, Asia Minor, Palestine, Sinai, Egypt, and Edessa, written in the East for the nuns of her own convent, perhaps in Spain. It is generally agreed that its date is round about A.D. 400, with a few years margin on either side. The sole MS., apart from fragments, was discovered in Arezzo, and published in 1887. It had been written in Monte Cassino in the second half of the eleventh century. It is incomplete, but it is important for the information given about liturgical practices at the Holy Places as well as for the account of biblical sites and of the writer's visits to the churches and tombs of Eastern martyrs. It is of great value to philologists as a source of Late and Vulgar Latin. Its language does not represent any specific dialect.

ITURAEA. The Ituraeans, a predatory Arab people, occupied the Libanus, Antilibanus, and Hermon, and the Massyas, where lay Chalcis their capital and Heliopolis (q.v.) their religious centre. In the early first century B.C., under their tetrarch and high-priest Ptolemy, they almost captured Damascus, having conquered most of

the country north and south of it. Ptolemy was confirmed by Pompey (64); his son Lysanias was killed by Antony (35), who granted his dominions to Cleopatra. The tetrarchy was restored by Octavian (30) to Zenodorus, who was, however, soon deprived of most of it owing to his depredations (24). Parts were granted to Berytus, Sidon, and Damascus; part became the tetrarchy of Abilene; Batanaca, Trachonitis, and Auranitis went to Herod, who on Zenodorus' death in 20 received Paneas and Gaulanitis also. Herod's Ituraean dominions passed to his son Philip (4 B.C.-A.D. 34), Agrippa I (37-44), who from 41 also ruled Abilene, and Agrippa II (53-c. 93), who ruled Abilene and in addition Arcene, an Ituraean tetrarchy in northern Libanus which had never belonged to the main principality. Chalcis formed a kingdom for Herod, brother of Agrippa I (41-8) and Agrippa II (50-3). The Ituraeans were gradually broken of their predatory habits, but remained a primitive people, living in villages. Famed as archers, they contributed three cohorts and an *ala* to the imperial army.

IUDEX. In the Roman civil procedure (see *LAW AND PROCEDURE, ROMAN*, II), with its bipartite arrangement in two stages, *in iure* and *apud iudicem*, the *iudex* was a private person taken from the higher social classes (senators and, later, *equites*). No special juridical education was legally required; only persons with physical defects, women, and *minores* were excluded. The choice of the judge lay with the parties, and was normally, but not necessarily, made from a panel of qualified persons (*album iudicum*). The plaintiff usually proposed a name, but the defendant had the right of refusal. It is uncertain what happened if the defendant refused every name in the *album* (choice by lot, or treatment of defendant as *indensus*?). The parties' choice was approved by the magistrate *in iure*. The *iudex* was unable to refuse the commission conferred upon him by the magistrate's *iussu iudicandi*, except on recognized grounds such as old age, a numerous family, or a privileged profession (philosopher, physician, rhetorician). For the proceedings *apud iudicem* see the article quoted above. The functions of the *iudex*, assisted, if he wished, by advisers (*consilium*), ended with the verdict pronounced by him orally in the presence of the litigants. He could, however, refuse to give a verdict if he was in doubt (Gell. 14. 2); the trial was then repeated before another *iudex*. In classical times the *iudex* had full discretion in appraising the evidence and was not bound by previous decisions in similar cases. Nevertheless, decided cases (*res iudicatae*) probably acquired some authority in later times (Dig. 1. 3. 38). The XII Tables are said (Gell. 20. 1. 7) to have punished by death the judge convicted of bribery; the praetorian edict (see *EDICTUM*) introduced a special civil remedy against the careless or corrupt judge (*qui litem suam fecit*).

The judge might be an *arbitrator* rather than a *iudex*. In early law there may have been a substantial difference, but in historical times *arbitrator* seems merely to have been an alternative word for *iudex* in those suits in which the judge had a wide discretion. (It also may denote an arbitrator to whom the parties may privately agree to submit their dispute: Dig. 4. 8.) The *iudex* sat alone (*unus iudex*), but there were also courts composed of several persons, *recuperatores*, *centumviri* (qq.v.), and *decemviri stlitibus iudicandis* (see *VIGINTISEXVIRI*).

In the *cognitio extra ordinem* the judge was appointed, independently of the parties, by the official before whom the case first came. He was now called *iudex datus*, *pedaneus*, or *specialis*, and his competence (final decision or only a partial cognition of the case) depended on his

commission. Under the late Empire the use of the term *iudex* became much larger: any official endowed with jurisdictional or administrative power was so called. Therefore '*iudex*' was often interpolated in classical texts in place of judicial magistrates. Justinian's constitution *Cod. 3. 1. 14. 1* demonstrates the wide application of the term.

For bibliography, see LAW AND PROCEDURE, ROMAN, II. J. Mazenod, *La Nomenclature du iudex unus* (1933); P. Collinet, *Le Rôle des juges* (Recueil d'études F. Gény 1, 1935); G. Broggin, *Iudex arbitrus* (1957). A. B.; B. N.

IUDICIA POPULI, trials before the *comitia* (q.v.) *centuriata* at Rome. The XII Tables (q.v.) provided (*Cic. Leg. 3. 4. 11*) 'de capite civis nisi per maximum comitiatum . . . ne feruntur'. According to the long-accepted view of Mommsen, this meant that (in normal times) a citizen could never be sentenced to death except after such a trial and that therefore any death sentence was subject to revision by the *comitia* (see *PROVOCATIO*). The proceedings were peculiar in that the investigation (*anquisitio*) by the magistrate was made *in contione*, i.e. before the assembled people, who subsequently judged by what they heard, there being no repetition of the evidence. The people had no option but to confirm or quash the magistrate's sentence; a magisterial acquittal was final.

In recent years a different view has been propounded. According to this view the XII Tables rule did not forbid the sentencing to death of a citizen by ordinary criminal process; it provided merely that the only popular assembly which might impose such a sentence was the *comitia centuriata*. Moreover, *iudicia populi* were used only for political offences, not for ordinary crimes, and *provocatio* was confined to acts of administrative coercion (q.v.). In a *iudicium populi* the proceedings *in contione* were an investigation by the magistrate as prosecutor, and his 'sentence' was only a proposal made by him in the same capacity.

Mommsen, *Rom. Strafr.*; C. H. Brecht, *Sav. Zeitschr.* 1930, 261 ff.; W. Kunkel, *Untersuchungen zur Entwicklung des röm. Kriminalverfahrens* (1962). A. B.; B. N.

IURIDICUS was a judicial functionary of praetorian rank in Italy (except Rome and its environs), nominated by the emperor. The first mention of *iuridici* is in A.D. 163. By introducing them Marcus Aurelius imitated the *consulares* created by Hadrian but abolished by Antoninus Pius. The field of their competence (confined to civil cases) was one or more districts, *regiones*; the procedure was *cognitio extra ordinem*. The *iuridici* disappear under Diocletian; later uses of this title (as in the *Digest*) are to be referred to the *iuridicus Alexandreae*, a high jurisdictional officer in Egypt, known also from the Greek papyrus as *δικαιοδότης*. In other imperial provinces there were *legati iuridici* (called in some inscriptions simply *iuridici*), also appointed by the Emperor, with a limited jurisdictional competence. A. B.

IUS CIVILE. This term derives its meaning from its context. By contrast with *ius gentium* (q.v.) in the 'theoretical' sense it is the law of a particular State, and usually, unless otherwise qualified, the law of Rome. By contrast with *ius gentium* in the 'practical' sense it is that part of the law of Rome which is applicable only to Roman citizens. By contrast with *ius honorarium* (see *EDICTUM*) it is law derived from statute and 'common law' as interpreted by the jurists (see *JURISPRUDENCE*). It was also used in a still narrower sense to denote only the product of the jurists' interpretation. B. N.

IUS GENTIUM. This term has three main senses. (1) In a 'practical' sense it denotes that part of Roman

law which was open to citizens and non-citizens alike. Originally commercial and other relations between Romans and foreigners were based merely on reciprocal trust, since the institutions of the old *ius civile* (q.v.) and the procedure of *legis actiones* were accessible only to Romans, in accordance with the general principle of the ancient world that law was 'personal' (i.e. that a man lived by the law of his own State). The growth of international trade made it necessary to recognize some institutions which could be applied by Roman courts to relations between foreigners and between foreigners and citizens. The course of development of this *ius gentium* is conjectural. No doubt the establishment in 242 B.C. of the office of *praetor* (q.v.) *peregrinus* played a part, but there must have been other factors, since in the classical law *ius gentium* was not regarded as a praetorian creation, and it was applicable also to relations purely between citizens. It included even some institutions which were part of the old *ius civile* (notably *stipulatio*, q.v., except in the form using 'spondeo'). It had thus come to include the most flexible and commercially significant parts of Roman law. The law of the family and of succession on death remained for the most part 'personal', but the historically important institutions of the rest of the law, and especially of the law of contracts, belonged to the *ius gentium*. After the *constitutio Antoniniana* (see *CITIZENSHIP, ROMAN*), when the same law was applied to Romans and *peregrini*, the distinction between *ius gentium* in this sense and *ius civile* was only an historical reminiscence.

(2) In a more 'theoretical' sense the term is used as a synonym for the philosophical *ius naturale*, conceived as an ideal and universally valid set of precepts. Gaius (q.v. 2) contrasts it with the *ius civile* of each individual State: 'quod vero naturalis ratio inter omnes homines constituit, id apud omnes populos praeque custoditur vocaturque *ius gentium*, quasi quo iure omnes gentes utuntur' (*Inst.* 1. 1). The term '*ius naturale*' looks to the origin of this law in natural reason, '*ius gentium*' to its universal application. This is strictly a confusion of thought, since *ius naturale* is law which ought to be universally applied, and *ius gentium* is law which is in fact so applied, but the Romans never made this sharp distinction. Only in the case of slavery did they differentiate between *ius naturale*, according to which all men were born free, and *ius gentium*, by which they might be slaves. Though without direct practical consequences, these concepts of *ius gentium* and *ius naturale* were indirectly important in fertilizing and developing the law.

(3) *Ius gentium* also sometimes denoted legal rules governing relations between States, corresponding to modern 'public international law'.

G. Lombardi, *Ricerche in tema di ius gentium* (1946); id., *Il concetto di i. g.* (1947); G. Grosso, *Rev. int. des droits de l'antiquité* 11 (1949); E. Levy, *Stud. et Doc. Hist. et Lits* xv (1949); and literature on history and sources under LAW AND PROCEDURE, ROMAN, I. B. N.

IUS ITALICUM represents the legal quality of Roman territory in Italy: the land is free from *tributum soli* and can be possessed in full ownership *ex iure Quiritium*; the inhabitants are not liable to *tributum capitis*. The distinction arose when Roman colonies were founded outside Italy, from which such privileges might be withheld. Under the Empire this was the highest privilege obtainable by a provincial municipality. Augustus only gave it to genuine citizen colonies, mostly his eastern foundations. Later it was granted along with colonial rights to Roman municipalities, but, for fiscal reasons, sparingly. Severus, however, distributed it not only to three municipalities of Africa, his native province, but, after their co-operation in the Civil War, to several Greek cities. This development typified the assimilation of East and

West, which the *Constitutio Antoniniana* completed (see CITIZENSHIP, ROMAN).

J. Triantophyllopoulos, 'Ius Italicum personnel', *Jura* 1961, 109 ff., and see COLONIZATION, ROMAN. A. N. S.-W.

IUS LATII. The Latin rights of the Empire were a continuation of the rights enjoyed by the Latin Name (see LATINI) of the Republic, which were derived from the social and political ties existing between the original *populi Latini*. Latins after 338 B.C. shared *comitium* and *commercium* (q.v.) with Rome, and possessed the *ius mutandae civitatis* together with the closely associated *ius exsili*. Hereby individual Latins settling permanently in Rome acquired the Roman citizenship, and vice versa. Later, when this encouraged the depopulation of the Latin States, the more limited *ius civitatis per honorem adspiciendae* was substituted for it (c. 150 B.C.?). This gave Roman citizenship to Latins holding the magistracies of their local communities. Latins temporarily resident in Rome also possessed a limited right of voting in the tribal assemblies. The *ius provocacionis* was possibly added in 122 B.C. There were no different kinds of Latin rights, although sometimes special regulations might be included in the charter establishing a Latin colony or group of colonies. In 89 B.C. Latin rights were conferred *en bloc* upon the Transpadane Gauls. Their communities were remodelled on the pattern of the earlier Latin colonies, adopting Latin language and law. In 49 B.C. the Transpadanes received Roman citizenship, and in the following century *ius Latini* was extended to many communities of Gallia Narbonensis, Hispania Ulterior, and Africa. It became an intermediate stage in the promotion of individual *peregrini* to Roman citizenship, and some Latin municipalities acquired the full status of *municipia civium Romanorum*. Under Hadrian *Latium maius* appeared, whereby *decuriones* (q.v.), as well as magistrates, received the citizenship *per honorem*.

For bibliography, see LATINI.

A. N. S.-W.

IUS LIBERORUM. The Augustan marriage legislation (*lex Iulia de maritandis ordinibus* and *lex Papia Poppaea*) gave certain privileges to the parents of three children (four for *libertini*). In particular this *ius trium (quattuor) liberorum* freed the mother from *tutela* (see GUARDIANSHIP). It also gave the father a prior claim to magistracies. The privilege came also to be granted as a favour by the Emperors (e.g. by Trajan to Pliny the Younger) regardless of the number of children. B. N.

IUS PRIMAE RELATIONIS. When in 23 B.C. Augustus ceased to hold the consulship, certain compensatory rights and powers were voted to him by the Senate in order that his position might not be weakened, among them the *ius primae relationis* (Dio Cass. 53. 32. 5). His *tribunicia potestas* gave him the right to introduce business in the Senate: the *ius primae relationis* either allowed him to submit proposals to the Senate in writing (so Mommsen, *Staatsr.* ii (1), 899) or, far more probably, gave him, for one piece of business at each meeting of the Senate, the prior right of reference that would otherwise have belonged to the consuls (so H. F. Pelham, *Essays in Roman History* (1911), 74 ff.). This right is specified as 'relationem facere' in the *Lex de imperio Vespasiani* (Dessau, *ILS* 244). Later the number of items of business for which the Emperor was given precedence was raised as high as five (*Vita Alexandri* 1). J. P. B.

IUSIURANDUM. An oath was used in several ways in the stage before the magistrate (*in iure*) in classical Roman civil proceedings. (i) In almost every action either party might exact from the other, on pain of losing the case, an oath that he was proceeding in good faith

(*iusiurandum calumniae*). Justinian made this oath compulsory for both parties and for their representatives. (ii) In a few actions only the plaintiff might invite the defendant to swear to the validity of his claim (*deferre iusiurandum*); the defendant might then either swear and win the case, or refuse and lose, or invite the plaintiff to swear instead, with the same alternatives before him (*referre iusiurandum*), or, finally, might invite the plaintiff to swear a *iusiurandum calumniae*. (iii) Either party in any action (or at any stage of any dispute) might invite the other to swear an oath of this kind; the other might either swear and win or refuse with impunity. These last two oaths are distinguished by the modern names of *iusiurandum necessarium* and *voluntarium* respectively.

In the proceedings *apud iudicem* an oath served only as evidence or (*iusiurandum in litem*) for the assessment by the plaintiff of the value of the thing in issue in certain actions. B. N.

IUSTITIA, Roman equivalent of Dike (q.v. 1); mostly in poetry, but had a temple from 8 Jan. A.D. 13 (Ov. *Pont.* 3. 6. 25, *Fasti Praen.* under 8 Jan.; see further Wissowa, *RK* 333). In inscriptions she sometimes has the title Augusta. H. J. R.

IUSTITIUM (from *iuris stitum* - *ius sistere*), temporary suspension of all jurisdictional activity of magistrates, *iudices*, and courts, in civil and criminal matters, on account of events disturbing the whole of public life, as in the case of great national calamities, riots, and the like. A *iustitium* could be proclaimed by the Senate; it produced immediate suspension of *iurisdictio* and inhibition of *iudicia* (Cic. *Har. Resp.* 26. 55). A. B.

IUVENES (or **IUVENTUS**—i.e. *Equestris ordinis iuventus*, Val. Max. 2. 2. 9). When, usually at the age of fourteen, a Roman boy adopted the *toga virilis*, he became a *iuvenis*. At the age of seventeen those who intended to follow an equestrian or a senatorial career started the military service which Augustus made a necessary preliminary to those careers. In the interval the *iuvenes* of fourteen to seventeen years of age who were *equites* (whose number included the sons of senators) served at Rome their *tirocinium*, a preparation for military service. They practised physical exercises and riding, paraded at great festivals, and held their own games, the *ludi sevirales* (the *lusus Troiae* being celebrated by those who were still *pueri*). This institution, which had precedents in the Roman Republic (Cic. *Cael.* 11), was thoroughly organized by Augustus, with a view to invigorating the youth of the upper classes at Rome (cf. Maecenas' speech, Dio Cass. 52. 26). It was extended also, for freeborn youths, to the *municipia* of Italy and, by the second century A.D., had spread widely through the western provinces of the Empire. Nero held games called *Iuvenalia* and organized a body of picked youths, perhaps known as *Iuvenes Augustiani*. A *collegium iuvenum Augustianorum* was established, perhaps by Domitian.

Iuventus was also used in a wider sense to indicate at Rome the whole body of *equites equo publico* (i.e. *equites* under the age of 35 who were still 'iuniores' technically, and sons of senators under the age of 25 who had not yet held a senatorial magistracy), organized in six *turmae* and parading, for inspection by the Emperor, under the *sevir equitum* at the *recensio equitum*. This is the sense of *iuventus* in the courtesy title 'Princeps Iuventutis' (q.v.).

M. Rostovtzeff, 'Römische Bleitesserae', *Klio*, Beiheft iii (1905), 50 ff.; M. Della Corte, *Iuventus* (1924) and *Not. Scav.* 1930, 239 (inscriptions and graffiti of the great palaestra at Pompeii); S. L. Mohler, 'The Iuvenes and Roman Education', *TAPA* 1937, 442. J. P. B.

IUVENTAS, goddess, not of youth or youthful beauty in general, but of the *iuvenes*, or men of military age (contrast *HEBE*). She had a shrine in the vestibule of Minerva's *cella* in the Capitoline temple (Dion. Hal. *Ant. Rom.* 3. 69. 5), and is said to have been there before the temple was built, she and Terminus (q.v.) refusing to leave (*ibid.* and Livy 5. 54. 7; but see Latte, *RR* 256). When any young man took the *toga virilis*, a contribution was made to her temple chest (Dion. Hal. 4. 15. 5).

H J R.

IVORY. Bronze-Age Greece first learnt ivory working from Egypt, and later obtained ivory from Syria. There were distinguished Minoan schools making statuettes and in the later Mycenaean period furniture was often decorated with ivory plaques. Fresh inspiration from the East came in the eighth century, together with the material and techniques, although the Syrian herds of elephant probably did not survive that century. There were orientalizing schools in the Peloponnese and east Greece but the finds became sparse after the seventh century when supply became more difficult. Ivory was used for the flesh parts of cult statues like Phidias' chryselephantine Parthenos and Zeus at Olympia, and for minor works it could be carved in low relief or with incised patterns which might be gilt or painted. In the Hellenistic and Roman period, when Indian sources were available, its use was mainly confined to decorative plaques for furniture and toilet articles.

J. B.

IXION, the Greek Cain, the first to murder one of his kin (Pindar, *Pyth.* 2. 31 f.); as other accounts (e.g. schol. Ap. Rhod. 3. 62, quoting Pherecydes) make the victim his father-in-law Eioneus, whom he killed to avoid paying bride-price, either Pindar is speaking loosely or Eioneus was also his blood-relation. Zeus purified him, but he attempted the chastity of Hera; consequently he was first deceived with a cloud-image of her, on which he begat the Centaurs (q.v.) or their father, and afterwards attached to a revolving wheel. Pindar, *ibid.* 21 ff.; scholiasts on Pindar and Apollonius (above).

Weizsäcker in Roscher's *Lexikon* II 766 ff.; Cook, *Zeus* I 198 ff. H J R.

IYNYX (ἰυνξ 'wryneck') was in legend a nymph, daughter of Peitho or Echo, who by magic spells won the love of Zeus for herself (or for Io), and was turned to a bird by Hera. The legend may be due to the use of the wryneck, spread out on a wheel, as a love-charm, which Pindar says (*Pyth.* 4. 214) Aphrodite invented to enable Jason to obtain the love of Medea. The iynx used by Simaetha in Theoc. *Id.* 2 was probably a simple wheel, pierced with two holes, and threaded with string, the twisting of which caused the wheel to rotate (see R. Gow, *JHS* 1934, 1 ff.). For further discussion of the iynx-wheel as a solar symbol, see Cook, *Zeus* I 253 ff.

C B.

J

JANICULUM, the prominent ridge on the west bank of the Tiber at Rome, some $3\frac{1}{2}$ miles long. The name was anciently connected with Janus, but the only trace of his cult on the hill is the shrine of his son Fons or Fontus. The place was early a defensive outpost (Livy 1. 33) and was later enclosed in a great salient of Aurelian's Wall. Here lay the Lucus Furrinae, scene of the death of C. Gracchus and later occupied by the temple of the Syrian cults favoured by Commodus and the Severi and restored by Julian.

The district was primarily industrial, with mills driven by the Aqua Traiana (*CIL* vi. 1711), and nurseries for sacred fish fed from the same source.

P. Gauckler, *Le Sanctuaire syrien au Janicule* (1912); F. Cumont, *CRAI* *Inscr.* 1917, 275 ff.; Dauvergne, *Les Fouilles du Janicule à Rome* (1920).

I A R.

JANUARIUS NEPOTIANUS, author of a loose and imperfect epitome of Valerius (q.v. 8) Maximus before the sixth century A.D. It was inferior to that by Julius Paris.

JANUS. The word properly means a gate or barbican (Livy 1. 19. 2 and often); especially the monument there named, the *Janus geminus* in the Forum 'ad infimum Argiletum', though other structures of a like kind were so called also. They were mostly free-standing, not part of a city or other wall, and used originally for ceremonial purposes, and it is very probable that such *iani* as that in the Forum were used for the formal setting-out of an army or other party, to make sure that they began in the proper way. (There is a right and a wrong way to march out through a gate (Livy 2. 49. 8); the Fabii go out to war 'infelici uia, dextro iano [arch] portae Carmentalis'.) Hence *ianua*, the outer door of a house, and the god Janus, who is the *numen* of both

it and the arch. But to enter house or city one must pass through the gate or the door; hence Janus tended to become a god of beginnings. He is named at the beginning of any list of gods in a prayer, even before Jupiter (as Livy 8. 9. 6); the first month of the reformed calendar, Ianuarius, is his and his festival comes in it (see *AGONIUM*). His priest is the *rex sacrorum*, his proper offering a ram, and the place the Regia (Varro, *Lang.* 6. 12; Ov. *Fasti* 1. 318)—perhaps some ancient piece of ritual connected with the king's door, but if so it is the only instance of Janus' ritual being connected with a door. All this seems to have given rise to the notion that he was a very great god ('diuini deus', hymn of the Salii ap. Varro, op. cit. 7. 27), and finally a sky-god or cosmic god (e.g. Ov. *ibid.* 101 ff., where see Frazer's note for modern adaptations of this theory). When represented otherwise than by the gate, his symbol was a double-faced head, a very old art-type, sometimes awkwardly joined to a body. The closing of the *Janus geminus* signified peace (i.e. no need for war-magic).

Wissowa, *RK* 103 ff.; Latte, *RR* 132 ff.; L. A. Holland, *Janus and the Bridge* (1961). For the temple in Forum Holitorium (dedicated by Dullius after the victory of Mylae in 260 B.C.), shrine in Forum (Janus Geminus), and arch in Forum Boarium (Janus Quadrifrons), see Platner-Ashby, 275 ff.; Nash, *Pict. Dict. Rome* I 500 ff. H J R.

JASON (Ἰάσων), in mythology, son of Aeson and leader of the Argonauts (q.v.). Apart from his adventures on the voyage the chief events in his life are as follows. On the usurpation of Pelias his parents smuggled him out of Iolcus, under cover of a mock funeral and a report of his death, and gave him to Chiron to bring up. On reaching young manhood he returned to claim his heritage, and arrived in the city with but one sandal, having lost the other in crossing a torrent. Pelias, who

knew that the man with the one sandal was to be fatal to him (or in general, that one of the Aeolidae should overthrow him), managed to induce him to go for the Golden Fleece (Pind. *Pyth.* 4. 71 ff., for earliest surviving account). The episode of the lost sandal is variously explained, the most interesting story being that Hera disguised as an old woman met him and asked to be taken across the river, in struggling through which he lost his shoe in the mud. It seems possible that originally Pelias did not neglect to sacrifice to her (Ap. Rhod. 1. 14) but refused to carry her across. See in general Apollonius, loc. cit. and schol.; *Γένος Απολλωνίου*; Hyginus, *Fab.* 12 and 13. After the return from the voyage the chief incident is his desertion of Medea (q.v.; cf. CREON 1); thereafter there is nothing interesting save the manner of his death (foretold Eur. *Med.* 1386–7, whereon see schol.): as he slept under the stern of the Argo, part of it fell on him and killed him. H. J. R.

JASON (2), tyrant of Pherae c. 385–370 B.C., probably son of Lycophron. He sought to gain control of all Thessaly, and finally gained his object in 374 by winning over Pharsalus. Elected *tagos* (q.v.), he modernized the organization of the Thessalian State and extended his influence over northern Greece. He maintained friendly relations with Athens and allied himself to the Thebans, who summoned him to Leuctra immediately after their victory (371). He refused to use his well-trained mercenaries on their behalf and negotiated an armistice between them and the Spartans. In 370 he caused alarm in Greece by mobilizing the entire Thessalian army at the time of the Pythian Games, but he was assassinated before the completion of his preparations, and their object remained unknown.

The success of Jason in uniting a potentially strong people, long weakened by inter-city feuds and external intervention, affords proof of his ability. His ambition to establish a Thessalian hegemony over Greece remained far from accomplishment, but his methods foreshadowed, and may in some degree have suggested, those adopted by Philip of Macedon.

Xen. *Hell.* 6. 1. 2–19 and 4. 20–32 (who had excellent sources); Diod. bk 15. 11. 1. Westlake, *Thessaly in the Fourth Century B.C.* (1935), chs. 4–6; M. Sordi, *La lega tessala* (1958). H. J. R.

JASON (3), a hellenized Jew of Cyrene, wrote a history of the exploits of Judas Maccabaeus in five books, of which 2 Maccabees is an epitome; he was probably a contemporary (2 Macc. ii. 23).

FGH II. 182.

JAVELIN, THROWING THE. The javelin (*ἀκων*) was a spear about 8 feet long, probably with a metal point. Round the middle was bound a thong with a loop through which the athlete placed his first finger, or first and middle fingers, when throwing. As he let go the javelin he held on to the loop of the thong which, as it unwound, gave a spinning motion to the javelin. This, together with the extra leverage given by the use of the thong, added distance and accuracy to the throw. R. L. H.

JAVOLENUS PRISCUS, GAIUS (or LUCIUS) OCTAVIUS (PW 59) TIDIUS TOSSIANUS, a prominent Roman jurist, born before A.D. 60, died after 120. After commanding two legions, he was *iuridicus* of Britain, *cos. suff.* (86), governor of Germania Superior (90) and Syria, and proconsul of Africa. He enjoyed a high reputation among his contemporaries, was a member of Trajan's *consilium* and head of the Sabinian School (see SABINUS 2); but posterity did not cite him very frequently. This may be explained by the fact that his literary production consisted mainly of epitomes of the works of earlier jurists, in which his

own opinions are manifested only by short phrases of approval or dissent (*libri ex Cassio, ex Plautio, ex Posterioribus Labeonibus*). His most mature and most important work is his *Epistulae* (in fourteen books), freely excerpted by Justinian's compilers. The *Epistulae* reveal fine, independent legal thought, and prove that he was a sagacious respondent and not merely a critical and judicious epitomator. The great Salvius Julianus (q.v. 2) acknowledged him as his teacher. A. B.; B. N.

JAXARTES, Asiatic river (*Syr Darya*, flowing into the Aral Sea). Though known perhaps to Herodotus by repute, it was discovered by Alexander, who founded Alexandria Eschate (*Khodjend*?) on it. The Greeks thought that it flowed into the Caspian (which perhaps was once true—see CASPIAN SEA), and sometimes confused it with the Araxes (*Aras*). Ptolemy gives geographical details of tribes on its banks.

Strabo 11. 507 ff., Ptol. *Geog.* 6. 12–14. Thomson, *Hist. Anc. Geog.* 85, 127 l. E. H. W.

JEROME, EUSEBIUS HIERONYMUS (c. A.D. 348–420), is the most important to the classical student of all the Fathers. Born at Stridon, in Dalmatia, he was taken early to Rome; it was his good fortune to be taught by the greatest teacher in that age, Aelius Donatus (q.v. 1). The best training in rhetoric followed. There he was baptized, but this did not prevent him from indulging in immorality. After his studies he proceeded to Trèves (Trier), and dedicated himself to religion. Later, at Antioch, he laid the foundations of his theological training, and mastered Greek. The ascetic life had a growing attraction for him, and he visited the Chalcis desert (375 to 378), where he learned Hebrew with great difficulty. The theological disputes of Antioch brought him no peace. He decided to return to Rome. He received priest's orders from the Bishop of Antioch. On his way westwards, at Constantinople, about 381, he made the acquaintance of the great Greek theologian Gregory (q.v. 2) of Nazianzus. His stay in Rome lasted from 382 to 385. It was then that Pope Damasus compelled him to revise the old Latin texts of the Gospels, in view of the variety of such texts then in existence. The revision took two directions: first, the Latinity was made more literary; second, the underlying Greek texts were brought into accord with the type of Greek text closely related to that in the Codex Sinaiticus, now in the British Museum. Several ladies of the Roman nobility found in him a valued religious adviser. The death of Damasus (384) made things difficult for Jerome, as he was suspected of aspiring towards the papal chair. He left Rome, Aug. 385, and travelled by Antioch to Jerusalem, then to Egypt to see ascetic life at close quarters, and subsequently with some like-minded friends to Palestine and Bethlehem. There, 389, he founded a religious house and spent his days in study and writing. He died 30 Sept. 420.

Of all Christian Latin writers Jerome most closely approaches the standard of classical purity, when writing his best. He had so absorbed Cicero, Virgil, Horace, and other Latin writers that we hear constant echoes of them in his works. Though he tried hard to 'declassicz' himself, he could not succeed. His pagan master was Cicero; his Christian was Origen. His most important works are his *Chronicle* (partly based on Suetonius) translated from Eusebius and expanded (380–1), a leading authority for dates of ancient historical events; *De Viris Illustribus* (392), short notices of 135 Christian writers; his revision and translation of the Latin Bible (called since 9th c. *Vulgata*; see VULGATE), and his correspondence, full of interest to students of Scripture and to historians of morals. His controversial works are characterized by the foulest abuse. His reputation is due to his

immense services to the study of Scripture in the West rather than to saintliness of character.

Migne, *PL* xxii-xxx; newly discovered works, ed. G. Morin, *Anecdota Maredtolana*, vol. iii (3 parts) (Maredsous, 1895-1903); *Chronicle* (J. K. Fotheringham, 1923; R. Helm, 1913). See H. Gouzer, *Étude lexicographique et grammaticale de la latinité de Saint Jérôme* (1884), 'Laves' by G. Grützmacher and F. Cavallera. A. S.

JERUSALEM (*Ἱεροσόλυμα*) was reoccupied by the Jews in 538 B.C. after the Exile, and the second Temple was dedicated in 516, though the walls were not rebuilt until 445. Palestine came into Alexander's Empire after Issus, but his visit to Jerusalem is legendary. Jerusalem became a city, temporarily called Antioch, during a Hellenizing movement in the reign of Antiochus IV, who in 167 dedicated the Temple to Olympian Zeus and built and garrisoned a new citadel, the Acra, dominating it. The Maccabean revolt resulted and the Temple was reconsecrated to Yahweh in 164. From 152 the Hasmonean (Maccabean) High Priests ruled in Jerusalem, and with the surrender and demolition of the Acra in 142 the country achieved independence. In 63 Pompey, supporting Hyrcanus against Aristobulus, captured Jerusalem and dismantled the walls, which were rebuilt with Caesar's permission in 47. In 37 the city was again stormed by a Roman force under C. Sossus, now supporting the appointment of Herod the Great as king. Herod's buildings in Jerusalem were many: a theatre, hippodrome, and amphitheatre; a palace defended by three massive towers named after Mariamne, Phasaël, and Hippicus (the lower courses of Phasaël survive in the present 'Tower of David'), the fortress of Antonia, of which the paved courtyard, the cisterns, and some substructures survive under the convent of the Dames de Sion; and the third Temple, of which parts of the platform and surrounding wall, including the 'Wailing Wall', survive. Agrippa I began to fortify the northern suburb Bezetha. Jerusalem, the centre of resistance in the revolt of A.D. 66-70, was destroyed by Titus after a long siege. The rabbinic schools were transferred to Jabneh (Jamnia) and Jerusalem became the camp of Legio X Fretensis. After the revolt of 132-5, during which it was reoccupied by Bar Cochba (q.v.), it was rebuilt by Hadrian as Colonia Aelia Capitolina (without *ius Italicum*), a pagan city which no Jew was allowed to enter. The east gate of Aelia survives, known since the Middle Ages as the 'Ecce Homo Arch'. Though ruling a large territory, Aelia did not flourish until the Christian pilgrim traffic developed.

JEWISH GREEK LITERATURE. By the beginning of the second century B.C. the Greek language and Greek civilization were widely diffused over Judaea, and continued to flourish there up to the fall of Jerusalem. The revolt of the Maccabees against the extreme hellenization attempted by Antiochus Epiphanes (175-164 B.C.) stopped the spread of Greek religion, but not that of Greek culture; and Herod the Great (37-4 B.C.) was an enthusiastic Philhellene. But the Jews of the Diaspora were naturally more influenced by Hellenism than the Jews of Judaea. Jews were numerous in Egypt, particularly in Alexandria, the centre of Hellenistic-Judaic literature. Here the Septuagint (q.v.) translation of the Bible was made in the third and second centuries B.C. for the benefit of the Jews of the Diaspora, to whom Hebrew was largely an unknown tongue, and formed the foundation of Hellenistic-Judaic literature. This literature was largely apologetic and propagandist in aim, being designed to show that the Jews possessed all that was

most valuable in Greek thought, an orientation which inevitably led to a certain hellenization of Jewish ideas.

The literary forms were sometimes Jewish (Hebraic histories, collections of wise sayings, prophetic books, etc.). At other times they were taken over from the Greeks—philosophy (see PHILON 4 and ARISTOBULUS 2), sometimes in dialogue form, imaginary letters, epic, and tragedy, but no comedy. The first writer of Jewish history in Greek was the Jew Demetrius (end of 3rd c. B.C.), who wrote simply and did not hellenize the great figures of Jewish history. Eupolemus (q.v.) was freer in his treatment of the biblical tradition. The greatest of these historians were Josephus and Justus of Tiberias (qq.v.). See also JASON (3) and *FGH* 722-37.

Three Jewish authors treated themes from Jewish history in the forms of Greek poetry. Philo the Elder (? c. 200 B.C.) wrote an epic, *Περὶ τὰ Ἱεροσόλυμα*, of which 24 lines in an obscure style survive (A. Ludwig, *De P. carmine graeco-iudaico*, 1900); Theodotus (date unknown) a *Περὶ Ἰουδαίων*, another epic of which 47 lines in a clear and simple style survive (A. Ludwig, *De T. carmine graeco-iudaico*, 1899). Ezechiel (date unknown) wrote a drama *Ἐξαγωγή*, describing the Exodus from Egypt; 269 trimeters survive, in simple Euripidean Greek (A. Kuiper, *Mnemos.* 1900, 237 ff.). Among *pseudepigrapha* (see PSEUDEPIGRAPHIC LITERATURE) may be mentioned the fictitious letter of Aristas about the Septuagint translation (Engl. Transl. H. St. J. Thackeray, 1917) and the *pseudo-Phocylidea*, probably of the first century A.D. (M. Rosbroich, *De pseudo-Phocylideis*, 1910). See in general, E. Schürer, *Geschichte des jüdischen Volkes im Zeitalter Jesu Christi* in² (1909). J. D. D.

JEWS (in Greek and Roman times). A. PALESTINE. Palestine was under Persian rule from 538 B.C. until its annexation by Alexander in 332. During the third century it was under the rule of the Ptolemies, for whose administration the Zeno papyri (see APOLLONIUS 3) provide much information. In 200 Palestine passed into Seleucid hands. Early in the reign of Antiochus IV the Hellenizing party in the priestly aristocracy, led by Jason who usurped the high-priesthood from his brother Onias, attempted to convert Jerusalem into a Greek city, and in 167 the king's answer to the resultant disturbances was to install a garrison, to dedicate the Temple to Olympian Zeus, and to attempt to suppress Judaism. This caused a popular revolt, led by Judas Maccabaeus, a priest of the house of Hashmon, and the emergence of the party later known as the Pharisees into prominence. The Temple was reconsecrated to Yahweh in 164, but the Hellenizers remained in power, and the revolt continued as a struggle for political freedom, led after Judas' death in 160 by his brother Jonathan, whom Alexander Balas appointed High Priest in 152 and governor of Judaea in 150 as a reward for military help. After Jonathan had been killed by Tryphon in 143, his brother Simon expelled the Seleucid garrison in 142, and was confirmed as High Priest by a national assembly. For the next eighty years the Jews were independent under the rule of the hereditary Hasmonaean High Priests, except for a few years of subjection to Antiochus VII.

2. Territorial expansion, begun under Jonathan and Simon, proceeded rapidly. Simon's son, John Hyrcanus (134-104), conquered the Samaritans and Idumaeans, forcibly converting the latter to Judaism. John's sons, Aristobulus (104-103), who took the title of king, and Alexander Jannaeus (103-76), annexed and forcibly Judaized the southern Ituraeans, Galilee, and Peraea, and conquered many Greek cities in Transjordan and on the coast. But as the dynasty grew in military strength, it became secularized, relying on the aristocratic Sadducean party and losing popular support. John Hyrcanus

quarrelled with the Pharisees, and Jannaeus faced a serious revolt. His successor, however, his widow Alexandra Salome (76-69), regained the Pharisees' support and reigned peacefully. After her death her two sons quarrelled. The younger, Aristobulus, supported by the discontented military leaders, expelled his brother Hyrcanus, who, incited by an Idumaeen noble, Antipater (q.v. 6), fled to Arctas III of Arabia. Arctas was besieging Aristobulus in Jerusalem in 63 when Pompey intervened, stormed the city, and appointed Hyrcanus High Priest and ethnarch of Judaea, Samaria, Galilee, and Peraea, although he deprived him of all the conquered Greek cities. In 57 Gabinus split the ethnarchy into five autonomous *communes*, leaving Hyrcanus only his spiritual powers. Hyrcanus relied heavily on his minister Antipater, who in 48 gave important aid to Caesar at Alexandria; in recompense Hyrcanus was reinstated as ethnarch, and granted Joppa. When Cassius (q.v. 6) exacted money from Judaea, Antipater and his sons, Phasaël and Herod (q.v. 1), co-operated. Antipater was murdered in 43, and after Philippi Phasaël and Herod secured from Antony positions as tetrarchs under Hyrcanus, who continued as ethnarch. In 40 Antigonus, son of Aristobulus, was installed in Jerusalem by the Parthians, who had invaded Syria. Hyrcanus was carried off to Babylonia, Phasaël committed suicide, but Herod escaped to Rome, whence he returned as client king. For his reign and those of his successors see HEROD (1) THE GREAT, HEROD (2) ANTIPAS, ARCHELAUS (4), and PHILIP (4).

3. In A.D. 6 Judaea, Samaria, and Idumaea were annexed as the Roman province of Judaea and administered by procurators. A census in that year aroused opposition and led to the foundation of a nationalist party (perhaps to be identified with the Zealots), which aimed at recovering political independence. Despite Rome's official protection of Jewish religious liberty there was much unrest and discontent, especially under Pontius Pilate (26-36). In 39-40 Gaius almost provoked a rebellion by attempting to have his statue placed in the Temple, and in 41 Claudius thought it wise to put the province under Agrippa I (q.v.). On Agrippa's death in 44 his whole kingdom was annexed. Under the subsequent series of procurators, who were apparently even more tactless and inefficient than their predecessors, discontent increased, now aggravated by famines and manifesting itself in pseudo-messianic risings and in brigandage which eventually developed into guerrilla warfare led by the terrorist organization of the *sicarii*. In 66 this culminated in an open rebellion, despite the efforts of the priestly aristocracy and Agrippa II at pacification. It was crushed by Vespasian and Titus, who in 70 destroyed Jerusalem and the Temple. The two-drachma tax paid by all adult Jewish men to the Temple funds was diverted to Jupiter Capitolinus and paid into the new *fiscus Iudaicus*, and its incidence was widened to cover women and children.

4. From 70 the province was governed by legates and Legio X Fretensis was stationed in Jerusalem. The synagogues now replaced the Temple as the focus of Jewish religion, the rabbis replaced the priests as leaders, and Jabneh (Jamnia) became the centre of rabbinic learning and the seat of the Sanhedrin. The revolt of the Diaspora in 115-18 caused disturbances in Palestine, which were quelled by Lusius Quietus. The second great Palestinian revolt of 132-5, led by Bar Cochba (q.v.), was perhaps the culmination of years of unrest. Its immediate causes were Hadrian's prohibition of circumcision and his proposal to found a pagan city on the site of Jerusalem. Apart from Jewish legends, little is known of the course of the revolt or of its suppression by Julius Severus (see BAR COCHBA). The devastation and loss of life were very heavy. From 135 the name of the province was Syria

Palaestina, Legio VI Ferrata was stationed in Galilee, and Jerusalem was rebuilt as the pagan city of Colonia Aelia Capitolina, from which the Jews were excluded. But unrest continued. Although Antoninus Pius exempted the Jews from Hadrian's ban on circumcision, which was retained after the suppression of Bar Cochba's revolt, a further revolt, of which no details survive, occurred during his reign. The Jews are said to have supported Avidius Cassius. And a revolt under Septimius Severus is recorded, perhaps associated with the rising of Pescennius Niger. Economic conditions were poor in the second century as a result of repeated wars, but there seems to have been some improvement early in the third, especially in Galilee, to which the centre of learning had shifted, and this is perhaps to be connected with Septimius' visit in 199. There is little evidence for friction between the Jews and the Romans during the third century, but the province felt the effects of the anarchy.

Although Greek was widely known in Palestine, the Jews there retained their own language through centuries of Greek and Roman domination, and their post-biblical literature was written in Aramaic.

B. THE DIASPORA. The Dispersion of the Jews began in 586 B.C., when Nebuchadnezzar took the inhabitants of Jerusalem into captivity. Many of them did not return when permitted by Cyrus in 538 but remained voluntarily in Babylonia, where flourishing communities existed for centuries and from the third century A.D. became the chief centres of rabbinical learning. During the Hellenistic period many Jews migrated from Palestine and Babylonia to the eastern Mediterranean lands, where Syria and Egypt in particular attracted large settlements; the Alexandrian community became one of the most important, comprising about a third of the city's population by the first century A.D. This movement was fostered by some kings, who found the Jews industrious subjects and good soldiers and encouraged settlement by granting privileges. Expansion to Italy and the West began later, but the community in Rome was established by the mid second century B.C. The frequent wars and disturbances in Palestine gave additional impetus to emigration, and Jews taken prisoner and sold into slavery swelled the numbers of the Diaspora.

The Jews of the Diaspora were not absorbed into the races among which they lived, but preserved their national identity and religious beliefs and practices, with the Temple in Jerusalem, to which, until A.D. 70, they paid their annual tax, as their spiritual focus. But their exclusiveness and refusal to be assimilated and their attitude towards paganism made them unpopular, and anti-Semitic literature appeared from the third century B.C. Julius Caesar and Augustus sponsored legislation to protect Jewish religious liberty throughout the Empire: the synagogues, which were classified as *collegia*, were exempted from the general ban on such associations; the rights to hold meetings and to collect and transmit the Temple-tax were granted; Sabbath-observance was safeguarded; and gentile attacks on the synagogues were punishable as sacrilege. Judaism was thus established as a *religio licita*, and the Jews' religious privileges and civic rights were vindicated by Rome when necessary against gentile infringements. The legal status thus granted to Judaism was not affected by the revolt of 66-70, although the Diaspora suffered with Palestine the indignity of

having to pay the erstwhile Temple-tax to Jupiter; and Hadrian's prohibition of circumcision is the only known repressive action of Rome against Jewish religion. But while Rome had no objection to the practice of Judaism by Jews, she disapproved of proselytism, whether full conversion involving circumcision, or the adoption of certain Jewish tenets only for which there was a fashion from the late Republic, and made spasmodic attempts to check it. Three expulsions of the Jews from Rome are recorded—in 139 B.C., in A.D. 19, and during Claudius' principate. The offence on each occasion seems to have been proselytizing activities, although disorder caused by the arrival of Christianity may have helped to provoke the last. Domitian attacked converts to Judaism and Christianity. Antoninus Pius' continuance of Hadrian's ban on circumcision in the case of gentiles was probably an attack on proselytism. Septimius Severus explicitly forbade *Iudaes fieri*.

The Diaspora communities whose history is best known are those in Egypt and Alexandria, for which papyri provide information on social and economic conditions to supplement the literary evidence. In Alexandria, as at Berenice in Cyrenaica and most probably in other Greek cities also, the Jews formed a *πολίτευμα*, a civic organization independent of the host city. Friction developed after the Romans annexed Egypt between the Greeks, who resented their domination, and the Jews, who benefited from coming under their protection, and this was apparently aggravated by the aspiration of some Jews to admission to the Greek citizen body. It was here that anti-Semitism took its most active form. The tension flared up in A.D. 38 into a violent anti-Jewish riot, in which synagogues were desecrated or destroyed, many Jews were massacred, and a ghetto was temporarily instituted. Claudius re-established the Jews' civic position and rights but refused them Greek citizenship. Feelings continued to run high for nearly a century and to cause recurrences of trouble, including a sanguinary clash in 66—a time when the Palestinian revolt inspired anti-Semitic outbursts in Antioch, Damascus, and other Syrian cities. Finally, when the Jews in Cyrenaica attacked both Greeks and Romans there in 115, the rising rapidly spread to Alexandria, most of Egypt, and Cyprus, and developed from a racial quarrel into a serious rebellion against Rome. It was particularly dangerous because it coincided with, and was no doubt encouraged by, the revolt of Trajan's new provinces in 116, in which the Babylonian Diaspora played a considerable part. Marcus Turbo was put in charge of the suppression, which was probably not completed until 118. The Jews were then excluded from Cyprus, and in Egypt and Cyrenaica they never recovered in numbers or prosperity.

From an early date Greek was the language of the Diaspora in the eastern Mediterranean. During the second century B.C. the Septuagint (q.v.) translation was made for the benefit of the Egyptian Jews who could no longer read their Scriptures in Hebrew. Even in Italy Greek predominates over Latin in Jewish inscriptions, especially in epitaphs from the six Jewish catacombs in Rome; only a small minority are in Hebrew or Aramaic.

JORDANES (JORDANIS), an historian who lived c. A.D. 550. According to his own declaration he had been a notary to the Gothic chief Gunthigis Baza prior to an unspecified 'conversion' (to Catholicism from Arianism or to monastic life). He was probably a Goth himself, born somewhere on the lower Danube. About A.D. 551, when Cassiodorus was still alive, he summarized the

latter's *Gothic Histories* in his *Getica*. He used a MS. which came from the household of Cassiodorus himself. Immediately afterwards he concluded the composition of a summary of Roman history (known as *Romana*) which seems to be mainly derived from the lost history of Aurelius Memmius Symmachus. It has been suggested that Jordanes is to be identified with his namesake, bishop of Croton in Italy. It is also disputed whether Jordanes wrote his books in Italy or in Constantinople and whether the final chapters of the *Getica* (which were written in the hope of a permanent reconciliation between the Gothic royal family and the Roman imperial family) were inspired by Cassiodorus or independently added by Jordanes. See CASSIODORUS.

Crit. ed. by Th. Mommsen, in *MGH* Engl. transl. of the *Getica* with commentary by Chr. Mirows (1915). Important study and commentary (in Russian) of the *Getica* by E. C. Skrzynskij (1960). W. Med.* 1963, 366 ff. A. M.

JOSEPHUS, FLAVIUS (b. A.D. 37/8), was a Jewish priest of aristocratic descent and a Pharisee. Though a zealous defender of Jewish religion and culture, politically he was pro-Roman and without sympathy for extreme Jewish nationalism. A visit to Rome (c. 64) impressed on him the futility of resistance, and when the Sanhedrin put him in command of Galilee early in the Jewish revolt, he tried unsuccessfully to curb the extremists. In 67 he was besieged in Jotapata and captured, but saved his life by prophesying that Vespasian would become emperor. When this prediction came true, he was released but remained with Titus until the fall of Jerusalem. He then settled in Rome, where he received Roman citizenship and a pension. His first work was a history of the war written in Aramaic for the Mesopotamian Jews, of which a Greek translation, the extant *Bellum Judaicum* in seven books, appeared between 75 and 79. The first one and a half books are introductory, sketching Jewish history from the Maccabean revolt to A.D. 66. The narrative of the war is based largely on Josephus' own notes and memories probably supplemented by the *Commentarii* of Vespasian and Titus. His next work, the *Antiquitates Judaicae* in twenty books (published in 93/4), is a history of the Jews from the Creation to immediately before the outbreak of the war, giving a fuller account of the period from the Maccabees to A.D. 66 than that in the *BJ* and showing a more hostile attitude to Herod the Great. The principal sources were the Old Testament for the early history, and the writings of Nicolaus (q.v.) of Damascus for the period 175 B.C. to the death of Herod, together with 1 Maccabees in books 12-13. Josephus' last works were his *Vita*—not a full autobiography but an answer to the allegations of Justus (q.v.) of Tiberias about his conduct in Galilee—and his apology for Judaism in two books (*Contra Apionem*), in which he attacks the ignorant or malicious mis-statements of anti-Semitic writers from the third century B.C. to Apion (q.v.).

JOVIAN, FLAVIUS, Roman Emperor in A.D. 363-4, was born c. 331 in Singidunum (*Belgrade*). He took part in the Persian campaign of Julianus (q.v. 1), and on the death of the latter was elevated by the army. He immediately made an unpopular peace with the Persians, surrendering to them all the territory which Diocletian had won in the East along with the cities of Nisibis

and Singara. Before reaching Constantinople he died at Dadastana (364). He was an earnest Catholic. E. A. T.

JUBA (1), son of Hiempsal II of Numidia, was notorious for cruelty and arrogance. Offended by Caesar in his youth and, after his accession, by Curio (q.v. 2), he joined Pompey in the Civil War, and defeated and killed Curio (49 B.C.). Ceasing to behave as a client king, he began to aim at the annexation of Roman Africa. He assisted Cato (q.v. 5) and Metellus (q.v. 11) Scipio, but was distracted by an attack by Sittius (q.v.) and Bocchus II. Promised Africa by Scipio (it was said), he rejoined him, escaped after Thapsus (46) and, hated and rebuffed on all sides, died in a suicide pact with Petreus (q.v.).

E. B.

JUBA (2) II, king of Mauretania and son of Juba (1) of Numidia, was led in Caesar's triumph in 46 B.C. when still an infant, and brought up in Italy; he received the Roman citizenship, apparently from Octavian, and accompanied him on campaigns. Perhaps first reinstated in Numidia (q.v.), in 25 he received from Augustus the kingdom of Mauretania (q.v.), to which parts of Gaetulia were added in compensation for the annexation of Numidia. About A.D. 6 the Gaetuli rebelled and were put down with the help of a Roman proconsul, Cossus Lentulus (cos. 1 B.C.); and in 17 Juba seems to have taken part in the defeat of Tacfarinas (q.v.). He married first (by 20 B.C.) Cleopatra Selene, the daughter of Antony and Cleopatra (q.v. VII), and secondly Glaphyra (q.v. 2). He died c. A.D. 23 and was succeeded by Ptolemy, his son by Cleopatra.

Juba was above all a man of learning, who sought to introduce Greek and Roman culture into his kingdom. His capital at Iol, refounded as Caesarea (q.v. 3), and in the west Volubilis (q.v.), where he may have had a second residence, became fine cities. His artistic collections were remarkable. He developed the production of the 'Gaetulan' purple, perhaps prepared by his invention from orchil (see DYEING, PURPLE). He wrote many books (now lost) in Greek: works on Libya, Arabia, and Assyria; a history of Rome; researches into language, drama, and painting; a treatise on the plant euphorbia, which he discovered and named after his doctor Euphorbus, brother of Antonius (q.v. 10) Musa; and *Ὁμοιότητες*, a comparative study of antiquities, mainly Greek and Roman. Pliny the Elder and Plutarch were among the authors who used his writings.

S. Gsell, *Hist. anc. de l'Afrique du Nord* viii (1928), 206 ff.; P. Romanelli, *Storia delle prov. rom. dell'Africa* (1959), 156 ff. Gaetulan territory: J. Desanges, *Rev. Ét. Lat.* 1964, 33 ff. Purple: J. Desanges and P. Koeberlé, *Hesperis* 1955, 193 ff.; J. Gattefosse, *Hesperis* 1957, 329 ff. Literary works: Christ-Schmidt-Stählin ii. 401 ff.; Jacoby, *FGH* 275. Iconography: G. M. A. Richter, *Portraits of the Greeks* (1965), 280 f. A. M.; T. J. C.

JUBA (3), of Mauretania (2nd c. A.D.), wrote a treatise (now lost) on metric which was based on the Greek Heliodorus (q.v. 2) and was used by later Latin grammarians.

Schanz-Hosius, § 606.

J. F. M.

JUGURTHA, grandson of Masinissa (q.v., but illegitimate), served at Numantia under Scipio (q.v. 11) Aemilianus, hereditary patron of the Numidian royal house, and, on his recommendation, was adopted by King Micipsa and given pre-eminent rank in the succession. When his two brothers and joint heirs challenged this after Micipsa's death (118 B.C.), Jugurtha had one of them murdered and attacked the other (Adherbal), who fled to Rome and appealed for aid. A mission under Opimius (q.v.) divided Numidia, giving the western and more primitive part to Jugurtha. In 112 he again attacked

Adherbal, besieged him in Cirta and, despite two Roman embassies (one under Scaurus, q.v. 1), captured the city and killed him. Some Italian businessmen died in the sack of Cirta (which they had helped to defend), and this aroused anger in Rome and led to agitation for war by Memmius (q.v. 1). In 112 the consul Bestia (q.v.) invaded Numidia, but soon gave Jugurtha a tolerable peace—perhaps through the efforts of the king's Roman friends, but also in order to avoid a long colonial war. There was widespread discontent at this; Jugurtha was summoned to Rome under safe-conduct, but a tribune (C. Baebius) vetoed his interrogation and he left hurriedly after having a pretender murdered (see BOMILCAR).

In Numidia, war started in earnest, but was waged incompetently by the consul Postumius (q.v. 4) Albinus and his brother, who had to capitulate. After an outcry in Rome, which led to the commission of Mamilius (q.v. 3), the consul (of 109) Metellus (q.v. 6), in two campaigns, achieved considerable success (including a major victory at the Muthul), but got little nearer finishing the war. His legate Marius (q.v. 1), profiting by this, gained the consulship 107, promising a quick end to the war. Despite army reforms, including the admission of *proletarii* (q.v.), he failed to provide this and thus caused a short reaction in favour of the Optimates (see CAEPIO 1, METELLUS 6). But the war was ended when Sulla persuaded Bocchus (q.v.) to surrender Jugurtha to Marius. He was executed after Marius' triumph (1 Jan. 104).

The Jugurthine War, as Sallust saw, marks an important stage in the decline of the oligarchy, showing its political vulnerability and, through Marius and his army reform, preparing the way for the use of the army in politics.

Sallust's *Jugurthine War* is the chief source; see R. Syme, *Sallust* (1964), chs 10 and 11 (with extensive bibliography). For the chronology and strategy of the war see also M. Holroyd, *JRS* 1928, 1 ff. E. B.

JULIA (1, *PW* 547), daughter of Caesar and Cornelia, born c. 83 B.C., was betrothed to Q. Servilius Caepio, but married in Apr. 59 to Pompey, whom her affection bound more strongly to her father. In 55 the sight of Pompey returning from the *comitia* bespattered with blood caused a miscarriage; and next year she died in childbirth, the child dying a few days later. On the people's insistence, she was buried in the Campus Martius, and in 46 Caesar held magnificent shows over her tomb.

On the possibility that Caepio was M. Brutus (q.v. 5), the tyrannicide, see F. Munzer, *PW* xiii. 497 f. G. E. F. C.

JULIA (2, *PW* 550), only daughter of Augustus and Scribonia (q.v.), was born in 39 B.C. and betrothed in 37 to M. Antonius (q.v. 7) 'Antyllus' and later, according to Antony, to Cotiso, king of the Getae (q.v.). She was brought up strictly by her father and stepmother Livia (q.v.). In 25 she married her cousin M. Marcellus (q.v. 7) and in 21 Agrippa (q.v. 3), to whom she bore C. and L. Caesar (6 and 7), Julia (3), Agrippina (2), and Agrippa (4) Postumus. Her third marriage, to Tiberius (in 11), is said to have been happy at first, but estrangement followed, and her licentious conduct may have contributed to Tiberius' decision to retire from Rome in 6. In 2 B.C. Augustus at last learned of her adulteries (e.g. with Iullus Antonius, q.v. 8) and banished her to Pandateria; in A.D. 4 she was allowed to move to Rhegium. Scribonia voluntarily shared her exile. Augustus forbade her burial in his mausoleum, and Tiberius kept her closely confined and stopped her allowance, so that she died of malnutrition before the end of A.D. 14. Macrobius (*Sat.* 2. 5) speaks of her gentle disposition and learning, and gives anecdotes attesting her wit.

Syme, *Rom. Rev.*, see index; E. F. Leon, *TAPA* 1951, 168 ff.; P. Sattler, *Studien aus dem Gebiet der alten Geschichte* (1962), 1 ff. J. Carcopino, *Passion et politique chez les Césars* (1958), 83 ff.; R. A. Bauman, *The Crime Maestatus* (1967), 198 ff.

JULIA (3, *PW* 511), daughter of Agrippa and Julia (2), was born c. 19 B.C. and married (c. 4 B.C.) L. Aemilius Paullus (q.v. 5). After her husband's fall Augustus relegated, then recalled, and finally (A.D. 8) banished her permanently for adultery to the island of Trimerus off the Apulian coast, where she died in 28.

Syme, *Rom. Rev.*, see index.

T. J. C.

JULIA (4, *PW* 575), sometimes called Livilla, youngest daughter of Germanicus and Agrippina (2), born in A.D. 18. In 33 she married M. Vinicius (grandson of Vinicius (1), and consul in 30 and 45). After the accession of her brother Gaius she received special honours like her sisters Agrippina (3) and Drusilla (qq.v.), but in 39 was relegated to the Pontian islands for adultery with her brother-in-law, M. Lepidus. Claudius restored her, but Messallina (q.v. 1) presently accused her of adultery with Seneca (q.v. 2) and she was again banished and shortly killed (42?).

F. Giannotti, *Rend. Linc.* 1953, 52 ff.

T. J. C.

JULIA (5), **FLAVIA** (*PW* 552), daughter of Titus (q.v.) by his second wife, was born c. A.D. 65 just before her parents' divorce. She married her cousin Flavius Sabinus (q.v. 4), and after his execution (c. 84) lived with her uncle Domitian (q.v.) as his mistress. She died in 91, and was deified.

G. E. F. C.

JULIA (6, *PIH* 566) **DOMNA**, sister of Julia (7) Maesa, a Syrian by birth, was the second wife of the Emperor Septimius Severus. According to some accounts she collected about her a large coterie of men of learning (e.g. Galen and Philostratus), and was not undeservedly called ἡ φιλόσοφος Ἰουλία. Intelligent and ambitious, she was eclipsed from c. 200 to 205 by Severus' praetorian prefect Plautianus but regained influence on his fall. After Septimius' death she tried unsuccessfully to reconcile her sons Caracalla and Geta. She died or committed suicide at Antioch in 217 on hearing of the death of Caracalla.

J. Réville, *La Religion à Rome sous les Sévères* (1885), *B.M. Coms.*, *Rom. Emp.* v. cxcvii, cxcv f.; G. W. Bowersock, *The Sophists in the Roman Empire* (1969), ch. 8. See also SEVERUS (1).

H. M. D. P.; B. H. W.

JULIA (7, *PIH* 579) **MAESA**, daughter of Julius Bassianus of Emesa and sister of Julia (6) Domna, was the wife of Julius Avitus, a Syrian of consular rank, by whom she had two daughters, Julia (8) Soaemias and Julia (9) Mamaea. After Caracalla's death she returned from Rome to Emesa. She assisted in the proclamation of Elagabalus and accompanied him to Rome, becoming Augusta and 'mater castrorum et senatus'. Later she induced Elagabalus to adopt his cousin Alexianus. She died in 226.

Coins. Mattingly-Sydenham, *RIC* iv. 2, 62, 101.

A. M.; B. H. W.

JULIA (8, *PW* 596) **SOAEMIAS BASSIANA**, daughter of Julia (7) Maesa, and wife of Sex. Varius Marcellus, a knight of Apamea in Syria. In A.D. 218 she and her mother procured the elevation of her son Elagabalus and the death of Macrinus. Lacking her mother's intelligence she, with Elagabalus, flouted opinion in Rome and the two were killed by the praetorians in 222.

B. H. W.

JULIA (9, *PW* 558) **AVITA MAMAEA**, younger daughter of Julia (7) Maesa, was married to Gessius Marcianus, a knight of Arca Caesarea in Syria. With her mother she procured the removal of Elagabalus and the elevation of her son Alexianus, subsequently known as Severus Alexander, in A.D. 222. From the death of Maesa

(226) she dominated Alexander, who was only 13 on his accession. Although her influence was prudently exercised, and she cultivated good relations with the Senate, this unwarlike regime ultimately alienated the army and led to the murder of herself and her son (235; see SEVERUS (2) ALEXANDER).

R. A. G. Carson, *RIC* vi. 39 ff.

B. H. W.

JULIANUS (1, *PW* 26), **FLAVIUS CLAUDIUS** ('Julian the Apostate'), born in A.D. 332, was the son of Julius Constantius, half-brother of Constantine, and Basilina. In 337 his father was lynched in a mutiny promoted by Constantius II. Julian was brought up with his half-brother Gallus in a remote fortress in Cappadocia. The brothers were given a pious Christian education and were even ordained as readers, but Julian acquired from his tutor, the eunuch Mardonius, a passion for the classics and for the old gods. In 351 he was allowed to complete his education at Ephesus where he fell under the influence of the celebrated pagan philosopher Maximus, and later at Athens. From here he was summoned to the West by Constantius II, who on 6 Nov. 355 proclaimed him Caesar, placing him in charge of Gaul and Britain. Julian quickly made himself the idol of his troops by sharing their hardships, and displayed his powers as a general by defeating the Alamanni at Argentoratum. In a series of campaigns (356-9) he reduced the Franks and Alamanni to obedience and restored the Rhine frontier. Meanwhile during the winters he reformed the fiscal administration, despite the opposition of the praetorian prefect, Florentius, reducing the tax from 25 to 7 *solidi* per *caput*.

Constantius II (q.v.), becoming jealous and fearful of Julian's success, demanded that he should send some picked troops to the East, but when Julian gave the order the troops mutinied and proclaimed him Augustus (Feb. 360). Julian accepted the title and paid the customary donative, but failed to reach a compromise with Constantius. He therefore marched East (361), but before he reached Constantinople Constantius died.

Julian had openly professed his paganism directly he became Augustus. He now proclaimed general toleration for all religions, reinstituted the pagan cult, restored the lands to the temples, and rebuilt such as had been demolished. He also appointed pagan high priests of provinces and cities to supervise and stimulate pagan worship and granted them subsidies to distribute in charity. The churches lost their imperial subsidy and the clergy their immunities. There was no persecution, but pagans were favoured and promoted, and the troops were glutted with sacrificial meat and encouraged to offer incense on pay days. In religious disorders Julian was sharper in punishing Christians than pagans. His most criticized anti-Christian measure was to forbid Christian professors to teach the classics.

Julian also carried through a number of vigorous reforms and economies, drastically reducing the overgrown palace staff and palatine offices, such as the notaries, the *agentes in rebus*, and the *protectores*. He reduced the burden on the post by instituting a strict control of postal warrants. He restored their lands and revenues to the cities and brought the city councils up to strength.

After five months at Constantinople Julian moved to Antioch to prepare his Persian campaign. The temple of Daphne was burnt down during his stay, a famine occurred in which the city council sabotaged his relief measures, and the Christian populace insulted him. He replied by publishing the *Misopogon*, a satirical defence of his actions.

On 5 Mar. 363 he marched eastwards. He defeated the Persian army outside Ctesiphon, but did not attack the city. His march to meet a reserve force, which he had

sent via Armenia to Assyria, was continually harassed by the Persians, and in one of the battles he was mortally wounded.

Julian's religious beliefs were the Neoplatonist monotheism expounded by his friend Sallustius. He was superstitious, believing in oracles and miracles and devoutly practising the ancient rituals. He was by temperament and in principle highly ascetic. He was an immensely hardworking and conscientious emperor.

Julian's surviving works include eight orations, the *Misopogon*, the *Convivium* or *Caesares*, a comic account of Constantine's reception on Olympus, and about eighty letters, including the Letter to the Athenians, which recounts his life up to the death of Constantius.

WORKS G. F. Heintze (Leubner, 1879), and W. C. Wright (Loeb, 1913-23). J. Hudez, *La Vie de l'empereur Julien* (1930), W. E. Kaegi, 'Research on Julian, 1945-1964', *Cl. Weekly* 1965, 229 ff. A. H. M. J.

JULIANUS (2) SALVIUS (PW 14) (L. OCTAVIUS CORNELIUS P. SALVIUS JULIANUS AEMILIANUS) (c. A.D. 100-c. 169), a Roman jurist, perhaps born at the village of Puppurt near Hadrumetum, disciple of Javolenus (q.v.), and the last recorded head of the Sabinian School; see SABINUS (2). Even as a young man he enjoyed a high authority among his contemporaries, as is shown by the fact that before he was 30 years old he was entrusted by Hadrian with the revision and rearrangement of the praetorian edict (see EDICTUM). This work procured him a wide reputation, and Justinian praised him for it in the highest terms. He combined great distinction as a jurist with an outstanding career in public life, the main stages of which are recorded in an inscription (*ILS* 8973) discovered at Puppurt (see above). He was *decemvir stlitibus iudicandis* (see DECEMVIRI), *quaestor* (q.v.) of Hadrian (and given double the usual salary because of his learning), one of the *tribuni plebis* (q.v.), *praetor* (q.v.), *praefectus* both of the *aerarium Saturni* and of the *aerarium militare* (see AFRANIUM), consul in 148, *pontifex* (q.v.), *curator* (q.v.) *aedium sacrarum*, governor of Lower Germany under Antoninus Pius, of Nearer Spain under Marcus Aurelius and Verus, and of Africa (168/9); and he was a member of the *consilium principis* (q.v.) under Hadrian and Antoninus Pius. His principal work was his *Digesta* (in ninety books), a systematic, richly casuistic treatise on civil and praetorian law, partly following, as was usual in works of this kind, the arrangement of the *edictum* (q.v.) *perpetuum*. Justinian's *Digesta* (q.v.) include a large number of excerpts from this and other works, and a still larger number of citations of him by later classical jurists. Many of his *responsa* were published by his pupil Caecilius Africanus (q.v. 2).

Julian is perhaps the most remarkable representative of Roman jurisprudence. It may justifiably be claimed that Roman legal science reached in him the height of its development. The Severan jurists, Ulpianus (q.v. 1), Papinianus (q.v.), and Paulus (q.v. 1), surpassed him in the volume and encyclopedic character of their writings, but he had the greater originality and creative power, and exercised a more formative influence on the law.

H. Buhl, *Salvius Julianus* (1888); L. Boulard, *Salv. Julianus* (1902); A. Guarino, *Salv. Julianus* (1946), repr. *Labeo* 1964; W. Kunkel, *Iura* 1950, F. Serrao, *Atti III cong int epigrafia* (1959), A. Guarino, *Labeo* 1959. And see bibliography s.v. JURISPRUDENCE. A. B.; B. N.

JULIUS (1, PW 363) MODESTUS, freedman of Julius Hyginus (Augustus' *libertus*), followed his patron's broad treatment of grammar (Suet. *Gram.* 20).

JULIUS (2, PW 167) CANUS or KANUS, a philosopher whose uncompromising reproaches offended Caligula and led to his execution (Sen. *Dial.* 9. 14. 4-9).

JULIUS (3, PW 184) CEREALIS, epic and pastoral poet, friendly with Martial (11. 52. 1 and 16-18).

JULIUS (4, PW 254) GABINIANUS, SEXTUS, mentioned in Suetonius' list of rhetors, was an eminent teacher in Gaul in the Flavian age (Hieron. *Ab. Abr.* 2092 = A.D. 76; Tac. *Dial.* 26. 11).

JULIUS (5, PW 511-2) TIRO (full name *CIL* ii. 3661 *C. Iulius C. f. Gal. Tiro Gaetulicus*), given in Suetonius' list of rhetors next after Quintilian's name (Reifferscheid wrongly emended to *M. Tullius Tiro*). Pliny mentions a case about his will (*Ep.* 6. 31. 7).

JULIUS (6, PW 434) ROMANUS (3rd c. A.D.) wrote an extensive grammatical work entitled *Ἀφορμαί*, of which considerable fragments are preserved by Charisius (q.v.).

Schanz-Hosius, § 603.

J. F. M.

JULIUS (7, PW 520) VALERIUS ALEXANDER POLEMUS (3rd-4th c. A.D.) composed a Latin version of a Greek novel on Alexander the Great by 'Aisopos' or 'pseudo-Kallisthenes'. His style is artificial and checked.

Edited by B. Kübler (1888). See C. Fassbender, *De Iulio Val. sermone quaest. sel.* (1909).

JULIUS (8, PW 532) VICTOR, GAIUS (4th c. A.D.), author of an *ars rhetorica* largely and closely based on Quintilian.

Halm, *Rhet. lat. min.* 373.

JUNIUS (1, PW 68) CONGUS, a friend regarded by Lucilius as a reader to whom he would have his satires appraised (595 f. Marx). It has been maintained that a satire in book 26 was addressed to him. Some identify him with Marcus Junius Gracchanus, author of a work *de potestatibus*.

J. W. D., G. B. A. F.

JUNIUS (2, PW 108) NIPSUS, MARCUS (perhaps 2nd c. A.D.), *grammaticus*; author of treatises on mensuration, replacement of boundaries, and surveying of rivers.

Ed. K. Lachmann, *Die Schriften der röm. Feldmesser* 1 (1848), 285 ff.

JUNIUS (3, PW 113) OTHO, rhetor, praetor A.D. 22; formerly an elementary schoolmaster, he owed his advancement to Sejanus (Tac. *Ann.* 3. 66). He was master of innuendo, and wrote four books of *colores*, 'complexions to be put on cases' (Sen. *Controv.* 2. 1. 33).

JUNO, an old and very important Italian goddess, in functions resembling Hera (q.v.), with whom she was anciently identified. There is no doubt that she was closely connected with the life, especially the sexual life, of women (hence indirectly with the moon, and therefore theorists ancient and modern have made her a moon-goddess; see Roscher in his *Lexikon* ii. 578 ff., cf. *Juno und Hera* (1875), i ff.). This is shown among other things by the fact that she either assimilates the minor deities Lucina, who makes the child see the light of day, Opigena, who brings help to women in childbirth, Cinxia, *numen* of the bride's girdle, Iterduca, who brings her to her new home, and several other such vague figures, or else these are titles of hers which tended to assume independent existence as goddesses attendant on women (references in Roscher, *Lex.* 579 ff.). But she developed wider functions and became a great goddess of the State

(probably for the same reason as Hera), notably at Lanuvium, where she was worshipped as Sospita or Sispes and shown armed and wearing a goatskin cloak, and, under the Etruscan kings, at Rome also, where as Juno Regina she forms one of the Capitoline triad with Jupiter and Minerva (qq.v.); see Wissowa, *RK* 187 ff., and Latte, *RR* 166 ff. Concerning her origin there is much doubt. Wissowa (*ibid.* 181) would derive her name from the root of *iuvens*, *iunx*, etc., with the meaning 'young woman', 'bride', and her functions from the individual *iuno* who is to a woman what the *genius* (q.v.) is to a man ('iuno mea', Petron. *Sat.* 25. 4; cf. Lygdamus 6. 48; Sen. *Ep.* 110. 1). Others, notably J. Whatmough (as in *Foundations of Rom. Italy* (1937), 150 f.), suppose the individual *iuno* secondary and late and support a derivation of the name from the same root as that of *Juppiter*, despite the difficulty that no such forms as **Diuno*, *(*D*)*iuno* ever occur, as would be expected. The views are not wholly exclusive of each other; the *numen* which watches over women and their functions might from the beginning have been thought of now as appearing in each individual woman, now as forming a great reservoir of power on which all women drew, and these have developed respectively into the individual *iunones* and the great goddess.

Her most interesting festival is the Nonae Caprotinae, see CAPROTINA. It was commonly alleged in antiquity that she was connected with the Lupercales (see Wissowa, *op. cit.* 185, but *contra*, Rose in *Mnemos.* 1932, 389 f.). The Kalends of every month were sacred to her (Macrob. *Sat.* 1. 15. 18), and in the old ceremony of announcing at the new moon the date of the Nones (Varro, *Ling.* 6. 27, whereon Goetz and Schoell *ad loc.*, and Latte, *RR* 43) she was addressed as Juno Covella, showing some connexion with the moon. An important festival was the Matronalia of 1 Mar., also the foundation-day of the temple of Juno Lucina (Wissowa, *ibid.*). Cf. MONFIA.

H. J. R.

JUPITER (*Iuppiter*), the Italian sky-god, *Dion-pater*, the first member of the name being etymologically identical with that of Zeus (q.v.), and the god himself an inheritance from pre-ethnic days among the Wiro-speaking population. Primitively it would appear that he was simply the power (*numen*) of the sky, manifesting itself in various ways. As Iuppiter Lapis (see Gell. 1. 21. 4; Livy 1. 24. 8, cf. LETHAENS; 30. 43. 9; Festus, 102. 11 Lindsay; Rose in *Customs of King* (1936), 56 ff.) he was incorporated in one or all of sundry stones used in taking oaths and presumably supposed to be thunderbolts; they were probably neolithic implements. As Iuppiter Feretrius he appears to have been a holy tree (Livy 1. 10. 5-7; Dion. Hal. *Ant. Rom.* 2. 34. 4; Rose, *op. cit.* 54 ff.). How old his association with the Ides of every month may be (Macrob. *Sat.* 1. 15. 15) we cannot say, but it probably is very ancient; he is naturally worshipped at the time of full moon, when the light from the sky is most powerful. Like Zeus he is also associated with rain (Iuppiter Elivius originally, perhaps, see Wissowa, *RK* 121, but regularly spoken of as connected with the ritual of thunderstorms, see Valerius Antias, fr. 6 Peter; Ov. *Fasti* 3. 291 ff.). It is also as sky-god that he was worshipped at the Vinalia (Rustica) on 19 Aug., when the flamen Dialis (see FLAMINES) offered a ewe-lamb to him and cut the first grapes 'inter exta caesa et porrecta' (Varro, *Ling.* 6. 16). His development into a personal and to some extent anthropomorphic god seems to have been more complete in the rest of Italy than in Rome, and it is also outside Rome that signs are to be found of an early association with Juno (q.v.), and of connexions with the underworld (cf. Zeus Chthonios, etc.); see C. Koch, *Der römische Juppiter* (1937), and cf. Rose in *Gnomon* 1938, 255 ff. In

Rome, apart from Greek and Etruscan influence, he remains almost purely a sky-god and not very sharply personal.

2. His festivals, besides the Vinalia, not only Rustica but Meditrinalia on 11 Oct., where his connexion with the goddess Meditritia is obscure (see Varro, *ibid.* 21; Festus, 110. 21 Lindsay; *Fasti Amernini* on 11 Oct.; Wissowa, *op. cit.* 115), and Priora, 23 Apr. (Varro 16; Pliny, *HN* 18. 287; Ov. *Fasti* 4. 863 ff., whereon see Frazer), include the *nundinae* or market-days, when the flaminica Dialis sacrificed a ram to him (Macrob. *Sat.* 1. 16. 30); also the very obscure Poplufugia on 5 July (see Rose in *CQ* 1934, 157) and an unnamed festival on 23 Dec. (Macrob. 1. 10. 11 and *Fasti Praenestini* on that date), apparently because the winter solstice occurs about then. His oldest associates in Roman cult are Mars and Quirinus, e.g., 'Numa' ap. Festus, 204. 13 ff. Lindsay; the first *spolia opima* go to Jupiter, the second to Mars, the third to Quirinus.

3. The Etruscan kings introduced (shortly before their fall according to tradition, supported by the fact that the oldest calendar-festivals do not include those of the Capitol) the cult of Iuppiter Optimus Maximus, i.e. the best and greatest of all Jupiters, in which the god, in his Capitoline temple, built in the Etruscan manner and with three *cellae*, was associated with Juno and Minerva (qq.v.), apparently a purely Etruscan grouping. From then on his cult became more splendid. The oldest games, *Ludi Capitolini* (15 Oct., Plut. *Rom.* 25; see, further, Wissowa, *ibid.* 117), are indeed connected with Iuppiter Feretrius and have peculiarities in their celebration which may be pre-Etruscan; but the *Ludi Romani* (which seem to have originated from games celebrated on the occasion of a triumph; see below) of 4-19 Sept., the *Ludi Plebei* of 4-17 Nov., and the attendant *epula Iouis* (cf. EPULONES) were among the greatest feasts of the year. To this temple also came the triumphs (q.v.), in which the general, in the full costume of a king (and so in that of Jupiter, whom he did not impersonate) drove at the head of his army to do honour to the god (see Marquardt, *Staatsverw.* ii. 582 for references).

4. In the moral and political sphere Jupiter was associated not only with war but with treaties and oaths of all kinds, a development, as the cult of Iuppiter Lapis shows (see above), from his functions as sky-god and wielder of thunderbolts, wherewith he can punish the perjurer; cf. ZEUS, and see also FETIALES. Hence it is that he seems to be connected in some way with Fides (q.v.); cf. also SEMO SANCUS.

5. For his Roman temples and shrines see Platner-Ashby, 291 ff.; Nash, *Pict. Dict. Rome* 1. 518 ff. (and for his Capitoline temple, E. Gjerstad, *Early Rome* iii (1960), 168 ff.). Outside Rome, but within her sphere of influence in historical times, his most noteworthy solemnity was the *feriae Latinae*, celebrated yearly, but not on a fixed date, on the Alban Mount. Here he bore the title Latiaris, in his capacity of god of the Latin League. The ritual was in some respects archaic, milk and not wine being used for libation (Cic. *Div.* 1. 18, whereon see Pease for further details); the chief Roman magistrate for the time being was in charge, and representatives of all the cities of the League were present to claim their share of the sacrificial meat (*carnem petere*) and take part in the ritual, which as usual must be exactly observed (Livy 41. 16. 1-2).

Jupiter is the *interpretatio Romana* (q.v.) of a number of foreign sky-gods.

Latte, *RR* 79 ff. and elsewhere.

H. J. R.

JURISPRUDENCE. Until the third century B.C. at Rome knowledge of the law and its procedure was a monopoly of the patrician *pontifices* (q.v.), but thereafter

the line of lay jurists (*iurisprudentes, iurisconsulti, iurisperiti*) begins (see FLAVIUS 1 and CORUNCANIUS 1). The jurist was the central figure in the Roman legal system, since statute law was relatively unimportant in the private law, and neither magistrate nor judge was necessarily or normally learned in the law (see EDICTUM, IUDEX). The jurist influenced the law at every point. He assisted the private citizen by drafting legal forms for legal transactions, wills, etc. (*cavere*), advising on the conduct of litigation (*agere*), and giving opinions on questions of law submitted to him (*respondere*). His wider influence lay in his advice to magistrates, and especially to the urban praetor, on the formulation of their edicts and the granting of remedies in individual cases, in his advice also to *iudices* in the making of their decisions, in his teaching, and above all in his writing. But though he was an adviser, a teacher, and a writer, he was not normally an advocate (see ADVOCATUS). And he was usually a man of standing, whose activity in the law was only one facet of a public career. Until the last years of the Republic, the leading jurists came from senatorial families and held high office. Thereafter, they came from a wider class, but were still, for the most part, prominent public men, and in the later Principate were more and more to be found among the highest officials in the emperor's service. The Republican jurist is typified by Quintus Mucius Scaevola (q.v. 4), the jurist of the late period by Papinianus (q.v.), Paulus (q.v. 1), and Ulpianus (q.v. 1), while Javolenus (q.v.) and Salvius Julianus (q.v. 2) represent the transitional period. Others, however, such as Pomponius (q.v. 6) held no public office.

Though Roman legal writing came inevitably under Greek influence, for example in its use of the dialectical method, it is substantially an original creation of the Roman mind, and one which has had immense influence in medieval and modern Europe. Its principal forms were: commentaries, particularly on the Praetor's Edict (see EDICTUM), and, of a rather different kind, commentaries on the works of earlier jurists (e.g. those of Sabinus (q.v. 2)); collections of opinions (*responsa*) and of discussions of hypothetical or actual cases (*Quaestiones* or, when more general and systematic, *Digesta*), monographs; and some expository textbooks, of which the *Institutiones* (q.v.) of Gaius (q.v. 2) are the most famous example. The method is usually markedly casuistic, even in works, such as commentaries, which are not ostensibly of that kind, and frequent reference is made to the opinions of other jurists. It is this casuistic character which gives to Roman law its richness of detail. By far the greatest part of the surviving literature is known only through Justinian's *Digesta* (q.v.).

The extent to which *responsa* were binding on a *iudex* is obscure, and controverted. Pomponius says that Augustus gave to some jurists the *ius respondendi ex auctoritate principis*, but it is quite uncertain what the effect of this was. It is unlikely that Augustus took so radical a step as to make *responsa* of privileged jurists formally binding. More probably he wished simply to mark out certain jurists as especially eminent. It is uncertain also whether authority attached to such *responsa* generally and in perpetuity or only for the case for which they were given. An obscure passage of Gaius (*Inst.* 1. 7) suggests that by the time of Hadrian the authority was general and that the problem therefore presented itself of possible conflicts of authoritative *responsa*. It is also uncertain who had the *ius*: it is directly attested only for Sabinus (q.v. 2). Nor did it certainly continue to be granted after Hadrian.

In the Republic the young man learned his law by attaching himself to a jurist. In the Empire, however, there emerge two 'schools', the Sabinians and the Proculians, which evidently had some teaching functions, but no details are known. See SABINUS (2).

The line of jurists breaks off in the middle of the third century A.D. (see HERENNIIUS 2), and thereafter decay sets in. A revival of legal science comes in the fifth century from the law schools of the Eastern part of the Empire, especially that of Berytus; but it was essentially a classifying revival rather than a new life, and its importance lies in its contribution to the codification of Justinian (see TRIBONIANUS). See further LAW AND PROCEDURE, ROMAN, 1: 10, 11. For individual jurists see special articles.

JUSTIN MARTYR (c. A.D. 100-65), a Christian apologist, flourished under Antoninus Pius and died a martyr in Rome in 165 after his condemnation as a Christian by the *praefectus urbis* Q. Junius Rusticus. He tells us at the outset of his account of his debate with the Jew, Trypho, at Ephesus (c. 135), that he was born at Flavia Neapolis, the ancient Shechem in Samaria, of pagan parents. Never, it seems, attracted to Judaism, for some years he led a peripatetic life searching for truth successively in Stoicism, Aristotelianism, Pythagoreanism, and finally Platonism. While a Platonist he came into chance contact with an aged Christian at Ephesus, but was converted to Christianity by his admiration at the constancy of Christian confessors (II. *Apol.* 12). After his debate with Trypho he moved to Rome where he set up a small Christian school. He wrote two Apologies (nominally directed to the emperor, but in fact to the liberal provincial public), one (c. 155) providing a general defence of Christians and their faith against current pagan calumnies (see CHRISTIANITY) and the second (c. 162) in which he is more concerned with specific acts of persecution resulting from the denunciation of Christians to the authorities. He himself is said by his disciple Tatian to have been the victim of the jealousy of the Cynic philosopher Crescens.

Justin believed that Christianity was the true philosophy, and though he was endowed with no great philosophical skill attempted to harmonize current philosophy, principally Platonism, with Christianity. In his belief that truth had been moving gradually towards its final revelation in Christ and that all men shared in the 'generative' or 'germinating' Word (*λόγος σπερματικός*) he anticipates Clement and the Alexandrian school. In his relatively optimistic views of Church-State relations he is in line with the thought of Melito of Sardis (c. 175) and also anticipates the philosophy of history of Origen and Eusebius. His life and thought illustrate the attraction which Christianity was beginning to exercise on thoughtful provincials in the eastern part of the Empire in the Antonine period. Despite the Jewish-Christian imprint apparent in the *Dialogue with Trypho*, he foreshadows the philosophical interpretation which was to be given to the Christian message under the influence of these Gentile converts.

JUSTINIAN (FLAVIUS PETRUS SABBATIUS JUSTINIANUS) was born c. A.D. 482 at a village near Naissus. His original name was Petrus Sabbatius; he took the name Justinianus on his adoption by his uncle Justin. When Justin became emperor (518), Justinian was rapidly promoted to be *comes* and then *magister militum praesentalis*, becoming consul in 520. In 522 he married the actress Theodora. They were a devoted couple until her death (548) and she did much to hearten him in difficult times, notably during the Nika rebellion of 532, when circus riots at Constantinople developed into a movement to make Hypatius, a nephew of Anastasius, Emperor. She also inspired some of his reforms, but there is no evidence that she exercised undue influence on appointments or policy, though on the major religious issue she was sharply opposed to her husband, being a strong monophysite.

Justinian was crowned as Augustus on 4 Apr. 527 and succeeded on his uncle's death on 1 Aug. He had a deep sense of the past greatness of the Roman Empire and was determined to restore it, by recovering the lost provinces of the West, by reforming its administrative abuses, and by codifying and rationalizing its legal system. He was also a strongly religious man, who believed that the greatness of the Empire depended on God's favour, which he was resolved to win by suppressing heresy and paganism. He chose able generals and ministers to carry out these projects. The chief military tasks were assigned to Belisarius, Germanus, and Narses. His legal expert was Tribonian, his financial and administrative expert John the Cappadocian, diplomacy was entrusted to Peter the Patrician.

Justinian had no ambitions on the eastern frontier, but was forced to conduct long campaigns there by the aggressive attitude of the Persian kings. After five years' fighting (527-32) he secured an Eternal Peace at the price of 11,000 lb. gold. In 540 Chosroes broke the Peace and the war continued with intervals of partial truce until another treaty was signed in 562. Meanwhile in the West Belisarius (q.v.) reconquered Africa from the Vandals (533), and Italy from the Ostrogoths (535-40). The latter, however, were not finally crushed until 553 (see NARSES). In 551 part of southern Spain was conquered from the Visigoths.

On 13 Feb. 528 a commission was appointed to codify all imperial constitutions from Hadrian up to date which were still valid; the first *Codex Justinianus* was issued on 7 Apr. 529, and on 15 Dec. 530 a second commission was appointed to excerpt and codify the works of the classical jurists; the *Digest* was published on 16 Dec. 533. On 16 Nov. 534 a second revised edition of the *Codex Justinianus* was issued. Justinian subsequently issued over 150 novels; many were administrative, others reformed or codified topics of law.

Justinian carried out many reforms of the provincial administration; in particular he tried to root out corruption and extortion by abolishing the sale of offices and by raising the status and salaries of governors. He reorganized the system of appeals to speed up justice and to prevent minor cases coming up to the capital. Since his wars were very expensive he made many economies, such as reducing the public post, and tried to eliminate speculation and waste by strict audit of municipal and military accounts. It nevertheless proved necessary to introduce a supplementary land tax (the *aerikon*) and later to institute many monopolies.

Justinian carried out an active building programme throughout the Empire, erecting fortresses and churches and restoring aqueducts and other public buildings. His supreme achievement was S. Sophia at Constantinople.

In the religious field Justinian drastically reinforced the penal laws against pagans, Jews, and heretics, and made persistent efforts to heal the quarrel between the Chalcedonian and Monophysite parties. In an attempt to placate the latter he issued in 543-4 an edict of 'Three Chapters' condemning certain works of Theodoret and Ibas and Theodore of Mopsuestia, and in 546 carried Pope Vigilius off to Constantinople and made him confirm the edict. Vigilius later retracted, but Justinian in 553 summoned a general council at Constantinople which ratified the edict and Vigilius yielded next year. The Monophysites, however, remained obdurate and established a rival hierarchy. In 564 Justinian declared the aphthartodocete doctrine orthodox, but he died in 565 and the edict was ignored.

JUSTINUS, MARCUS JUNIAN(I)US (*PW* 4) (Justin), made an epitome in Latin of Pompeius Trogus' *Historiae Philippicae*, probably in the third century A.D. It is an unequal work, but preserves the main lines of the original (cf. the report of Mithridates' speech in 38. 4-7). The epitome was widely read in the Middle Ages.

JUSTUS, a leading citizen of Tiberias (q.v.), was an opponent of Josephus (q.v.) when the latter was in command in Galilee A.D. 66-7. After helping to instigate the revolt of Tiberias, he fled to Agrippa II (q.v.), who saved him from punishment by Vespasian and later appointed him his secretary. After Agrippa's death he published a history of the war (possibly part of his history of the Jews from Moses to Agrippa II entitled *Ἰουδαίων Βασιλέων τῶν ἐν τοῖς στέμμασι*). Josephus criticizes it severely in his *Vita* for inaccuracy, but his own picture of Justus may well be distorted by personal antagonism.

JUVENAL (DECIMUS IUNIVS JUVENALIS), the last great Roman satiric poet, was (unlike Horace and Persius) reticent about himself and was little known during his lifetime. Since the ancient 'biographies' are largely fictitious, no detailed account of his career is possible: any reconstruction must be tentative. He came from Aquinum (3. 319). When he published his first extant satires (between A.D. 100 and 110), he was middle-aged (*Sat.* 1. 25, cf. 3. 26-28): thus he was born between 50 and 65. (For a slightly later dating see Syme.) He was still writing in A.D. 127 (*Sat.* 13. 17, 15. 27). Like his friend Martial (*Mart.* 7. 24 and 91, 12. 18), he was for some time miserably poor and lived in Rome as a dependant of the rich (*Sat.* 1. 3, and 5); but in time he acquired a small competence (11. 64-182). No extant contemporary except Martial ever mentioned him. His work was scarcely known until the fourth century, when Lactantius quoted him by name and Ausonius and others imitated him. Then, after 352 and before 399, his satires were edited and published with a commentary—perhaps through the influence of Servius (q.v. 2)—and at once became popular.

Several ancient sources say he was banished for lampooning a court favourite. His terror of satirizing living persons (1. 147-71), his penetrating hatred of Domitian, and the mildness of his later work make it likely that Domitian (if anyone) exiled him. Since his property would be confiscated, when he returned after Domitian's murder he would be as poor as he appears in

his early poems. On a votive tablet from Aquinum (*CIL* x. 5382) the broken name '... nius Iuvenalis' was found. If the poet dedicated it, he was once an important magistrate of Aquinum and a knight in the imperial service. Possibly his failure to obtain promotion caused him to write the lampoon that ruined him. In any case the chief impetus behind his satires was a bitter sense of failure and injustice: focused on Domitian's principate, it gradually faded in intensity with advancing years.

Juvenal left sixteen hexameter satires, grouped in five books which run from 662 to nearly 1,000 lines in length and are apparently arranged in the order of publication. The books differ considerably in tone, the fourth and fifth being markedly gentler than the rest.

In book 1 (after A.D. 100, cf. 1. 49-50), 1, the introduction, explains that Juvenal cannot help writing satire when he sees the corruption of Rome, but that for safety he will attack only the dead; 2, beginning with gibes at hypocritical Stoics, broadens into a savage polemic against sodomy; in 3 Juvenal's friend Umbricius explains he is leaving Rome, where honest men cannot make a living and poverty entails scorn, discomfort, and danger; 4 tells how Domitian summoned his cringing cabinet to discuss the cooking of a giant turbot, 5 describes a client's dinner at his patron's home, where insolent servants bring him cheap food while his host laughs to see him squirm.

Book II (c. A.D. 116, cf. 6. 407-12) consists of satire 6, a vast, ruthless denunciation of affected and immoral wives.

Book III (after A.D. 118, cf. 7. 1-3, 20-6) opens with 7, which compliments Hadrian as a friend of literature and exposes the misery of intellectuals lacking generous patrons; 8 reproaches the aristocrat who thinks nobility superior to virtue; in 9, a witty but repulsive dialogue, a male prostitute describes the troubles of his profession.

Book IV (without indication of date) contains 10, a magnificent declamation on the folly of men in desiring hurtful things instead of courage, health, and sanity; 11, an invitation to dinner, contrasting decent moderation with contemporary extravagance and archaic austerity; and 12, relating a friend's escape from shipwreck, with reflections on the nature of true friendship.

In book V (in or after A.D. 127) satire 13 is a mock consolation to a friend cheated of some money; 14 discusses the influence of parents' sins upon children, emphasizing the danger of greed; 15 describes a case of cannibalism and mob-violence in Egypt, adding reflections on man's inhumanity to man; 16 (whose end was evidently lost in antiquity) is a fragment ironically expounding the advantages of a soldier's life.

Although Juvenal speaks as a moralist, he poses not as a philosopher but as an ordinary man (1. 30, 79-80; 13. 120-3) who feels his world is out of joint, and writes satire as a protest rather than a remedy. His denunciations of folly, avarice, vulgarity, vice, and crime gain great force from the fascinated accuracy with which he describes their practitioners and victims. His bitterness often seems to be dictated by literary fashion, over-

emphasized by rhetoric, or exaggerated by personal rancour. Yet (despite Tac. *Ann.* 3. 55) there can have been no great change in the morality of the Roman upper class since it was attacked by Seneca on similar charges. Martial's callous frankness and the moral crusades of Domitian and M. Aurelius show that Juvenal told the truth, even if he confined himself to its darker side.

He retained in his poems the variety characteristic of satire, adding a more lofty and sustained tone of invective. His memorable epigrams have seldom been surpassed, and he is an amusing though cruel parodist. In his large vocabulary colloquialisms and queer foreign words jostle the grand phrases of epic and oratory. His poems, often condemned for structural laxity, have at their best quite as clear a pattern as is compatible with the quasi-improvisatory tone of his medium. He is the last Roman poet to use the full range of the hexameter, which he constantly varies with brilliant effects of sound and rhythm. He was much admired as a thinker in the Middle Ages, and he became the model for many satirists in and after the Renaissance.

JUVENCUS, GAIUS VETTIVS AQUILINUS, a Spanish priest of noble birth, apparently the first Latin poet to aim at providing a Christian substitute for the traditional poetry of paganism, c. A.D. 330 composed an epic, *Evangeliorum libri IV*, in hexameters, utilizing an early Latin translation and closely following the Gospel narrative (especially Matthew). The work shows strong Virgilian influence and some skill in versification.

TEXT: J. Huemer, *CSEL* xxiv. N. Hansson, *Textkritisches zu J.*, mit vollständigem Index verborum (1950). A II-W.

JUVENTIUS (PW 16) LATERENSIS, MARCUS, of a Tusculan family with a consul in the second century B.C., served in Bithynia and Cyrenaica. In 59 B.C. he abandoned his tribunician candidature to avoid taking an oath to preserve Caesar's legislation. He helped Cicero during his exile. In 55 he prosecuted Cn. Plancius (q.v.) for *ambitus*; but Cicero defended him and secured his acquittal. Praetor in 51, he is hardly heard of until 43, when he tried to keep Lepidus (q.v. 3) loyal to the Republic and, after failing, committed suicide. E. B.

K

KAIROS, personified Opportunity. He had an altar at Olympia (Paus. 5. 14. 9), and Ion of Chios (cited there) called him the youngest son of Zeus (i.e. opportunity is god-sent) in a hymn possibly composed for this cult. That he was a little more substantial than most personifications is perhaps indicated by Antimachus, fr. 32 Wyss, where Kairos is one of Adrastus' horses. He has no mythology, but was a favourite subject in art, especially from Lysippus onwards. Then or later he was shown with a long forelock, but bald behind (Posidippus in *Anth. Plan.* 4. 275, see Sauer in Roscher's *Lexikon*, s.v.). Hence, by a gross mistranslation of his name, our phrase 'to take time by the forelock'.

Material in Cook, *Zeus* II. 859 ff.

H. J. R.

KANEPHOROI (κανηφόροι) were usually young women who bore baskets or vessels (κανά) in religious processions. In the Panathenaic procession the young women were chosen from noble houses, and were required to be of good family (Harpocration, Photius, Hesychius, s.v.), unmarried, and of unsullied reputation; hence 'to be fit to carry the basket' is to live chastely (as Men. *Epit.* 221 Allinson), and to reject a candidate was a grave insult (Thuc. 6. 56. 1). They were dressed in splendid raiment; hair and garments were decked with gold and jewels, they were powdered with white barley-flour and wore a chain of figs (ἀρχαῖον ὄμμαθός). They carried vessels of gold and silver, which contained all things needed in the sacrificial ceremony: firstfruits, the sacrificial knife, barley-goats (ὄβαί), and garlands. Erichthonius was said to have introduced Kanephoroi at the Panathenaea. Certainly the institution was very old, and its object was doubtless to secure the efficacy of the sacrificial materials by letting them touch nothing that was not virginal and therefore lucky and potent.

Kanephoroi are also found in other Attic cults, e.g. those of Apollo, Dionysus, and Isis, and in the cult of Zeus Basileus at Lebadea.

E. Fuhl, *De Atheniensium pompis sacris* (1900), 20 ff., Mittellhaus, *PW* x. 1865 f., L. Deubner, *Attische Feste* (1922), 25; and numerous references in Nilsson, *GGR* II, s.v. J. E. F., and H. J. R.

KASIOS (Κάσιος, less correctly Κάσσος), **ZEUS**. An oriental god, possibly Semitic, but the etymology of the name is uncertain. He is plainly connected with Casius, a mountain near Antioch on the Orontes, and also one near Pelusium, on both of which he had a cult. He was also worshipped (owing to the similarity of the names?) at Cassiope in Coreyra. The evidence for his worship, which is Hellenistic and imperial, is largely archaeological, and his original nature is conjectural. He may have been a mountain- or weather-god, thus leading to his identification with Zeus.

See further Roscher, *Lex.* II. 970 ff.; *PW* x. 2265 ff.; Cook, *Zeus* II. 906, 981, 1191.

H. J. R.

KERES, malignant spirits, the bringers of all sorts of evil. They pollute and make unclean (Pl. *Leg.* 937 d, like the Harpies), cause blindness (Eur. *Phoen.* 953), other diseases (Soph. *Phil.* 42), old age and death (Mimnermus fr. 2. 5 f. Diehl), spiritual blindness (ἀντη), misfortune, and troubles in general (cf. Emped. fr. 121 Diels, Semon. 1. 20 Diehl). In its most frequent sense of death or death-bringer Ker is used almost as a common noun. Sometimes it must be rendered 'fate', as when Achilles is given the choice between two Keres (*Il.* 9. 411), but it is never neutral or favourable in sense.

Keres can also mean the souls of the dead, as in the cry at the all-souls festival (end of the Anthesteria, q.v.) *θύραζε κῆρες, οὐκέρ' Ἀνθεστήρια* (the only certain instance—but see R. Ganszynie, *Eranos* 1947, 100 ff.: the weighing of Keres in *Il.* 22. 210 ff. may reflect an earlier weighing of souls (Malten, *PW*, Suppl. iv. 895; M. P. Nilsson, *Homer and Mycenae* (1933), 267 f., fig. 56)). From this use earlier writers (Crusius, Rohde) posited 'ghosts' as the original meaning of Keres, but this is convincingly denied by Malten (*PW*, Suppl. iv, s.v.). Malten concludes that Keres is originally a predicative word (like *θρός*, Wilamowitz, *Platon* (1948) i. 348) meaning harmful (√ κηραίνω, ἀκήρατος). See also Nilsson, *GGR* I. 206 ff. As to their form, literary descriptions suggest birds of prey, similar to Harpies or Sirens; it is hard to identify any figures on monuments as Keres.

W. K. C. G.

KEYS AND LOCKS. The primitive Greek doorfastening was a horizontal bolt working in staples behind the door (μοχλός θύρας, ὄχεύς, *sera, claustrum*). From the outside the bolt was drawn by a strap passing through a hole in the door; it was withdrawn by inserting through a second hole a bar (κλείς, *clavis*) bent twice at right angles, so that its end engaged in a groove in the bolt. This bar is the 'temple key' of Greek art. Subsequently a slot was cut in the bolt, into which a vertical peg (βάλαρος) fell as the bolt moved forward; then a βαλανίστρα had to be employed to hook up the peg before the bolt could move back. This seems to be the 'lock of Penelope' (*Od.* 21. 46); it remained long in use, with growing complexity of the slots and correspondingly of the prongs of the key. The 'Laconian key', with three teeth (Ar. *Thesm.* 421, Plaut. *Mostell.* 404), is probably one of these variants. The modern form of lock in which the key rotates the bolt on a pivot is not found before Roman times, but is then common, as are movable padlocks. The key in art is often a symbol of power, as when Hecate holds the key of Hades (κλειδοῦχος, *clavigera*); to give or take back the household keys was a Roman form of divorce.

British Museum Guide to Greek and Roman Life, s.v. 'Keys'; R. Vallou, *Dir. 'Sag.*, s.v. 'Sera'; *PW*, s.v. 'Schlüssel'; Singer *et al.*, *Hist. of Technology* II (1956), 415 f.

F. N. P.

KOLAKRETAI (κολακρέται) were Athenian officials in charge of the State treasury. The date of their institution is not known, but they existed at least as early as the time of Solon (q.v.) (Arist. *Ath. Pol.* 7. 3). References in Aristophanes and in inscriptions show that they still had charge of public money at the time of the Peloponnesian War and paid the fees of jurors (see *DIKASTERION*) and others who performed services for the State. But they are not heard of after 411 B.C., and were probably abolished in that year. Some, perhaps all, of their functions were taken over by the *hellenotamiai* (q.v.).

ATL III. 359 ff.; F. Jacoby, *FGH* II b Suppl. (1954), commentary on 324 F 5.

D. M. M.

KRONOS, youngest son of Heaven and Earth and leader of his brethren the 'Titans' (q.v.). By advice of his mother he castrated his father, who therefore no longer approached Earth but left room for the Titans between them. Kronos then married his sister Rhea, and there were born to them Hestia, Demeter, Hera, Hades, Poseidon, and Zeus, all of whom (or all the males), save the last, he swallowed, because he was fated to be

overcome by one of them. Rhea, by counsel of her parents, wrapped a stone in swaddling-clothes when Zeus was born and hid him away in Crete (cf. CURETES, ZEUS); Kronos swallowed the stone, thinking it to be his son. Later, by the contrivance of Earth, Kronos vomited up all those he had swallowed, and was overcome by them after a desperate struggle (Hes. *Theog.* 137–8, 154 ff., 453 ff., and many later authors, who differ only in minor details).

This story is so extraordinary and so unlike normal Greek mythology that it is pretty certainly pre-Hellenic; Andrew Lang long ago pointed out (*Myth, Ritual and Religion* (1887), ch. 10) its resemblance to the Maori myth of Tane Mahuta; for legends of swallowing see Stith Thompson, F 913. Since E. Forrer ('Eine Geschichte des Götterkönigtums aus dem Hattireiche', *Mél. Cuntont*, 1936, 687 ff.) first published the documents, it has become clear that the legend of Kronos is largely derived from Asia Minor. Another group of stories represents Kronos as king of the Golden Age (ὁ ἐπὶ Κρόνου βίος; Hcs. *Op.* 111) or of a distant wonderland (ibid. 169, if genuine; Pind. *Ol.* 2. 70; Plut. *De def. or.* 420 a, etc.). Hence, through his identification with Saturnus (q.v.), his position as civilizer of Italy.

Before the discovery of the Hittite documents, a usual interpretation was that Kronos was a god of the pre-Hellenic population, but it would now be admitted that he was mainly a mythological figure, whose cult was

localized in a few places. His festival, the Kronia, was celebrated at Athens and elsewhere (L. Deubner, *Attische Feste* (1932), 152 ff.; Farnell, op. cit. *infra*, 20) at harvest-time, masters and slaves feasting together; here and there, as at Olympia (Paus. 6. 20. 1), we find him with a priesthood and a sacrifice. Where references to a cult occur after the period of Roman influence the worship of Saturn seems to have led to modifications. At all events he had a somewhat grim reputation, leading to his being identified with foreign gods of formidable character (c.g. [Plato], *Minos* 315 c, Dion. Hal. *Ant. Rom.* 1. 38. 2).

Cult: Farnell, *Culte* i. 23 ff. Mythology: M. Mayer in Roscher's *Lexikon*, art. 'Kronos'; M. Polien, *PW*, s.v. 'Kronos'. Nilsson, *GGR* i², 501 ff., for recent literature and discussion.

KRYPTeia, the Spartan secret police, in which selected young Spartiates were, among other things, authorized by the ephors to patrol the remoter parts of Laconia and to murder secretly any supposedly dangerous helots (q.v.). It probably represents the formalization of some old initiation rite. Aristotle (quoted by Plut. *Lyc.* 28) ascribes it to Lycurgus (q.v. 2) but Plutarch dates its institution to the period after the helots' revolt of 464 B.C., and quotes the murder of 2,000 helots in 424 B.C. (Thuc. 4. 80) as typical of its methods.

L

LABEO (1), MARCUS ANTISTHIUS (*PW* 34) (d. A.D. 10 or 11), one of the most prominent Roman jurists. Of plebeian extraction, he was by political conviction a republican; his official career ended with the praetorship, for he refused the consulate offered to him by Augustus. In his legal work he showed great independence of mind and was a bold innovator ('plurima innouare instituit', *Dig.* 1. 2. 2 (*fn.*)). His learning was enormous: besides mastering his special branch of knowledge, to which he was introduced by his father (who was also a jurist), and by other teachers, including Trebatius (q.v.) Testa and some of the disciples of Servius Sulpicius (q.v. 2) Rufus, he was expert in dialectics, in the history of Latin language and grammar, and in philosophy. Gellius (13. 10. 1) emphasizes his knowledge of ancient Roman literature. Laqueo was a voluminous writer: it was his practice to spend six months in every year with his pupils in Rome, and to devote the remainder of the year to writing in the country. He is said to have written about 400 volumes. We know from citations by other jurists the titles of the following works: *Pithana* (collection of decisions on individual cases); *Responsa*; *Epistulae*; a large treatise *De Iure Pontificio* (fifteen books); a commentary on the Praetor's Edict. After his death his *Libri posteriores* (at least forty vols.) were published. These are known only by quotations in other jurists, and by a large Epitome made by Javolenus (q.v.) and freely excerpted by the compilers of the *Digest*.

He was a contemporary of Ateius Capito (q.v. 2), and if Pomponius' account is true (see SABINUS 2), it was the political and personal antagonism between them which originated the schools of jurists named later *Sabiniani* and *Proculiani*. Laqueo enjoyed a high reputation not only with his contemporaries but also with later jurists.

A. Pernice, *M. Antistius Laqueo* i (1873). See also under JURISPRUDENCE. A. B.; B. N.

LABEO (2), ATTIIUS (1st c. A.D.), an unscholarly ('indoctus') translator of both *Iliad* and *Odyssey* into Latin hexameters (Pers. 1. 4 and 50 with the scholia).

LABERIUS, DECIMUS (c. 115–43 B.C.), together with Publius Syrus, elevated to literary standards the popular southern Italian *munus* (q.v.), in Rome called also *fabula riciniata*. The surviving forty-three titles and 155 lines (Ribbeck, *CRF*) do not offer enough material for understanding, since the fragments were preserved to illustrate unusual words. Women acted in his plays for the first time in Rome. Macrobius (*Sat.* 2. 7) records a story of Caesar and Laberius.

G. Malagoli, *Atene e Roma* 1905, 188 ff.; H. Reich, *Der Mimus. Ein literar-entwickelungsgeschichtlicher Versuch* (1903).

R. M.; G. W. W.

LABIENUS (1, *PW* 6), TITUS (c. 100–45 B.C.), served under Servilius (q.v. 2) as *tribunus militum* in Cilicia (c. 78–74). In 63 as *tribunus plebis* he conducted the prosecution of C. Rabirius for *perduellio*, and obtained the re-enactment of the *Lex Domitia* sanctioning election to priesthoods (see LEX, LEGES). Appointed *legatus* of Caesar, he acted as his principal subordinate in Gaul (58–51), taking full command in his absence, and he was entrusted with the independent conduct of important operations (e.g. against the Treveri 54–53 and Parisii 52—the latter a strategical and tactical masterpiece). Caesar may have intended him for consul in 48 (a very doubtful inference from *B Gall.* 8. 52. 2), but at the beginning of 49 he deserted to Pompey. There is reason to believe that Labienus was always a partisan of Pompey, also of Pictian origin (R. Syme, *JRS* 1938, 113 ff.). He fought at Pharsalus and in the African campaign, and died in the final campaign of Munda. C. E. S.

LABIENUS (2, *PW* 5), QUINTUS, son of (1) above, was sent to Parthia by Cassius in winter 43/2 B.C. to solicit help against the Triumvirs. Philippi marooned him in Parthia, but in winter 41/40 he and the king's son Pacorus led Parthian troops into Syria and defeated Antony's governor Decidius (q.v.) Saxa; then, with Saxa's army, which went over to him, Labienus overran part of Asia Minor, and put on his coins the shameful title 'Parthicus imp(erator)'. In 39 he was defeated and killed by Ventidius (q.v.).

W. W. T.; T. J. C.

LABIENUS (3, *PW* 8), TITUS, Augustan orator who combined an older eloquence with a modern vigour in furious invectives which earned him the nickname of 'Rabienus' (Sen. *Controv.* 10. *praef.* 4 ff.). He also wrote history. When his books, like those of Cassius (q.v. 9) Severus, were burned by senatorial decree, Labienus refused to survive them. Caligula restored their works to circulation (Suet. *Cal.* 16).

J. W. D.

LABRANDA, great religious centre in Caria, famous for the cult of Zeus Labraundos or Zeus Stratos, clearly a deity of native origin. It lay on a remote hillside 8 miles north of Mylasa, and was approached thence by a Sacred Road. The earliest traces of occupation are archaic, and the earliest temple dates probably from the fifth century, but Labranda only gained importance through the patronage of the Hecatomnids, who probably had a palace there.

Mausolus (q.v.) and Idricus rebuilt the sanctuary on a large scale; the temple was small, but there were imposing *oeci* and *andrones* on a series of terraces, and entrance *propylaea* at the lowest corner. There was little further building activity except in the Julio-Claudian period, and the main buildings were apparently destroyed soon after A.D. 350.

A. Laumomei, *Les Cultes indigènes en Carie* (1958) 45-101; Labranda, *Swedish Excavations and Researches*, vol. 1, K. Jeppesen, *The Propylaea*, (1955); 1-2 A. Westholm, *The Architecture of the Hieron* (1953), u. 1; P. Hellström, *The Pottery of Classical and Later Date, Terracotta Lamps and Glass* (1965).

D. J. B.

LABYRINTH (λαβύρινθος, probably derived from a pre-Greek word), a building of complicated plan, constructed by Daedalus for King Minos of Crete, from which nobody could escape. The original labyrinth was located at Cnossos (Cleidemus in Plut. *Thes.* 19), perhaps suggested by the ruins of the Bronze-Age palace, but some later writers identified it with a quarry near Gortyn. The Minotaur lived in the labyrinth and was killed there by Theseus (Catull. 64). By extension Greeks called all kinds of architectural mazes labyrinths, especially, in Egypt, the funeral temple of Amenemhet III (Hdt. 2. 148; H. Kees in *PIF* xii. 324). An inscription found in Rome records the construction of a labyrinth in the reign of Septimius Severus (Kailbel, *Epigr. Gr.* 920).

A dance with complicated figures performed in Delos and at Cnossos in memory of the delivery of Athenian youths and maidens from the Minotaur is said to have been an imitation of the labyrinth (Plut. *Thes.* 21).

The labyrinth is represented on coins of Cnossos, on Greek vases, and in Roman mosaics (L. Shear, *AJArch.* 1923). Even on the walls of a house in Pompeii we find a graffito of the labyrinth inscribed: 'hic habitat Minotaurus'.

R. Eilmann, *Labyrinthos* (1931), W. F. J. Knight, *Epic and Anthropology* (1967).

G. M. A. H.

LACHARES, Athenian general after Ipsus (301 B.C.), friend of Cassander. He used his mercenary troops to crush an attempted usurpation by his colleague Charias, but in 300 employed them to make himself tyrant, though until 299/8 he maintained the forms of constitutional

government. He abolished compulsory military service at Athens and stripped the gold from Athena's statue to pay his troops. His opponents rallied against him in the Piraeus and in 296/5 besieged Athens with the aid of Demetrius Poliorcetes. After a determined resistance he fled to Boeotia, leaving Athens in Demetrius' hands (295). Of his later adventures nothing certain is known.

G. De Sanctis, *Riv. fil.* 1928 (*Scritti minori* 1, 149 ff.), 1936, W. S. Ferguson, *CPHil.* 1929 (chronology as above) F. W. W.

LACONIA (Ἡ Λακωνική [γῆ or χώρα] and *Laconica* are the usual forms, derived from Λάκων, a short and unofficial version of Λακεδαιμόνιος), the south-eastern district of the Peloponnese, bounded on the north by Argolis and Arcadia, on the west by Messenia, and on the south and east by the Aegean Sea.

It is a mountainous limestone-region, comprising in the eastern portion the chain of Mt. Parnon, which rises to nearly 6,000 ft. near the Argive frontier, and runs south-south-east from there towards Cape Malca; in the western portion Mt. Taygetus, which runs nearly north to south and forms a high ridge (summit c. 7,800 ft.) overlooking the plain of Sparta. It continues southward at a lower elevation to form the promontory ending in Cape Taenarum (*Matapan*). Between Parnon and Taygetus is the valley of the Eurotas, which flows into the Laconian Gulf; its principal tributary, the Oenus, joins it from the north-east, just above Sparta, and smaller streams flow from Taygetus through the Spartan plain to join it further south.

A flourishing Mycenaean kingdom (see MENELAUS 1) was destroyed in the twelfth century (see DORIANS), and by 950 new Dorian settlements had appeared. By 700 B.C. one of these, Sparta (q.v.), on low hills to the north of a fertile plain between Taygetus and the Eurotas, had annexed the rest of the Eurotas valley down to the sea, the adjoining coastal plains, and a fertile region west of Gytheum, which became the harbour and arsenal of Sparta. This formed the territory of the *Spartiatæ*, cultivated for them by their helots (q.v.). The remainder of Laconia, whose northern frontier was fixed by about 540 B.C. after long disputes with Argos and Arcadia, belonged to technically independent *periœkois* (q.v.) who occupied smaller fertile areas both coastal and inland. But Spartan domination was complete, with some temporary local exceptions, until, after the fall of Nabis (q.v.), Sparta herself with much of Laconia came under the Achaean Confederacy (q.v.). A league of Laconian cities seems to have grown up again after 146 B.C. under some Spartan influence, but this was transformed by Augustus into the *Κοινὸν τῶν Ἐλευθερολακόνων*, independent of Sparta; it comprised twenty-four members, which had dwindled to eighteen by the Antonine age (Paus. 3. 21. 7).

PAUS. bk. III. For excavations see SPARTA and the survey by H. Waterhouse and R. Hope-Simpson, *BSA* 1965, 67 ff.; 1966, 114 ff. A. M. W.; W. G. F.

LACTANTIUS (L. Caelius (? Caecilus) Firmianus qui et Lactantius, c. A.D. 240-c. 320), a native of North Africa, pupil of Arnobius (q.v.), Christian apologist. Under Diocletian he was officially summoned to Nicomedia to teach rhetoric there: it is uncertain when he was converted to Christianity, but he was a Christian by 303, and lost his position when persecution began in that year. He remained in Nicomedia till 305, and then moved to the West; in extreme old age he was tutor (c. 317) to Crispus, eldest son of Constantine.

Lactantius wrote numerous works on various subjects, but only Christian works survive. He commenced to write these after persecution began. The *De Opificio Dei* (303-4) is a demonstration of providence from the construction of the human body. The *Divinae Institutiones* (303-13),

begun as a reply to attacks on Christianity by a philosopher and a high official (Hierocles), was intended to be a refutation of all opponents, past, present, and future; later (317?) Lactantius produced an *Epitome* of this work. The *De Ira Dei* (314?) demonstrates, against certain philosophers, that anger was a necessary element in the character of God. The *De Mortibus Persecutorum* (318?) is a pamphlet designed to show how all persecutors, particularly those of his own times, came to an evil end. The doubts long cast on its authorship have now been allayed. One poem by Lactantius, *The Phoenix*, also survives. At the Renaissance Lactantius, became known as 'the Christian Cicero'. He is the most classical of all the early Christian Latin writers, and also makes much use of Latin authors, particularly of Cicero. He shows little philosophic knowledge or ability, and has little of importance to say on Christian doctrine or institutions. But the last point may be due to his apologetic method, because he was chary of using Christian sources to refute those who did not believe in them.

Blakeney, *Epitome* (1950); R. Pichon, *Lactance* (1901); A. Wlosok, *Laktanz u. die philosophische Gnosis* (1960).

Jas. S.

LACYDES of Cyrene succeeded Arcesilaus as head of the Middle Academy in 241/40, B.C., and held the position till at least as late as 224/3, after which the headship was probably in commission till Carneades became head; Lacydes died in 206/5. He is sometimes described as founder of the New Academy, but in truth he simply emphasized the scepticism which was already well developed in Arcesilaus. He seems to have made no important contribution to philosophy.

W. D. R.

LAELIUS (1, *PW* 2) (**MAJOR**), **GAIUS**, a *notus homo* who owed his political advancement to his commander and friend Scipio Africanus. In Spain (210–206 B.C.) he commanded the fleet at New Carthage and fought at Baccula and Ilipa. He shared in Scipio's African campaign (204–202), defeating Syphax (q.v.), capturing Cirta, and commanding one wing at Zama. He was plebeian aedile (197), praetor in Sicily (196), consul with L. Scipio (190), proconsul in Gaul (189), and ambassador to Perseus (174) and to some Celtic tribes (170). He lived to meet Polybius (160), to whom he was a valuable source of information about Scipio Africanus, since he shared so much of his life.

H. H. S.

LAELIUS (2, *PW* 3), **GAIUS**, the closest friend of Scipio (q.v. 11), Aemilianus whose cultural interests he shared (see *SCIPIONIC CIRCLE*). As Scipio's *legatus* he led the decisive assault on Carthage in 146 B.C., and as praetor in 145 he won some successes in Spain. Either in that year or as consul in 140 he sponsored an abortive proposal for some kind of agrarian resettlement. In 132 he assisted the consuls (see *RUPILIUS* and *POPILIUS* 2) in the persecution of the Gracchans. His nickname *Sapiens* probably refers to his sagacity. Later generations judged him one of the ablest orators of his day. He is the central figure in Cicero's *De Amicitia* and appears also in the *De Republica*.

Malcovati, *ORF*³ 115. H. H. Scullard, *JRS* 1960, 62 ff.; A. E. Astin, *Scipio Aemilianus* (1967).

A. E. A.

LAELIUS (3) **ARCHELAUS**, a friend of Lucilius, who, like Vettrius Philocomus, lectured and commented on Lucilius' satires.

Suet. *Gram.* 2.

LAESTRYGONES, a race of cannibal giants encountered by Odysseus (q.v. and see *ANTIPHATES*). In their

country the night is so short that men going out with the flocks to pasture meet those coming back (*Od.* 10. 82 ff.), apparently a vague echo of some traveller's tale of northern conditions in summer (cf. Crates in schol. *ibid.* 86). Their city, Laestrygonia, is described as the 'lofty town of Lamos', a name suggesting Lamia (q.v.), i.e. their royal family is descended from King Bogey. The ancients, as usual, tried to locate the country in the neighbourhood of Magna Graecia, either in Sicily (*Thuc.* 6. 2. 1) or at Formiae (*Cic. Att.* 2. 13. 2), when they did not suppose it completely fabulous, as it is.

H. J. R.

LAEVINUS, **MARCUS VALERIUS** (*PW* 211), praetor in 227 B.C. and again in 215, commanded a fleet on the Illyrian coast against Philip V in 214, and in 212/11 entered into alliance with the Aetolians and Attalus of Pergamum in the First Macedonian War. Consul in 210, he captured Agrigentum, completing Marcellus' work in Sicily, which he governed for three years; in 208 he defeated a Punic fleet. In 205 he brought the Magna Mater from Pessinus to Rome. He died in 200. The record of a consulship in 220 suggests faulty election; a command in Greece in 201 (*Livy* 31. 3) is uncertain.

A. H. McD.

LAEVIVS (the cognomen *Melissus* depends on a conjectural identification with a person named by Suetonius, *Gram.* 3) wrote *Erotopaegnia*, playful lyrics on amatory themes, probably in the early years of the first century B.C. Other known titles (*Adonis*, *Helena*, *Alcestis*, *Io*, *Sirenocirca*, *Protesilaodamia*) probably refer to parts of that collection: the surviving fragments suggest a fanciful, sentimental, and romantic treatment of the love-stories of mythology. He experimented with a variety of metres (scæzon, iambic dimeter, ionic, anapaests) and indulged in bizarreries of language—picturesque compounds, affective diminutives, novel forms of words—which attracted the attention of later grammarians. In the *Phoenix* he seems even to have reproduced the Hellenistic conceit of the technopaegnon, in which the length of the lines was contrived to make a shape. An obscure figure who is never mentioned in the succeeding two centuries and only emerges in the *litterati* of the second century A.D., Gellius, Fronto, and Apuleius, who were attracted by his idiosyncrasies, he is of importance as a pioneer, both in technique and in matter, of Alexandrianism in Latin poetry.

Fragments in Morel, *FPL*.

C. J. F.

LAMACHUS (d. 414 B.C.), Athenian general. He was *strategos* as early as c. 435 and must have become well known for his military leadership by 425, when he was caricatured as a blustering soldier in the *Acharnians* of Aristophanes. In 415 he was appointed with Alcibiades and Nicias to conduct the expedition to Sicily. He advocated an immediate attack on Syracuse, but failed to convince his colleagues. The rapid progress of the Athenian blockade in 414 seems to have been largely due to his energetic leadership; it terminated abruptly when he was killed in a skirmish. Aristophanes in later plays pays tributes to his heroism.

Thucydides, bk. 6.

H. D. W.

LAMBAESIS (modern *Lambèse*), a Roman camp in Numidia north of the Aurès range, is attested in A.D. 81 (*AE* 1954, 137; cf. *Libya* 1953, 189 ff.). Under Trajan the Legio III Augusta there controlled the route which led north from the Sahara through Vescera (*Biskra*) and Calceus Herculis (*El Kantara*). Military roads enabled the legate to reinforce the auxiliaries in Numidia and the Mauretaniae. Hadrian visited Lambaesis (A.D. 128); his

address to the troops was inscribed on a column, and much of it survives (Dessau, *ILS* 2487 and 9133-5). The legion was disbanded by Gordian III (238), but Valerian restored it to its old quarters (253).

Lambaesis is the finest example of a Roman fortified camp extant. It contains an *arcus quadrifrons* (usually called the *praetorium*), legionary headquarters, offices, storerooms, chapels, messrooms, baths, and latrines. Platforms along the walls served as artillery emplacements, and at the four corners are rounded re-entrant towers. An amphitheatre was built outside the walls, and married-quarters were erected after Septimius' army reforms; these grew into a substantial town with its own baths, arches, and temples. W. N. W.

LAMIA (1), a child-stealing nursery bogey, Ar. *Vesp.* 1035 - Pax 758 (where she is apparently bisexual) and often. The schol. on Pax says she was daughter of Belus and Libya (see DANAUS), whose children Hera destroyed because Zeus was her lover, whereat she became savage with grief; more refs. in Roscher's *Lexikon* ii. 1819. For a later conception of her see Philostr. *VA* 4. 25. H. J. R.

LAMIA (2), the principal city of Malis, commanding the chief route from Thessaly to central Greece. It did not exist, or was an insignificant village, until the close of the fifth century. Thereafter it became increasingly important, especially after Spartan control of Heraclea (q.v. 4) terminated. During the Greek rising against Macedonia after the death of Alexander an army under Antipater was besieged at Lamia. Its strong fortifications helped him to resist the Greeks throughout the winter of 323/2. In the third century the city reached the height of its prosperity under Aetolian hegemony, but in 190 it was sacked by Aelius Glabrio.

Y. Bequignon, *La Vallée du Spercheios* (1937).

H. D. W.

LAMPADIO, GAIUS OCTAVIUS, a Roman scholar of the second century B.C., prompted by the influence of Crates of Mallos to take a literary interest in early Latin poets (Suet. *Gram.* 2). He arranged in seven books the *Bellum Punicum* of Naevius.

LAMPOON (GREEK). The tradition of abusive and satirical verse seems to have been indigenous to the Greeks. An early example can be seen in the verses with which Archilochus assailed Lycambes, or later those with which Hipponax attacked Bupalus. The form was recognized by the word *ἱαμβος*, used for any poetry which abused (cf. Procl. ap. Phot. *Bibl.* 321 a 28, Ael. *VI* 3. 40, Poll. 2. 54). Hence it was applied to the satirical verses of Xenophanes and Timon. See also ALCAEUS (3) OF MESSENE. C. M. B.

LAMPROCLES (early 5th c. B.C.), Athenian musician and poet, teacher of Damon (schol. Pl. *Alc.* 118 c), exponent of the mixo-Lylian mode (Plut. *De mus.* 16), composer of dithyrambs (Ath. 491 c) and of a famous hymn to Athens quoted by Aristophanes (*Nub.* 967).

TEXT Page, *Poet. Mel. Gr.* 379 f.

CRITICISM. U. von Wilamowitz-Muellendorf, *Textg. d. gr. Iyr.* (1900), 84 f. C. M. B.

LAMPS (λύχνος, *lucerna*) were used not only to illumine interiors and shop exteriors, but as votive offerings to deities and as tomb-furniture. The commonest materials were bronze and clay, and olive oil the usual fuel (see LIGHTING). Middle and Late Minoan clay and stone lamps are plentiful, usually having unbridged nozzles, and certain handled, open vessels from Mycenaean sites have been described as lamps, but recognizable lamps

appear only on the fringes of the Mycenaean world, in places, like Cyprus, close to the lamp-using countries of the East. Homer has only a single reference to lamps (*Od.* 19. 34), and after the Bronze Age there are no identifiable lamps in Greece until the early seventh century B.C. when 'cocked-hat' lamps of Athenian manufacture are found, deriving from Eastern examples, the production of which, in Palestine, continued with only cultural breaks, from about 2000 B.C. In Italy outside the Greek cities the use of lamps, apart from some isolated Etruscan examples, does not begin before the third century. The more efficient bridged nozzle was introduced, probably in Asia Minor or the Islands, towards the end of the seventh century. Thereafter the Greek wheel-made lamp has a tendency to become less open and shallow. Athens would appear to be the main innovator of new forms; these products were exported and copied over much of the Greek world. Mould-made lamps, with greater possibilities for different shapes and decorative features were introduced at the beginning of the third century B.C. Hellenistic moulded lamps, decorated on their wide shoulders, died out in the first century A.D. when the new Italian lamps, with dished tops bearing relief pictures, swamped the market and were copied everywhere. Elaborate specimens with many nozzles are not uncommon, while the forms of the metal lamps are extremely varied. Clay lamps modelled in a great variety of plastic forms are found from the third century B.C. through to the later Empire. In the second and third centuries A.D. there was a revival of high-quality lamps in Corinth and Athens, and the Italian lamps degenerated. From the fourth century the finest lamps were produced in North Africa, probably near Carthage, and Christian symbolism becomes common. After the sixth century few lamps of good workmanship were produced, except in Palestine and Egypt.

LAMPSACUS, a Phocaeian foundation in the northern Troad with a good harbour. Its strategic position guarding the eastern entrance to the Hellespont explains the city's economic prosperity and historical significance. Hence, too, sprang its attempt to check the elder Miltiades' domination of the Chersonese. In the sixth and fifth centuries Lampsacus passed successively under Lydian, Persian, Athenian, and Spartan control. It was assigned by Artaxerxes I to Themistocles, whom it supplied with the wine for which it was famous. Its tribute of twelve talents as a member of the Delian League, and its gold coinage in the fourth century, attest its commercial well-being. Attempts to assert its independence against Persia and Athens were quickly repressed, but in the fourth century Lampsacus enjoyed long periods of self-government. Its prosperity continued during the Hellenistic age and under the Roman Republic (Cic. 2 *Verr.* i. 24. 63) and Empire.

W. Leaf, *Strabo on the Troad* (1923), 92.

D. E. W. W.

LANUVIUM, modern *Lanuvio*, an ancient Latin city in the Alban Hills (Cato fr. 58 P.; Strabo 5. 239). In 338 B.C. Rome dissolved the Latin League, granted Lanuvium Roman citizenship, and officially adopted its famous cult of Juno Sospes (Livy 8. 14; Cic. *Nat. D.* 1. 83; for ancient remains, G. Bendinelli, *Mon. Ant.* 1922, 292). Although it suffered in the Civil Wars (App. *BCiv.* 5. 24), Lanuvium, unlike many Latian towns, continued to flourish even in imperial times (however, reject *Lib. Colon.* 235). Milo, Roscius, and Antoninus Pius were born there (Cic. *Mil.* 27; *Dio.* 36, *S.H.A. Ant. Pius* 1;

Comm. 1). Lanuvium was often confused with Lavinium (q.v.): hence its medieval name *Civita Lavinia*.

G. B. Colburn, *Arch* 1914; A. E. Gordon, *Cults of Lanuvium* (U.S.A. 1938). E. T. S.

LAOCOÖN, a legendary Trojan prince, brother of Anchises and priest of the Thymbraean Apollo or (in some accounts) of Poseidon. Of his story as it was told by Arctinus in the *Iliupersis*, by Bacchylides, and by Sophocles in a tragedy bearing his name we know little. According to the generally accepted tale (Verg. *Aen.* 2. 40-56, 199-231; Apollod. *Epit.* 5. 17-18), he protested against the proposal to draw the Wooden Horse within the walls of Troy, and two great serpents coming over the sea from the island of Tenedos killed him and his two sons (in Arctinus one son, in Quint. Smyrn. 12. 444-97 Laocoön himself escaped). According to Hyginus (*Fab.* 135. 1) the serpents were sent by Apollo to punish him for having married in spite of his priesthood, in Quint. Smyrn. and Virgil, by Athena on account of his hostile attitude to the Horse. The story is famous not only from the dramatic pathos of Virgil's rendering, but as the subject of one of the most famous examples of ancient sculpture, the marble group now in the Vatican which depicts father and two sons in their death-agony. Thus, a masterpiece of the Pergamene school, was the work of three Rhodian sculptors, Agesander, Polydorus, and Athenodorus, of the second half of the first century. In Roman times it was exhibited in the palace of the Emperor Titus, and in Pliny's view (*HN* 36. 37) surpassed all other works of painting and sculpture. Lessing made it the text for his famous essay of 1766 on the difference between poetry and the fine arts.

R. A. B. M.

LAODICE (1), in mythology, a stock name for women of high rank, meaning 'princess' (cf. CREON, CREUSA), e.g. (a) a daughter of Priam, see ACAMAS, DEMOPHON, (b) a daughter of Agapenor (q.v.), she founded the temple of Paphian Aphrodite in Tegea (Paus. 8. 53. 7, cf. 5. 3); (c) daughter of Agamemnon (*Il.* 9. 145), later replaced by Electra (q.v. 3).

II J R.

LAODICE (2), probably a niece of Antiochus I (q.v.), married her cousin Antiochus II (q.v.), by whom she had two sons and two or three daughters. Antiochus repudiated her and her children in favour of Berenice (daughter of Ptolemy II), whose son (b. 251 B.C.) became heir-apparent. The result, when Antiochus died, was a war of succession, in which Egypt supported Berenice's son ('Third Syrian', or 'Laodicean War', 246-241), though Ptolemy III's expedition in Asia did not prevent mother and son from being killed by Laodice's supporters. Tradition gives Laodice a share in inspiring and organizing the resistance (especially in Asia Minor) which enabled her elder son to succeed as Seleucus II.

W. W. Tarn, *CAB* vii, 715 ff; W. Otto, *Beiträge zur Seleukiden-geschichte des 1. Jahrhunderts v. Chr.* (1928), 48 ff. G. T. G.

LAODICEA AD LYCUM (Λαοδικεία ἐπὶ Λύκῳ, also called A. τῆς Λαίας), a city founded by Antiochus II (261-246 B.C.) and called after his wife Laodice (q.v. 2). It occupied the site of an older city on a flat hill overlooking the valley of the Lycus a few miles east of its junction with the Maeander; its territory was bounded by the rivers Λύκος and Κάμπος, symbolized as Wolf and Boar on its coins. It lay on a great trade-route and was one of the most prosperous cities in Asia; it was the head of a *comentus* and one of the 'Seven Churches' of the Apocalypse. Diocletian made it the *metropolis* of the province of Phrygia.

W. M. C.

LAOMEDON, legendary king of Troy, for whose genealogy see DARDANUS. For his relations with Heracles see HERACLES; for his dealings with Apollo and Poseidon see *ibid.* Apart from this he has little place in mythology, the most interesting feature of his legend being the story of his grave, which lay over the Scaean Gate and ensured the safety of the city so long as it was undisturbed (Servius on *Aen.* 2. 241, cf. Plaut. *Bacch.* 955; see W. F. J. Knight in *CJ* 1933. 257 ff., cf. the tomb of Aitolos in Elis, Paus. 5. 4. 4). This undoubtedly refers to some kind of magical precaution, whether or not originally associated with Troy.

LARCIUS (? **LARGIUS**) **LICINUS** (1st c. A.D.) wrote a *Cicero-mastix*. Its reprehensible audacity in criticizing the orator is coupled by Gellius (17. 1. 1) with that of Asinius Gallus.

LĀRES (older **LASES**, Arval hymn; Henzen, *Acta Arualium*, cciv. 33). The etymology and consequently the connexion, if any, with the names Larentia (Acca, q.v.), Larunda, Lara, and Etruscan Lasu and Larth are very uncertain (Boehm, op. cit. *infra*, 806 f.). As to their origin there are two principal theories, supported respectively by Samter and by Wissowa, W. Warde Fowler, and K. Latte.

(1) They are the ghosts of the dead. Samter starts from the *Lar familiaris*, and supposes him closely connected with the cult of the dead, because (a) if a bit of food falls on the floor during a meal, it is proper to burn it before the Lares (Pliny, *HN* 28. 27; see X. F. M. G. Wolters, *Antique Folklore* (1935), 96 ff., but *contra*, Rose, *Gnomon* 1936, 390). Now the floor is a notorious haunt of ghosts; the food, therefore, has gone to the ghosts' region and so is formally given to the ghosts. (b) At the Compitalia, or festival of the cross-roads (cross-roads being again a favourite place for ghosts cf. HECATE), it was the custom to hang up a male or female puppet for each free member of a household, a ball for each slave (Festus, 272. 15 Lindsay, cf. 108. 27; 273. 7), that the Lares, says Festus, might spare the living and take these surrogates instead. This is a quite reasonable precaution against ghosts. (c) The connexion, which he assumes, with Larentia and the Larentalia definitely connects them with chthonian ritual.

(2) Wissowa points out that the Roman dead are honoured not in the house but at their graves; the hearth is the place of Vesta and the *di Penates* (qq.v.), and the *Lar (familiaris)*, a later intruder. The ceremonial at the cross-roads is easily enough explained when it is remembered that a *compitum* is properly and originally the place where the paths separating four farms meet (Gromatici, 302. 20 ff., Lachmann; schol. Pers. 4. 28). This has no ghostly associations, but it regularly had a chapel of the Lares, and Latte would explain the rite as a purification, not a sacrifice. That the *Lar familiaris* (Lar of the servants, rather than of the household generally, in origin) was brought into the house by the farm-slaves is likely, cf. Warde Fowler, *Roman Essays* (1920), 61.

The Lares, then, are originally deities of the farm-land. From this, and from the secondary cult in the houses, they expand (apart from purely theoretical developments of the use of their name to signify ghost or *daemon*) (1) into guardians of any cross-way, including one in a city. Hence grew up in Rome the *collegia compitalicia*, associations of humble people, mostly freedmen, who tended the shrines, and their festival. These were restored by Augustus, with the addition of his own Genius (q.v.; Ov. *Fasti* 5. 145, Suet. *Aug.* 31. 3 with Latte, op. cit. 307); (2) into guardians of roads and wayfarers, *Lares viales*, including travellers by sea, *Lares permarini*; (3) into guardians of the State in general, *Lares praestites*; see

especially Wissowa, *Ges. Abh.*, 274 ff.; Ovid, *ibid.* 129 ff., and Frazer thereon.

Like all Roman deities the Lares have no mythology. Ovid (*Fasti* 2. 599 ff.) has a story of their begetting by Mercurius on Lara, manifestly a late invention and quite possibly his own. For another alleged mother see MANIA. In one version (Pliny, *HN* 36. 204) of the wonderful birth of Servius (q.v. 1) Tullius' father is the *Lar familiaris*; a late anthropomorphizing (for a different one see Ovid, *Fasti* 6. 627) of an old folk-tale, that he or some other remarkable person was born of a woman fertilized by the fire.

Since the cult of the *Lar familiaris*, whatever its origin, became universal (see for many examples in popular art G. K. Boyce in *Amer. Acad. Rome* 1937), *lar* or *lares* is used like *penates*, by metonymy for 'home', 'house'; *lararium* is 'private chapel'.

Latte, *RR* 90 ff

H. J. R.

LARINUM, town near the Adriatic immediately north of Apulia (q.v.): modern *Larino*. The Larinates were ethnically identical with, but politically independent of, the neighbouring Frentani (q.v.). A wool trading centre, Larinum witnessed several of the Hannibalic War operations, but is chiefly celebrated for its notorious cases of murder (see CLUENTIUS). E. T. S.

LARISSA, the principal city of Thessaly, dominating the fertile plain of Pelasgiotis, with an acropolis on a low hill protected by the river Peneus. It was the first Thessalian city to strike coins, and its earliest issues, struck on the Persian standard, reflect both the mediocrity of the Alcadae (q.v.) and their influence over the Larissaeans. In the second half of the fifth century the city was weakened politically by conflicts between rival factions but apparently continued its economic prosperity. From the end of the fifth century, although it formed the centre of aristocratic opposition to the tyrants of Pherae, its efforts were seldom successful without external support. Jason won Larissa before 374, but it resisted his successors by enlisting aid first from Thebes and later from Philip of Macedon. This policy led to the Macedonian annexation of Thessaly, and Larissa remained in Macedonian hands until liberated by Rome in 196, after which it became the capital of the new Thessalian Confederacy and enjoyed considerable prosperity.

F. Stählin, *Das hellenische Thessalien* (1924), 94 ff.

H. D. W.

LARUNDA, an extremely obscure Roman goddess, said to be Sabine (Varro, *Ling.* 5. 74, cf. E. C. Evans, *Cults of the Sabine Territory* (1939), 227 ff.), and generally supposed to be chthonian (Wissowa, *RR* 234). She was honoured with an annual sacrifice on Dec. 23 at an altar in the Velabrum. The quantity of the first syllable (known from Ausonius, *Technop.* 8. 9 (p. 161) Peiper), 'nec genius domuum, Larunda progenitus Lar' suggests a possible connexion with Acca Larentia (q.v.). The ancients equate her with Lára, said by Ovid (*Fasti* 2. 599 ff.) to be mother of the Lares (see Frazer *ad loc.*; Lactantius, *Div. Inst.* 1. 20. 35). The quantity, however, is against this. Probably this identification is meant by Philoxenus, 225 (LA 66), Lindsay-Laistner, *Larunda*: δαμόνων μήτηρ, cf. [Placidius], 66 (L 15) Lindsay-Pirie, 'Larunda: quam quidam Maniam dicunt', but the reading is doubtful. If right, cf. Varro, *Ling.* 9. 61, 'uidemus enim Maniam matrem Larum dici'. For the Mother of the Lares cf. Henzen, *Act. Arval.* 145, and add Dessau, *ILS* 9522, on which see L. R. Taylor in *AJArch.* 1935, 299 ff.; E. Tübeling, *Mater Larum* (1932). The most probable explanation of the occurrence of this un-Roman genealogy in a sacred document is that it had been affected

by the theories mentioned above. On the whole question, see Latte, *RR* 92.

H. J. R.

LASUS (b. c. 548–545 B.C., *Suda*), son of Charminus, of Hermione, lived at the court of Hipparchus, where he disclosed the forgeries of Onomacritus (Hdt. 7. 6). Rival of Simonides (schol. Ar. *Vesp.* 1410), he composed hymns (Ath. 467 a, 624 c) and dithyrambs, of which he was a pioneer in Athens (schol. Pind. *Ol.* 13. 25; schol. Ar. *Av.* 1403; Clem. Al. *Strom.* 1. 16).

TEXT. Page, *Poet. Mel. Gr.* 364 ff.

C. M. B.

LATIFUNDIA. It was a characteristic of ancient Oriental large estates that commercial, industrial, and lending enterprises were interrelated with agriculture. The primitive serf estates of Linear B Hellas and of archaic Greece and Italy were broken up, except in backward countries like Thessaly, as a consequence of democratic movements. Imitation of the *ergasterion* (see INDUSTRY), however, led to a new slave estate in classical Greece, which was larger than the normal peasant holdings, used scientific handbooks on agriculture, and produced with a view to high profit. The Hellenistic large estates and the Italian *latifundia* originated in a blending of Oriental and Greek estate systems in Hellenistic and, probably, Carthaginian territories. The division of labour and the wide economic activities of Oriental estates were preserved, and very cheap labour became most important. Hellenistic estates like the *dorea* ('concession') of Ptolemy II's minister Apollonius (q.v. 3) used more free workmen than slaves, in spite of being actively engaged in the slave trade. The West exploited cheap slave labour with an unrivalled mercenary spirit and cruelty.

The Roman *latifundium* originated in distributions of the *ager publicus* in the early second century B.C., as soon as the wealth of the Roman upper class had sufficiently increased to imitate Eastern landlords. The *villa* with its slave *famiha* was much stronger economically than the surrounding peasants, because only large owners had capital for introducing new crops and breeds. In consequence, a large number of peasants in Italy and even in the provinces lost their homesteads. *Latifundia*, with *villa urbana*, *villa rustica*, *instrumentum vocale* (— slaves), *semmocale* (— cattle), and *mutum* (furniture and implements) became characteristic of all Roman provinces.

A change came as soon as slave labour ceased to be cheap, and the *famiha* gave way to the *colonus*, who learned all the methods of *latifundium* agriculture useful to him. A new type of large estate arose after A.D. 100 or so, the *patrocinium*, which later became a model for the Middle Ages. Most of the soil was in the hands of *coloni*, who cultivated small tracts in accordance with the teachings of Cato (1), Varro (2), and Columella (qq.v.), as far as the economic situation permitted. Enterprises in trade, craftsmanship, and banking, as well as small garrisons, remained on the estates. These Late Roman estates, together with State and Church institutions, remained as islands of classical culture and experience during the difficult times of the Germanic, Slavic, and Islamic conquests. See AGER PUBLICUS, AGRICULTURE, COLONUS, GRACCHUS (3, 4), PASTURAGE, VILLA.

LATIN, CHRISTIAN. The notion that the early Christian communities of the Roman world brought into being a distinct category of Latinity, which subsequently passed into general current usage, was put forward by Mgr. J. Schrijnen of the University of Nijmegen in his *Charakteristik des altchristlichen Latein* (1932). His

pupils, notably Professor Christine Mohrmann, of the Nijmegen School of Christian Latin Studies, have done much to propagate Schrijnen's theory by publishing an extensive series of monographs on the language of the Church Fathers.

However, the term 'Christian Latin' must be used with some reserve. The early Christians were charged by their antagonists with being a *latebrosa et lucifuga natio*, in *publicum muta*, in *angulis garrula* (Min. Fel. Oct. 8). Such remarks may be regarded as hostile propaganda. The Christians were also suspect because of their weekly assemblies (Pliny, *Tra.* 96) which appeared to violate the ban on *collegia*. But to argue from this that the Christians formed closed communities, living apart from their non-Christian neighbours, is unrealistic. They belonged largely to the lower orders, among whom they had to pursue their daily tasks, while many of them were slaves for whom segregation from the rest of the *familia* was clearly impossible.

It is therefore rash to maintain that Christian Latin was a *Sondersprache*, if this is meant to have syntactical or even merely stylistic implications. Much has been made of the Grecisms prevalent in the language of the Christian writers. It is true that the Latin versions of the Scriptures have many echoes of the Greek (as also of the Hebrew) originals and that these were the only reading which many Christians permitted themselves (the style of the authoress of the *Itinerarium Egeriae* (q.v.) is completely dominated by the Scriptures); but this would not make for a Latin markedly different from the Graeco-Latin of say the freedmen in Petronius' *Cena Trimalchionis*. There is no evidence that the speech of the unlettered majority of Latin speakers converted to the new Faith was anything but the *sermo plebeus* of imperial times, which already had a strong admixture of Greek, especially as regards vocabulary.

In fact, the researches of the Nijmegen School are largely concerned with lexicology, and it is upon this that their *Sondersprache* rests. 'Christian Latin' owes what specific character it possesses to the large number of loan-words from the Greek Bible and from the Greek technical language of liturgy and exegesis (*angelus*, *diabolus*, *episcopus*, *ecclesia*, *presbyter*) and also to a number of Latin words which acquired new, specifically Christian meanings, like *orare* ('to pray'), *gratia* ('grace'), *sacramentum* ('sacrament'), *sacculum* ('the world'), *caritas* ('love').

The Church Fathers, even those well acquainted with the pagan classics, like Augustine, Jerome, Ambrose, and Lactantius, could on occasion write a Latin close to the popular idiom, while the language of the Vetus Latina and Vulgate versions shows morphological and syntactical phenomena such as change of gender and conjugation, increased use of prepositions to combat the breakdown of case endings, extensive compounding of nouns, verbs, adjectives, and adverbs, replacement of the accusative and infinitive by *quod*, *quia*, *quoniam*, etc., all of which are found equally in the pagan writers and mark the evolution of the living Latin towards Romance.

See J. Selinonen, *Charakteristik des altchr. Latein* (Nijmegen, 1912); Ch. Mohrmann, *Études sur le latin des Chrétiens* i-ii (Rome, 1961-5), also the series *Latinitas Christianorum Primaeva*, Nijmegen (some twenty fascicles since 1942); numerous articles in *Vigiliae Christianae* and *Revue Benedictine*, L. R. Palmer, *The Latin Language* (1954), ch. 7.

LATIN LANGUAGE. Latin was originally the language of the city of Rome and the Latian plain, and it was only as Rome's power extended that her language spread itself over the ancient Western world. It belongs to the Italic branch of the Indo-European family of languages and is thus akin to Greek, Germanic, Celtic, etc.; within Italy its nearest relative is Faliscan, and next

are the Italic dialects proper, Oscan and Umbrian (qq.v.). When and whence Italic came into Italy cannot be stated exactly, but it presumably came over the Alps and Apennines from somewhere in Europe before the eighth century B.C. Besides the numerous Italic dialects there were in Italy also Greek in the south and on the coast, Celtic in the north, and the non-Indo-European language of Etruria. All these exerted more or less influence upon Latin. Borrowings from Celtic were confined to a few words, e.g. *petrorritum*, *gaesum*, *carrus*, and the Greek influence, though considerable, did not come in till late. From Etruscan came names such as *Sulla*, *Cusca*, and many with an *-n*-suffix, e.g. *Perpenna*, *Sisenna*, *Maecenas*. Etruscan also are technical terms such as *histrion*, *subulo*, *persona*, *puteal*, *camillus*, and perhaps even such common words as *urbs* and *amare* (infinitive). The substitution of breathed for voiced sounds in words like *sporta* (< *σπορῖδα*), *catamitus* (< *Γανυμήδης*), the aspirate in names like *Gracchus*, *Cethegus*, and the weakening or disappearance of syllables which resulted from the shifting of the word-accent as in Pollux (< *Πολύδεύκης*) are probably due to Etruscan. This theory receives support from the Etruscan names of the old Latin tribes, *Rammes*, *Tities*, *Luceres* (cf. *lucumo*), and it is now generally accepted that the Latin alphabet is derived not directly from Greek but is partly of Etruscan origin.

2. Outside Italy the Italic group (including Latin) has its closest affinity with Celtic, and the number of morphological innovations which both groups share gives much plausibility to the theory that their pre-ethnic speakers must have lived in close association after the separation of the Indo-European peoples. Both groups show

- (a) extension of the abstract-noun stems in *-ti-* by an *-n*-suffix, e.g. *men-ti-on-em*;
- (b) superlative formation in *-simos*, e.g. *aegerrimus* (< **aegr-ismos*);
- (c) genit. sing. of *-o*-stems in *-i*: e.g. *filī*, OIr *magr*;
- (d) medio-passive formation in *-i*: *sequitur* — Ir. *sechdar*;

Both Celtic and Italic are divided into two sub-families, a Goidelic and Brythonic, and an Oscan-Umbrian and a Latin-Faliscan respectively, which differ in the same way in their treatment of Indo-European *q*. Thus Latin has *quod*, *quinque* while Oscan has *pod*, *pompe*; Irish has *coc* (five), Welsh *pump*; Gaelic has *Mac* (e.g. MacDonald), Welsh *Ap* (e.g. Powell < Ap Howell).

3. The most striking feature of Latin is its accentuation. In Indo-European the accent was predominantly musical and was unrestricted. In the historical period of Latin, while remaining musical, it was restricted by the trisyllabic law dependent on the quantity of the penult. In the intervening period, however, it became strongly stress and shifted to the first syllable of the word. This resulted in the transformation of words by

- (a) syncope: *ardere*, *audere* (cf. *aridus*, *avidus*);
- (b) umlaut: *teneo*, *capio* (cf. *retineo*, *retentum*; *incipio*, *inceptum*);

- (c) iambic shortening: *benē*, *vidē* (cf. *rectē*, *audē*).

Thus all short vowels in open position in medial syllables either disappeared or were narrowed to *i* or *e*, and diphthongs became monophthongs, e.g. *caedo*, *claudio* (cf. *occido*, *excludo*).

4. Other vocalic changes were the reduction of (accented) diphthongs *ai*, *ei*, *oi*, *eu*, e.g. *aedes* (αἶθω), *dico* (δείκνυμι), *ūmus* (οὐμή), *iumentum* (ζεύγος).

5. Of the consonants original *i* and *y* were lost very early, the former between any two vowels (e.g. *trēs* < **trejes*), the latter between two similar vowels if the first was accented, e.g. *audi* < *audīi* (but not in *amāvi* or *avārus*). Where *i* occurs between vowels it equals *ij*, e.g. *Maia*. Initially *dy-* became *b-*, e.g. *bis* (cf. *duo*). In

the second century A.D. Latin *v* (pronounced *wo*) came to be sounded like English *v* (cf. *vox*, Fr. *voix*), and Latin *b* in certain positions developed the same sound (cf. *habere*, Fr. *avoir*). Hence late spellings like *Victorinus*, *birtus*. Between 450 and 350 B.C. intervocalic *-s-* became *-r-*, e.g. *gero*: *gestum*. Therefore, words such as *rosa*, *miser* are non-Latin, while in *causa*, *fisus* there was originally not *-s-* but *-ss-*.

6. The chief innovations in morphology are:

- (a) loss of the dual number;
- (b) new forms of genitive singular and nominative plural in *-o-* and *-a-* stems;
- (c) new adverbial forms in *-ē-*, *-m-*, *-iter*;
- (d) rise of the so-called 5th declension;
- (e) confusion of consonantal stems with stems in *f-* and the disuse of the *u* declension in adjectives, e.g. *ῥόδus* but *suavis*;
- (f) confusion of primary and secondary personal terminations in the verb;
- (g) almost complete disappearance of non-thematic conjugations;
- (h) fusion of aorist and perfect forms and of active and middle endings in what we call the perfect;
- (i) complete fusion of conjunctive and optative into one mood.

7. Latin syntax has restricted case-usage more sharply than Greek except in the ablative, which combined ablative, locative, and sociative-instrumental uses from which developed the characteristically Latin ablative absolute. In the verb there is a great extension of the subjunctive, particularly in dependent clauses, and a very complex and strict system of *oratio obliqua* and sequence of tenses.

8. As a vehicle of literature Latin, unlike Greek, appears at first as crude and unpolished in both verse and prose. The pioneer efforts of Ennius, however, to graft on Latin the artistic excellences of Greek were ably seconded by Lucretius and Catullus and culminate in the full glory of Latin poetry in the *Aeneid* of Virgil and of prose in the resonant periods of Cicero and the rich smoothness of Livy. The rhetorical style reaches its height in the Ovidian elegiac and the brilliant epigram of Tacitus. In the hands of the greatest masters Latin was shown to be the worthy vehicle of the thought of a great imperial race.

A. Meillet, *Épaves d'une histoire de la langue latine* (1938); Stolz-Schmalz, *Latinsche Grammatik*, 5th ed. by Leumann-Holmann (Müller's Handbuch, 1928); J. Marouzeau, *La Latinité* (1927); L. R. Palmer, *The Latin Language* (1954) P. S. N.

LATIN, SILVER. The period of Silver Latin is broadly from A.D. 17 to 130, but the literary decline which marks it began even before Livy's death. The loss of political liberty and the practice of barren declamation led to a striving after novelty in which forced expression, exaggerated emphasis, antithesis, and epigram were cultivated for the express purpose of winning applause. Though the diction of Seneca is still fairly classical, all these faults abound in his works, and thereafter the same vein of rhetoric runs through the literature, reaching its height in Tacitus, the greatest of Silver writers. Quintilian has well summarized its faults when he says (book 8 proem) 'nihil iam proprium placet, dum parum creditur disertum, quod et alius dixisset' and 'tum demum ingeniosi scilicet, si ad intelligendos nos opus sit ingenio'. The chief features of Silver Latin are:

- (1) words borrowed for prose from the poets, especially Virgil;
- (2) words in new (frequently poetical) meanings;
- (3) new formations of agent-nouns in *-tor*, *-sor*, and abstracts in *-sus*, *-ura*, *-mentum*;
- (4) as in poetry, use of simple instead of compound verbs;

- (5) freer use of cases, e.g. dative of purpose, ablative of separation without preposition, ablative of duration of time, instrumental ablative even of persons, etc.;
- (6) present and perfect subjunctive in *oratio obliqua* after secondary tenses;
- (7) subjunctive of indefinite frequency and its extension to relative conjunctions;
- (8) interchange of *quoniam* and *quoniam*;
- (9) *quamvis*, *quanquam* with subjunctive even when denoting facts;
- (10) *tanquam*, *quasi*, *velut* to express, not comparison, but alleged reason. P. S. N.

LATIN, SPOKEN. Colloquial Latin (*sermo cotidianus*) means the easy everyday Latin of cultured people in which, as Quintilian says, 'cum amicis, coniugibus, liberis, seruis loquimur'. The plays of Plautus and Terence are written mostly in this style, just as in a modern comedy of manners the language is the ordinary speech of polite society. Thus Cicero tells us that the speech of nobly born Roman ladies, e.g. Laelia, was strongly reminiscent of the language of Plautus, and Terence has always been considered a model of familiar, but elegant, latinity. Particularly important are the letters of Cicero, especially those written to his 'second-self' Atticus, or, e.g., to Paetus, to whom he says: 'Quid tibi videor in epistulis? nonne plebeio sermone agere tecum? epistulas vero cotidianis uerbis texere solemus.' Characteristic features of this style are (1) the frequency of diminutives; (2) interjections, (3) very free syntax; (4) use of Greek words and tags, as we nowadays use French; (5) wide use of forms intensified by *per-* or weakened by *sub-*, e.g. *subinudare*. The same style in verse is found in Horace's *Satires* and *Epistles*, and there are occasional lapses into colloquialism in other writers, e.g. Catullus. On a somewhat lower level are the *Bellum Africanum* and *Bellum Hispaniense*, while in the *De Architectura* of Vitruvius we have what might be called the Latin of business life. Very important, too, is the *Satyricon* of Petronius with its descending scale of urbanity from the cultured familiarity of Encolpius to the coarse vulgarity of Echion and Habinnas.

J. B. Hofmann, *Latinsche Umgangssprache*, 1925 (2nd ed. with additions 1936); L. R. Palmer, *The Latin Language* (1954) P. S. N.

LATIN, VULGAR. Vulgar Latin is that form of the Latin language which was used by the uneducated classes in Italy and the provinces. We know it from (1) inscriptions, (2) a few texts such as the *Satyricon* of Petronius, *Itinerarium Egeriae*, *Mulomedicina Chironis*, *Appendix Probi*, and (3) the early development of the Romance languages. It differs from classical Latin mainly in a disregard of seemingly unnecessary distinctions, a desire for greater regularity in word-form, and a striving after emphasis. Vowels are slurred and confused, final *-m*, *-s*, *-t* are dropped, *b* is confused with *v*, *s* with *x*; hence forms like *oli*, *plevis*, *milex*. Analogy creates *nura*, *aprus*, *acrum*, and syncope *ueclus*, *oclus*, *urdis*, *frigda*. *Caelus* and *caelum* are pronounced *caelo*, whence confusion of gender (e.g. *vinus*, *fatus*); and the break-up of declension leads to a greatly increased use of prepositions (e.g. *ab + ante*, *de + intus*). The infinitive and accusative construction disappears in favour of clauses with *quia*, *quoniam*, *ut*; and new perfect and future tenses are formed by auxiliary verbs, *habere*, *debere*, e.g. *qui nasci habent* (= *nascuntur*). There is great activity in word-composition, especially diminutives of nouns (e.g. *ossucula*, *uricla*, *audaculus*) and frequentatives and intensives of verbs (e.g. *ausare*, *contemebicare*). Many common words become obsolete and are replaced by others, e.g. *magnus*,

edere, ludus, senex, ignis, ferre, emere by grandis, manducare, iocus, vetulus, focus, portare, comparare. Finally, the word-order of Vulgar Latin is simpler and more rational, e.g. 'Haec est autem vallis ingens et planissima, in qua filii Israel commorati sunt his diebus, quod sanctus Moyses ascendit in montem Domini' (*Itinerarium Egeriae*, 2, 2).

LATINI. The inhabitants of the plain of Latium—a people of mixed stock, predominantly 'cremators' but including a late wave of 'inhumators'—lived originally in numerous small communities, *populi*, which gradually coalesced or were forcibly amalgamated between the sixth and fourth centuries B.C. into larger States, the greatest of which was Rome. The *populi* formed confederations for religious purposes. The largest was the cult-group of Jupiter Latiaris on the Alban Mount, the presidency of which passed early to Rome but was of no political significance. The 'league of Ferentina', based on a shrine of Diana in the territory of Aricia, was from the sixth to the fourth century the political centre of all Latium, where the representatives of the independent *populi* deliberated on equal terms, elected federal officers, and decided on joint policy. These conditions, interrupted by the partial ascendancy of the Etruscan kings of Rome, were reaffirmed by the Cassian treaty (see CASSIUS 1) and continued during the troubled period of the fifth century till, in the fourth, Rome began to encroach seriously on her neighbours. Eventually, in 338, Rome incorporated the smaller States and reduced the larger to subject allies. The characteristics of the later Latin Name were fixed in this early period by the continuous tradition of social and political equality between the Latins. Even the establishment of federal colonies drawn from all the Latin peoples, and the sharing of booty won in federal wars, persisted unchanged after 338 (see IUS LATII, COMMERCIIUM). Henceforth the Latin Name consisted of the few remaining *populi Latini* and an ever-growing number of Latin colonies, of which the man-power was increasingly drawn from Rome. These colonies were autonomous States subject to Rome only in foreign policy, but dependent for their existence upon the Roman law establishing them. This autonomy remained unchallenged even when Rome in the second century assumed the supervision of all Italy, since her edicts were only advisory. The Latin Name provided Rome with numerous troops *e formula togatorum*, and garrisoned Italy at strategic points with loyal colonies. The Latins by their origin and special social position formed an intermediate category between Romans and the foreign *socii Italici* (see SOCII), and were commonly associated by Rome in many material privileges with Roman citizens. Though in 209 twelve colonies objected to the strain of continuous military service and were later punished (but not by diminution of civic rights), the Latins remained continuously loyal till the abuse by Roman commanders of their *imperium* at the expense of individual Latins led to a demand for the *ius provocatoris*, which, after the rebellion of Fregellae (125), may have been granted by the tribune Drusus in 122; for the Latins took no major part in the Social War, accepting the Roman citizenship by the *Lex Iulia*. After 89 B.C. Latium became a purely legal concept (see IUS LATII).

ANCIENT SOURCES. Livy and Dion. Hal. *Antiquities*, *passim*, are basic, but misleadingly retroject Roman supremacy to earliest period. Scattered references in Cato, Cicero, Gellius, Pliny *HN*, Varro, etc. Also Gaius, *Digest*.

aspects; E. T. Salmon, *Phoenix* 1953, 93 ff., 123 ff., A. Alldödi, *Early Rome and the Latins* (U.S.A. 1965), E. T. Salmon, *JRS* 1936, 47 ff., A. H. McDonald, *JRS* 1944, 11 ff., for second century, A. Rosenberg, *Hermes* 1919; A. N. Sherwin-White, *The Roman Citizenship* (1939), J. Gohlen, *Rom und Italien* (1939); E. T. Salinon, *Roman Colonization* (1969). (b) Empire: E. G. Hardy, *Six Roman Charters*, Hirschfeld, *Kl. Schr.* (1913) xxii. See also MUNICIPIUM A. N. S.-W.

LATINI IUNIANI. By a *Lex Iunia* (Norbana?) of either 17 B.C. or A.D. 19, a slave of a Roman citizen manumitted informally or in violation of certain rules of Augustus (see FREEDMEN) became not a Roman citizen but a *Latinus*, a status now wholly divorced from nationality (see IUS LATII, LATINI). There is no way of knowing how numerous the *Latini Iuniani* were, nor is it clear why the status was established in the first place. The *Lex Iunia* gave the benefit of full statutory sanction to informal manumissions, previously protected only by praetorian action, while at the same time lowering the status of a man so freed. His chief civil disability was that on his death his property reverted to his former master, and that is what preoccupied the legal writers on the subject. He could still acquire citizenship in one of several ways, for example, once he had a one-year-old legitimate child. Justinian abolished *Latinitas Iuniana* in 531.

For alternative views, see A. Steinwenter, *PW* xii. 1; A. M. Duff, *Freedmen in the Early Roman Empire* (reissue 1958), 75 ff., 210 ff. M. I. F.

LATINUS, eponymous hero of the Latini (q.v.). Hesiod (*Theog.* 1011-16) makes him the son of Circe and Odysseus and king of the Tyrrhenians. Timaeus first connects him with Aeneas, whose daughter Rhome Latinus married and had as sons Rhomus (in Roman tradition Remus) and Romulus, founders of Rome. Cato's version (probably also that of Naevius and Ennius) is that Latinus betrothes his daughter Lavinia to Aeneas; Turnus, to whom she was formerly promised, makes war with Latinus on Aeneas, Latinus is killed, and Aeneas becomes king of the Latins. In Livy's version (1. 2) Latinus is killed fighting with Aeneas against Turnus. Virgil (*Aen.* books 7-12) in the main follows Cato's version, but makes Latinus son of Faunus and the nymph Marica. Latinus, a weak and vacillating character, takes no part in the war and only emerges from his palace to propose concessions to Aeneas (book 11) and to arrange the single combat of Turnus and Aeneas (book 12).

C. B.

LATIUM, lying between the Apennines and the Tyrrhenian Sea in western Italy, originally was a small area about the Albanus Mons (q.v.). By 500 B.C., however, it stretched from the Tiber to the Circeian promontory (*Latium Vetus*). Subsequently Latium embraced Volscian, Auruncan, and Hernican territories, and by Strabo's time included Mons Massicus and Sinuessa (*Latium Adiectum*). Augustus amalgamated Latium with Campania, and after A.D. 292 the name Campania prevailed; consequently Latium is still called *Campania*. Eastern Latium (the Apennine slopes and Trerus valley) and Central Latium (an undulating plain embracing the Alban Hills and Pomptine Marshes) supported large herds; subterranean drainage channels, excavated apparently in pre-Roman times, aided flourishing agricultural operations. Western Latium contained extensive forests. Latium was well watered and possessed sulphur springs, abundant volcanic building-materials (tufas, travertine, basalt, pozzolana), and a road network (ultimately developed into Viae Latina, Appia, etc.). The earliest inhabitants, the prehistoric Aborigines, (= Ligurians? or Sicels? Ciaceri identifies the two) apparently did not speak Latin. In historical times Latium was peopled by Latini, traditionally a mixed race and presumably an amalgam of the prehistoric population and various

Bronze and Iron Age invaders: 'Southern Villanovans' (q.v.) (who probably introduced Latin into Latium), Sabelli, and apparently Picenes (= Illyrians). The Latini inhabited mutually independent settlements on knolls or mountain slopes, but from early times grouped themselves together for religious, and ultimately for political, purposes. There were several Latin federal sanctuaries (at Albanus Mons, Ardea, Aricia, Lavinium, and elsewhere) and therefore perhaps several Latin Leagues, although tradition is explicit about only one—that led by Alba Longa (q.v.). When Rome destroyed Alba (c. 600 B.C.) she allegedly succeeded her as leader of this league. However, when the Roman monarchy fell (508 B.C.) the Latini (led apparently by Tusculum, Aricia, Lanuvium, Cora, Tibur, Pometia, Ardea: Cato, *Orig.* fr. 58 P) threw off any predominance Rome possessed, but failed to subordinate her to themselves (see REGILLUS LACUS). In 493 B.C. Rome and the Latin League signed a defensive alliance (*foedus Cassianum*) against threatening Volsci and Aequi. For Rome's subsequent relations with the Latini see LATINI, IUS LATII.

Depopulation of Latium began c. 300 B.C., caused chiefly by the centripetal pull of Rome, various wars (Pyrrhic, Hannibalic, Civil), the growth of *latifundia*, and malaria (which, however, reached its full virulence much later). The Augustan poets mention, and exaggerate, the desolation of Gabii and other places; Pliny, significantly, records towns that had utterly disappeared. Other towns (e.g. Tibur, Praeneste, Antium) undoubtedly became fashionable resorts, and in imperial times Latium contained numerous opulent villas. In general, however, its towns failed to revive. Pasturage ousted agriculture (Pliny, *Ep.* 2. 17) and, after the Barbarian Invasions, Latium assumed that derelict appearance which it bore until recently.

E. T. S.

LAUDATIO FUNEBRIS, the funeral oration, originally part of the rites of the Roman patrician *gens*, developed into a public *laudatio*, pronounced by a magistrate, later over women as well as men, e.g. Catulus' mother. It retained its traditional character, linking praise of the deceased with glorification of his ancestors, covering public and (probably) private life, and describing outstanding events. The encomiastic treatment, when the *laudationes* were published, tended to falsify history (Livy 8. 40. 4; 27. 27. 13; Cic. *Brut.* 16. 62). In Roman biography—as in Roman portraiture—the funeral rites added emphasis, especially on the political side, to the Hellenistic technique from the later Peripatetic school which had been accepted in Rome (see BIOGRAPHY, ROMAN).

LAUREA, MARCUS TULLIUS, one of Cicero's freedmen, wrote an epigram on the hot springs which burst out at Cicero's villa soon after his death (Pliny, *HN* 31. 7-8).

Bachrens, *FPR* 316; Morel, *FPL* 80.

LAURENTUM, on the Tyrrhenian coast of Latium immediately below the Tiber mouth, where Aeneas found King Latinus reigning (qq.v.). Although separately

mentioned in the Latin War, it had dwindled to insignificance by imperial times, when its inhabitants formed one community with those of nearby Lavinium. Ruins still exist of the Younger Pliny's celebrated Laurentine villa (*Epp.* 2. 17).

B. Tilly, *Vergil's Latium* (1947).

E. T. S.

LAURIACUM, modern *Lorsch* near Enns on the Danube, was a Celtic and Roman settlement in Noricum. An earth and timber military station occupied from the first century A.D. was superseded under Marcus Aurelius by a legionary fortress occupied by the newly raised Legio II Italica. Lauriacum was destroyed in 405 by the Ostrogoths.

J. J. W.

LAURIUM, a hilly district in south Attica near Cape Sunium, was one of the largest mining areas in the Greek world, famed for production of silver from galena. The deposit was discovered probably in the early Iron Age. Exploitation was at first limited to surface operations with little or no burrowing. However, with impetus supplied by the tyrant Pisistratus and by the increasing demand for coined silver, more sophisticated techniques and a growing understanding of the basically simple geological formation led to the finding of rich beds of ore lying deep below the surface, particularly at Maronea c. 483 B.C. (Arist. *Ath. Pol.* 22. 7). The mines flourished in the fifth century until the latter part of the Peloponnesian War, and they did not revive fully until the second half of the fourth century; in the third they suffered under the low prices of silver, but were exploited ruthlessly in the second until the revolt of the slave workers in 103. A few tailings were reworked in the first century A.D., and the mines closed soon after. An attempt was made to reopen them in the fourth century. Throughout the district there are copious remains from the mining industry: buildings, shafts, cisterns, and washing tables. The mines were considered the property of the State and were rented out to private citizens by the *poletai* (q.v.). Fragments of those leases have been found in the Athenian Agora.

E. J. K.

LAVINIUM: modern *Pratica di Mare*, where Aeneas (q.v.) landed in Latium (q.v.), a town of the Latin League, whose federal sanctuary it became in the sixth century B.C.: thirteen large archaic altars survive *in situ*. The Romans revered Lavinium for its Trojan associations, its Venus temple common to all Latins, its cults of Vesta and Penates, and its loyalty in the Latin War. It dwindled to a village, however. In imperial times, if not in primitive (see Livy 1. 14), Lavinium apparently formed one community with Laurentum (q.v.), Laurolavinium, whose aristocrats were styled Laurentes Lavinates (Dessau, *ILS* 1371).

E. T. S.

LAW AND PROCEDURE, ROMAN. I. CIVIL LAW. The beginning and the end of the historical development of Roman law are marked by two legislative works, both

unique in universal legal history, though different in origin, nature, and structure—the XII Tables (q.v.) and Justinian's codification (see DIGESTA, TRIBONIANUS, CODEX, INSTITUTIONES). In the intervening thousand years the Romans produced no codification; the XII Tables were never repealed and remained formally effective, though in a considerable part obsolete, down to the time of Justinian. Though probably no more than a publication of the most important rules of the existing customary law, they were for the Romans, and still are for us, the starting-point of the history of Roman law. Four periods may be distinguished in that history: (a) the period of the primitive law, ending with the third century B.C.; (b) the formative period of the last two centuries B.C.; (c) the classical period of the first two and a half centuries A.D., or, more narrowly, of the century from c. 130 to c. 230 (see JULIANUS 2, EDICTUM, JURISPRUDENCE); (d) the post-classical period, in which the law, particularly in the Western Empire, is 'vulgarized', but which culminates in the East in a classical revival and the codification of Justinian. The great bulk of the sources for our knowledge of the private law comes from the extracts or the writings of the jurists of the classical period (in the narrower sense) preserved, and to an uncertain extent altered, in Justinian's *Digesta* (q.v.).

2. The most characteristic mark of the primitive law was its rigorous formalism: both in legal transactions and in litigation solemn oral forms were required; the will of the parties was without effect unless clothed in these forms. In this respect Roman law resembles other primitive systems. It differs from them in the simplicity of the forms, and in its 'economy' in their use: a very small number of forms serves a wide variety of purposes (see MANCIPATIO, EMANCIPATIO, ADOPTIO, MANUS, NEXUM, STIPULATIO). And like other early systems it was exclusive: the small rustic community excluded foreigners from participation in its own *ius Quiritium* (see IUS GENTIUM). The Roman family preserved its exclusive organization and its central place (see PATRIA POTESTAS).

3. In the last two or three centuries B.C., however, the expansion of Rome's commerce and Empire over the Mediterranean world made it impossible to maintain the formalism and exclusiveness of the old *ius civile* (q.v.). New, informal institutions appear, resting on the intentions of the parties and not on the observance of external forms, notably the 'consensual' contracts (see CONTRACT, ROMAN LAW OF), which provide for the principal commercial transactions. These new institutions were open to foreigners and citizens alike (see IUS GENTIUM), and so also now was the central contract of *stipulatio* (q.v.). Special courts of *recuperatores* (q.v.) had early been set up for disputes with non-citizens, and c. 242 B.C. a special *praetor* (q.v.) *peregrinus* was created with jurisdiction over such litigation. In the same period the old formalistic procedure for the trial of suits between citizens (*legis actiones*) gave way to the informal and flexible formulary procedure (see below, II). All this was accompanied and made possible by a first flowering of legal thought and writing, stimulated by contact with Greek culture but essentially Roman in character (see JURISPRUDENCE). Owing to the sparsity of direct contemporary evidence the details of much of this development are obscure, but it is plain that in this period the foundations were laid both of the flexible system which was capable of satisfying the needs of a great Empire, and of the legal literature which has influenced legal development ever since.

4. A factor which contributed vitally to the release of the law from its early rigidity was the development of the *ius honorarium* (see EDICTUM). The introduction of the formulary procedure did more than simplify procedure. It gave the controlling magistrate (and especially the *praetor* (q.v.) *urbanus*) the power, in effect though not in

form, to reform and develop the law. Under the system of *legis actiones* a claim could be instituted only in one of a limited number of ritual modes recognized by statute. The praetor's function was to administer but not to alter this system. With the introduction of the formulary procedure, however, he acquired the power to grant new remedies (by way of action, defence, etc.) and thereby to 'support, supplement, and correct the civil law' (*Dig.* 1. 1. 7. 1). He supported it by giving more effective remedies to enforce existing rights (see, e.g., INIURIA); he supplemented and corrected it by enforcing claims which the civil law did not recognize and barring those which it did. This supplementing and correcting power produced a dualism between the old *ius civile* and the newer *ius honorarium* in some fields, especially in the law of inheritance (q.v.) and of ownership (see DOMINIUM).

5. Legislation (see COMITIA) played only a minor part in the development of the private law during the Republic. Such statutes as there were dealt usually with details of existing institutions. The *Lex Aquilia* (see DAMNUM INIURIA DATUM) is a notable exception. *Senatus consultum* (q.v.) likewise played little part in the private law. It was not recognized as having independent legal validity until perhaps the second century A.D. (*Gai. Inst.* 1. 4), and it was then largely an expression of the imperial will.

6. *Senatus consultum* can indeed be seen as a transitional legislative form between Republic and Empire, which cloaked the growing fact of the Emperor's power. The *lex* and *plebiscitum* (qq.v.) of the Republic became rare after the time of Augustus (see LEGES IULIAE) and disappeared altogether in the course of the first century A.D. By the middle of the second century it was accepted that pronouncements of the Emperor had the force of law (*Gai. Inst.* 1. 5). These pronouncements might take various forms, either openly legislative or ostensibly judicial (see CONSTITUTIONES), but after the codification of the praetor's edict by Julian (see EDICTUM, JULIANUS 2) had brought to an end the innovative power of the *ius honorarium*, the Emperor emerged as the sole direct legislative force. Indirectly the jurists continued to play a large part—in one sense indeed larger than before, since they were increasingly to be found among the leading officials of the Emperor (see JURISPRUDENCE). It is to the activity of the jurists in elaborating and co-ordinating in a vast legal literature the developments of the preceding centuries that the period of the Principate, and especially the later Principate, owes its description as 'classical'.

7. A factor which tended to break the pattern of the earlier law was the development of the new procedure by *cognitio extra ordinem* (see below, II), which at first existed side by side with the formulary procedure but eventually, by the early fourth century, entirely superseded it. Out of this came institutions, especially *fideicommissum* (q.v.) which cut across the old line between *ius civile* and *ius honorarium*.

8. New problems arose from the conquest of provinces to which the Romans conceded from the first the right of organizing their legal life according to their own laws. Only persons upon whom Roman citizenship was conferred (individually, regionally, or by groups) were obliged to observe in their legal relations the Roman *ius civile*. Differences between the various legal systems gave rise to misunderstandings which were submitted to the decision of the Emperor, who decided not infrequently in favour of the provincial law. The general bestowal of Roman citizenship by Caracalla (A.D. 212) (see CITIZENSHIP, ROMAN) simplified the legal situation, but unavoidably some conceptions of local law penetrated the law of the Empire. This penetration of the imperial law by local law was to be an important factor in the post-classical period.

9. The end of the classical period is marked by the disappearance of the independent jurist. With the shadowy exceptions of Hermogenianus (q.v.) and Arcadius Charisius, both probably of the early third century, Iheronimus (q.v.) Modestinus is the last of the named jurists. The next three centuries are a period of almost complete anonymity and absence of original legal writing outside the imperial chancery—and after the time of Constantine the standard of legal thought even inside the chancery is low. Apart from wider reasons for the decline of Rome in this period, the disappearance of the old type of jurist was foreshadowed in the careers of the great jurists of the Severan age. Men such as Ulpianus (q.v. 1), Papinianus (q.v.), and Paulus (q.v. 1) influenced the law both from inside the chancery and from outside it, by their writings. Their successors were confined to the chancery. The *responsa* of the jurists were now wholly replaced by the rescripts of the Emperor (see CONSTITUTIONES).

10. Modern opinion distinguishes three stages within the post-classical period. The first, until the reign of Constantine, is a time in which the classical law was still known (the rescripts of Diocletian's chancery are notable for their insistence on the old distinctions and the old rules—though the need for the insistence is significant), and in which the classical writings were probably subjected, especially c. 300, to editing and abridgement. It is probable that many of the interpolations (see DIGESTA) in the excerpts of the classical books contained in Justinian's *Digest*, which until recently were attributed to Justinian's compilers, or at least to their immediate predecessors, were in fact made in this period. Certainly the small amount of literature which survives from this time outside the compilation of Justinian consists of epitomes or anthologies (see ULPIANUS (1) for the *Epitome Ulpiani*, and PAULUS (1) for *Pauli Sententiae*), or collective works (*Fragmenta Vaticana*).

11. The period after Constantine is now seen as the period of the Vulgar Law. No doubt even in the classical period the Roman law applied among Roman citizens in the provinces often failed to live up to the standard of the metropolitan jurisprudence. Now that, on the one hand, everyone was a Roman citizen, and on the other, the standards of legal learning even at the centre had fallen, this vulgar law tended to swamp the imperial law. The careful distinctions and the elaborate constructions of the classical jurists were blurred and misunderstood. The great works of the classical period were too complex for current use (but the *Institutes* of Gaius (q.v. 2) now came into their own as an elementary work, though even they were eventually epitomized). In the western part of the Empire this vulgar law was continued in the compilations (*Lex Romana Visigothorum*, *Lex Romana Burgundionum*) made by the successors of the Roman emperors for their Roman subjects, and in this way a shadowy form of Roman law survived. In the East the tide was turned back by a classical revival in the later fifth century. This classical revival, which is a matter of inference more than of observation, seems to have been centred on Berytus, where there had been a law school ever since the middle of the third century, and to a lesser extent on Constantinople, where a law school was in being in the early fifth century. It was evidently in the law schools that the old literature was studied once again and a knowledge of the old law recovered. It is this revival which is now seen as making possible the codification of Justinian (see DIGESTA, TRIBONIANUS, CODEX, INSTITUTIONES). For this codification now appears not as the terminus of a gradual development from the classical law, but rather as a reaction against the vulgarization of the intervening period. Against this background the debate over the extent to which the law of Justinian was

influenced by the ideas and practices of the Greek East takes on a new appearance. Some individual institutions of Greek origin there certainly are, and some of the old institutions, especially those of a formal character, have disappeared, but the purpose of the whole compilation is a revival of the old law. In some fields, again, the influence of Christianity can be seen—in the law of marriage, for example, or in the treatment of slaves. But here it is perhaps the smallness of the influence which is notable. The law remains markedly Roman.

For particulars on sources see CODEX, CONSTITUTIONES, DIGESTA, EDICTUM, INSTITUTIONES, IUS CIVILE, IUS GENTIUM, JURISPRUDENCE, TRIBONIANUS, TWELVE TABLES; for the private law: COMMUNIO, CONTRACT, DAMNUM INIURIA DATUM, EMPHYTEUSIS, FIDEICOMMISSUM, GUARDIANSHIP, INHERITANCE, INIURIA, MANCEPS, MANCIPATIO, MARRIAGE, NEXUM, POSSESSIO, SECURITY, SERVITUDES, SLAVERY, STIPULATIO, VINDICATIO. See also below, II. 'Civil procedure'.

II. CIVIL PROCEDURE. The Roman civil trial from earliest times showed a characteristic feature: the division into two stages. The first took place before a magistrate, *in iure* (ius signifies here the place of magisterial jurisdiction), and its purpose was to define and formulate the issue (i.e. the limits of the dispute between the parties). This stage culminated in *litis contestatio* (joinder of issue), an acceptance by the parties, under the magistrate's supervision, of the issue as formulated and of the *iudex* authorized by the magistrate. It was the *iudex* who presided at the second stage (*apud iudicem*), at which the case was heard and argued. He was a private person empowered by the magistrate's order to give judgment (*iussu iudicandi*) (see IUDEX). This bipartite division of the trial (whose origin is much disputed) was an ingenious combination of official jurisdiction and private arbitration, from which it differs in that the *iudex* was obliged to accept the commission conferred upon him by the magistrate and the litigants, and was bound by their agreed definition of the matter in dispute. Only in the first stage, *in iure*, were certain formalities observed; the second stage, *apud iudicem*, was conducted without any prescribed form. Two systems are to be distinguished in the proceedings before the magistrate: *legis actiones*, the earlier one, and *formulae*.

2. *Legis actio* was a solemn procedure of a rigidly formal character, wherein the plaintiff (*is qui agit, actor*) and the defendant (*is cum quo agitur, reus*) had to assert their rights in oral forms prescribed by law or custom. This system existed in the time of the XII Tables, as has been confirmed by the new fragments of Gaius (q.v. 2).

There were five types of *legis actiones* (Gai. *Inst.* 4. 11 ff). The most usual, applicable to claims of ownership (see *VINDICATIO*) and to claims originating in obligations, was the *legis actio sacramento*, involving in historical times a formal wager (*sacramentum*, q.v.) between the parties, who both deposited a fixed sum of money (also called *sacramentum*). The winner (the party whose assertion was declared right by the judge) received his *sacramentum* back, while the loser's *sacramentum* was forfeited to the State. The other types were (1) *per iudicis postulationem* for claims based on *stipulatio* (q.v.) or for disputes about the division of property belonging to several persons; (2) *per conductionem* (of later date) for recovery of *certa pecunia* or *certa res* in particular cases. These were of greater simplicity and did not require a *sacramentum*. The last two *legis actiones* were methods of execution: the one (*per manus iniectionem*) against the person of the condemned debtor, the other (*per pignoris capionem*) against his property.

3. *Legis actiones* were supplanted by the formulary system (Gai. *Inst.* 4. 30 ff.), in which the matter in dispute was defined in a written document (*formula*, *concepta verba*) in place of the oral forms of the *legis actio*. Moreover, the number of *formulae* was in principle unlimited and depended on the discretion of the praetor in the formulation and administration of his *edictum* (q.v.). Whereas each *legis actio* was appropriate to a number of causes of action (see above), the principle of the formulary system was that each cause of action had its appropriate *formula*. Thus in the contract of sale (*emptio venditio*: see *CONTRACT, LAW OF*) the buyer had the *actio empti* and the seller the *actio venditi*. But while the *formula* varied from action to action, its structure was based on some permanent essential parts: the *intentio* (concise formulation of the plaintiff's claim) and the *condemnatio*, by which the judge was authorized to condemn the defendant if he found after hearing the evidence and the arguments that the plaintiff's case was good, otherwise to discharge him. To suit the complexities of each case the *formula* might be extended by additional clauses, e.g. by a *demonstratio*, which served to determine more precisely the matter at issue when the *intentio* was indefinite (*incerta*); or by an *exceptio*, a clause on behalf of the defendant excluding his condemnation, if he should prove a fact recognized by the praetor as making such condemnation unjust (e.g. that the plaintiff had been guilty of fraud: *exceptio doli*; or that the plaintiff had agreed not to sue the defendant: *exceptio pacti*). Model *formulae* for all recognized actions, defences, etc., were published with the edict. The principle that each cause of action had its appropriate *formula*, coupled with the praetor's power to create new *formulae* either generally in the edict or on the facts of a particular case, lay at the root of the *ius honorarium* (see above, I. 4).

4. The origins of the formulary system are obscure. Gaius (4. 30) says only that the *legis actiones* were replaced by the *formula* by a *lex Aebutia* (probably after 150 B.C.) and by two *leges Iuliae* (17/16 B.C.), but the part played by each of these pieces of legislation is conjectural. It is probable that the *formula* originated well before the *lex Aebutia* in proceedings between peregrines (to whom the *legis actiones* were not open) under the jurisdiction of the praetor (q.v.) *peregrinus* (first created 242 B.C.) or in the provinces. In either case the proceedings would depend entirely on the *imperium* (q.v.) of the magistrate authorizing them and would therefore be free of the restrictions imposed by statute on suits between citizens by *legis actio*. It is also likely that the *formula* was admitted before the *lex Aebutia* in suits between citizens arising out of the newer, flexible institutions open to citizens and peregrines alike (see above, I. 3). If this is so, the *lex Aebutia* would for the first time have allowed the formu-

lary procedure as an alternative to the *legis actio* in cases involving the old *ius civile*, and the *leges Iuliae* would have abolished the *legis actiones* altogether, except for proceedings before the centumviral court (see *CENTUMVIRI*).

5. The formulary system was the ordinary procedure of the classical period. But from the time of Augustus there developed beside it various other forms of procedure in particular contexts. These other forms are commonly called *cognitio extra ordinem* (sc. *iudiciorum privatorum*) or *extraordinaria*. Their common characteristic is that the whole proceeding takes place before an official appointed by a magistrate or by the Emperor (*iudex datus, pedaneus*). There is no division of proceedings *in iure* and *apud iudicem*, and no private *iudex*. This procedure is used in Rome for cases in certain fields singled out by the Emperor, such as *fideicommissa* (q.v.) and later the claiming of *honoraria* for services performed by members of the upper classes (see *CONTRACT, ROMAN LAW OF; ADVOCATUS*), and more widely in the provinces. The procedure in appeals, which from the beginning of the Empire were probably admissible even from decisions under the formulary procedure, was also by *cognitio*. The formulary procedure finally (see *APPELLATIO*) disappeared in the early fourth century. The *cognitio* procedure of the Late Empire was more akin to the modern process than to the voluntary submission to a non-professional judge of the classical and earlier law. It is appropriately called the bureaucratic procedure.

6. Roman juridical language had two expressions for a civil lawsuit: *actio* and *iudicium*. Both terms originally had separate meanings, which were enlarged by the development of the procedure, so that from early times they overlapped, particularly when used to indicate a special kind of action by its technical name (e.g. *de dolo mandati, tutelae, communi dividundo, in factum* and so on. *Actio* probably signified originally the activity of the plaintiff who initiated the trial, but subsequently came to denote the whole proceedings, and especially their first stage *in iure*. But *actio* had also a material sense. A famous definition (*Dig.* 44. 7. 51) qualifies *actio* as '*ius quod sibi debetur, iudicio persequendi*', where the difference between the material *actio* and the formal *iudicium* is evident. *Iudicium* signifies generally the second stage of the classical lawsuit, before the *iudex*, but it may indicate either the entire trial or only its final act, the judgement; frequently it refers to the written *formula*. In the language of Justinian's compilers *iudicium* acquired a very wide application and was often interpolated in the place of classical mentions of the first stage, *in iure*, after the bipartition had been abolished.

7. The classical trial began with an extra-judicial private act, *in ius vocatio*, by which the plaintiff personally summoned the defendant to follow him before the magistrate. The XII Tables contained detailed provisions for cases in which the defendant disobeyed the summons on grounds of physical disability. It is noteworthy that they began merely by stating the absolute duty of the party summoned to go with the plaintiff immediately: '*si in ius uocat, ito.*' The only manner of avoiding an immediate appearance before the magistrate (which could be procured by force in case of resistance) was for the summoned party to give a guarantor (*vindex*). In the formulary system summons remained a more private act, the plaintiff being obliged to announce to the defendant the claim and the form which he wished to apply against him. In the extraordinary procedure the summons was issued in writing with the assistance of an official. Finally the summoning was performed exclusively by a judicial functionary without any co-operation of the plaintiff.

8. The magistrate began by trying some preliminary questions such as the competence of the court, the

personal capacity of the litigants, and their legitimation to be plaintiff or defendant in the intended lawsuit. A negative result of this examination made further litigation superfluous; *denegatio actionis* by the magistrate put an end to the trial. Other cases where the litigation was finished *in iure* were: acknowledgement of the plaintiff's claim by the defendant (*confessio*) or, in certain cases, the swearing of an oath by one or other party (see *IUSIURANDUM*). Normally, however, the stage *in iure* was devoted to defining the issue (see above). In the formulary process there might often be long discussions about the composition of the *formula*, especially when the case and the appropriate form were not provided in the praetor's edict and the plaintiff tried to obtain the grant of a new form adapted to the particularities of the case (*actio in factum*). *Litis contestatio* required the co-operation of both the parties, but neither of them could frustrate the achievement of this act by repeated refusal of the other's proposals, the plaintiff being exposed to *denegatio actionis*, the defendant to an executive measure applied by the magistrate on behalf of the plaintiff (*missio in possessionem*).

9. The *litis contestatio*, as the name declares, was performed in the presence of witnesses. In the developed formulary system it probably referred to the witnessed document embodying the *formula*. After its completion another trial on the same claim was debarred; and the judge's sentence was determined by the condition of the case at the moment of the *litis contestatio*, especially in regard to the fruits or the alienation of the object at issue and the like.

10. The second stage of the trial was in the control of the private *iudex*. It was occupied by the pleadings of the parties and their advocates (see *ADVOCATUS*), and the submission of evidence, the assessment of which depended wholly on the discretion of the judge. If the defendant lost the case, he was obliged to carry out his obligations under the judgment within a fixed term (thirty days according to the XII Tables, various in later development; extended to a maximum of four months by Justinian). But, although until the end of the Republic there was no appeal (see above), a sentence could be annulled by an extraordinary remedy such as *restitutio in integrum*. If the condemned debtor did not carry out the terms of the sentence the creditor could proceed to a forcible execution of his rights. Personal execution (*manus iniectio*) was the rule; real execution on objects forming part of the property of the debtor (*pignoris capio*) was admitted only for distrainers of a sacral or public character. Real execution eventually became prevalent, but not exclusive. The formulary procedure comprised a special *actio iudicati* for execution of the sentence, wherein a contumacious debtor risked a condemnation in double value of the object in dispute and an immediate authorization of the creditor to seize his property. The *cognitio extraordinaria* softened the rigid earlier forms of execution by restricting it to single objects instead of the whole property.

11. A strange procedural institution, partly of administrative character, was provided in classical Roman law by the *interdicta*. These were orders or prohibitions issued by the magistrate without long investigations and addressed as a rule to a particular person. Their object was to give immediate protection to menaced or violated interests of the plaintiff. If the defendant ignored the interdict, or disputed the plaintiff's right to it, a procedural wager enabled the matter to be litigated by an ordinary action. A variety of private interests were protected in this way, but the most important were *possessio* (q.v.) and the praetorian rights of inheritance created by grant of *bonorum possessio* (see *INHERITANCE, LAW OF*). *Interdicta* also protected rights of a public character,

such as public rights of way. After the disappearance of the formulary procedure the distinction between *interdictum* and *actio* was effaced.

See *ADVOCATUS*, *APPELLATIO*, *CENTUMVIRI*, *FDICTUM*, *IUDEX*, *IURIDICUS*, *IUSIURANDUM*, *IUSTITIUM*, *RECUPERATIONES*, *SACRAMENTUM*, *TESTIMONIUM*, *VINDICATIO*.

III. CRIMINAL LAW AND PROCEDURE. In the evolution of Roman criminal law we can distinguish three phases governed by different fundamental ideas not unknown in criminal law of other ancient nations. The older phase is characterized by the principle of private revenge; then followed the period of composition between offended and offender, first voluntary and sporadic, later obligatory. But even in this phase the beginnings of a new system can be observed: intervention of the State in punishing some crimes, especially those directed against the structure or existence of the community (a characteristic feature of the last phase). The State now takes in its hands the repression of offences, not only those which menace the public order or interest directly, but also those affecting private property or interests. The separate systems cannot be distinguished by exact dates, as none of them was completely replaced by the next one, but generally speaking the first phase falls in the Regal period, the XII Tables represent a combination of the first two systems, while in the advanced Republic the intervention of the State, hitherto exceptional, becomes more and more common. Under the Principate it gains dominance, and under the Late Empire and Justinian it becomes exclusive, having absorbed nearly the whole field of private criminal law. A survival of the idea of vengeance is found in the *noxae deditio*, the surrender of the wrongdoer (slave or child under *patria potestas*) to the person wronged (see *PATRIA POTESTAS*).

2. The Romans did not create an organic body of statutes relating to criminal law. The XII Tables are, as the fragmentary remains of Tables VIII and IX show, a mosaic of various penal provisions but not a code. They were restricted to such criminal matters as interested a primitive peasant community, and therefore could not suffice for the State in its further development. The copious legislation of the Republic did not solve the problem, as these *leges* dealt only with single crimes, and it is noticeable that some offences were even treated by several *leges* voted within a relatively short period of time, e.g. the *crimen repetundarum* (see *REPETUNDARUM*) or *ambitus* (q.v.). The various *Leges Corneliae* (of Sulla) and *Juliae* (of Caesar and Augustus; it is not always certain which of them was the author) with their different courts and proceedings for particular crimes were as far from a systematic treatment or a coherent code as the later legislation of the Empire, which, though creative in particular details, made no attempt to codify. Extensive interpretation of earlier statutes to cover new facts (wherein the Senate co-operated as long as it remained active), or modification of penalties in the direction of greater or lesser severity, constitutes all the legislative activity of these times in substantive criminal law. The procedure *extra ordinem*, it is true, caused the introduction of new ideas into the general doctrines of penal law; and imperial constitutions applied some novel conceptions; but all these, being sporadic and exceptional, did not give an impulse to systematic and comprehensive elaboration.

3. The jurists of the second century A.D.—the best

period of classical jurisprudence—contributed to the development of criminal law far less than to that of civil law. A compilation analogous to the *Edictum* (q.v.) *perpetuum* in civil law would certainly have roused their interest in criminal matters; and it is noticeable how fertile was their contribution to doctrines of private delicts, with which the praetorian edict dealt (cf. the excellent elaboration of *iniuria*, Dig. 47. 10), in comparison with their modest part in public criminal law. The effect of the interpretative work of all these more or less authoritative elements (imperial rescripts and edicts, *senatus consulta*, practice of *cognitio extra ordinem*, jurisprudence) was that offences quite different from those which were described and made punishable in Republican statutes were subjected to the statutory penalties. Thus (1) Sulla's *Lex Cornelia testamentaria* (*nummaria*, called also *de falsis*), which originally dealt with falsification of wills and of coins, was extended not only to the forgery of documents and the assumption of false names, titles, or official rank, but even to corruption in litigation, as when a juror, accuser, witness, or advocate was bribed, in which case both giver and receiver were punishable. Even a juror who *constituitur principum neglectus* was punished according to this statute. (2) The penalties of the *Lex Cornelia* against murderers and poisoners were extended in later times to magistrates, jurymen, and witnesses who contributed to an unjust capital sentence. (3) The *Lex Iulia de ambitu* was applied to cases of pressure exercised on a jurymen by the accuser or the accused, though the original field of the statute was electoral corruption.

4. Under the Late Empire criminal legislation is directed more to penalties than to the doctrinal treatment of offences. The punishableness of some delicts varied under the influence of political or religious points of view; the creation of new categories of crimes in this long period is restricted to abduction and offences against the Christian religion after its recognition by the State. The profession of Christianity had at one time been prosecuted as *crimen maiestatis* (see MAIESTAS). Justinian's legislative compilations show the first endeavour to collect the scattered provisions of public and private criminal law into a systematic whole. The *Digest*, books 47–9, and the *Code*, book 9, give a well-arranged design of criminal law, procedure, and penalties. The compilers, of course, found some help in works of the latest classical jurists, who in just appreciation of the difficulties created by this fluctuating and uncertain state of criminal legislation dealt with these matters in monographs: *de iudiciis publicis* (Marcianus, Macer, Paulus), *de poenis* (Paulus, Saturninus, Modestinus), *de cognitionibus* (Callistratus). But all these and similar works, though doubtless meritorious and useful, aimed rather at collecting material than at creative criticism or presentation of new ideas. Even the terminology distinguishing different categories of offences does not show that stability and precision which is so excellent a feature of Roman legal language. The terms most used are *crimen*, *delictum*, *maleficium*; but it can hardly be affirmed that these expressions had a particular exclusive sense, though generally *crimen* indicates more serious offences directed against the State or public order, whilst *delictum* is rather used for delicts against private property or personal integrity and of no great harmfulness. The meaning of *maleficium* as a general term is even less technical, especially as it was used for designating sorcery and magic arts. All endeavours to bring order into classical texts by allotting to these terms an exclusive technical sense and removing all inconvenient texts as interpolated break down because of the indiscriminate use of these terms.

5. For the distinction between public and private offences we likewise lack any precise definition or state-

ment of distinguishing marks; and yet it was of fundamental importance for Roman criminal law. This distinction rested upon a practical rather than a doctrinal differentiation of offended interests, and found its visible consequences in the fields of procedure and penalties, which differed greatly in the two spheres. The Roman jurists dealt more with the distinction between *iudicia publica* and private *actiones poenales* than with that between the interests violated as public or private, and the post-classical and Justinian classification into *delicta privata*, *crimina extraordinaria*, and *iudicia publica* (Rubr. Dig. 47. 1; 47. 11; 48. 1) was also made from a procedural point of view.

6. The private delicts form a group apart: the wrongdoer is exposed to an action under the ordinary civil procedure (see above, 11) by the person wronged, the effect of which is that he must pay a pecuniary penalty to the plaintiff (to be distinguished from another *actio* by which the restitution of the *res* or compensation is claimed—*rei persecutio*). The State as such did not show any interest in the prosecution of these offences, but the proceedings had a punitive character. By contrast with other civil proceedings (i.e. for *rei persecutio*) they did not lie against the heir if the wrongdoer died before he had been sued, and each of several wrongdoers was liable for the whole penalty. The principal forms were theft (*furtum*, q.v.); robbery (*rapina*, theft combined with violence); damage to property (see DAMNUM INIURIA DATUM); assault, and in general all affronts to the plaintiff's dignity and personality (*iniuria*, q.v.). The praetor also made other wrongs actionable, such as threats (*metus*), deceit (*dolus*), malicious corruption of other people's slaves, and the like. Praetorian law also introduced a category of actions for misdemeanours which affected public interests, e.g. damage to the *album* (q.v.) of magistrates, violation of sepulchres, and pouring liquids or throwing things out into the streets. In such cases anyone, *quivis ex populo* (hence the name *actiones populares*), could be plaintiff and claim the penalty. Proceedings for private delicts were in later times greatly restricted in favour of the criminal *cognitio extra ordinem* (see below).

7. The special domain of criminal law is, however, the second group of crimes prosecuted by public organs in *iudicia publica*. The oldest law knew the intervention of the State, as avenger of offences against its security or against public order, only in exceptional cases such as treason (*perduellio*, q.v.), desertion to the enemy, or special forms of murder (*parricidium*, q.v.). For the evolution of this group the series of criminal *leges* of the last century of the Republic (*Corneliae*, *Iuliae*, see above) were of the greatest importance. They instituted special criminal courts for particular crimes, extending in large measure the competence of the State to the prosecution and punishment of criminal acts. A survey of the various kinds of crimes allotted to the *quaestiones perpetuae* shows that they comprehended not only offences against the State, its security and organization, or public order in the widest sense of the word, but also the more serious offences against life, personal integrity, private interests (falsification of wills and documents, serious injuries), and morality (adultery). (For the procedure before these courts see *QUAESTIO*.)

8. However, even with the help of the Senate, imperial constitutions, and the jurists, this legislation covered only part of the offences needing repression. Furthermore, the *quaestiones* operated only at Rome and tried Roman citizens only (not women or slaves or *peregrini*). Augustus introduced juries into some provinces (see CYRENE, EDICTS OF), but they had no jurisdiction over Roman citizens. These and other deficiencies were made good by a new kind of procedure called *extra ordinem*, as not being subordinated to *ordo iudiciorum*.

The trials in these *iudicia publica extra ordinem* were always conducted by public officials. Jurisdiction was exercised—apart from political offences and senatorial matters reserved for the Senate—chiefly by the Emperor and the prefects, in the provinces by *praesides* and *procuratores* as his delegates. The sphere of *cognitio extra ordinem* became, thanks to the Emperor's policy, more and more extensive and superseded the *quaestiones*, which are not mentioned after Alexander Severus. On the strength of new legislative provisions new forms of offences arose (called later *crimina extraordinaria*), e.g. fraud (*stellionatus*), participation in illicit corporations, displacing of boundary stones, special types of theft (*fures balnearii, nocturni*). Whilst in *quaestiones* only the penalty laid down by the statute could be pronounced, the imperial judges had discretion in grading the penalty according to their appreciation of all the facts of the case. From the earliest times the intention of the wrongdoer was taken into consideration; even the legendary law of Numa on parricide (see *PARRICIDIUM*) required that the murderer had acted *sciens dolo*; the analogous expression in Republican laws was *sciens dolo malo*.

9. More adequate differentiation between different states of mind was developed in the practice of the *cognitio extra ordinem*, influenced also by imperial constitutions. In appreciating the atrocity of the act and depravity of its author the judge considered the intensity and persistence of the delinquent's will (*dolus*), the question whether the act had been committed with premeditation or on sudden impulse, whether it had been provoked by a moral offence (e.g. murder of an adulterous wife when caught in the act) or was due to drunkenness ('per uinum'). A late classical jurist, Claudius Saturninus, known only by a treatise on penalties, distinguished seven points to be taken into consideration in determining the punishment: reason, person, place, time, quality, quantity, and effect (*Dig.* 48. 19. 16). Judicial liberty, however, gave occasion for arbitrariness: the third century, with the decline of imperial authority, brought anarchy into criminal jurisdiction. Under the Late Empire fixed penalties—now more severe than formerly—were restored, the discretion of the judge in the infliction of punishment having been abolished. But in contrast to the trial before *quaestiones*, appeal was admitted *extra ordinem*. A distinction was made between *honestiores* (q.v.) and *humiliores*, the latter being punished more severely than distinguished persons. There is no further trace of the old Republican principle of equality of all citizens in the eyes of the criminal law which had been expressed in the rule 'privilegia ne inroganto' ascribed by Cicero to the XII Tables.

10. The magistrates invested with *imperium*, acting personally or by delegates, were in general the organs of criminal justice. From early times their power of punishment was restricted by the rule that a sentence *de capite civis* could be passed only by decision of the people assembled in *comitia* (for an alternative view see *IUDICIA POPULI*). The magistrate could, however, apply by informal procedure coercive measures (*coercitio* in a narrower sense) against disobedient or recalcitrant citizens, e.g. prison, castigation, and fines (*multae*); foreigners, slaves, and women were also subjected to *coercitio*. The oldest stage of criminal proceedings before the magistrate was governed by the inquisitorial principle: the magistrate initiated the prosecution at his discretion; he controlled the investigation and production of evidence, he passed the sentence. During the struggle of the orders the jurisdiction of *tribunus plebis* in criminal matters was established especially for political offences and abuses committed by patrician magistrates. Sulla's reform, however, aimed at superseding the jurisdiction of *comitia* and plebeian tribunes and completed the new system of

quaestiones. This procedure was a compromise between the former criminal proceedings (the jury now representing the popular element) and principles of civil procedure, as the accused had a voice in the choice of jurymen. But the criminal trial preserved its own forms, distinct from the bilateral, contractual character of civil proceedings. The *quaestiones* brought about a restriction of the magistrates' prerogatives, because the prosecution depended now upon the necessary intervention of an accuser. This accusatory system was, however, abolished in the trials *extra ordinem*, where the imperial jurisdictional official regained the full initiative in prosecuting criminal acts and conducted the trial from beginning to end. Accusation was sometimes admitted and even, when successful, rewarded, but the accuser was simply an informer without any substantial procedural rights.

11. The Roman penal system was peculiar in its distinction between public and private penalties, reflecting the division into public and private offences. The private penalty was originally a substitute for private vengeance and retaliation (*talio* = infliction on the delinquent of the same injury as that done by him: see *INIURIA*). Pecuniary composition between the parties (*pacisci*), always permissible, had become compulsory. The private penalty consisted in payment of a sum of money to the person wronged, and is to be distinguished from *multa*, a fine inflicted as a coercive measure by a magistrate and paid to the State. The public penalty originated, as in other primitive systems, in the idea of public revenge, or religious expiation for crimes against the community, or religious conceptions ('sacer esto'), and could not be other than the death of the delinquent. The death-penalty (*poena capitis*), known already in the XII Tables for several crimes, was inflicted in different ways, varying with the times: decapitation (with *gladius*, applied to military persons), gallows (crucifixion, *furca*), burning (in case of arson; application of the *taho*-principle), drowning in a sack (*culleus*), precipitation *de saxo Tarpeo*, and the like. The most severe form, *bestiis obicere*, was practised under the Empire till Justinian. In the republican times the execution (and even the sentence) could be avoided by voluntary exile of the wrongdoer (see *EXILIUM*). Banishment was later applied as an independent penalty in various forms: *relegatio* (q.v.), *deportatio*, and condemnation to heavy work in mines (*metalla*) or public works (*opus publicum*) or to the gladiatorial training-schools (*in ludos*). These penalties were normally combined with loss of citizenship; *damnatio in metalla* (considered as *morti proxima*), with loss of liberty and flagellation; an accessory penalty was the total or partial confiscation of property. It is noticeable that the Romans applied imprisonment only as a coercive or preventive measure, not as a penalty (see *PRISON*): the Roman conception of penalty laid more stress upon its vindictive and deterrent nature than on correction of the delinquent.

LAW, INTERNATIONAL. Under this heading law must be taken in its widest sense to include customary, religious, and moral law. Some approach to statutory law can be seen in the Amphictionic laws, the decrees of the Congress of Plataea of 479 B.C., and the King's Peace, not to mention that the relations of States to each other were regulated by treaties. Nevertheless, international law remained essentially customary and, in contrast to the laws of individual States, which also had once been customary, was never officially recorded or codified. The importance of religion is seen in the Amphictionic oath, the *fetial* rites, and the practice of ratifying treaties by oath.

2. Public international law was relatively well developed by Homeric times, when heralds and ambassadors were considered inviolable and the sanctity of sworn agreements was recognized. Similar evidence is supplied for early Italy by the *fetial* code with its demand that every war be a just war. Greek law was soon expanded by the Amphictionic oath and the truces for the Panhellenic Games.

3. In both countries treaties were negotiated at an early date. The Greek treaties (*σπονδαί, ὅρκοι, συνθήκαι*) obviously were descended directly from the compacts of Homeric times, while the Roman organization of Italy indicates extensive use of treaties relatively early. Omitting armistices, the chief classes were treaties of peace, of alliance, and of friendship. The lack of treaties need not mean hostility. Thus, though Rome had treaties of friendship (*amicitia*) with several States, friendly relations often existed without such a treaty. Though permanent treaties probably were made at an early date, the oldest Greek treaties preserved in detail were made for a limited period, and treaties 'for all time' did not become the rule before the fourth century. The short-term treaties of peace probably were not looked upon as interrupting a natural state of war by a temporary rest, but as imposing additional obligations for the period of their duration. Many Greek treaties contained clauses providing for the arbitration of disputes, and even in their absence arbitration was frequently offered. The system was used with some success and continued to be used under Roman supervision in the second and first centuries B.C.

4. Private international law developed more slowly. At first piracy, private seizure, and enslavement of foreigners were common. In fact, the theory of the complete absence of rights for foreigners not protected by special arrangements was retained by Roman jurists (*Dig.* 49. 15. 5). The foreigners in question are not enemies, so that the theory does not involve the doctrine that all strangers are enemies. On the other hand, there was a high regard for the sanctity of suppliants and for hospitality. Out of this grew hereditary exchanges of private hospitality and later the institution of *proxenoi*, to which the Roman *hospitium publicum* roughly corresponded. Outright piracy soon was widely condemned, and the feeling developed that private seizure should be used only as a reprisal for wrongs suffered. Its use sometimes was further regulated and limited by treaties. Courts, too, began to give protection to foreigners, sometimes when no treaties existed, but probably more frequently on the basis of commercial treaties (*σύμβολα*). These, at least at Athens, were ratified by a jury-court and so probably were regarded as contracts of a less sacred nature—but not less binding—than other treaties. More extensive rights were granted through treaties of

isopoliteia (q.v.). Related to this for Rome was the frequent grant of *commercium*.

5. The regard for what was customary or morally right applied to many points not so far mentioned, for instance to the rules of war. Such a basis for law meant that the standards varied from time to time and from place to place. Everyone is familiar with the lowering of standards which, according to Thucydides, resulted from the Peloponnesian War, while the accusation of piracy constantly made against the Aetolians implies that their standard was lower than those of other States. Nor were all foreigners treated alike, but barbarians were shown less consideration than closely related States. Yet there was always a line which could not be overstepped without incurring censure.

6. Roman expansion, at first glance, seems to leave less scope for development of international law in the Roman Empire than in Greece. It must not be forgotten, however, that Rome's early organization of Italy was based on international law and that the existence of free and allied cities also outside Italy and the control of States not formally annexed caused the Roman Empire to be governed for long largely by a modified form of international law.

LEAD. Metallic lead was discovered early, but little used in primitive cultures. Even at *Lau ium* (q.v.) much was thrown away; but the Romans needed for water-pipes all that they produced. Lead was extensively used for desilvering pyritical ores and for alloying with copper to save tin, both processes being known in pre-Roman times.

Lead mines were mainly exploited for silver, the lead being regarded as a by-product. Of the various deposits in Greece the most important were at Laurium. There were extensive workings in Anatolia. Of pre-Roman origin are the mines of Sardinia and Etruria. Spain, Gaul, and Britain were exploited actively by the Romans, and many stamped Roman pigs have been found there. In the Late Empire mines were opened in the Balkans; the workings in Africa are of doubtful date.

LECTISTERNIUM. A Roman version of the Greek customs of *κλῶνη* and *θεοξένια* (q.v.). A god or gods were made guests at a meal, couches being prepared for them as for human banqueters. This might be (a) in a private house (e.g. Varro ap. Serv. on *Aen.* 10. 76); (b) at some shrine, when the *lectus* may but need not be identical with the *pulvinar* (q.v.; Agnes H. Lake in *Quantulacumque* (1937), 243 ff.); (c) simultaneously for several gods, first in 399 B.C. (Livy 5. 13. 6). The gods might be represented by statues or *capita deorum*, i.e. bundles of herbs (Festus, 56, 12; 473, 4 (cf. 410, 21) Lindsay; H. Wagenvoort, *Roman Dynamism* (1947), 21). Latte, *RR* 242. H. J. R.

LEDA, in mythology, daughter of Thestius king of Aetolia, wife of Tyndareus, and mother of the Dioscuri

and Helen (qq.v.), but see below. Zeus approached her in the shape of a swan (a very favourite subject in art, see Höfer-Bloch in Roscher's *Lexikon* ii. 1925 ff.) and begat Helen and Polydeuces (Apollod. 3. 126); Castor was begotten by Tyndareus the same night (ibid.). Hyginus (Fab. 77) adds Clytemnestra (see CLYTEMNESTRA), whose name has perhaps fallen out of the text of Ps.-Apollodorus; but the whole story is told in a number of different ways, Helen being regularly daughter of Zeus (but of Tyndareus, Hyg. 78. 1), the Dioscuri both his sons in Homer. The most noteworthy variant (Apollod. ibid. 127) is that Helen was daughter of Zeus and Nemesis; both parents having been transformed into birds, Nemesis (q.v.) laid an egg, of which Leda took care; when Helen was hatched out from it she passed for Leda's daughter. This is obviously a reconciliation of two conflicting stories. Leda is everywhere mother of Clytemnestra, and frequently, as [Eur.] *IA* 49-50, she has a third daughter, called there Phoebe, Timandra in Apollod. loc. cit. and elsewhere, even a fourth (Apollodorus), Phylonoe, who was made immortal by Artemis. Again, Helen was hatched from an egg laid by Leda, not Nemesis (Eur. *Helena*, 257-9, a doubtfully authentic passage, but the earliest mention surviving, if genuine). The egg is, indeed, a central feature in the story, and was alleged to be preserved in Sparta down to Pausanias' time (Paus. 3. 16. 1); it may therefore be conjectured to go back to some very old tale of deities in bird-shape (Minoan-Mycenaean? cf. Nilsson, *Minoan-Mycenaean Religion*, ch. 10). It may well be older than Homer and the lack of mention of it in his poems due to his dislike of the grotesque; later Greeks disbelieved the story (Eur. *Ilel*. loc. cit.) or made fun of it (Cratinus in Athenaeus, 373 c). H. J. R.

LEGATI. During the late Republic *legati* were senatorial members of a provincial governor's staff, and were used by Caesar in particular as commanders of individual legions or detachments. This served as a precedent for the reorganization of the army by Augustus.

In the imperial army of the first two centuries each legion (except those in Egypt) was commanded by a *legatus legionis*, normally of praetorian rank. Where there was only one legion in a province, its commander was also the provincial governor and had the title *legatus Augusti pro praetore*. An exception was Africa, where at first the legion was under the command of the proconsul: from the time of Caligula, however, it came under the command of a *legatus*, while the proconsul remained in charge of the civil administration. Where there was more than one legion in a province, the governor held the supreme command and the *legati* of individual legions served under him. The legions of Egypt were commanded by equestrian *praefecti legionum*, as were the three legions raised by Septimius Severus.

Legati Augusti pro praetore was also the title of commissioners appointed by the Emperor to perform special tasks, or, especially in the second century, to act as his advisers when he took the field in person.

A. von Domaszewski, *Die Rangordnung des römischen Heeres* (1908); Parker, *Roman Legions*; G. Jacopi, *Diz. Epigr.* (1949), s.v. 'Legatus'. G. R. W.

LEGION. 1. EARLY REPUBLIC. The early history of the legion is very uncertain. A 'Romulean' legion of 3,000 men may have been doubled in size in the later Regal period and then divided into two on the establishment of the Republic. The first trustworthy account is that of Polybius (6. 19 ff.), which reflects the conditions, supposedly of the Second Punic War, but more probably of his own time. The *dilectus* is still based upon a property-qualification, now of 4,000 *asses*: it had earlier been 11,000,

and this seems evidence of some proletarianization of the army before Marius. The legion was drawn up in three lines of *hastati*, *principes*, and *triarii*, with the youngest and poorest forming the *velites*, or light-armed troops. The tactical unit was the manipule, of which there were thirty to the legion, ten to each of the three lines. The manipule had a *signum*, was composed of two centuries, and was commanded by the senior of its two centurions. See MANIPULUS, VELITES.

2. MARIUS TO CAESAR. By the Marian reforms (a) eligibility for service was extended to the *capite censi*, and the legions became largely volunteer forces of semi-professional soldiers; (b) each legion, now standardized at 6,000 strong, received an *aquila*; (c) the cohort permanently superseded the manipule for tactical purposes; (d) the legionary cavalry and the *velites* were replaced by *auxilia*. See AUXILIA, MERCENARIES (ROMAN).

3. THE PRINCIPATE. Out of the forces of the triumvirs Augustus established a standing legionary army. In 15 B.C. the number of legions, each comprising some 5,000 foot-soldiers and 120 mounted men, was 28, which, by the loss of 3 in A.D. 9, was reduced to 25. In the next two centuries additions were made and losses sustained, but the total did not exceed 30 until Septimius Severus raised three new legions. Each legion bore a number, which was not infrequently duplicated, and a title honorific to itself or its creator.

The commander was a senatorial *legatus*, except in Egypt, where an equestrian *praefectus* was employed. This latter practice was extended by Severus to his new legions, and under Gallienus *praefecti* became general. See LEGATI, PRAEFECTI.

In the beginning the legions in the West were recruited mainly from Italy and Gallia Narbonensis. As citizenship became more widely extended recruitment became more and more provincial, till by the late second century local recruitment had become the rule. The period of service was fixed by Augustus first at 16 and then at 20 years *sub aquila*, with an additional 4 and 5 years respectively in a veteran corps *sub vexillo*. The Flavians abolished the veteran corps and made 25 years the total legionary service. The legionary received pay of 225 *denarii* a year in the basic grade under Augustus, which was increased to 300 by Domitian. Further increases were made by Severus and Caracalla. The legionary received also donatives and a gratuity on discharge. See DONATIVUM, STIPENDIUM.

4. CONSTANTINE. Diocletian considerably increased the number of legions, the majority of which remained (with new units added) under the Constantinian reorganization. The legions of the field army, composed entirely of infantry, were only 1,000 strong. (Some had their origin in existing vexillations, which had regularly been of this size since the second century.) They were commanded by *tribuni*. The legions of the *limitanei*, however, commanded by *praefecti*, which were the rumps of the former frontier legions, may have remained at two-thirds or half their original strength. See also CENTURIO, COHORS, COMITATENSES, DONATIVUM, LIMITANEI, PALATINI, PRIMIPILUS, SACRAMENTUM, SIGNA MILITARIA, TRIBUNI MILITUM, VEXILLUM, WAR (ART OF, ROMAN).

H. M. D. P.; G. R. W.

5. THE INDIVIDUAL LEGIONS. Legio I: perhaps reformed from an earlier I *Augusta* which disgraced itself in Spain in 19 B.C. Stationed at Cologne after disaster of Varus: perhaps previously at Mainz. Moved to Bonn, probably under Caligula. Disbanded after revolt of Civilis, and perhaps incorporated with VII *Galbiana* to form VII *Gemina* (q.v.). On one inscription (*CIL* xii. 2234) called I *Germanica*.

Legio I *Adiutrix*: a force raised from marines by Nero,

made *iusta legio* by Galba. Fought at Bedriacum for Otho, capturing the eagle of XXI *Rapax*, and posted by Vitellius to Spain. Transferred to Mainz (Germ. Sup.) in 70. Moved to Danube c. 85; granted title *pia fidelis* by Trajan; perhaps garrisoned Dacia from 107 to c. 113. Probably taken by Trajan on Parthian campaign; returned with Hadrian to Danube. Thereafter stationed at Brigetio (Pann. Sup.).

Legio I Italica: raised by Nero in 67; sent to Gaul in 68. Supported Vitellius, defeated and sent to Moesia. Thereafter stationed at Novae.

Legio I Macriana liberatrix: raised by Clodius Macer in Africa in 68; disbanded by Galba.

Legio I Minervia: raised by Domitian in 83 as I *Flavia Minervia*, and stationed at Bonn. For loyalty in 89 granted title of *pia fidelis Domitiana*. (*Flavia* and *Domitiana* dropped after Domitian's death.) Served in Trajan's Dacian Wars and in the Parthian War of M. Aurelius: Bonn remained permanent station.

Legio I Parthica: raised by Severus c. 197 and stationed at Singara in Mesopotamia.

Legio II Adiutrix pia fidelis: created by Vespasian from men of Ravenna fleet; became *iusta legio* 7 Mar. 70. After opposing Civilis went with Cerealis to Britain, and stationed at Lincoln. At Chester under Frontinus and Agricola. Transferred to Danube c. 87, possibly to Singidunum; by 114 was in a permanent station at Aquincum (Pann. Inf.).

Legio II Augusta: raised by Octavian and in Spain till disaster of Varus, when it moved to Germany, perhaps near to Mainz. From 17 at Argentorate (*Strasbourg*). With invasion force to Britain in 43 (see GLEVUM). Eventual permanent station at Isca Silurum, first under Frontinus.

Legio II Italica: raised c. 165 by M. Aurelius. Stationed at *Albing* (Noricum) from c. 176; under Commodus moved to Lauriacum. Early names are II *Pia* and II *Italica pia*; called II *Italica pia fidelis* before end of century.

Legio II Parthica: raised by Severus c. 197. On return from the East stationed at Albanum near Rome from 202. As the Emperor's personal legion saw service all over the Empire. Became *pia fidelis* under Elagabalus.

Legio II Traiana fortis: raised by Trajan, possibly for Dacian Wars, but early history obscure; later in Syria. Transferred to Egypt c. 125 and stationed at Nicopolis near Alexandria.

Legio III Augusta: probably a legion of Octavian. Stationed in Africa, first at Ammaedara and later at Theveste; from end of first century at Lambaesis except for period 238–53. Suffered *damnatio memoriae* in 238; restored by Valerian.

Legio III Cyrenaica: perhaps a legion of Lepidus. In the early reign of Augustus stationed in Upper Egypt; when the garrison was reduced to two legions (after A.D. 62) it shared the double camp at Nicopolis with XXII *Deiotariana*. Moved to Bostra (Arabia), probably after the Jewish Revolt of 132–5.

Legio III Gallica: a legion of Antony, perhaps of Caesarian origin. Consistently part of the Syrian command. Transferred to Oescus (Moesia) by Nero in 68; returned to Syria in 70, perhaps to Raphanaec, its second-century station. Still there as garrison of Phoenice after Severus divided Syria. Suffered *damnatio memoriae* for opposing Elagabalus c. 219; restored after his fall. Moved to near Damascus in 231/2.

Legio III Italica: raised by M. Aurelius c. 165. Stationed at *Regensburg* (Raetia), where it remained till end of Roman occupation. In the early period called III *Concoris*.

Legio III Parthica: raised by Severus c. 197; stationed in Mesopotamia, perhaps near Resaina.

Legio IV Flavia felix: reorganized by Vespasian in 70

from former IV *Macedonica* (q.v.); replaced XI *Claudia* at Burnum (Dalmatia). Probably transferred to Moesia in 85/6; its stations may have been Viminacium (86–97) and, possibly, Ratiaria (89–100?), before it became part of the first garrison of Dacia (107–13?). From the time of Hadrian, at least, it was at Singidunum.

Legio IV Macedonica: a legion of Octavian which was in Spain during the Early Empire; transferred to Upper Germany c. 43, probably to replace XIV *Gemina* at Mainz. Supported Vitellius, surrendered to Civilis, disbanded by Vespasian.

Legio IV Scythica: early history obscure, garrisoned Moesia after A.D. 9. In 55 or soon after transferred to Syria, where it remained.

Legio V Alaudae: raised by Caesar in Narbonensis. In Spain at beginning of Principate: transferred to Rhine possibly before 17 B.C., when it may have lost its eagle (Vell. Pat. 2. 97), and in A.D. 14 was stationed at Vetera (Germ. Inf.). A Vitellian legion defeated at Cremona, it was sent to Moesia, and was probably destroyed in the disaster of Cornelius Fuscus in Dacia in 86.

Legio V Macedonica: probably transferred to Moesia from the East in A.D. 9. Stationed, at least since Claudius, at Oescus. Moved to Armenia c. 62; afterwards took part in Jewish War. Returned to Oescus in 71, where it remained as garrison of Moesia Inf. on division of Moesia c. 85/6. During or after Trajan's second Dacian War it moved to Troesmis. After Marcomannic War stationed at Potaissa (Dacia). On abandonment of Dacia north of the Danube in 274/5 returned to Oescus as garrison of new province of Dacia Ripensis.

Legio VI Ferrata: an Antonian legion stationed under Augustus in Syria, perhaps at Raphanaec. Fought under Corbulo. Marched west with Mucianus, but soon returned. Probably at Samosata from 72. Probably annexed Arabia in 106, and at Bostra till Jewish Revolt of 132–5. Then transferred to Caparcotna in Galilee as part of garrison of new province of Syria Palaestina. Granted title of *fidelis constans* for supporting Severus.

Legio VI Victrix: a Caesarian legion which fought for Octavian. Stationed in the early Principate in Spain. Transferred to the Rhineland in winter of 69/70; repaired and occupied the camp at Novaesium (Germ. Inf.). Rewarded with title of *pia fidelis Domitiana* for loyalty in 80. Moved to Vetera c. 93. Transferred to Britain c. 119. Stationed at York thereafter.

Legio VII: a Caesarian legion whose early history is obscure. The occasional cognomen *Macedonica* suggests an early station in Macedonia, perhaps from c. 12 to 1 B.C. From A.D. 9 at Delminium (Dalmatia). Rewarded with title of *Claudia pia fidelis* for its loyalty in 42. Transferred to Moesia c. 57, and stationed at Viminacium probably from the beginning, certainly from Vespasian onwards.

Legio VII Gemina: raised by Galba and apparently at first called VII *Galbiana*. Accompanied Galba to Rome; then sent to Carnuntum to replace X *Gemina*. Under its legate Antonius Primus it fought for Vespasian. Changed name to VII *Gemina*, perhaps by incorporation of former leg. I (q.v.). Rewarded with title *felix*, perhaps after campaigns of Clemens in Upper Germany in 72/3. Returned to Spain c. 74, probably to Legio (*Leon*), where it is attested later. Under Severus became VII *Gemina pia felix*.

Legio VIII Augusta: a Caesarian legion whose early history is obscure: perhaps in Moesia before A.D. 6. After A.D. 9 in Pannonia, probably at Poetovio. Transferred to Moesia c. 45, and under Nero stationed at Novae. Sent to the Rhine in 70, where its station became Argentorate (*Strasbourg*) in Upper Germany.

Legio IX Hispana: Caesar's old Ninth, which may have acquired its cognomen from a period in Spain.

Before 13 B.C. it had probably left for Illyricum; after A.D. 9 it remained in Pannonia. Transferred in 20 to Africa to fight Tacfarinas, it returned to Pannonia in 24. Took part in Claudius' invasion of Britain in 43; within a few years was stationed at Lincoln. In the early years of Vespasian it moved forward to York. Its end is obscure; it was probably not destroyed in Britain c. 119, but moved to Nijmegen c. 121, and later to the East. Perhaps it was finally destroyed in Palestine in the Jewish War of 132-5, or even in Armenia in 161.

Legio X Fretensis: Caesar's Tenth. Probably stationed in Syria from the beginning of the Principate; from A.D. 17 at least it was at Cyrrhus. Moved to Alexandria in 66 for the projected campaign against Ethiopia, but employed instead in the Jewish War, and subsequently stationed at Jerusalem. Near the end of the third century moved to Aelana on the Red Sea.

Legio X Gemina: the name implies a composite unit; perhaps it was descended partly from Caesar's Tenth and partly from some other legion. Stationed in Spain from the beginning of the Principate, it was transferred to Carnuntum in 63. Returned to Spain in 68. Sent to Lower Germany in 70; stationed first at Arenacum and then at Noviomagus. Rewarded with title *pia fidelis Domitiana* for its loyalty in 89. Transferred to Pannonia c. 103, first at Aquincum (103-13?) and then at Vindobona.

Legio XI: a legion of Octavian whose early history is obscure. By A.D. 9 was at Burnum (Dalmatia). Rewarded with title *Claudia pia fidelis* for its loyalty in 42. Slow to join the other legions supporting Vespasian, it marched with them to Rome, and in 70 was ordered to Germany, where it remained at Vindonissa (Germ. Sup.). Transferred to the Danube c. 101, first at Brigetio (101-5?) in Pannonia and then at Durostorum (Moes. Inf.).

Legio XII Fulminata: a Caesarian legion which may have been in Africa or Egypt during the early years of Augustus. By the time of Tiberius it was in Syria, probably at Raphanea. Disgraced in the campaign of 62 and the surrender of Rhandaia, it was sent back to Syria. Took part in the Jewish War in 66 and lost its eagle (perhaps temporarily). Transferred in 70 to Melitene in Cappadocia. The legend of the miraculous storm of rain which helped XII *Fulminata* in the campaign against the Quadi of 172, if not apocryphal, may refer to a vexillation.

Legio XIII Gemina: probably constituted by Octavian from an amalgamation of two legions. Apparently in Illyricum before A.D. 9, when it moved to the Rhine, where its headquarters eventually became Vindonissa (Germ. Sup.). Transferred to *Poetovio* (Pannonia) c. 50. Moved forward to Vindobona under Domitian. Took part in Trajan's Dacian Wars and remained at Apulum thereafter. On the abandonment of Dacia in 274/5 moved to Ratiaria in the new province of Dacia Ripensis.

Legio XIV Gemina: another composite legion formed by Octavian. Probably in Illyricum before A.D. 9, then at Mainz. Took part in the invasion of Britain in 43, and within a few years was at Viroconium (*Wroxeter*). Rewarded with title *Martia Victrix* for its part in the defeat of Boudicca. Recalled in 67 for Nero's projected Eastern campaign; returned by Vitellius to Britain. Recalled to fight Civilis, then stationed once more at Mainz. Supported Saturninus in 89; transferred to Pannonia in 92/3, perhaps first at Aquincum (93-101?), and then Vindobona, before it settled finally (at least by 114) at Carnuntum.

Legio XV Apollinaris: a legion of Octavian. Stationed in Illyricum at the beginning of the Principate; moved forward to Carnuntum c. A.D. 14. Sent to the East in 62; fought under Corbulo, and then in the Jewish War. Returned to Carnuntum in 71. Went east again for Trajan's Parthian War, and thereafter was stationed in Cappadocia at Satala.

Legio XV Primigenia: raised by Gaius in 39 for his projected German campaign or by Claudius in preparation for the invasion of Britain. Originally at Mainz, soon after at Bonn, and later at Vetera (Germ. Inf.). Destroyed in the revolt of Civilis.

Legio XVI: raised by Octavian before 30 B.C.; early history obscure but the name XVI *Gallia* on a few inscriptions may be significant. Perhaps in Raetia before A.D. 9; subsequently in Upper Germany at Mainz. During reign of Claudius transferred to Novaesium in Lower Germany. Surrendered to Civilis, disbanded by Vespasian, and reconstituted as XVI *Flavia Firma* (q.v.).

Legio XVI Flavia Firma: created by Vespasian on disbandment of XVI. Its first province was probably Cappadocia, and it was stationed perhaps at Satala, but Trajan's Parthian War caused its transference to Syria. Subsequently it was stationed in Commagene at Samosata.

Legiones XVII, XVIII, XIX: legions of Octavian which by A.D. 6 at the latest were based on what was later Lower Germany. In A.D. 9 they were annihilated in the Teutoburgian Forest and their commander, Varus, committed suicide. Their numbers were never reused. The eagle of XIX was recovered from the Bructeri in 15, the others in 16 and 41 from the Marsi and, probably, the Chauci.

Legio XX Valeria Victrix: probably a legion of Octavian. Perhaps originally in Spain, but later part of the army of Illyricum. Transferred to Lower Germany in A.D. 9 and stationed at Cologne. Sometime during Tiberius' reign moved to Novaesium and stayed there till 43, when it took part in the invasion of Britain. It played a key part in Agricola's campaigns and probably built and occupied Inchtuthil from c. 84 to 86. On the withdrawal of II *Adiutrix* it retired to Deva (*Chester*), where it was to remain for the rest of the Roman occupation.

Legio XXI Rapax: raised by Augustus probably soon after 25 B.C., certainly before 8 B.C. It may have been serving in Raetia in A.D. 6. Transferred to Vetera (Germ. Inf.) after the Varian disaster of A.D. 9. Moved to Vindonissa (Germ. Sup.) in 43. After the campaign against Civilis remained in Lower Germany at Bonn. Returned to Upper Germany to Mainz c. 83. Supported Saturninus in 89 and was transferred to the Danube, where it was probably destroyed in 92.

Legio XXII Deiotariana: originally a legion of Deiotarus which was taken over by Augustus on the death of Amyntas in 25 B.C. Became a *iusta legio* soon after, i.e. after formation of XXI *Rapax*. Served in Egypt probably from the start (attested at Alexandria in 8 B.C.). The legion's end is uncertain, but probably occurred in the Jewish revolt of 132-5.

Legio XXII Primigenia: raised at the same time as XV *Primigenia* (q.v.). Originally at Vetera (Germ. Inf.) but transferred to Mainz (Germ. Sup.) c. 43. Supported Vitellius; after his defeat sent to Danube, probably Pannonia. By 71 back on Rhine, but now in Lower Germany at Vetera. Rewarded with title *pia fidelis Domitiana* for its loyalty in 89. When XIV *Gemina* was transferred to the Danube c. 92, XXII *Primigenia* returned to Mainz.

Legio XXX Ulpia Victrix: raised by Trajan, probably after, not before, II *Traiana*. After the Dacian Wars was stationed at Brigetio (Pann. Sup.). Transferred in 119 to Vetera (Germ. Inf.) to replace VI *Victrix*, which had left for Britain.

E. Rutterling and W. Kubitschek, *PW*, s.v. 'Legio'; A. Passerini, *Diz. Epigr.*, s.v. 'Legio' (1950); Parker, *Roman Legions*; Kromayer-Veit, *Heerwesen und Kriegführung der Griechen und Römer* (1928); R. Syme, *JRS* 1928, 41 ff., 1933, 14 ff., *Laureae Aquincenses* 1938, 207 ff.; E. Birley, *JRS* 1928, 56 ff., *Roman Britain and the Roman Army* (1953), esp. 20 ff.; R. E. Smith, *Service in the Post-Marian Army* (1958); Jones, *Later Rom. Emp.*, ch. 17; J. E. Bogaer, *Studien zu den Militärgrenzen Roms* (1967), 54 ff. G. R. W.

LELEGES (*Λέλεγες*), a tribe mentioned, *Il.* 10. 428, 21. 86, as allied with Troy and occupying Pedasus in the Troad. Later writers give them a wide distribution. In Herodotus (1. 171) Carians 'formerly called Leleges' occupied the Islands and manned King Minos' navy. Philip of Theangela (in Caria) says that Leleges were to Carians as helots to Spartans (*Ath.* 6. 272). Hesiod located Leleges as aborigines in Iocris, and Aristotle in Acarnania, Aetolia, Boeotia, and Megaris (*Strabo* 321-2). Pausanias (3. 1. 1) makes 'Lelex' the first king of Laconia. Archaeology and place-names do, in fact, confirm that the earliest agriculturalists in Greece came from Asia Minor. A R B.

LEMNOS, an island of the north-east Aegean. The lava from its volcano (reputed to be the forge of Hephaestus, but extinct in historical times) gave it high fertility, and it grew considerable wheat crops. An important Bronze Age culture has connexions with Troy. In the *Iliad* it figures as a victualling centre for the Achaeans at Troy. From the eighth century on, the island became thoroughly hellenized, but it is doubtful whether it had a Greek population before the sixth century. According to ancient writers its early inhabitants were 'Pelasgians' and 'Tyrsenoi' from the mainland, and there is an undeciphered inscription (*IG* xii. 8. 1; probably of the 6th c.), which seems to have affinities with Etruscan. Lemnos received Athenian colonists after its seizure by the Younger Miltiades in his capacity as ruler of the Thracian Chersonese, c. 500 B.C. It was organized as an Athenian cleruchy c. 450, and after a brief period of Spartan domination (404-393) was recovered by Athens. From the time of Philip II of Macedon it passed occasionally into the possession of various Hellenistic dynasts, but it was again in Athenian hands from 307 to 295 and from 281 to 202. In 166 it was definitely attached to Athens by the Romans.

P-K, *GL* iv. D II (c); *IG* xii. 8; D. Mustilli, *Anuario* 1932-3 (Hephaestus cemetery), Brea, *Polytechni* 1- (1964-; prehistoric). M C J B.

LEMURIA, 9, 11, 13 May, on which days apparently kinless and hungry ghosts, *lemures* (Wisniewski's doubts, *PW*, s.v. 'Lemuria', col. 1932, that such a word originally existed seem unjustifiable), were supposed to prowl about the houses. Ovid (*Fasti* 5. 419 ff.) describes the ritual of feeding and getting rid of them, but his assertion (443) that they were addressed as *manes paterni* is incredible.

H. J. Rose *Univ. of California Publ. Class. Phil.* 1941, 80 ff.; Lattin, *RR* 99. See also *ATL* 11-117, § 8. H. J. R.

LENAEA, a Dionysiac festival celebrated in Athens on the 12th day of the month Gamelon (Jan.-Feb.), which in other Ionian calendars is called Lenacon. The name is derived from *λήνη*, maenad. The official Athenian name, *Διονύσια τὰ ἐπὶ Ἀφαιῶν*, proves that it took place in this sanctuary, which is believed to have been situated west of the Acropolis. Very little is known of the rites. There was a procession and it is said that the *dadouchos* of Eleusis officiated in the Lenaean *ἀγῶνες*. The chief importance of the festival lies in the dramatic performances; it seems that originally comedy was preferred to tragedy. Much has been written on the so-called *Lenaean vases*; this still forms a controversial subject.

M. P. Nilsson, *Studia de Dionysii atticis* (1900), 109 ff.; L. Deubner, *Attische Feste* (1932), 123 ff.; A. W. Pickard-Cambridge, *Dramatic Festivals of Athens* (1953), 68 ff. M. P. N.; J. H. C.

LENAEUS, POMPEIUS, a learned freedman of Pompey, taught in Rome and, loyal to his patron's memory, attacked the character and style of Sallust who had described Pompey as 'oris probi, animo inuerecundo' (Suet.

Gram. 15). Pompey caused him to translate into Latin Mithridates' writings on pharmacology (Pliny, *HN* 25. 5 and 7). J. W. D.

LENTULUS (1), LUCIUS CORNELIUS (*PW* 188), served under Scipio Africanus in Spain, where he remained from 206 to 201 B.C. as a *privatus* with proconsular imperium, which was constantly prolonged, despite his election as curule aedile for 205. He claimed a triumph in defiance of precedent, but received an *ovatio*. He served in north Italy as consul (199) and proconsul (198). In 196 he was sent on an ineffective diplomatic mission to Antiochus III to mediate on behalf of Egypt. H. H. S.

LENTULUS (2), PUBLIUS CORNELIUS (*PW* 202), legate in Greece (172-171 B.C.), curule aedile (169), envoy to Perseus after Pydna, became praetor in 165, reorganizing the *ager Campanus*, and consul *suffectus* in 162. In 156 he negotiated with the kings of Asia Minor. *Princeps senatus* from 125, he opposed C. Gracchus. A H. McD.

LENTULUS (3) CLODIANUS, GNAEUS CORNELIUS (*PW* 216), a fair orator, perhaps fought under Sulla in the East and returned to Rome with him. Consul in 72 B.C., he co-operated closely with his colleague Gellius (q.v. 2), taking action against Verres and validating grants of citizenship made by Pompey. He then fought disastrously against Spartacus (q.v.) and (again with Gellius) exercised a stern censorship (70), ejecting sixty-four senators. A legate of Pompey against the pirates, he supported the law of Manilius (q.v. 2) and died soon after. E. H.

LENTULUS (4) SURA, PUBLIUS CORNELIUS (*PW* 240), disgraced himself as quaestor (81 B.C.); praetor *repetundarum* (74) and consul (71), he was expelled from the Senate by the censors of 70. Praetor again in 63, he joined Catiline (q.v.), negotiated with the Allobrogan envoys and was arrested on their evidence; forced to abdicate, after the senatorial debate he was executed. He was buried by his stepson Antonius (q.v. 4). E. B.

LENTULUS (5) SPINTHER, PUBLIUS CORNELIUS (*PW* 238), an agreeable aristocrat, lavish in his aedileship (63 B.C.) and praetorship (60), was active as consul (57) in promoting Cicero's recall. Next year Cicero vainly tried to preserve for Spinter as governor of Cilicia the right, procured during his consulate, of restoring Ptolemy Auletes. Before leaving Cilicia in 53 Spinter was saluted *imperator*, and he triumphed in 51. In 49 he fled from Asculum before Caesar's advance, and surrendered at Corfinium with Domitius; he abused Caesar's clemency and was executed after Pharsalus. G. E. F. C.

LENTULUS (6) MARCELLINUS, GNAEUS CORNELIUS (*PW* 228), a fair orator, as a patron of Sicily (being a descendant of Marcellus, q.v. 1) supported Cicero against Verres. He was a legate of Pompey against the pirates, one of the prosecutors of Clodius (q.v. 1) in 61 B.C., praetor (60), and proconsul in Syria. As consul (56) he opposed Clodius and proposals for armed intervention in Egypt and reproached Pompey and Crassus over their renewed alliance with Caesar. He died soon after. E. B.

LENTULUS (7) CRUS, LUCIUS CORNELIUS (*PW* 218), praetor 58, was consul 49 B.C., and a determined anti-Caesarian. Later in 49 he administered Asia, and thence brought two legions to Dyrrhachium; after Pharsalus he fled to Egypt, and arrived to meet his death the day after Pompey's. It is possible (though see BALBUS 3) that, after fighting against Sertorius, Lentulus gave Balbus Roman citizenship and his name Cornilius; in any case they were

close friends, and Balbus persistently begged Lentulus to keep the peace. But Lentulus, according to Caesar, was made desperate by debt; and all authors, including Cicero, whom he had befriended in 58 and 49, describe him as lazy, luxurious, and pretentious. G. E. F. C.

LENTULUS (8), GNAEUS CORNELIUS (*PW* 181), consul 14 B.C., known as 'Augur' to distinguish him from Cn. Lentulus, consul 18 B.C. (*PW* 180). Poor to begin with, he received a grant from Augustus, and became extremely rich (*Sen. Ben.* 2. 27. 1 f.). He was proconsul of Asia (2/1 B.C.), was still alive in A.D. 22 (*Tac. Ann.* 3. 59), and died under Tiberius, whom he made his heir (*Suet. Tib.* 49. 1). He, and not his namesake, is very probably the Cn. Lentulus referred to by Tacitus (*Ann.* 1. 27. 2. 32. 3. 68. 4. 29. 44) as victor over the Getae (q.v.) under Augustus and a close friend of Tiberius who accompanied Drusus in Pannonia in A.D. 14, was ridiculously accused of *maiestate* in 24 (cf. Dio 57. 24. 8), and died in 25, very rich after earlier poverty.

PIR C 1370; R. Syme, *JRS* 1934, 112 ff. and *Taritus* 750; R. S. Rogers, *Class. Weekly* 1947/9, 91 f. T. J. C.

LENTULUS (9) GAETULICUS, GNAEUS CORNELIUS (*PW* 220), was consul in A.D. 26 and legate of Upper Germany, possibly in succession to his brother, in 30-9. As a lax disciplinarian he was popular with his own army and also with the Lower German legions, commanded by L. Apronius, his father-in-law. An attempt to indict him in 34 as an associate of Sejanus failed. In 39 he appears to have led a conspiracy by which the Emperor Gaius was to be murdered at Moguntiacum. Gaius was forewarned of the plot and Gaetulicus was executed. He was an erotic poet, regarded by Martial (1 *praef.*) as one of his models. Nine epigrams in the *Greek Anthology* may be by him.

Baehr, *FPR* 361.

J. P. B.

LEO (1) I, the Great, Pope A.D. 440-61. Ninety-six sermons and 143 letters survive. They speak with the voice of the institution in which he had merged his personal identity. In a disturbed age he tried to bring order by centralization, persuading metropolitans to send him reports and then writing them answers like imperial rescripts. He won from Valentinian III recognition of Roman ecclesiastical jurisdiction over all western provinces. Though ignorant of Greek, he was drawn into the eastern theological controversy and in 448 issued a theological manifesto, the *Tome*, which rejected the monophysite Christology of Eutyches. Its orthodoxy was acutely criticized by the monophysite Egyptians, but was recognized by the council of Chalcedon (451). Leo welcomed the doctrinal decisions of Chalcedon, but attacked the council's decree conceding the dignity of Constantinople as the second see of Christendom 'because it is new Rome'. In 452 he persuaded Attila to withdraw from Italy, and in 455 dissuaded the Vandals from massacring the defenceless population of Rome, though he could not prevent systematic plunder. He was a crucial figure in the development of the ideology of papal primacy.

Ed. Migne, *PL* lv-lvi, Letters, ed. Schwartz, *Acta Conciliorum Oecumenicorum* n. 4 (1932) E. Caspar, *Geschichte des Papsttums* 1 (1930). H. C.

LEO (2) I, Eastern Roman Emperor (A.D. 457-74), a Thracian by birth, planned a vast expedition to overthrow the Vandal kingdom in Africa. But his army, said to number 100,000 men, was utterly outwitted by Gaiseric (q.v.) and failed even to reach Africa. At home his strength depended mainly on the support of soldiers from Isauria. E. A. T.

LEOCHARES, sculptor, probably Athenian. Pliny places his *floruit* in 372 B.C., but Leochares is mentioned in a letter of Plato written after 366 as 'young and good' (*Ep.* 13, 361 a).

SELECTED WORKS: *dated*, (1) Isocrates, dedicated by Timotheus presumably before his banishment in 356 (the surviving bust (Winter, *KB* 317. 5) derives from a later statue). (2) Signature from the Acropolis, about 350. (3) West side of Mausoleum, after 351. Slabs 1020, 1021 of the Amazonomachy (Winter, *KB* 304. 2) with tall, slim, dramatic figures are probably by Leochares. (4) Gold and ivory group of Philip, Alexander, Amyntas, Olympias, and Eurydice in the Philippeum at Olympia, dedicated after Chaeronea, 338. (5) (with Lysippus, q.v.) Alexander's lion hunt, bronze, after 321. *Undated*, (6) Ganymede. Pliny's description of the eagle 'parcentem ungubus etiam per uentrem puero' (*HN.* 34. 79) fits the marble group in the Vatican (Winter, *KB* 299. 1), which must therefore be the basis of attribution to Leochares. *Attributed*, (7) Apollo Belvedere in the Vatican (Winter, *KB* 299. 2-4), Roman adaptation of fourth-century original (Leochares made an Apollo in Athens). (8) Artemis Versailles (Winter, *KB* 312. 3). (9) Hypnos (Winter, *KB* 299. 6). Nos. 3, 6-9 are all theatrical compositions of tall, slim figures. B. Ashmole, however, starting *not* from the Ganymede but from the Alexander on the Acropolis (Acr. no. 1331), which he gives to Leochares, associates with it the Demeter of Cnidos and Mausoleum slabs 1013-16, which others have given to Bryaxis.

LEON (1) of Byzantium, prominent as one of the leaders of his city who claimed Athenian support against Philip of Macedon. He conducted the successful resistance to Philip's siege, 339 B.C., but when the city later made terms Philip secured his death. If he died c. 338 various historical works on Philip, the Sacred War, and Alexander should probably be assigned to a later Leon (fl. c. 300 B.C.) who was a pupil of Aristotle.

FGH II B. 132.

G. I. B.

LEON (2) of Pella (? late 4th c. B.C.), wrote a book on the Egyptian gods, in the form of a letter from Alexander the Great to his mother, in which the gods are represented as in origin human kings, the discoverers of agriculture and other means of human subsistence.

FGH III. 659.

LEONIDAS (1), king of Sparta, succeeded on the mysterious death of his half-brother Cleomenes (q.v. 1), whom the family had suffered as insane. He married Cleomenes' daughter Gorgo. In 480, while his countrymen were celebrating the Carneia, he marched to Thermopylae with his royal guard of 300 (selecting 'men who had sons living' *Hdt.* 7. 205. 2) and volunteers picked up *en route*, and secured the pass with some 7,000 hoplites, in time to make possible the massive Artemisium naval operation (*see* PERSIAN WARS). He repelled assaults for two days, but when his Phocian allies failed to stop a Persian move by the Anopaea path (*see* THERMOPYLAE), his flank was turned. Leonidas then secured the retreat of his main body, remaining with 1,100 Boeotians, some helots, and his own guard and, after counter-attacking fiercely, fell with all his Spartans. A fifth-century warrior-statue, found at Sparta, may be from his monument.

Hdt. 7. 204-30; to which *Diod.* (11. 3-11) and *Plut.* (*Apophth.*, 'Leonidas') add fulsome and unreliable embellishments. A. R. Burn, *Persia and the Greeks* (1962), 273, 378 ff., 403 ff. A. R. B.

LEONIDAS (2) of Tarentum, the greatest Greek epigrammatist of the Alexandrian era, led a poor vagabond life (*Anth. Pal.* 7. 715) in the first half of the third century B.C. The Greek Anthology (q.v.) contains about a hundred of his epigrams—some dedications (mainly genuine), some real or imaginary epitaphs, the rest very varied in subject and tone. He is a pessimist of almost tragic intensity (*Anth. Pal.* 7. 472). He does not (like his contemporaries Asclepiades and Posidippus) write of love or feasting, but evokes the life of the poor (*Anth. Pal.* 6. 226, 296, 355), among whom he counts himself (6. 300, 6. 302, 7. 736). In this he resembles certain Hellenistic sculptors of old fishermen (*Anth. Pal.* 6. 4) and decrepit women. But his verse is highly finished, full of baroque compounds and odd technical terms set out in complex sentences. Sometimes his epigrams end in a sharp point, which for his time is unusual. Many later poets, both Greek (e.g. Antipater (q.v. 3) of Sidon) and Roman (Propertius 3. 13. 43–6 ~ *Anth. Pal.* 9. 337), admired and imitated him.

C. M. Dawson, *APPhil.* 1950; J. Geffcken, *Neue Jahrb. Suppl.* 1897; A. S. F. Gow, *CQ* 1958; B. Hansen, *De L. Tarentino* (1914); L. A. Stella, *Cinque poëti dell'Antologia Palatina* (1949); T. B. L. Webster, *Hellenistic Poetry and Art* (1964), ch. 10, Wilamowitz, *Hell. Dicht.* 1. 139 ff.; Gow and Page, 1955 ff. G. H.

LEONIDAS (3) of Alexandria, an astrologer turned poet, wrote in the time of Nero and Vespasian. He is the earliest known author of isopsephic poems, so composed that the letters in each couplet, if read as numbers ($\alpha = 1$, $\beta = 2$, etc.), make the same sum. Thirty such are in the Greek Anthology, with other poems imitative of his predecessors.

Cichorius, *Röm. Studien* viii 12, P. Perdrizet, *Rev. Ét. Grec.* 1904; K. Radinger, *Rh. Mus.* 1903. G. H.

LEONNATUS (c. 358–322 B.C.), a Macedonian noble related to the royal house, accompanied Alexander to Asia, became one of his personal 'Bodyguard' in 332 and (after 328) a prominent general, distinguishing himself in an independent command on the return from India. As satrap of Hellespontine Phrygia (323) he reinforced Antipater in the Lamian War; but he was defeated and killed in Thessaly by the Greek insurgents. His character lacked moderation and stability, and he would probably have fared badly against cooler heads in the age of the 'Successors'.

Berve, *Alexanderreich*, no. 466.

G. T. G.

LEONTINI (modern *Lentini*, though the excavated remains of the south gate, walls, and tombs are at *Carlentini*), founded from Naxos (q.v. 1) in 729 B.C. on a commanding hillside position south of the Piana di Catania. Flourishing in the sixth century (its ruler Panaetius being the earliest Sicilian tyrant), it was captured by Hippocrates (q.v. 1) c. 494 B.C., and thereafter was usually dominated by Syracuse, with intervals of precarious freedom. Its alliance with the Athenians (renewed in 433/2 B.C.; see *IG* 1². 52) was implemented in 427 when its most famous citizen, the orator Gorgias (q.v. 1), led its delegation to Athens. Hieronymus, successor of Hieron II (q.v.), was murdered there in 215 B.C. and after further provocations Leontini was sacked by the Romans who then besieged Syracuse. A *civitas decumana* under Roman rule, it suffered in the Servile War (104) and its inhabited area contracted in later antiquity.

Good description in Polyb. 7. 6. Hérard, *Bibl. topogr.* 59 ff.; Dunbabin, *Western Greeks*; recent excavations, G. Rizza, *Not. Scav.* 1955, 281 ff. A. G. W.

LEOSTHENES (d. 322 B.C.), an Athenian, general at Athens in 324/3, having probably served as captain of mercenaries in Asia previously. With acute political in-

sight he organized the return and maintenance at Taenarum of mercenaries disbanded by Alexander's satraps (324), and presumably organized (by means unknown) their feeding and payment till the time should come to employ them in an anti-Macedonian war. The Lamian War (323–322) was his opportunity. He commanded the Greek army and inspired its devotion, and his death at the siege of Lamia was a heavy blow to the Greek cause.

Berve, *Alexanderreich*, no. 471; E. Badian, 'Harpalus', *JHS* 1961, 27, 36 ff. G. T. G.

LEOTYCHIDES, king of Sparta c. 545–469 B.C., succeeded the exiled Demaratus (c. 491 B.C.) with aid of Cleomenes I (q.v.). In the Aeginetan War he apparently secured the granting of a truce to Athens and delivery of hostages by Aegina. In 479, as commander-in-chief of the allied fleet, he fomented the revolt of Chios and Samos, and decisively defeated the Persians in a land and sea battle at Mycale. He led another combined Greek force on a punitive expedition against the medizing aristocracies in Thessaly (c. 477). He took Pagasae and perhaps Pherae, but failed to capture Larissa. He was tried at Sparta on a charge of bribery (probably c. 476), but he escaped condemnation by retiring to Tegea. An earlier namesake (with whom Leotychides has often been confused) subdued Messenia in the Second Messenian War (see *MESSENIA*).

Beloeh, *Griech. Gesch.* 2 i, pt. 2, 179 ff.; ii, pt. 2, 190 ff.; J. Johnson, *Hermathena* 1931; J. Kroyman, *Sparta und Messenien*, 3 ff. (1917); L. R. Shero, *TAPA* 1938, 516 ff. P. T.

LEPCIS (or **LEPTIS**) **MAGNA** (neo-Punic *Lpqī*). One of the Phoenician Emporia between the Syrtes, perhaps founded before 600 B.C. (see *TRIPOLIS* 1). Its prosperity came from its olive-bearing hinterland and from the trans-Saharan trade. Lepcis became a colony under Trajan, and Septimius Severus, a native of the city, gave it the *us Italicum* and adorned it with splendid buildings, including a forum, basilica, and colonnaded street leading to his newly built harbour. It had bishops in the third century. New city walls (late third or early fourth century) saved Lepcis from the Austuriani who in 365 devastated its territory (Amm. Marc. 28. 6). Thereafter it declined and its Byzantine walls enclosed only a fraction of the former city. The ruins of Lepcis, excavated since 1920, are exceptionally fine. Besides the Severan buildings, the Augustan forum, under which remains of the early settlement have been found, the theatre, amphitheatre, Hadrianic baths, and Hunting baths are of outstanding interest.

P. Romanelli, *Leptis Magna* (1925); T. H. Carter, 'Western Phoenicians at Lepcis', *APArch.* 1965, 123 ff.; R. Buttacchi, *Il porto romano di Leptis Magna* (1958); G. Caputo and F. V. Calliari, *Buried City* (1966); M. Squarciapino, *Leptis Magna* (1967). See also bibliography s.v. *TRIPOLIS*. O. H.

LEPIDUS (1), **MARCUS AEMILIUS** (PIV 68), the censor of 179 B.C., appears first on the embassy to Greece, Syria, and Egypt in 200, delivering the Roman ultimatum to Philip V. Curule aedile (193), praetor in Sicily (191), he became consul (187), constructing the Via Aemilia, and as triumvir (183) founded Mutina and Parma. Pontifex Maximus (180) and censor (179) with M. Fulvius Nobilior, he reformed the Comitia Centuriata and carried out a large building programme, including the Basilica Aemilia. Consul again (175) in Liguria, he was decemvir for land settlement there (173). From his censorship to his death in 152 he was *princeps senatus*. Well-born and handsome, combining liberal culture with observance of tradition, he was pre-eminent in the Senate, and his name marks the pacification of Cispadane Gaul.

F. W. Walbank, *Philip V of Macedon* (1940), 134, 313 ff.; H. H. Scullard, *Rom. Pol.* 135, 180, 233, 237; H. Mattingly, *Roman Coins* (1960), 70. A. H. McL.

LEPIDUS (2), **MARCUS AEMILIUS** (*PW* 72), descendant of (1), whose Gallic connexions he inherited and used. Military tribune under Pompeius (q.v. 3), probably aedile under the *Cimnani*, he joined Sulla—divorcing his wife (related to Saturninus, q.v. 1)—and amassed wealth in the proscriptions. Elected consul for 78, with Pompey's support, he agitated—perhaps even before Sulla's death—for the overthrow of his constitution, against the opposition of his colleague Catulus (q.v. 2). Given Gaul as a province, he held Cisalpine through his legate Brutus (q.v. 4), stirred up trouble in Transalpine, and made contact with Sertorius (whom his supporters later joined) in Spain, then marched on Rome (77), where the emergency decree was passed. But lacking experience of command, he was defeated by Catulus and fled to Sardinia, where he was defeated by Triarius (q.v.) and died (we are told) of grief over his divorce (Pliny, *HN* 7. 122). The first to realize the resources and strategic importance of Gaul, he lacked tactical ability to match his strategic grasp, but showed the way to others. Caesar watched him with interest and later secured an amnesty for his supporters (Suet. *Jul.* 3; 5).

LEPIDUS (3), **MARCUS AEMILIUS** (*PW* 73), the Triumvir, younger son of (2), as praetor in 49 B.C. supported Caesar, then governed Nearer Spain (48–47), intervening in the dissensions in Further Spain (see **CASSIUS** 5) and returning to triumph. He was consul (46) and Caesar's *magister equitum* (46–44). On Caesar's death he gave armed support to Antony, who in return contrived his appointment as *pontifex maximus* in Caesar's place. He then left to govern the provinces assigned him by Caesar, Gallia Narbonensis and Nearer Spain. When, after the war of Mutina, Antony retreated into Gaul, Lepidus assured Cicero of his loyalty to the Republic but on 29 May 43 joined forces with Antony and was declared a public enemy by the Senate. At Bononia in October he planned the Triumvirate with Antony and Octavian, accepting Further Spain with his existing provinces as his share of the Empire; and demanding (or conceding) the proscription of his brother Paullus (q.v. 3). After triumphing again 'ex Hispania' he held a second consulship (42) and took charge of Rome and Italy during the campaign of Philippi. After their victory his colleagues deprived him of his provinces, on the pretext of a rumour of collusion between him and Sextus Pompeius, but nothing serious was proved, and after helping Octavian ineffectively in the Perusine War he was allowed to take over Africa instead (40). He played an independent part in the campaign of 36 against Sextus, and laid claim to Sicily, but Octavian won over his army and compelled him to leave the Triumvirate and retire into private life, retaining only his office of *pontifex maximus*. Lepidus, who died in 13 or 12 B.C., lacked the character and energy to use the opportunities which high birth and Caesar's favour placed in his way. His wife Junia was a sister of M. Brutus.

Cic. *Letters and Philippics*, Vell. Pat. 2. 63 7. 80; Plut. *Ant.*; App. *B.Civ.* 2. 5, Cass. Dio 41. 54. Syme, *Rom. Rev.*, see index. G. W. R.; T. J. C.

LEPIDUS (4), **MARCUS AEMILIUS** (*PW* 74), son of (3) above, plotted in 30 B.C. to assassinate Octavian on his return to Rome, but was detected by Maecenas and executed. His wife Servilia, perhaps the Servilia once betrothed to Octavian, committed suicide. Either he or another son of the Triumvir had earlier been promised to Antonia (1).

Münzer, *Röm. Adelsparteien*, 360 f.; Syme, *Rom. Rev.*, see index; E. Hohl, *W. ü. z. b. Jahrb.* 1948, 107 ff. T. J. C.

LEPIDUS (5), **MARCUS AEMILIUS** (*PW* 75), younger son of Paullus (4) and Cornelia, was consul in A.D. 6, then

served under Tiberius in Pannonia, receiving *ornamenta triumphalia* in 9. In 14 he was governor of Nearer Spain; in 21 he prudently declined the proconsulship of Africa in favour of Blaesus (q.v. 2), uncle of Sejanus; later (probably 26–8) he was proconsul of Asia. In 22 he repaired the Basilica Aemilia. He died in 33. Augustus, on his death-bed, had adjudged him 'capacem (imperii) sed uspernantem', Tac. *Ann.* 1. 13 and he is one of the more prominent senators of Tiberius' reign; Tacitus stresses his wisdom and moderation. His children included Lepida, who married Drusus (q.v. 5), helped to bring about his fall in 30, and committed suicide when accused of adultery in 36; perhaps also Lepida, wife of Galba (1), and Marcus, last of the family, who married Drusilla (q.v.), was promised the succession by Gaius, but conspired against him in 39 with Lentulus (q.v. 9) and was executed.

R. Syme, *JRS* 1955, 22 ff. (reading 'Manium' for 'Marcum' in Tac. *Ann.* 1. 32, and keeping the MS. 'M.' in 1. 13, 3. 11, 15, 50; 4. 20, 56, 6. 5, 27). T. J. C.

LEPIDUS (6), **MANIUS AEMILIUS** (*PW* 63), probably a grandson of the Triumvir and also of Faustus Sulla (3) and Pompeia (cf. Tac. *Ann.* 3. 22), was consul in A.D. 11, defended his sister Lepida in 20, and was appointed proconsul of Asia (21/2) despite objections on the score of his poverty and inactive disposition.

R. Syme (cited under the preceding).

LESBONAX. The author of three extant Atticizing declamations, set in fifth- and fourth-century B.C. situations: perhaps to be identified with the writer of *μελέται* and *ἐρωτικά ἐπιστολάι* mentioned in the scholia to [Lucian] *Περί ὀρχήσεως* 19. Probable date: second century A.D.

TEXT Bekker, *Oratores Attici* (1823–8); Kiehr (1907) Norden, *Ant. Kunstpr.* 390. D. A. R.

LESBOS, the largest of the islands off the coast of Asia Minor, lying athwart the entrance to the Gulf of Adramyttium, roughly triangular in shape, but with two landlocked bays cutting deep into the hills on the southern side. The fertile soil and mild climate supported five cities: Mytilene (overshadowing but never completely dominating her neighbours), Methymna, Eresus, Antissa, and Pyrrha. An important Bronze-Age settlement at Therma has close connexions with Troy. The Aeolian immigrants, who formed the chief element in the population, turned to the sea, as well as to agriculture, for a livelihood, as their secondary colonization on the coast of the Troad and their participation in founding the Hellenium at Naucratis show. This widening of horizons must have helped to stimulate the intense intellectual and cultural life among the aristocratic classes during the Golden Age of the late seventh and early sixth centuries B.C., represented by the poets Arion, Sappho, and Alcaeus, and the statesman Pittacus, and the construction of 'Aeolic' (or 'proto-Ionic') temples at Mytilene and Nape. Lesbos later had a distinguished philosophical tradition: Theophrastus came from Eresus, and in the fourth century Aristotle and Epicurus, in the first century Cratippus, resided for a time on the island. See also MYTILENE.

P.-K. *GL* iv. E I, *IG* xii. 2, Longus, *Daphnis and Chloe* (a vivid picture of life on Lesbos in the third century A.D.); R. Koldewey, *Die ant. Baureste der Insel Lesbos* (1890); W. Lamb, *Therma* (1936). D. E. W. W., J. B.

LESCHES of Mytilene (? 7th c. B.C.), epic poet, to whom the *Ilias Parva* is almost universally attributed. See EPIC CYCLE.

EGF 3, 36–48.

LETO (Λητώ, Lat. Latona), a Titaness, daughter of Cocus and Phoebe, 'gentle to men and to the deathless

gods' (Hes. *Theog.* 404 ff.). She is one of the few Titans who have a cult in historical times, although generally it is together with her children (see Sauer in Roscher's *Lexikon* ii. 1966 ff.), and some of her temples had pious legends connected with them, see Semon of Delos in Athenaeus, 614 a (the Letoön on Delos), Nicander in Ant. Lib. 17, cf. LEUCIPPUS (2) (the Letoön at Phaeustus). The etymology of her name is quite obscure, though Wilamowitz-Moellendorf (cf. APOLLO) would connect it with Lycian *lada*, 'woman' (*Apollo* (1908), 31). It is almost certainly not Greek. (For her cult in Lycia, cf. W. II. Buckler, *JHS* 1935, 78; in Phrygia, L. Robert, *Villes d'Asie mineure* (1935), 128.) But her chief importance is as mother of Apollo and Artemis (qq.v. and see DELOS). Homer (*Il.* 24. 605 ff.) and Hesiod (*Theog.* 918-20) merely say she bore them and give no details; we may conjecture that many famous shrines of one or both deities claimed to be the birthplace, but for some reason, perhaps not unconnected with the great 'Homeric' hymn to the Delian Apollo, Delos imposed its claims on nearly the whole Greek world, other legends, such as those of Tegyra in Boeotia (Plut. *Pel.* 16), Zoster in Attica (Semon in Steph. Byz. 611, 5 Meineke, cf. Paus. 1. 31. 1), and Ephesus (Iac. *Ann.* 3. 61), fading into obscurity.

According to the Hymn Leto was delivered of Apollo (but not Artemis, 16) 'leaning against Cynthus' mountain' in Delos (26; her gigantic size needed this huge prop), or more usually described as grasping the sacred palm-tree (116 with Allen, Halliday, and Sykes' note). None of the other islands dared to let so terrible a god be born in it, and even Delos was afraid till reassured by an oath of Leto (83 ff.) that Apollo would make his temple there. But Leto was in labour nine days and nights, because Hera would not let Eleithyia go to her (97 ff.) till the other goddesses sent her word and promised her a great fee; she then came without Hera's knowledge or consent and Leto was delivered. Callimachus in his fourth Hymn follows a somewhat different account; Hera forbade any land to afford Leto refuge and set Ares and Iris to see that they did not, but at last Delos ventured to disobey (202 f.), and was forgiven because she was once the nymph Asteria (q.v.). A later story (*Ilyg. Fab.* 160. 3) makes Poseidon overreach Hera; the waves were washing over Delos, therefore it was not land.

A curious legend is preserved by Aristotle (*Hist. An.* 580a15 ff.). Leto, as mother of the 'wolf-god' (cf. APOLLO), took the form of a she-wolf to deceive Hera, and so journeyed from the Hyperborean country to Delos in twelve days. Therefore there are but twelve days of the year in which she-wolves bring forth.

Leto appears with Apollo and Artemis already in the art of the early seventh century (bronze statuettes from Dreros in Crete), and they are commonly shown together from the later sixth. Two groups of the three are recorded by Praxiteles, as well as a statue of Leto alone.

Besides the literature cited in the text see the art. 'Leto' in *PW* (Suppl. v. 555), and Nilsson, *GGR* i² 500, 562.

LETTERS, GREEK. For the sake of convenience Greek letters may be roughly divided into six classes:

(1) Private letters, almost exclusively represented by papyri. These are valuable both as evidence of the language commonly spoken and written in Hellenistic and later periods and as documents illustrating contemporary social and economic conditions in Egypt. Of the great number of those already published many have now been re-edited in separate collections.

(2) Official letters by means of which representatives of the government communicated with each other or with their subjects and subordinates. The most interesting of

these are to be found in the official correspondence of the Hellenistic kings.

(3) 'Literary' letters contained in the authentic collections of the great fourth-century epistolographers, e.g. Julian, Libanius, St. Basil, St. Gregory of Nazianzus, St. John Chrysostom, and Synesius, many written with a view to subsequent publication.

(4) Letters employed as a medium for the exposition of ideas, e.g. on philosophy by Epicurus, on science by Archimedes and Eratosthenes, on literary criticism by Dionysius of Halicarnassus; the epistles of St. Paul belong to this class, as do the long 'hortatory' letters of Isocrates (*Or.* 2 and 3), at least from one point of view.

(5) Letters, for the most part spurious, attributed to persons of note, which owe their survival to the general interest of their contents or the reputations of their supposed authors. The spurious letters are sometimes real forgeries; more often they are school exercises or inventions intended to illustrate the characters of famous men. The deliberate forgeries belong for the most part to the last two centuries B.C. and may have been partly due to the eagerness of the Attalids and Pergamids to acquire additions to their libraries; the second sort is chiefly the product of the period 100 B.C.-A.D. 200, amongst them those of Anacharsis (which imposed on Cicero), Hippocrates, and Diogenes the Cynic. The famous letters of Phalaris, exposed by Bentley after a long and celebrated controversy, may be as late as fifth century A.D.

The most important surviving collections are those of Isocrates, Plato, and Demosthenes, some at least of these have strong claims to authenticity, the majority are almost certainly spurious. We know also of collections by Theophrastus, Epicurus, Arcesilaus, and Carneades, the practice of collecting letters being specially characteristic of philosophical schools; those of Aristotle, even if the six printed in Hercher are not genuine, were much admired in antiquity.

(6) 'Imaginative' letters, designed to entertain readers by recreating the lives and manners of real or imaginary persons of a bygone age. The master of this style is Alciphron but also worthy of mention are Aelian, Aristacetus, and Philostratus, who in this respect at least may be said to have anticipated the historical novel and such works as Richardson's *Pamela* and *Clarissa* and Rousseau's *La Nouvelle Héloïse*.

The theory of epistolography first began to interest the Greeks themselves in the Hellenistic period. The earliest name known to us in this connexion is that of Artemon, who is said to have edited the letters of Aristotle but cannot be identified with any certainty; others who expounded the subject were Apollonius of Tyana, Dionysius and Theon of Alexandria, Philostratus of Lemnos, and St. Gregory of Nazianzus. Practical handbooks which have survived are the *Τύποι ἐπιστολικοί* of Demetrius, written as an excursus to his *Περὶ ἐρμηνείας* and the *Περὶ ἐπιστολικαίου χαρακτήρος* of Proclus, which is probably an earlier edition of the *Ἐπιστολικάιοι χαρακτήρες* attributed to Libanius. It can be argued that it is possible to detect a certain degree of continuity of form and even of phraseology throughout the history of Greek letters, whatever the class into which they happen to fall.

PRIVATE AND OFFICIAL LETTERS. D. Blooke, *Private Letters, Pagan and Christian* (1929), W. Dollstadt, *Griechische Papyriusbriefe in gebildeter Sprache* (1934), G. Ghedini, *Lettere cristiane* (1923) (cf. Cavassini, 'Lettere cristiane', *Aegyptus* 1954, 266 ff.) R. Herzog, 'Griechische Königshriefe', *Hermes* 1930, 455 ff.; A. S. Hunt and C. Edgar, *Select Papyri* i (Loeb, 1952), B. Olsson, *Papyriusbriefe aus der frühesten Römerzeit* (1925), A. Salomonius, *Zur Sprache der griechischen Papyriusbriefe* (1927), C. B. Welles, *Royal Correspondence in the Hellenistic Period* (1934); S. Witkowski, *Epistulae privatae graecae* (Teubner, 1911).

LITERARY AND OTHER LETTERS. R. Bentley, *A Dissertation upon the Epistles of Phalaris* (1699); R. Blass, *Die attische Heraklidenzeit* (1887-98), pt. iii, 430 ff. (Demosthenes); R. Hackforth, *The Authorship of the Platonic Epistles* (1913); J. Harward, *The Platonic Epistles*

II.* (1910); F. Ziemann, *De epistularum graecarum formulae sollemnibus quaestiones selectae* (1910) R. II., B. R. R.

LETTERS, LATIN. Letter-writing was, next to Satire, Rome's most distinctive legacy to the world's literature. In the self-contained communities of independent Greece there was comparatively little need or scope for correspondence; but as Rome became the hub of the Mediterranean world written communication gained in importance. Landowners visiting their estates in Italy, senators on military or administrative service in the provinces, merchants and tax-farmers, students and exiles, all needed to be kept in touch with the capital, and every traveller went laden with letters he had been asked to deliver, often in return for letters of introduction to influential persons (*epistulae commendaticiae*), such as are found among Cicero's extant correspondence (*Fam.* 13). Men of wealth and position in Cicero's time had among their slaves couriers (*tabellarii*) who could cover fifty Roman miles a day, and the companies of tax-farmers had their own postal service (*publicanorum tabellarii*). Later Augustus, in order to maintain close contact with his provincial governors, instituted a system of post-couriers along the main routes of the Empire, but there was still no organized postal system for private correspondence (see *POSTAL SERVICE*).

2. Letters were normally written with a reed pen (*calamus*) and ink (*atramentum*) on papyrus (*charta*). Pages were pasted together, as in the case of books, to form a roll which was tied with thread and sealed. Notes written off-hand to persons at no great distance were sometimes scratched with a *stilus* on wax-covered folding tablets (*codicilli*); the recipient could erase the message and use the same tablets for his reply (*Cic. Fam.* 6. 18. 1; Pliny, *Ep.* 6. 16. 8). To Atticus, his most intimate friend, Cicero generally wrote in his own hand ('suo chirographo') unless for some special reason (*Att.* 2. 23. 1, 8. 13. 1); but it was usual for persons of rank to employ an amanuensis (*librarius* or *servus ab epistulis*). Cicero's secretary, Tiro, appears to have kept copies of letters dictated to him (*Fam.* 7. 25. 1), and to have pasted together in rolls (*volumina*) those which Cicero thought best worth keeping. It is no doubt to this practice that we owe the preservation of Cicero's *Epistulae ad Familiares*, though his intention, expressed in 44 B.C. (*Att.* 16. 5. 5), of revising and publishing a selection of letters remained unfulfilled. His letters to Atticus and to his brother Quintus were preserved by their recipients, and the former probably remained unpublished for a century after his death (see *CICERO* 1).

3. Cicero himself (*Fam.* 2. 4) classified letters under three heads, news-letter, 'genus familiare et iocosum', and 'genus seuerum et graue'. To the first of these categories belong his letters to Atticus, which, more than any other document of antiquity, show history in the making, and discuss with absolute frankness all that is in the writer's mind; also the vivid and somewhat cynical letters of M. Caelius Rufus, seventeen of which are preserved (*Fam.* 8). The second type is well represented by Cicero's letters to C. Trebatius Testa, M. Fadius Gallus,

and L. Papirius Pactus (*Fam.* 7. 6-27, 9. 15-26); the third perhaps best of all by the letter of condolence addressed to Cicero, on the death of his daughter Tullia, by Sulpicius Rufus (*Fam.* 4. 5). This last, together with such letters as those in which Cicero asks the historian Lucceius to immortalize his consulship (*Fam.* 5. 12), or expresses his distaste for the *Ludi* exhibited by Pompey in 55 B.C. (*Fam.* 7. 1), may be taken as representing the type of letter which was to serve as a model for the Younger Pliny. Close on a hundred letters from other correspondents are preserved along with Cicero's; of these perhaps the most distinctive in character and style are those of Q. Metellus Celer (*Fam.* 5. 1), M. Cato (*Fam.* 15. 5), M. Antonius (*Att.* 10. 8 a), P. Vatinius (*Fam.* 5. 9-10), C. Asinius Pollio (*Fam.* 10. 31-3), and C. Matius (*Fam.* 11. 28), and the letter in which Cicero's son, writing to Tiro, gives a glimpse of student life at Athens (*Fam.* 16. 21).

4. The correspondence of Augustus was extant in the time of Suetonius (*Aug.* 71, 76; *Claud.* 4, etc.), and Macrobius (*Sat.* 1. 24. 11) quotes a letter of Virgil. But the Augustan age has left us only the verse epistles of Horace and Ovid, and from the Claudian and Flavian dynasties we possess only the *Epistulae Morales* of the Younger Seneca (q.v.). With these authors the epistolary form is a mere literary convention, and although Seneca was undoubtedly influenced by the *Epistulae ad Atticum*, his letters to Lucilius are essentially the ramblings of a philosopher; their ancestry should be sought rather in the epistles of Epicurus.

5. That life under the Empire afforded neither the material nor the freedom of expression for letter-writing in the true Ciceronian tradition is evident even when we come to the second great collection of Latin letters, published under the liberal rule of Trajan. The letters of Pliny the Younger (q.v.) resemble Cicero's in that they cover a wide range of topics and reflect the life, interests, and personality of their author; but they do so deliberately and selectively. Their writing belongs, not to the urgent business of living, but to the tranquil detachment of literature. The tenth book, consisting of letters exchanged between a responsible official and his emperor, stands alone as representing the practical side of Pliny's activities. Certain of Statius' *Silvae* are poetical epistles.

6. The correspondence of Fronto (q.v.) with Marcus Aurelius and others owes nothing to the literary tradition of Seneca or Pliny. Much of its subject-matter is purely academic, but the affectionate exchanges of gossip between master and pupil have something of the unselfconscious intimacy of Cicero's letters to Atticus, and their style and diction, quaintly compounded of colloquialism and pedantry, add both to their interest and to their charm.

7. The literary epistle reappears in the fourth century with Symmachus, last of the pagan prose-writers, and Ausonius, first of the Christian poets, some of whose *Epistulae* are in prose. In a long list of letter-writers extending through the two following centuries the outstanding names are those of Ambrose, Jerome, Paulinus of Nola, Augustine, Sidonius Apollinaris, and Cassiodorus.

Cf. H. Peter, *Der Brief in d. röm. Lit.* (1901); Sykutris, *PW*, Suppl. v. s.v. *Epistolographie*; D. R. Shackleton Bailey, *Cicero's Letters to Atticus* (1965), 59 ff. R. G. C. L.

LEUCAS, an island of the Ionian Sea, opposite the coast of Acarnania. It derived its name from the white limestone cliffs on its west coast. Its south-west promontory, C. Leucatas, has a sheer drop of 2,000 ft.; suspected criminals were hurled from it, and if they survived the ordeal were rescued in boats (Strabo 10. 452). The shallow waters between its north-east coast and the mainland were liable to be closed to navigation

by the formation of a sand-bar. The early Corinthian colonists cut through this spit (Strabo, *ibid.*), but in the fifth century ships had to be hauled across it (Thuc. 3. 81, 4. 8).

Leucas took its culture from the mainland in prehistoric times, but it was subject also to occasional influences from the north, which are indicated by the occurrence of 'barbotine' pottery late in the Early Neolithic period and by interesting groups of tombs under tumuli of Early Helladic and Middle Helladic date. In the Mycenaean period it was on the fringe of the Greek world and is to be identified with the Homeric Dulichium rather than, as Dörpfeld argued, with the Homeric Ithaca. The history of the island in classical times begins with the arrival of Corinthian colonists c. 625 B.C., who soon dominated the native population and remained loyal to their mother-city.

In the Persian Wars Leucas furnished contingents to the Greek fleet at Salamis and to the army at Plataea, and gave active assistance to Corinth in the Peloponnesian War. After a brief alliance with Athens against Philip of Macedon it passed into the hands of various Hellenistic rulers (Cassander, Agathocles, Pyrrhus), but c. 250 it joined the Acarnanian Confederacy, of which it became the capital. The Romans besieged and captured it in 197; in 167 they detached it from Acarnania and constituted it a free city.

M. C., N. G. L. II.

LEUCE COME (Λευκή Κώμη, 'White Village'), on the Red Sea, probably *Sherm Welj*, possibly *El Haura*. Nabataean Arabs here received in small ships Eastern wares for Petra and the West. A due (25 per cent; *Peripl. M. Rubr.* 19) was levied there (perhaps under Roman control: in 25 B.C. Aelius Gallus, on an expedition to S. Arabia, landed there). It seems to have declined after Nabataea became a Roman province (A.D. 106). It may be Ptolemy's *Αὔρα*.

Strabo 16, 780 i; *Peripl. M. Rubr.* 19; *Plut. Ant.* 51; *Cosmas* 2, 143; Warrington, *Indian Commerce*, 16, 334 f.; Thomson, *Hist. Anc. Geog.* 284. E. H. W.

LEUCIPPUS, 'person who keeps white horses', hence 'rich man, noble'. Name of fifteen mythological characters, see Stoll in Roscher's *Lexikon*, s.v., but especially (1) father of Hilaria and Phoebe, cf. *DIOSCURI*; (2) a young Cretan, turned from a girl into a boy by a miracle of Leto (*Ant. Lib.* 17).

LEUCIPPUS (3), originator of the atomic theory in the second half of the fifth century B.C. His birthplace is reported to be Elea, Abdera, or Miletus (D.L. 9. 30), but all of these may be inferences from affinities between his work and that of philosophers known to come from these places; Miletus is slightly more probable than the others. He wrote later than Parmenides, and almost certainly later than Zeno and Melissus. Epicurus is said to have denied his existence (D.L. 10. 13), but this is not to be taken seriously, in the face of Aristotle's frequent mentions of him.

WORKS. Of the Democritean works collected by Thrasyllus (D.L. 9. 45-9), two are sometimes attributed to Leucippus: *The Great World System* (*Μέγας διάκοσμος*), and *On Mind*. Both attributions appear to stem from Theophrastus and may well be right.

For the atomic theory, see *DEMOCRITUS* of Abdera. Various attempts have been made to separate Leucippus' contribution from that of his more prolific pupil Democritus, but none is sufficiently convincing.

ANCIENT SOURCES. Diels-Kranz, *Vorsokr.*¹¹
MODERN LITERATURE. See *DEMOCRITUS*.

D. J. F.

LEUCON, writer of Old Comedy who lived during the Peloponnesian War (*Suda*). In his *Φράγες* he attacked Hyperbolus (fr. 1)—probably as a *βάββαρος* who had no clansmen (*φράγες*).

FCG ii. 749-50; *CAF* i. 703-4.

LEUCOS LIMEN (Λευκὸς Λιμὴν, 'White Haven'), *Kosseir*, Egyptian port on the Red Sea, was connected with Coptus on the Nile by a track with stations and intervisible beacons, but was less important in Oriental trade than Berenice and Myos Hormos (qq.v.).

LEUCOTHEA (probably 'white goddess', perhaps 'runner on the white [foam]'), a sea-goddess identified early (*Od.* 5. 333-5) with Ino daughter of Cadmus, for reasons unknown. For her story see *ATHAMAS*. It is an old suggestion (see Farnell, *Cults* ii. 637) that she has Semitic connexions (through the 'Phoenician' Cadmus) and her son Melicertes is Melqart; but this is unproved and unnecessary, for his name may be Greek, 'Honey-cutter', i.e. a minor deity of bee-keeping. He is also called, or identified with, Palaemon ('the Wrestler'), again for uncertain reasons. Children are said to have been sacrificed to him (schol. *Lycoph.* 229).

Extrem in *PW*, s.v.; Farnell, *Hero-Cults*, 35 ff.

H. J. R.

LEX (1) (cf. *hgare*, to bind), signifies an agreement binding on the contracting parties. *Lex privata* means a contract signed by private individuals. *Lex publica* is an agreement between two parties of whom at least one is invested with magisterial authority and represents the State. Two types of *lex publica* must be distinguished according to the procedure followed and the authority enacting the law: a *lex rogata* results from the co-operation of the magistrate and the people, a *lex data* proceeds from the unilateral action of the magistrate. The *leges regiae*, of which the extant fragments are in all likelihood forgeries of the Republican age, were probably *leges datae*, but the laws of the early Republic were indisputably *leges rogatae*, despite the small share of the lower classes in legislation. *Plebiscita*, too, were formally in the same category as *leges rogatae*, since they were passed in assemblies summoned and presided over by a plebeian magistrate, although in practice they could hardly be regarded as the equivalent of laws until the right of the plebeians to legislate for the whole community was recognized. After the *Lex Hortensia* (c. 287 B.C.) (see *HORTENSIVS* 1) the terms *lex* and *plebiscitum* were used indiscriminately in common parlance, although the jurists continued to define the *lex* as a contract to which the entire *populus*, inclusive of patricians, was party (see *PLEBISCITUM*). The *lex rogata* was divided into four categories: (1) a *lex perfecta* invalidated an act prohibited by the terms of the law itself; (2) a *lex minus quam perfecta* penalized any person performing an act which the law forbade, but did not invalidate; (3) a *lex plus quam perfecta* both invalidated an act which it prohibited and penalized the offender; (4) a *lex imperfecta* neither invalidated an act which it prohibited nor punished the offender.

2. In order to be valid a *lex rogata* had to pass through three stages: (1) *legislatio* or public announcement by a magistrate of the draft of the *lex* (*promulgatio*), and the summoning by him of an assembly to debate it at a date not earlier than a *trinundinum* (q.v.) after the *promulgatio*; (2) *rogatio*, or the polling in the assembly, where debate, not amendment, was allowed; (3) *publicatio*, or the publication of the Bill in due form and time. Copies of laws enacted had to be kept in the *aerarium* (q.v.), engraved on wooden, and later bronze, tablets. Any enactment could be legally abrogated by subsequent legislation.

3. A *lex data* was issued by a Roman magistrate, and depended on his authority only, provided that senatorial

approval was previously secured. It generally concerned either aliens (individuals and communities), or statutes issued by the Roman Republic, which the new law was intended to amend. In Republican times *leges datae* were mainly concerned with provincial administration and municipal statutes. They were issued by magistrates *cum imperio*, appointed to organize a province, or to reform its administration (see *PROVINCIA*), or as municipal statutes granted (also by a magistrate *cum imperio*) to cities both inside and outside Italy.

4. The unlimited power conferred upon the dictator or on the triumvirs *rei publicae constituendae* enabled them to legislate without the people's co-operation or approval. Moreover, they were exempted from the obligations and restrictions of ordinary legislation. Their exceptional legislative measures therefore mark an intermediary stage between Republican and Imperial legislation. The theory and practice of the Hellenistic monarchies, and the political philosophy of Cicero and his age, tended to make belief in leaders and emperors as the living source of law widespread. Consequently the emperors were regarded as *legibus soluti* and as alone competent to give laws to their subjects. From Tiberius onwards the *comitia* were seldom summoned for legislation (the last known law was passed under Nerva), and the distinction between *lex data* and *lex rogata* thus ended. The imperial constitutions finally covered all the field originally covered by the *leges datae* (grants of citizenship, municipal statutes, founding of new cities, enfranchisement of slaves, etc.).

5. *Lex* also indicated a contract between the State and a private individual (e.g. a middleman) to whom the State leased the exploitation of public land (e.g. a mine, estate), or the collection of the provincial taxes, etc. Similarly the regulations affecting a locality, or building, reputed to be holy (e.g. a wood, common, temple, altar) were termed *leges*.

Mommsen, *Röm. Staatsr.* iii. 308 ff.; É. Cuq, in *Dur.-Sag.* iii. 1107 ff.; G. Barbieri and G. Tibiletti, *Dir. Epigr.* iv. 702 ff.; A. C. Johnson, P. R. Coleman-Norton, and F. C. Bourne, *Ancient Roman Statutes* (1901), transl. and commentary. P. T.

LEX (2), LEGES. Individual Roman laws are generally treated in this work under the name of the magistrate who introduced them. The following list contains cross-references and occasional explanation. For a detailed list and discussion see G. Rotondi, *Leges publicae populi Romani* (1912).

ACILIA

- (1) *de intercalando* (101 B.C.), see *GLABRIO* (1).
- (2) *de repetundis* (123 B.C.), see *GLABRIO* (2).
- (3) (*Acilia*) *Calpurnia de ambitu* (67 B.C.) imposed perpetual incapacity to hold office as a penalty for electoral corruption.

AEBUTIA

- (1) *de magistratibus extraordinariis* (? 154 B.C. or post-Gracchan) prohibited the election to an extraordinary magistracy of the man who had proposed its institution.
- (2) *de formulis (de legis actionibus)*, see *LAW AND PROCEDURE, ROMAN*, II. 4.

AELIA

- (1) *Aelia et Fufia* (c. 150 B.C.), two separate but similar laws of uncertain content. They regulated the use of auspices by magistrates, establishing or more probably confirming the right of magistrates and tribunes to obstruct the holding of all (or only legislative) assemblies through the announcement of unfavourable auspices (*obnuntiatio*). They probably forbade the holding of legislative assemblies in the interval between the announcement of consular elections and the elections themselves.

See W. F. McDonald, *JRS* 1929, 164 ff.; S. Weinstock, *JRS* 1937, 215 ff.; L. R. Taylor, *JRS* 1962, 22 ff.; G. V. Sumner, *AJPhL* 1963, 387 ff. (who dates them to 132 B.C.); A. E. Astin, *Latomus* 1964, 421 ff. (dates c. 147/6); A. K. Michels *The Calendar of the Roman Republic* (U.S.A. 1967), 94 ff.

- (2) *Aelia Sentia* (A.D. 4) regulated the manumission of slaves and completed the work begun by the *Lex Fufia Canina* (see *SLAVERY*). It also established registration of births; F. Schulz, *JRS* 1942, 78 ff.

AEMILIA of M. Aemilius Scaurus (consul 115 B.C.), of uncertain content, which concerned the distribution of freedmen among the tribes. See L. R. Taylor, *Voting Districts of R. Rep.* (1960), 141 ff.

AGRARIAE. Laws concerned with the distribution of public land (*ager publicus*, q.v.), such land being distributed in allotments to individuals or allocated to colonies of Roman citizens. Over forty agrarian laws of republican date are known, e.g. those of Flaminius and the Gracchi (qq.v.). An agrarian law of 111 B.C. has been partially preserved on a bronze tablet: see *below* under *THORIA*.

ANNALES. Laws regulating qualifications (e.g. minimum age) for magistracies. See *CURSUS HONORUM*, *VILLIUS*. Cf. A. E. Astin, *The Lex Annalis before Sulla* (1958).

ANTONIA

- (1) *de Termessibus* of a tribune C. Antonius and his colleagues (71 or 68 B.C., cf. Broughton, *MRR* i. 141) concluded an alliance between Rome and the Pisidian city of Termessus. It is partly preserved: Dessau, *ILS* 38; Riccobono, *FIRA* 135.
- (2) *leges Antoniae*, a variety of measures passed by the triumvir M. Antonius (q.v. 4), included laws to abolish dictatorship, to readjust provincial commands (*de permutatione provinciarum*), to confirm Caesar's *acta*, and to grant *provocatio* to those convicted *de maiestate* and *de vi*.

APPULEIA: various *leges* of Saturninus (q.v. 1) in 103 and 100 B.C.

AQUILA, de damno, see *LAW AND PROCEDURE, ROMAN*, I. 5

ATERNIA-TARPEIA (454 B.C.) fixed the maximum fine which magistrates could impose (Gell. II. 1).

ATINIA, de tribunis plebis in senatum legendis (before 102 B.C., possibly in 149) made tribunes regular members of the Senate (Gell. 14. 8. 2; Livy, *POxy.* 50).

AUFEIA, a tribunician (?) measure to settle Asia after the war with Aristonicus, probably 124 B.C. It was opposed by C. Gracchus.

AURELIA

- (1) *de tribunicia potestate* (75 B.C.), see *COTTA* (1).
- (2) *iudiciaria* (70 B.C.), see *COTTA* (3).

BARBIA, de praetoribus (? 181 B.C.), enacted that four and six praetors should be elected in alternate years (Livy 40. 44. 2); it was not long observed. Cf. De Sanctis, *Stor. Rom.* iv. 504 ff.

BANTINA, see *TABULA BANTINA*.

CARCILIA DIDIA (98 B.C.), see *DIDIUS* (1) and *COMITIA*.

CALPURNIA

- (1) *de repetundis* (149 B.C.) established a permanent court to try cases of extortion. Cf. W. S. Ferguson, *JRS* 1921, 86. See *REPETUNDAE* and *PISO* (1).
- (2) *de civitate sociorum* (90 B.C.), of uncertain content,

probably added two new tribes and empowered generals to grant citizenship for bravery (Sisenna, frs. 17, 120 Peter). For date and Calpurnius see Broughton, *MRR*, Suppl. 13.

- (3) *de ambitu*, see *LEX ACILIA*, no. 3, above.

CANULEIA, *de conubio patrum et plebis* (445 B.C.). See *CANULEIUS*.

CASSIA

- (1) *tabellaria* (137 B.C.), of the tribune L. Cassius Longinus, introduced vote by ballot in the *iudicia populi*, except in cases of *perduellio*. See *VOTING* and cf. *LEX COELIA* below.
- (2) a tribunician measure of 104 B.C. which expelled from the Senate men condemned or deprived of their *imperium* by the people. It was aimed at Caepio (q.v. 1).
- (3) *de plebeis in patricios adlegendis* (44 B.C.) empowered Caesar to create patricians (*Iac. Ann.* 11. 25). See *PATRICIUS*.

CENSORIAE were the conditions imposed by censors in contracts with tax-collectors (see *PUBLICANI*) and in sales and auctions when State property was alienated or leased.

CICEREA *de sponsu*, probably second century (173 B.C.?), required a creditor to state publicly, before a surety (*sponsor*) committed himself, the amount of the debt and the number of sureties. See J. Triantaphyllopoulos, *Lex Cicerea* (1957-9).

CINCIA, *de donis et muneribus* (204 B.C.), of the tribune M. Cincius Alimentus, forbade gifts which might defeat justice and certain donations above a given amount. See *ADVOCATUS*, *PATRONUS*.

CLAUDIA, *de nave senatorum* (218 B.C.). See *CLAUDIUS* (7).

CLODIAE: various *plebiscita* proposed by P. Clodius (q.v. 1), tribune in 58 B.C.

COELIA, *tabellaria* (107 B.C.), of the tribune C. Coelius Caldus, extended vote by ballot to cases of *perduellio* which had been excepted in the *Lex Cassia*.

COLONIAE GENETIVAE IULIAE or *LEX URSONENSIS*, generally considered a *lex data*, contains the charter granted by Julius Caesar to the colonia Genetiva Julia at Urso (modern *Osuna*) in southern Spain which was organized for him by Antony. Our knowledge of it derives from four bronze tablets, found in 1870-3; a few more fragments of the inscription were found about 1940. The surviving portion deals with jurisdiction, priests, games, etc. See *ILS* 6087; Riccobono, *FIRA* 177 ff.; frs. *Emerita* 1941. Bibliography, *Diz. Epigr.* iv (1957), 727 f. Translation, E. G. Hardy, *Three Spanish Charters* (1912), 7 ff.

CORNELIAE

- (1) Various *leges* passed by Sulla (q.v. 1). See also *LAW AND PROCEDURE, ROMAN*, III. 3.
- (2) Cornelia Pompeia. Laws, e.g. *de comitiis centuriatis* et *de tribunicia potestate*, carried by Sulla and his fellow consul in 88 B.C. (*App. BCiv.* 1. 59; *Livy, Ept.* 77).
- (3) Laws of Cinna (q.v. 1), consul in 87 B.C.
- (4) Measures of the tribune Cornelius (q.v. 1) in 67 B.C.

DIDIA sumptuaria (143 B.C.) extended the application of *lex Fannia* to all Italy (*Macrob. Sat.* 3. 17. 6). See also *LEX CAECILIA-DIDIA*.

DOMITIA, *de sacerdotiis* (104 B.C.) of Cn. Domitius (q.v. 3). It was abrogated by Sulla, but renewed by a *lex* of Labienus in 63 B.C.

DUODECIM TABULARUM, see *TWELVE TABLES*.

FANNIA, *sumptuaria* (161 B.C.), limited the sums to be spent on entertainments.

FLAMINIA, *agraria*. See *FLAMINIUS*.

FRUMENTARIAE, laws concerned with the distribution of grain. See *GRACCIUS* (4), *ANNOXA*, etc.

FUFIA CANINIA, *de manumissione* (2 B.C.), limited the number of slaves a master might liberate by will. Cf. *CAH* x. 432. See *SLAVERY*, § 7. See also *EX AELIA* (2) above.

GABINIA

- (1) *tabellaria* (139 B.C.) See *GABINIUS* (1).
- (2) Various *leges Gabiniae* (67 B.C.) of the tribune Gabinius (q.v. 2), which included the establishment of a command against the pirates (for Pompey), the forbidding of the lending of money to provincials in Rome, and *de senatu legatis dando*, which fixed February as the month of audience for foreign *legati* to the Senate.

GELLIA CORNELIA, of the consuls of 72 B.C., validated grants of citizenship by Pompey in Spain.

GENUCIAE, see *GENUCIUS*.

HADRIANA, see *LEX MANCIANA*.

HIERONICA was not strictly a *lex*. See *HIERON II*.

HORTENSIA, see *HORTENSIVS* (1).

ICILIA, see *ICILIUS*.

DE IMPERIO VESPASIANI (A.D. 69/70) is the name given to the content of a bronze inscription (*ILS* 244) of which only the end survives. It is part of an enactment which conferred powers on Vespasian. Although the phrasing suggests a *senatus consultum*, it is a *lex rogata*; the People who passed it into law allowed the formation of the prior *S.C.* to stand. The surviving fragment enumerates specific privileges. The problem is to deduce what the missing part contained, whether it conferred on Vespasian (a) *imperium*, i.e. is a *lex de imperio* (Ulpian records that Vespasian received his *imperium* by a *lex regia*), (b) *tribunicia potestas* (this is unlikely), (c) all his powers (the jurists of the second and third centuries conceived that all imperial power had been bestowed on Augustus by a single enactment), or (d) 'a consolidated grant of miscellaneous rights additional to those which formed the main basis of the imperial position', i.e. the right to do what Vespasian's predecessors had done by virtue of either special enactment or their own *auctoritas* (so *IL*. Last, *CAH* xi. 404 ff.). A survey of modern views is given by G. Barbieri, *Diz. Epigr.* iv (1957), 750 ff.

IUDICIARIAE were laws dealing with the organization of the courts and judicial procedure. See *QUAESTIO*.

IULIAE. It is doubtful whether certain *leges Iuliae* were enacted by Caesar or by Augustus.

- (1) *de civitate Latinis et sociis danda* (90 B.C.), see *CAESAR* (2).
- (2) *Leges* of Julius Caesar (q.v.) in 59 B.C. (*agraria*, *de publicanis Asiae*, *de actis Pompeii*, *de Ptolemaeo Aulete*, *de pecuniis repetundis* (cf. *PW* xii. 2389), *de provinciis*), and in 49-44 B.C. measures which included *de pecuniis mutuis* (to relieve debtors);

de civitate Transpadanis danda; frumentaria (reducing the number of recipients of free corn); *de collegiis* (see CLUBS, ROMAN); *iudiciaria* (see TRIBUNI AERARI); *sumptuaria*; *de maiestate* (see MAIESTAS); *de re pecuaria* (that at least one third of Italian herdsmen should be freemen); *de provinciis* (limiting provincial promagistracies to one year for ex-praetors, to two years for ex-consuls); *Lex Iulia municipalis* (so-called; also known as *Tabula Heracleensis* because a bronze tablet containing part of the law was found at Heraclea). It was probably a collection of various statutes, drafted by Caesar and later incorporated in one general bill and carried by Antony. Part of the text refers to Rome (comprising regulations for, e.g., corn supply, building, traffic), the other part to municipalities and colonies (e.g. qualifications for local magistrates and Senate). Text: *ILS* 6085; Riccobono, *FIRA* 140. Transl. E. G. Hardy, *Roman Laws and Charters* i. 136 ff. Modern views discussed by G. Barbieri, *Diz. Epigr.* iv. 725 ff.

- (3) *Leges* of Augustus included *de maiestate* (see MAIESTAS and PERDUELLIO); *de vi*; *de ambitu* (18 B.C.); excluding from office for five years men convicted of bribery; see also LAW AND PROCEDURE, ROMAN, III. 3); *de adulteris coercendis* (18 B.C.; cf. *CAH* x. 443 ff.; see ADULTERY); *de maritandis ordinibus* (18 B.C.; cf. *CAH* x. 448 ff.; see MARRIAGE); *de senatu*; *de vicesima hereditatum* (A.D. 6; levied a 5 per cent tax on legacies which was paid into the *aerarium militare*); *de magistratibus* (12 B.C.); *de collegiis* (see CLUBS, ROMAN); *de tutela*; *de iudiciis privatis* (see LAW AND PROCEDURE, ROMAN, II. 4); *de iudiciis publicis* (A.D. 7; see QUAESTIO).
- (4) *Iulia Papiria* (430 B.C.) is said to have introduced payment for fines in bronze instead of in sheep or oxen. See COINAGE (ROMAN), § 1.

IUNIA

- (1) *de peregrinis* (126 B.C.) of the tribune M. Junius Pennus, expelling non-citizens from Rome.
- (2) *de manumissione* (? 17 B.C. or A.D. 19), see LATINI IUNIANI, SI AVERY § 7.
- (3) *Iunia Licinia* (62 B.C.) ordered the deposition in the *Aerarium* of a copy of promulgated laws.
- (4) *Iunia Petronia* (A.D. 19) enacted that in trials about manumission the judgement should be for liberty if the jurors were equally divided.
- (5) *Iunia* (123 B.C.), see REPETUNDAE.

LICINIA

- (1) *sumptuaria* (between 143 and 102 B.C.).
- (2) *Licina Mucia* (95 B.C.), proposed by L. Licinius Crassus and Q. Mucius Scaevola, set up a *quaestio* on aliens who were illegally claiming to be citizens. See CRASSUS (3).
- (3) *Licinae Pompeiae*, two measures passed by Crassus and Pompey: (a) *de tribunicia potestate* (70 B.C.), which restored full competence to the tribunate, and (b) *de provincia Caesaris* (55 B.C.), which effectively prolonged Caesar's Gallic command for five more years (until ? 13 Nov. 50 or 1 March 49).
- (4) *Licinae Sextiae* (367 B.C.), see STOLO.

LIVIAE, see DRUSUS (1) and (2).

LUTATIA *de vi* (78/7 B.C.), perhaps directed against sedition and specifically in relation to Lepidus. See VIS.

MAENIA, *de patrum auctoritate* (q.v.).

MALACITANA. The grant of Latin rights to the whole of Spain by Vespasian entailed a long process of re-

organization (some 400 new charters were needed). Parts of the text of municipal charters granted (as *leges datae*) to Malaca and Salpensa were found near Malaga. They belong to c. A.D. 82-3 and contain regulations for the municipal government and constitution of the two towns. For Malaca the surviving portions concern municipal magistrates, elections, and finance, for Salpensa magistrates, manumission of slaves, and legal guardians. For text of *Lex Malacitana*, *ILS* 6089, Riccobono, *FIRA* 208 ff. Cf. E. G. Hardy, *Three Spanish Charters* (1912), 61 ff. *Lex Salpensana*, *ILS* 6088, Riccobono, 202 ff., Hardy, 83 ff.

MAMILIA

- (1) *de coniuratione Iugurthina* (109 B.C.) established a court of inquiry. See MAMILIUS (3).
- (2) *Mamilia Roscia Peducaea Allena Fabia* (Riccobono, *FIRA* 138 ff.) hardly belongs to Caesar's land legislation of 59 B.C. but is more probably a later supplement to it (55 B.C.). Its attribution to the tribune Mamilius (109 B.C.) is improbable. Cf. Broughton, *MRR* ii. 220; *Diz. Epigr.* iv. (1957), 722 f.

MANCIANA. A measure known as the *lex Manciana* of uncertain date (Flavian?) and called after a certain Mancina, either an imperial agent or a landowner. It is concerned with the administration of imperial and private estates in North Africa, conferring certain rights upon cultivators and regulating their relations with the proprietors or their agents (*conductores*). Its scope was extended by Hadrian, in the so-called *lex Hadriana*, which aimed at developing waste land by permanent tenants. Texts: Riccobono, *FIRA* 484 ff., 493 ff. Cf. Rostovtzeff, *Roman Empire*², 368 f.; R. M. Haywood in Frank, *Econ. Survey* iv. 89 ff.

MANILIA, see MANILIUS (2).

MARIA, a *lex tabellaria* introduced by C. Marius as tribune in 119 B.C., included the narrowing of gangways (*pontes*) along which voters passed, in order to reduce intimidation.

METALLI VIPASCENSIS. An ordinance for the administration of the imperial mines at Vipasca in Spain (early 2nd c. A.D.). These local rules, which were published by procurators of individual mining districts, derived from regulations sent out to the provinces from Rome where a general order (a *lex data*) had been drawn up (under Vespasian?) to regulate the exploitation of different types of mine. The inscription contains detailed instructions about leasing the mines to private contractors. A second inscription, part of a letter to the local *procurator metallorum*, transmits part of imperial rules for the actual exploitation of the mines. Texts: Riccobono, *FIRA* 502 ff., 498 ff. Cf. J. J. van Nostrand, in Frank, *Econ. Survey* iii. 167 ff.

MINUCIA, *de liberis* (before 90 B.C.), established that sons of parents who had not *conubium* should take the status of the inferior parent.

MUNATIA AEMILIA (42 B.C.) authorized the Triumvirs to grant citizenship and exemption from taxes (Riccobono, *FIRA* 310, l. 10).

OCTAVIA, *frumentaria* (? c. 120 B.C.), modified the *Lex Sempronia frumentaria* by raising the prices.

OGULNIA, see OGULNIUS.

OPPIA, see OPIUS (1).

ORCHIA, *sumptuaria* (182 B.C.), limited the number of guests at entertainments.

OVINIA, *see* OVINIUS.

PAPIA (65 B.C.) was designed to stop illegal exercise of citizen rights by expelling from Rome all foreigners who resided outside Italy.

Papia Poppaea (A.D. 9) completed the *Lex Iulia de maritandis ordinibus*.

PAPIRIA

- (1) *tabellaria* (131 B.C.), of Carbo (q.v. 1).
- (2) *semunciaris* (89 B.C.) of the tribune C. Papirius Carbo, made the *as* semiuncial.

PETRONIA

- (1) *de praefectis iure dicundo* (? Augustan) provided for the appointment of *praefecti* in municipalities when regular magistrates were lacking.
- (2) *Petronia* (? A.D. 61), forbade masters arbitrarily to send their slaves to fight wild beasts.

PINARIA FURIA (472 B.C.) regulated the quadrennial period of intercalation.

PLAETORIA, protected minors from fraud (c. 193-192 B.C.), *see* GUARDIANSHIP.

PLAUTIA

- (1) *iudiciaria* (89 B.C.), *see* PLAUTIUS (1) and QUÆSTIO.
- (2) *de vi* (between 78 and 63 B.C.), *see* *vis*.
- (3) *de restituta Lepidanorum*, restored citizenship to the followers of Lepidus. For the date (70 B.C.?) *see* Broughton, *MRR* II. 130.
- (4) *Plautia Papiria* (89 B.C.), *see* PLAUTIUS (1).

POETELIA, *see* POETELIUS.

POMPEIA

- (1) *de Transpadanis* (89 B.C.). *See* POMPEIUS (3) STRABO.
- (2) various *leges* of Pompeius Magnus, which included *de parricidio* (q.v.); *iudiciaria* (55 B.C.?) limiting the magistrate in the choice of *iudices*; *de vi* (52 B.C., simplifying the procedure and increasing the penalty of the *lex Plautia*); *de ambitu* (52); *de provinciis* (52, prescribing a five-year interval between a magistracy and a provincial command); *de iure magistratuum* (52, renewing the obligation for candidates to register in person). *See also* LEGES LICINIÆ POMPEIÆ, *above*.

PORCIAE, *de provocazione* or *de tergo civium*. Three laws—*see* A. H. McDonald, *JRS* 1944, 19.

- (1) The tribune P. Porcius Laeca extended the right of *provocatio* in capital cases to Roman citizens in Italy and the provinces (199 B.C.).
- (2) M. Porcius Cato, as praetor (198) or less probably as consul (195), prohibited the scourging of citizens without appeal.
- (3) Military officers were deprived of the right of summary execution by the consul L. Porcius Licinus (184) or more probably later (c. 150-135).

PUBLIIAE, *see* PUBLILIUS (1) and (2) and PATRUM AUCTORITAS.

PUPIA, *de senatu diebus comitialibus non habendo*. *See* SENATUS, § 1 b.

QUINCTIA: proposed by T. Quinctius Crispinus, consul 9 B.C., for the preservation of aqueducts (Riccobono, *FIRA* 152 ff.).

REMMIA, *see* LIBEL § 3.

REPETUNDARUM, *see* REPETUNDÆ.

ROMANÆ BARBARORUM are codes promulgated by Germanic kings in the territory of the former Western Roman Empire where they established themselves. Thus the *Lex Romana Visigothorum* was promulgated in A.D. 506 by Alaric II for the use of his

Roman subjects, and the *Lex Rom. Burgundionum* (c. 500) for Burgundian and Roman subjects of King Gundobad.

ROSCIA

- (1) *theatralis* (67 B.C.), *see* ROSCIUS (2).
- (2) *de civitate Transpadanorum* (49 B.C.) mentioned in *Tabula Atestina*; its content is uncertain (*see* LEX RUBRIA (2), below).

RUBRIA

- (1) A bill to found a colony at Carthage carried by a tribune Rubrius in 123 or 122 B.C. The date is controversial; *see* G. Tibiletti, *Athenaeum* 1953, 5 ff.; E. Badian, *AJPhil.* 1954, 374 ff. and *Illst.* 1962, 206. An attempt to repeal it in 121 led to disorder and C. Gracchus' death; it was repealed soon afterwards.
- (2) A *plebiscitum* mentioned twice in, and usually (but not universally) identified with, a *lex de Gallia Cisalpina* which is partly preserved on a bronze tablet found at Veleia near Piacenza: Riccobono, *FIRA* 169 ff. It belongs to the years 49-42 B.C. and deals with the conduct of a variety of civil cases in the courts of Cisalpine Gaul. *See* E. G. Hardy, *Six Roman Laws* (1911), 110 ff.; *Diz. Epigr.* iv. 730; M. W. Frederiksen, *JRS* 1964, 129 ff. It is uncertain whether another fragment found at Ateste, the so-called *Tabula Atestina* (Riccobono, *FIRA* 176 ff.), is part of the same law. *See* *Diz. Epigr.* iv. 723 f.

RUFRENA, probably 42 B.C., enacted the setting up of statues to the dead Julius Caesar, Divus Iulius, throughout Italy. *See* *ILS* 73.

RUPILIAE, *de iure Siculorum, de re frumentaria*, etc., were *leges datae* of the proconsul P. Rupilius, regulating the condition of Sicily in 171 B.C.

SACRATAE were laws which, if violated, made the offender *sacer*, an outlaw. Thus the sacrosanctity of the tribuni plebis (q.v.) was upheld.

SAENIA, *see* PATRICIUS.

SALPENSANA, *see* LEX MALACITANA.

SATURAE (*per saturam*) were statutes which dealt with varied subject-matter in one bill. They were forbidden by the *lex Caecilia Didia*: *see* DIDIUS (1).

SCRIBONIAE, *rogationes* of Curio (q.v. 2), tribune 50 B.C.

SEMPRONIAE of Tiberius and Gaius Gracchus. *See* GRACCHUS (3) and (4).

Sempronia de pecunia credita (193 B.C.), of M. Sempronius Tuditanus, extended to *socii* and the *nomen Latinum* the laws about loans (Livy 35. 7).

SERVILIA

- (1) *iudiciaria*, *see* CAEPIO (1).
- (2) *de repetundis*, *see* GLAUCIA.
- (3) *rogatio Servilia agraria*, *see* RULLUS.

SULPICIAE of Sulpicius (q.v. 1) Rufus (88 B.C.).

TABELLARIAE were laws dealing with voting in the popular assemblies with tablets (*tabellae*). *See* LEX CASSIA, GABINIA, MARIA, PAPIRIA.

TARENTINA. A municipal charter (*lex data*) of Tarentum, dating between 89 and 62 B.C. The part preserved in an inscription (Riccobono, *FIRA* 166 ff.) gives provisions about the responsibilities of local magistrates, building regulations, etc.

TARENTINUM (FRAGMENTUM) *de repetundis*. The fragment of a law found at Tarentum and published in 1947

(*Epigraphica* 1947, 3 ff., 1948, 159). It has been identified with the law of Servilius Glaucia (e.g. by Piganiol) or of Servilius Caepio (by Tibiletti, *Athenaeum* 1953, 38 ff.), but the question remains open.

TERENTIA

- (1) *de libertinorum liberis* (189 B.C.), see CULLEO.
- (2) *Terentia Cassia frumentaria* (73 B.C.), see LUCULLUS (3).

THORIA, agraria. Sp. Thorius was, according to Appian (*BCiv.* 1. 27, MSS. *Θόριος*), the author of a measure (of 119 B.C.) which (a) abolished the land commission established by the Gracchi, (b) granted perpetual tenancy to *possessores of ager publicus*, and (c) re-imposed rent on this. More probably Thorius was the author of an agrarian law of 111 B.C. (Cic. *Brut.* 36, 136) which has been partially preserved on the back of a bronze tablet which has the *Lex Aelia* on its other side; this laid down (a) that all public land should become the private property of its occupants, (b) the abolition of rent, (c) all colonies and municipia were given security of tenure in *ager publicus* which had been granted to them, (d) the system of *postevio* was abolished, (e) lands in Africa and at Corinth were dealt with. For this law see Riccobono, *FIRA* 102 ff.; E. G. Hardy, *Roman Laws and Charters* (1912), 35 ff. (translation); *Diz. Epigr.* iv (1957), 717 ff. (bibliography). For other interpretations of the three laws of Appian and of the *lex Thoria*, see E. Badian, *Hist.* 1963, 211 ff.; A. E. Douglas, ed., *Cicero, Brutus* (1966), 247 ff.

TITIA, de Illvris reipublicae constituendae (27 Nov. 43 B.C.). See *TRIUMVIRI*.

TREBONIA, de provinciis consularibus (55 B.C.), see *TREBONIUS*.

TULLIAE of Cicero in his consulship (63 B.C.).

- (1) *de ambitu* forbade anyone to exhibit a public show for two years before he was a candidate, and extended the penalty established by the *Lex Calpurnia* to ten years
- (2) *de legationibus liberis* limited the privilege of *libera legatio* to one year.

URSONENSIS, so-called, see *LEX COLONIAE GENETIVAE*.

VALERIAE

- (1) of Valerius Poplicola (509 B.C.), see *VALERIUS* (1).
- (2) *Valeriae Horatiae* (449 B.C.), see *VALERIUS* (2).
- (3) *de provocatione* (300 B.C.) of the consul M. Valerius Corvus. See *PROVOCATIO*.
- (4) *de acre alieno* (86 B.C.), see *FLACCUS* (7).
- (5) *Valeria Cornelia* (A.D. 5) dealt with electoral procedure. See *DESTINATIO*.

VARIA, de maiestate (90 B.C.), see *VARIUS* (1).

VATINIAE of the tribune P. Vatinius (q.v.) in 59 B.C., including the conferring on Caesar of the Gallic command.

VIBIAE. The consul C. Vibius Pansa (43 B.C.) carried some *leges* (confirming Caesar's *acta*, founding colonies, and abolishing the dictatorship) to replace similar laws of Antony which had been abrogated.

VILLIA, annalis (180 B.C.), see *VILLIUS*.

VISELIIA (A.D. 24) granted full citizenship to *Latini Iuniani* (q.v.) who served in the *Vigiles* for six years and debarred all who were not *ingenui* from gaining municipal magistracies unless supported by the Princeps.

VOCONIA, de mulierum hereditatibus (169 B.C.), limited the right of inheritance by women, and restricted individual legacies to less than the portion of the heir(s) instituted in the last will. H. H. S.

LEX CURIATA (frequently and perhaps inaccurately termed *lex curiata de imperio*) was a measure in favour of Roman consuls, praetors, and other holders of *imperium* commonly carried immediately or soon after their election. Its purpose and content are the subject of controversy. Hints in Cicero that it was conceived in his day as peculiarly essential to the exercise of military command (cf. *Leg. Agr.* 2. 30) lend weight to the view that there was a necessary connexion between the *lex curiata* and *imperium*. Yet the fact that a parallel measure was carried in favour of censors, albeit in a centuriate rather than a curiate assembly, appears to belie this theory. Indeed, the fact that all known beneficiaries of such a measure were *magistratus maiores* (i.e. magistrates who held the *auspicia maxima*) suggests that there may be more truth in the alternative tradition of Cicero that the *lex curiata* was carried 'for the sake of the auspices'. Possibly the *lex curiata* (or in the case of censors the *lex centuriata*) conferred on the magistrate the right to take auspices in the name of the people. In this case it will have been a prerequisite not of the tenure of *imperium*, but only of its undisputed and efficient exercise. The *lex curiata* is unlikely to have dated from earlier than the institution of magistracy, and it soon became a formality, the full curiate assembly being replaced by thirty representative lictors. It appears to have assumed political significance only in the last century of the Republic, when personal and factional conflict dictated attempts to obstruct its passage. See also *AUSPICUM*, *COMITIA*, *IMPERIUM*.

LEXICA SEGUERIANA, so named from a former owner of the MSS. (now cod. Paris, Coislin 345 and 347), or Bekkeriana, from the editor (*Anecd. Bekk.* 1), are I, Phrynichus the Atticist (excerpts); II, Anonymus Antatticista; III, *Περὶ συντάξεως*; IV, *Δικῶν ὀνόματα*; V, *Λέξεις ῥητορικαί*; VI, *Συναγωγή χρησίων λέξεων*. Of the last Bekker prints only A: Bachmann adopts this and edits the rest (B, etc.) in his *Anecd.* 1 (1828).

P. B. R. F.; R. B.

LIBANIUS, born at Antioch (A.D. 314), died there (c. 393), was a Greek rhetorician and man of letters who embodied in his work many of the ideals and aspirations of the pagan Greek urban upper classes of late antiquity. He belonged to a wealthy Antiochene curial family, and after a careful education at home was sent to study in Athens (336-40). Thereafter he taught rhetoric successively at Constantinople (340/1-346) and at Nicomedia. Recalled to Constantinople by Constantius II, he was offered but declined a chair of rhetoric at Athens; in 354 he accepted an official chair of rhetoric in Antioch, where he passed the rest of his life. His pupils numbered many distinguished men, pagan and Christian alike. John Chrysostom and Theodore of Mopsuestia were almost certainly among them, Basil and Gregory of Nazianzus probably, and Ammianus Marcellinus possibly.

In his later years Libanius became a literary figure of renown throughout the Greek world, and was in correspondence with many of its leading figures, e.g. the Emperor Julian, for whom he had an unbounded admiration, and whose death was a bitter blow to him. In spite of his adherence to paganism, which for him was uncomplicated by Neoplatonist speculations, he enjoyed considerable influence under Theodosius I, who granted him the honorary title of praetorian prefect.

His sixty-four surviving speeches deal with public or municipal affairs, educational and cultural questions. Many are addressed to emperors or high government officials, with whom he intervenes on behalf of the citizens or the curials of Antioch (e.g. after the riot of 382). Some of these were never actually delivered, but were sent to their addressees and published. Other speeches include his funeral oration on Julian (*Or.* 17), his encomium of Antioch (*Or.* 11), and the autobiography which he composed in 374 (*Or.* 1). There also survive some 1,600 letters, fifty-one school declamations, numerous model rhetorical exercises and minor rhetorical works composed in the course of his teaching. The speeches and letters are a mine of information on social, political, and cultural life in the eastern half of the Empire in the fourth century A.D.

Deeply attached to old values, and seeing the rapidly changing world about him through the distorting lens of a pedantic and snobbish literary tradition, Libanius was vain, petty, and wrapped in finicking antiquarianism. Yet his sincerity, his freedom from vindictiveness, his never-failing readiness to use his eloquence to combat injustice, and a certain warmth of character which breaks through the restraints of classicizing purism make him attractive to the patient reader. He writes an atticizing Greek which is always the result of painstaking labour, and often tortuous and difficult. He was much esteemed as a model of style in Byzantine times.

LIBANII OPERA, ed. R. Foerster, 12 vols (1909-27), *Or.* 1 (Autobiography), ed. A. F. Norman (1965) and *Selected Works* 1 (Loeb, 1969) 1. Petit, *Libanius et la vie municipale à Antioche au IV^e siècle après J.-C.* (1950, with a full bibliography). R. B.

LIBEL AND SLANDER in Rome. 1. **LAMPOONS:** The legislation of the XII Tables (see § 3 below) shows that these were as common in ancient Rome as in medieval Italy. The form of extra-legal self-help, referred to by words cognate with *flagitare* (cf. Plaut. *Pseud.* 357-69, Catull. 42, and Usener in bibliography), was a related phenomenon. The first-known use was the lampoon which Naevius (q.v.) caused to be uttered from the stage against the Metelli and which, with others of a like kind (later scholars, knowing the fact, searched his works for hidden allusion and absurdly found one to the great Scipio—Gell. 7. 8. 5), resulted in his imprisonment. The poetry of Lucilius (q.v. 1) contained personal attacks which would fall under this head. Many of the poems of Catullus are obviously lampoons (with Bibaculus he was mentioned by Tacitus, *Ann.* 4. 34. 8, as notorious for such compositions). Octavian wrote them, e.g. on Antony and Fulvia (Mart. 11. 20) or on Pollio (Macrobius, *Sat.* 2. 4. 21). Much of the writing of Martial and Juvenal has a lampooning intention, except that the objects are normally dead (the lampoon which Juvenal was alleged to have written about Paris and the exile which it was supposed to have earned him are probably later fictions). A real-life lampoon in trochaic tetrameters was found at Pompeii (*Carm. Epigr.* 231).

2. **INVECTIVE:** The study of Greek literature brought the rhetorical invective to the attention of Romans—Thrasymachus, for example, was a great expert in such *λόγοι* (Pl. *Phdr.* 267 d). Invective is easily found even in the fragments of early Roman orators, e.g. Cato, fr. 213 ORF², Scipio Aemilianus, fr. 17, C. Gracchus, frs. 43, 58, Titius, fr. 2. Cicero brought the form to a high point in speeches like in *Pisonem*. Caesar's *Anticatores* (Suet. *Jul.* 56. 5) are a different form of the same genre, and the pamphlet-literature of the Empire, including forgeries like the pseudo-Sallust *Invectiva in Ciceronem*. A stock series of inventions, suitable for such compositions, can be traced from the fourth century in Greece to the fifth century A.D. in Rome. (On all this, see especially R. G. M. Nisbet's edition of Cicero's in *Pisonem*, 192 ff.)

3. **THE LAW:** One of the XII Tables provided execution for libel and slander (Cic. *Rep.* 4. 11). At a much later stage came the praetorian edict: *ne quid infamandi causa fiat, si quis adversus ea fecerit, prout quaeque res erit, animadvertam* (O. Lenel, *Das Edictum Perpetuum*³ (1927), *Titulus* 35. 193). This is dated by Daube (see bibliography) between 200 and 100 B.C. It is put in a peculiarly cautious form, since libel-legislation is very open to abuse. Daube considers that this edict was concerned with *infamia* in the narrow technical sense and that it was later (from about the second half of the first century B.C.) assimilated to the general edict for *iniuria*. The question is highly complex and difficult. It is not known under what procedure Naevius was imprisoned; it was probably under a form of the law in the XII Tables. But, in spite of the meagre evidence, it is not reasonable to reject the story of his imprisonment, from which he was rescued by tribunician action (Gell. 3. 3. 15, who adds the further explanation that he expiated his sin by two plays written in prison—no doubt an attempt to harmonize the romantic fiction of the prison-plays with the meagre report of the legal circumstances). He was forced to leave Rome by the Metelli (not necessarily by legal proceedings). There is no justification for talking of Naevius attacking 'the Government', or of 'the State' taking action against him. At most it was a matter of sectional family-politics. The next cases known are of success by Accius and failure by Lucilius to obtain a trial against a writer of mimes under the *actio iniuriarum* for mention by name from the stage (which shows with what caution the praetors allowed trials in such cases). There was no distinction between libel and slander, and Lucilius' ability to escape impeachment for his lampoons should not be attributed simply to their being in written documents (for Catullus also escaped), which would be an uneasy distinction to make in Roman literature; the explanation lies more in the social status of men like Lucilius and Catullus. Reply would be in like kind (see Pollio's reply to Octavian, Macrobius, *Sat.* 2. 4. 21). There would be many reasons for not attempting a libel action (in ancient times or in modern), and one would be the influence (i.e. *auctoritas*) and friends of one's opponent. Another would be that such compositions, within limits, were recognized types of literary composition in which criteria of truth and falsehood were known to be inapplicable. The same consideration would apply to speeches like in *Pisonem*, with, perhaps, in addition something analogous to the concept of a privileged occasion, which attached to meetings of the Senate. Horace in *Sat.* 2. 1 has an amusing discussion of libel with the great lawyer Trebatius who advises against it as liable to prosecution. The imperial system introduced the added complication of *maiestas* (q.v.), and Augustus is usually credited with subsuming libel under this procedure (cf. Tac. *Ann.* 1. 72), but in *Ann.* 4. 34, Crematius is made to express a different view of Augustus. Curvatus Maternus in the *Dialogus* of Tacitus was clearly getting away with a great deal of dubious political comment in his tragedies, and the action of Augustus should not be credited with too much precision. A rather different aspect of the law was dealt with by the *lex Remmia* (date unknown) *de calumniis* (more or less on malicious prosecution): little is known about its working and the difficulty of proof will have restricted actions under it (see Landgraf on Cic. *pro Rosc. Am.* 55).

A. H. J. Greenidge, *Infamia* (1894); H. Usener, *Rh. Mus.* 1900, 1 ff. (= *Kl. Schr.* 4. 356 ff.); E. Fraenkel, *Gnomon* 1925, 105 ff. (= *Kl. Beitrage* II. 397 ff.); L. Robinson, *Freedom of Speech in the Roman Republic* (1941); A. Momigliano, *JRS* 1942, 121 ff.; D. Daube, *Atti del congresso internaz. di diritto romano, 1948* ... (1951), 413 ff. (very important and not known to the next two authors); R. E. Smith, *CQ* 1951, 169 ff.; H. Mattingly, 'Naevius and the Metelli', *Hist.* (1960), 414 ff. (a rather violent treatment of the evidence); R. G. M. Nisbet, *Cicero, in Pisonem* (1961), esp. 192 ff. G. W. W.

LIBELLUS was a petition to the Emperor by a party to a judicial suit at Rome. It was answered by a *subscriptio* appended to it, which the Emperor himself signed (S.H.A. *Comm.* 13). The official who dealt with *libelli* was the *a libellis*, who was a personal secretary of the Emperor. The post of a *libellis* no doubt existed from the time of Augustus, but it is prominent first under Claudius, when it was held at first, perhaps, by Polybius (Sen. *Consolatio ad Polybium* 6. 5) and then by Callistus. It was in the hands of freedmen until the reign of Hadrian, after which its holders were *equites* (S.H.A. *Hadr.* 22). The jurists Papinianus and Ulpianus (1) (qq.v.) held the post.

J. P. B.

LIBER PATER, Italian god of fertility and especially of wine, commonly identified with Dionysus (q.v.). Concerning his origin and relation to Jupiter (I. Liber) divergent views have been held, see Wissowa, *RR* 138; Altheim, *Hist. Rom. Rel.* 125, 149. But it is certain that he was an independent god when the festival calendar was completed, for it contains his feast, the Liberalia of 17 Mar. He had, however, no temple, or none of any importance, in Rome (see Platner-Ashby, 316, 321). This may be explained by the fact that his feast would be chiefly rustic and have little to do with the city. According to Verg. *G.* 2. 385 ff. it was a merry occasion, and characterized by crude songs, doubtless traditional, and the use of masks, which apparently were hung on trees; they may have been intended to scare away evil influences.

Liber had, however, an important cult in Rome along with his partner Libera as associate of Ceres on the Aventine (cf. *CERES*); but we have too little information about the ritual there to say anything definite about the manner of his worship. It appears to have been Greek in origin, like everything about that temple.

By a sort of play on words (*Liber—libert*) the Liberalia became a favourite day for boys to put on the *toga virilis* (Ov. *Fast.* 3. 771). It was a day of feasting (Wissowa, op. cit. 299), but the native and Greek elements are not easily dissociated.

He has no mythology of his own, simply taking over that of Dionysus.

A. Bruhl, *Liber Pater* (Paris, 1953).

H. J. R.

LIBERTAS, the personification of personal liberty, the condition of a free man. She was given a temple in or about 238 B.C. by T. Sempronius Gracchus, consul in that year, on the Aventine (Livy 24. 16. 19); it was restored by Augustus (*Mon. Ancyr.* 4. 6; 10, 11 of the Greek version). Here, as commonly, she was associated with Jupiter, like Liber (q.v.): (*aedem*) *Iouis Libertatis* (Augustus *ibid.*, but cf. Platner-Ashby, 296 f.). How old her cult is we do not know, but certainly later than the 'calendar of Numa', which contains no mention of her. Under the Empire *libertas* comes to mean political liberty, not only in republican declamations, as Lucan 7. 432 ff., but in official language, to signify constitutional government, especially as opposed to usurpation or tyranny (for a full discussion, see Ch. Wirszubski, *Libertas as a Political Idea at Rome* (1950).

H. J. R.

LIBITINA, Roman goddess of burials, which were registered at her grove; Dion. Hal. *Ant. Rom.* 4. 15. 5, cf. Plut. *Quaest. Rom.* 23. Both identify her with Venus (q.v.), a mere confusion with Lubentina.

See Latte, *RR* 138 and 185, n. 2.

LIBRARIES. I. GREEK. In the article on BOOKS it is noted that writing was available well before the date of composition of the Homeric poems, but that the earliest

books probably existed only for the use of rhapsodists, actors, singers, and the like. There is no trace of a reading public until about the end of the fifth century. Athenaeus (1. 4) names Polycrates of Samos and Pisistratus as traditional owners of collections of books, but he may be gratuitously crediting them with the habits of the cultured Hellenistic despot. Euripides owned books (*ibid.*), and Socrates refers to the accessibility of books (Pl. *Ap.* 26 d, *Phd.* 97 b, 98 b; Xen. *Mem.* 1. 6. 14), but evidently reading and the ownership of books were far from common, and provided the basis of Aristophanic jests at 'highbrows' (Denniston, *CQ* 1927, 117). In the fourth century Aristotle (*Rhet.* 1417^b12) recognizes the existence of authors whose works were intended to be read (*ἀναγνώστικοί*) rather than recited, naming the dramatist Chaeremon and the lyric poet Licymnius.

Strabo's statement (13. 1. 54) that Aristotle was the first collector of books and taught the kings of Egypt how to arrange a library can only mean that a carefully organized library, essential to the methods of Aristotelian research, was first set up in the Lyceum, and that this provided a model for Alexandria. It is significant that Athens had to wait till the second century B.C., and for the munificence of a Ptolemy for its first public library (*JG* ii². 1009+ *Hesperia* 1947, 170). Beyond doubt the foundation of the Library at Alexandria marks an epoch in bibliographical history. It appears to have been founded, in connexion with the Museum, by Ptolemy I, under the direction of Demetrius of Phalerum, but greatly extended by Ptolemy II, whom some regarded as the real founder. It is variously said to have contained from 100,000 to 700,000 volumes (Aristaeus, ed. Thackeray ap. Swete, *Introduction to the O.T. in Greek*, 520; also ed. P. Wendland (Teubner) and Meecham (1935); Tzetzes ap. Ritschl, *Opusc.* i. 8, *Die alexandrinische Bibliotheken*; Gell. 6. 17; Amm. Marc. 22. 16); but book-counting is notoriously an inexact science. At its head were placed a series of distinguished scholars, Zenodotus, Eratosthenes, Aristophanes of Byzantium, Aristarchus; Callimachus and Apollonius Rhodius worked there, but were apparently not chief librarians. It became the great centre of literature in the Hellenistic world, and the practice of its copyists was probably decisive in the forms of book-production. Classified catalogues (*πίνακες*) of its contents were drawn up under the direction of Callimachus, and no doubt continued by his successors. A second, smaller library was established at the Serapeum.

According to Plutarch (*Caes.* 49) the great library was burnt when Caesar was besieged in Alexandria. Dio Cassius (42. 38), however, says only that the 'storehouses of corn and books' were so destroyed. Later legend magnified this into the total destruction of the great Library, or of both libraries (Sen. *Tranq.* 9; Oros. 6. 15; Gell. 6. 17); but this is very improbable.

The chief rival of the Alexandrian Library was that of Pergamum, founded by Eumenes II (see BOOKS). This is said to have contained 200,000 volumes when Antony presented it to Cleopatra (Plut. *Ant.* 58). Perseus of Macedon had a library (Plut. *Aem.* 28); and no doubt there were also libraries in the other principal Hellenistic towns.

Of private libraries there is little mention. The discoveries of literary papyri in Egypt are proof of private collections of books; but no particulars are on record. A third-century papyrus from the Fayum contains a fragment of an inventory of a library, comprising 132 rolls of philosophy (100 opisthograph) and 296 of medicine (*Arch. Pap.* 11. 277). With the beginning of the Hellenistic age the habit of reading set in, and libraries, public and private, seem to have become common. Specialist libraries were attached, e.g., to the medical school at Cos and to the Asclepieion near Pergamum; synagogues and later churches had their own

libraries (as did gymnasia), the latter being the genesis of the great monastic libraries.

II. LATIN. At Rome, apart from archives of official documents, there is no trace of libraries before the first century B.C. Lucullus is recorded to have possessed a large library, which he made freely accessible, especially to Greeks (Plut. *Luc.* 42). Atticus and Cicero had considerable collections of books. Caesar commissioned Varro to assemble a library for him (Suet. *Iul.* 44), but the project was not consummated. The first public library in Rome was founded by C. Asinius Pollio (Pliny, *HN* 7. 30. 115; 35. 2. 10); but the decisive impulse was given by Augustus, who founded two libraries, one (the Porticus Octaviae) in the Campus Martius, the other on the Palatine. Both were connected with temples and comprised separate Greek and Latin libraries and a hall or reading-room in which conversation was possible (Gell. 13. 19). This model was generally followed. Tiberius, Vespasian, and Trajan built libraries in Rome, and Hadrian at Athens, all in connexion with temples. Eventually there are said to have been twenty-six in Rome alone, and the gift of a library to a provincial town was a recognized form of public munificence. The Younger Pliny gave one to Comum (*Ep.* 1. 8. 2), and remains of libraries, also the result of private benefactions, have been found at Ephesus and Timgad.

Private libraries also became so fashionable that Seneca (*Tranq.* 9) declares that a library is considered as essential to a house as a bath, and that the idler people fill their houses with books from mere ostentation. The *Suda* (s.v. 'Epaphroditus') mentions a private library of 30,000 volumes. A specimen of a private library was found in the excavation of Herculaneum in 1752. It was a room about 12 ft. square, lined with bookcases ornamented with inlaid woods. In the middle was a table for readers. In the presses (*plutei, armaria*) of such libraries the rolls lay on shelves or in pigeon-holes (*nidi, foruli*), or stood in boxes (*capae, scrinia*) with projecting *tituli*. Portraits of authors were often inserted in the woodwork of the presses, or stood as busts upon them. The Younger Pliny had a bookcase let into the wall of his bedroom (*Ep.* 2. 17. 8), a fashion afterwards followed in medieval monasteries.

J. W. Clark, *The Care of Books* (1900), ch. 1; Dziatzko in *PW*, s.v. 'Bibliotheken'; W. Schubart, *Das Buch bei den Griechen u. Römern* (1921); C. Wendel in *RAC* II, s.v. F. G. K.; C. H. R.

LIBRI COLONIARUM (or *libri regionum*). Two lists of regions and colonies in Italy, the first also including a chapter on Dalmatia, are preserved in the *corpus promaticorum* (see *GROMATICI*). They contain historical, legal, and agrimensorial information; much of the history is incorrect or doubtful, so that some of the rest too has come under suspicion. Recently, however, the section on Apulia has been shown by air photography and ground survey to be substantially true.

T. Mommsen, *Herme* 1883, 173 ff.; F. Pais, *Storia della colonizzazione di Roma antica* (1923). O. A. W. D.

LIBURNI, an Illyrian people on the east coast of the Adriatic, once occupied a large part of the coast of Illyricum (Strabo 6. 2. 4) but by the Roman period they were confined to the sector between the R. Arsia (modern *Raša*) on the west side of Istria and the Titius (*Krka*), where the territory of the Delmatae began. The Liburni were famous as seafarers, especially as pirates (Livy 10. 2. 4), and invented the *liburna* (or *liburnica*), a warship adopted by Octavian at Actium. J. J. W.

LIBYA was in Homer (*Od.* 4. 85-9) merely a narrow piece of land west of Egypt; but later it became the Greek name for the modern continent of Africa. The relation of Libya to Asia was at first in dispute. Until c. 500 B.C. it was regarded as part of Asia; when it came to be regarded

as a separate continent its frontier was drawn along the Nile, or to west of Egypt, but after Herodotus it was fixed at Suez.

The north coast was opened up by the Phoenicians, and a Carthaginian, Hanno (q.v. 1; c. 490?), followed the Atlantic coast to Sierra Leone (or perhaps Kamerun). The east coast was known to the early Egyptians as far as Somaliland; in the first two centuries A.D. Greek pioneers sailed to C. Delgado. The story that Phoenicians had circumnavigated Libya (Hdt. 4. 42) found little credence, and the attempt by Eudoxus (q.v.) to sail round ended in failure.

Inland exploration was carried on under the Ptolemies by way of the Atbara and Blue Nile to Abyssinia; some Roman soldiers under Nero reached the swamps of the White Nile to the south of Khartoum. But these obstructed further advance, and it was probably by journeys from the east coast that knowledge was obtained of the 'Mountains of the Moon' (Kilimanjaro and Ruwenzori?) and lakes (Victoria and Albert Nyanza) of central Africa, and of the Nile's sources. The Sahara was traversed c. 500 B.C. by some natives from Tripoli, who found the Niger near Timbuctoo (Hdt. 2. 32-3); a Roman officer, Julius Maternus (c. A.D. 100?), reached the Sudanese steppe, probably near Lake Chad. But there is little evidence of trans-Saharan trade before the Middle Ages.

There was, until at least Alexander's time, a strange but widespread belief that east Africa outside the Red Sea was joined to north-west India (see *NILE*). After Alexander's explorations had disproved this idea, better informed people believed that Africa continued indefinitely southwards. But in the general opinion of the Greeks Libya was a right-angled triangle (with the right angle at Suez); it lay wholly north of the equator (its southernmost parts being too hot to inhabit), and it was water-girt. But later exploration of the east coast suggested the theory (accepted by Ptolemy) that east Africa was joined by land to SE. Asia.

Cary-Warmington, *Explorers* 45 ff., 62 ff., 86 ff., 165 ff., (Pelican) 61 ff., 110 ff., 202 ff. For the Romans in Algeria and Libya see especially J. Baradez, *Forsatum Africæ* (1949), R. G. Goodchild and J. B. W. Perkins, *JRS* 1949, 81 ff., and Goodchild, *JRS* 1950, 30 ff.; also *Mon. Ant.* 1951; R. E. M. Wheeler, *Rome beyond the Imperial Frontiers* (1955), 119 ff. E. H. W.

LICENTIUS, of Thagaste, friend and (probably) relation of St. Augustine, to whom (A.D. 395) he addressed 154 hexameters, declaring himself unable to understand Varro's encyclopaedia without St. Augustine's guidance, and asking for a copy of the latter's work *De Musica*. The poem is preserved with St. Augustine's reply (*Aug. Ep.* 26 g). It hardly justifies St. Augustine's description of Licentius as 'poeta paene perfectus', its language being unoriginal and often obscure; its prosody, however, is fairly correct (shortening of final o, as is usual in late poetry; actual mistakes 'Pelōpum', 'Macōtidum'), and the hexameter is built with care (no spondee word in the first foot, etc.).

See Baehrens, *FPR* 417-19; M. Zelzner, *De carmine Licentii* (diss. Breslau, 1915); G. Hardy, *L'Année théol.* 14 Aug. 1954, 55 ff. O. S.

LICINIUS (1, *PW* 31a), VALERIUS LICINIANUS, born of peasant stock in (new) Dacia, a comrade-in-arms of Galerius. At the conference of Carnuntum in A.D. 308 he was created Augustus of the West to replace Severus, killed by Maxentius. He made no effort to remove the latter or to contest Constantine's assumption of the title of Augustus in Gaul, and thus controlled only the Illyrian provinces. On the death of Galerius in 311 he prepared to contest the inheritance of the eastern provinces with Maximinus, but concluded peace on the Hellespont on the basis of *uti possidetis*. In 312 he formed a close alliance with Constantine, marrying his sister, Constantia, and,

after Constantine had destroyed Maxentius, himself conquered Maximinus (313). In 314 or 316 he quarrelled with Constantine, lost a sharp but indecisive war, ceded part of Illyricum, and allowed his nominee, Valens, to fall. In 317 his infant son, Licinius, was made Caesar with Constantine's sons Crispus and Constantine II. From c. 320 new difficulties arose. Licinius withdrew his favour from the Christians, which he had agreed upon with Constantine at Milan in 313, and revived the persecution. In 324 Constantine attacked and won decisive victories on land and sea. Licinius was sent into retirement at Thessalonica, then accused of plotting, and put to death. His colleague, Martinian, fell with him.

LICINIUS (2) IMBRES, Latin poet, called by Gellius 'an old writer of comedies', whose *pallata* entitled *Neaera* he cites (13. 21. 16; 15. 24).

LICTORES were attendants, ranking higher than the *vatores* and lower than the *scribae* (see *APPARITIONES*) and *accensi*, who formed part of the *apparito* of Roman magistrates, priests, and certain other persons. The main body was that of the *lictors qui magistratibus apparent* who formed a corporation divided into several decuries each under the presidency of ten men. Lictors drawn from this body accompanied holders of *imperium* at all times in and out of Rome, proceeding before them in single file and each bearing a bundle of *fasces* (q.v.) on his left shoulder. Their function was to announce the approach of the magistrate, clearing everyone except Vestals and *matronae* from the path, and to implement his right of arrest, summons, and in early times execution. Their number varied according to the nature of the magistrate's *imperium*. In the late Republic lictors were also provided from the same body for such men as *privati* holding public games and travelling senators, but they are unlikely to have carried *fasces*. Lictors drawn from a separate decury of *lictors curiatii* attended certain religious officials and were responsible for the summoning of the *comitia curiata*, while in the imperial age those from a third group—the *lictors populares demuntiores*—attended at the games of the *magistri vicorum* (see *VICUS*). The institution of lictors was of Etruscan origin. They were normally citizens of low birth. Their traditional dress was a toga in Rome, a red coat (*sagum*) out of Rome and in the triumphal procession, and a black mourning-dress at funerals.

E. S. S.

LICYMNIUS (1), in mythology, brother of Alcmena and uncle of Heracles (q.v.). He was the only son of Electryon to escape the Taphii (see *AMPHITRYON*), and when Amphitryon and Alcmena left for Thebes he accompanied them (Apollod. 2. 55. 57). He met his death when an old man at the hands of Tlepolemus II. 2. 661–2). The reason is variously given. Pindar (*Ol.* 7. 27 ff.) says 'Tlepolemus struck him in anger 'as he came from the bowers of Midea', whether that means the town or his mother, Electryon's concubine; the reason for the quarrel is not given. Others, as Diod. Sic. 5. 59. 5, say it was an accident; but all agree that 'Tlepolemus left for Rhodes, where he founded the Dorian settlement, led his people before Troy (Homer, *loc. cit.*), and was killed by Sarpedon (*Il.* 5. 628 ff.). H. J. R.

LICYMNIUS (2), of Chios, dithyrambic poet and rhetorician, teacher of Polus (Pl. *Phdr.* 267 c). Aristotle says that his works were better to read than to hear (*Rh.* 1413^b14). Also wrote on language (*ibid.* 1414^b15).

Page, *Poet. Mel. Gr.* 768–73.

LIGARIUS (PW 4), QUINTUS, one of three brothers of undistinguished family from Sabinum, was *legatus* in Africa under C. Considius Longus in 50 B.C. Left in charge of the province, he surrendered it in 49 to the Pompeian P. Attius Varus (q.v. 1), helped him to keep out L. Aelius Tubero (q.v. 1) who had been appointed governor by the Senate, and apparently remained with the Pompeians in Africa till 46, when Caesar captured him at Hadrumetum. Cicero and Ligarius' two brothers, who had supported Caesar in 49, pleaded for his recall, but Q. Aelius Tubero (q.v. 2), piqued by his father's humiliation in 49, accused him before Caesar as a stubborn foe. Cicero defended him and he was restored. In 44, however, he joined the conspiracy against Caesar. His brothers perished in the proscriptions; his own fate is unknown.

LIGHTHOUSES. Although the Piraeus had been indicated at night by open fires on columns in the fifth century B.C., and the use of towers as day beacons began in the Hellenistic age, the first true lighthouses seem a result of the growing commerce in the Roman Empire. The Pharos at Alexandria bore a lantern by the reign of Nero, and subsequently towers at the mouths of numerous harbours and on some dangerous coasts, as at Sestos, were crowned by lanterns or open fires within a wall. The largest such tower, the Alexandrian Pharos, built about 300–280 B.C. by Sostratus of Cnidus (Strabo 17. 1. 6) 'for the safety of sailors', rose 300 feet to the top of the crowning statue, and was composed of three stories, respectively square, hexagonal, and round. Other lighthouses, apart from the Colossus at Rhodes, imitated this arrangement to some extent. The stump of a Roman lighthouse may be seen inside Dover Castle.

C. G. S.

LIGHTING. The ancients knew two methods: the burning of oil in a lamp (see *LAMPS*) and the combustion of a solid substance. In Minoan and in classical times lamps were preferred for indoor illumination, and in the Roman Empire they were sometimes employed for streets and on exteriors of buildings. The torch (*ἀγνῶς*) was more generally used out of doors and also for interiors during the early Iron Age. The Greek torch was generally of wood (*δαῖς*), a branch or a bundle of twigs (*βερύ*). The Italians preferred candles of tallow (*candela*) or wax (*cereus*), and the abundance of these materials explains the late adoption of the lamp in Italy. Lanterns were also freely used, candles or lamps enclosed within horn or (in imperial times) glass. Torches were also used for signalling in warfare.

F. N. P.

LIGURIANS. Mentioned from Hecataeus onwards as the indigenous neighbours of the Greeks at Massilia. Their territory is first defined clearly (by Polybius and Livy) for the time of Roman expansion in northern Italy during the third century B.C. They were then allies of the Celts and occupied lands adjacent to them: along the coast from the Rhône to the Arno and inland as far as the Durand and the mountains south of the Po. Roman campaigns between 238 and 117 B.C. reduced to submission Ligurian tribes throughout this area. After Ligurian support of Mago (q.v. 2) c. 205–203, the most important Roman successes were against the Cisalpine Ingauni and Apuani in 181 and 180 (40,000 Apuani were deported to Samnium), against the Alpine Statielli in 173, against the Deciates and Oxybii around Nice in 154 (after Massilian appeals for help against Ligurian pirates), and against the

'Celtoligurian' Salluvii and their allies near Aix in 123, after further Massilian appeals for help. This marked the major Roman success: only lesser Ligurian tribes remained unconquered and the Roman Province was established. By this time, the western Ligurians at least had become thoroughly Celticized and Strabo (4. 6. 3) refers to the Salluvii and other tribes near Massilia as Celtoligurian or simply Celtic.

Liguria formed one of the Augustan *regiones* of Italy. The history of the Ligurians before the third century B.C. is obscure. Contemporary classical writers simply mention them in passing and the traditional account in later works (most notably Justin 43) is semi-mythical. Few ethnographic details are given by early or late authors. The principal account in Diodorus Siculus (5. 39) mists on the toughness of the Ligurians, both male and female, and of their environment.

Despite claims that some words or place-names (e.g. those ending in *-asco*, like *Giubiasco*) are diagnostically Ligurian, the existence of any Ligurian language is still hypothetical.

Relevant archaeological evidence is scanty and imprecise, and it is not possible to equate any archaeological culture with the historical Ligurians. However, Urn-field traditions, like those of neighbouring Alpine and Villanovan groups, are prominent throughout the Ligurian area at the beginning of the Iron Age, with influences from the Greek colonists and from the La Tène culture north of the Alps appearing later. There is little evidence to support theories of a persisting Mediterranean Neolithic tradition in the area.

LILYBAEUM, the westernmost point of Sicily, was the site of a fruitless attempt at colonization c. 580 B.C. by Cnidians under Pentathlus (Diod. 5. 9). A small Carthaginian settlement later grew up there, but Diodorus' reference to it in 454 B.C. (11. 86) is probably mistaken. Its real importance began in 396, when the Carthaginians established it as a city to replace Motya (q.v.), sacked by Dionysius I (q.v.). It became a flourishing port and important Punic stronghold. Pyrrhus failed to take it (276), and it withstood a long siege by the Romans (250–241); cf. Polyb. 1. 41–59. After 241 it formed part of the Roman province of Sicily as a *civitas decumana* and the headquarters of a quaestor; Cicero resided there in that capacity and thought it a '*civitas splendidissima*' (Verr. V. 5. 10). It became a *municipium* under Augustus and a *colonia* under Pertinax or Severus. The harbour was blocked in the sixteenth century, and modern *Marsala* covers only part of the extensive ancient city.

TOPOGRAPHY. G. Schmiedt, *Kónakos* 1961, 49 ff., with good photographs, recent excavations. G. A. Ruggieri, *Archaeology* 1957, 131 ff. A. G. W.

LIMES originally meant a pathway, especially the strip of open land along which a column of troops advanced into enemy territory. Hence, it came to mean a military road, with fortified posts and signal-towers, and finally a frontier. While Roman expansion continued, there was no thought of static frontiers. As expansion slackened and finally ceased the provincial garrisons gradually formed continuous frontier lines to facilitate control. After the conquest of the Wetterau Domitian constructed a series of wooden signal-towers along the Taunus. Physical barriers are first certainly attested under Hadrian: a palisade in Raetia and Upper Germany, stone walls in Britain and Numidia. Elsewhere, close-spaced structures along rivers (lower Rhine, middle and lower Danube, upper Euphrates) or, in deserts, along a frontier road (Red Sea to Euphrates, controlling cross-frontier nomadic migration); in Dacia and Mauretania Tingitana, networks

of forts without apparently strictly delimited frontier lines. In Upper Germany part of the line was advanced by Antoninus Pius, in Mauretania Caesariensis a more southerly line was occupied under Severus. The attempt to advance into Scotland, begun under Antoninus Pius, was abandoned under Caracalla. In Upper Germany the palisade was reinforced, probably under Caracalla, by an earth bank and ditch (*Pfahlgraben*), in Raetia it was replaced by a stone wall (*Teufelsmauer*). On river frontiers legionary fortresses (*castra*) stood on the frontier line itself, elsewhere they lay back, usually with fortified road-communications to the frontier. The *limes* itself was held by auxiliary units and *numeri*, stationed in forts (*castella*) with subsidiary posts (*Zwischenkastelle*, mile-castles) and signal-towers between. Patrols along the line secured intelligence, signalled information, prevented petty raids, ensured customs collection but above all imposed political control, preventing contact between hostile outsiders and dissident elements within the Empire. The Walls in Britain, Germany, and Africa were not fighting platforms (there were no projecting towers to give enfilading fire); the enemy was met, wherever possible, in the open. The market created by frontier garrisons had a considerable economic effect. Settlements of traders grew up at legionary fortresses (*canabae*, q.v.) and auxiliary forts (*numi*), reinforced increasingly by the families of soldiers and by settlement of veterans (the latter officially promoted by land-grants from the early third century, to encourage hereditary enlistment). Garrisons became less and less mobile in practice, and failed to stem barbarian invasion in the mid third century. The Upper German and Raetian frontiers were abandoned under Gallienus, Dacia under Aurelian. The frontiers were greatly strengthened under Diocletian and Constantine, but nevertheless imperial defence thereafter depended mainly on the mobile Field Armies. For the late developments of frontier defence see **LIMITANEI**.

LIMITANEI (or *riparienses*, *ripenses*) was a generic name for the frontier army of Constantine and his successors. It comprised cavalry (*cunei equitum*, *equites*, *alae*), and infantry (*legiones*, *cohortes*, *auxilia*), and was commanded by *duces*. Its units were normally static, but on occasion they could be converted into regiments of the field army as *pseudocomitatenses*, or even sometimes upgraded into *comitatenses*. It is therefore unwise to dismiss it as a mere peasant militia. See **COMITATENSES**.

LINDUM (*Lincoln*) lay in the territory of the Coritani, whose capital was Ratae (*Leicester*) (q.v.). It began as a fortress for Legio IX Hispana perhaps a little before A.D. 60 (Collingwood and Wright, *RIB* 254–7, 260) and its *munimenta* may be referred to by Tacitus (*Ann.* 14. 32). Soon after 71 this legion was advanced to Eburacum (q.v.) and Lindum seems to have been held by Legio II Adiatrix perhaps till c. 76 (*RIB* 253, 258). Within the Flavian period and perhaps c. 90 a colonia was founded at Lindum (*CIL* xiii. 6679). The new town, with colonnaded main streets, small insulae, a piped aqueduct, and

notable sewers, occupied the site of the fortress, but later doubled its area. A wall with monumental gates was provided perhaps early in the third century. The town was an important road centre and enjoyed good water communications (Car and Fosse dykes, R. Witham); in the fourth century it was the seat of a bishopric and perhaps the capital of Flavia Caesariensis.

LINUS (Λίνος). An old and apparently mournful-sounding song (*Il.* 18. 570, which shows that it was not always sung on mournful occasions, for there it is at a vintage; but it may be a lament for the 'death' of the grapes, a custom widely paralleled, see Frazer, *GB* vii. 216 and the whole chapter) contained the sounds αἰλων, interpreted as meaning 'alas for Linus'. The song was called a Linus (Homer, *ibid.*), and the question was asked who Linus was and why he should be bewailed. Argos said he was a son of Apollo and Psamathe, a local princess; she exposed him, he was devoured by dogs, and the city plagued by Apollo till satisfaction was made (*Paus.* 1. 43. 7-8). In central Greece, Linus was son of Amphimarus and Urania, killed by Apollo for saying he was as good a singer as the god (*Paus.* 9. 29. 6). A third variant made him Heracles' music-teacher, whom his pupil killed with a blow from a cithara (*Apollod.* 2. 63). A favourite modern explanation (Frazer, *loc. cit.*) is that αἰλων is Phoenician, *ai lanu*, 'woe to us!' This is not impossible, cf. LITYFISES.

H. J. R.

LIRIS, river of central Italy, called *Garigliano* below Interamna Lirenas (q.v.). Rising near the Fucinus Lacus (q.v.) it flows SSE. to Sora, turns sharply SSW., cascades picturesquely at *Isola del Liri*, and enters the Tyrrhenian through marshy country at Minturnae. Chief tributaries: Fibrenus (Cicero's natal stream: *de leg.* 2. 6), Tretus, Melpis, *Rapido*.

E. T. S.

LITERARY CRITICISM IN ANTIQUITY. The arts of formal speech played a great part in ancient life, both in business and in pleasure. Instruction in oratory was provided by rhetoric (q.v.), and rhetorical teaching soon became influential in the work of historians and poets as well as speakers. Most ancient criticism is a by-product of rhetoric. Hence it is concerned with literature as producing an effect on an audience, not as the self-expression of an author. The idea, variously interpreted, that the poets 'teach' is seldom absent. With the notable exception of Aristotle's *Poetics*, there is little general aesthetic theory. It is a very different thing from most modern criticism.

2. The early poets made pronouncements on their profession. The art of Homer and Hesiod was a gift of the Muses, who inspired their poet, knew all things, and could tell false tales as well as true (*Il.* 2. 484-92, *Od.* 8. 479 ff., Hes. *Theog.* 1-104). Pindar is the *προφήτης* of the Muses (fr. 137 Bowra), his *σοφία* is the product of endowment (*φύσις*), not mere technique (C. M. Bowra, *Pindar* (1964), ch. i). Hesiod and Pindar criticize the falsehoods of the epic (*Theog.* *loc. cit.*, *Nem.* 7. 20 ff.); so, with much more trenchancy, do the philosophers (e.g. Xenophanes, fr. 11). Allegory (q.v.) helped for the defence. The notion of inspiration (cf. Democ. fr. 18, 21) and the tendency to find fault with myth, usually on moral grounds, are the two main critical attitudes to poetry which Plato's generation inherited, though the paradox of Gorgias on the *ἀπάτη* of tragedy (the deceived is wiser than the un-deceived . . .: Plut. *De gloriā Ath.* 348 b-c) and the saying of Simonides that 'poetry is silent painting' (*ibid.* 346 f)

perhaps indicate different lines of reflection. The contest between Aeschylus and Euripides in Aristophanes' *Frogs* contains not only a moralizing element, but the essentials of the distinction between 'high' and 'low' styles which became an important tool of later critics (F. Wehrli in *Phyllobolia für P. von der Muehl* (1946), 9 ff.).

3. Plato devalued inspiration (*Ion*, *Meno*, *Phaedrus*); he also (*Republic*, *Laws*) developed the educational criticism of poetry and music. He thought that the spectacle of degrading emotion nourished the same emotion in the hearer. He severely criticized the amoral technicalities of contemporary rhetoric (q.v. § 2). His superb quality as a critic is shown most clearly by his gift of parody (*Symposium*, *Phaedrus*, *Menexenus*), in which Aristophanes is his only rival.

4. Aristotle's *Poetics*, the fountain-head of most later criticism, is in part an answer to Plato; this is the point both of the improved and very important analysis of *μίμησις* (imitation) and of the much-debated doctrine that tragedy effects the *κάθαρσις* of pity and fear. Aristotle does not theorize without detailed observation, and though he hardly gives the impression of an instinctively sensitive judge, he is an extremely acute one. His discussions of *ἀμαρτία*—the tragic hero's mistake or flaw—*περιπέτεια* ('reverse'), and *ἀναγνώρισις* (recognition) touch fundamental principles of dramatic construction. The contrast (1459^b15) between the *Iliad* as a poem of emotion (*παθητικόν*) and the *Odyssey* as a poem of character (*ἡθικόν*), moralized and realistic, is of great significance for later criticism (compare and contrast 'Longinus' 9. 13-15). Few texts of the length have been so much debated; and this is a tribute to the seminal quality of the thought even more than to the difficulties of interpreting a book which must be in some sense a set of lecture notes.

5. Throughout the Hellenistic and Roman periods, with their various swings in taste and the running battle between classicism and modernism (*τὸ καινόσπουδον*, 'Longinus' 5), criticism retained its rhetorical character. Theophrastus' remark (fr. 64 Wimmer) that *λόγος* directed *πρὸς τὰ πράγματα* is the pursuit of philosophers, while poets and orators are both concerned with *λόγος* in its relation to the audience, is fundamental. Conviction is the poet's aim as well as the orator's. It follows that the form of his work may be judged apart from its content; like the orator, he may have a good case but not know how to present it. Rhetoricians indeed used poets freely as examples; they treated them as having more freedom, in language and in invention, but as playing essentially the same game.

6. It was therefore natural that the main achievement of this long period should be new refinement in the discussion of style. (i) The contrast between 'high' and 'low' (cf. *Frogs*) developed, under Theophrastus or soon after, into a system of three types (*χαρακτῆρες*). The intermediate type, originally thought of as a golden mean, was identified with the smooth, flowing style of Isocrates, with the result that the three *χαρακτῆρες* (*ἰσχνός, γλαφυρός* or *ἀνθηρός, μεγαλοπρεπής*: *genus tenue, floridum, grande*) came to form a descriptive rather than a normative scheme. All kinds of writing could be classified on this principle: e.g. the representative historians were Xenophon, Herodotus, Thucydides. The system dominates later criticism; a locus classicus is Cicero, *Orator* 75-90. There were many variations and adaptations. Dionysius (q.v. 7) uses an analogous scheme to classify *ἀρμονίαι* (types of word-arrangement); Demetrius (q.v. 17) has a four-style system which may be original; in 'Longinus' (q.v.), the most congenial and, after Aristotle, the most influential of the Greek critics, *ὕψος* ('the Sublime') is described largely with the help of the traditional accounts of the high or grand style, though it is clearly a concept which does not fit into the scheme. (ii) There was also the

doctrine of the ἀρεταὶ λέξεις, *virtutes dicendi*. These had been enumerated by Theophrastus, following up Aristotle's *Rhetoric*, as ἐλληρισμός (good Greek), σαφήνεια (clarity), τὸ πρέπον (appropriateness), and κατασκευή (elaboration, *ornatus*); in Dionysius (e.g. *Epistula ad Pompeium* 3) these are reinforced by additional (ἐπιθετοὶ) excellences, most of which are appropriate to one or other type of writing rather than to writing in general (e.g. τὸ μέγα καὶ θαυμαστόν, ἰσχὺς, ἡδονή (charm)). (iii) A conflation of χαρακτήρ-language with ἀρετή-language produced the elaborate system of ἰδέαι of the later rhetoricians (see HERMOGENES 2). The critical interest of all this lies partly in the delicate metaphorical vocabulary developed, and partly in the application of theory to examples (so also with the figures, see RHETORIC, GREEK, § 4: see, e.g., 'Longinus' 17-29 for a group of traditional examples sensitively treated).

7. Philosophers and scholars, as well as rhetors, contributed to Hellenistic criticism. (i) The Stoics (Ariston, Diogenes of Babylon) viewed poetry primarily as educational, and in a sense continued Plato's moralizing approach. Plutarch's *de audiendis poetis* is in this tradition. (ii) Epicurean theory is known mainly from Philodemus *Περὶ ποιμάτων*, book 5, extant on papyrus; he strongly criticizes the didactic approach. (iii) Alexandrian scholarship owed much to Aristotle (e.g. to *Poet.* 25). The great scholars used aesthetic as well as historical arguments in the discussions of authenticity which were among their main concerns. Dionysius is in the same tradition in the sense that his historical interests combined fruitfully with his rhetoric in the criticism of the orators. Many extant commentaries and scholia, all the way down to Eustathius (q.v.), contain critical judgements of interest.

8. The Roman contribution is not a mere appendage to Greek criticism; it has its own value and originality. In the great period of Latin literature (as in the days of the Old Comedy) criticism appears in topical writing in quite unacademic contexts; in Lucilius and Horace (as later in Persius and Petronius) it is an ingredient of satire. Horace (*Sat.* 1. 4, 1. 10, 2. 1; *Epist.* 1. 19, 2. 1, 2. 2) defended his own literary position, expounded literary history and finally (*Ars Poetica*) built an epistle combining a poet's personal experience with the Peripatetic theory of Neoptolemus of Parium, known also from Philodemus. The *Ars* mingles traditional precepts on the drama and views on the poet's place in society with much individual wisdom and humour. It set a fashion followed in the Renaissance by Vida, Boileau, Pope.

9. Cicero's achievement as a judge of oratory (see RHETORIC, LATIN, § 2) is unequalled by any Greek. Political oratory died with him; the age of the declaimers and rhetorical schools which followed produced critics of a different cast. The Elder Seneca (q.v.) makes many shrewd points in commenting on his favourite declaimers (see DECLAMATIO), to many in the first century A.D. the sophisticated declamatory style was a symptom of decadence. Seneca's son (*Epist.* 114) and Tacitus (*Dialo-*) reflect interestingly on the moral, political, and intellectual causes of decline. With Quintilian, there is a return to Cicero's ideals: the famous chapter (10. 1) in which Quintilian catalogues the authors to be read by the budding orator both summarizes traditional teaching *Περὶ μνήσεως* and shows a capacity for independent judgement.

10. The writers of the second century—Gellius and Fronto—represent a further change in taste. They often prefer early poets and pre-Ciceronian prose-writers to the Ciceronian and Augustan classics. From now on, Latin literature becomes, as Greek had long been, backward-looking and archaistic. In the Late Empire scholia and commentaries on the classical writers (e.g. Servius on Virgil, Donatus on Terence) preserve the traditions of

rhetoric and criticism and enshrine many interesting and valuable judgements.

In general, see the articles on the authors mentioned. Early texts are usefully collected in G. Lanata, *Poetica pre-Platonica* (1963).

Aristotle's *Poetics*. I. Bywater's commentary (1909) remains valuable, his text is superseded by R. Kassel's (1965). See also A. Rostagni's edition (1945) and the useful short interpretation by H. House, *Aristotle's Poetics* (1956). New commentary by D. W. Lucas (1968). Many translations: e.g. Bywater (1909), G. M. A. Grube (1958); Longinus, *On the Sublime*, ed. D. A. Russell (1964).

On Plato, see P. Vicaire, *Platon critique littéraire* (1960). On Horace (and Neoptolemus and Philodemus), C. O. Brink, *Horace on Poetry* (1963).

GENERAL SURVEYS G. Saintsbury, *History of Criticism* 1 (1900); J. W. H. Atkins, *Literary Criticism in Antiquity* (1934); E. E. Sikes, *The Greek View of Poetry* (1931); J. D. Denniston, *Greek Literary Criticism* (anthology, in translation) (1924); J. F. D'Alton, *Roman Literary Theory and Criticism* (1931); G. M. A. Grube, *The Greek and Roman Critics* (1965). D. A. R.

LITERATURE, GREEK. 1. W. Schmid and O. Stählin, *Geschichte der griechischen Literatur* (in I. von Müller's *Handbuch*). The latest volumes are:

7th ed.: I. i. *Die griechische Literatur vor der attischen Hegemonie* (1929). I. ii. *Die griechische Literatur in der Zeit der attischen Hegemonie vor dem Eingreifen der Sophistik* (1934). I. iii. *Die griechische Literatur zur Zeit der attischen Hegemonie nach dem Eingreifen der Sophistik, Erste Hälfte* (1940). I. iv. *ibid.*, *Zweite Hälfte, Erster Abschnitt* (1946). I. v. *ibid.*, *Zweite Hälfte, Zweiter Abschnitt* (1948).

6th ed.: II. i. *Die nachklassische Periode der griechischen Literatur, Erste Hälfte: Von 320 vor Christus bis 100 nach Christus* (1920). II. ii. *Die nachklassische Periode der griechischen Literatur, Zweite Hälfte: Von 100 bis 530 nach Christus* (1924). 'Schmid-Stählin' is essentially a reference work, and does not lend itself to continuous reading. It contains full bibliographies.

2. T. Sinko, *Literatura grecka*, 3 vols. in 6 parts (Cracow, 1931-54). This Polish work is on a scale comparable to Schmid-Stählin. Volume III, dealing with Greek literature in the Roman and early Byzantine period, offers the most up-to-date treatment of its subject. The extensive bibliographies may be consulted by those unable to read Polish.

3. F. Susenmühl, *Geschichte der griechischen Literatur in der Alexandriner-Zeit*, 2 vols. (1891-2). Still fundamental as a reference work, though its bibliographical information is out of date.

4. K. Krumbacher, *Geschichte der byzantinischen Literatur von Justinian bis zum Ende des oströmischen Reiches* (527-1453)² (1897), in I. von Müller's *Handbuch*. Still the essential reference work on Byzantine Greek literature. For theological literature it is now supplemented by

5. H. G. Beck, *Kirche und theologische Literatur im byzantinischen Reich* (1959), in I. von Müller's *Handbuch*, and for historical literature by

6. Gy. Moravcsik, *Byzantinoturcica*², vol. 1 (Berlin, 1958).

7. A. Lesky, *Geschichte der griechischen Literatur*² (1963) and Engl. Transl., *A History of Greek Literature* (1965), is an eminently readable and authoritative shorter study, with up-to-date bibliographical information. There are many shorter histories of Greek literature in English. The most informative is probably

8. H. J. Rose, *Handbook of Greek Literature from Homer to the age of Lucian*⁴ (1957). For the period after Lucian reference can still profitably be made to

9. F. A. Wright, *History of Later Greek Literature from the death of Alexander in 323 B.C. to the death of Justinian in A.D. 565* (1932). R. B.

LITERATURE, LATIN. 1. M. Schanz, C. Hosius, G. Krüger, *Geschichte der römischen Literatur* (in I. von Müller's *Handbuch*). The latest volumes are:

4th ed.: I. *Die römische Literatur in der Zeit der Republik* (1927). II. *Die römische Literatur in der Zeit der Monarchie bis auf Hadrian* (1935).

3rd ed.: III. *Die Zeit von Hadrian 117 bis auf Constantin 324* (1922).

2nd ed.: IV. i. *Die römische Literatur von Constantin bis zur Gesetzgebungswerk Justinians*. Erste Hälfte: *Die Literatur des vierten Jahrhunderts* (1914). IV. ii. *ibid.*, Zweite Hälfte: *Die Literatur des fünften und sechsten Jahrhunderts* (1920). 'Schanz-Hosius-Krüger' is essentially a reference work, unsuitable for continuous reading. It contains full bibliographies.

2. W. S. Teuffel, *Geschichte der römischen Literatur*, 6th/7th ed. by W. Kroll and F. Skutsch, 3 vols. (1913-20). On a somewhat smaller scale than 'Schanz-Hosius-Krüger', this too is suitable for reference rather than reading.

3. M. Manitius, *Geschichte der lateinischen Literatur des Mittelalters*, 3 vols. (1911-31), in I. von Müller's *Handbuch*. Essential for study of medieval Latin literature, but rather a collection of monographs than a unitary history. The most extensive treatment of Latin literature in English is offered by

4. J. Wight Duff, *Literary History of Rome from the Origins to the Close of the Golden Age* (1909; 3rd ed. 1953, with corrected impression, 1960, by A. M. Duff); and

5. *id.* *Literary History of Rome in the Silver Age, from Tiberius to Hadrian* (1930). There are many shorter studies in English, of which the most generally useful is probably

6. H. J. Rose, *Handbook of Latin Literature*³ (1954). On the Latin literature of late antiquity and the Middle Ages the best shorter history is

7. M. Hélin, *A History of Mediaeval Latin Literature*, transl. by J. C. Snow (U.S.A. 1949). A longer, and most sensitive and perceptive survey of medieval Latin literature is given by

8. J. de Ghellinck, *Littérature latine au moyen âge*, 2 vols. (1930), and

9. *id.* *L'Essor de la littérature latine au XII^e siècle*, 2 vols. (1946). Fundamental for the study of late and medieval Latin poetry are

10. F. J. E. Raby, *A History of Christian-Latin Poetry*² (1953), and

11. *id.* *A History of Secular Latin Poetry in the Middle Ages*², 2 vols. (1957). R. B.

LITERNUM, Roman citizen colony on the northern coast of Campania (q.v.), founded in 194 B.C. but soon derelict (Liv. 34.45): excavations near *Lago di Patria*. The disillusioned Scipio Africanus Major retired and possibly was buried there (Liv. 38.52, 53, 56; Sen. *Ep.* 86). Later the Via Domitiana (q.v.), like the modern railway, somewhat increased its importance. E. T. S.

LITIS AESTIMATIO, the assessment, made by the *iudex* (q.v.), of the amount of money which the unsuccessful defendant in a Roman civil action must pay to the plaintiff. In the formulary procedure (see LAW AND PROCEDURE, ROMAN, 1) all actions, except those intended only to settle a preliminary question (*actiones praeiudiciales*: Gai. *Inst.* iv.44), necessarily led to a *condemnatio* for a money sum (Gai. *Inst.* iv.48). There could be no order for specific performance or for the restitution of a thing, though it was open to the defendant to do so before judgment (Gai. *Inst.* iv.114), and in some actions the *condemnatio* was made conditional on his not doing so, the plaintiff making his own assessment of the value (see VINDICATIO). In an action concerning title to property, if the defendant paid the *litis aestimatio*, the title thereby passed to him. B. N.

LITURGY. At Athens in the fifth and fourth centuries B.C. certain public functions were compulsorily conferred upon the richer citizens and metics. Of these liturgies some, like the trierarchy (q.v.), were occasional, others were imposed regularly, according to a fixed order of rotation. These included the *choregia* (q.v.: the production of a chorus at the musical and dramatic festivals), the gymnasiarchy (see GYMNASIUM), *ἐστίασις* (the provision of a banquet for a tribe at festivals), *ἀρχιθεωρία* (the leadership of a public delegation to a foreign festival), *ἵπποτροφία* (the maintenance of a horse by a knight). To some liturgies nominations were made by a magistrate, e.g. by the archon to the tragic *choregia*, to others by the tribes, e.g. to the cyclic *choregia* and *ἐστίασις*. A person nominated might challenge another whom he considered better able to bear the expense, and the latter might either undertake the liturgy or exchange properties with his challenger, or appeal to the courts (see ANTIDOSIS). A liturgy involved the holder both in personal service (though he might employ a deputy) and in expense. In some cases the State made an allocation, but this did not by any means cover the costs.

In the Hellenistic age no clear line was drawn between *ἀρχαί* and *leitourgiai*. Both were filled by popular election; neither imposed any obligatory expenditure in theory, but both in fact often involved a heavy personal outlay; both might in the last resort be compulsorily imposed. Immunity was in this age often granted, not only from liturgies, but from magistracies, and the term 'liturgy' came to denote minor offices, which were onerous but did not carry much authority.

In Roman municipal law a sharp distinction was drawn between *honores* and *munera*; *honores* qualified their holder for a seat on the council; the *immunitas* conferred by the Roman government meant exemption from *munera*. These rules were also applied in the Greek East, and offices must therefore have been definitely classified into *ἀρχαί* and *leitourgiai*. In time the distinction became blurred; immunity (*ἀλειτουργησία*) by the early third century included exemption from magistracies. By this time the most important and onerous liturgies were imperial, such as the collection of tribute.

In Egypt a liturgy meant a compulsory State office. Compulsion was little used in the Ptolemaic or early Roman period, but from the latter part of the first century A.D. became commoner, till every post below the rank of *στρατηγός* or *βασιλικὸς γραμματεὺς* became a liturgy. Qualified persons were nominated by the scribes of the *metropoleis* and villages to the *strategoi*, who themselves appointed to lower posts, and for higher posts submitted the names to the *epistrategoi*, who drew lots between them. When councils were instituted in the *metropoleis*, many of the more important officers were elected by them.

V. Thurneier, *De civium Atheniensium muneribus eorumque immunitate* (1880), J. Oehler, *PW*, s.v. 'Leitourgia'; F. Oertel, *Die Liturgie. Studien zur ptolemäischen und kaiserlichen Verwaltung Ägyptens* (1917). A. H. M. J.

LITYERSES. 'Some say that he was a son of Midas, and that he challenged all and sundry to a contest in reaping, and maltreated those who were overcome by him. But, encountering a stronger reaper, he met his death. Some say that it was Heracles who killed him' (Pollux 4.54, who says that Lityerses is the Phrygian reapers' song). His source is uncertain, cf. Crusius in Roscher's *Lexikon*, s.v. It would seem, therefore, to be a traditional song with a story to explain it, cf. LINUS. H. J. R.

LIVIA (PW 37) **DRUSILLA**, daughter of M. Livius Drusus Claudianus (adoptive son of Drusus 2^o) and Alfidia, was born 30 Jan. 58 B.C. and in 43 or 42 married Ti. Claudius Nero (q.v. 3), whom she accompanied on

his flight after the Perusine War and to whom she bore Tiberius, the future emperor, and Drusus (3). In 39 Nero divorced her so that she could marry Octavian (Augustus), whose affection and esteem she retained throughout, although they did not have the children he longed for. She ruled his household with old-fashioned propriety, and her beauty, dignity, intelligence, and tact well fitted her for the high position which she presently filled as the consort of a monarch. Augustus valued her counsel, and was believed to have shown clemency to conspirators at her instance (see CINNA 4). Under his will she was adopted into the Julian gens and renamed Julia Augusta. After this her position was less happy; a desire to continue to exert influence seems to have caused some discord between her and Tiberius, and he was even supposed to have retired from Rome in A.D. 26 chiefly to be away from her. When she died in 29 he refused to execute her will or to allow her to be deified: the former omission was repaired by Gaius, the latter by Claudius. Though she was generally popular with the Senate for her many kindnesses to individuals, there were always those who assigned to her the character of a ruthless intriguer (Gaius called her 'Ulixes stolatus') and believed her to have had a hand in the deaths of Marcellus (q.v. 7), C. and L. Caesar (qq.v. 6 and 7), Agrippa (q.v. 4) Postumus, and Germanicus (q.v.), and even to have hastened the end of Augustus himself. But, while her influence may well have helped Tiberius to power, it does not appear that these graver imputations rested on any solid evidence.

Syme, *Rom. Rev.* and *Tacitus*, see indexes; J. Carcopino, *Passion et politique chez les Césars* (1958), 65 ff.; T. P. Wiseman, *Hist.* 1965, 333 f. Iconography. W. H. Gross, *Julia Augusta* (1962).

G. W. R.; T. J. C.

LIVILLA (CLAUDIA LIVIA JULIA ? *PW* Livii 38), daughter of Drusus (3) and Antonia (3), born c. 13 B.C., was married to C. Caesar (q.v. 7) and then to Drusus (q.v. 4). In 25 Sejanus (q.v.) asked Tiberius for her hand, but was refused. In 31 Tiberius was informed that she had been Sejanus' mistress and had helped him to have Drusus poisoned; she was put to death. T. J. C.

LIVIVS (1) ANDRONICUS, LUCIUS. Accius (q.v.), whose chronology was at fault, said that Livius came from Tarentum, and there is no reason to think this false. He came to Rome as prisoner of war (perhaps after the surrender of Tarentum in 272 B.C.); on manumission he took his owner's name. The first performance of a play (probably a tragedy) was in 240 B.C. (Cic. *Brut.* 72—relying on the *liber annalis* of Atticus, who based his work on Varro's researches). In 207 B.C. Livius was commissioned to compose a *παράδειγμα* in Greek style after the Sibylline books were consulted (Livy 27. 37. 7—previously done in 217 B.C., Livy 22. 1. 16, when the author is unknown, and later in 200 B.C., Livy 31. 12. 5, when the author was P. Licinius Tégula—presumably Livius was dead). In honour of this work of Livius the temple of Minerva on the Aventine was set aside as a place where writers and actors could meet and could make dedications (Festus, s.v. *scribas*). The lengthy account in Livy 7. 2. 3–12 which traces the origin of Roman drama from dramatic *satura*, with anecdotes about Livius, is untrustworthy and probably a construction, on Greek analogies, made about 100 B.C.

Plays: the titles of some eight tragedies are known and indicate Sophoclean and Euripidean originals, but the fragments are very scanty. There is one fragment (20–22 R.) from the *Equos Troianus* in cretics which is most plausibly identified as coming from a speech of Sinon: if so, Livius must have invented the practice of dispensing with the Greek choral odes and producing *cantica* of his own from trimeter monologues (this practice

was transferred then to comedy: see NAEVIUS, ENNIUS, PLAUTUS, CAECILIUS (1) STATIUS). Even less is known of his comedies but enough to show that, in contrast to Greek practice, he used the same pattern of senarius for both tragedy and comedy.

Odyssea: this 'translation' of Homer's *Odyssey* became famous and influential. It was composed in Saturnians, a poor substitute for the hexameter (cf. Ennius, *Ann.* 213 ff. V.), but it was clearly a work of great skill and some force. It was no 'translation' in fact: it was a Roman adaptation of Homer, with many happy inventions, e.g. the Muses became *Camēnae* (fountain goddesses), *μοῖρα* (*Od.* 3. 238) becomes *Morta* (a mysterious Italic goddess of death); the Roman use of patronymics adds a touch of solemnity, e.g. *Μοῦσα* (*Od.* 8. 481) becomes *diva Monetis filia*, Apollo becomes *filius Latonas*, etc. The high-flown effect of Homeric language is imitated by the use of archaisms, but Livius seems to have avoided the temptation to invent compound adjectives (e.g. *πολύτροπος* becomes *versutus*). Horace's characterization (*Epist.* 2. 1. 166) of early Roman poetry *nam spirat tragicum satis et feliciter audet* applies to Livius; what was clearly lacking was the easy flow and grace of Homeric composition.

G. W. W.

LIVIVS (2, *PW* 9), TITUS (Livy) (59 B.C.–A.D. 17 or 64 B.C.–A.D. 12), the Roman historian, was born in Patavium (Padua) at the height of the old Venetic city's prosperity and fame; thus he grew up under the influence of stern Italian morality. We know little of his life. His daughter married a rhetorician, Magius, and his son may have been a writer, followed by Pliny. He himself wrote philosophical dialogues, historical in tendency, and his advice on rhetoric to his son (Quint. 10. 1. 30) shows his place in the Ciceronian tradition. At Rome he gave readings of his work, and won Augustus' interest in his historical task (4. 20. 7) and respect for his republican sentiment (Tac. *Ann.* 4. 34); he encouraged Claudius in his historical studies (Suet. *Claud.* 41). He must have spent most of his time at work in Rome or in Padua, where he died.

The history of Rome (*ab urbe condita libri*) was composed in 142 books. Books i–v covered from the origins to the Gallic sack of Rome, vi–xv reached the beginning of the Punic Wars, xvi–xx treated the First Punic War, xxi–xxx the Second Punic War, xxxi–xlv the Macedonian and Syrian Wars. As the work grew under his hand the pentad and decade arrangement had to be modified. The destruction of Carthage appeared in book li, Ti. Gracchus in lvii, the defeat of the Cimbri in lxxiii, the opening of the Social War in lxxi, Marius' death in lxxx, Sulla's death in xc, Caesar's consulship in cii, Pharsalus in cxi, Caesar's death in cxvi, Actium in cxxxiii, the death of Drusus (9 B.C.) in cxlii. Books cix–cxvi were entitled *belli civilis libri*.

The proemium reflects the situation at Augustus' accession to sole power; book i. 10. 3 was published after 27 B.C. and before 25 B.C.; book xxviii. 12 presupposes Agrippa's Spanish campaign of 19 B.C. Book lix followed Augustus' quotation of Metellus' speech on marriage in 18 B.C. If book cxxi was published after Augustus' death (A.D. 14), it may have been accompanied by the subsequent books; for books cxxxiv–cxlii (from 28 B.C. to Drusus' death in 9 B.C.) could well be deferred in publication.

Of this immense work only thirty-five books are extant: i–x, xxi–xlv. For the lost books we have a palimpsest fragment of book xci, cited fragments and

excerpts, and the epitomized, perhaps slightly 'contaminated' tradition of the *Periochae* (q.v.) and the Oxyrhynchus Epitome of books xxxvii–xl, xlviii–lv; also, in basis, the work of Florus, Granius Licinianus, Aurelius Victor, Eutropius and Festus, Orosius and Cassiodorus, Julius Obsequens.

Livy stood at the peak of annalistic historiography, and was able to develop the work of the immediate post-Sullan annalists. Valerius Antias from the beginning, and Claudius Quadrigarius from the Gallic sack (book vi), appear to have provided the basis of composition; they are cited regularly. The set annalistic arrangement allowed easy transition from source to source and the incorporation of episodic material; in books i–x Licinius Macer, Aelius Tubero, and (indirectly) Fabius Pictor and Calpurnius Piso, in books xxi–xxx Coelius Antipater and Polybius, in xxxi–xlv Polybius, supplement Valerius Antias and Claudius Quadrigarius; afterwards Posidonius, and perhaps Sulpicius Galba, Sisenna, Caesar, and Augustus' *Memoirs*, among others, were used in the same way.

In accordance with contemporary historiographical practice, Livy does not cite his authorities, except in cases of dispute or doubt, and often, e.g. in the comparison of casualty figures, this may be conventional. As a rule he adapted the source material with scarcely more than literary and stylistic elaboration, apparently without 'contamination', if we may judge from his reproduction of Polybius and the common inconsistency of the annalistic narrative. There is always a certain negligence in his treatment of context, with obvious discrepancies, repetitions, and chronological divergences; this is most striking in his use of Polybius, where the Olympiad yearly divisions are forced within the narrative based on the Roman year. The reason appears to lie in his undue dependence upon narrative form in constructing his work. This acceptance of the annalistic tradition in both matter and form largely explains his lack of source criticism; the authority of the *Annales Maximi*, persisting in its literary development, limited criticism to detail, and Livy remained the rhetorical writer.

Yet, even if we grant this, he falls short in critical method. His defective treatment of the problem of Cossus' *spolia opima* (4. 19), his neglect of the *libri lintei* when two sources cited the same passage differently (4. 23), not to mention again the inconsistencies in his narrative, reflect his subservience to written authority. Livy had little knowledge of Roman institutions. His inexperience in military matters affects his description of battles: his ignorance of the phalanx, for example, is unpardonable; he is, however, better on ships. He does not falsify events, but his literary elaboration often makes his narrative conventional and misleading. His ignorance of conditions in early Rome and in the East leaves blemishes on his historical reconstruction. There is little reason to believe that he improved his methods in the later books, once he had chosen his main sources, or that he applied sharp historical interpretation even where the circumstances of the Late Republic required it—and still less so for the dubious events since Caesar's death.

Livy's purpose in the first instance was not to analyse the process of history in the light of its political discordance. He set himself to give Rome a history that in conception and style should be worthy of her imperial rise and greatness, and challenge his generation to resume the responsibilities of their position. As a sober Italian he felt closer to the true traditions of Rome than the sophisticated politicians of the capital, and nourished the hopes of the early Augustan period. Thus he depicted the life and character, the policies and personalities of the past and the later decay of discipline; in particular, the social morale of early Rome, the 'integra atque

immobilis virtus' against Hannibal, the policy of Republican freedom against the Hellenistic monarchies, and the consequences of luxury and avarice in the later age. He failed to see the radical consequences of imperial expansion, social change, and political rivalry; yet he had faith in the moral qualities which should maintain what had been gained and so nearly lost.

Livy's genius lay in his power of vivid historical reconstruction, visualizing scenes and people. His natural feeling developed under the influence of Hellenistic psychological interpretation, and his literary talent was trained in rhetorical expression; the annalistic tradition gave him material and form. Cicero had defined his task, and his patriotic hopes of Augustus gave life to his early writing. In his first books his narration, fitting the subject-matter, has poetical colour and style: it is the prose epic of Rome, ranking with the *Aeneid*. The later books take on a more regular prose form, but show equally brilliant description of men and events. The feeling for atmosphere, as well as the principle of variation, allowed the set appearance of formal notices and prodigy tables.

In detail Livy's composition followed the Isocorean canons of brevity, economy, and verisimilitude, with the devices of literary elaboration, characterizing speeches, and dramatic technique. The style conformed to the Ciceronian requirements of 'varietas colorum, collocatio verborum', and 'tractus orationis lenis et aequabilis' in historical narration (e.g. for the sake of homogeneity, Livy (27. 37) would not quote Livius Andronicus); but composition and style had their own varying character, suitable to the different elements in the annalistic tradition. Livy's 'clarissimus candor' and 'lactea ubertas' reflect the lucidity and continuity of his thought, but the style is not purely periodic: it corresponds to the mode of the passage, poetic or formal, elaborate or plain, expository or rhetorical. Even stylistic irregularity or strained word-usage may occur to convey a nuance, departing from the pure Latinity of the capital. This may justify the charge of 'Patavinitas', if Pollio's gibe was not directed at the moral and romantic tone of Livy's work.

The command of his theme and its expression, and his deep seriousness and wide humanity give life to Livy's history. It is Augustan, with the faults as well as the merits of the time, and it falls below modern critical standards. Yet it reproduces tradition faithfully, without the defective rationalization practised in both ancient and modern times; thus modern criticism may be grateful.

His success was immediate and lasting. His work was used by historians and epic poets; an epitome had appeared for common use by the time of Martial (14. 190); his speeches were collected. In the Middle Ages, Dante praised 'Livio che non erra'. The Renaissance saw him in high favour, and printing made him a popular author. Machiavelli discoursed on the First Decade. Niebuhr and Lewis began the critical examination of his early tradition, and historical study has continued it.

EDITIONS. A. Drakenborch (1738–46; 1820–8); J. Th. Kreyssig (xxxiii; 1839); C. F. S. Aelschelski (i–x, xxi–xxiii; 1841–6); M. Hertz (1857–64); A. Luchsi (xxvi–xxx, 1879, xxi–xxx; 1888–9); W. LOBON of Argos (perhaps 3rd c. B.C.) was a literary forger, author of a work (perhaps in verse) on poets (Diog. Laert. i. 34. 112), in which he ascribed verses fabricated by himself to the Seven Sages and works in prose to early poets, e.g. Aristeas, Semonides, Pindar. His treatise seems to have been extensively, though indirectly, used by the *Suda*. J. F. L.

LOCRIEPIZEPHYRII (Λοκροὶ Ἐπιζεφύριοι), a Dorian city in the 'toe' of Italy, was founded c. 700 B.C., apparently by Opuntii (East Locrians), although its settlers probably included Ozolae (West Locrians), fugitive slaves, and Lacedaemonians. Oenotri (= Sicels?) previously inhabited the site. Locri's oligarchy, 'The Hundred Houses', reputedly governed excellently: the town possessed Europe's earliest written legal code (attributed to Zaleucus, q.v.). Locri defeated Croton at the Sagrais battle (6th c.), founded its own colonies (Hipponium, Medma; before 450), and usually was friendly with Syracuse who supported it against its rival Rhegium (q.v.). Bruttian, Pyrrhic, and Hannibalic Wars caused some decline, but Locri was still a considerable town, allied to Rome, in Polybius' day; Polybius knew it intimately (12. 5 f.). Apparently Saraceni finally destroyed it.

LOCRI. Eastern Locris, comprising the mainland coast of the Euboean Straits from Thermopylae to Larymna, and Western Locris, comprising the valley of Amphissa and the northern coast of the Corinthian Gulf from Naupactus to near Crisa, were separated from one another by Doris and Phocis, probably the results of an invasion through an early Locrian State occupying central Greece. As late as the fifth century B.C. the two divisions of Locris, known as 'Opuntian' and 'Ozolian', possessed a joint franchise. Their territory being mainly infertile and hemmed in by stronger States, the Locrians played little part in history. Opuntian Locris united round a centre at Opus, where the assembly of the 'Thousand' drawn from noble families met, founded Locri in south Italy, and began to coin in the fourth century B.C. But Ozolian Locris remained backward and without unity (Thuc. i. 5). Both areas were curtailed by their neighbours, Opuntian Locris losing Thermopylae to the Thessalians and Daphnus to the Phocians, whereby Eastern Locris split into Hypocnemidian and Opuntian Locris, and Ozolian Locris losing Naupactus to Athens. The valley of Amphissa, traversed by the

route from Doris to the Corinthian Gulf, was of strategic importance and became involved in the Sacred Wars (q.v.).

P.-K., *GL* 1. 2. 339 ff., for Eastern Locris, and L. Lerat, *Les Locriens de l'Ouest* (1952), for Western Locris. N. G. L. H.

LOCUSTA (LUCUSTA), a noted poisoner of Gallic origin, was employed by Agrippina to poison Claudius and by Nero for Britannicus. Nero took with him on his flight a poison prepared by her. Galba executed her. A. M.

LOGIC, the science of valid argument-forms, developed among the Greeks as a result of their interest in arguments of all kinds, not only those occurring in philosophy and mathematics but also the arguments of politics and the lawcourts. The comparison of valid and invalid arguments leads first to the abstraction of *logical form* from many arguments of a similar verbal pattern and then to the analysis of *logical constants*, i.e. the propositional connectives such as 'not', 'if', and 'or', and the quantifiers, 'every' and 'some'. Both processes may be observed within the context of philosophical argument in many of Plato's dialogues, e.g. the *Parmenides* and the *Sophist*. Aristotle at the end of the *Sophistici Elenchi* claims to have been the first to study the technique of argument (dialectic) systematically, and it can be seen in this work and in the *Topics* how the study of argument-forms is gradually disengaged from the practical study of argument-winning.

Aristotle's main contributions to logic are his theory of the four forms of general statement and the relations between them, developed in the *De Interpretatione*, and the doctrine of the syllogism, presented in the *Prior Analytics*. Two features distinguish the latter as the first great work of formal logic: the use of letters as *term-variables*, which immensely simplifies the presentation of formal argument, and the development of syllogistic as a *system*. By the doctrine of reduction the syllogistic moods are shown to be interconnected, so that all can ultimately be reduced to two, later called *Barbara* and *Celarent*. A literal translation of Aristotle's formula for *Barbara* is 'If A belongs to every B and B belongs to every C, then A belongs to every C'. Aristotle also made a beginning in the study of modal logic, i.e. the logic of propositions expressed by the use of the words 'necessary', 'possible', etc., but his technical equipment was insufficient for this task and his treatment is generally recognized to be unsatisfactory. The discovery of the syllogism was so brilliant an achievement that it appeared as something final to Aristotle's followers, and his successors did little more than introduce minor improvements. Theophrastus, without complete success, attempted to render the theory of modal syllogisms consistent by what came to be known later as the *peiores* rule.

The Megarian-Stoic school of logic developed independently of the Aristotelian. Two prominent early members, Eubulides and Diodorus Cronus, were contemporary with Aristotle, and Philo of Megara was slightly younger. According to the judgement of his successors, the greatest logician of the school was the Stoic Chrysippus. His works are unfortunately lost and Stoic logic has, for the most part, to be reconstructed from fragments. The interest of the Megarians and the Stoics was concentrated on the propositional connectives, whereas syllogistic is essentially a logic of the quantifiers. Philo anticipated some modern logicians by giving a truth-functional definition of 'if . . . then . . .' and other connectives, but Chrysippus preferred to give them a stronger, modal sense. Both Megarians and Stoics also worked on modal logic. The Stoics used variables, but the values of their variables were propositions, not terms, and

the signs they employed were ordinal numbers, not letters. They also elaborated their logic as a deductive system with five indemonstrable moods (*ἀναπόδεικτοι τρόποι*) as basic. The first of these (later called the *Modus Ponens*) was expressed as follows, 'If the first, then the second; but the first; therefore the second'. They differed from Aristotle in presenting logic as a system of argument-forms, whereas he formulated his syllogistic moods in general conditional statements. It is probable, however, that he would not have recognized the difference; for the Stoics seem to have been the first to recognize clearly the distinction between a valid argument and a true conditional statement. They were also aware of the Principle of Conditionalization, i.e. that to every valid argument there corresponds a true conditional statement.

It was unfortunate for the development of logic in antiquity that the two systems were regarded as alternatives, whereas they are in fact complementary, the Stoic logic of propositions being required as a substructure for the Aristotelian logic. Thus the Stoic theorem, 'If the first and the second, then the third: but not the third; on the other hand the first; therefore not the second', is presupposed in Aristotle's indirect reduction of the second-figure mood *Baroco* to *Barbara*.

An attempt to synthesize the two traditions seems to have been made by Galen in the second century A.D. but his major work is lost so that we cannot say how successful he was. Some conflation, or perhaps, confusion, did, however, certainly occur in later antiquity and some Stoic elements are to be found in Boethius (470–524), although he writes in general as an Aristotelian.

Inductive logic was comparatively little developed in antiquity. Aristotle discusses *ἐπαγωγή* in the *Topics* and in the *Posterior Analytics*, but he seems generally to mean by this term what was later called intuitive induction. There is, however, some attempt to formulate principles of scientific research in the Hippocratic writings, and the Epicureans developed a theory of inductive inference under the title *συσμεινόν*.

C. Prantl, *Geschichte der Logik im Abendlande*, 4 vols. (1855–70), still a valuable source-book, although the text is all but worthless. I. M. LOGISTAI (*λογισταί*) in Athens were the public auditors. In the fifth century B.C. there were thirty, but in the fourth century there were only ten, perhaps because they had less to do after the Athenian Empire came to an end. They were appointed by lot by the members of the *boule* (q.v.) from among themselves (unless, as some have thought, the statement to this effect in Arist. *Ath. Pol.* 48. 3 refers to a different board of auditors). Their chief function was their part in the procedure called *euthynia* (q.v.): with the assistance of ten advocates (*συμφυροποι*) they examined the accounts of every magistrate who had handled public money, and brought him before a lawcourt for trial. In the time of the Athenian Empire they also performed various duties in connexion with the accounts of the tribute.

LOGOGRAPHERS. The word *λογογράφος*, as used by the contemporaries of Demosthenes, commonly means a speech-writer for litigants in the courts, or else a writer of prose, as distinct from a poet (cf. Arist. *Rh.* 2. 11. 7 with the note in Cope's edition). Modern practice, however, has followed Thucydides (1. 21) in applying the

term to the predecessors and contemporaries of Herodotus who were the pioneers of history-writing. Early writers of narrative prose are called *λογιστοί*, 'tellers of tales', by Herodotus (2. 134, 143). But like the early philosophers and natural scientists, those who claimed to offer a faithful account of human activities considered their task as an investigation (*ἵστορία*), as scientific rather than poetic. If we grudge the title of historian to the predecessors of Herodotus, it is largely because they wrote of gods and heroes as well as of men and some of them professed to offer a true and correct version of mythology as well as of history.

No MSS. of these authors have survived, but there are numerous references to them and occasional direct quotations in later Greek writers. Some later writers (e.g. Strabo 11. 6. 2, 12. 3. 21) have a low opinion of their accuracy and accuse them of fabricating names and incidents; others stress their lack of critical judgement; all agree that they wrote in simple style and language (cf. esp. Dion. Hal. *Thuc.* 23). It would be easier to estimate their talents and their value as historical sources if Herodotus had been more explicit in recording his obligations to them. See **HERODOTUS** (1).

Many of them came from Ionian cities. Two supposed Milesians, Cadmus and Dionysius, are often given as the earliest logographers; but they are very uncertain figures, and the references to them in later literature are probably not to be trusted (Hellenistic writers were quite capable of fabricating their sources). Hecataeus of Miletus, on the other hand, is a well-attested historical figure, mentioned several times by Herodotus; he was active politically in Miletus as early as 500 B.C. (Hdt. 5. 36, 125), and much can be learnt from surviving fragments about the range and character of his literary work. Acusilaus, Charon (2), Damastes, Euagor, Hellanicus, Pherecydes (2), Scylax, and Xanthus (2) (qq.v.) can all be considered contemporaries of Herodotus, though there is much uncertainty about precise dates.

The work of the logographers may be classified under various heads:

1. Mythographic treatises, which involved attempts to rationalize and systematize Greek mythology, and to trace the genealogies of families who claimed descent from a god or hero.
2. Geographical works, often in the form of a *Periegesis* or *Periplus*, describing the peoples and areas met with on a coasting voyage and the neighbouring peoples inland.
3. Accounts of the customs and history of non-Greek peoples.
4. Local histories, especially accounts of the Founding of Cities (*κτίσεις*).
5. Chronological works, which might include tables based on lists (real or apocryphal) of kings, magistrates, priests, or priestesses.

Herodotus combines the various strains of the logographers' work, and was the first to provide a coherent history, which had for its main theme the contest of Greek and barbarian that culminated in the Persian Wars.

Griffith in *Fifty Years of Classical Scholarship* (ed. Plautner, 1954), 150 ff., A. Lesky, *Hist. Gk. Lit.* (Engl. transl. 1966), 218 ff. L. P.

LOGOS combines in its meaning both speech and reason. Its first use to signify the intelligible law of the universe has been attributed to Heraclitus (Diels frs. 1, 2, 45, 50, 72, 115), but this may be doubted; and the origin of the metaphysical meaning must probably be sought in Stoic teaching. According to this, the whole natural order was pervaded by *ὑπὸς λόγος* (to be identified, if need be, with Zeus: Zeno, von Arnim fr. 162), and this rational purpose prompted the regular motions of the heavenly bodies and

the exact functioning of natural objects. Within at least the wisest of men there is a λόγος σπερματικός and man's duty and distinction is to live κατὰ λόγον; for in this way (according to Posidonius) he 'is akin to, and has a like nature with the power governing the whole cosmos'. The consistency of earlier Stoic teaching was later modified, especially in the schools of Alexandria, by the adoption of the cosmogony of Plato's *Timaeus*, so that transcendental monotheism was combined with an original pantheism. Hellenistic-Jewish teachers adopted language appropriate to the Stoic λόγος for the divine Wisdom (as in *Wisdom of Solomon* vii. 22-viii. 1), and their tradition influenced writings as diverse as the cosmogony of Ptolemy and the philosophy of Philo. The Logos in Philo can be the divine pattern of which the material world is a copy, the divine power immanent in the cosmos, the divine purpose or agent in creation, an intermediary between God and the world (*Quis r. d. heres?* 205 f.), and hence, never wholly personal nor impersonal. The prologue of St. John's Gospel draws on a similar range of ideas, though treating them very differently: it asserts that in Christ, as the unique Son of God, the cosmological λόγος was incarnate. According to the second-century Apologist, Justin Martyr, the divine Logos appeared in its fulness in Christ; but every man possesses the λόγος σπερματικός. In so far as the philosophers lived according to reason they were Christians before Christ; but after Christ's coming, Christians have the whole and undiluted truth (*I Ap.* 46; *II Ap.* 8, 13).

Dodd, *The Interpretation of the Fourth Gospel* (1953), 263 ff.; E. R. Goodenough, *The Theology of Justin Martyr* (1927), 263 ff.

LOLLIA (*PIW* 30) **PAULINA** was granddaughter of M. Lollius (q.v.) and very wealthy. She was forced to abandon her marriage with P. Memmius Regulus (q.v. 3) in order that she might marry the Emperor Gaius in A.D. 38. Divorced by him in the following year, she was an unsuccessful candidate for the hand of Claudius after Messalina's death in 48. Agrippina secured her banishment (on the charge of consulting astrologers) in the following year, and she was driven to suicide. J. P. B.

LOLLIUS (1, *PIW* 21) **PALICANUS**, MARCUS, 'a Picene of humble origin' (hence an adherent of Pompey), 'loquacious rather than eloquent' (Sall. *Hist.* 4. 43); father-in-law of Gabinius (q.v. 2). As tribune (71 B.C.) he was Pompey's main political agent, helping to formulate his policy on *Popularis* lines. Praetor in 69, he was not allowed to rise to the consulate. E. B.

LOLLIUS (2, *PIW* 11), MARCUS (cos. 21 B.C.), a *novus homo* and prominent partisan of Augustus, praised by Horace (*Carm.* 4. 9. 33 ff.) for conspicuous integrity, but described by Velleius as crafty, corrupt, and rapacious. He was the first legate of Galatia (25), active in Macedonia, probably as proconsul (c. 19-18) and then in Gaul, where German raiders inflicted a defeat, capturing the eagle of a legion, but hardly causing a serious disaster. In 1 B.C. he was chosen to be counsellor and overseer of C. Caesar in the East. A bitter enemy of Tiberius, he influenced the young prince against the exile. As a result of quarrel or intrigue, however, he fell from favour, was accused of taking bribes from the Parthian king, and died before

long, perhaps by suicide (A.D. 2). Lollius left enormous wealth.

Syme, *Rom. Rev.*, see index; *Hist.* 1964, 118 ff.

R. S.

LOLLIUS (3) **BASSUS** of Smyrna has about a dozen epigrams in the Greek Anthology. *Anth. Pal.* 7. 391 is a pompous comment on the death of Germanicus (A.D. 19); *Anth. Pal.* 10. 102 looks like an adaptation from Horace (*Carm.* 2. 10), and 11. 72 is a joke in the manner which Lucilius (q.v. 1) was to perfect later.

Gow and Page, 1587 ff. Cichorius, *Röm. Stud.* vii. 4.

G. H.

LOLLIUS (4, *PIW* 28) **URBICUS**, QUINTUS, governor of Britain from A.D. 139 until after 142 (*JRS* 1922, 66) and formerly legate of Legio X Gemina and governor of Lower Germany, built the Wall of Antoninus (q.v.) (S.H.A. *Pius* 5. 6; Collingwood-Wright, *RIB* 2191, 2192). Inscriptions commemorating the erection of buildings under Lollius come from Corstopitum (*RIB* 1147, 1148), and from High Rochester (*RIB* 1276). He later became governor of Africa (Apul. *Apol.* 2) and *praefectus urbi* (*CIL* viii. 6705, 6706).

I. A. R.

LOMBARDS, a Germanic people whose original home appears to have been in the island of Gotland. By the time of Tacitus, who regards them as few in number but warlike and audacious, they lived east of the lower Elbe. After the Roman defeat in A.D. 9 they spread to the west of that river. Conquered by Maroboduus and the Marcomanni they joined Arminius in A.D. 17 and lived in freedom thereafter. The chief event in their history was their settlement in A.D. 568 in northern Italy, where they maintained themselves for two centuries. E. A. T.

LONDINIUM (perhaps denoting 'place of Londinos', 'the fierce one') originally stood on the eastern of two hillocks bounding the Walbrook at the mouth of the Thames. Tacitus states that at the time of Boudicca's revolt (A.D. 60) it was an important trading-centre. (*Ann.* 14. 33) and that at the principal towns, Londinium, Verulamium, and Camulodunum, 70,000 persons perished. Early vestiges have been found, but authority inclines against a pre-Roman origin for this considerable community.

Perhaps after 60 it became the financial centre of the province (*CIL* vii. 30 and *JRS* 1936, 264 f.), and eventually the capital, probably of Britain, and is mentioned as a key-point in official activities. In c. 290-326 and 383-8 it was the seat of a mint, and a treasury official was stationed there (*Not. Dign. Occid.* xi. 37). The Council List of Arles calls it a 'civitas' and assigns it a bishop. It received at an unknown date (? 326-65) the title of Augusta. Of its local divisions, a *vicinia* is known (*CIL* vii. 20).

The principal remains are subsequent to Boudicca's destruction, after which the settlement spread to the western hill. About 80 a vast *basilica* (500 feet long) and *forum*, enclosing perhaps an official temple, were built, and about the same time a stone fort, c. 10 acres in area, was built in what was to be the north-west re-entrant (Cripplegate) of the town wall; this was built of squared stones and brick-bonders with bank and ditch (c. 200). It enclosed an area of c. 330 acres, making Londinium the fifth largest town in the west. Traces of stone and timber foundations, mosaics, etc., are found with frequency within the walls, and there was a suburb on the south bank connected by a bridge. A serious fire seems to have occurred c. 120-30, and at various dates bastions were added to the town wall (some may even be Saxon), the river section of which was built (or rebuilt). A Mithraeum (see MITHRAS) close to the east bank of the Walbrook

was discovered in excavations after bomb-damage and left open for view. It dated from the end of the second and was abandoned in the fourth century. It has yielded important statues and inscriptions.

How far Londinium survived the Saxon invasions is still a matter of great uncertainty; 'The period remains blank' (Grimes). Londinium was certainly a town without a bishop in the seventh century (Bede, *Hist. Eccl.* ii. 3) which is hardly credible if significant town life had existed.

Royal Commission on Historical Monuments, London (Roman) (1928) is complete to its date, though its conclusions are often (e.g. on date of town wall) obsolete. For subsequent discoveries, see JRS and W. F. Grimes, *The Excavation of Roman and Medieval London* (1968).
C. E. S.

LONG WALLS, THE (τὰ μακρὰ τεῖχη or σκέλη), were built between 461 and 456 B.C. to connect Athens with her ports, Phalerum and Piraeus. About 445 the Phaleric wall was replaced by a third, parallel to the north or Piraeus wall. They were destroyed by the Spartans to flute music in 404, rebuilt by Conon in 393, but allowed to fall into a half-ruined state by 200 (Livy 31. 26. 8). The walls to Piraeus were about 4 miles long and c. 200 yards apart; the traces visible a century ago have now almost entirely disappeared. The course of the Phaleric wall is uncertain. The main road from Piraeus to Athens lay outside, the road inside being primarily military. The Long Walls were used in the Peloponnesian War to make Athens into an isolated fortress, in which most of the population of Attica could live on seaborne provisions. The example of Long Walls was followed elsewhere, notably at Megara.

W. Judeich, *Topographie von Athen* (1913), 155 ff. (his course for the Phaleric wall is improbable); T. Lenschau, *PH* xix, 881; R. L. Scranton, 'The Fortifications of Athens at the opening of the Peloponnesian War', *Arch.* 1938, 525 ff.; J. Γρηγορίου, *Πολιορκητική ἔκκλησις τῶν Ἀθηναίων* (1960), 48 ff.

'LONGINUS'. The literary treatise *Περὶ ὕψους*, *On the Sublime*, of which about two-thirds survives, is ascribed by the medieval tradition to 'Dionysius Longinus' or 'Dionysius or Longinus'. Until the early nineteenth century, it was generally believed to be by Cassius Longinus (q.v.). Internal evidence, especially the chapter on the decline of oratory (44), points, however, to an earlier date, some time in the first century A.D. The writer sets out to answer Caecilius (q.v. 4) of Calacte, who had given what 'Longinus' holds to be an inadequate account of ὕψος ('elevation', 'grandeur', 'sublimity'), failing in particular to give due weight to the emotional element (πάθος).

On the Sublime is a work of the first importance. In discussing the quality of thought and style which marks writing as ὕψηλον, the author breaks free of the rhetorical tradition within which he works, and throws real light on what constitutes literary greatness. He wrote in an archaizing age, and his own style is a product of great sophistication; but his concern with the moral function of literature and his impatience with pedantry give a clear impression of a serious and original mind. The period of his greatest influence extends from Boileau's translation (1674) to the early nineteenth century; but as a stimulus to critical thought and to the understanding of ancient literature he has permanent value.

LONGINUS, CASSIUS (c. A.D. 213-73), rhetorician and philosopher, who taught at Athens (see J. Bidez, *Vie de Porphyre* (1913), ch. 4) and, in the last few years of his

life, became the principal adviser of the rulers of Palmyra, Odenathus and Zenobia; he was executed when the city fell to Aurelian (Gibbon, *Decline and Fall*, ch. 11, gives the classic English account). Plotinus (*Vita* 14) spoke of Longinus as φιλόλογος, φιλόσοφος δ' οὐδαμῶς, though he wrote on philosophical subjects (*Περὶ ἀρχῶν*, commentary on *Timaeus*), he was much more celebrated for his critical and rhetorical work; Eunapius (*Vitae Sophistarum* 4) calls him 'a living library and walking Museum'. For the attribution to him of *Περὶ ὕψους*, see 'LONGINUS'.

Fragments in J. Toup's edition of *Περὶ ὕψους* (1778); rhetorical fragments in A. O. Prickard's (O.C.T. 1906).
D. A. R.

LONGUS, Greek writer, creator of the pastoral romance, and author of *Daphnis and Chloe*. Nothing is known about him: even his name has been suspected. He was perhaps from Lesbos, since his descriptions of the island seem to betray autopsy; his *floruit* is most uncertain, because our conjectures depend only upon stylistic comparisons with other romancers and authors, an admittedly hazardous criterion which has caused him to be assigned by scholars to every century A.D. from the second to the sixth. His work is a bucolic idyll in prose, adapted into the traditional framework of Greek romance, and narrates how Daphnis and Chloe, two foundlings brought up by shepherds in Lesbos, gradually became enamoured of each other and finally married. The difficulties traditionally hindering lovers in the genre (such as abductions) are severely reduced in number and bearing: what interests the author is really to describe how the passion of love developed in the two protagonists, from the first naïve and confused feelings of infancy to full sexual maturity. Longus' work is, in this respect, the prototype of the modern *Entwicklungsroman*: his psychological analysis is penetrating and felicitous, and stands out in sharp contrast to the poor characterizations of the other Greek romancers. His style has been described as 'a triumph of sophistic *apheleia*': short sentences are neatly arranged in isocolic structures (*antitheta* and *parisa*), which aim perhaps at reflecting the symmetric structures of Alexandrian bucolic poetry: in his diction he is, as the laws of the genre 'romance' required, a pure atticist, although vulgarisms appear, together with poetic words and a few baroque metaphors. The general tone of his romance is dictated by *glykutes*, which was prescribed by ancient critics for the bucolic genre: this sweetening of pastoral life appealed very much to the critics of the eighteenth and early nineteenth centuries, when 'bergeries' were the fashion (Bernadin de S. Pierre, with his *Paul et Virginie*, and S. Gessner, with his pastoral idylls in rhythmical prose, are the most illustrious imitators of Longus, whilst Corot is one of his most famous admirers) but is today very variously judged. In spite of his artificiality in language and style, his ecphrastic descriptions of nature (gardens, the alternating of seasons, landscapes) testify to a notable love of nature, which was highly praised by Goethe (in his *Gespräche mit Eckermann* the poet recommends the reading of *Daphnis and Chloe* once a year). Even Longus' detractors (like Wilamowitz, who blames in the author 'die Naturschwärmerei des Salonmenschen') cannot deny that the general structure of the romance is well woven and laudably compact (four books, without inharmonious parts) and that the atmosphere of pastoral *naïveté*, if recognizable as artificial by the more perspicacious critics, is so dexterously created as to appear natural and convincing to most readers.

EDITION PRINCIPAL: 1508 (Giunta, Florence), preceded by Amyot's famous French translation, which contributed enormously to making the romance popular (Paris, 1550).

STANDARD EDITIONS: Dalmeyda (Paris, 1960⁴, with French translation and excellent Introduction); Schönberger (Berlin, 1960; highly commendable).

COMMENTARY: Villosion (Paris, 1778, still useful); Seiler (Leipzig, 1843).

CRITICISM. Schiessel von Fleschenberg, *PW*, s.v. Longus; Rohde, *Griech. Roman*, 531 ff.; Christ-Schmid Stählin II. 2^o. 823 ff.; G. Valley, *Über den Sprachgebrauch des Longos* (Diss. Uppsala, 1926); L. Castiglioni: *Rend. Ist. Lomb.* 1928, fasc. 1-v, H. Dörrie: see biblog. s.v. ACHILLES TATIUS; H. Reich, *De Alephronu Longue aetate* (Diss. Königsberg, 1894) although controversial, contains much useful material on the 'Schöpfung des bukolischen Romans auf Grundlage des bukolischen Mimus'.

ENGLISH TRANSLATIONS. Thornley (1657, rev. by J. M. Edmonds in his Loeb edition of Longus), R. Smith (in Bohn's Classical Library).

LOTOPHAGI, a fabulous people, living on the lotus (flower?), the effect of which is to make the eater forget his own country and desire to live in Lotus-land (*Od.* 9. 82 ff.).

LUA MATER. Cult-partner of Saturnus, Gellius 13. 23. 2 (*Luum Saturni*; cf. SATURNUS). Her name may be connected with *lues* and mean something like 'baneful'; she is one of the deities to whom captured arms may be dedicated and burned (*Livy* 8. 1. 6; 45. 33. 2). H. J. R.

LUCIA, modern *Lucca*, in Liguria (later incorporated in Etruria) on the river Ausar (*Strabo* 5. 217). Both notices of the town before 100 B.C. are suspect (*Livy* 21. 59; *Vell. Pat.* 1. 15: preferably read Luna (q.v.) in each case). A border town of the Cisalpine province, Luca became famous when Caesar and Pompey met there for their conference in 56 B.C. (*Suet. Jul.* 24, etc.). Under the late Republic Luca was a *municipium* (*Cic. Fam.* 13. 13), under the Empire a *colonia* (*Pliny, HN* 3. 50). But, although a fairly important station on an extension of the Via Clodia (q.v.), it is rarely mentioned until late imperial times. E. T. S.

LUCAN (MARCUS ANNAEUS LUCANUS, A.D. 39-65) was born at Corduba (modern *Cordova*), 3 Nov. A.D. 39. His father, M. Annaeus Mela, was a Roman knight and a brother of the philosopher Seneca. Mela migrated to Rome when his son was about eight months old. There Lucan received the ordinary liberal education, ending with the school of rhetoric, where he was a great success; there is also good reason to believe that he studied philosophy under the famous Stoic Cornutus. He continued his studies at Athens, but was recalled by Nero, who admitted him to his inner circle and conferred on him the offices of quaestor and augur. In A.D. 60, at the first celebration of the games called Neronia, he won a prize with a poem in praise of Nero. In 62 or 63 he published three books of his epic on the Civil War. Growing enmity between him and Nero, for which various reasons are given, finally caused the emperor to debar him from further exercise, or at least from public display, of his literary talent. Lucan recklessly joined the conspiracy of Piso, and on its disclosure was compelled to put an end to his life (30 Apr. 65). The story that he sought to win leniency by accusing his mother of complicity in the plot is probably a malicious fabrication (see F. Plessis, *La Poésie latine* (1909), 547 ff.).

WORKS. Lucan was a voluminous writer from early years. The titles of many of his works, both in prose and in verse, have come down to us, but nothing more than a few lines remains of any of them except the *Bellum Civile* (the title *Pharsalia* is due to a misunderstanding of 9. 985). It is in ten books, the last being unfinished. Beginning with the causes of the war between Caesar and Pompey, it carries the story beyond the death of Pompey until it breaks off with Caesar's occupation of Pharos in Egypt. The battle of Pharsalus is related in book 7. In all probability Lucan intended to continue the narrative to the death of Caesar, if not further. His principal historical authority was undoubtedly Livy, but he probably consulted others, including Caesar. It is not his purpose to give a full account of the war. Several

events are omitted, others receive only a brief perfunctory mention. He dwells at length on particular episodes, not solely for their intrinsic importance, but largely because they appealed to his emotions or offered scope for a display of his powers. There are a few glaring departures from historical truth, as when he makes Cicero, who was not present at Pharsalus, deliver a harangue to Pompey on the eve of the battle; but apart from instances of carelessness, his perversions of the facts consist mostly of a false colouring due to his Stoic and Republican bias. On the other hand, he shows some notable instances of penetrating insight.

Recent history is ill suited to be the subject of a sustained epic poem, and Lucan, by discarding (wisely, it is true) the traditional apparatus of divine interventions, made his task doubly hard. All the resources of rhetoric are enlisted to impress the reader; vehement declamation and brilliant epigrammatic utterances (*sententiae*) are everywhere in evidence. There are numerous digressions, many of them making a display of curious learning. In book 6, for example, we find 80 lines on Thessaly and 136 on witches, in book 9, 115 lines on serpents and their bites, in book 10, 138 lines on the Nile. In general Lucan shows an excessive fondness for the purple patch. There is much exaggeration, often absurd; bizarre effects and far-fetched paradoxes abound. Nevertheless, the poet's feeling is strong and sincere. The horrors of civil war stirred his heart, and as the poem proceeded (and especially after his estrangement from Nero) his detestation of Caesarism and of its founder became a ruling passion. But with all his prejudice he cannot entirely conceal, even from himself, the greatness of Caesar, and the attempt to exalt the unheroic Pompey above such a colossus was foredoomed to failure; he does, however, succeed in making Pompey a truly tragic figure and in evoking sympathy both for him and for his cause. The portrayal of Cato, the unflinching Stoic, arouses at best a qualified admiration without much appeal to the heart. The language of the poem, though not without vigour and occasional novelty, lacks the richness and colour of Virgil. The verse is deficient in flexibility and variety; the comparative rarity of elision and the great fondness for the 'hepthemimeral jerk' are conspicuous features. But with all its faults the work is a remarkable achievement for so young a writer. Permeated though it is, and often marred, by rhetoric, it soars at times to those higher regions where poetry and oratory meet, where vision, imagination, and emotion commingle and find noble utterance. Even where this has not been achieved, there are many passages whose stirring trumpet-tones vibrate in the memory and whose unsurpassed epigrams, incisive and often strangely thrilling, have become part of the world's literary heritage. Lucan had a great vogue in the Middle Ages, and his influence is often seen in the poetry and drama of the seventeenth century. In later times he has found more critics than admirers, but Shelley drew inspiration from him, and, like Southey, at first preferred him to Virgil. Macaulay considered him one of the most remarkable men that ever lived.

LUCANIA, a mountainous region of southern Italy; recently its ancient name has replaced the medieval *Basilicata*. Its earliest recorded inhabitants are Oenotri

(= Sicels?) and Chones (= Illyrians). About 700 B.C. Greeks commenced colonizing its fertile coastlands. About 420 Sabelli (q.v.), the pugnacious Lucani, began to subjugate the Greeks; by 390 they held all Lucania and were partly hellenized (Polyaenus 2. 10; Diod. 14. 91-102; Strabo 5. 253 f.). Lucanian communities had an official known as *meddix*; a generalissimo led their confederation in war (Strabo 6. 254). In the fourth century Tarentum was their chief enemy; apparently their decline began after her mercenary captain Alexander defeated them (326). Thereupon they prudently sought a Roman alliance (Livy 8. 24, 27; 10. 11; Diod. 20. 104). Later, however, Lucani opposed and were conquered by Rome in the Pyrrhic, Hannibalic, and Social Wars. These struggles completely ruined Lucania; malaria appeared and is only now being eradicated (Zonar. 8. 3 f.; Livy 22. 61; App. *BCiv.* 1. 90 f.). Sulla massacred both Lucani and Samnites, and the Lucani as a separate nation disappeared. Chief towns: coastal Greek colonies and Grumentum, Atina, Potentia, and perhaps Bantia.

F. Magaldi, *Lucania romana* (1947); E. Vetter, *Handbuch der ital. Dialekte* (1953), I. 119 ff. E. T. S.

LUCCEIUS (*PW* 6), LUCIUS, as praetor (67 B.C.) and friend of Pompey (q.v.) quarrelled with the consul Glabrio (q.v. 3). In 64, when Caesar, in charge of the murder court, encouraged prosecutions of those who had killed men proscribed by Sulla, Luceius accused Caesar's friend Catiline (q.v.), forcing Caesar to stop. He supported Cicero in 63. In 60 he joined Caesar (now Pompey's ally) in canvassing for the consulship (he provided the money for both), but was defeated by Bibulus (q.v. 1). In the 50s he wrote a history of the period 90-81, and Cicero (*Fam.* 5. 12) unsuccessfully asked him to glorify the suppressor of Catiline next. By 49 he was one of Pompey's most trusted advisers. After Pharsalus he returned to Rome and in 45 wrote to Cicero on the death of his daughter. E. B.

LUCERIA, modern *Lucera*: town on the borders of Samnium and Apulia (q.v.). Inhabited since prehistoric times, it is not certainly recorded until 315/14 B.C. when it was a Samnite-controlled stronghold, which the Romans captured and made a Latin Colony. Its strategic importance was repeatedly demonstrated and it has remained a large town. E. T. S.

LUCIAN (*Λουκιανός*) of Samosata (b. c. A.D. 120), author of some eighty pieces, chiefly in Dialogue form. For details of his career we have to depend largely on his writings. Though his mother-tongue was not Greek, but probably Aramaic, he received a sufficiently good education to become, first a pleader (*Suda*), and later a travelling lecturer; he practised the art of Sophistic rhetoric as far afield as Gaul (*Δις κατηγορούμενος* 27). About the age of 40 (*Ἐρμώτιμος* 13), when he moved to Athens, he deserted rhetoric for 'philosophy'. From then onwards he proceeded to develop the special variety of Dialogue which made him famous. He later resumed the habit of public recitation and accepted a post under the Roman administration in Egypt. He died later than A.D. 180 (*Ἀλέξανδρος* 48).

Of his writings, certain *μελέται*, or exercises on set themes (e.g. *Φάλαρις*), probably belong to his early period; so also his first essays in Dialogue (e.g. *Θεῶν διάλογοι*). His *προλαλίαί* ('introductions') and certain epideictic pieces (*Μυίας ἐγκώμιον*, *Περὶ τοῦ οἴκου*) may belong to any part of his career. The strongest influence in his development was the Cynic humour of Menippus of Gadara (*Δις κατ.* 33); it was supplemented by that of the Mime, Attic Comedy (notably the Old) with which he shares a robust sense of humour, and in his later works

the Platonic Dialogue. In his typically Menippean period he aimed his satire at such objects as popular religious ideas (*Ἰκαρομένιππος*, *Θεῶν ἐκκλησία*), human vanity (*Χάραν*, *Νεκρικοὶ διάλογοι*), and philosophic pretensions (*Βίαν πρᾶσις*). Contact with the Platonic Dialogue produced a series of pieces, some late in his life, in which he introduces himself as *Λυκίος* (*Ἐρμώτιμος*, *Πλατῶν*, *Εἰκόνες*). Beside the Dialogue form he adopted the epistolary, either direct (*Πῶς δεῖ ἱστορίαν συγγράφειν*), or as a setting for Dialogue (*Νυγρίνος*). Notable among his productions in this style are *Περεγρίνος* and *Ἀλέξανδρος*, the castigation respectively of a religious maniac and of a charlatan. His most famous narrative is *Ἀληθὴς ἱστορία*; the authorship of *Λυκίος ἢ ὄνος* is questioned.

Lucian compares favourably with his contemporaries, not merely in the variety of his literary resources and in his skill in handling them, but in the reality of his objects. He uses his Atticism, in which he yields to none of them, as a means rather than as an end. He illustrates contemporary life and manners, and criticizes many of the received ideas of his time; his comments on art, in particular, are more helpful than those of some professed critics. He cannot, however, be called either a great original literary artist or a profound thinker. His stock of ideas, except when he is dealing with topical subjects, is drawn either from classical literature or from the popular philosophy of the preceding age; he has no genuine philosophic position, but is essentially an opportunist, *σπουδαῖος ἐς τὸ γελασθῆναι* (Eunapius). At the same time, though he derived his forms from earlier models, the Satiric Dialogue as he ultimately developed it is a worthy addition to Greek literature of the second rank. A certain adroitness of appeal to the less reflective side of human nature has preserved his work in spite of contemporary disregard. There are scholia dating from late antiquity and the Middle Ages, including those of Arethas of Caesarea.

LUCILIUS (1), GAIUS: the date of birth is unknown but he died an old man in 102/1 B.C. at Naples. He was born in Suessa Aurunca on the edge of Campania, a Roman citizen, of a rich and noble family; his brother was a senator (perhaps his father too), and his niece was the mother of Pompey. He owned large estates. He did military service in Spain from 139 B.C. and was at the siege of Numantia (134/3 B.C.). He may, like Terence and Accius, have gone on an educational trip to Athens. He was a friend and equal of the greatest men in Rome. Horace gives several accounts of him: *Sat.* 1. 4 (excessive emphasis on Aristophanic element); *Sat.* 1. 10; and 2. 1 (this last is the best and most comprehensive). No poet's personality before Catullus makes such an impact, even through the meagre fragments. Lucilius invented a new literary genre, of which the outstanding characteristic is the personal autobiographical form (*omnis . . . vita senis*): all that he says is coloured by his personality, his feelings, his views—he is the real subject of his satire. Here his social position gave him a unique advantage. The earliest books are xxvi-xxx (perhaps written 132-125 B.C.), the first two in trochaic septenarii, the next two mixed hexameters, trochaics, and senarii, then xxx in

hexameters alone—and this metre he retained for all the rest of his writing; except that xxii–xxv contain traces of elegiac couplets—perhaps epigrams and epitaphs. Book i contained (on the precedent of Ennius' scene in *Ann.* 1) a *concilium deorum* which carried an attack on Cornelius Lentulus Lupus (who died c. 123 B.C.: Lucilius had attacked him before). Book ii contained an account of the trial of Q. Mucius Scaevola (cos. 117 B.C.), accused by Albucius of maladministration in Asia: this gave Lucilius the opportunity to contrast tellingly two styles of rhetoric. Book iii contained the *iter Siculum*, the model for Horace, *Sat.* 1. 5. Book iv contained a contest of gladiators. Book v contained a letter reproaching a friend for not visiting him when ill. Book vi, Scipio Aemilianus meets a wretched bore (cf. *Hor. Sat.* 1. 9). Books vi–vii seem to have contained satirical matter on sex. Book ix contained grammatical ideas, including an attack on Accius' (q.v.) orthographical theories. Book x, perhaps on literary and stylistic questions, Book xi anecdotes about contemporaries. Book xv on philosophy. About many of the books little can be said since the fragments are so meagre, and the context of many important fragments cannot be known. It is clear that sheer invective played only a minor role in Lucilius' conception of satire—though, by its very freedom, it impressed later readers disproportionately; Horace himself started from this view, but as his own satire developed so did his view of Lucilius, to whom no doubt he owed far more than can now be traced. Lucilius established the hexameter as the metre of this new genre, and, as he wrote it, it was the hexameter of Ennius. His style appears uneven, at times almost careless, and he was prepared to mix Greek words with Latin; but its power, vigour, and flexibility are unmistakable—a reflection of his own turbulent genius—and they conceal a serious regard for Alexandrian canons of style.

F. Marx, *G. Lucili Carminum Reliquiae* (1905; text and commentary); E. H. Warmington, *Remains of Old Latin* iii (1938), 2 ff. (with transl.). C. Cichorius, *Unters. zu Lucilius* 1908; M. Puelma Piwonka, *Lucilius und Kallimachos* (1949); I. Mariotti, *Studi Luciliani* (1960)—especially useful on Lucilius' style. G. W. W.

LUCILIUS (2, *PW* 126), GAIUS, friend of Seneca (2) and the recipient of the *De Providentia*, *Quaestiones Naturales*, and *Epistulae Morales*, was born in Campania, perhaps at Pompeii or Neapolis (Sen. *Ep.* 49. 1; 53. 1; 70. 1), without wealth or prospects (*QNat.* iv. *praef.* 14–15; *Ep.* 19. 5). He was some years younger than Seneca (*Ep.* 26. 7). Talent, literary style, and distinguished connexions brought him into prominence (*Ep.* 19. 3). His own energy made him an *eques Romanus* (*Ep.* 44. 2). He was loyal to the memory and friends or relatives of Lentulus (q.v. 9) Gaetulicus after the latter's execution under Gaius, and to victims of Messallina or Narcissus under Claudius (*QNat.* iv. *praef.* 15). Under Claudius and Nero he held procuratorships in Alpes Graiae, Epirus or Macedonia, Africa, and Sicily (*Ep.* 31. 9; 45. 2; 79. 1; *QNat.* iv. *praef.* 1). The date of his death is unknown.

Lucilius had an inquiring mind; many of Seneca's letters start from some question he has put—generally philosophical, but sometimes literary, linguistic, or social (*Ep.* 9, 29, 39, 43, 71, 72, 106, 108, 109, 111, 113, 114, 117). In spite of business (*Ep.* 17, 19, 22, 24), travel (*Ep.* 69, 84, 104), ill health (*Ep.* 78, 96), and a tendency to grumble (*Ep.* 21, 28, 44, 45, 60, 96, 103) he was a philosopher, probably an ex-Epicurean Stoic. On one occasion Seneca delightedly says to him 'meum opus es' (*Ep.* 34. 2). Lucilius wrote a philosophical treatise, warmly praised by Seneca (*Ep.* 46).

Lucilius was a poet too (*QNat.* iv. *praef.* 14 and ch. 2. 2). Four Latin lines of his (two iambics and two hexameters) are preserved by Seneca (*Ep.* 8. 10; 24. 21; *QNat.* iii. 1. 1). It is unlikely that he is the same as the

Lucillius (q.v.) of the Greek Anthology; but one Greek epigram of twelve lines (*IG* xiv. 889 = *Epigr. Gr.* 810), inscribed on stone in Sinuessa with the genitive heading 'Ιουλίωπος may well be his. From the passage Sen. *Ep.* 79. 5–7 Wernsdorf and others have attributed the pseudo-Virgilian *Aetna* (q.v.) to Lucilius; but the wording suggests a poem including a description of Aetna rather than one devoted to Aetna *per se*.

See preface to Seneca *QNat.* iv and his *Epp.* (*passim*—esp. 19, 31, 79), L. Delatte, 'Lucilius, l'ami de Sénèque', *LFC* 1935, 367 ff., 546 ff.; J. H. Waszink, *Mnemos.* 1949, 224 ff., supports the attribution of *Aetna* to Lucilius. A. M. D.

LUCILLA, ANNIA (*PW* 123), for whom *CIL* viii. 27777 shows also the names *Aurelia Galeria*, was a daughter of Marcus Aurelius and Faustina (2) the Younger (qq.v.), born c. A.D. 148. She was married (c. 164) at Ephesus to L. Verus (q.v.), co-emperor with Marcus, and given the title *Augusta*. On Verus' death in 169, Marcus immediately married her—an unwilling bride—to Ti. Claudius (q.v. 15) Pompeianus. About 182 she conspired unsuccessfully against her brother Commodus (q.v.); she was exiled by him to Capri and subsequently put to death.

Diz. *Epigr.* 1. 945; Wegner, *Herrscherbild* (1939) ii 4. 74 ff.; *B.M. Coins, Rom. Emp.* iv. F. Giosso, *La lotta politica al tempo di Commodus* (1964). See also under AURELIUS (1), MARCUS, and VERUS.

C. H. V. S., M. H.

LUCILLIUS (Λουκίλλιος), a Greek epigrammatist of Nero's time, is credited with over a hundred poems in the Greek Anthology (q.v.). Most are quasi-satirical jokes about eccentric or repulsive individuals, e.g. the thief who stole everything including the detective (*Anth. Pal.* 11. 177) and the thin man who had to wear a sinker when diving (11. 100); the rest are mostly occasional pieces written to amuse guests at parties. His language is colloquial but cultivated. He was the first epigrammatist to specialize in bringing his poems to a sharp humorous point in the last line, and in mocking contemporaries. Much of his work is reminiscent of Petronius and of the *Apocolocyntosis*: it strongly influenced Martial.

F. J. Brecht, *Motiv- und Typengeschichte des griech. Spottepiagramms* (1930), Cichorius, *Rom. Stud.* viii. 17; A. Gaizya, *Giornale Italiano di Filologia* 1955; K. Prinz, *Martial und das griech. Epigramm* (1914); P. Crupi, *L'epigramma greco di L.* (1964). A. Linnenkugel, *De Lucilio Tarrhuco* (1928), and H. Usener, *KL Schr.* ii (1913), identify him with a grammarian of Tiberius' reign. G. H.

LUCRETIA, the wife of Tarquinius (q.v. 3) Collatinus, according to legend was outraged by Sextus, son of Tarquinius Superbus; after telling her husband, she took her own life. This incident resulted in a popular rising led by Junius Brutus (q.v. 1) against the Tarquins, and their expulsion from Rome. While the story of Lucretia probably arose from popular poetry, independent of Greek literary influence, her father Lucretius (q.v. 1) was invented by Roman annalists who elaborated the legend. The Greek character of the Lucretia (as well as of Virginia) story is overstressed by Ogilvie, *Comm. Livy* 2–5, 218 ff. P. T.

LUCRETIVS (1, *PW* 30) TRICIPITINUS, SPURIUS, the father of Lucretia (q.v.). When the annalists associated her with the fall of the monarchy, they placed Lucretius among the founders of republican freedom by alleging that he had been appointed prefect of Rome by the last king, and had retained that office under the Republic. The tradition that he was consul in 509 is disproved by Livy (2. 5).

Ogilvie, *Comm. Livy* 1–5, 228 ff.

P. T.

LUCRETIVS (2) (TITUS LUCRETIVS CARUS), poet and philosopher, probably 94 to 55 B.C. Jerome gives the

date of his birth as 94 and says that he died in his 44th year, i.e. in 51 or 50. Donatus in his 'Life' of Virgil states that Virgil assumed the *toga virilis* on 15 Oct. 55, and adds that 'it happened that on that very day Lucretius the poet died'. Cicero (*QFr.* 2. 9. 3), writing in 54, implies that both he and his brother had read the poem, but it is clear from its unfinished state that it was not published till after the poet's death. His death should therefore probably be placed in 55; if Jerome is right as to his age, he was born in 99.

Of Lucretius' life almost nothing is known. It is natural to assume that he was a member of the aristocratic Roman family of the Lucretii, whose names occur in the *Fasti* as holders of magistracies. This view has lately been contested on the ground that Carus was not a cognomen of noble families, but of slaves and freedmen, and was possibly a romanized version of a Celtic name; Lucretius would then be a freedman attached to the house of the Lucretii. But inscriptions show Carus as a cognomen of free men. A more recent theory is that Lucretius was a Campanian—a landowner near Pompeii—and learned his Epicureanism at Naples, but the evidence is slender.

The only certain fact of his life is that he was a friend—or possibly dependant—of the aristocrat C. Memmius, the patron of Catullus and Cinna, to whom the poem is dedicated. A 'Life' prefixed to the Editio Veneta in the British Museum and written in the hand of Girolamo Borgia, secretary of Pontanus, states that he was intimate with Atticus, Cicero, Cassius, and Brutus, but this 'Life' is of doubtful authority. Jerome makes the famous statement that Lucretius was poisoned by a love-philtre, wrote the poem in his lucid intervals, and ultimately committed suicide. The attack on the passion of love in book 4 might be held to support this, but the poem itself does not show signs of insanity. Jerome also says that Cicero 'emended' the poem, and this probably means that he edited it for posthumous publication.

Lucretius' only work is the *De Rerum Natura*, a didactic poem in six books, in which the poet expounds the physical theory of Epicurus (q.v.) with a view to abolishing superstitious fears of the intervention of the gods in the world and of the punishment of the soul in an after-life. Thus he accomplishes by demonstrating that the world is governed by the mechanical laws of nature ('*foedera naturae*') and that the soul is mortal and perishes with the body. The bulk of the poem is occupied in setting out in detail the atomic view of the universe, which Epicurus adopted with modifications from the Atomists Leucippus and Democritus (qq.v.). Lucretius also touches from time to time on Epicurus' moral theory that pleasure is the end of life, and his thought is regulated throughout by Epicurus' rules of procedure (*Canonica*), which are to some extent expounded in book 4. The root-idea is that of atoms infinite in number moving in space infinite in extent and by their combinations bringing about the creation of things. Lucretius' philosophy is thus purely material, but not, like that of Democritus, deterministic; for he postulates free-will for man and, analogous to it, a certain spontaneity of movement in the atoms (2. 216-93).

5. Book 1, after an introductory address to Venus as goddess of creation, starts from the principle of the permanence of matter and demonstrates the existence of matter in the form of 'first-bodies' or particles, and of void as empty space. Lucretius then shows that the first-bodies are 'atoms', solid, indivisible, and eternal. In a digression he refutes the rival physical systems of Heraclitus the monist and Empedocles the pluralist, and the homocomeria of Anaxagoras; and in conclusion shows that the universe and its components, the atoms and space, are infinite.

Book 2 opens with a poem on the blessings of philosophy and deals first with the motions of the atoms, then with their shapes and the effects of difference in their shapes on compounds. Lucretius then argues that the atoms do not possess secondary qualities, colour, heat, sound, taste, and smell, or sensation, and concludes with a section on the many worlds and their formation and destruction.

Book 3 deals with the soul. After a preliminary laudation of Epicurus, Lucretius discusses the atomic formation of the soul and its relation to the body. There follows a long series of proofs of its mortality, drawn from its atomic structure and from the phenomena of disease and its cure. The book ends with a triumph-hymn on the mortality of the soul and the folly of the fear of death.

Book 4, which opens with a picture of Lucretius' mission, treats mainly of the psychology of sensation and thought. Lucretius demonstrates that sight is effected by means of 'images' coming off from things and entering the eye. He then discusses the nature of sensation and thought, and deals with false inferences of the mind based on sensation, which is itself infallible. In the end of the book he treats of certain functions of the body and especially of the passion of love, which he violently condemns.

Book 5 is devoted to the phenomena of our world. After another hymn of praise to Epicurus and an attack on the theological view, he shows that the world had a beginning and will have an end, describes its formation, and discusses certain problems of astronomy. He then speaks of the origin on the earth of vegetable and animal life, of the creation of man and the early development of civilization.

Book 6, whose proem is once more a laudation of Epicurus, deals with miscellaneous phenomena, celestial and terrestrial. Among the former Lucretius discusses thunder, lightning, and thunderbolts, waterspouts, clouds, and rain; among the latter earthquakes, volcanoes, the Nile, infected lakes and hot springs, the magnet, and pestilences. The last leads to a description of the plague at Athens, with which the poem closes.

Lucretius regarded himself primarily as a philosopher and only secondarily as a poet (1. 931-4); but the sheer logical architecture of the poem is an extraordinary accomplishment. As a thinker he followed in the steps of Epicurus, but he seems to have made a far-reaching shift of emphasis so that the aim to relieve mankind of the fear of death has become central and paramount (there is also evidence that he avoided some of the more abstruse of his master's discussions). Modern editors have, however, erred in endeavouring by transposition, lacuna, and the assumption of passages written by the poet but not adjusted to their place, to establish a dryly logical sequence in the poem. He adorned the dry exposition of Epicurus with a wealth of illustration and imagery, derived from a vivid observation of the world, which shows him as the true poet. Cicero (*QFr.* 2. 9. 3) recognized in him both 'high lights of genius' ('*lumina ingenii*') and 'artistry' ('*ars*'), and both elements are abundantly evident. In style Lucretius owed far more to the influence of Ennius and other early Roman poets than his Alexandrianizing contemporaries. He used alliteration and assonance, archaic forms and constructions, and many compound adjectives; verbs fluctuate between conjugations and substantives between declensions. He complains of the poverty of his native tongue and does not hesitate to invent words as he wants them. His hexameters, judged by the standard of Virgil, are rough and sometimes clumsy, and exhibit certain licences which later taste spurned. As philosopher he accomplished an amazing feat in expounding atomism in verse, and as poet his lines have a weight and majesty, and often a depth of

passion and feeling, which have caused critics to rank him as the equal of Virgil, if not his superior.

LUCRINUS LACUS, shallow lagoon near Baiæ (q.v.), which a narrow spit separated from the Bay of Naples. Its oysters were famous. Agrippa (q.v. 3) converted it temporarily into a naval anchorage by cutting canals that linked it with Lake Avernus (q.v.) on the one side and open sea on the other. Today the Lucrine Lake has largely disappeared beneath *Monte Nuovo*, a hill upheaved by an earthquake in 1538. E. T. S.

LUCULLUS (1), LUCIUS LICINIUS (*PIW* 102), first consul of his house (151 B.C.E.), tried to enforce the levy for troops for Spain so harshly that he was temporarily imprisoned by the tribunes. When he reached Spain and found that peace had been made with the Celiberians, he treacherously attacked the Vaccaei and Cauci. As proconsul, he joined Galba (q.v. 3) in an attack on Lusitania. He later built a temple to Felicitas. Scipio (q.v. 11) Aemilianus served under him as military tribune.

II. Simon, *Roms Kriege in Spanien* (1962), see index. E. B.

LUCULLUS (2), **LUCIUS LACINIUS** (*PW* 104), grandson of (1), nephew of Metellus (q.v. 6), for whose return from exile he pleaded. He served in the Social War under Sulla and, as quaestor (88 B.C.), was the only officer who supported his march on Rome. As proquaestor in the East, he was Sulla's most reliable officer, charged with diplomatic missions, collecting ships and money, and letting Mithridates escape from Fimbria (q.v.) in accordance with Sulla's policy. Aedile (79) with his brother (3), he gave splendid games. Praetor in 78, he became Sulla's literary executor and guardian of Faustus Sulla (q.v. 3), and then governed Africa. As consul in 74, he opposed tribunician agitation and, worried by the threats of Pompey, sent him generous supplies to Spain; after complicated intrigues (see **CETIEGUS**), he secured an *imperium* against the pirates for Antonius (q.v. 2) and the command against Mithridates for himself.

He won over envoys of Sertorius (q.v.), relieved Cotta (q.v. 2) and Cyzicus, invaded Pontus and occupied much of it, forcing Mithridates to flee to Armenia; and he asked for a Senate commission to settle Asia Minor. When negotiations, through Ap. Claudius (q.v. 12), with

Tigranes (q.v. 1) failed, he invaded Armenia and occupied its capital (69). But he failed to end the war: Parthia threatened intervention, Mithridates and Tigranes collected fresh forces, and Lucullus' troops—kept under strict discipline—began to mutiny. His fair settlement of Asian finances (ensuring order and prosperity there for a generation) had offended many senators and equites, and he came under heavy attack in Rome, with his old enemy Pompey preparing to profit. When the campaign of 68 failed, his brother-in-law Clodius (q.v. 1) incited further mutinies and Marcus Rex (q.v. 2) in Cilicia refused assistance. The army almost disintegrated and Pompey finally took it over under the law of Manilius (q.v. 2). Lucullus had to wait for a triumph until 63, was prominent in opposing Pompey's demands, but after unpleasant experiences in Caesar's consulate (59) retired to live in refined luxury and lapsed into insanity before his death.

He was an able soldier and administrator, an Epicurean, a lover of literature and the arts, and a generous patron. But he lacked the easy demagoguery that was needed for success in both war and politics in his day.

Plut. *Luc.*, and references in Dio and Cicero are the chief sources. For the war, see also App. *Mith.* J. van Ooteghem, *Lucius Lucullus Lucullus* (1950), with bibliography. E. H.

LUCULLUS (3), **MARCUS TERENTIUS VARRO** (*PW*, 'Lucinius' 109), younger brother of (2), adopted by a Varro. Quaestor under Sulla c. 87 B.C., legate in the *bellum Sullanum*, aedile with his brother (79), he was praetor in 76. As consul (73), with his colleague C. Cassius Longinus, he passed a *lex Terentia Cassia* providing for a supply of a moderate quantity of cheap grain to the city *plebs* (see R. Rowland, *Acta Antiqua Acad. Sc. Hungariae* 1965, 81). As proconsul in Macedonia, he extended Roman control in Thrace up to the Danube and the Black Sea, triumphing in 71. Harassed (with his brother) in the 60s, he supported Cicero against both Catiline and Clodius and died soon after his brother.

E. B

LUCUS FERONIAE, sanctuary dedicated to the Italic woodland goddess Feronia (q.v.) at *Scorano*, south of Soracte (q.v.) in Etruria. The town which grew around its annual festival became a *colonia* in imperial times. Excavations have confirmed Livy's statement (26. 11. 8) that Hannibal plundered the sanctuary (211 B.C.). Another less important Lucus Feroniac existed near Tarracina (q.v.).

LUDI. The chief uses of the word touch diverse fields of Roman culture:

1. Formal sports and representations, generally with religious origin, motivation, and sanction, and counting as religious rites just as did sacrifices and processions; commonly annual, sometimes *ad hoc*. First, *L. Circenses*: the evolutions of the contestants suggested, eventually if not originally, the movements of the planets about the centre of the heavens—a form of sympathetic magic conceivably thought to promote the orderly progress of the seasons. Then, the gladiatorial and other displays in the fora and amphitheatres, a survival from the funeral games of the Etruscans and Campanians—whether their original purpose was to send the spirits of the brave as companions to the souls of the deceased, to satisfy the craving of the departed spirit for blood, or to release a high degree of emotion in replenishment of the vitality of the dead man, or perhaps something more vague or confused. Further there were priestly games like the dances of the *Salii* (q.v.), and these constituted an older type under the control of priests as contrasted with others, including the *Circenses*, which were under the control of

magistrates. *L. Scaenici* were associated with literature, music, and the dance; they were held especially at the Apollinare in the Prata Flaminia (*L. Apollinares*, from 208 B.C.) and at the temple of the Magna Mater on the Palatine (*L. Megalenses*, from 191 B.C.), but every city in the Empire possessed at least one theatre as well as an amphitheatre. *Ludi*, part sport, part pre-military drill, entered into the routine of the *Juventus* (see *IUVENES*), probably an early Italic institution for the training of youth, revived by Augustus; they included the *Lusus Troiae* (Verg. *Aen.* 5. 545–603; F. Norden, *Aus alt-römischen Priesterbüchern* (1939), 188 f.). There were eventually over forty different varieties of *ludi* in Rome itself, religious, votive, or commemorative, with specific names: *Magni* (regularized as *Ludi Romani*), *Florales* (regularly from 173 B.C.), etc.

2. Informal games, of which the Romans had fully as many varieties as the moderns, retaining the practice of some of them even in mature years; the *Campus Martius* contained a 'multitude of those exercising themselves with ball and hoop and in the sports field' (Strabo 5. 236). They are attested by numerous toys, dice, tablets, etc., in the museums; also by 'gaming-boards' scratched upon ancient pavements. The games of chance led to grave abuses, as the Church Fathers realized.

3. Schools of instruction, also training-schools for gladiators (q.v.). Grammatical and literary instruction was largely in the hands of Greeks; training for the law and politics was acquired through apprenticeship until the schools of rhetoric replaced the old tradition (Quintilian; Tac. *Dial.*).

4. Buildings for housing *ludi* in the third sense: a school building has been identified with probability at the north-west end of the forum of Pompeii, scratched inscriptions testify to school-teaching in a hall adjoining the Forum of Julius Caesar in Rome, and the *L. Magnus* and *L. Matutinus* in the Third Region of Rome served for the practice of the gladiators who were to perform in the Amphitheatre.

See also SECULAR GAMES, LUDI SCAENICI, GLADIATORS.

Wissowa, *RE* 440 f.; Habel, *PW* Suppl. v. 608 ff. A. M. Colini and L. Cozza, *Il Ludus Magnus* (1962). A. W. VAN B.

LUDI SCAENICI, theatrical shows, first added to the *Ludi Romani* in 240 B.C. (see *LIVY* (1) *ANDRONICUS*); in 200 the *Stichus* was produced at the *Plebeii*; in 194–191 the scenic *Megalenses* were instituted; in 169 the *Thyestes* was performed at the *Apollinares*; in 160 the *Adelphoe* was performed at the funeral games of Paullus. Under the Empire performances chiefly consisted of mime and pantomime. The cost was usually shared between State and presiding magistrates. Admission free; certain seats reserved; women and slaves admitted (Prologue, *Poenulus*).

BUGDUNUM. (1) *Colonia Copia Claudia Augusta Lugdunum*, modern *Lyon*, was founded 43 B.C. by L. Munatius Plancus (q.v. 1) and was the birthplace of the Emperor Claudius. Its position led to its becoming the centre of Agrippa's road system in Gaul, the capital of the Augustan province of Lugdunensis and the financial centre of Gallia Comata, with a mint (see *COINAGE, ROMAN*) and a *cohors urbana* to protect it. Despite a disastrous fire in A.D. 66 and constant disputes with its neighbour Vienna (q.v.), which reached their height in the troubles of 68–9, Lugdunum flourished in the first and second centuries. A Christian community developed early and a full record of its persecution in 177 is preserved (Eus. *Hist. Eccl.* 5. 1). But the city suffered severely in the revolt of Albinus (197) and in the Late Empire its primacy was usurped by Augusta Treverorum

(q.v.), Lugdunum being merely the capital of Lugdunensis Prima. It became the centre of the Burgundian kingdom c. 460.

The Colonia occupied the hill of Fourvière, west of the confluence of Rhône and Saône. Between the rivers (*ad confluentem*, Gallic Condate, q.v.), on ground overlooked by the Colonia, Drusus established in 12 B.C. the altar of Rome and Augustus, the centre of the Imperial Cult for the 'Tres Galliae', around which the Concilium Galliarum developed. On the cult site only a fragment of the amphitheatre survives, though numerous important inscriptions have been found. In the Colonia the most notable monuments are the theatre and odeon, but the four aqueducts, involving extensive use of syphons, are especially interesting, while the museum contains the bronze tablets of Claudius' speech on the admission of Gauls to the Senate (*ILS* 212).

P. Willeumier, *Lyon, Métropole des Gaules* (1953), id. *Fouilles de Fourvière à Lyon* (1951, Suppl. to *Gallia*), Grenier, *Manuel* n. 220 ff. (general), 685 ff. (amphitheatre), 786 ff. (theatre and odeon), iv. 118 ff. (aqueducts); G. de Montauzon, *Les Aqueducs antiques de Lyon* (1909).

(2) *Lugdunum Convenarum* (St. Bertrand-de-Comminges), a town in Aquitania, to which Herod (q.v. 2) Antipas was banished in A.D. 40. In 72 B.C. a hill-fort on the site of the *haute-ville* became the nucleus for Pompey's resettlement of assorted survivors of the Sertorian wars, whence the quasi-tribal name of Convenae (Strabo 4. 190). Under the Empire a considerable town developed in the plain between the hill and the Garonne. Excavation has uncovered much of its plan, including forum, temples, baths, theatre, amphitheatre, market, and a fourth-century Christian church; extensive use was made of marble from the quarries at St. Béat, 10 miles to the south. In the later Empire the hill was fortified with a wall which largely survives, but the town was sacked by Vandals in 409 and came under Visigothic control in 418. According to Strabo (4. 191) the Convenae enjoyed *ius Latii*, but Ptolemy's application of *Colonia* to Lugdunum (2. 7. 13) is probably due to confusion with Lyon.

R. Lizop, *Les Convenae et les Consoranni* (1931), B. Sapène, *St. Bertrand-de-Comminges—Lugdunum Convenarum* (1961).

(3) A town of the Batavi, near modern *Katwijk* (not Leyden).

Holwerda, *Nederlands vroegste Geschiedenis* (1925), 190.

A. L. F. R.

LUNA, Roman moon-goddess. Varro (*Ling.* 5. 74) names her among a number of deities introduced by Titus Tatius and therefore of Sabine origin. The latter statement may be doubted, but the existence of an early cult of Luna remains likely, though Wissowa (*RE* 315) objects that no trace of it is to be found. This may be mere accident; in historical times she certainly had a cult with a temple on the Aventine, first mentioned in 182 B.C., and another on the Palatine (ibid. 316; cf. C. Koch, *Gestirnerverehrung im alten Italien* (1933), 27; Latte, *RR* 232. H. J. R.

LUNA, a town in Liguria on the river Macra, the boundary with Etruria, a district still called *La Lunigiana* (Strabo 5. 222). The Romans early used its harbour (= the Bay of Spezia? or the mouth of the Macra?), but the first certain reference to a town is in 177 B.C., a Roman citizen colony, which in 168 quarrelled with Pisaec (q.v.) over boundaries (Livy 34. 8; 41. 13; 45. 13; Ennius fr. 1, 2 Stuart). Subsequently Luna became a *municipium* (derelict by 49; Lucan 1. 586). The triumvirs colonized it anew (*Lib. Colon.* 223), but it never became a place of consequence. The neighbouring Carrara marble quarries were extensively worked under the Empire.

L. Banti, *Luni* (1937).

E. T. S.

LUPERCALIA, a Roman festival held on 15 Feb. After the sacrifice of a goat or goats and a dog, a rite generally in ancient and commonly in modern times thought to be directed to the god Faunus, at the Lupercal, a cave below the western corner of the Palatine, youths, naked except for girdles made from the skins of the victims, ran about the bounds of the Palatine settlement, striking those whom they met, especially women, with strips of the goat-skins, a form of fertility magic combined with the ritual beating of the bounds and with purificatory rites. Their name, *Luperci*, suggests aversion of wolves or propitiation of a wolf god, and the whole ceremony reflects the needs of a small pastoral community. It is described by Dion. Hal. 1. 80. 1; Ov. *Fasti* 2. 19-36, 267-452 (see Frazer's commentary); Plut. *Ant.* 12, *Rom.* 21, *Caes.* 61. At the Lupercalia of 44 B.C. the consul Marcus Antonius, being one of the *Luperci*, offered an encrowned diadem to Caesar. Augustus added dignity to the ceremony (Suet. *Aug.* 31; Mommsen, *Staatsr.* iii. 566 f.).

J. Deubner, *ARW* 1910, 481 ff.; H. J. Rose, *Mnemos.* 1931, 385 ff.; for another view, F. Altheim, *History of Roman Religion* (1938), 206 ff.; Latte, *RR* 84 ff. A. W. VAN N.

LUSCIUS LANUVINUS (? IAVINIUS), Latin poet (attacked in prologues by Terence, whom he blamed for departing from Greek models and for 'contaminatio'—fusion of several plots into one), translated Menander's *Phasma* and (Menander's?) *Thesaurus*.

Ribbeck, *CRF* 83 (3rd ed. Teubner). (Ter. *Ad* 1; *An.* 15; *Eun.* 9-10; *Haut.* 16; *Phorm.* 1.) E. H. W.

LUSITANIA, a region of western Spain named from the Ibero-Celtic ethnological group of Lusitani. They were mobilized into a coalition against Rome by Viriathus (q.v.), defeated in 139 B.C., and overrun by D. Junius Brutus (q.v. 2) in 137, but again mobilized in rebellion by Sertorius (q.v.). Though they were reduced to submission by Pompey in 73-72, the provincial organization of Farther Spain did not extend north of the Tagus, and most of the old province was assigned to the Senate in 27 B.C. (see *BAETICA*). Augustus proceeded to conquer the north of the peninsula, and at some date created a separate province of Lusitania including the southern region west of the Anas (*Guadiana*), stretching north to the Durus (*Douro*) and eastward beyond his road from Emerita (q.v.) to Salmantica (*Salamanca*). It was divided into the *conventus* of Emerita, Pax Julia, and Scallabis, and was governed by a praetorian *legatus* without legionary troops. It developed slowly but steadily; under Trajan some of its towns built the great bridge of Alcántara; it was prosperous in the later Empire. Its chief products were horses, pigs, wood, and metals; the harbour of Olisipo (*Lisbon*) and the coast had little importance before medieval times. M. I. H.

LUSIUS (*PW* 9) **QUIETUS**, a Libyan Moor, was *praefectus alae Maurorum* under Domitian (q.v.), by whom he was dismissed. He volunteered with his Moorish cavalry for Trajan's Dacian wars and served with such distinction that Trajan (q.v.) enrolled him in the Senate with praetorian rank and made him *cos. suff.* at an uncertain date, possibly as late as 117. In the Parthian war, Lusius captured Singara, repelled the Parthians from northern Mesopotamia, and c. 116 ruthlessly quelled a revolt of Mesopotamian Jews. He then became legate of insurgent Judaea. He was un-Roman, impetuous and cruel, but a capable commander and loyal to Trajan's policy of expansion. When Hadrian, on his accession, reversed this policy, he removed Lusius from Judaea and deprived him of his Moorish cavalry detachment. In 188 Lusius was put to death for alleged parti-

cipation in the 'conspiracy of the four consulars' (see *HADRIAN*).

Lambrechts, *Sénat*, no 87; J. Carcopino, *Istros* 1 (1934), 5 ff.; A. Jordanescu, *Lusius Quietus* (*Hbl. d'Istros* iii, 1941); Syme, *Tacitus*, see index. C. H. V. S.; M. II.

LUSTRATION. A *lustrum* is a purificatory ceremony conducted every five years by the censors (q.v.) at Rome: *lustrare* is to perform this or a like ceremony and *lustratio* is the performance of such ritual. The ultimate etymology of the words is uncertain, especially the connexion (defended by C. Koch, *Gestirnverehrung im alten Italien* (1933), 25 f.) with *lustrare*, to illuminate. In all cases the general form of the ceremonial seems to have been the same, whether the object to be purified was a body of people (*lustratio exercitus, populi*), a piece of land (see *AMBARVALIA*), a city (see *AMBURBIUM*), or some other object. Plautus (*Amph.* 775-6) clearly knows of a like process for ridding a mad person of his disease or possession: 'quin tu istanc iubes pro cerrita circumferri?' The essential was to carry or lead materials having supposedly magical virtues around the object to be benefited; the speaker, believing *Alcumena* ('istanc') to be insane, proposes that this should be done to her.

Normally such a process would require a procession of some kind, small or great; hence the not uncommon use of *lustrare*, to move slowly around something, like a procession (Warde Fowler, *Anthropology and the Classics*, 169 ff.; *Rel. Exper.* 209; q.v. for his discussion of the words and ideas involved). This is shown by the passages quoted s.v. *AMBARVALIA*, especially by Verg. *G.* 1. 345 ff.; the farmers go around the farm (or *pagus*), taking with them a *felix hostia*, that is a beast proper to be sacrificed to the gods and so full of good luck; they accompany this by a loud invitation to Ceres to come into the barn. In Cato, *Agr.* 141, the victims are three, *suovetaurilia*, and the prayer is to Mars (q.v.) to keep away all manner of evil from the land and its inhabitants. Ceres might fittingly be invited into a place thus made pure and lucky. In the case of the censors' *lustratio populi* it is not unlikely that the ceremony concluded with the burial or other disposal of the materials used; cf. the phrase *lustrum condere*. In an *amburbium*, the State clergy formed the procession (Lucan 1. 592 ff.); this could be reinforced by sacrifices at the gates, as at Iguvium (*tab. Iguvin.* vi A f.; 1 A f.; see I. Rosenzweig, *Ritual and Cults of pre-Roman Iguvium*, 26 ff., and see *TABULAE IGUVINAE*). The Lupercalia (q.v.) were an early and peculiar expression of the like idea (see Rose, *Mnemos.* 1932, 385 ff.). In all cases the ceremonial keeps evil out and puts good in. H. J. R.

LUTETIA (or *Lutecia*), modern *Paris*. Originally a marshy island (c. 25 acres) in the Seine, and capital of the Parisii, it was burnt by them in Labienus' campaign (52 B.C.). Under the Empire it spread up the Mont Ste Geneviève on the S. bank, where vestiges of important public buildings still exist. The town was laid out in irregular *insulae*. In the third century the island alone was inhabited, surrounded by a wall of reused stones. It was a favourite residence of Julian, who was proclaimed Augustus here in 360. Lutetia (from the 3rd c. called Parisii) fell to Clovis c. 493.

C. E. S.

LUXORIUS of Carthage (early 6th c. A.D.), grammarian and poet, wrote epigrams in imitation of Martial, mostly in hendecasyllables, elegiacs, and hexameters.

TEXTS Baehrens, *PLM* iv; Riese, *Anth. Lat.* i²; with transl. and comm. M. Rosenblum (1961). A. H.-W.

LYCANTHROPY. It was occasionally believed in antiquity that a man might turn into a wolf. Herodotus encountered the belief in Scythia that the Neuri changed

annually into wolves, but refused to accept it (4. 105). Plato (*Resp.* 565 d) knows a story that in the worship of Zeus Lycaeus a man is sacrificed and whoever tastes of his flesh becomes a wolf (cf. *SACRIFICE*). Pliny (*HN* 8. 34) has a circumstantial tale of a whole clan, one of whose members in each generation becomes a wolf for nine years. A sorcerer could turn himself into a wolf (Verg. *Ecl.* 8. 97; Petron. *Sat.* 61-2). See also LYCAON (3). Wolves are among the shapes into which Circe (q.v.) changes men (Verg. *Aen.* 7. 18).

R. P. Eckels, *Greek Wolf-Lore* (U.S.A. 1937), 32 ff.; Nilsson, *GGR* i², 399. H. J. R., H. W. P.

LYCAON, in mythology, (1) Son of Priam (q.v.) and Laioch; killed by Achilles (*Il.* 21. 34 ff.). (2) Father of Pandarus (q.v.; *Il.* 2. 826-7). (3) Son of Pelasgus (q.v.), king of Arcadia, first mentioned in Hesiod, fr. 44 Rzsch. According to Apollodorus (3. 96 ff.), who seems to follow Acusilaus, he had fifty sons, but accounts vary, partly owing to attempts to provide Arcadian towns with founders going back to remote antiquity (e.g. Haliphron and Mantineus, eponyms of Haliphra and Mantinea, in Apollod. 3. 17; Phigalus, of Phigalia, Paus. 8. 3. 1). His character is an odd mixture of piety and extreme impiety. He founded the cult of Zeus Lycaeus (Paus. *ibid.*), but sacrificed a child on his altar, and therefore was turned into a wolf (for this story cf. R. P. Eckels, *Greek Wolf-Lore* (U.S.A. 1937), 49 ff.). He tried to murder Zeus, also to trick him into eating human flesh (Ov. *Met.* 1. 222 ff.), thus provoking the deluge, cf. DEUCALION.

Nilsson, *GGR* i², 507 ff.

H. J. R.

LYCAONIA. The original home of the Lycaonians was the mountainous country around Laranda (on the north side of Mt. Taurus), but they were already under Persian rule raiding and settling in the plain to the north, which came to be called Lycaonia. Subdued by Perdiccas in 322 B.C., they were subject to the Seleucids (280-189) and Attalids (189-133). Lycaonia became, it is uncertain when, a *conventus* of the province of Cilicia; the southern mountainous area was, however, ruled by a dynast, Antipater (50-36 at least). The plain, with Iconium as capital, was granted by Antony to Polemon in 39, and in 36 was transferred to Amyntas, who conquered Antipater. From 25 B.C. the plain was part of Galatia and Cappadocia-Galatia. The mountainous country was probably ruled by Archelaus I and II, and certainly by Antiochus IV, till A.D. 72, when it (Lycaonia Antiochiana) joined Cappadocia-Galatia. Trajan on dividing this province probably allotted the plain to Galatia, Antiochiana to Cappadocia. Under Antoninus Pius most of Lycaonia (excluding Iconium and Laodicea) was added to Cilicia, within which it was a *κοινόν*. The Lycaonians were a backward people, still speaking their native language in the first century A.D. Most of their cities issued no coins till Antoninus Pius' reign.

Sir W. M. Ramsay, *BSA* 1901, 241, *JÖAI* 1904, Beiblatt 57; Jones, *Cities E. Rom. Prov.*, 124 ff. A. H. M. J.

LYCIA. A mountainous country in the south-west of Asia Minor. According to Herodotus (1. 173) the Lycians came there direct from Crete under Sarpedon, and at that time were called Termilae; the name of Lycians they took from the Athenian Lycus son of Pandion. In fact a tribe called Lukka appears in the Hittite records; on the other hand, the name Termilae (in the form Trēmīli) is used in the epichoric inscriptions of the fourth century. Another tradition said that Sarpedon came from Crete to Miletus; it has been suggested that the passage of the Lycians from there to the south coast is marked by the recurrence of the syllable *mil* in Miletus, Mylasa, Milyas (Termilae). The Lycians fought at Troy as allies of Priam; at that time they already occupied the classical

Lycia (*Il.* 2. 876-7). Their chieftains Sarpedon and Glaucus are among the more notable of the minor heroes in the *Iliad*.

In 546 B.C. Lycia was overrun by the Persians after a heroic resistance at Xanthus. Liberated by Cimon c. 468, the Lycians were temporarily included in the Delian League (appearing in the tribute lists for a single year 446), but quickly fell back under Persia. Included for a while in the Hecatomnid dominions (see MAUSOLUS), Lycia submitted readily to Alexander, and after his death passed into the hands of the Ptolemies. The country was conquered in 197 B.C. by Antiochus III, upon whose defeat at Magnesia it was granted in 189 by the Romans to Rhodes. The Lycians bitterly resented and resisted the Rhodian rule, and in 169 were given their freedom by Rome. This freedom was not revoked until A.D. 43, when Claudius established the province of Lycia-Pamphylia, under a praetorian legate.

The Lycians had an unusual capacity for collaboration and federation. Even in the fourth century, when the cities were ruled, under the Persians, by their own dynasts, the uniformity of their coinage indicates some kind of confederation. At some time in the Hellenistic period, perhaps even before 200 B.C., a regular Lycian Confederacy (*κοινὸν τῶν Λυκίων*) was established. The east coast cities of Olympus and Phaselis (q.v.) were now for the first time included in Lycia, and in 83 B.C. three cities of the Cibyratis were added. In the federal Council and Assembly the individual cities were represented proportionally to their size and importance (Strabo 14. 664-5). In the two centuries following 169 B.C. the Confederacy performed all the functions of a Sovereign state; under the Empire it continued to exist with limited authority. Federal coinage was struck, of a uniform type generally bearing a lyre, in the names of the various cities, which at the same time issued their own individual types. The lyre represents Apollo, the principal deity of the Lycians.

The Lycian language and script continued in use down to the end of the fourth century. Greek appears in the inscriptions, side by side with Lycian, from about 400, and soon after 300 supplanted it entirely. The language is largely *sui generis*, but exhibits certain Indogermanic features; it is still only imperfectly understood. The alphabet contains twenty-nine letters, rather more than half of which are of Greek form; of some of the others the phonetic values are still uncertain.

Herodotus' statement (1. 173) that the Lycians alone of all men reckoned descent through the female side receives no support from the oldest inscriptions; none of these, however, is quite as early as Herodotus' time.

O. Treuber, *Geschichte der Lykier* (1887); G. Fougères, *De Lyciorum Communis* (1898); Jones, *Cities E. Rom. Prov.* 96 ff.; *Tituli Asiae Minoris* vols. 1-11 (1901-44); Magie, *Rom. Rule Asia Min.*, ch. 22; on the Confederacy, J. A. O. Larsen, *Greek Federal States* (1968), 240 ff. G. E. H.

LYCO (PW 14) (c. 302/298-c. 228/224 B.C.), son of Astyanax of Troas, pupil of Strato of Lampascus and his successor as head of the Peripatetic school (q.v.) which he directed for forty-four years. The sources for his life, mostly derived from a lost biography by Antigonos (q.v. 4) of Carystus, show that he was a man of the world, a friend of kings and statesmen, a benefactor of the people, a lover of pleasure and luxury of all kinds—all but a great philosopher or scientist like his predecessors. He was a fluent and interesting speaker (*φρασιτικός*), but had little to teach (Cicero, *Fin.* 5. 13, calls him 'oratione locuples, rebus ipsis ieiunior'), and with him began a long period of decline in the history of the Peripatetic school. At his death he left some writings, but only a few fragments, and no titles, have survived.

Diog. Laert. 5. 65-74. Wilamowitz, *Antigonos von Karystos* (1881), 78 ff.; F. Wehrli, *Die Schule des Aristoteles* vi (1952), 9 ff. J. G.

LYCOPHRON (1), tyrant of Pherae c. 406–390 B.C. He may have established his tyranny by championing a democratic element against the aristocracy, for he was opposed by the nobles of Larissa and other cities, whom he defeated in 404. He allied with Sparta and in 395 fought against Medius of Larissa, who, with support from Boeotia and Argos, may have won a temporary advantage over him. In a period of violent struggles between Thessalian cities and factions he played a prominent part, but so little evidence has survived that it is impossible to determine the extent of his success or to assess his ability as a military and political leader. His ambition to dominate Thessaly was achieved by Jason (q.v. 2), probably his son. H. D. W.

LYCOPHRON (2) (b. c. 320 B.C.), of Chalcis in Euboea, as a young man frequented the philosopher Menedemus at Eretria. Circa 285–283 he went to Alexandria and was entrusted by Ptolemy Philadelphus with the *diorthosis* (preliminary sorting-out) of the comedies collected for the Library. He was included in the *Pleiad* of Tragic Poets. According to Ovid, *Ibis* 529–30, Lycophron was killed by an arrow.

WORKS. (1) *Verses*: Tzetzes credits Lycophron with 64 or 46 tragedies, and the *Suda* gives the titles of 20. The *Cassandreia* must have been historical and based on recent events, since Cassandreia was founded c. 316. The only fragment (4 lines) is from the *Pelopidae* (*TGF* 818). Lycophron's satyric drama, the *Menedemus* (*TGF* 817–18), depicted the high thinking and low living of Menedemus' circle. The *Suda* further credits Lycophron with 'the *Alexandra*, the obscure poem'. This survives, a dramatic monologue in 1474 tragic iambs, in which the slave set to watch Alexandra (Cassandra) reports her prophecies to Priam. Apart from prologue (1–30) and two epilogues (1451–74) the poem falls into three sections, 31–364 Destruction of Troy and crime of Ajax, 365–1282 Return of the Greeks, 1283–1450 Struggle between Europe and Asia. At one time or another the poem touches on nearly all the themes of the Epic Cycle, but the central idea, the Greek sufferings as compensation for the Trojan, was probably suggested by Euripides' *Troades*. In 365–1282 the author devotes most space to early Greek and Trojan colonization of the West and here draws extensively on Timaeus. In 1226–80 Cassandra foretells Aeneas' arrival in Latium and the future glories of Rome. This passage and 1446–50, where the precise reference is disputed, raised doubts even in antiquity (cf. the scholia on 1226) whether Lycophron, the tragic poet, was the author of the *Alexandra*. Since the two passages show no stylistic differences from the rest of the poem, excision is unjustified. Some see a reference to Pyrrhus in 1446–50 and attribute the recognition of Rome's power to her victory in the Tarentine war. On this view the poem was composed by the tragedian Lycophron, probably c. 273, when the Romans sent an embassy to Alexandria. Others refer 1446–50 to T. Quinctius Flamininus, who defeated Philip V at Cynoscephalae in 197. These date the poem not long after that event and suppose the author to have been a namesake, perhaps descendant, of the tragedian. General grounds favour the later dating. The obscurity of the *Alexandra* exceeds that of any other Greek poem. This is due to the recondite material, to the blending of inconsistent myths, but above all to the language. Of about 3,000 words used in the *Alexandra* 518 are found nowhere else and 117 appear for the first time (Scheer). Of the rest many are 'glosses' from Epic and Tragedy, especially Aeschylus. Neologisms too are frequent, and there are some modernisms and vulgarisms. The syntax is characterized by extravagant use of the figures of speech and rhetoric. The real names of gods and men occur rarely, and, when they do, usually refer to another

character, e.g. Zeus means Agamemnon and vice versa. Normally the gods appear under some obscure cult-title, the heroes under the names of animals or disguised by a riddling periphrasis. Countries are indicated by some little-known town, mountain, or river situated in them. In metre the author is strict. There are few resolutions and the rule of the final cretic is uniformly observed. The explanation of the numerous coincidences between the *Alexandra* and the poems of Euphronion depends on the dating of the former. The first explicit reference to the poem is in Statius (*Silv.* 5. 3. 157), but soon after this Clement of Alexandria, Lucian, and Artemidorus all mention it, and later the lexicographers and Stephanus of Byzantium cite it frequently. Theon (fl. c. 40 B.C.) wrote a *hypomnema* on the *Alexandra*, and some of the material contained in the scholia and in the commentary of Tzetzes probably goes back to this scholar.

(2) *Prose*: The only known work of Lycophron is a lexical compilation *Περὶ κωμωδίας* in at least nine books (Ath. 11. 485 d). This treatise, presumably a by-product of his labours in the Library, was much criticized by later workers in this field.

LYCORTAS, father of Polybius and friend of Philopoemen, represented with these the Megalopolitan policy of Achaean independence in a unified Peloponnese with Egyptian support. Hipparch in 192/1 B.C., he defended Philopoemen's pressure on Sparta before the Senate (189/8), and after visiting Egypt (186), renewed alliance with Ptolemy Epiphanes as General in 185/4. General *suffectus* in 182, after Philopoemen's death, he suppressed the Messenian revolt and received Sparta again into the League. Possibly General in 182/1, he was prevented by Epiphanes' death from going to Egypt in 180. Against the pro-Roman Callicrates he failed to gain Achaean neutrality in the Third Macedonian War or help for Egypt against Syria in 168.

LYCURGUS (1), a mythological personage, according to Homer, *Il.* 6. 130 ff., a son of Dryas, who attacked Dionysus (q.v.), driving him and his nurses before him till the god took refuge in the sea; thereafter Lycurgus was blinded and died soon. This is vaguely placed on Mt. Nysa. Later, as in Aeschylus (Nauck, *TGF* 19 ff.), he is an Edonian; he and others elaborate the story in various ways. Apollodorus (1. 35) and Hyginus (*Fab.* 132) say Dionysus drove him mad, and further embroider the story of his sufferings and death; their sources are uncertain. For details, see Rapp in Roscher's *Lexikon*, s.v., Marbach in *PW*, s.v.; Nilsson, *GGR* 12. 580.

H. J. R.

LYCURGUS (2), the traditional founder of the Spartan constitution, social and military systems, and consequently of the *eunomia*, the 'good order', which they created. The earliest surviving mention of him is in Herodotus, where he is guardian of the Agiad king Leobotes (c. 900 B.C.); most later writers attached him, directly or by implication, to the Euryptid Charillos (c. 775 B.C.) but there are also traces of other traditions.

Modern opinion sees much of his social system (the *ἀγωγή*) as a survival of primitive tribal customs, much of Sparta's later character (e.g. her austerity) as a gradual development conditioned by her peculiar economic and

political position, many of his other reforms (e.g. a ban on coinage) as later accretions, and thus, with ancient doubts about his date and life and the obvious elements of romance in the tradition, has led many to doubt his existence. Pointing to the quasi-divine honours which he received by the fifth century they explain him away as the god under whose protection the new regime was placed.

But the basic structure of this regime was established, or at least defined, at some one moment, though probably not as early as 775 (see SPARTA), and no compelling argument forbids the belief that this was the work of one great legislator.

Hdt. 1 65 6; Plut. *Lyc.* J. Wells, *Studies in Herodotus* (1923), 44 ff.; V. Ehrenberg, *Neugründer des Staates* (1924), 1 ff.; W. G. Forrest, *Phoenix* 1963, 157 ff. W. G. F.

LYCURGUS (3) (c. 390–c. 325/4 B.C.), Athenian statesman, of great importance after Chaeronea. The principal evidence about him is the 'Life' in [Plut.] *Lives of the ten Orators* and the appended honorific decree of 307/6, the original of which is partially preserved (*IG* ii². 457). Clearly he played the major part in the control of the city's finances for a period of twelve years, raising the revenue to perhaps 1,200 talents a year, and financing projects by raising capital from individuals (*προδανεισμοί*); scattered epigraphic evidence attests the wide range of his activities (note esp. *SIG*³ 218, *IG* ii². 1627 and 1672, ll. 11 and 303). The powers by which he did it all are obscure. Some have inferred from Hyperides fr. 118 and other passages that he was given a general but extraordinary commission to supervise the city's finances, but the manner of Aristotle's allusions to the financial officers in the *Ath. Pol.* tells against such a theory. The passage in Hyperides in *Dem.* (col. 28) frequently taken to describe Lycurgus' position should be referred to Demosthenes' powers as Theoric Commissioner. Probably he occupied different offices including the position of *ταμίας τῶν στρατιωτικῶν* and controlled the whole by personal influence (cf. Plut. *Mor.* 841 c), which manifests itself to us in the varied decrees which he proposed. Whatever his powers, it is certain that he carried through a diverse building programme including the completion of the Skeuothekē begun by Eubulus (q.v. 1), the rebuilding of the theatre of Dionysius, the construction of docks, and the improvement of the harbours. The substantial increase in the navy in this period is ascribed to him. He also concerned himself with the arrangements for processions and festivals, and had statues of the three great tragic poets erected and an official copy made of their works (later borrowed by Ptolemy Philadelphus (q.v.) for the library of Alexandria and never returned). The common belief that Lycurgus instituted, or reformed, the corps of *epheboi* (q.v.) is ill grounded. In politics he was bitterly suspicious of Macedon and was one of those at first demanded by Alexander in 335. He prosecuted Lysicles who had been a general at Chaeronea and any who after the battle seemed to show signs of defeatism, and, when the revolt of Agis III (q.v.) in 331/30 put the city in turmoil, Lycurgus used the occasion to attack Leocrates, who had been absent from the city from 338 to 332 but probably not illegally, and very nearly had him condemned for treachery. The fragments of his speeches attest the wide range of his prosecution of corrupt practices. He died shortly before the Harpalus (q.v.) affair. According to a story contained in a letter ascribed to Demosthenes he was accused by his successor Menesaechnus of having left a deficit; his sons were condemned to repay the money, and were imprisoned when unable to do so. They were released on the appeal of Demosthenes. By 307/6 his great services were generally recognized.

WORKS. Of fifteen speeches regarded as genuine by Caecilius, the only one extant is *Against Leocrates*. The ancient opinion that Lycurgus was mercilessly severe in his prosecutions is supported by the study of this speech. His literary style was influenced by that of Isocrates, but he is a much less careful writer, being often negligent in the matter of hiatus, and inartistic in the composition of his sentences. Evidently he cared more for matter than style. His disregard of proportion is shown by his inordinately long quotations from the poets.

LYCUS of Rhegium (fl. 300 B.C.), second in importance to Timaeus for his history of Sicily (*Ἱστορίαι Συκελίας*), and one of Timaeus' sources. The history of Libya (*Ἱστορία Λιβύης*) was a separate work.

FGH iii. 570

LYDIA was a territory in the west of Asia Minor, centred in the lower Hermus and the Cayster valleys, bordered on the north by Mysia, on the east by Phrygia, on the south by Caria; the Phrygian and Carian borders were indeterminate, and the coastal cities (Cyme, Smyrna, Ephesus, etc.) were reckoned sometimes to Lydia, sometimes to Aolis or Ionia. Lydia contained much natural wealth, and lying astride and along the two main routes from the coast to the interior of Asia Minor it was an entrepôt of trade and lay open both to Greek and to Anatolian influences, which are united in its civilization, art, and cult. Under the Mermaid dynasty (c. 700–550 B.C.) Lydia was a powerful kingdom which by the time of its last king Croesus had incorporated all the plateau of Asia Minor up to the Halys (q.v.). After his defeat, Lydia became the chief Persian satrapy in the West, with its headquarters at Sardes; this satrapy was in close political relations with the Greek States throughout the Persian period. The conquest by Alexander threw Lydia open to Graeco-Macedonian settlement; after the battle of Magnesia in 189 it became Attalid territory and passed to Rome with the rest of the Attalid kingdom in 133. It remained part of the province Asia till Diocletian made it a separate province, with Sardes as *metropolis*.

Lydian civilization and art were influenced by and reacted on Greece; Lydia was the first realm to use coined money and was an innovator in music. The Lydian language, though obscure, seems to belong to the Anatolian group of Indo-European; it survives on about fifty inscriptions of the fourth century B.C. excavated from the temple of Artemis—in Strabo's day it was still spoken on the border of Lycia.

G. Radet, *La Lydie* (1893), L. Burchner and J. Keil, *PIW*, v. 'Lydia'. W. M. C., J. M. C.

LYDIADAS (d. 227 B.C.), son of Eudamus (*SIG* 504), was Megalopolitan commander against Sparta in 251 (Paus. 8. 10. 5) and assumed the tyranny c. 243. Threatened by Achaia, he abdicated, brought Megalopolis into the Achaean Confederacy (235), and was elected general in 234, 232, and 230. He was a constant rival of Aratus and disobeyed his orders in the battle of Ladocea against Cleomenes III, when he charged with the cavalry and was killed (227). He was ambitious and generous, but was eclipsed by Aratus.

LYDUS, IOANNES LAURENTIUS. Greek writer of the sixth century A.D. He talks about himself in *De magistratibus* 3. 26-30 and elsewhere. He was born in 490 in Philadelphia in Lydia (hence his name), and went to Constantinople in 511 to learn philosophy. A protégé of his countryman the praetorian prefect Zoticus, he soon entered the *officium* of the praetorian prefect as *exceptor*. He ended his career forty years later with the highest rank of *cornicularius*, notwithstanding the hostility of John the Cappadocian. For some years he also taught Latin philology in Constantinople. Bribes and perquisites made him a rich man. After his retirement in 551 or 552 he (probably) wrote *De mensibus* and *De ostentis* and (certainly) composed his most important work, *De magistratibus populi romani*. He wrote them in Greek, though he was a great champion of the Latin language and altogether a representative of that revival of interest in old Roman customs and institutions which is characteristic of Justinian's reign. His works go back directly or indirectly to the authoritative antiquarians of the first century B.C. and of the first two centuries A.D.—perhaps they owe most to Suetonius' lost works (but further research on their sources is needed). The *De magistratibus* is a very unusual attempt to trace the development of Roman institutions, beginning with the monarchic period. The section on the *officium* of the praetorian prefect is of great importance, and also elsewhere Lydus provides good evidence for his own time.

De mensibus (only partially preserved), ed. R. Wünsch (1898); *De ostentis*, ed. C. Wachsmuth (1897); *De magistratibus*, ed. R. Wünsch (1903). Bibliography in B. Rubin, *Das Zeitalter Justinians* (1960), 427 ff., and Latté, *RR* 7. A. Klotz, *PW*, s.v. Lydos, 7. A. H. Jones, *JRS* 1949, 51 ff.; E. Stein, *Histoire du Bas-Empire* II (1949), 729 and 838, G. Moravcsik, *Byzantinoturcica* I* (1958), 328. A. M.

LYGDAMUS, the author of six smooth but wooden elegies transmitted with the poems of Tibullus. His derivative and tedious poems are addressed to a Neaera. Both names may be pseudonyms, and the poems give no real clue to the status of either; 4. 85 ff. compare Neaera's parents favourably with the Chimæra, Cerberus, and Scylla, but this hardly justifies the inference that she was of good family. No attempt to identify Lygdamus himself carries any conviction, and the preservation in the Tibullian corpus of a poet who apparently pretends to be Ovid (5. 18) is a puzzle.

Text in editions of Tibullus; commentary in the older editions by Heyne and Dissen; see also G. Némethy, *Lygdami Carmina*, etc. (1906). Postgate, *Selections from Tibullus* (1916); A. Cartault, *Tibulle et les auteurs du Corpus Tibullianum* (1909); Kirby Smith, *The Elegies of Albius Tibullus* (1913). Cf. Schanz *Historia* II § 282. M. E. II.

LYRIC POETRY, GREEK. Lyric poetry, in the sense of song accompanied by a musical instrument which is normally but not necessarily the lyre, must have existed both as monody and as choral song from an early age in Greece. Homer hints at monody in the Linus Song which a boy sings (*Il.* 18. 570), and he knows of several kinds of choral song which were later to be practised by known poets, notably the Dirge (*Il.* 18. 50-1, 314-16, 24. 746-7), the Paean (*ibid.* 1. 472-4), the *Hymenaeus* (*ibid.* 18. 493), the *Hyporchemus* or song accompanied by mimetic dancing (*Od.* 13. 256-65), and the Maiden-Song (*Il.* 16. 182-3). In all these the procedure seems to be the same; there is a choir and a leader, each belongs to a definite occasion, and each is accompanied by music and dancing. These characteristics survived for centuries, and the different types of song known to Homer were standard parts of Greek life. Poets wrote words and music for them, so that all five kinds are, for instance, included in the different types of poetry written by Pindar. The earliest example of such a poem comes from Alcman's Maiden-Song (fr. 1), written in the seventh century. Its

chief characteristics belong to its kind and lasted long after it. First, there is the attention paid to the gods at whose festival it is sung. Secondly, there are the moral maxims which the poet makes. Thirdly, there are remarks about the persons who take part in the festival. Fourthly, there is the myth or story, from which, in this case, the poet draws an emphatic moral. These main elements are to be found in Pindar and Bacchylides and seem to be essential to the choral ode as such. Of them the only one that needs some comment is the myth. In origin its presence must have been due to the song's being sung in honour of some god, and no doubt the myth told something about him. But even in Alcman the connexion of the myth and the festival is not clear, and in Pindar the myth might be introduced for different reasons, though often it gave an example of some law about god and man which the poet wanted to emphasize.

2. Another early type of choral song was the *Prosdion* or Processional Song. Homer does not mention this, but it was already in existence in the middle of the eighth century, when Eumelus of Corinth wrote one for the Messenian choir which was sent to Delos (Paus. 4. 4. 1). Only a little later came the Dithyramb, which, after being an unorganized song to Dionysus, was reduced to order by Arion and made like other choral songs in the seventh century. It is possible that some of Stesichorus' poems and a fragment of Alcman (fr. 56) were also of this kind, though its heyday came when it was made a subject for competition at Athens in the last quarter of the sixth century, and was written by Lasus, Simonides, Pindar, and Bacchylides. Later than this came songs which were addressed not to gods but to pre-eminent men. Their development probably belongs to the age of the tyrants, and an early example may perhaps be seen in Ibycus' lines to Polycrates (fr. 1), in which all centres on the boy whom the poet wishes to honour. *Encomia* were written for distinguished persons like Scopas by Simonides, Hieron and Xenophon of Corinth by Pindar, Alexander of Macedon by Bacchylides. Similar to the *Encomium* in origin was the Epinician, a song written for a victor in one of the great games. This might be sung at the place where he won or at his home after his return. It came into prominence under Simonides, who seems to have treated it in a light-hearted way, but its real exponent was Pindar, who gave to it most of the characteristics of the formal hymn by writing for occasions when the victor was welcomed at the feast of some god in his home. It may be doubted whether earlier Epinicians had this religious character.

3. These different types survived into the middle of the fifth century, and even later, since Euripides wrote an Epinician for Alcibiades and Sophocles a Paean for Asclepius. But with the rise of tragedy and the decay of the Greek aristocracies the choral hymn seems to have declined. The best poets seldom wrote them, and the occasions which required them were no longer as important as before. The only popular choral poetry of the later fifth and the fourth centuries was the Dithyramb, which underwent considerable changes, becoming less formal than before, more concerned with music than with words, more artificial in its language. Closely allied to it was the *Nomos*, an astrophic composition, like 'Timotheus' *Persae*, which aimed at sensational effects in words and music.

4. Outside this main stream of development other types may be observed. Monody grew to great distinction c. 600 B.C. in Lesbos, where Sappho and Alcaeus produced a personal poetry concerned with the emotions and interests of their own lives; they were followed a generation later by Anacreon in Ionia, and the example of all three may have helped Athenian aristocrats to produce their *σκόλια* or drinking-songs at the turn of the

sixth and fifth centuries. But this art, like that of choral poetry, declined as the fifth century advanced, and *σκόλια* seem to have ceased to be composed. Quite separate from these was the poetry written by women for women in different parts of Greece. Corinna in Boeotia, Telesilla in Argos, and perhaps Praxilla wrote a special kind of traditional verse which in simple language told of local myths.

5. In the fourth century the old divisions of forms began to be confused. Aristonous wrote a Paean (proper to Apollo) to Hestia, Philodamus to Dionysus; Aristotle used the form of the Paean as a memorial hymn for his dead friend Hermias and addressed it to the abstract power *Ἀπερά*. This confusion persisted into the Hellenistic age, when Paeans were addressed to human beings, and the form of the folk-song was used by Hermocles for the entry of Demetrius Poliorcetes into Athens. But the lyric tradition survived both in the real Paeans which were still composed for Apollo and in other new types of monody, of which the most distinguished are the Sernade, the Lovers' Dialogue from Marisa (Powell, *Coll. Alex.* 184), simple songs of work like that of the Nile Boatmen (ibid. 195), while more elaborate forms existed like Mesomedes' hymns to Nature and Isis, and the beautiful anonymous *Telamibi* (ibid. 197). There were still imitations of earlier poets like the Acolic poems of Theocritus based on Alcaeus, and the sapphics of Melinno, who seems to have lived in south Italy and used the form of personal monody to praise the grandeur of Rome.

C. M. B.

LYRIC POETRY, LATIN. Greek lyric poetry, on a reasonably workable definition produced by Alexandrian scholars, was distinguished by its musical accompaniment. This definition has no relevance whatever to Latin lyric poetry. No Latin lyric poet sang his compositions to the accompaniment of the lyre although Horace often self-consciously speaks as if he did. Equally the modern notion of lyric poetry as brief, personal, and subjective in tone will not apply to Latin lyric—it will apply to some Latin lyric poems, but by no means to all. The only way by which Latin lyric poetry may be defined is by its metres: such a test will admit some of the very fragmentary predecessors of Catullus and poems 11, 30, 34, 51, and 61 of Catullus himself (it will be noticed that the poems of Catullus which a modern judgement would be most ready to call lyric are excluded); it may be extended to include not only the *Odes* of Horace, but also the *Epodes*, and Statius, *Silvae* 4. 5 and 7. The definition in Greek which allowed the choral odes of tragedy to be considered in the genre of lyric poetry may in Latin allow the choral odes which Seneca composed for his tragedies. Beyond that there are some fragments of the first century A.D., perhaps Hadrian's poem to his soul, then Ausonius and the Christian hymns of Prudentius and Ambrose.

2. The Romans are usually represented as allergic to the lyric spirit, and Cicero's scathing remark is quoted (Sen. *Ep.* 49. 5) that, even if he had a second lifetime, he would not find time to read the lyric poets. Seneca adds the explanation that they make a business of trivialities. Quintilian (10. 1. 96) considered Horace pretty well the only lyric poet worth reading, but his educational aim was cramping to the free range of literary perception. These opinions should not be taken alone: in *Orator* 183 Cicero shows a technical acquaintance with lyric poetry, and in *Dialogus* 10 Tacitus makes *Aper* list *lyricorum quoque iucunditatem* among the branches of literature which he considers worth while.

See articles on ALEXANDRIANISM and on the authors mentioned above; also METRE, LATIN, III. G. W. W.

LYSANDER (d. 395 B.C.), Spartan general and statesman. Appointed admiral for 408/7, he restored the efficiency of the Peloponnesian fleet, gained the friendship and support of Cyrus, and won a victory at Notium which caused the withdrawal of Alcibiades (q.v.). After the battle of Arginusae he resumed command, and, transferring his fleet to the Hellespont, destroyed the Athenian navy at Aegospotami (405). He conducted the blockade of the Piraeus and after the surrender of Athens (spring, 404) supported the establishment of the 'Thirty'. In most of the cities hitherto allied to Athens he set up 'decarchies' of his oligarchical partisans, reinforced by Spartan harmosts. Soon, however, he became estranged from the Spartan government, which reversed his policy by assisting in the restoration of the Athenian democracy and modifying his system of decarchies. Attempts to regain his autocratic position proved unsuccessful: his plot to introduce an elective monarchy at Sparta miscarried, and after he had secured for Agesilaus the kingship and supreme command in the war against Persia he found himself discarded by his protégé. At the outbreak of the Corinthian War he invaded Boeotia from Phocis, but before he could establish contact with Pausanias he was surprised and killed at Haliartus. He made himself unpopular by his arrogance and his unscrupulous pursuit of personal aggrandisement, and this unpopularity is reflected in the unsympathetic attitude of the literary authorities. He was, however, among the ablest of all Spartan leaders.

Xen. *Hell.*, bks. 1-3; Diod. bks. 13-14, Plut. *Lys.* H. D. W.

LYSANIAS of Cyrene (fl. 2nd c. B.C.), Alexandrian philologist, taught Eratosthenes, wrote *Περὶ ταμνοποιῶν* and Homeric studies (fragments listed by Gudeman, *PW*, s.v.).

LYSIAS (c. 459-c. 380 B.C.), son of Cephalus (a Syracusan whom Pericles persuaded to settle in Athens), went, with his brothers Polemarchus and Euthydemus, to Thurii, where they lived for some years. Returning to Athens in 412, they carried on a prosperous business at the Piraeus as manufacturers of shields. The evidence of Plato (*Resp.* i ad init.) makes it clear that they moved in the best intellectual society at Athens. In 404 they were proscribed by the Thirty, partly on the ground of their democratic sympathies, but chiefly because of their wealth; Lysias was arrested, but escaped to Megara; Polemarchus was put to death, and their funds were confiscated. While in exile Lysias still showed himself a true friend of the democracy and on his return in 403 the *ekklesia* conferred on him the rights of citizenship. Owing to some informality this decree was pronounced illegal and Lysias lost his new privilege. Between this time and his death he is said to have composed over two hundred forensic speeches. As a *metoikos* he could not appear in court himself, but he could appeal to a far wider audience by his *Olympiac* speech of 388 B.C., which contained a solemn warning against the dangers of internal discord.

2. WORKS. In addition to the *Olympiacus*, an *Epitaphios*, and a fragment (*Or.* 34) of a deliberative speech, the following are preserved:

(i) *Speeches in public causes*: *Or.* 20, on a charge of subverting the democracy, which, if by Lysias, is his earliest extant work (c. 407 B.C.); 27, 28, and 29, dealing with embezzlement and the betrayal of Greek cities in Asia; 21, a charge of taking bribes; 30, negligence in performing public duties; 22, prosecution of the public corn-dealers for making excessive profits; 16, 25, 31, cases

concerning *δοκιμασία*; 1, 12, 13, murder-charges, of which 12 (*Against Eratosthenes*) provides first-hand evidence about the reign of terror under the Thirty, and 1 (*On the Murder of Eratosthenes*) throws an interesting light on the domestic life of the middle classes; 3 and 4, charges of malicious wounding; 5 and 7, sacrilege; 14 and 15, charges of (a) desertion, (b) evasion of military service, against the son of the great Alcibiades; 17, 18, 19, claims on confiscated property; 9, non-payment of a fine; 24 (*For the Cripple*), an excellent speech in defence of a man charged with receiving a state-pension under false pretences.

(ii) *Speeches in private causes*: *Or.* 32 against Diogiton, a dishonest guardian, is admirable for its character-drawing, its clear exposition of a complicated story, and the dramatic touches which enliven the narrative; 10 is in an action for defamation; in 23 the charge is not stated; 8 is a trivial declamatory exercise; 6 (*Against Andocides*) is probably spurious.

3. Lysias, by his exceptional mastery of idiom, turned the spoken language of everyday life into a literary medium unsurpassed for its simplicity and precision. He possesses a felicity of expression which is based on art skilfully concealed. He avoids rare and poetical words, striking metaphors, and exaggerated phrases, with the result that at times he may seem to lose in force what he gains in smoothness. His blameless style and unimpassioned tones may seem monotonous to some readers who would prefer a diction that rises above the level of conversation; to others his smoothness may seem more telling than the vigour of Antiphon or the solemnity of Demosthenes. Even when his own personal feelings are deeply concerned he is always moderate. The character of the Thirty is brought out by the calm narration of their actions rather than by denunciation. In the structure of sentences he passes without effort from a running style to the use of the period, which he employs with skill and moderation.

4. Lysias did not, any more than other orators, vary his language to suit his characters, but he succeeds, by subtle nuances of thought rather than of language, in suggesting their personality. We cannot fail to sympathize with the young Mantitheus (*Or.* 16)—ambitious and unaffectedly pleased with himself, he seems to have some ground for his harmless conceit; the 'Cripple' (*Or.* 24) strikes us as a plausible rogue. In the construction of his speeches Lysias is no less simple than in his language: they regularly consist of preface, narrative, proof, and epilogue—a form approved by Isocrates, but seldom adopted with such regularity as by Lysias. It is noted, as a proof of his versatility and good taste, that he never used the same exordium twice, nor borrowed from current collections of Prefaces (see PROOEMIUM).

GENERAL K. J. Dover, *Lysias and the Corpus Lysiacum* (1968). See also s.v. ATTIC ORATORS.

LYSIMACHUS (c. 360–281 B.C.), companion and 'successor' of Alexander. His father was probably a Thessalian Greek who migrated to Macedonia. He was one of Alexander's bodyguards, and in one of Alexander's lion-hunts he killed a beast at close quarters, though wounded himself. (This feat gave rise to the absurd story that Alexander had caged him with a lion.) After Alexander's death he received a province consisting of Thrace and the north-west of Asia Minor. In 315 he joined the coalition of Cassander and Ptolemy against Antigonus, but was mainly occupied with the consolidation of his power in Thrace, where he founded a new capital at

Lysimacheia (on the neck of the Thracian Chersonese). In 306 he assumed the royal title. Four years later he drew Antigonus into Asia Minor and held him on successive prepared lines until Seleucus, coming from the eastern provinces, could join hands with him. In 301 he helped Seleucus to defeat Antigonus at Ipsus, and received northern and central Asia Minor as his share of the spoil. Crossing the Danube in 292, he was captured by a Thracian chief, but obtained his speedy release. In 285 he won Macedonia and Thessaly from Demetrius and thus became the strongest of the 'successors' in manpower. But he was disliked for his high-handed administration and oppressive taxation, and was distracted by family quarrels. In 281 he was attacked by his former ally Seleucus and completely defeated in a battle at Corupedium (near Magnesia ad Sipylum), where he fell fighting. His kingdom was broken up after his death.

G. B. Possenti, *Il re Lisimaco di Tracia* (1901); Berve, *Alexanderreich*, no. 480; G. Saitta, *Κόρυλλος* 1955, 62 ff. M. C.

LYSIPPUS (1), poet of Old Comedy. Won prizes in 435 and 410–409 B.C. (*IG* xiv. 1097). His *Βάκχαι* contained an attack on the seer Lampon (fr. 6).

FCG II. 744 ff.; CAF I. 700–3.

LYSIPPUS (2), sculptor, of Sicyon; Pliny places his *floruit* in 328 B.C. (because of Alexander). Athenaeus connects him with the founding of Cassandrea (316). Selected works:

Dated. (1) Troilus, Olympic victor, 372. (2) Coridas, Pythian victor, probably in 342. (3) Statues of Alexander, from about 340. Alexander allowed Lysippus alone to figure him because he preserved his lion-like and manly look as well as the turn of his neck and the softness of his eyes. Herm of Alexander in the Louvre has ancient inscription attributing it to Lysippus (Winter, *KB* 334. 1–2); bronze statuette in the Louvre (Winter, *KB* 334. 3) and head in the British Museum are near in style. Bronze statuette in Grado best fits Plutarch's description of Alexander with spear. (4) Agias of Pharsalus, epigram and signature preserved. The epigram without signature recurs under the Agias (Winter, *KB* 331. 3) of a group erected at Delphi by Daochus, tetrarch of Thessaly, 338–334; this Agias is probably a contemporary marble copy of the Pharsalus Agias. (5) Equestrian group, commissioned by Alexander after Granicus, 334. (6) Socrates, probably erected by Lycurgus, 338–326. Has been reconstructed by combining the Louvre bust (Winter, *KB* 317. 1) with seated body in Copenhagen. (7) Signatures from Corinth and Thermon, about 330. (8) Chilon, who fell at Lamia, after 322. (9) (with Leochares, q.v.) Alexander's lion hunt, erected by Craterus' son after his death in 321. Reflected in relief in the Louvre (Winter, *KB* 334. 8). (10) Seleucus, probably after 312. (11) Signature from Megara, about 300. Probably not from base of Zeus and Musae.

Undated: (12) Colossal bronze Zeus at Tarentum. (13) Chariot of the Sun for Rhodes. (14) Eros at Thespiae. Lysippan Eros survives in copies (Winter, *KB* 332. 2). (15) Satyr in Athens. Borghese satyr may be copy (Winter, *KB* 343. 1). (16) Kairos in Sicyon. Reproduced on reliefs and gems. (17) Colossal bronze seated Heracles at Tarentum, later in Rome and Constantinople. Described by Nicetas. (18) Heracles Epitrapezus. Statuette derived from this described by Statius (*Silo*. 4. 6) and Martial (9. 44). Copies are preserved. (19) Heracles at Sicyon. Original of Farnese Heracles by Glycon (q.v. 2) (Winter, *KB* 333. 4). (20) Polydamas, Olympic victor. Base has been discovered. (21) Apoxyomenos. Copy in the Vatican (Winter, *KB* 331. 1–2).

Attributed: from likeness to 18, 22, seated Hermes (Winter, *KB* 333. 1); from likeness to 19, 23, Satyr with

infant Dionysus in the Louvre; from likeness to 21, 24, athlete tying sandal (Winter, *KB* 332. 1).

Lysippus was famed for the new and slender proportions of his figures (although he called the Polyclitan Doryphorus his master), his representation of momentary appearance, the precision of his detail. The tridimensionalism of the Apoxyomenos is in advance of any earlier statue. His influence lasted into the Hellenistic period through his pupils, e.g. Eutychides (q.v.).

Overbeck, 903, 954, 1443-1516; F. P. Johnson, *Lysippus* (1927); F. Poulsen, *Delphi* (1920), 265, *Iconographic Studies* (1931), 31; F. von Lorenz, *Röm. Mitt.* 1935, 331; Lippold, *Griech. Plastik*, 276 ff.; E. Sjöqvist, *Opuscula Atheniensia* 11 (1953), 87 ff.; J. Marcadé, *Rev. Ét. Anc.* 1963, 351.

T. B. L. W.

LYSIS (1) of Tarentum, a Pythagorean who migrated to Achaea and then to Thebes and became the teacher of Epamondas. It is uncertain whether he wrote anything.

Testimonia in Diels, *Vorsokr.* 1 i. 420-1. *PW* xiv. 64.

LYSIS (2) (fl. c. 300 B.C.), originator of λυσιφδία, and probably from Magnesia in Ionia, like his predecessor Simus, inventor of σιμφδία. See MAGODIA.

LYSISTRATUS, Greek sculptor, brother of Lysippus (q.v. 2), active in the second half of the fourth century B.C. A native of Sicyon (Pliny 35. 153). According to Pliny (ibid.), 'he was the first person who modelled a likeness

in plaster of a human being from a living face, and established the method of pouring wax into this plaster mould and then making final corrections in the wax cast' (transl. H. Rackham); and that 'he introduced the practice of making exact likenesses (*similitudines*) whereas before him the object was to make a portrait as beautiful as possible'. From this passage one can deduce that Lysistratus was especially interested in realistic portraiture, and for this end took impressions from living models—a perfectly possible proceeding. Pliny furthermore states that Lysistratus 'invented the taking of casts from statues (*de signis effigies exprimere invenit*), a method which advanced to such an extent that no figures or statues were made without a clay model' (*crevitque res in tantum ut nulla signa statuere sine argilla fierent*). This interesting passage, if credible, suggests that the making of casts from statues was invented as early as the late fourth century B.C. Plutarch's anecdote (*De Soll. An.* 984 b) in which he refers to 'taking an impression of' (ἀπομάζασθαι) a statue of Kore for Ptolemy I Soter would supply another instance of the 'casting' of a statue in the late fourth century B.C.; but its credibility has been doubted (cf. A. D. Nock, *Conversion* (1933), 50 ff. with notes).

Two signatures of c. 300 B.C. with the name Lysistratus have been found in Thebes and Tanagra (*IG* vii. 553, 2463; there read Histaïos), and may refer to the same sculptor, though the ethnic there given is in one case Athens, in the other Thebes.

G. M. A. R.

M

MACAR, sometimes called Macareus (q.v.), in mythology a Lesbian king (*Il.* 24. 544), but usually a son of Helios and so a Rhodian (schol. Pind. *Ol.* 7. 135); for various accounts of his parentage and adventures, see Schürner in Roscher's *Lexikon*, s.v. His name, very strange for a mortal because a stock divine epithet, has been interpreted as corrupted from Melqart. H. J. R.

MACAREUS, when not identical with Macar (q.v.), is usually the name of a son of Aeolus (q.v. 2, for his incestuous love of his sister Canace). Several minor figures have the same name, e.g. a son of Lycaon (q.v.; Apollod. 3. 97), a Lapith (Ov. *Met.* 12. 447). H. J. R.

MACEDONIA. By its geographical position Macedonia forms the connecting link between the Balkans and the Greek peninsula. Three important routes converge on the Macedonian plain: from the Danube via the Morava and Vardar (Axius) valleys, from the Adriatic via Lake Ochrida, and from Thrace via Mygdonia. In climate Macedonia is intermediate between Europe and the Mediterranean. Contact with the south is made by sea or by the narrow vale of Tempe into Thessaly. Macedonia proper consisted of the coastal plain of the Thermaic Gulf, which has been formed by the rivers Haliacmon, Lydias, and Axius; these rivers, draining the wide plateaux of Upper Macedonia, cut the mountain-ring of the Macedonian plain at Beroea, Edessa, and the defile of Demir Kapu respectively. Of the cantons of Upper Macedonia Orestis occupied the upper and Elimiotis the middle Haliacmon valley, Lynceus the upper valley of the Erigon (tributary of the Axius), Paonia the upper valley of the Axius, and Eordaea the basin of Lake Ostrovo west of Edessa. The Macedonian plain comprised Bottiaea between the lower Haliacmon

and Axius, Pieria south of the Haliacmon mouth, Almopia in the upper Lydias valley, Mygdonia in the Lake Bolbe basin leading towards the Strymon valley, Krestonia and Anthemus north and south respectively of Mygdonia. Upper Macedonia is girt by high mountain-ranges traversed mainly by the three important routes mentioned above; when united, it had strong natural defences. The Macedonian plain is vulnerable from the sea and from Mygdonia, but the defiles leading into Upper Macedonia are easily defensible. The natural products were horses, cattle, sheep, crops, wine, fruit, timber, and silver (at Mt. Dysoros between Krestonia and the Strymon valley), the last two being exported in antiquity.

Prehistoric Macedonia, occupied continuously from early neolithic times, possessed a uniform culture in the Bronze Age, little influenced by Mycenae, and was invaded c. 1150 B.C. by a northern people, who may also have provoked the Dorian invasion. Of the Dorian peoples some known as Macedon (Hdt. 1. 56) came from southwest Macedonia; a remnant of these perhaps formed the nucleus of the classical Macedonians. In the centuries after the Dorian invasion many new peoples came into Macedonia; one of them, perhaps deriving from Illyria, left a remarkable burial ground with tumuli at Vergina in the middle Haliacmon valley (*Εργον* 1958, 81 ff., and following vols., and *Δελτ.* 1961/2, 1. 218 ff.). The tradition of the royal house of Macedon, the Argeadae (Hdt. 8. 137 f.; Thuc. 2. 99 f.), suggests that from the upper Haliacmon valley they conquered Eordaea, occupied Aegae, and captured the Macedonian plain c. 640 under Perdiccas I, the first in the Macedonian list of kings. While these Macedonians were probably of Dorian blood, the tribes of Upper Macedonia appear to have been composed of Greek, Illyrian, and Thracian elements.

Until the reign of Philip II Macedonia struggled with the semi-independent principalities of Upper Macedonia, the Illyrians, the Odrysian kingdom in Thrace, the Greek States in Chalcidice, and Persia, Athens, and Sparta. Hellenization began with Alexander I (q.v.), who claimed descent from Argos and issued State coinage, and urbanization followed in the fourth century B.C.

When Philip II incorporated Upper Macedonia and annexed the Strymon valley and Chalcidice, he created a State superior in military and economic strength to any Greek city-state; the military genius of Philip and Alexander raised Macedonia to a world power, but imposed a severe strain upon the nation, which was accentuated by the Wars of the Successors, and resulted in its collapse before the expanding power of Rome (167 B.C.). Dis-integrated into four republics by Rome, Macedonia was annexed as a province in 146, and its history merged with that of the Roman Empire.

During its acme, Macedonia, a national territorial State with an enlightened monarchy, was the intermediary between Greek and Hellenistic culture, being herself a fusion of Greek and barbarian elements and transmitting a fused culture which long survived under the Roman Empire.

N. G. L. H.

MACEDONIAN CULTS. There are two distinct elements in the religion of early Macedonia. The first is the pre-existing cults of the regions successively conquered by the Argead kings; the second is the original worship of the dominant *Μακεδόνες*.

(1) Cults, largely Thracian, indigenous to the regions occupied by the Argead Macedonians were received and preserved. Such was the βέων, the water-air spirit which gave its name to Edessa, an old town famous for its springs situated near Aegae, the earliest residence of the Macedonian kings. Sileni (σαυδαί) and Bacchae (Κλώδωνες and Μυαλλώνες) illustrate the prevalence of Dionysus-Sabazius worship (see SABAZIUS). Deities such as Ζευήρη (equated with Aphrodite) and Artemis Ταζωρία, both stated to be Macedonian, were in fact Thracian and took their names from localities east of the Strymon river first conquered by Philip II. In western Macedonia Illyrian elements appear.

(2) The religion of the *Μακεδόνες* themselves was Hellenic, as is proven by the names of the Macedonian months. Cults of most of the chief Greek deities are sufficiently attested for the early period. To Zeus, father of *Μακεδών*, the eponymous ancestor of the folk (Hesiod fr. 5 Rzsch; *FGH* nos. 135-6, fr. 13), and to Heracles the progenitor ('*H. προπάτωρ*') of the Argead clan as also of the later Antigonid dynasty the Macedonians were particularly devoted. Notable are the cults of Zeus 'Εταιρίδης, who presided over the relationship of the Argead kings with their aristocratic Companions (ἐταίροι) and whose epithet gave its name to the festival of the *Hetairideia*, and Heracles Κυναγίδας, the patron of hunting, a sport to which the Macedonians were passionately attached, who presided over the Royal Huntsmen (βασιλικοὶ κυνηγοί) and the game preserves of the kings. Established custom (νόμος) required the king personally to conduct innumerable rites and sacrifices. Among these two of the most important were the formal purification of the army performed each year at the festival of the *Xandica* held in the early spring at the beginning of the campaigning season (Polyb. 23. 10. 17; Livy 40. 6. 1-5), though this purification could be performed at other times as well (Curt. 10. 9. 11-12), and

the most solemn responsibility of the kings themselves to oversee the ceremonial interment of the Macedonian combat dead (Curt. 5. 4. 3; Livy 31. 34. 1-2).

The Hellenistic and Roman imperial periods show few developments peculiar to Macedonia. By the end of the third century B.C. the Egyptian gods (q.v.) had been widely received, and the cult of the Syrian Goddess is found at Beroea. The documents do not as yet attest the worship of Zeus 'Υψίστος before the second century, but the cult may well be earlier and at any rate achieved real popularity. In the Roman period, above all at Thessalonica, a most successful cult was that of the Dioscuri-Cabiri derived from Samothrace (see CABIPI). Ma of Cappadocia is found at Edessa in the third century A.D. And from the late Hellenistic period down to the triumph of Christianity the Thracian Rider ('*Ἡπών* or '*Ἡρώς*') was the object of widespread devotion, particularly in connexion with the burial of the dead.

W. Baer, *De Macedonum sacris* (1913); C. Edson, *Harv. Stud.* 1924, 226 ff., and 1940, 125 f.; *Harv. Theol. Rev.* 1948, 153 ff.; J. N. Kalléris, *Les anciens Macedoniens* (1954), O. Hoffmann, *Die Makedonen, ihre Sprache und ihr Volkstum* (1906), 92 ff.; A. D. Nock, *Harv. Theol. Rev.* 1936, 60 ff. C. F. E.

MACER (1), GAIUS LICINIUS (PIV 112), the Roman annalist, tribune in 73 B.C., when he agitated for popular rights (cf. Sallust, *Hist.* 3. 48), praetor in 68, was convicted of extortion in 66 and committed suicide. His history of Rome, in at least sixteen books, began with the origins; Pyrrhus appeared in book 2; its closing point is unknown. It reflected democratic and family bias (Livy 7. 9. 5) and was rhetorically composed. At the same time, it rationalized legends and quoted original authorities, particularly the *libri lintei* (Livy 4. 7. 12; 4. 20. 8; 4. 23. 2), in order to reinterpret the old political institutions. Livy and Dionysius used his work.

Peter, *HRRel* 1st ed. 298, Beloch, *Rom. Gesch.* 1. 105, Ogilvie, *Comm. Livy* 1-5, 7 ff. A. H. M. (1).

MACER (2), AFMIILIUS, of Verona, was an Augustan poet, older than Ovid (*Tr.* 4. 10. 43-4). A few lines of his didactic poems *Ornithogonia*, *Theriaca*, and *De Herbis* remain (Morcl, *FPL*). Ovid mentions him first amongst recent 'bards' (*Tr.* 4. 10. 41-56); and Quintilian (10. 1. 56, 87; 12. 11. 27) couples his name with that of Virgil and Lucretius.

R. M.

MACHAON (Μαχάων) and **PODALIRIUS** (Ποδαλῆϊρος), sons of Asclepius (q.v.), *Iliad* 2. 731-2, where they are described as physicians, but also as leaders of the contingent from Tricca, Ithome, and Occhalia. Whatever may be the character of their father, their names have no hieratic meaning; Machaon is 'Warrior', Podalirius apparently 'Lily-foot'. Machaon heals Menelaus (4. 200 ff.), but is also active as a fighter and is wounded by Paris (11. 505 ff.); Podalirius is too busy in the battle to tend Eurypylus (11. 836). Their further adventures consist mostly of healing (Machaon, or both, cure Philoctetes (q.v.), *Soph. Phil.* 1333, where see Jebb) and fighting (Machaon killed by Eurypylus, *Little Iliad*, fr. 7 Allen; Podalirius survives the war and settles in one of several places, see Türk in Roscher's *Lexikon* iii. 2588-9). They had a cult, both separately (Machaon at Gerenia, Paus. 3. 26. 9; Podalirius at Drion in Daunia, Strabo 6. 3. 9, 284) and together, generally with their father (references in Farnell, *Hero-Cults*, 420). There seems no reason for supposing them originally gods.

H. J. R.

MACHON (Μάχων), New Comedy poet and raconteur, born at Corinth or Sicyon and resident in Alexandria, where he staged his comedies about the middle of the

third century A.C. From his epitaph by Dioscorides (Ath. 6. 241 f, *Anth. Pal.* 7. 708)—'O city of Cecrops, sometimes on the banks of the Nile too the pungent thyme has grown in the garden of the Muses'—it has been inferred that he revived the keen invective of Old Comedy in Alexandria (cf. fr. xxi Gow), but the two extant comic fragments belong to the type of Middle or New Comedy, which was not devoid of *δριμύτης* (pungency).

In another genre Machon composed a book of anecdotes (*Ἀπειρά*: see *CHRFIA*) in iambic verse of the sayings and doings of notorious Athenian courtesans, parasites, etc. (462 verses, mainly scurrilous, preserved by Athenaeus, book 13).

Edited with introduction and commentary by A. S. F. Gow (Cambridge Classical Texts and Commentaries, 1, 1965). W. G. A.

MACRIANUS, TITUS FULVIUS (PH⁸²) JUNIUS, Emperor A.D. 260–1, son of (Fulvius) Macrianus, a staff officer of Valerian. On the latter's capture by the Persians, the Elder Macrianus refused the imperial title on account of his age, but allowed the elevation of his two sons, Macrianus and Quietus. The former marched west with his father against Gallienus, but both were killed in battle in Thraace. Quietus was besieged and killed at Emesa by Odaenathus of Palmyra. B. H. W.

MACRINUS, MARCUS OPELLIUS (PH²), a native of Africa, became praetorian prefect under Caracalla and from motives of personal safety contrived his assassination (A.D. 217). Saluted Augustus by his troops, he was the first Roman Emperor who was not a senator. He ended Caracalla's Parthian war on somewhat inglorious terms. His subsequent retrenchments in pay and the retention of the European legions in Syria made the army regret the death of Caracalla. Through the agency of Julia (q.v. 7) Maesa the story was put about that her grandson Bassianus was Caracalla's natural son. The soldiers of Legio III Gallica saluted him Emperor (218), and Macrinus was routed in a battle near Antioch and subsequently captured and put to death (see *ELAGABAIUS* 2).

Herodian 4. 14–5 4, *Die Cassi* bk 78, S.H.A. *R.M. Coins*, *Rom. Emp.* v, *CCXIII*, 494 ff. H. M. D. P.

MACRO, Q. NAEVIUS CORDUS SUTORIUS (PW²¹), came from Alba Fucens and, as Prefect of the Vigiles, was in A.D. 31 'Tiberius' agent in the overthrow of Sejanus (q.v.), whom he succeeded as sole commander of the Praetorian Guard. Predominating in Roman politics during the remainder of Tiberius' principate and influential in securing Gaius' accession, he was appointed Prefect of Egypt but then—leaving money for an amphitheatre to his native city—forced, with his wife Enna, to commit suicide. Much of this knowledge (including his correct name) we owe to an inscription (*Ann. Épig.* 1957, 250). J. P. B.

MACROBIUS (PW⁷), AMBROSIIUS THEODOSIUS, 'uir clarissimus et illustris' (so the MSS. give his rank), has variously been identified with Macrobius named in the Codex Theodosianus (16. 10. 15; 8. 5. 61; 11. 28. 6; 6. 8. 1) as *vicarius Hispaniarum* (390), or as *proconsul Africae* (410), or as *praepositus sacri cubiculi* (422). He was foreign to Italy (*Sat.* i. *praef.* 11, 12, where he admits that his style is deficient in *nativa Romani oris elegantia*), and may have been African; his works show no trace of Christianity.

WRITINGS. (1) *De differentiis et societatis Graeci Latineque uerbi*: fragments in Keil, *Gl.* v. 599 ff. (excerpts made by Iohannes Scottus, 9th c.; cf. Manitius, *Gesch. d. lat. Lit. des Mittelalters* 1. 331, 338).

(2) *Commentarii in Somnium Scipionis*, a Neoplatonist exposition of Cicero's *Somnium*, the text of which appears

with the *Commentarii* in some MSS.: thus, through Macrobius in the first instance, the 'Dream' was known to the Middle Ages when other parts now extant of Cicero's *De republica* were still undiscovered. In all probability the *Commentarii* largely depend on Porphyry's commentary on Plato's *Timaeus*, either directly or through a Latin intermediary; they exercised much influence on medieval philosophic writings.

(3) *Saturnalia*, an academic symposium in seven books, in form and manner recalling Athenaeus and Gellius (who is much drawn upon, though nowhere named); among the imaginary speakers in the pretended 'dialogue' are Avienus, Symmachus, and the young Servius. Macrobius compiled it as a *scientiae supellex*, a *noscendorum congeries* (i. *praef.* 2, 4) for his son's education as a gentleman, an ancient 'Sandford and Merton': the topics are arranged methodically (contrast Gellius), and are fascinatingly rich in philological, historical, antiquarian, and scientific lore, throwing a clear light on the interests and taste of the period. But this miscellany of discussions (on, e.g., fishes, indigestion, dancing, drunkenness) is a mere framework: the central theme (books 3–6) is Virgilian criticism. Mainly by means of parallels, relentlessly adduced, from Homer, Ennius, Lucilius, Lucretius, and many others, the critics steadily develop a build-up of Virgil as the Complete Rhetorician, the omniscient, infallible, unique scholar-poet; opposition is provided by the villainous stooge Euangelus, whose views are duly demolished. The whole section is of great importance, both for the history of early Virgilian scholarship and for the medieval conception of Virgil, which it significantly foreshadows.

MADAUROS (modern *Mdaourouch*) in Numidia was ruled successively by Syphax and Masinissa (q.v.). It was occupied by the Romans to dominate the powerful Musulamii. Under the Flavians its Berber-Phoenician population was supplemented by time-expired legionaries, and it received colonial rank. It was noted for its olives and its schools. Apuleius was born at Madauros; Augustine received part of his education there, and paganism flourished till late times. Substantial remains of Byzantine fortifications survive and an exceptional number of important inscriptions have been found.

MAEANDER (Μαίανδρος), a river which rises in several sources, including the Marseyas, in and near Celaenae-Apamea in Phrygia, and flows through the Peltene plain to engage itself first in a narrow valley and then in a canyon 1,500 feet deep, sunk in the western flank of the Anatolian plateau, whence it emerges to join the Lycus near Colossae, Laodicea, Hierapolis, and Tripolis. Thence to the Sinus Latmius it flows through a flat-bottomed, fertile valley, here dividing Lydia from Caria, and passing among other cities Tralles and Magnesia ad Maeandrum. In this part of its course it winds much, and the Greeks described it as *σκολιός* and used its name to describe a

winding pattern. Flowing past Priene in antiquity, the river eventually made a bar across the mouth of the Latmic Gulf, so that the harbours of Miletus and the island of Lade (scene of the naval battle of 494 B.C.) are now landlocked. W. M. C.; J. M. C.

MAECENAS, GAIUS, probably from Atrietum (q.v.), a scion of the ancient Etruscan aristocracy and a Roman knight, was the trusted friend, counsellor, and diplomatic agent of Octavian (Augustus). He accompanied him on the campaign of Philippi, negotiated his marriage with Scribonia (q.v.), represented him in the discussions which led to the pact of Brundisium (40 B.C.), undertook a diplomatic mission to Antony (38), and in 37 helped to negotiate the pact of Tarentum (see NERVA 2). His luxurious habits and apparent indolence concealed a capacity for vigilance and firmness, and though he never held public office he was more than once entrusted by Octavian with the management of affairs in Rome and Italy when he was absent abroad—alone (36–33) and in company with Agrippa (31–29); in 30 he detected the conspiracy of Lepidus (q.v. 4). Of great importance to the Augustan Principate was his influence as a patron of letters; in addition to Virgil, Horace, and Propertius his circle of poets included his freedman C. Melissus (q.v. 2), L. Varius (q.v. 2) Rufus, and Domitius (q.v. 7) Marsus. He himself wrote prose works of uncertain scope (e.g. *Prometheus*, *Symposium*, *De Cultu Suo*, and *In Octavium*; *Dialogi* was perhaps a generic title) and verses. His affected style was much criticized. Few fragments survive. He married Terentia, sister of Varro (q.v. 4) Murena. She frequently quarrelled with him and was unfaithful to him with Augustus, who, possibly because of this, ceased to make use of his services during his last years. That there was a serious rift is not clear; at all events when Maecenas died, in 8 B.C., he left all his extensive property to the Emperor, including a magnificent house and gardens on the Esquiline. Maecenas was his *nomen*; 'Cilnius' (Tac. *Ann.* 6. 11) may have been his mother's.

Some, *Rom. Rev.*, see index; A. Fougues, *Maecène* (1947); A. Dalzell, *Phoenix* 1956, 151 ff.; K. J. Reckford, *JAPA* 1959, 195 ff.; Schanz-Hoerius II. 17 ff., 116 f.; R. Avallone, *Maecenas: I. Frammenti* (1945). G. W. R.; T. J. C.

MAECIANUS, LUCIUS VOLUSIUS (PIV 7), a Roman jurist of the second century A.D. His official career is fully known from two inscriptions discovered in 1930 at Ostia (*CIL* xiv. 5347–8). Some of his official posts (*procurator bibliothecarum*, *praefectus vehiculorum*, *aduitor operum publicorum*, *praefectus fabrum*) are not known to have been held by any previous jurist. He was also *praefectus annonae*, a *libellis et censibus* under Antoninus Pius, and *praefectus Aegypti* about 161. He instructed Marcus Aurelius when he was heir to the throne, and was a member of the imperial *consilia* under Antoninus Pius and the *divi fratres*. From the *Digest* we know the following works of Maecianus: a voluminous treatise on *fideicommissa* (16 books), *De iudiciis publicis* (14 books), and a monograph written in Greek on the *Lex Rhodia*. A booklet entitled *Assis distributio* and dedicated to Marcus Aurelius is preserved almost complete; it contains the terms used to denote fractions, particularly with reference to inheritance.

BEST EDITION OF *Assis distributio*, E. Seckel and B. Kübler, in Huschke, *Jurisp. anteaust.* 1^o (1908). A. B.

MAELIUS (PIV 2), SPURIUS, a rich plebeian, was alleged to have relieved a food shortage and courted popularity by distributing corn at his own expense (440–39 B.C.); suspected of aiming at a tyranny he was killed (? by C. Servilius Ahala, q.v.). Many modern critics have questioned his historicity and undoubtedly many features are late Republican inventions, but the story was told by

Cincius (q.v.) Alimentus and is thus of the pre-Gracchan period when there was less reason to invent it, while the circumstances of the corn-shortage cannot easily be rejected (see MINUCIUS 1).

Cf. Ogilvie, *Comm. Livy* 1–5, 550 ff.

H. H. S.

MAENADS, also **Bacchae** or **Thyiades**, women inspired to ecstatic frenzy by Dionysus. Wearing fawn or panther skins and wreaths of ivy, oak, or fir they carry snakes or bunches of grapes, wave wands or torches and celebrate the power of Dionysus in song, music, and dance. They roam through mountains and woods, oblivious of all human concerns, conventions, and fears. Dionysus inspires them with strength so that they can uproot trees and kill strong animals. They also hunt animals and devour their raw flesh, a characteristic feature of the Dionysiac *omophagia* (see DIONYSUS).

In mythology Maenads accompany Dionysus in his triumphal journey from Lydia or Phrygia to Thrace and Greece. The women of Thebes who followed Dionysus also became Maenads (Eur. *Bacch.* 915, 1021). They destroy his enemies Pentheus (ibid. 1114) and Orpheus (Ov. *Met.* 11. 22; M. P. Nilsson, *Harv. Theol. Rev.* 1935, 190). Maenads form a contingent in the army of Dionysus during his campaign in India. But they are also associated with the peaceful aspect of Dionysus as inventor of wine and are frequently shown gathering grapes or preparing wine.

In literature Aeschylus (q.v.) had given a powerful picture of Maenads in his lost plays *Edonoi*, *Bassarides*, *Xantriai*, and *Pentheus*, but the classic description of Dionysiac ecstasy of Maenads was drawn by Euripides in the *Bacchae*. This was the model of later accounts by Lycophron, Accius, Pacuvius, Ps.-Theocritus (26), Ovid (*Met.* 3. 511), and Nonnus.

From the middle of the sixth century B.C. onwards Maenads are distinguished in art from other Dionysiac female figures. They wear the long χιτών rarely the short, and are seldom naked. Greek vase-painters delight in depicting their revelries in the *thiasos* or *komos* (T. B. L. Webster, *Greek Theatre Production*, 1956). Their amorality mingling with satyrs and siemens (H. Jeanmaire, *Mélanges Picard*, 1949), their nocturnal dances, their sacrifices to Dionysus, and their assaults on Pentheus and Orpheus. In classical and later art they are sometimes shown in more subdued mood with Aphrodite and her circle, with Eirene, and even with Muses. Two fine types of statues show dancing Maenads. The first (Dresden) is commonly assigned to Scopas, the other is a Hellenistic creation. The Maenads of tragedy and myth are an idealized reflection of human Bacchantes modelled on the behaviour of women in the orgiastic worship of Dionysus in Thrace. More than any other figure of the Dionysiac worship they represent the complete liberation from conventions of daily life, the awakening of primeval instincts, and the union with nature achieved in the cult of Dionysus.

Ps.-Theoc. 26; Catull. 63. 24; Verg. *Aen.* 7. 373; Ov. *Met.* 3. 511, 11. 1; Nonnus 45. 273; Ps.-Eratosth. 24, ed. Robert; E. R. Dodds, *Harv. Theol. Rev.* 1940; T. B. L. Webster, *Greek Art and Literature 700–510 B.C.* (1950); E. R. Dodds, *The Bacchae of Euripides* (1960); M. W. Edwards, *JHS* 1960; R. Gooldchild, *Lab. Ant.* 1 (1964), 121. G. M. A. H.; J. R. T. P.

MAENIUS (PIV 9), GAIUS, the only Maenius to reach the consulship. As consul (338 B.C.) he conquered the Latins and the fleet of Volscian Antium (q.v.); his statue was erected in the Forum, and the captured ships' beaks (*rostra*) adorned the speaker's platform (henceforth called *rostra*) (Livy 8. 13 f.). The *columna Maenia* in the forum, however, probably did not celebrate him; apparently it was a column of the Basilica Porcia supporting a projecting balcony (*maenianum*) erected by a descendant (M. Lehmann-Hartleben, *AJPPhil.* 1938, 290). Later Maenius

was censor (318) and the first certainly attested plebeian dictator (314). An earlier dictatorship (320: *Fasti Cap.*) is apocryphal.

E. T. S.

MAEOTIS was the ancient name for the *Sea of Azov*. Greek colonists from Miletus and other Ionian towns were attracted by the fisheries at its mouth (the 'Cimmerian Bosphorus'), and here founded Panticapaeum (q.v.). They subsequently founded a city named Tanais (q.v.) at the upper end of the sea, but they do not appear to have explored its interior systematically. Greek geographers (Herodotus, Scylax, Strabo, Ptolemy) greatly exaggerated its size and were very hazy about the river Tanais (q.v.). But they noted the shallowness of the sea and prophesied that it would eventually be silted up.

M C.

M(A)EVIUS belonged to a group of poetasters who criticized Horace and Virgil and incurred their contempt and enmity (*Ecl.* 3. 90). Horace wrote the tenth *Epode* against him.

E. Fraenkel, *Horace* (1957), 24 ff.

MAGIC is a complex of practices through which man exercises power on the world around him by irrational means. It is based upon a mental attitude that is called 'primitive' in this sense that it knows no clear-cut distinction between the natural and the supernatural; but the word 'primitive' should not be taken in a chronological sense, as the magical attitude forms a substratum to all human thought and experience. In it, man does not see the world as an object, but he participates in it as it does in him; he transfers the outward world into himself and dominates it from within. In this aspect of participation magic is a religious phenomenon. On the other hand, it is often opposed to what is usually called a religious attitude, as the latter does not use prayers of constraint, but in devotion, submission, and hope. Magic uses the word of power (spells, charms, curses, etc.) and the act of power (imitative rites, *infra* under 8), cf. the *legomena* and *dromena* at Eleusis (see MYSTERIES).

2. As the intellectual adventure of Greek civilization is precisely the discovery of the world as an object of rational contemplation, the magical elements were more and more suppressed. Nevertheless traces remain at all levels. This applies equally to 'black' (i.e. harmful) and to 'white' (i.e. harmless or beneficial) magic. In a time when secularization prevailed in the higher social levels, the fourth century B.C., there was a conspicuous outburst in the lower (E. R. Dodds, *The Greeks and the Irrational* (1951), ch. 6).

3. Our earliest examples of Greek magic come from Homer, but we may presume that the Greek invaders a long time before had taken over much pre-Greek magic (connected, e.g., with agriculture, navigation, and useful arts). An incantation can stop the flow of blood from the wounded Odysseus (*Od.* 19. 457). Circe effects the most wonderful transformations by means of potions, salves, and a magic wand (which we also find in the hands of Hermes and Athena); she is also able to teach Odysseus how to summon the ghosts from the nether world. In the Homeric epics the great Olympian gods generally do not practise any witchcraft. Hermes, however, still preserves traits which remind us of the old magician; he presents the 'moly' to Odysseus, who by this means is able to outdo Circe. In Hesiod's *Opera et Dies* we get glimpses of agricultural and everyday usages, and his *Theogony* contains a unique glorification of Hecate (q.v.), elsewhere the protectress of all witches, as the greatest and most beneficent of all deities.

4. Greek myth affords still more material. We hear of the Telchines (q.v.; perhaps pre-Greek), skilful but

malignant smiths, hostile to gods and fearful to men, well versed in magic; cf. the Curetes (q.v.) and Dactyli (see IDAEAN DACTYLS), the latter especially known as masters of medical charms and music (the same combination recurs in Chiron). Orpheus the magician, Musaeus, Melampus, Autolycus (Hesiod fr. 136 Rzsch) are other well-known names; but the female sex seems in literature as elsewhere to predominate, the most renowned enchantress through all antiquity being Medea. She commands all nature, puts the dragon at Colchis to sleep, makes warriors invulnerable and old men young. She also has the Evil Eye, terrible to all living things (see TALOS). Magic brings her victory, but love is her tragedy (see MEDEA); so far she remains a prototype for the jilted witch of later literature (cf. Canidia in Horace). The Thessalians claimed that she had lost her box of drugs on their fertile soil, and their wonder-working plants were just as widely known as their witches (see the equally brilliant *Metamorphoses* of Ovid and Apuleius).

5. Later literature gives us further evidence of the interest taken in magic and magicians by poets and writers, Greek as well as Latin. New fragments of Sophron give a vivid picture of a piece of Hecate-magic (the prototype of Theoc. 2), but we are still waiting for more of Sophocles' 'The female Herbalists' and Menander's 'Thessalian Woman', where the popular Thessalian feat of 'drawing down the moon' was mentioned. The dramatists on the whole were fully alive to the scenic possibilities of a *nyctomania*, the first description of which we find in Homer's *Odyssey* (cf. Aeschylus' *Persae*, Aristophanes' *Frogs*, Seneca's *Oedipus*). Lucian used it as a welcome satirical theme. Virgil and Horace have a specialist's insight into love-charms, popular—and feared—in their time, and Lucan in his epic gave an illustration of Thessalian witchcraft which for completeness and gruesome description remains unrivalled. The keen interest felt in the theme is excellently illustrated by Apuleius' *Apologia*.

6. A clear insight into the whole magical technique of a syncretistic character, its practices, prayers, and faith in demons and demonic powers is furnished by the many finds of magical papyri in Egypt, collected by Preisendanz, *Papyri Graecae magicae*. Thus we can now also measure the distance between ancient witchcraft in real life and the literary treatment of the subject.

7. Sociologically, magic, both of positive ('white') and negative ('black') *mana* is divided into *official* and *private* practices, but their mutual interpenetration is evident. A number of official Greek and Roman festivals, concerned with, e.g., the fertility of soil and man (*hieros gamos*: see MARRIAGE, SACRED), rain-making (weather-charms), war (e.g. the Roman *fetiales*), where public welfare is at stake, have preserved their old magic character. On the other hand, many apotropaic ceremonies to purify and avert, having an obviously magical character, were used in a public and in a private way; so likewise prayers (cf. HYMNS, PAEAN) and curses (see CURSES); even sacrifices offered to the gods on behalf of the State or the single family were magical in much of their ritual (cf. the use of fire and water, circumambulation as in the Roman *lustratio*), still more so the offerings to the dead. All the main events in man's life (birth, marriage, death, etc.) and the emotional force of such events called for supernatural help and defence.

8. Theoretically the division into 'sympathetic' 'homoeopathic' (*similia similibus*) and 'contagious' magic (*pars pro toto*) is of great help. You make an image of a person whose love you desire or whose death you wish, you melt it at a fire, you pierce it with nails, etc., and the person in question suffers correspondingly—this is a homoeopathic procedure (cf. Pl. *Leg.* 933 b, Theoc. 2, Verg. *Ecl.* 8, Ov. *Her.* 6. 91). If, when burning the image, you throw some of the victim's hair or a bit of his cloak

(Theoc. 2. 53 ff.) or anything else that has been his (Verg. *Aen.* 4. 494 ff.) into the fire, you simultaneously make use of contagious magic. The combination naturally gives you a stronger hold upon the victim. Further we may call the transmission of disease into another person or beast (e.g. when stung by a scorpion you whisper into the ear of an ass: 'A scorpion has stung me', Pliny, *HN* 28. 155) *direct* magic, as contrasted with the *indirect* where gods, demons, or spirits are at work (cf. *devotio*). Direct are, e.g., the apotropaeic efficacy of rings and crowns of amulets (the phallus, *fascinum*, vulva, the Gorgoneion on wine-cups, etc.), the 'binding' practices (*δέω σε, ligo te; κἀράσεις, defixio*, see CURSES), the use of the wryneck (*ιὺς*) in homocopathic love magic, a host of medical charms, preserved, e.g., in Cato, *Agr.* 160, and in so many works of popular medicine (Marcellus, *De medicamentis*, Aëtius, Alexander of Tralles, etc.), innumerable concoctions, incantations (*ἐνφθαῖ*) and formulas to be found in the papyri (in Egyptian and Greek), magical sounds and tunes, finally the power of the spoken word and the name, the 'great name', of god or demon. We find an early example of *indirect magic* in the Homeric description of a *necromanteia*, the evocation of the spirits of the dead (*Od.* 11, cf. the witch of Endor (1 Sam. xxviii, 3 ff.) and the definition of *γοητεία* in Cramer, *Anecd. Ox.* iv. 240). The necromancers (*ψυχάγωγοι*) were a definite class of magicians (popular also in Etruria), and corresponding official oracles existed, cf. the incubation (q.v.), officially sanctioned at Asclepeia and elsewhere. Compare also the *ὄνειραπομνή* of PGM. The introduction of foreign demons (and rites), characteristic of ancient magic from early times, culminated in the 'syncretistic' period after Alexander the Great. A wider outlook on all sorts of magic and on the powers of the supernatural world now made possible the synthesis of magic and *theurgia* which the Alexandrian philosophic speculation attempted (cf. the magico-religious Gnostics: see GNOSTICISM). Accordingly, the prescriptions for consecration and prayer, for the material to be used (e.g. plants, stones, extensive use of lead), and for the ritual fitness of the persons became more and more complicated.

9. As civilization developed, the lawgivers in Greece as in Italy (where the Marsi and Paeligni were famous indigenous magicians) became more and more interested in repressing magic (so far the division into beneficent and mischievous witchcraft often materially coincides with public and private magic). Already in Ancient Egypt a magician could be prosecuted, and the Homeric hymn to Demeter (228) contains a hit at witchcraft. Plato wants the abuse of magic (*φαρμακεία*) to be punished (cf. also [Dem.] 25 *contra Aristog.* 79 f.), and the Roman *decemviri* really did so. New laws under the Roman emperors repressed the new growth of magical influence (cf. Julius Paulus, *Sent.* 5. 23, 14 ff.; *Cod. Theod.* 9. 10; 16. 10; *Cod. Iust.* 9. 18). See AMULETS, ASTROLOGY, CURSES, DIVINATION, SACRIFICE.

MAGISTER EQUITUM, or the master of the horse, was a subordinate official, nominated by every dictator on appointment, originally to control the cavalry, but, in later practice, to represent the dictator either on the field of battle or at Rome. He held derivatory *imperium* from the dictator and ranked with the praetors. His commission ended with that of his dictator. A notable but unsuccessful attempt was made in 217 B.C. to equate

the *magister equitum* with the *dictator* as a colleague (see MINUCIUS 2). A similar though permanent magistracy is found in the municipalities of Italy, known as *magister iuventutis* or *magister iuvenum*. See also MAGISTER MILITUM.

For bibliography see DICTATOR.

A. N. S.-W.

MAGISTER MEMORIAE was the most important of the imperial secretaries in the third century A.D., acting as legal adviser and foreign minister, but when Constantine created the *quaestor* and *magister officiorum* (q.v.) he lost these functions but continued to deal with petitions and write rescripts to them (*adnotationes*). From the late fourth century he was *spectabilis*. He had under him the *scrinium memoriae* (sixty-two clerks). A. H. M. J.

MAGISTER MILITUM. Constantine deprived the praetorian prefects of their military functions, and left them with purely administrative duties. To command the army he appointed two new generals, the *magister peditum* and *magister equitum*; the former was the senior officer. Later, with the division of the field-army into local groups, the number of *magistri* was increased, and the limitation of command to a particular arm was removed. The *magistri* who commanded that part of the army which was attached to the Emperor's headquarters were styled in *praesenti* or *praesentiales*.

R. Grosse, *Römische Militärgeschichte* (1920), 180 ff.; Jones, *Later Roman Emp.* 608 ff. H. M. D. P., G. R. W.

MAGISTER OFFICIORUM, an official created by Constantine. He originally held the rank of tribune, was *spectabilis* under Valentinian I and *illustris* by the end of the fourth century; he was also a *comes primi ordinis consistorianus*. He controlled the imperial couriers (*agentes in rebus*, q.v.) and the inspectors of the post (*curiosi*) drawn from them, and issued postal warrants (*evectioes*). He exercised disciplinary control over the secretariats (*sacra scrinia*) which served the *quaestor* and the *magistri memoriae, epistolarum* and *libellorum*, the *scrinium dispositionum*, the *officium admissionum*, the *decani, cancellarii, lampadarum, mensores*, and the interpreters who translated for foreign ambassadors. He was also commander of the imperial guard (*scholae palatinae*). From the end of the fourth century he also controlled the armament factories (*fabricae*) throughout the Empire, and in 443 he became inspector general of the *limitanei* (q.v.) in the Eastern Empire. The *magister officiorum*, as controlling audiences with the Emperor, was a very influential minister, and virtually foreign secretary. He also had an extensive jurisdiction over palatine civil servants. His *officium* was drawn from the *agentes in rebus*.

MAGISTRACY, GREEK. Magistracy in Greek city-states was the heir of the old monarchy which survived in a few States only (Sparta, Cyrene). According to Greek tradition, which, however, sometimes tends to over-emphasize the regularity of the process, firstly one or a few magistrates, elected by the ruling class, governed the State for life. At an early stage military, judicial, and religious functions were separated, part of the religious duties being transferred to an official who preserved the royal title. Next the duration of office became limited, and official power was distributed among several colleagues. By a procedure which varied in each city the leaders of the State gradually became mere executive instruments. The number of officials increased. Besides the leading political and military magistrates there were officials needed for special tasks, e.g. finance or public works. But

it was never usual to elect men with special qualifications, except to military offices. Officials were generally elected by the full-citizens out of their own body. They received no salary and some magistracies were open to men of great wealth only. All officials had to undergo a test (*dokimasia*), confirming legal birth and family cult as well as fulfilment of certain civic duties. In democracies the number of magistracies underwent a large increase, and their power accordingly diminished. Boards of three, five, or more colleagues were far more common than single officials. Their term of office never exceeded one year and they could usually not be re-elected. One official (or priest) gave his name to the year (*eponymos*). Some technical offices excepted, election was by lot (*see* SORTITION), a fact that made the elective offices more powerful; only their holders could exercise political leadership. All officials had to render account (*eûthuna*) after their terms of office. Most of the lower officials received small daily salaries. In general, Greek magistracy expressed the participation of all citizens in politics, and their equality; there existed no hierarchy or 'cursus honorum'.

In the Hellenistic monarchies magistrates were on a quite different footing. They were professionals, paid by the king in money, natural products, or gifts of land. The higher magistracies were occupied by Macedonians or Greeks, the lower mostly by natives, who did not rise to high positions before the second century B.C. Greek was the official language. The members of the central government resided in the chief city, but there were numerous higher and lower officials in every part of the realm. The most important provincial officials were generally called *strategoi*. The administration was strictly centralized in Egypt, but decentralized in the Seleucid Empire. In all cases there was a firm hierarchy, well organized and rather bureaucratic, nowhere more than in Egypt. Lower officials were often personally dependent on the higher, as the higher were on the king.

F. Leifer *Klio*, Beiheft 23 (1911), U. Kahrstedt, *Untersuchungen zur Magistratur in Athen* (1936), Bengtson, *Strategie* I III, V. Ehrenberg, *The Greek State* (1960). V. E.

MAGISTRACY, ROMAN. Magistracy was one of the three basic elements of the Roman Republic, the other two being the Senate and the people. In the legal period all power was embodied in the person of the king, and the other executive officials were merely his representatives. But under the Republic it rested with magistrates who were regarded as the representatives of the *populus Romanus*, and who were invested with rights, duties, and executive power (*potestas*) by the joint authority of the Senate and the people. During the fifth century a new board of plebeian officials who were commonly called *magistratus plebei* was created in opposition to the senatorial magistrates, but it soon lost its revolutionary character, since a process of compromise, beginning as early as 450 B.C., led by the middle of the third century to the large-scale admission of plebeians to all the official magistracies and to the absorption of the plebeian offices within the sphere of authority of the Senate. Even earlier, however, excessive magisterial power had been successfully checked by several limitations. The *imperium* (q.v.) was restricted to the military sphere (*imperium militiae*), and thus was exercised only beyond the walls of Rome (*extra pomerium*); while the *imperium domi*, although, like the *imperium militiae*, it still included *iurisdictio* and *coercitio*, was considerably limited by the right of appeal (*provocatio*). Moreover, the principle of collegiality always made it impossible for a magistrate to start any revolutionary movement (until the age of Sulla and Caesar, when magistrates came to be commanders in chief of professional, mercenary armies). Magistrates became

progressively more dependent on the Senate, with whom they were compelled to collaborate, especially when the Senate became a closed assembly of magistrates and ex-magistrates, from whose ranks alone the candidates for magistracies were mostly taken. As Polybius observed, it was this compromise between the Senate, conceived as the administrative power, and the magistrates invested with the executive, that assured the stability and continuity of the Roman constitution. To maintain the correct balance, measures were taken to guarantee the regular succession of magistrates, and the alternate and balanced exercise of authority by colleagues. The *leges annales* determined both the age-limits required for candidature and the intervals of time between the tenure of magistracies: this *certus ordo magistratum* remained essentially undisturbed from 180 B.C. (*Lex Villia*) until the Augustan age (*see* VILLIUS, CURSUS HONORUM). Similarly the principle, emphatically maintained by Cicero, that public office and service was a civic duty, was observed until the end of the Republic. Since public service was never regarded as a profession, no remuneration was given to Roman magistrates, except for journeys, special celebrations, military commands and expenses, etc. This purely honorary aspect of magistracy was confirmed by regulations concerning the escort of lictors (q.v.) and their number, the dress to be worn, the use of the *sella curulis* (q.v.), different forms of homage due to magistrates, etc. These formalities were observed even under the Empire, at least down to the end of the fourth century A.D., when magistracies lost any independence and political significance. Imperial magistrates, being appointed by the emperor, were in fact reduced to the condition of civil and military subordinates.

Mommsen, *Rom. Staatsr.* 1² (abridged in *Abriß d. röm. Staatsrechts*, 1893, 82 ff.) P. T.

MAGISTRI. A common title for the head of a religious or semi-religious organization in Rome was *magister*. This official was primarily not a priest, though he generally had some sacred duties, but rather a president (*see* De-Marchi, *Culto Privato* II, 146 f.). Thus the *fratres Aruales* elected a *magister* annually to serve from one Saturnalia to the next (e.g. *Acta Arualium* for 19 May, 87, cxix 30, Hensen; at the same time a different person was made *flamen*, *ibid.* 32). When Augustus restored the worship of the Lares Compitales (*see* LARES), he apparently organized it under *magistri uicorum*, perhaps on the analogy of the *magistri pagorum* or presidents of the rural districts (*see* De-Marchi, I, 230; cf. Marquardt-Wissowa, *Römische Staatsverwaltung*² (1881-5), III⁴, 204 ff.).

For other uses of the term, and in particular for that revealed in J. Johnson, *Excavations at Minturnae* II (Rome and Philadelphia, 1933), *see* A. D. Nock, *AJP* 1935, 86 ff. H. J. R.

MAGNA GRAECIA, the collective name for the Greek cities of southern Italy. Cumae (q.v.) was the oldest, Heraclea (q.v. 1) the youngest. The inhabitants of Magna Graecia, the so-called Italotae, developed an amphitryony, Olympic champions, schools of philosophy, etc. Fertile surroundings and foreign commerce brought prosperity, but political instability proved fatal. The total destruction of Sybaris (q.v.) by Croton (q.v.) illustrates the mutual animosities of the cities. After 400 decline began: hostile Italian neighbours, Sicilian tyrants, and possibly malaria accelerated it. By 300 most cities needed Roman protection: Tarentum (q.v.), however, relied on Greek *condottieri* (*see* PYRRHIUS). Pyrrhic and Hannibalic wars completed the ruin of Magna Graecia. *See*, too, CAULONIA, ELIA, LOCRI, METAPONTUM, NEAPOLIS, PAESTUM, RHEGIUM, SCYLACIUM, SIRIS, THURII.

MAGNENTIUS, FLAVIUS MAGNUS, usurping Roman Emperor (A.D. 350-3), was a pagan. Elevated at Autun he murdered the Emperor Constans (q.v.) and ruled over the West. He was defeated by Constantius II at the great battle of Mursa (351) and committed suicide in Gaul two years later.

E. A. T.

MAGNES is treated by Aristotle (*Poet.* 1448^a34) as one of the two earliest Athenian comic poets. He won eleven victories at the City Dionysia, one of them in 472 B.C. (*IG* 11². 2318. 8, 2325. 44, Anon. *De Com.* 6). We have eight titles, but the plays ascribed to him in Hellenistic times were of very doubtful authenticity (Anon. *ibid.*, *Ath.* 367e and 646e); the titles include *Dionysus*, *Lydians*, *Fig-flies*, *Frogs*, and *Birds*, of which the last three may possibly be only inferences from *Ar. Eq.* 520 ff., where Magnes is described as *περυγίζων . . . καὶ ψηνίζων καὶ βαπτόμενος βατραχίαις*.

FCG ii 9-11; CAF i. 7-9, FAC i. 8 ff.

K. J. D.

MAGNESIA AD MAEANDRUM (*Μαγνησία πρὸς (or ἐπὶ) Μαίανδρῳ*), a city of Ionia on a tributary of the Maeander, inland from Ephesus. Colonized by the Magnetes (q.v.), it and Magnesia ad Sipylum (q.v.) both commanded rich inland valleys. Successively subject to Lydia and Persia, it was presented by Artaxerxes to Themistocles, whose female relatives were priestesses of the local goddess Artemis Leucophryene. The temple (a work of Hermogenes), together with public buildings of the city, which was refounded by the sanctuary in 390, has been excavated. Like Magnesia ad Sipylum it sided with Rome against Mithridates, and was made a *civitas libera* by Sulla when he reorganized the province of Asia.

K. Humann, *Magnesia am Maeander* (1904). W. M. C.; J. M. C.

MAGNESIA AD SIPYLM (*Μαγνησία πρὸς Σιπύλῳ*), a city of Lydia lying in the fertile Hermus valley at the point where the roads from the interior and the Propontis converge on the way to Smyrna, the scene of the decisive battle between Antiochus and the Scipios in 190 B.C. See also MAGNESIA AD MAEANDRUM.

MAGNETES, a tribe occupying the mountain-systems of Ossa and Pelion on the eastern border of Thessaly. Their long coastline on the open sea was harbourless, and their chief towns, Meliboia, Homolion, and Rhizus, were very small. They became *Perioikoi* to the invading Thesalians and had to surrender the coastal district round Pagasae, but they retained their two votes on the Amphictionic Council. Pagasae was restored to the Magnetes when Philip expelled the tyrants of Pherae, but they lost the limited autonomy which they had previously enjoyed and became subjects of Macedonia. In 293 Demetrias (q.v.) was founded through a 'synoecism' of the Magnetes.

II. D. W.

MAGNUS (1), of Carrhae, accompanied Julian on his Persian expedition in A.D. 363 (see JULIANUS 1) and wrote an account of it, of which a paraphrased passage is quoted by Malalas. The view that Magnus' narrative was used by Ammianus and Zosimus has been rejected by E. A. Thompson.

FGrH 225. E. A. Thompson, *The Historical Work of Ammianus Marcellinus* (1947), 28 ff.

H. H. S.

MAGNUS (2) **MAXIMUS**, Roman Emperor (A.D. 383-8), was a Spaniard who rose to the command of the troops in Britain, where he fought successfully against the Picts and Scots. Elevated by the army in Britain, he at once crossed to Gaul and overthrew Gratian (q.v.). He was recognized as Emperor by Theodosius I and controlled Gaul and Spain as well as Britain. He successfully

invaded Italy but was decisively defeated by Theodosius in battles fought near Siscia and Pola, and was executed in 388. Maximus was a Catholic and persecuted Priscillian and his followers.

E. A. T.

MAGO (1), fl. 550-520 B.C. The founder of a family which held quasi-monarchical power at Carthage from c. 550 to 450 B.C. He fought in Sardinia to consolidate the power of Carthage in the island, and changed the basis of the Carthaginian army; previously a citizen levy, it was subsequently a mercenary force, officered and led by Carthaginians.

B. II. Warmington, *Carthage* (1960), 40 ff., 121.

II. H. W.

MAGO (2) was youngest brother of Hannibal, under whom he served in Italy (218-216 B.C.), fighting at Trebia and Cannae. He fought in Spain from 215 till his defeat at Ilipa (206). After failing to seize Carthago Nova and to re-enter Gades he attacked the Balearic Isles (Mahon in Minorca perpetuates his name) and in 205 landed in Liguria. After lengthy recruiting he advanced into the Po valley, where he was defeated by the Romans (203). He successfully re-embarked his army for Africa, but died of wounds on the voyage.

II. II. S.

MAGODIA, a type of low-class mime or lyric, sub-literary (like *hilarodia*, *simodia*, and *lysiodia*), about which the ancient tradition (*Ath.* 14. 620 d, Strabo 14. 648) is far from clear. *Magodia* is defined as *ὄρχησις ἀπαλή* (Hesych.); the actor, accompanied by kettledrums and cymbals, represented usually in comic style the drunken lover and other low characters. Possible libretti are the *παράκλαυσιθυρον* found on an Egyptian papyrus of the second century B.C. and a lament for a lost cock (texts in Powell, *Coll. Alex.* 177 ff., 182 ff.; see also Page, *GLP*, no. 75).

Μαγ in PW, s v. συμφορ.

W. G. W., W. G. A.

MAHARBAL, Hannibal's chief cavalry officer, defeated a Roman cavalry squadron near Assisi after the battle of Lake Trasimene (217 B.C.). After Cannae (216) he is alleged to have urged Hannibal to march on Rome ('for in five days you shall dine in victory on the Capitol'), and when Hannibal wisely refused he added 'uincere scis, Hannibal, victoria uti nescis' (Livy 22. 51. 4).

II. II. S.

MAIA, (1) *Maia*, mother of Hermes (q.v.) by Zeus and daughter of Atlas; she is one of the Pleiads (*Od.* 14. 435, where she is called Maia; Hes. *Theog.* 938, fr. 275, 3 Rzsch). Her name means simply 'mother' or 'nurse' (cf. M. P. Nilsson, *ApPhil.* 1938, 392 on the Attic sacrifice mentioned in a text published by W. S. Ferguson, *Hesperia* 1938, 5, 65 f.), and apart from her son she has little existence. (2) A Roman goddess, associated with Vulcanus (Gell. 13. 23 (22). 2); on 1 May the *flamen Vulcanalis* sacrificed to her (Macrob. *Sat.* 1. 12. 18), further confirming the association, which, however, is quite unexplained, since he is undoubtedly a fire-god (see VOLCANUS), while her name appears to come from the root *mag* and signify growth or increase; cf. the by-form *Maiesta* (Piso in Macrob. *ibid.*) and the month-name, appropriate to a time of year when all plants are growing. By a natural confusion with (1) she was associated with Mercurius (q.v.) and worshipped also on 15 May, the *natalis* of his temple, apparently under the title of *inuicta* ('*Maiae inuict.*', *Fasti Antiates* on that date).

Wisniewa, *RK* 229, 304; Latte, *RR* 130, 163.

H. J. R.

MAIESTAS, technically *maiestas minuta*, was 'treason', thus defined by Cicero: '*Maiestatem minuire est de dignitate aut amplitudine aut potestate populi aut eorum quibus populus potestatem dedit aliquid derogare*' (*Inuent.*

Rhet. 2. 17. 53). Established as a crime by the Lex Appuleia of 103 B.C. (see SATURNINUS 1), it virtually replaced the earlier *perduellio* (q.v.). Saturninus was provoked by the incompetence and corruption of Roman generals in the wars against the Cimbri and Teutones. Sulla's *lex maiestatis* of 81 B.C., establishing a permanent *quaestio*, was an important part of his attempt to re-establish senatorial government, and survived the Republic. Its prime purpose was to curb the dangerous initiative of proconsuls by making it a crime for them to take an army outside their provinces except under instruction of the government in Rome—'iussu senatus populi-que Romani'. (Caesar's invasion of Italy in 49 was the most startling imaginable violation of the law.) Proconsuls, however, were not the only objectives of the law, for the ex-tribune Cornelius was accused under it in 66 B.C. for disregarding the veto of a fellow tribune. Already under the Republic it was sometimes difficult to know what could legitimately be construed as treason (Cic. *Fam.* 3. 11. 2).

The *lex Julia maiestatis* of Julius Caesar or Augustus (*Dig.* 48. 4) revised Sulla's law. The Emperor came to control foreign policy, and the very existence of a *princeps* inevitably widened the application of the law to include conspiracy against his life, libel and slander against him, and, after the exposure of Julia (q.v. 2), adultery with a member of his family. The law was never redrafted to take precise account of such offences and, where conspiracy was concerned, Domitian was to observe sagely that 'the only time that anybody believed an Emperor's statement that he had detected a conspiracy was when the conspiracy had succeeded and he was dead' (Suet. *Dom.* 21; cf. Tac. *Ann.* 4. 70. 7). Prosecutions for *maiestas* might now be brought before the *quaestio maiestatis*, the Senate sitting as a consular-senatorial court, or before the Emperor himself (see Tac. *Ann.* 3. 10-12 for these three possibilities in the trial of Cn. Piso in A.D. 20). Information was laid and prosecutions were brought by individuals (informers, *delatores*, *quadruplicatores*) who, if they secured a condemnation, received a quarter of the accused man's property, for a condemned man's property was confiscated to the Treasury; he was increasingly liable to the death sentence (with no opportunity given to retire into exile) and he suffered *damnatio memoriae* (q.v.). Only if he committed suicide before the charge was formally laid against him could he escape these indignities.

Charges of *maiestas* were increasingly frequent under Tiberius, many on seemingly trifling grounds, and after A.D. 23 disfigured his administration. Their background from 23 to 31 was the increasing power of Sejanus at the expense of Agrippina (q.v. 2), her sons, and friends; from 31 to 37 the determination of Sejanus' enemies to be avenged on his surviving friends. The virulent hatred of one faction of the Senate for another was in the tradition of the late Republic and the civil wars. Cn. Piso was rightly condemned in 20; but there is no certain evidence, even in the case of Sejanus, of a real conspiracy against Tiberius' life. Tiberius did nothing to encourage the evil; but he did nothing to repress it.

There were condemnations for *maiestas* under Gaius, Claudius, and Nero, yet all three Emperors were confronted by dangerous conspiracies, and the horror of Tiberius' Principate was not re-enacted until the last years of Domitian's rule, when the property of the condemned passed to the Emperor himself; indeed Domitian was accused of instigating prosecutions to rescue himself from his extensive financial embarrassments.

the trials of M. Primus and Varro Murena; E. Koestermann, 'Die Majestätsprozesse unter Tiberius', *Hist.* 1955, 72. Cases under Tiberius are listed in R. S. Rogers, *Criminal Trials and Criminal Legislation under Tiberius* (1935). J. P. B.

MAJORIAN, JULIUS, Western Roman Emperor (A.D. 457-61), was elevated by Ricimer (q.v.). He tried to improve the administration of his realm. His planned expedition against the Vandals of Africa was completely defeated at Carthago Nova; he was obliged to make a humiliating peace with Gaiseric (q.v.), and was shortly afterwards put to death by Ricimer. Sidonius Apollinaris addressed a panegyric to him. He was the last Western Emperor of any ability. E. A. T.

MALACA (modern *Malaga*), a Phoenician foundation on the southern coast of Spain, was noted by Artemidorus as an emporium for the opposite African shore and kept a Phoenician look. Its trade and industry (chiefly fish-curing) were not interrupted when it became an ally of Rome. With the other Spanish communities, it received the *ius Latii* (q.v.) from Vespasian. The extant parts of its charter and that of Salpensa are important sources for Latin municipal status in imperial times.

Dessau, *ILS* 6089, Bruns, *Font.* (1919) 147, no. 30

J. J. VAN N.; M. I. H.

MALALAS, IOHANNES, a Greek rhetorician and historian who lived in Antioch c. A.D. 491-578 (the name Malalas means 'rhetor' in Syriac). We have under his name a universal chronicle (*Chronographia*) in eighteen books from the creation of the world to A.D. 565. The only continuous text of it is preserved in the Oxford MS. Bodl. Baroccianus 182 of the twelfth century, but fragments are extant in other MS. sources, including the *Excerpta* by Constantinus Porphyrogenitus. Even the Oxford MS. (apart from lacunae) shows clear traces of abridgement of the original text: this is confirmed by a Slavonic translation of the tenth to eleventh century, which is preserved in excerpts. The chronicle had great influence on Byzantine, Slavonic, and Oriental historiography. In the first seventeen books and at the beginning of book xviii Antioch is at the centre of the narration; and the author shows monophysitic sympathies. The second part of book xviii gives prominence to Constantinople and displays orthodoxy. Some modern critics explain the difference by postulating a different author for book xviii. Others think that the author moved to Constantinople late in life and modified his convictions. It has even been suggested that Iohannes Malalas should be identified with Iohannes III, Patriarch of Constantinople 565-77, who was of Antiochian origin. Malalas' direct or indirect sources have not yet been established with certainty: they must have included official records and local chronicles of Antioch together with general histories and universal chronicles. Uncritical, confused, and often childish, Malalas preserves many otherwise unknown facts and is, of course, of special importance for his own time. His popular language, his interest in local traditions, and his desire to appeal to the semi-educated Christian are in themselves extremely significant.

A critical edition is available only for books ix-xii in A. Schenk von Stauffenberg, *Römische Kaisergeschichte bei Malalus* (1931) with important commentary, discussed by W. Ensslin, *Phil. Wach.* 1933, 760 ff. The standard ed. remains L. Dindorf (1831); also Mugne, *PG* xcvi (1865). The proemium first published by A. Wirth, *Chronographische Späne* (1894), 3. Part of the Slavonic version translated into English by M. Spinka-G. Downey (1940). Cf. W. Weber, *Festschrift A. Leissmann* (1927), 20 ff.; E. Bickerman, *Byzantion* 1951, 63 ff.; G. Moravcsik, *Byzantinoturcica* 1 (1958), 329 ff.; G. Downey, *A History of Antioch* (1961), 38, for other bibl. A. M.

MALCHUS (1), a Carthaginian general (fl. 580-550 B.C.). The form of the name is uncertain; possibly it is

a misunderstanding of *melek*, king. He extended the overseas empire of Carthage. He strengthened Punic control of western Sicily, was perhaps checked by Phalaris of Acragas, and then set off to conquer Sardinia where he was defeated by the natives. He was 'exiled', that is perhaps ordered to stay with his men (as colonists?) in Sardinia, but the troops insisted on returning home. He seized Carthage, but was soon overthrown and executed. His career represents the first-known threat of a general and army to the civil government of Carthage. He was succeeded in power by Mago (q.v. 1). H. H. S.

MALCHUS (2), king of the Nabataeans (q.v.), 47–30 B.C. He sent cavalry to Caesar for the Alexandrine war (47). He refused to receive Herod (q.v. 1) when he was driven from Palestine by the Parthians (40). For his help to the Parthians he had to pay Ventidius a fine, while Antony gave part (but not all) of his territory to Cleopatra who skilfully sowed seeds of discord between Malchus and Herod. Herod was later ordered by Antony to attack Malchus who was defeated (31). H. H. S.

MALCHUS (3), a Byzantine historian (c. A.D. 500) from Syrian Philadelphia. He recorded the story of at least the years 474–80 in seven books, thus starting where Priscus (q.v.) left off. He relied not on literary sources, but on personal knowledge gained during his stay in Byzantium. He is also well informed about the Ostrogoths. The *Suda* and Photius approved of his style. The majority of the surviving fragments of his history are preserved in Constantine Porphyrogenitus' *De legationibus*.

See Müller, *FHG* iv (1851), 111 ff.; Dindorf, *Hist. Gr. Min.* (1870), 383 ff.; C. De Boor, *Excerpta de Legationibus* (1903), 155 ff., 568 ff. H. H. S.

MALEA, south-eastern promontory of Laconia, and of the whole Peloponnesus, a dangerous corner for shipping, chiefly because of the sudden veering of the winds off a harbourless coast. It was denounced on this account from Homer down to Byzantine writers. But in part this perilousness was a literary tradition, and there was always much traffic through the narrow strait between Malea and Cythera. V. E.

MALLIUS THEODORUS (cos. A.D. 399) wrote a *De metris* (ed. Keil, *Gramm. Lat.* 6. 585–601). His philosophical and astronomical works are lost.

Schanz-Hoosius, § 1085.

MAMERTINES, a body of Campanian (i.e. Oscan) mercenaries, whom Agathocles had settled in Syracuse, after his death treacherously seized Messina between 288 and 283 B.C. Calling themselves *Mamertini* (Mamers is the Oscan form of Mars), they dominated and plundered north-east Sicily, although temporarily checked by Pyrrhus, until defeated near the Longanus river by Hieron of Syracuse (? 265). At their request Carthage installed a protective garrison in Messina, but at the same time or soon afterwards they also asked Rome for help, thereby precipitating the First Punic War. When Rome accepted the alliance, they ejected the Carthaginian garrison and called in Appius Claudius (q.v. 5) Caudex, who drove back both Carthaginians and Hieron.

M. Sörstom, *A Study in the Coinage of the Mamertines* (Lund, 1940). For the few inscriptions see Conway, *The Italic Dialects* i (1897), 1 f. H. H. S.

MAMILIUS (1, *PW* 4) **TUSCULANUS**, OCTAVIUS, said to have been the son-in-law of Tarquinius (q.v. 2) Superbus, and to have assisted the exiled king in his attempt to return to Rome by force. At the battle of Lake Regillus, in which he commanded the army of the Latin League, he was defeated and killed. Though Livy's

account of him (2. 18. 3 ff.) ultimately may depend on popular ballads, this does not disprove his historical character.

Ogilvie, *Comm. Livy* 1–5, 198.

P. T.

MAMILIUS (2, *PW* 1), LUCIUS, dictator of Tusculum, is praised by tradition for the voluntary help which he brought to the Roman Republic when its safety was menaced by the Sabine Appius Herdonius, who had entrenched himself on the Capitol (460 B.C.). Mamilius is said to have been rewarded with the Roman citizenship (458), which is likely to be a historical fact. P. T.

MAMILIUS (3, *PW* 7) **LIMETANUS**, GAIUS, as tribune in 109 B.C. set up a commission of 'equestrian' *iudices* (with Scaurus (q.v. 1) as one of the chairmen) to investigate the mishandling of relations with Jugurtha. Those condemned included Bestia, Cato (2), Galba (4), Opimius, and Postumius (4) (qq.v.). He also passed a law (necessitated by the agrarian legislation of 133–111) to settle boundaries, thus getting his *cognomen*. E. B.

MAMURRA of Formiae, *praefectus fabrum* under Caesar in Spain (61 B.C.) and Gaul, where he accumulated great wealth. His extravagance aroused ill feeling, and Catullus (29, 41, 43, 51), who had personal reasons for disliking him, coupled his name scandalously with Caesar's.

For a possible identification with Vitruvius, see VITRUVIUS.

C. E. S.

MANCEPS has several meanings. Most commonly it denotes the successful bidder in an auction of contracts for the sale or leasing of State lands or for public works (see CONDUCTOR). Festus and others associate this with the raising of the hand in bidding. But this is etymologically unconvincing, and Festus also gives a quite different meaning, 'quod manu capiatur', which is presumably related to *mancipatio* and connected words and perhaps refers to *res Mancipi* (see MANCIPATIO), *manceps* being a person with the power of *mancipium* or *manu capium* (see PATRIA POTESTAS). The original meaning of *manceps* in this context is, however, much disputed (cf. Plaut. *Cure.* 515, where *manceps* is evidently the person making a *mancipatio*, the *auctor*).

The *manceps* in State contracts normally acted on behalf of associates—in the late Republic of a *societas publicanorum* (see PUBLICANI), but the details are obscure. He is sometimes, but not always, the *magister* of the *societas*. In the late Empire, when the functions of the *publicani* have become public duties discharged by guilds (*collegia*), *manceps* is a person charged with an obligatory public function (e.g. *manceps salinarum et thermarum* for the salt monopoly and the public baths).

M. Kaser, *Das altrom. ius* (1940), 135 ff.; P. Meylan, *Studi de Francisci* (1956) i. 65 ff.; F. Knipf, *Societas publicanorum* (1896). B. N.

MANCINUS, GAIUS HOSTILIUS (*PW* 18), *praetor urbanus* c. 140 B.C. As consul in 137 he was defeated by the Numantines. His quaestor T. Gracchus (q.v. 3) secured a peace that saved the army; but it was disowned by the Senate at the suggestion of Scipio (q.v. 11), and Mancinus, with his own consent, was surrendered in expiation. When the Numantines refused to accept him, he returned, was readmitted to citizenship and again became praetor. E. B.

MANCIPATIO was a solemn transaction with copper and scales (*per aes et libram*), mentioned already in the XII Tables. In historical times it was a symbolic sale (Gaius calls it 'imaginarie venditio'), but it originated, no doubt, as a real sale, the scales being for weighing

out the price. As we know it, it served as a conveyance of ownership of *res Mancipi*, and also for the transfer of rights akin to ownership over persons (see DOMINIUM, PATRIA POTESTAS, MANUS, ADOPTIO, EMANCIPATIO, NEXUS, SECURITY, INHERITANCE—LAW OF, § 3). *Res Mancipi* included the most important objects in a primitive agricultural economy, such as land (*solum Italicum*), slaves, and beasts of draught and burden. In a set form of words (Gaius 1. 119) the recipient asserted his ownership of the property, and struck the scales with the copper; the act acquired a kind of publicity by the presence of five citizens as witnesses and the *libripens* holding the scales (see TESTIMONIUM). A. B.; B. N.

MANDURIA, principal town of the Sallentini in the 'heel' of Italy. Its Messapic remains (extensive town-walls, necropolis, etc.) are of exceptional interest. The Tarentine mercenary, Archidamus III (q.v.), of Sparta possibly fell here, 338 B.C. (Plut. *Agis* 3. 2, emending *Mandonion*). A curious fountain described by Pliny (*HIN* 2. 226) still exists at modern Manduria.

G. B. Aino, *Manduria*¹ (1954).

E. T. S.

MANES, the spirits of the dead. The most generally accepted derivation is that from the old Latin adjective *manus*, 'good'; the appellation may be euphemistic (but see Latte, *RR* 99, n. 3). (i) In early times the dead were thought of as an undifferentiated mass with a collective divinity expressed in *Di Manes*; Cicero (*Leg.* 2. 9. 22) quotes the ancient ordinance 'deorum manium iura sacra sunt'. Graves were dedicated to them in the formula *DIS MANIBUS SACRUM*, and they were worshipped at the festivals of the *Feralia*, *Parentalia*, and *Lemuria* (qq.v.). From this primary sense there are two derivatives: (a) *manes* is used by the poets in a topographical sense for the realm of the dead (e.g. Verg. *Aen.* 11. 181). (b) *Manes* was applied to the Graeco-Roman underworld gods, *Dis*, *Orcus*, *Persephone*, etc. (e.g. Verg. *Aen.* 10. 39). (ii) Later in a special, though still collective sense, the *Di Manes* were identified with the *Di Parentes*, the ancestors of the family (e.g. Ov. *Met.* 9. 407). (iii) Still later *manes* came to be used of the soul of individual dead persons. The first recorded instance is Cic. *Pis.* 16 'coniuratorum manes', and in Augustan writers the usage is frequent (e.g. Livy 3. 58. 11 'manes Verginiae'); and so in the famous line of Virgil, *Aen.* 6. 743, 'quisque suos patitur manes'. From the beginning of the Empire it became customary on grave inscriptions to add to *DIS MANIBUS SACRUM* the name of the dead person in the genitive or dative case (see Latte, *RR* 99, n. 4, for the inscriptional evidence). See also AFTER-LIFE, § 8. C. B.

MANETHO (fl. 280 B.C.), Egyptian high-priest in Heliopolis under the first two Ptolemies, who dedicated to Ptolemy II a history of Egypt (*Αἰγυπτιακά*) from mythical times to 323. His claim to have consulted the lists of kings (*ἐπὶ γράμματα*) implies that his version was more official than that of Herodotus of Teos. The three-fold division of the thirty-one dynasties corresponds with the recognized division into old, middle, and new kingdoms. Frequently used by Jewish and Christian writers to establish biblical chronology.

FGH in C 609; Manetho, ed. W. G. Waddell (Loeb); with Ptolemy, *Tetrabiblos*, ed. F. E. Robbins. G. L. B.

MANIA, Roman goddess of whom nothing certain is known except her name. This apparently means 'the good one', cf. *manes*, and may be a euphemism for a death-goddess. By way, it would appear, of the theory that the Lares (q.v.) are ghosts, ancient speculation made Mania their mother (Varro, *Ling.* 9. 61), and this affects

late cult (Henzen, *Acta Arvalium* (1874), 145; add Dessau, *ILS* 9522).

F. Altheim, *Hist. Rom. Rel.* 117 f., 131.

H. J. R.

MANICHAISM, a developed form of gnosticism (q.v.) founded by the Syriac-speaking Babylonian Mani (A.D. 216–77). At first influenced by a gnostic sect like the Mandaeans (some of whose hymns the Manichees used), he left the sect after two visions convinced him that he was a manifestation of the Paraclete promised by Jesus. After visiting India he returned to the Sassanid Empire, where he enjoyed friendly relations with Sapor I (q.v.); but Mazdean opposition under Bahrām I led to his death. He left tracts, sermons, and hymns. A systematic catechism (*Kephalaia*), preserved in Coptic, was edited in his name. His doctrine was a religion of redemption in which dualistic myth provided a rationale for an ascetic ethic. A precosmic invasion of the realm of light by the forces of darkness had resulted in the present intermingling of good and evil, the divine substance being imprisoned in matter. In Jesus the Son of God came to save his own soul, lost in Adam. The Elect, to whom all worldly occupations and possessions were forbidden, participated in redemption and were destined for deliverance from transmigration. The community also included an inferior order of Hearers who by keeping simple moral rules could hope for rebirth as one of the Elect.

Proscribed in the Roman Empire by Diocletian (297: his edict is preserved) and later Emperors, it was attacked by Neoplatonists (Alexander of Lycopolis c. 300, Simplicius c. 540) and Christians (Hegemonius, Titus of Bostra, Serapion of Thmuis, Ephraem Syrus, Epiphanius, Augustine, cf. Rylands papyrus 469). Nevertheless, it spread rapidly in the West; Augustine (q.v.) was a Hearer for nine years. Eastwards, the advent of Islam drove it across central Asia to survive in China till the fourteenth century. Important texts and paintings were found (1895–1912) at Turfan in Chinese Turkestan, and many Coptic papyri in Egypt in 1933. In the medieval West its legacy passed to the Paulicians and Bogomils.

H.-C. Puech, *Le Manichéisme* (1949); G. Widengren, *Man und der Manichäismus* (1961, E.T. 1965) Bibliography, *CAH* xii. 773 ff. H. C.

MANILIUS (1, *PIV* 12), MANIUS. After a not very successful praetorship in Spain (154 B.C., or 155) Manilius as consul in 149 commenced the siege of Carthage in the Third Punic War, his colleague L. Marcus Censorinus co-operating by sea. After two expeditions to Nephria (south-east of Tunis) had been saved from disaster by Scipio Aemilianus, Manilius was superseded in 148. In 133 he urged Tiberius Gracchus to submit his dispute with Octavius to the Senate. He was introduced by Cicero as one of the speakers in the *De Republica*. He was a famous jurist, one of three who 'fundauerunt ius civile' (Pomponius). His works included *Monumenta*, presumably consisting of *responsa*, and a collection of *formulae* (precedents for contracts, wills, and pleadings, etc.) A few of his *actiones* and *responsa* survive (see Huschke, *Iurisprud. anteiust. Reliquiae*⁶ 1. 5–7). H. H. S.

MANILIUS (2, *PIV* 10, cf. 23), GAIUS, on the last day of 67 B.C. carried as tribune a law distributing freedmen through all the tribes; this the Senate annulled next day for non-observance of the *trinundinum*. Manilius then (66) conferred on Pompey the command against Mithridates and Tigranes, with *imperium* over all the provinces of Asia Minor. On laying down his tribunate he was prosecuted for *repetundae* by Pompey's enemy Cn. Piso, but the case was dropped amid the disturbance of Jan. 65, to which date Cicero, praetor for 66, had postponed it.

But Manilius was soon prosecuted for *maiestas* and condemned.

ALCONIUS 53, 57 ff.; Schol. Bob. *Cic. Mil.* 284 Or.; Dio 36. 42. 4, Plut. *Cic.* 9. G. E. F. C.

MANILIUS (3, *PW* 6), MARCUS, author of the *Astro-nomica*, a didactic poem on astrology, wrote under Augustus and Tiberius. (Book 1. 899 mentions Varus' defeat in A.D. 9, while in 384-6, etc., Augustus (who died in August A.D. 14) is still alive, as he is in 2. 508-9; in 4. 763-6 and 773-7 Tiberius is the reigning *princeps*.) Of the man himself we know nothing else whatever. Of his work we have five books. Book 1 (926 lines) describes the creation, the arrangement of the starry heavens, and the circles which mark them out; book 2 (970 lines) the signs of the zodiac, their characteristics, mutual aspects, and subdivisions; book 3 (682 lines) their division into twelve *sortes*, methods of determining the place of the horoscope, etc.; book 4 (935 lines) their influence on men born under them, their divisions as combined in decades, and other technicalities; book 5 (745 lines) the risings of the other signs and their effects on children born on each occasion. Thus many essential parts of the subject are omitted, for instance any discussion of the movements and influence of the planets; but whether the work is incompletely preserved or was never finished we cannot tell. Manilius writes as an enthusiast for his subject, anxious to make converts and to provide practical instruction for their use, but his poem even if complete would not serve as a technical treatise. He is not seldom inaccurate and sometimes appears to have misunderstood his sources; what these were is unknown, for much of what he tells us appears nowhere else. He is not a great poet, but his literary gifts are by no means negligible. If sometimes feeble or obscure, his language is correct, often forcible, and sometimes eloquent, and he writes with an easy mastery of the technique of hexameters; his skill in doing sums in verse is worthy of Ovid. Much of the poem is condemned by its subject to find few readers, but the non-technical books 1 and 5, and the proems to the others, deserve to be better known. To students of Latin he will always appeal as the object of some of the best work of three great latinists, Scaliger, Bentley, and Housman.

See also ASTROLOGY.

TEXT AND COMMENTARY. A. F. Housman, 5 vols. 1903-30 (with Latin notes); text only, 1932. Book 2 (with English notes and translation) H. W. Garrod, 1911. D. R. Shackleton Bailey, *CQ* 1956, 81 ff.; W. Bühler, *Hermes* 1959, 475 ff. (with full bibliography of recent work) R. A. B. M.

MANIPULUS. With the introduction, perhaps during the fourth century B.C., of the *pilum* or throwing spear, the legion ceased to be a phalanx and was organized for open-order fighting. It was subdivided into thirty maniples, which in the Polybian period varied in strength from 120 to 200 men. Each manipulus comprised two centuries, was commanded by the centurion of the right-hand century, and had its own standard (*signum*). For tactical purposes the maniples were normally drawn up in three lines with the rear units covering off the intervals in the line in front. After the introduction of the cohort as a tactical unit the manipulus gradually lost its importance.

Parker, *Roman Legions*, 11 ff.

H. M. D. P.

MANLIUS (*PW* 51), MARCUS, according to Roman tradition defeated the Aequi as consul in 392 B.C., held the Capitol against the Gauls, and repulsed a night attack after being awakened by the cackling of the sacred geese (387); hence he was surnamed *Capitolinus*. It is not unlikely that he or his kinsmen rendered distinguished service against the Celts, but the above story in its present form is probably an aetiological myth invented to explain the surname *Capitolinus* borne by a branch of the Manlii,

because they lived on the Capitol even before the sack of Rome. In the crisis that followed the Gallic catastrophe Manlius, though a patrician, probably supported the poor against Camillus (q.v. 1), and may have made an abortive attempt at revolution, in which he fell. The traditional account was greatly elaborated by late annalists, who read back into the story of Manlius the aims and policy of the *plebs* in and after the Gracchan period.

Mommsen, *Röm. Forsch.* 179 ff.; Ogilvie, *Comm. Livy* 1-5, 694, 734 f. P. T.

MANTINEA lay in a plain of south-east Arcadia, to the north of Tegea (q.v.). The two States were constantly at war over boundaries and the control of the swallow-holes which drained the plain (Thuc. 5. 65); their rivalry often prevented the Arcadians from uniting against Sparta. Mantinea was synoecized from five villages (Strabo 337), probably c. 500 B.C., when its coinage began. It became a moderate democracy c. 450 B.C. (for date of synoecism and democracy, not necessarily related, see *PW* xiv. 1318 ff.). Mantinea withdrew from the anti-Spartan movement after the Persian Wars (Hdt. 9. 35) and supported Sparta in the helot revolt (Xen. *Hell.* 5. 2. 3) (see also, on fifth-century Arcadian-Argive-Spartan relations, W. G. Forrest, 'Themistokles and Argos', *CQ* 1960, 221 ff., and A. Andrewes, 'Sparta and Arcadia in the Early Fifth Century', *Phoenix* 1952, 1 ff.); but under the democracy it grew in power and joined Sparta's enemies in 420. It was the scene of a decisive Spartan victory in 418. After the peace of 387 the Spartans obliged the Mantineans to dismantle their walls and live in villages, but after the battle of Leuctra (371) the city was restored. In 362 Epaminondas won his last victory over the Spartans here. The city was destroyed by the Achaean League in 223 and refounded under the name of Antigonea. Unlike most fortified Greek cities, Mantinea stood in the middle of a plain.

IG v. 2, 46 ff. G. Fougères, *Mantinée et l'Arcadie orientale* (1898); Bolte, *PW* xiv. 1290 ff.; W. J. Woodhouse, *King Agis of Sparta* (1933) (battle of 418 B.C.). T. J. D.; R. J. H.

MANTUA, modern *Mantova*, town of (presumably) Etruscan origin between Cremona and Verona in Cis-alpine Gaul (q.v.), situated amid the sluggish waters of the River Mincius. Seldom mentioned in ancient literature, Mantua is famous as the town near which Virgil was born and whose territory the Second Triumvirate confiscated.

E. T. S.

MANUBIAE (or *manibiae*, as in inscriptions. From *manus* and *habeo*, or rather perhaps from an old verb *manuo* -- to grasp). The original meaning of this term has been variously defined, (1) (Mommsen) as the revenue raised from the public sale of booty (Gell. 13. 25. 28: 'pecunia per quaestorem populi Romani ex praeda uendita contracta'), or, (2), more probably (Karlowska), as the portion of the booty reserved for the victorious general, which he could dispose of at his discretion (Ps.-Asc. in *Cic. Verr.* 2. 1. 54: 'manubiae . . . sunt praeda imperatoris proportionem de hostibus capta'). Although legally he could not be prosecuted for any use to which he put his share of the booty, the commander generally devoted it to works of public utility (temples, roads, forums, theatres, etc.), or, to avoid popular resentment, he shared it or the proceeds of its sale with his officers and men. Thus the distinction between *praeda* and *manubiae* was easily forgotten or ignored, especially when the Emperors compelled their officials to contribute a certain amount of their *manubiae* to the Emperor's privy purse.

Mommsen, *Röm. Forsch.* ii. 443 ff. (cf. J. Marquardt, *Röm. Staatsverw.*, ii. 277 f.); O. Karlowska, *Röm. Rechtsgesch.* (1885-1901), ii. 1, 5 (cf. Ph. Fabia, *Dar.-Sag.* iii. 2, 1582 ff.). P. T.

MANUS was the power (akin to *patria potestas*, q.v.) which a husband might have over his wife. Entry into *manus* (*conventio in manum*) took place in three ways. *Confarreatio*, the earliest form, was a religious ceremony in the presence of ten witnesses (requiring the assistance of a pontiff and the utterance of formal words); it was necessary for, and perhaps confined to, the members of certain priesthoods. *Coemptio*, evidently a survival of marriage by purchase, was a *manipatio* (q.v.) of the wife to the husband. In the absence of these two forms, marriage by itself did not result in *manus*, but would do so by prescription (*usus*) if the partners lived together as man and wife uninterruptedly for a year. By a rule of the XII Tables if the wife was absent for three successive nights, the *usus* was interrupted. The legal effects of *conventio in manum* were similar to those of *adoptio* (q.v.), the wife being *filiae loco* to her husband.

Marriage with *manus* was evidently uncommon by the end of the Republic. *Usus* was obsolete by the second century A.D., and *coemptio* was perhaps only used as a collusive device (*coemptio fiduciae causa*) to enable a woman to escape from *tutela* (see GUARDIANSHIP). *Confarreatio* may have lasted as long as the old religion. See also MARRIAGE, LAW OF.

B. N.

MAPS (*πίνακες*). For measuring distances the Greeks and Romans counted the steps of a pedestrian or estimated the length of a sea-journey on a basis of 500 stades (c. 55 statute miles) by sea. Lacking the compass, they determined direction by the sun or stars. For latitude they used sticks that projected their shadow into a bowl (*πρόλοι*, introduced from Babylon by Anaximander). For longitude they were reduced to guesswork, since their sand- or water-clocks were useless for synchronizing. In spite of this primitive equipment, the Greeks achieved considerable proficiency in cartography. Their first world-maps, constructed in the sixth century by Anaximander and Hecataeus (1) (q.v.), showed a plane land-mass of circular contour round the Mediterranean basin. Herodotus (esp. 4. 36-40) derided these 'compass-drawn' maps and had a rudimentary idea of meridians. Local maps had become familiar in the fifth century (Ar. *Nub.* 200 ff.).

The foundations of scientific cartography were laid when Aristotle (*Cael.* 293^b ff., *Mete.* 362^a ff.) confirmed the sphericity of the earth (previously assumed by Pythagoras) and defined more closely the five zones of Parmenides. Parallels of latitude were established by Pytheas (q.v.), and Dicaearchus (q.v.; c. 310 B.C.) laid down a median line from Gibraltar to the Himalayas. Eratosthenes (q.v.; c. 200) made a scientific and accurate computation of the earth's circumference, and drew two main axes of latitude and longitude intersecting at Rhodes, with corresponding parallels. His world-map was the first to achieve tolerable accuracy. Hipparchus (q.v. 3; c. 140) divided Eratosthenes' main parallel of latitude into 360 degrees and drew 12 parallels of latitude (with details of longest days), dividing the land-mass into 'climata' or zones. Crates constructed a large globe (with three imaginary land-masses besides the known one).

The results of Greek cartography were combined with data from Roman road-makers by Artemidorus, and especially by Agrippa (Pliny, *HN* 3. 17; R. Mauny, *Hesperis* 1949, 47 ff.), who set up a large globe at Rome. Strabo discussed the principles of map-making on plane and sphere (3. 116-17, 120). Lastly, Ptolemy (q.v. 4) constructed a plane world-map, using a modified method of conical projection (with curved lines of latitude and longitude), and furnished delusively accurate calculations of latitude north of the Equator and of longitude east of the Canaries. Copies of his map survive in his manuscripts. Other extant maps are a street-plan of Rome (*Forma*

Urbs Romae) c. A.D. 200; the Peutinger Table (q.v.); and various road-maps (see ITINERARIES). See also GEOGRAPHY, PEUTINGER TABLE.

Diller, *Jas* 1949, 6 ff. L. H. W.

MARATHON, a large Attic deme on the north-east coast, with its centre near Vrana, although the scanty remains there do not justify a positive identification. It commanded part of a long, fertile plain lying beside a deep bay sheltered at its northern end, and was a member of an ancient religious confederacy of neighbouring communities called the Tetrapolis. Partly because it was connected to Athens by a main road running south of Mt. Pentelicus, the plain was the scene of two hostile landings, the first by Pisistratus c. 545 B.C. when he recovered Athens for the last time, the second by the Persians in 490 when the Athenians helped by the Plataeans became the first Greeks to defeat Persia. Of the sons of Marathon perhaps Herodes (q.v. 2) Atticus was the most famous.

W. K. Pritchett, *Marathon* (1960); E. Vanderpool, 'The Deme of M. and the Herakleion', *AIArch* 1966, 319 ff.; 'A Monument to the Battle of M.', *Hesp.* 1966, 93 ff.; N. G. Hammond, *JHS* 1968, C. W. J. E.

MARBLE. Under *μάρμαρος*, *marmor*, the ancients included granites, porphyries, and all stones capable of taking a high polish.

In the third millennium B.C. the white marbles of the Greek Islands were used for Cycladic sculpture. The Minoans employed coloured marbles and breccias for vases and furniture and in architecture for facings and column bases. The Mycenaean also used coloured marbles including green porphyry and rosso antico for furniture and in architectural decoration. Neither the Minoans nor the Mycenaean used marble as a building stone or for sculpture.

The fine white marbles of Greece and the Greek Islands were widely used for architecture and sculpture from the seventh century B.C. onwards. Grey Naxian and white Parian were the best of the island marbles; Attic marbles were the fine-grained Pentelic used in the Parthenon and other fifth-century buildings, and the inferior Hymettian. Coloured marbles for use especially in interior decoration came into fashion in Hellenistic times.

In Italy the Etruscans made little use of marble and the famous quarries at Luna (*Carrara*) were not opened commercially until the middle of the first century B.C. by the Romans. Augustus employed marble, specially Luna marble, extensively in his programme of rebuilding the city of Rome. Throughout the Empire public buildings were often constructed of marble, but more commonly the marble was used as a facing for brick and concrete construction. A wide variety of coloured marbles was popular; they were used for columns as well as interior decoration. For statuary the Romans used Luna marble, most of the Greek marbles, and some coloured marbles. A flourishing marble trade was carried on throughout the Empire, the main quarries being in imperial control under a special office, the *ratio marmorum*. The storehouses of foreign marbles have been discovered by the Tiber in Rome.

Pliny, *HN* 36 *Enciclopedia dell'arte antica*, s.v. marmo; J. B. Ward-Perkins, *JRS* 1951, 89 ff. D. E. S.

MARCELLINUS (1) (probably 2nd c. A.D.), author of an extant work *Περὶ σφύγγων*, borrowed very largely from Hippocrates.

Ed. H. Schöne, *Festschrift zur 49. Versammlung deutscher Philologen und Schulmänner* (1907).

MARCELLINUS (2), biographer of Thucydides (text in Jones and Powell's ed. of Thuc., 1938). His 'Life' contains three sections, of which A (ch. 1-45) is probably the 'Life of Thucydides' from [Proclus'] *Chrestomathia*, worked over by a schoolmaster, and B (ch. 46-53) by a contemporary of Dion. Hal. (perhaps Caccilius), whose main interest was Thucydides' style. To these Zosimus (5th c. A.D.) added C (ch. 54-8) to make the introduction to his edition of scholia on Isocrates, Demosthenes, and Thucydides. Marcellinus was probably the scholar, who, shortly after Justinian, isolated the Thucydidean scholia and gave the composition his name. Its main value lies in the biographical parts, where the deductive method is employed to reach sound conclusions. F. W. W.

MARCELLUS (1), MARCUS CLAUDIUS (PW 220), served in the First Punic War and was augur, aedile, and praetor. As consul (222 B.C.) he campaigned successfully against the Insubres, relieving Clastidium and winning the *spolia opima* (q.v.) by killing the Gallic chief Viridomarus in single combat; he celebrated a triumph. As praetor II he thwarted Hannibal's attack on Nola (216). He was appointed *consul suffectus* for 215, but abdicated when the augurs objected to two plebeian consuls and declared his election invalid. In 215, with proconsular *imperium*, and as consul III in 214 he followed a Fabian strategy from his base at Castra Claudia near Succula, whence he parried two further thrusts by Hannibal on Nola; in 214 he stormed Casilinum. From the autumn until 211 he served in Sicily. He sacked Leontini, commenced the blockade of Syracuse by land and sea (213), stormed Epipolae (212), and finally took Syracuse despite the engineering skill of Archimedes (211). After routing a Carthaginian force near Himera he returned to Rome and celebrated an *ovatio*. As consul IV (210), proconsul (209), and consul V (208) he skirmished cautiously but successfully against Hannibal until he was killed while reconnoitring near Venusia. Named the Sword of Rome, he had shown an energy which set him above most of his contemporaries, while the exaggerations which embellish the annalistic accounts of his exploits against Hannibal are a tribute to his vigorous personality. His faith was exemplified in his dedication of temples to Honos and Virtus, his appreciation of Greek culture by the artistic treasures which he shipped from Syracuse to Rome. For his appearance see coin, *CAH*, Pl. IV, 57. H. H. S.

MARCELLUS (2), MARCUS CLAUDIUS (PW 222), eldest son of (1), tribune (204 B.C.), curule aedile (200), praetor in Sicily (198), became consul in 196, crushing the Insubrians near Comum; he was legate in Gaul (193). Censor in 189 with T. Flaminius, he restored census rights to the Campanians. He died in 177. A. H. McD.

MARCELLUS (3), MARCUS CLAUDIUS (PW 225), tribune in 171 B.C., was praetor in 169, when, after intervening in the levies, he commanded in Spain (169-168); he became consul in 166 in Liguria. He was consul again in 155 in Liguria, and for a third time in 152, within the ten years' interval, on account of the war in Spain. He subdued the Celtiberians and negotiated a peace in the liberal tradition of Sempronius Gracchus (152-151); the Scipionic tradition (in Polybius) depreciates his achievement. He was drowned in 148 on an embassy to Africa.

H. Simon, *Roms Kriege in Spanien, 154-133 v. Chr.* (1962), 30 ff.; R. L. Calvert, *Athenaeum* 1964, 11 ff. A. H. McD.

MARCELLUS (4), MARCUS CLAUDIUS (PW 229), consul 51 B.C., proposed a motion, declared illegal by the Caesarians, probably to recall Caesar on 1 Mar. 50. Pompey resisted this, but in October Marcellus carried various resolutions which, though some were vetoed, ensured that the question be discussed on the ensuing 1 March. He also declared invalid the *Lex Vatinia* on Novum Comum, and flogged a citizen of Comum to prove that he was not a Roman. After Pharsalus Marcellus retired to Mytilene, but in Sept. 46 Caesar allowed his return; Cicero in gratitude delivered the *pro Marcello*. But in May 45 Marcellus was murdered at the Piraeus, and Caesar, unjustly according to Cicero, was suspected of complicity.

SOURCES. (a) The *Relatio* of 51: [Hirtius], *B.Gall.* 8. 53. 1; Suet. *Jul.* 28; Dio 40. 59. 1; App. *B.Civ.* 2. 25; Cic. *Att.* 8. 3. 3; (b) the flogging: E. G. Hardy, *Problems in Roman History* (1924), 126 ff. G. E. F. C.

MARCELLUS (5), GAIUS CLAUDIUS (PW 216), first cousin of (4), was consul in 50 B.C. Frustrated in his efforts to procure Caesar's recall, he called on Pompey to take command of the two legions stationed at Capua and to raise more troops (2 Dec.). After the outbreak of war, however, he remained in Italy and obtained Caesar's pardon. He took no part in the dissensions of 44-42 and died in 40. By his wife Octavia (2) he had three children, Marcellus (7) and two daughters: the elder Marcella married, c. 28 B.C., Agrippa (3) and, after being divorced by him in 21, Iullus Antonius (8); the younger Marcella, born in 40, was married to a M. Valerius Messalla (cos. 12 B.C.), and to Paullus (4 or perhaps 5).

Syme, *Rom. Rev.*, see index.

G. W. R.; T. J. C.

MARCELLUS (6), GAIUS CLAUDIUS (PW 217), brother of (4), was consul in 49 B.C. He supported Pompey and crossed over to Greece with him; in 48 he was joint-commander of the Rhodian section of his fleet. He probably died before the battle of Pharsalus. T. J. C.

MARCELLUS (7), MARCUS CLAUDIUS (PW 230), son of (5) above and of Octavia (2), sister of Augustus, was born in 42 B.C. His betrothal in 39 to a daughter of Sextus Pompeius (q.v. 6) was brief. In 25 he and Tiberius served in Spain under Augustus, whose preference for Marcellus was shown by his marriage in the same year to Julia (q.v. 2); and in 24 a more rapid anticipation of the normal *cursus* was decreed for Marcellus than for Tiberius. In 23, as aedile, Marcellus gave exceptionally magnificent games. He began to be thought of as a rival to Agrippa (q.v. 3) for the position of heir to the monarchy, but he died late in 23. He was buried in Augustus' own mausoleum; Octavia named a library after him and Augustus a theatre. His death was lamented by Virgil (*Aen.* 6. 860-86) and Propertius (3. 18).

MARCELLUS (8), MARCUS POMPONIUS (early 1st c. A.D.), grammarian, notorious for pedantic purism in diction. Nothing of his work remains.

Schanz-Hosius, § 475 a.

MARCELLUS (9) of Side, physician and poet, lived under Hadrian and Antoninus Pius and wrote forty-two books of *Ἰατρικά* in heroic metre (lost); *Περὶ Λυκανθρώπου*; a poem *Περὶ ἰχθύων* (fragments preserved); *Epigrammata* written in A.D. 160 for Herodes Atticus' *Triopion*.

Ed. M. Schneider, *Commentationes philologicae quibus O. Ribbeckio ... congratulantur discipuli* (1888), 115. M. Wellmann, *Marcellus von Side als Arzt* (1934).

MARCELLUS (10), **ULPIUS** (*PW* 4), a Roman jurist of the second half of the second century A.D., a member of the *consilium* of Antoninus Pius and Marcus Aurelius. An acute, independent thinker, he criticizes effectively the opinions of earlier jurists (even those of Julianus, q.v. 2), and is cited with predilection by his successors. His main work was the *Digesta* (thirty-one books), a partly casuistic, partly dogmatic treatise, which was extensively used by later jurists (particularly by Ulpianus (q.v. 1) in his commentary on the Edict), and was also discussed in special commentaries by Ulpianus and Scaevola (q.v. 5). Marcellus also wrote *notae* to the *Digesta* of Julianus and to Pomponius' *Regulae*, and besides this a collection of *Responsa*, a commentary *Ad legem Iuliam et Papiam*, and five books *De officio consulis*.

A. B.; B. N.

MARCIA, a freedwoman, was mistress of Quadratus and, after his execution, of Cominodius (q.v.). Friend and helper of the Christians, she co-operated in the murder of Commodus. She later married Eclectus and was killed by Didius Julianus.

H. M. D. P.

MARCIANA, **ULPIA**, older sister of Trajan (q.v.), was born at latest by A.D. 48 and probably married C. Salinius Matidius Patruinus (d. 78), by whom she had one daughter, Matidia (q.v.). Pliny (*Pan.* 84) speaks of her closeness to Trajan and Plotina. Indeed Trajan named for her two new settlements: *Colonia Ulpia Marciana Trajana* (Thamugadi, q.v.) and *Marcianapolis* in Lower Moesia (Provadiya). Though Marciana at first refused the title *Augusta*, she had accepted it by 105 (*ILS* 288). On her death in 112, she was consecrated (*Fasti Ost.*, s.a.) and in 119 Hadrian apparently flanked a temple to Matidia in Rome with halls commemorating both Marciana and Matidia.

COINS. *H.M. Conn. Rom. Emp.* in (1936), Strack, *Untersuchungen I* (1931), 41, 201 Katalog.

L. Rubel, *Z. für die öst. Gym.* 1916, 488 ff.; L. Vidmann, *Fasts Ost.* (1957), 64; Platner-Ashby, 81; Wegner, *Herrscherbild u.* 3 (1956). M. II.

MARCIANUS, **AELIUS** (*PW* 88), one of the last classical Roman jurists, was active in the period after Caracalla. He was the author of voluminous manuals (*Institutiones*, *Regulae*) and some monographs, chiefly in the domain of criminal procedure, and perhaps addressed to the new citizens created by the *Constitutio Antoniniana* (see CITIZENSHIP, ROMAN) for the purpose of instructing them in Roman Law. He cites numerous rescripts, especially from the period 198–211. This has led some to conjecture that he held office in the imperial chancery. His writings are elegant, clear, well-arranged, and not unoriginal.

W. W. Buckland, *Studi Ruccoboni* i (1932). And see under JURISPRUDENCE. A. B.; B. N.

MARCIVS (1, *PIV* 9), **ANCUS**, traditionally the fourth king of Rome (642–617 B.C.), is probably a historical figure and not an annalistic reduplication of the portrait of Numa. To surmise, from the connexion of Marcivus' name with Mars, that he was a god, or that his acts are mere duplications of achievements by members of the *gens Marcia*, is quite gratuitous. He did not build the Aqua Marcia (cf. *REF* 1) or capture and colonize Ostia (q.v.), but indubitably he seized from the Etruscans a territory near the salt-pits at the Tiber mouth, he enlarged Rome, and he built the Pons Sublicius.

Ogilvie, *Comm. Livy* 1–5, 125 ff.

P. T.

MARCIVS (2, *PW* 97) **RUTILUS**, **GAIVS**, consul in 357, 352, 344, and 342 B.C., was the first plebeian dictator (356) and censor (351). His repulse of an Etruscan invasion in 356, for which despite patrician opposition Marcivus

was granted a triumph, led to the foundation of the first Roman settlement at Ostia. By a natural confusion this settlement was subsequently attributed to King Ancus Marcius (q.v. 1).

P. T.

MARCIVS (3) is the eponymous author of a number of miscellaneous oracular sayings current in Rome in early days. During the Punic Wars certain *carmina Marciana*, similar to the Sibylline oracles, succeeded in obtaining sufficient authority to give rise to the Ludi Apollinares celebrated in 212. This may have been due partly to war-time conditions, and partly to the collection of scattered oracular sayings and prophecies ordered to be made by the Senate in the previous year. There seem to have been two diverging views about their authorship. According to Cicero (*Div.* 1. 115; 2. 113), whose view is supported by Servius in his commentary on *Aeneid* 6, there were *Marcii fratres*, men of noble birth, who wrote prophecies and oracular sayings. According to Livy, however, and several later writers, there was one only, *vates Marcivus*; and it seems impossible to determine the truth more exactly.

Of an ancient collection of *praecepta* under the name of Marcivus three Saturnian quotations survive, which may be dated at latest as of the second century B.C. It is uncertain whether they have any connexion with *Marcivus vates*.

See Morel, *FPL* 63.

A. L. P.

MARCOMAN(N)I (Stat. *Silv.* 3. 3. 170 scans Marcomāni), a West-German (Suebic) tribe, the name meaning inhabitants of a border country, are first mentioned by Caesar. Stirred up by the Cimbri and Teutones, the Marcomanni left Saxony and Thuringia (c. 100 B.C.) and settled down on the upper and middle Main; they joined Ariovistus' expedition against Gaul. Attacked by the elder Drusus (9 B.C.), they emigrated to Bohemia (c. 8 B.C.). There Maroboduus (q.v.) established a powerful kingdom, which Augustus considered a danger and wanted to destroy, but was hindered by the Pannonian-Ilyrian revolt. Weakened by a war against Arminius, Maroboduus was expelled by Catualda (A.D. 19), who in turn was overthrown by Vibilius (20), the following kings being more or less dependent on Rome. After wars under Domitian and Nerva peace prevailed till the great Marcomannic wars (166–72; 177–80) under M. Aurelius. The Marcomanni must have played their part in the subsequent wars on the middle Danube, though they are not very frequently mentioned. After 500 they left Bohemia and occupied Bavaria.

F. A. W. S.

MARDONIUS, the brilliant young nephew and son-in-law of Darius, took over command in Ionia c. 492, immediately after the great Ionian Revolt, and removed one major cause of discontent by abolishing government through 'tyrants' and permitting democracies. He may have served during the Revolt, under Datis at Lindos (*Lind. Tempelchronik*, ed. Blinkenberg (1915), 38). He then restored Persian authority in southern Thrace, despite storm damage to his fleet off Mount Athos, and being himself wounded by the Brygians. Herodotus makes him the moving spirit of Xerxes' invasion. Left in command in Greece after Salamis, he vainly attempted to detach Athens from the Greek alliance by offers of favourable terms. Withdrawing from Attica in 479 in face of the Greek land-forces, he gave battle near Plataea and was defeated and killed (see PERSIAN WARS).

A. R. B.

MARINUS (c. A.D. 130), anatomist, often mentioned by Galen, perhaps lived in Alexandria.

WORKS: (1) *Ἀνατομικαὶ ἐγχειρήσεις*; (2) an Anatomy in 20 books; (3) a book on the roots of the nerves; (4) an Anatomy of the muscles; (5) a commentary on aphorisms.

W. D. R.

MARIUS (1, *PW* 14, Suppl. vi), **GAIVS**, born c. 157 B.C. near Arpinum (q.v.), of an equestrian family apparently not of long standing, but with good Roman connexions (including the Metelli). Serving under Scipio (q.v. 11) Aemilianus at Numantia, he attracted his attention and thus won an elective military tribunate (perhaps 120, before Scipio's death). Quaestor c. 123, he was helped to a tribunate by the Metelli (119), but—in an anti-Optimate atmosphere—carried a law impeding Optimate intervention in comitial voting procedure, and threatened Metellus (q.v. 5) who opposed it. Disliked for this, he failed to gain an aedileship, but became praetor (115), barely securing acquittal (through his 'equestrian' connexions) when prosecuted for *ambitus*. His year passed quietly, and as proconsul in Spain he showed aptitude at guerrilla warfare. On his return he brought off a *coup* by marrying a patrician Julia (later aunt of Caesar, 1). In 109 Metellus (q.v. 6), impressed with his promise, forgave his past and took him to Numidia as his senior legate. There Marius began to aim at a consulship. Insulted by Metellus over this, he intrigued against him in Numidia and Rome and secured election for 107; by a special law he superseded Metellus. In enrolling troops he remedied the long-standing manpower shortage by admitting *proletarii* (q.v.), thus creating—without realizing it—a new type of client army, bound to its commander as its patron.

After fighting against Jugurtha (q.v.) with varying success, he finished the war through the diplomacy of his quaestor Sulla (q.v. 1) and triumphed on 1 Jan. 104, having already been elected consul again to oppose a threatened German invasion of Italy. Consul each year until 101, he enrolled a new army and—building on the work of Rutilius (q.v. 1)—improved its organization, equipment, and training (see *ARMIES, ROMAN*); he finally defeated the Teutones (q.v.) at Aquae Sextiae (102) and with Catulus (q.v. 2) the Cimbri (q.v.) at the Vercellae (probably near Rovigo, in the Po valley) (101). He thus built up immense *auctoritas*, attracting nobles who hoped for his favour (see *CATULUS* 2), retaining the support of *equites* and *plebs*, and securing the clientship of his Numidian veterans through land grants passed for him by Saturninus (q.v. 1). Voted a sixth consulship (100) without serious opposition, he hoped for similar aid for his German army and gladly co-operated with Saturninus in bringing about Metellus Numidicus' exile. But when he saw Saturninus building up independent power, he joined the Optimates in defending the Republic against him. He thus alienated Saturninus' supporters, but offended the Optimates by refusing to agree to Metellus' return; and when this was brought about, he had to admit defeat and left for Asia Minor (where he met Mithridates, q.v. 6), giving up hope of a censorship.

He returned when the award of an augurate in his absence restored his *dignitas*, and during the 90s he parried attacks launched on his friends (see *AQUILLIUS* (3), *NORBANUS* (1)) and on his *auctoritas* (e.g. by the prosecution of T. Matrinus (Cic. *Balb.* 48 f.), to whom he had given the citizenship); yet he seems gradually to have lost many of his noble friends as his importance faded. Seizing an opportunity in 92, he reasserted his links with the *equites* and showed his power in the prosecution of Rutilius (q.v. 1). Though he had favoured Italian enfranchisement, especially as a reward for military service, he probably opposed Drusus (q.v. 2),

who wanted to bring it about with the greatest benefit to his own faction; in co-operation with L. Marcius Philippus (q.v. 4) Marius mobilized his Italian clients against him. In 90 he commanded with fair success, on part of the northern front in the Social War, but failed to secure a special commission to save the State and retired offended, especially as the Optimates now embraced Sulla, who sought for advancement at the expense of Marius.

With war in the East imminent, Marius hoped for another consulship for 88 and violently opposed the attempt of his former friend Caesar (3) Strabo to gain it. In this he co-operated with Sulpicius (q.v. 1) Rufus; and when Sulla gained the consulship and command, Sulpicius, his Drusan plans rebuffed by the Optimates, joined Marius and, in return for political support, passed a law transferring the command to him. Sulla replied by armed usurpation; Marius, unprepared for this, had to flee (in dramatic circumstances, later much embroidered) and finally found security among his African veterans. After the expulsion of Cinna (q.v. 1) he landed in Etruria, collected an army among his veteran clients, imposed himself on Cinna as an ally, sacked Ostia, and brought about the capture of Rome. He and Cinna became consuls 86 and he was voted the Eastern command. His enemies—particularly treacherous friends like Antonius (1), Catulus (2), Caesar (2), and Crassus (2) (qq.v.)—were cruelly punished, until Cinna stopped the slaughter. Marius' health now gave out and he died before he could take up his command.

A typical *novus homo* (q.v.), like Cato (q.v. 1) before him and Cicero (q.v. 1) after, Marius wanted to beat the nobles at their own political game, substituting self-made support for their inherited connexions. It did not occur to him—as it did to some nobles from the Gracchi through Sulla to Caesar—that the rules of the game could be changed. Though connected with the *equites* by birth and interests, and favouring the welfare of soldiers (including Italians), he had no positive policies or solutions for basic problems. Yet he marks an important stage in the decline of the Republic: creating the client army (which Sulla taught him how to use), he was the first to show the possibilities of an alliance of a military leader with demagogues and a noble faction. His noble opponents, on the other hand, in their attitude both to him and to Sulla, revealed their lack of political principle and loss of power and cohesion.

Marius, after his death, remained a hero to the Populares and a villain to their opponents. Cicero (also a *novus homo* from Arpinum) uneasily admired him. The sources are conflicting and difficult to evaluate. They are fully treated in the modern works, see esp. T. F. Carney, *A Biography of Gaius Marius* (1961). Cf. also E. Badian, *Hist.* 1962, 214 ff. (with bibliography); J. van Ooteghem, *Gaius Marius* (1964). E. B.

MARIUS (2, *PW* 15), son of (1) and of a Julia (aunt of Caesar, q.v. 1), born c. 110 B.C., shared his father's flight and return (88–87). Made consul of 82 (to his mother's horror) with Carbo (q.v. 2), who hoped to exploit his name against Sulla (1), he was defeated by Sulla at Sacriportus; besieged in Praeneste, he died during its capture by Ofella (q.v.). E. B.

MARIUS (3, *PW* 42) **GRATIDIANUS**, **MARCUS**, nephew, both by birth and by adoption, of (1) and second cousin of Cicero (q.v. 1). As tribune (87 B.C.) he supported Cinna (q.v. 1) and after his return to Rome prosecuted Catulus (q.v. 2), who killed himself. Praetor twice, he announced as his own a plan evolved by the praetors and tribunes to improve the coinage and, in gratitude, received heroic honours (Cic. *Off.* 3. 80 f.); but he was not allowed to become consul. After Sulla's victory he was cruelly killed by his brother-in-law Catiline (q.v.) at the

request of Catulus (q.v. 3), and his head was thrown into Praeneste.

The scheme for the coinage probably involved having coins tested by expert slaves or freedmen (in private employ) and sealed in bags authenticated with a marked bone tab (see *PW*, s.v. 'Nummularius'). This became standard practice. E. B.

MARIUS (4, *PW* 28), **SEXTUS**, was a very wealthy owner of mines in Spain. He was accused unsuccessfully in A.D. 25, but in 33 he was charged with incest and thrown from the Tarpeian rock. His mines became imperial property.

MARIUS (5) **MAXIMUS**, a biographer of the Emperors from Nerva to Macrinus or Elagabalus, a 'continuator' and imitator of Suetonius. His work does not survive. He is probably the Marius Maximus who had a long senatorial career, governed Syria, Africa, and Asia, and was *praefectus urbi* in A.D. 217 (*ILS* 2935). He was a source of the 'Historia Augusta', in which his entirely uncritical attitude is reproduced, though the authors of the work complain of his verbosity and unreliability. Most of his material was concerned with the scandals of the imperial court and the city of Rome, and the biographies were arranged in topics as in Suetonius. He included direct quotations from documents, but chiefly from the unreliable *acta urbis*. He was still read in the time of Ammianus Marcellinus, who deplored this.

Schanz-Hosius 82 ff., G. Barbieri, *Rev. Fil.* 1954, 36 ff., 262 ff. B. H. W.

MARMARICA, a district on the coast of North Africa, being the eastern part of Cyrenaica extending from Derna in the west to the Egyptian border in the east. It roughly corresponded to the Late Roman province of *Libya Inferior* or *Libya Sicca*. The native inhabitants were collectively called Marmaridae and frequently troubled the few towns on the coast. B. H. W.

MARMOR PARIUM, an inscribed marble stele, originally about 6 ft. 7 in. high, 2 ft. 3 in. broad, and 5 to 6 in. thick, set up at Paros. Two fragments survive, one of which, brought from Smyrna to London in 1627, is now preserved in the Ashmolean Museum, Oxford (save the upper part, which perished during the Civil War), while the other, discovered at Paros in 1897, is now in the Museum there. The compiler of the inscription, whose name is lost, claims to have 'written up the dates from the beginning, derived from all kinds of records and general histories, starting from Cecrops, the first king of Athens, down to the archonship of Astyanax (?) at Paros and Diognetus at Athens', i.e. 264/3 B.C. The text is written continuously, but comprises a number of items (80 on the first fragment, 27 on the second), each containing one or more events, dated by the number of years separating it from 264/3 and by the name of the Athenian king or archon then in office; the first fragment covers the period from 1581/80 to 355/4; the second that from 336/5 to 299/8. The events commemorated form a curious medley, drawn chiefly from political, military, religious, and literary history.

The best editions are those by F. Jacoby, *Das Marmor Parium* (1904), and *JGGrH* II B, D, no. 239; and by F. Hillel von Gaertingen, *JG* xii (5), 444 and 315, xii Suppl. 110. Cf. Jacoby, *Rh. Mus.* 1904, 1 ff.; Tod 205; G. Pöhl, *Die inschriftliche Überlieferung der griechen* (1964), 33 f. M. N. T.

MAROBODUUS, a prince of the Marcomanni, persuaded his tribe to migrate from southern Germany to Bohemia (soon after 9 B.C.), where he built up a kingdom and extended his power over the Germans of Saxony and Silesia. His army was large and well trained. Confronting Roman armies of invasion from the west and from

the south in A.D. 6, he was saved from destruction by the outbreak of the great rebellion in Illyricum. He refused to help Arminius three years later. In A.D. 19, however, as the result of troubles fomented by the Romans, Maroboduus was expelled from his kingdom, sought refuge on Roman territory, and was interned at Ravenna, where he lived on for eighteen years, 'multum immunita claritate ob nimiam vivendi cupidinem' (Tac. *Ann.* 2. 63). R. S.

MARON, a legendary priest of Apollo, son of Euanthes, of Ismarus in Thrace, who gave Odysseus the wine with which he made Polyphemus drunk (see CYCLOPES), along with other presents, for sparing him and his family (*Od.* 9. 197 ff.). His name links with the Thracian place-name, Maroneia. Later writers connect him with Dionysus, e.g. Euanthes is Dionysus' son (schol. *Od.* ibid.).

MARRIAGE, LAW OF. I. GREEK

1. Greek marriage was monogamous; indeed, monogamy was believed to be a distinguishing feature of Greek as opposed to barbarian usage (Eur. *Andr.* 172 ff.). The oldest form of contracting marriage was the purchase of the bride from her *κύριος* (father or nearest male relative); her consent was not necessary, for she was the object of the sale. On this occasion the bridegroom gave to the father a consideration (*ἐδνα*), which, after having been originally a real purchase-price, became later a fictitious one, since the father delivered it to the wife, or the husband gave it directly to her without intervention of the father. In classical Attic law the conclusion of a marriage, with handing over (*ἐκδοσις*) of the bride (or of the protection over her), was necessarily preceded by an act of betrothal (*ἐγγύη*) between the *κύριος* and the bridegroom. The legal nature of this *ἐγγύησις* is debated. In Hellenistic times *ἐγγύη* and *ἐκδοσις* disappear and marriage becomes simply a matter of fact, usually but not necessarily identified by the giving of dowry (*προίξ*) and the making of a written marriage contract.

2. Greek marriage, being a mere matter of fact, could be dissolved by simply terminating the facts—in the case of the husband by expelling the wife. In principle the wife likewise could simply leave the home, but in order to establish the husband's duty to return the dowry it was usual for her to give written notice of divorce in court.

II. ROMAN

3. According to the celebrated definition of Modestinus (q.v.), Roman marriage was 'coniunctio maris et feminae et consortium omnis vitae, divini et humani iuris communicatio' (*Dig.* 23. 2. 1), though this is rather an ideal than a legal definition. No formalities were necessary for the inception of a marriage: the ceremonies which normally accompanied it had no legal character. All that was necessary was the living together of a man and a woman with the intention of forming a lasting union (*affectio maritalis*) to which should attach the social consequences of marriage (*honor matrimonii*). The ceremonies, and in particular the customary *ductio in domum mariti*, would provide the normal evidence of this intention. Moreover, the intention was necessary not merely at the beginning of marriage but throughout; hence if the intention ceased, the marriage was in principle at an end (see below). Subject to this factual character, Roman marriage was essentially monogamous.

4. Marriage in the ancient world was a matter of personal law (see IUS GENTIUM), and therefore a full Roman marriage (*iustae nuptiae, iustum matrimonium*) could exist only if both parties were Roman citizens or had been granted *conubium* (right to contract a Roman

marriage; see *COMMERCIUM*), either generally (e.g. *Latini*, q.v.) or individually. Only such a marriage could place the children in the *patria potestas* (q.v.) of the father and create rights of succession, etc. Further, parties might have *conubium* in this sense but still be incapable of marrying each other (lack of so-called relative *conubium*). Impediments of this kind varied through the centuries, but the principal were: (1) Difference of social rank: patricians could not marry plebeians until a *Lex Canuleia* (445 B.C.); nor could any free person marry a freedman or freedwoman, until the marriage legislation of Augustus (*Lex Iulia de maritandis ordinibus* of 18 B.C. and *Lex Papia Poppaea* of A.D. 9) limited the restriction to persons of senatorial rank. (2) Considerations of morals or public policy: e.g. the Augustan legislation forbade the remarriage of an adulteress, and unions between free persons and women of ill-repute; later, provincial officials were forbidden to marry women of their province (to preserve the impartiality and loyalty of the administration); and soldiers, at least in some circumstances, were forbidden to marry at all. (3) Relationship, by blood, adoption, or marriage, within certain degrees. Also, although 'nuptias non concubitus sed consensus facit', the parties must be physically capable (limit of age eventually 14 years for males, 12 for females).

5. The Augustan restrictions on marriage gave new importance to the already existing institution of *concubinatus*, a permanent union similar to marriage, but because of these restrictions or for social reasons, lacking *honor matrimonii*. It had no legal consequences, but was a tolerated method of satisfying the form but not the substance of the restrictions. It was not, however, necessarily an alternative to marriage: a man might have a wife and a concubine, or more than one concubine. Under the influence of Christianity concubinage was subjected to restrictions, and in particular became exclusively a monogamous alternative to marriage, permitted only within the same limits of age and relationship.

6. Marriage was usually, but not necessarily, preceded by a betrothal, *sponsalia*. In the early law this reciprocal promise of marriage was made on behalf of the future consorts by their fathers in the solemn form of a *sponsio* (see *STIPULATIO*) (hence the nomenclature *sponsalia*, *sponsus*, *sponsa*); later it became informal and was not binding, and even a *stipulatio poenae* in case of breach was without effect. In course of time some secondary legal effects, similar to those of marriage (e.g. creation of an impediment to marriage with a relative of the betrothed) were ascribed to the *sponsalia*. In the fourth century A.D. an institution of oriental origin, the *arrha sponsalicia*, or earnest money in guarantee of the fulfilment of the promise of marriage, came into use.

7. Except where accompanied by *manus* (q.v.), marriage made no difference to the status or property rights of the wife. She remained either in the *patria potestas* of her father or *sui iuris*, as before, and retained unfettered ownership of her property, if any. This entire separation of the property of husband and wife was, however, considerably modified by the institution of dowry (*dos*). *Dos* was not legally necessary, but it was considered to be a moral duty so to endow a daughter. *Dos* could be constituted either by an actual conveyance of the property, or by a promise (either in the old special form of *dotis dictio*, a unilateral declaration in formal words, or merely by *stipulatio* (q.v.)). In the early law the husband acquired full ownership of the *dos*, considered as a contribution to the expenses of the joint household, but the wife, or whoever provided the *dos*, could stipulate for its return at the end of the marriage. With the increase of divorce in the late Republic there developed an *actio rei uxoriae*, by which the return of the *dos* could be required, even if there had been no *stipulatio*. In this

way the husband was required to account, subject to any special agreement (*pactum dotale*), for his management of the property; he could also retain fixed proportions of it in certain circumstances, especially in the event of divorce by fault of the wife. His powers were subsequently still further reduced, and under Justinian he had in substance only a usufruct.

8. It necessarily followed from the factual character of Roman marriage that it could be brought to an end by the free will of either or both. As with the formation of marriage, so also with its termination, all that was needed was some evidence of intention, though in the case of unilateral divorce (*repudium*) a communication by intermediary (*per nuntium*) or later by letter was common. Augustus in his marriage legislation required a declaration before seven witnesses, but probably only where *repudium* was for adultery by the wife, the purpose being to exclude the possibility of the husband's being prosecuted as a *leno* (see *ADULTERY*). If the wife were in *manu* it was necessary also to terminate the *manus*, either by *mancipatio* (q.v.) to a fiduciary, who then made a manumission, or, if *manus* had been created by *confarreatio*, by a reversal of that process (*diffarreatio*). Divorce was rare in the earlier Republic, but by the last century B.C. had become common, almost the only material deterrent being the rules governing retention or return of *dos* (above). The Christian Emperors imposed penalties for divorce on grounds not recognized by the legislator, but did not deprive it of effect. Divorce by mutual consent remained unpenalized until Justinian forbade it, but the ban was lifted within five years of his death.

GREECE. J. H. Lipsius, *Attisches Recht* ii 2 (1912), 468 ff.; W. Erdmann, *Die Ehe im alten Griechenland* (1934), H. J. Wolff, *Beiträge zur Rechtsgeschichte* (1961) (reprinted from *Traditio* 1944); *Sav. Zeitschr.* 1950; *Tidschr. voor Rechtsgeschiedenis* 1952, M. I. Finley, *Seminar* xii (1954); W. K. Lacey, *The Family in Classical Greece* (1968). A copious literature exists on the law of marriage in Graeco-Roman *patria*, especially on the very controversial matter of *γυναικὸς ὑπαρξὶς* and *ἀνυπαρξία*, cf. F. Hozza, *Aegyptus* xiv (1934), W. Erdmann, *op. cit.*; R. Taubenschlag, *Law of Greco-Roman Egypt* (1955). A. R. W. Harrison, *Law of Athens. Family and Property* (1968), 1 ff. ROMAN. H. F. Wolff, 'Written and unwritten Marriages in Hellenistic and Post-classical Roman Law' (*Amer. Philol. Assoc., Philological Monographs* ix, 1939). A. R., B. N.

MARRIAGE CEREMONIES. GREEK. The favourite time was said to be winter, in the month of Gamelion. Sacrifice (*προτέλεια γάμων*) was made to the *θεοὶ γαμήλιοι*, primarily Zeus and Hera, and a lock of the bride's hair might be dedicated. The bride took a ritual bath (in Athens it would appear popular to have the water brought from the spring Kallirhoe). A wedding feast was held, generally at the house of the bride's father: the bride was present, veiled, with other women, but they sat apart from the men. In the evening the bridegroom took her, veiled, from her father's house, on a carriage (*ἀμαξα*); he sat on one side of her and his best friend (*παράνυμφος* or *πάροχος*) on the other. A torchlight procession went ahead singing the wedding-cry of *Ilmen*. At the bridegroom's house, the bride was conducted, still veiled, into the bridal chamber, and the epithalamium was sung outside the closed door. This is an outline account of high-society wedding ritual inferred from Athenian literature. It is formalized and idealized.

K. F. Hermann-Blümner, *Lehrb. d. griech. Privataltertümer* (1882), 268 ff.; W. Erdmann, *Die Ehe im alten Griechenland* (1934), 250 ff.

2. ROMAN. The favourite season was June. Usually on the previous day the bride put away her *toga praetexta*—she had come of age. Her dress and appearance were

ritually prescribed: her hair was arranged in six locks (*sex crines*), with woollen fillets (*vittae*), her dress was a straight white woven tunic (*tunica recta*) fastened at the waist with a 'knot of Hercules', her veil was a great flame-coloured head-scarf (*flammeum*) and her shoes were of the same colour. Friends and clients of both families gathered in the bride's father's house: the bridegroom arrived, words of consent were spoken, and the matron of honour (*pronuba*) performed the ceremony of linking bride's and bridegroom's right hands (*dextrarum iunctio*). This was followed by a sacrifice (generally of a pig), and (in imperial times) the marriage contract (involving dowry) was signed. Then the guests raised the cry of *felicitur*. There followed the wedding feast, usually at the expense of the bridegroom. The most important part of the ceremony then took place: the bride was escorted in procession to the bridegroom's house (*deductio*), closely accompanied by three young boys, whither the bridegroom had already gone to welcome her. The bridegroom carried her over the threshold to avert an ill-omened stumble; in the house she touched fire and water, was taken to the bedchamber and undressed by *univirae* (women who had known only one husband), and the bridegroom was admitted. Meanwhile an epithalamium might be sung. Such is a generalized account of a society wedding as it appears in literature. There could be many variations of detail and there could be different forms of marriage (see MARRIAGE, LAW OF, II).

A most important source is Plutarch, *Quaest. Rom.*: see the edition by H. J. Rose (1924), nos. 1, 2, 6, 7, 8, 29, 30, 31, 65, 85, 86, 87, 105, and 107. Marquardt *Privatleben* (1886), 39 ff., II. Blümmel, *Rom. Privatleben* (1911), 349 ff.

MARRIAGE, SACRED (*ἱερὸς γάμος*), the sexual union of two persons, both divine or one divine and the other human but in some way sacral. The supposed result would appear to be increase of fertility, animal or vegetable, or of prosperity in general. An interesting example is the union on the day of the Choes (see ANTHESTERIA) of Dionysus with the wife of the Basileus at Athens (cf. DIONYSUS). Here one partner only is divine, there being no sufficient reason to suppose that an Attic queen was regarded at any date as other than human. No doubt, however, while the monarchy lasted both she and her husband had some priestly functions. Both partners are divine at the Daedala (references under BOEOTIA, CULTS), viz. Zeus and Hera; for a main feature of it was the bringing of a wife for Zeus. She was represented by a wooden image and came on a carriage, like a Boeotian bride (cf. Plut. *Quaest. Rom.* 29), accompanied by a brideswoman (*νυμφεύτρια*, Paus. 9. 3. 7).

Nilsson, *GGR* I. 121 ff.

H. J. R.

MARRUCINI, a small tribe on the Adriatic coast of central Italy. Chief town: Teate (modern *Chieti*). They spoke an Oscan-type dialect and had very close ties with the Marsi, Paeligni, and Vestini (qq.v.). Allied with Rome before 300 B.C. they remained loyal until they joined the Social War insurgents under Herius Asinius, grandfather of Asinius Pollio (q.v.). Their rapid romanization ensued.

E. T. S.

MARS (*Mavors, Mamers, Etr. Maris*; reduplicated *Marmar*), next to Jupiter (q.v.) the chief Italian god. Months were named after him at Rome (Martius, mod. Engl. March), Alba Longa, Falerii, Aricia, Tusculum, Lavinium, and among the Hernici, Aequiculi, Paelignians, and Sabines (Ov. *Fasti* 3. 89-95, presumably from Verrius Flaccus). At Rome his festivals came in March and October, with the exception of the first Equiria (27 Feb.). They were the *feriae Marti* on 1 Mar. (old New Year's Day), second Equiria (14 Mar.), *agonium Martiale* (17 Mar.), Quinquatrus (19 Mar.); after-

wards extended to five days and supposed to be a festival of Minerva, q.v.), and Tubilustrium (23 Mar.). All these may be reasonably explained, so far as their ritual is known, as preparations for the campaigning season, with performance of rites to benefit the horses (Equiria), trumpets (Tubilustrium), and other necessities for the conduct of war. On 1, 9, and 23 Mar. also, the Salii, an ancient priesthood belonging to Jupiter, Mars, and Quirinus (Servius on *Aen.* 8. 663), danced a sort of war-dance in armour of the fashion of the Bronze Age and sang their traditional hymn, addressed apparently to all the gods, not to these three only. This is intelligible as further preparation for war. In October the Equus October came on the Ides (15th). A horse-race (q.v.) took place in the Campus Martius; the off horse of the winning team was sacrificed and his head contended for by the inhabitants of the Sacra Via and the Suburra. On the 19th was the Armilustrium, presumably the purification of the soldiers' arms before putting them away for the winter. In this month again the Salii performed their dances ('arma ancilia mouent', the *ancilia* being archaic shields shaped like the figure 8). Before commencing a war the general shook the sacred spears of Mars in the Regia, saying 'Mars uigila'; it is most probable that these were the original embodiments of the god. His priest is the *flamen Martialis* (see FLAMINES) and his sacred animals the wolf and woodpecker (see Wissowa, *RR* 141 ff., 555 ff.). It is therefore not remarkable that he is usually considered a war-god and was equated with Ares (q.v.). But it has been pointed out (summary in Bailey, *P. Ovidi Nasonis fastorum lib. iii*, 33 ff., cf. Frazer, *Fasti of Ovid* iii. 1 ff.) that he has agricultural functions also (Cato, *Agr.* 141. 2 ff.; hymn of Arval Brethren, Henzen, *Acta Arvalium*, cciv), and that some at least of his feasts (see above) can be interpreted as agricultural from their date and the ceremonial. Four explanations seem possible. (a) He was originally a war-god, and therefore called upon to guard the fields of his worshippers from enemies physical and spiritual. (b) He was a god of the wild, and therefore was worshipped either to protect the fields or when his territory was crossed on campaign. (c) He was originally a chthonian deity, hence a god of death and hence of war (cf. ARES), though originally connected with the fertility of the soil. (d) He was the high god, little differentiated as to function, of a people often engaged in war and having agriculture for their staple industry and food-supply. All of these have been maintained by various scholars.

His mythology is almost entirely borrowed from Ares, the only exception being the comic tale of how he was deceived into marrying Anna Perenna (q.v.; Ov. *ibid.* 675 ff.), probably a folk-tale applied (by Ovid?) to deities treated after the Alexandrian manner. Under Augustus he obtained an important new title, Ultor, in recognition of the victory over Caesar's assassins (Nash, *Pict. Dict. Rome* i. 401 ff., and Platner-Ashby, 329 f., for his other places of worship in Rome).

Latte, *RR* 114 ff.

H. J. R.

MARSII inhabited mountains and strategic passes in central Italy near the Fucine Lake. Their chief town was Marruvium (Strabo 5. 241). They probably spoke an Oscan-type dialect, but their early latinization makes proof of this impossible. They were allied, ethnically and politically, with Marrucini, Vestini, and Paeligni (qq.v.), but from early times were friendly to Rome (cf. App. *BCiv.* 1. 46). In 340 B.C. they gave Roman troops passage through their territory and remained friendly in the Second Samnite War (Livy 8. 6, 29; 9. 13; Diod. 20. 44, 101. Records of Marsic hostility are suspect: K. J. Beloch, *Röm. Gesch.* 403; Livy 9. 41, 45; 10. 3 probably confuses Marsi with Aequi). The Marsi were loyal

against Hannibal (Livy 28. 45) but took the initiative in demanding Roman citizenship in the Social War (hence often called Marsic War: Vell. Pat. 2. 21). When this demand was granted, the separate nation of Marsi disappeared. Marsic magicians were famous for miraculous snake-bite cures. A grove, sacred to Angitia, Italic goddess of healing, stood on Marsic territory (whence modern *Luco ne' Marsi*).

G. Devoto, *Gli Antichi Italici* (1951), 125 f.

E. T. S.

MARSYAS (1), a satyr or silenus, generally associated with the river of that name, a tributary of the Macædon, but also with other streams (Jessen in Roscher's *Lexikon* ii. 2439, s.v. for the legend and its representation in art). He was a musician and inventor of a form of music for flute or oboe, the *μυρρῶν αὐλήμα*, Paus. 10. 30. 9, which passage also shows that at Celænae he was the subject of local myths and regarded as a guardian deity. He is therefore pretty certainly a Phrygian or at all events Asianic figure. In the Greek handling of his story, the origins of which are obscure, he is associated with Athena and Apollo (qq.v.) as follows. Athena, having invented the oboe (*αὐλός*), threw it away because it distorted her face to play it. Marsyas picked it up and soon learned to play on it (*Frag. Trag. Adesp.* 381 Nauck; Melanippides and Telestes in Ath. 616 e ff.; and later authors). He now challenged Apollo to a contest in music; Apollo, having defeated him, took advantage of an agreement that the winner should do as he liked with the loser and flayed him alive (Apollod. 1. 24). The river sprang from his blood or the tears of his mourners.

The picking up of the discarded flutes was shown by Myron in the mid fifth century in a bronze group on the Acropolis, and this and the contest with Apollo on Attic vases of the second half and in later works. The punishment was shown by Zeuxis and appears in fourth-century vase-painting and in a famous Hellenistic statuary group.

MARSYAS (2) of Pella, relative and afterwards admiral of Antigonos I, wrote on Alexander.

FGH II 135.

MARTIAL (MARCUS VALERIUS (*PIW* 233) MARTIALIS), born at Bilbilis in Spain c. A.D. 40 (1. 61. 12), died c. 104. His cognomen records his birth on 1 Mar. (9. 52; 10. 24 and 92. 10; 12. 60). H. Lucas (*CQ* 1938) argues against taking this literally; but references to other birthdays seem to mark actual anniversaries rather than adjacent kalends (e.g. 3. 6; 11. 65). Educated in Spain, he went in 64 to Rome, where intimacy with his fellow Spaniards Seneca and Lucan was soon cut short by their fate in the Pisonian conspiracy. Celebrating at Rome his 57th birthday (10. 24. 4), he had spent thirty-four years there (10. 103. 7–10, i.e. in a poem probably of A.D. 98, but this depends on whether it belongs to the first or second edition of book 10). Before his *Spectacula* (80) we know little of his career. It was one mainly of poverty-stricken dependence on patrons not over-generous in return for complimentary verses. For a time he had to be content with a three-storey-high lodging in the sweltering city (1. 117. 7); acquisition of a small farm at Nomentum afforded a welcome relief. By degrees his social influence, but not his wealth, increased. He received an honorary military tribunate and, though he never married, the *ius trium liberorum* (q.v.) (3. 95. 5). Brought into contact with all classes from Emperor and court downwards, he chronicled succinctly every sort and condition of men and women. With his chief literary contemporaries, except Statius, he had friendly relations. These included Frontinus, Juvenal, Silius Italicus, Quintilian, and the

Younger Pliny. His early works attracted notice, but his real fame rests on the amazing versatility which marks his epigrammatic depiction of life in the volumes issued from 86 (books 1, 2) to 98 (book 11). Then, under Nerva, he recognized that indecency and flattery were no longer acceptable. The Younger Pliny paid for his return to his never entirely forgotten homeland, and he settled on a rural property presented by a patroness Marcella. Three years later his final book was complete and in a letter which can be dated c. 104 Pliny regrets his recent death.

WORKS. A.D. 80. *Liber Spectaculorum* commemorated the opening by Titus of the Flavian Amphitheatre ('Colosseum'). Its 33 surviving pieces record contests in the arena without as yet full mastery of style.

A.D. 84–5. (a) *Xenia* (now book 13), mottoes for 'guest-gifts', 127 pieces, all except three in elegiac couplets, and, with four exceptions, on eatables and drinkables—an extended list indicative of Roman dinners for the fuller *menus* in some of Martial's invitations (10. 48; 11. 52). (b) *Apophoreta* (now book 14), mottoes for 'gifts to take home', 223, all, except two, couplets, originally perhaps paired to suit the purse of rich and poor alternately, and forming an instructive catalogue of presents.

Of his twelve *Epigrammaton libri* most appeared at intervals of about a year from 86, when he issued a revised edition of books 1 and 2 together. Book 3 came out during a temporary retreat to Cisalpine Gaul. From books 10 and 11 he made for Nerva an expurgated anthology. Book 12 occupied him for three years after he left Rome in 98. The division into books was his own (2. 93; 5. 2 and 15; 7. 17, etc.). Prose prefaces of literary significance are given to books 1, 2, 8, 12, and a few lines of prose introduce the poem prefixed to book 9.

Of his 1,561 poems the most by far, 1,235, are in elegiac metre, where Ovid's influence unites with that of Catullus; 238, hendecasyllabic; 77, choliambic; a few are in iambs and hexameters. His three chief metres are frequently, though not exclusively, used satirically; but he can employ limping iambs for telling description or personal grief (3. 58, a farm; 10. 30, beach at Formiae; 5. 37, lament for Erotion: cf. the beautiful one in elegiacs 5. 34); while hendecasyllables can be realistic, as in 4. 64 (a view), or semi-personal, 4. 55 (pride in Spain). Martial regards as his Latin exemplars Catullus, Domitius Marsus, Pedo Albinovanus, and Gaetulicus (2. 77; 5. 5. 6). The last-named may be the *Γαυθαῖκός* of the *Greek Anthology*, and recalls its influence, which Martial never mentions. But Greek epigrams contributed to his literary skill and some (e.g. those by Lucilius, q.v.) suggested subjects, though Martial's great repertory lay in the Roman world around and though his fame was largely won by the suspension of point or sting to the close of an epigram—a feature comparatively rare in Greek.

Martial's predominant interest centred in his fellow human beings: 'hominem pugna nostra sapit' (10. 4. 10). He denounces mythology as remote from life (4. 49); and in his pictures of Roman society, high and low, rich and poor, virtuous and vicious, he is a spectator writing with a sort of Spanish detachment. His *métier* was no deep system of thought, but extraordinarily keen observation and sharply condensed expression. Much of his work is therefore that realism in a nutshell which fits Coleridge's definition of an epigram as 'a dwarfish whole: its body brevity and wit its soul'. He often calls his poems *nugae* or *ioci*, yet he maintains they are not mere flippancies. They reflect life as in a mirror (10. 4. 8). Conscious of contemporary fame (5. 15; 6. 60; 7. 88), he is sure that he will survive, and no century, medieval or modern, has failed to remember him.

Where Martial most repels is in his undisguised mime-like obscenity, parallel to the naked licence of the Floralia, and in that grotesque adulation of Domitian

which tempts him into artificial conceits foreign, as a rule, to his genius. The method in his satiric epigrams is one of concealed personalities, using invented names (2. 23), 'to spare the sinner but denounce the sin' (10. 33. 10). He thus regards his sportive attacks as harmless ('ludimus in nocui', 7. 12), but recognizes that, to avoid insipidity, epigrams need a drop of gall (7. 25). His poems of friendship and of mourning over young lives cut short are a winning testimony to the warm affections of the most many-sided of all epigrammatists. Privations rather than any theoretical Stoicism taught him endurance as a health of soul. He has little sympathy for the theatrical exit from the world affected by some Stoics (1. 8. 5-6): 'contempt for life is easy in distress' (11. 56. 15). Without profound philosophy, he yet had the roots of his writings in his manifold experience of life and penetrating insight into humanity.

LIFE AND WORKS. L. Friedländer's ed. (*infra*), introd.; *Sitten-geschichte Roms* (ed. 9, posthumous, by Wissowa) iv. 209 ff.

TEXTS. W. Heraeus (1925); W. M. Lindsay, O.C.T. (1920).

COMMENTARY. L. Friedländer, *Martialis Epigrammaton Libri* (1886).

TRANSLATIONS. The Bohn translation (prose) adds many examples of verse translations including some by W. Hay, 1755. W. C. A. Ker (prose with text, Loeb, 1919-20). J. A. Pott and F. A. Wright, *Twelve Books* (London and New York, 1926). J. W. D.

MARTIANUS CAPELLA, of North African origin and a proconsul, composed between A.D. 410 and 439 a didactic treatise, addressed, in accordance with literary convention, to his son, in the mixture of prose and verse inherited from the Menippean Satire. Its usual title is *De Nuptiis Mercurii et Philologiae*, and the first part describes in a fantastic setting and in a style influenced by Apuleius, the ascent to heaven of Philologia, accompanied by her handmaids the seven Liberal Arts, to be married to the god of *Eloquentia*, Mercury. This extravagant fantasy was the model for subsequent allegories involving heavenly ascents. The remainder of the work is a compendium of elementary and superficial information about the Seven Arts, and as such it appealed to the later Carolingians and the twelfth-century school of Chartres, especially on account of its cosmographical information. Martianus was a mere compiler, an adherent of paganism, well grounded in Greek.

Most of the numerous MSS. have been examined and described by C. Leonardi (*I codici di Marziano Capella*, 1959) and much work has been and is still being done on the medieval commentaries.

EDITIONS. F. Eysenhardt (Teubner, 1866); A. Dick (Teubner, 1925). J. Willis is preparing a new Teubner text, and W. H. Stahl and R. Johnson an English translation. For the results of latest research and bibliographical references, W. H. Stahl, *Speculum* 1965, 102 ff.

MARULLUS. At his rhetorical academy the Elder Seneca and Porcius Latro were fellow students (Sen. *Controv.* 1 *praef.* 22).

MARZABOTTO, 17 miles south-west of Bologna, is near the site of an Etruscan city (Etr. ? *Misa*) on the flood-plain of the Reno, which by a subsequent change of course has partially destroyed it. The city, which gives us a unique picture of the ancient appearance of an Etruscan city, was laid out as a carefully oriented rectangular grid divided into two halves by a wide north-south road crossed at right angles by secondary roads, the northernmost of which connects the urban complex with a row of temples on a higher terrace. The quarters of the city are divided into *insulae* of city-dwellings separated by party walls and similar in plan to certain chamber-tombs at Caere (q.v.). The earliest finds belong to the last quarter of the sixth century, and there is a preponderance of material from the second half of the fifth. In the fourth

century the area was invaded by Gauls, who left a cemetery.

D. W. R. R.

MASADA is a small isolated plateau rising 1,300 feet sheer above the western shore of the Dead Sea. A small fort was built there by either Jonathan Maccabaeus or Alexander Jannaeus. Herod the Great (q.v.) used Masada as a refuge for his family during the Parthian invasion of 40 B.C., and later developed it as a sumptuous residence and the most southerly of the chain of fortresses controlling his kingdom. Recent excavations have supplemented Josephus' description of his buildings. The plateau was surrounded by a casemate wall with towers, except at its northern tip, where natural rock terraces were used to form a three-tiered pulace. At the western edge of the plateau there was a much larger palace on a magnificent scale, and other buildings included a garrison-block, baths, storage rooms for vast quantities of food and weapons, and (probably) a synagogue. Other parts of the plateau may have been cultivated. Enormous cisterns were supplied by aqueducts from two wadis and by the infrequent rain. On the east the fortress was accessible only by the tortuous and precipitous 'Snake path'. The easier western approach was guarded by a tower.

Early in the revolt of A.D. 66 the Jewish extremists, the zealots or *sicarii*, captured the fortress from its Roman garrison and held out until three years after the fall of Jerusalem. In May 73, after a siege of six months, Masada fell to a force of some 7,000 legionaries and auxiliaries under Flavius Silva, who surrounded the rock with eight siege camps and a circumvallation (still clearly visible), and built an earth ramp (still standing), crowned with a stone platform on which artillery was mounted, against the lowest part of the cliffs on the west. When the wall was breached, the garrison, less than 1,000 strong, set fire to the buildings and then, with the exception of two women and five children, committed suicide. The fortress was reoccupied by Roman troops until early in the second century.

Finds at Masada, mostly of the Zealot period, include numerous domestic objects, ostraca, coins, remains of food and clothing, and scrolls containing fragments of Old Testament books and a liturgical document of the Qumran sect.

MASCHALISMOS (μασχαλισμός), a practice adopted by man-slayers, literally to prevent the ghost from walking or otherwise manifesting itself. The hands and feet of the corpse were cut off and tied under the armpits (μασχάλαι). See Aesch. *Cho.* 439; Soph. *El.* 445, with schol. there, which, however, is confused; Jebb's note and appendix ad loc. quote the other authorities, all apparently going back to Aristophanes of Byzantium, and analyse them usefully.

Nilsson *GGR* 12. 92, 99.

H. J. R.

MASINISSA (so Latin writers; Polybius gives *Μασσινάσσης*) (c. 240-148 B.C.), son of Gaia king of the eastern Numidian Massyles, was brought up at Carthage and served with the Carthaginians against the Romans in Spain from 212 until 206, when he was won over by the diplomacy and friendship of Scipio (q.v. 5). Dynastic troubles following Gaia's death forced Masinissa to flee from his kingdom, which was partially overrun by Syphax (q.v.). After many adventures Masinissa joined the Romans when they landed in Africa (204), and fought in the night attack on the enemy's camps and at Campi

Magni, after which he defeated Syphax and reoccupied Cirta, where he met Sophonisba (q.v.) in 203. He was then publicly hailed as king by Scipio, according to Livy (30. 15. 11). His cavalry played a decisive part in Scipio's victory at Zama (202). Thereafter as Rome's faithful ally Masinissa was complete master of all Numidia, while Carthage was by treaty unable to resist when he gradually advanced his frontiers at her expense, filching the Emporia on the Syrtis and finally (c. 155) Tusca near Campi Magni. To Carthaginian complaints of this naked aggression Rome merely replied by sending out boundary commissions which decided in Masinissa's favour or left the question unsettled (e.g. in 193, 182, 174, 172, 153). Finally, helped by a party within Carthage, Masinissa goaded the Carthaginians to break their treaty with Rome by attacking him; he defeated them (150). When the Roman army arrived he was treated somewhat coldly by the Romans, who feared his ambitions (see PUNIC WARS). He died soon afterwards (148), and his kingdom was divided between his sons.

Of great physical strength even in extreme old age, Masinissa was a brave soldier, a skilful diplomatist, and a creative statesman. He not only extended his empire until it embarrassed Rome, but he energized its economic and social life, making 'nomads into farmers and welding them into a State' (Strabo 17. 833), and turning local dynasts into feudal barons owning large estates and loyal to the throne; Punic art, language, and culture permeated inner Numidia, urban life was encouraged, and Masinissa, following the pattern of Hellenistic monarchy, became Numidia's greatest king. He united his country and by widening the basis of Punic civilization enabled it to survive to influence the Africa of the Roman Empire.

J. Mazard, *Corpus Nummorum Numidiae Mauretaniaeque* (1955), 70 ff.; G. Camps, *Masinissa (= Libyca viii, 1960)*; P. G. Walsh, *JRS* 1965, 149 ff. H. H. S.

MASSALIA (MASSILIA) in Roman writers), modern *Marseille*, was founded c. 600 B.C. by settlers from Phocaea (q.v.), who obtained the site, on the excellent harbour of Lacydon (*Vieux-Port*) from the Ligurian Segobriges. Though preceded in the area by Rhodian and other traders, the Massaliotes eventually dominated the coast from Nicaea (q.v. 2) to Emporiae (q.v.), with outposts further west at Hemeroscopium, Alonae (near *Cape Nao*), and Macnaca (near *Malaga*). This last, founded for trade with Tartessus (q.v.), was soon lost to the Carthaginians though Massaliote venturing beyond the Straits of Gibraltar is reflected in the anonymous sixth-century *Periplus* (see AVIENIUS) and in the works of Pytheas (q.v.) and Euthymenes, who explored the west African coast. In Gaul and eastern Spain the Greek presence had profound effects. Trade up the Rhône, especially in the sixth century, contributed to the evolution of the La Tène culture of the Celts, while among the Ligurian and Iberian tribes of the coast all excavated hill-forts have yielded quantities of imported pottery and many show Greek influence in their fortifications, architecture, and art; occasionally, as at St. Blaise and Glanum (q.v.), a native settlement was actually taken over. The introduction of the vine and olive completed the picture of *Gallia in Graeciam translata* (Just. *Epit.* 43. 4. 2). Despite Massalia's remoteness and the failure of the Phocaean expedition to Corsica (q.v.), relations with Greece were maintained with a treasury at Delphi. Renowned for the stability of her own aristocratic constitution (Strabo 4. 179; Cic. *Flac.* 26. 63), she was not involved in wars with other Greek cities, but victories over the Carthaginians are recorded in the sixth and fifth centuries. She early enjoyed Rome's *amicitia* which later developed into formal alliance; Massaliote ships helped Rome in the Second Punic War. In 125 B.C. constant aggression by the Salluvii

(q.v.) prompted an appeal to Rome, which led ultimately to the formation of the Provincia. Having supported Pompey, the city was taken by Caesar in 49 B.C. Thereafter, though retaining federate status and a high reputation for Hellenism, Massalia gradually declined. The city wall was rebuilt under Nero by the doctor Crinias, and Maximian (q.v.) defended himself here in 307. Excavations since 1945 have revealed many details of both Greek and Roman phases, including a Greek theatre, temples, agora, docks, town walls, and pagan and Christian cemeteries.

MASSICUS MONS, mountain spur projecting from the Apennines (q.v.) towards the Tyrrhenian and separating Latium from Campania (qq.v.). It is not lofty but very fertile; grapes from its slopes produced some of the choicest wine in Italy. Sinuessa (modern *Mondragone*) controlled the narrow gap between its western extremity and the sea. E. T. S.

MASTARNA, a legendary hero of Etruria, was identified with Servius (q.v. 1) Tullius by the Emperor Claudius or his authority (Dessau, *ILS* 212; A.D. 48). According to another, purely Etruscan, version (attested by the famous wall-paintings from Vulci), Mastarna came to power at Rome after rescuing his comrade Caelus Vibenna, and murdering a king Tarquinius. He must therefore be identified not with the Servius Tullius of the Roman tradition, but with the Servius Tullius of the Etruscan version, or with Porsenna (q.v.), or with both. In any case, although he may be a purely mythical figure, Mastarna represents an Etruscan king of Rome.

MATHEMATICS. Our knowledge of the origins and early development of mathematics among the Greeks is negligible. In Mesopotamia an advanced mathematics had existed since at least the time of Hammurapi (c. 1700 B.C.). Characteristic of this were problems in arithmetic and algebra, but many facts of elementary geometry were known, e.g. 'Pythagoras' theorem' and the mensuration formulas for a variety of plane and solid figures. It is highly probable that much of this knowledge reached the Greek world at some time, but the nature of our sources makes it impossible to say what came when, particularly as independent discovery can rarely be ruled out. Greek doxographic tradition ascribed the invention of geometry to the Egyptians, whence it was made known to the Greeks by Thales (q.v.) in Ionia or Pythagoras (q.v. 1) in Magna Graecia. However, there was little to learn from Egypt beyond elementary mensuration formulas, and since neither Thales nor Pythagoras left writings there could be no foundation for the tradition. The most we can say on the positive side is that it is probable that fifth-century 'Pythagoreans' such as Philolaus (q.v.) discussed the properties of numbers in the semi-mystical way imitated by Speusippus in the fourth century (in *Theol. Arith.* 82. 10 ff. de Falco).

2. The first concrete evidence we have concerns the mathematical activity of Hippocrates (q.v. 3) of Chios in the late fifth century. While investigating the problem of squaring the circle (already considered a typical mathematical problem, as is shown by Aristophanes, *Av.* 1005) he produced some ingenious theorems on the quadrature of lunes. The *content* of these is reasonably certain, but our knowledge of the *form* is derived via two intermediaries, Eudemus (q.v.) and Simplicius (*Comm.*

in *Phys.* 60. 22 ff. Diels), and it may have been very different from the Euclidian cast in which we have it. However, these theorems exhibit the concept of proof, the most notable distinguishing characteristic of Greek mathematics. Clearly there was a geometrical tradition before Hippocrates; but how old, and of what kind, we shall never know. It is possible that the arguments of Zeno (q.v. 1) of Elea in the mid fifth century, showing that infinite division involved self-contradiction, were in part directed against current mathematical procedures. It is certain that the logical difficulties he raised influenced the later course of Greek mathematics in its avoidance of infinitesimals. That this was a difficulty in the early stages is shown by Democritus (q.v.) asking whether the two contiguous faces of a cone cut by a plane parallel to the base are equal or unequal (Plut. 1079 c). Another difficulty at this period was the existence of irrationals, specifically the incommensurability of the diagonal of a square with its side. Both arise only when one deals with continuous magnitudes (geometry), not with discrete (arithmetic in the Greek sense). Hence perhaps the statement of Archytas (q.v.) in the early fourth century that arithmetic can provide proofs where geometry fails (B 4 D-K). But these logical difficulties did not inhibit the practice of geometry, as is shown by Archytas' own ingenious solution to the problem of finding two mean proportionals (which Hippocrates had already shown to be equivalent to the problem of 'doubling the cube'), and by the work of his contemporary Theaetetus (q.v.), who made important discoveries about irrationals and the five regular solids.

3. The difficulties were solved, or at least circumvented, by Eudoxus (q.v.), c. 360. He formulated a general theory of proportion including both commensurable and incommensurable magnitudes, and also invented the method of approach to the limit which became the standard Greek way of dealing with problems involving infinitesimals. Euclid's formulation of this is found in Book 10, Prop. 1: 'If from the greater of (any) two unequal magnitudes more than its half is subtracted, and from the remainder more than its half, and so on, there will be left a magnitude less than the smaller of the original two.' Archimedes (*Quadr. Parab.* int.) quotes another formulation: 'The amount by which the greater of two unequal areas exceeds the smaller can, by being added continuously to itself, be made to exceed any given finite area.' He says that 'the earlier geometers' used this to prove among other things that pyramid and cone are one-third of prism and cylinder respectively with equal base and height. Since he tells us elsewhere (*Method* int.) that Eudoxus was the first to prove these theorems (though Democritus had stated them), it is likely that the second formulation is Eudoxus'. We may guess that Eudoxus, with his interest in logical rigour, was also chiefly responsible for the axiomatization of geometry as we find it in its classical form (Euclid). The great interest and progress in strict deductive logic during the fourth century is best seen in the logical works of Aristotle (q.v.).

4. From Proclus' summary of the early history of mathematics extracted from Eudemus we know many names of mathematicians active in the fourth century, but very few details of what they did. However, Eutocius (*Comm. in Arch.* 78 ff. Heiberg) preserves an account of a solution by Menaechnus (mid 4th c.) to the problem of finding two mean proportionals which is the first use of conic sections. Aristaeus wrote a textbook on these not very much later.

5. With the *Elements* of Euclid (c. 300 B.C.) we come to the first extant mathematical treatise (apart from the slight work of Autolyceus (q.v. 2)). This, though an introductory textbook, reflects the sophistication of contemporary geometry in both form and content, but the

axiomatic method of exposition necessarily obscures the historical development. A particular problem is raised by propositions concerning the 'application of areas'. 6. 28 gives a general solution of which a particular case can be derived from 2. 5 (see Heath's translation, 383): 'To a given straight line (b) to apply a rectangle which shall be equal to a given area (A), and fall short of the rectangle formed by the straight line and one of its own sides by a square figure'. In algebraic terms this is $xy = A, x + y = b$ (in other words the quadratic equation $bx - x^2 = A$ is to be solved). This is exactly what one would arrive at if one were to transform the 'normal forms' of Babylonian numerical problems involving a quadratic equation into geometric terms, and it is likely, though not demonstrable, that this 'algebraic geometry' is just such a transformation. If so, some knowledge of advanced Babylonian mathematics had reached Greece in the fourth century. As well as plane and solid geometry, the *Elements* comprises elementary number theory; but the latter, and the branches of mathematics treated in Euclid's other works (some lost), had not reached the same level of systematization as pure geometry. However, some remarkable results were reached, such as the proof that there are an infinite number of primes (*Elements* 9. 20).

6. This deficiency was supplied in the case of conics by Apollonius (q.v. 2), who completely transformed the approach to the field by extending the algebraic 'application of areas' to include it. His elder contemporary Archimedes (q.v.) created new branches of mathematics by applying the axiomatic approach to statics and hydrostatics, but systematization was not his main interest. Most of his surviving work is in higher geometry, where he proves by traditional methods many theorems that would now be proved by the integral calculus. But his *Method* shows that he could use infinitesimals to achieve the same results. This is only one of the ways in which his thought was so far ahead of his time that it had no effect in antiquity: thus the concept of a numerical system implicit in the *Sand-reckoner* has no echo in surviving literature. However, many of his results, such as the formula for the volume of a sphere and his approximation to π , became mathematical commonplace.

7. The third century was the great period of pure geometry. After this most creative mathematics was done in other fields. Several of these were connected with the study of astronomy. For instance, the necessity of determining the time of day accurately led to the development of the theory of sundials. Though the sundial itself goes back to at least the fifth century in Greece, the mathematical treatment of it known by the ancients as 'analemma' (an application of descriptive geometry) does not seem older than Diodorus (q.v. 4), of Alexandria, first century B.C. The most elegant example is found in Ptolemy's *Analemma*; earlier but cruder methods are found in the works of Heron (q.v.) and Vitruvius. There is evidence that the related technique of stereographic projection was used by Hipparchus (q.v. 3) about 150 B.C. for mapping circles of the heavenly sphere on to a plane in order to solve certain astronomical problems. The same problems led to the development of spherical trigonometry, probably by Menelaus (q.v. 3) about A.D. 100. Hipparchus himself had used plane trigonometry, for his 'Table of Chords' had the same function as a modern sine table.

8. It is in later Greek mathematics too that we find the non-axiomatic, numerical, and algebraic techniques which are typical of Babylonian mathematics. But it is accidental that they first occur as late as the work of Heron (q.v.), c. A.D. 60, for we cannot doubt that they are directly descended from Mesopotamian sources in a continuous tradition, which did not hesitate to borrow from the works of the classical mathematicians, though apparently ignored by them. It is also found in

mathematical papyri, and was evidently a 'popular' mathematics (in Heron it is mostly 'practical'). A different branch of the same tradition is found in Diophantus (q.v.). This is the work which comes nearest to the modern conception of algebra, though it is not a textbook on the solution of equations but rather groups of similar problems, mostly of indeterminate equations. Though the roots of this lie in Babylon, much of the content is probably original, and the form of exposition owes much to the Greek tradition.

9. Even in late antiquity there were still competent mathematicians such as Theon (q.v. 4) and Eutocius to edit and comment on the classical works, and even an original one (Pappus, q.v.) to add his own extensions. But the real revival of Greek mathematics came in sixteenth-century Europe, when the works of Archimedes began to have effect. Even in the seventeenth century a mathematician of the calibre of Descartes could be inspired by reading Pappus' account of lost works of higher geometry, and Fermat by Diophantus.

For special studies see the articles on the ancient authors referred to. A detailed general account is in Heath, *Hist. of Greek Maths.* See also O. Neugebauer, *The Exact Sciences in Antiquity* (U.S.A. 1957), and B. L. van der Waerden, *Science Awakening* (Groningen, 1954). G. J. T.

MATIDIA (*PW* 28; ?*Salonia*) the Elder was the only child of Marciana (q.v.) and hence niece of Trajan (q.v.). Born at latest by A.D. 68, she married an otherwise unknown L. Vibius (?Sabinus), by whom she had two daughters, (Vibia) Sabina (q.v.), wife of Hadrian (q.v.), and (Vibia) Matidia the Younger (*ILS* 327), who survived, apparently unmarried, into the 160s. Matidia the Elder was, like her mother, close to Trajan and Plotina; on her mother's death (112) she received the title *Augusta* (*Fasti Ost.*, s.a.) and in 117 she, Plotina (q.v.), and Attianus (q.v.) brought back Trajan's remains from Cilicia to Rome (S.H.A. *Hadr.* 5. 9). On her death in 119 Hadrian pronounced her funeral oration (*CIL* xiv. 3579), deified her (*Acta Fr. Arv.*), and erected a commemorative temple in Rome with attached halls named for her and Marciana; she was probably the first *diva* to have her own temple in Rome.

COINS. *B.M. Coins, Rom. Emp.* iii (1936); Strack, *Untersuchungen i* (1931), 41; u (1933), Katalog. I. Rubel, *Z. für d. öst. Gym.* 1916, 497 ff.; I. Vidmann, *Fasti Ost.* (1957), 64; Nash, *Pict. Dict. Rome* ii (1962), 36; Wegner, *Herrscherbild* ii. 3 (1956). M. H.

MATIUS (1), GNAEUS, in Sulla's time translated the *Iliad* into Latin hexameters. Gellius admired his learning. He introduced scazons into Latin light verse from the *mimiambi* of Ilerodas.

Baehr, *FPR* 281; Morel, *FPL* 48.

MATIUS (2, *PW* 1), GAIUS, a learned friend of Cicero and partisan of Caesar, helped the former in his relations with the latter, especially in 49 and 48 B.C. In 44 he shared in the management of the games which Octavian exhibited in July in honour of Caesar. Cicero's letter to him about his devotion to Caesar, and his reply, written later in 44 (*Fam.* 11. 27 f.), are of outstanding interest. Augustus' friend and assistant, C. Matus (*PW* 2), an *eques* and expert on arboriculture (q.v.) and gastronomy, has been identified with Cicero's friend, but seems to belong to the next generation.

A. Heuss, *Hist.* 1956, 53 ff.; 1962, 118 ff.; R. Combès, *Rev. Ét. Lat.* 1958, 176 ff.; B. Kytzler, *Hist.* 1960, 96 ff., *Philol.* 1960, 48 ff.; Schanz-Hosius i. 604 f. A. M.; T. J. C.

MATRIS of Thebes (3rd c. B.C.?), rhetor, who wrote an *Ἐγκώμιον Ἡρακλέους* with Asianist characteristics.

MATRON of Pitane (late 4th c. B.C.), parodist, wrote a poem called *Δείπνον Ἀττικόν*, quoted by Athenaeus

(4. 134-7), beginning *Δείπνά μοι ἔνεπε, Μοῦσα, πολύτροφα καὶ μάλα πολλὰ*.

Corp. poes. ep. Graec. Iud. i. 53-95.

MATUTA, MATER, a Roman goddess of growth (Varro ap. August. *De Civ. D.* 4. 8: '[prae]fecerunt frumentis] maturescentibus deam Matutam'). Lucretius (5. 656), followed by many moderns, makes her a goddess of dawn, but this is hardly possible, since she is a figure of cult, not poetry or myth, which the dawn seems never to be. For her temple in the Forum Boarium see Platner-Ashby, 330 f.; Nash, *Pict. Dict. Rome* i. 411. Her festival, the Matralia, 11 June, is included in the 'calendar of Numa'. The ritual was conducted by women, apparently *umivrae* (Tert. *De Monog.* 17), and they prayed only for their sisters' children (Ov. *Fasti* 6. 559; Plut. *Quaest. Rom.* 267 e, *De frat. amor.* 492 d, the ultimate source being probably Verrius Flaccus). This being both well attested and absurd, it seems probable that they prayed for *purri sororii*, i.e. adolescent children; Rose, *CQ* 1934, 156 f. H. J. R.

MAURETANIA, the land of the Moors, stretching from the Ampsaga to the Atlantic and embracing the western half of the Atlas range. Most of the country is high and rocky, supporting sheep and producing a little wine; corn and olives grew on the coast, in the Mulucha valley, and on the plains of Volubilis (q.v.) and Sala. The chief exports were ebony, precious woods, and purple dyes.

There seems to have been communication with Spain from early days, binding Europe and Africa by piracy and colonization. The bulk of the population belonged to the Moorish branch of the Berber race; there was an admixture of negro blood in the south, and numerous Phoenician trading-stations were established on the Mediterranean and Atlantic coasts.

By the second century B.C. the small Moorish tribes had formed kingdoms; their rulers, Bocchus and Bogud (qq.v.), played important parts in the Jugurthine and Civil Wars. Roman law and Greek art spread during the reign of Juba II. The murder in Rome of Ptolemy, his son and successor (A.D. 23-40), led to disturbances. Mauretania was pacified by Suetonius Paulinus (41-2) and Hosidius Geta. Before 44 Claudius constituted two Mauretanian provinces, ruled by procurators with capitals at Tingi and Caesarea (q.v. 3). Moorish cavalry served in the Roman armies, and the Moor Lusius Quietus won distinction under Trajan. A number of *coloniae* were founded in the first century, and there was a certain amount of Italian immigration; romanization was also spread by the auxiliary units which defended the country. Large tracts of country remained under Moorish chieftains; there were serious rebellions in the late third and fourth centuries. Mauretania Tingitana was attached to the diocese of Spain by Diocletian.

MAUSOLEUM, the Tomb of Mausolus (q.v.), satrap of Caria, built of white marble by his widow, Artemisia c. 353 B.C. at Halicarnassus, the architect being Pythius (q.v.). An earthquake caused its collapse before the fifteenth century. In 1857 the site was excavated by Sir C. Newton, who brought many pieces to the British Museum, including some fine friezes and the colossal statues of Mausolus and Artemisia, and many subsidiary

figures, human and animal. The monument was regarded as one of the seven wonders of the ancient world. Four leading sculptors contributed to its decoration—Scopas, Bryaxis, Timotheus (3), and Leochares (qq.v.) (Vitruvius, no doubt wrongly, includes Praxiteles). The architect himself, Pythius, added the great chariot group, according to Pliny. Vitruvius mentions a second architect, Satyrus of Paros (Pref. 7. 12–13; cf. 2. 8. 12).

The foundation cutting measured about 100 by 127 feet. On a high base stood a colonnade of thirty-six Ionic columns, above which rose a pyramid-like structure, reaching a height of about 134 feet. Pliny's description (36. 30–1) and the remains give plenty of scope for theoretical reconstructions, of which scores have been produced, differing widely in such matters as the arrangement of the columns and the position of the sculpture.

W. R. Lethaby, *Greek Buildings represented by Fragments in the British Museum* (1908); *PW* xxiv, Halbbd. 47, 372 ff., s.v. *Pythios* (reconstructions, 381 ff.); for some reconstructions see H. Law, *JHS* 1939, F. Krischen, *Die Griechische Stadt* (1938), Taf. 1 and 37 (cf. L. Lullies and M. Hirmer, *Greek Sculpture* (1957), fig. 10). W. B. Dinsmoor, *Architecture of Ancient Greece* (1950), pl. lxxv (cf. 257 ff., 376). T. F., R. E. W.

MAUSOLUS, satrap of Caria 377/6–353 B.C. in virtual independence of Persian control. His early relations with the Great King were cordial and in 365 he co-operated with Autophradates in suppressing Ariobarzanes. Subsequently, however, he embarked on an expansionist policy symbolized by the substitution of Halicarnassus for Mylasa as the seat of government, and in 362 he became involved in the Satraps' Revolt, though he diplomatically deserted the losing side at the right moment. Left in undisturbed possession of his satrapy, he resumed his advance at the expense of Lycia and Ionia. The conflict of his interests with those of Athens resulted in the Social War of 357, when Rhodes, Cos, Chios, and Byzantium revolted on a promise of support from Mausolus. Athens' attempts at reasserting her control proved unsuccessful, and Rhodes and Cos became appendages to his kingdom. His marriage to his sister Artemisia, the fortress-like palace with its private harbour at Halicarnassus, his philhellenic patronage of literature and the arts, and the monumental tomb (see **MAUSOLEUM**) which he planned but did not live to complete, foreshadow the rule of the Ptolemies.

W. Judeich, *Kleinasiatische Studien* (1892), ch. 6. D. E. W. W.

MAVORTIUS (perhaps not the consul of A.D. 527) wrote two Virgilian centos, *Judicium Paridis* and *De Ecclesia* (Bachr. *PLM* iv. 198 f., 214 ff.; K. Schenkl, *CSEL* xvi).

MAXENTIUS (*PW* 1), **MARCUS AURELIUS VALERIUS**, son of Maximian (q.v.) and Eutropia, was passed over in A.D. 305 when Diocletian and Maximian abdicated and Galerius and Constantius succeeded as Augusti, and was living in retirement at Rome when Constantius died (306) and Constantine, son of Constantius, who had also been passed over, was irregularly proclaimed emperor by the army in Britain. The Praetorian guard and the city of Rome, both bitter over lost privileges, then elevated Maxentius to the throne, and he called his father from his retirement in Lucania to assist him. Severus, the new Augustus of the West, marched against Rome, but was driven to surrender after retreating to Ravenna, while Maximian went to Gaul and won over Constantine. Galerius, invading Italy, was likewise forced to retire, and when Maximian tried to depose his son he failed and fled to Constantine. Declared a public enemy at Carnuntum (308), Maxentius yet maintained himself for some years in Italy; he was recognized in Spain c. 308, though this was lost to Constantine in 310. More serious was the

revolt of Africa (308–11) under its *vicarius* Domitius Alexander, which created famine at Rome. In 312 Constantine invaded Italy with a small but experienced army and destroyed Maxentius at the battle of the Mulvian Bridge. Maxentius' reputation was assiduously blackened by the victor. He was certainly no soldier but there is little evidence to support the various charges. He granted toleration and restitution to the Christians and his 'persecution' of the Roman Senate was fiscal in character. His chief significance is as the champion of the old privileges and the old faith of the capital.

C. H. V. Sutherland, *RIC* vi. 15 ff.

H. M., B. H. W.

MAXIMIAN (**MARCUS AURELIUS VALERIUS MAXIMIANUS**, *PW* 1), called by Diocletian in A.D. 285 to assist him as his Caesar. Born c. A.D. 240 near Sirmium of peasant parents, he had a solid military career under Aurelian and Probus. Uneducated and rather stupid, he was an excellent general and completely loyal to Diocletian, his old comrade in arms. Sent against the *Bacaudae* in Gaul, he soon dispersed their irregular bands and was promoted to be Augustus, early 286. Against Carausius, who revolted to escape punishment for neglect of his duties against the pirates, Maximian was less successful. A first expedition by sea failed and Carausius was left in peace for some years.

Maximian, charged with the defence of Italy and the West, was heavily engaged on the lower Rhine and in Raetia between 288 and 292. He acted in close accord with Diocletian whom he met in 289 and 290/1. In 293, under Diocletian's tetrarchic system, he received Constantius, formerly his praetorian prefect, as his Caesar, and gave him his daughter Theodora in marriage. Constantius took charge of a new attack on Carausius. He took Boulogne, and, after the death of Carausius, recovered Britain from his murderer Allectus in 296. Maximian came up in person to secure the Rhine frontier. In 296 and the following year he was in Africa where there was a revolt by the Quinquegentiani and other Mauretanian tribes, and later visited Rome where he began the building of the Baths of Diocletian. The persecution of the Christians (303–5) was enforced with some severity in North Africa where they were numerous. He abdicated with Diocletian on 1 May 305.

Maximian returned from retirement in Lucania to support the rising of his son, Maxentius (306). He forced Severus to surrender at Ravenna and then won over Constantine, giving him his daughter, Fausta, in marriage. In 307, after the failure of Galerius against Rome, Maximian tried in vain to depose his son and fled to Gaul. Required to abdicate again at Carnuntum (308), Maximian could not settle down to a life of honourable inactivity. He led a revolt against Constantine, but was captured at Massilia and died by his own hand (310).

C. H. V. Sutherland, *RIC* vi. 15 ff.

H. M.; B. H. W.

MAXIMINUS (1), **GAIUS JULIUS** (*PW* 526) **VERUS** (Roman Emperor A.D. 235–8), a Thracian peasant who had been promoted centurion by Septimius Severus because of his physical strength. He had held a number of equestrian military appointments when saluted Emperor at Mainz (Mar. 235) in the mutiny which overthrew Alexander Severus. An energetic soldier, he ravaged Germany and won a victory in a swamp in Württemberg (235). After two years' fighting on the Danube a rebellion in Africa led to the proclamation of Gordian I and his son (qq.v.) as Emperors (Apr. 238). They were recognized by the Senate, who feared the uneducated Maximinus. The latter invaded Italy, but his progress was arrested by the stout resistance of Aquileia. His troops became disheartened, till the soldiers of II Parthica sought an end

of civil war by murdering him with his son (*see* GORDIAN 1-3; BALBINUS).

Herodian, bks. 7-8; S.H.A. G. M. Bersanetti, *Studi sul imperatore Massimino il Trace* (1940); E. Hohl, *Maximini duo Julii Capitolini* (1949). H. M. D. P.; B. H. W.

MAXIMINUS (2, *PW*, s.v. *Daia*), GAIUS GALERIUS VALERIUS, originally named *Daia* (or *Daza*), son of a sister of Galerius, received rapid promotion in the army through his uncle's interest, was adopted by him and made Caesar when Galerius became Augustus on the abdication of Diocletian, 1 May 305. Entrusted with the government of Syria, Egypt, and the south of Asia Minor, Maximinus served Galerius faithfully but, in 310, when the tetrarchic system was breaking down, refused the offered title of 'filius Augusti' and assumed the rank of Augustus, already conferred on Licinius. When Galerius died in 311, Maximinus occupied Asia Minor up to the Hellespont, but made peace with Licinius, who contested the crossing to Europe. Maximinus now drew closer to Maxentius, to balance the alliance of Constantine and Licinius; after the fall of Maxentius, anticipating an attack on his own territory, he took Byzantium and Heracleia. He was then defeated near the latter by Licinius and after fleeing through Cappadocia died, a fugitive, at Tarsus (autumn 313).

Maximinus was a noted persecutor—in some ways the most interesting of them all. Not content with repression of the Christians, he tried to revive and reform the paganism of his subjects. He encouraged cities to petition against the Christians, and strove to improve the organization and raise the morale of the pagan priesthood.

C. H. V. Sutherland, *RIC* vi, 15 ff.

H. M.; B. H. W.

MAXIMUS (1), SEXTUS QUINCTILIUS (*PW* 24) VALERIUS, born in Alexandria Troas, received the *latus clavus* from Nerva (*ILS* 1018), and is probably identical with an Epicurean friend of Pliny the Younger, who served as *legatus Augusti ad corrigendum statum liberarum civitatum* in Achaia, probably not after A.D. 108-9.

M. N. Tod, in *Anatolian Studies presented to W. H. Buckler* (1939), 317 ff.; E. Giové, *Die röm. Reichsbeamten von Achaia* (1939), cols. 125 ff.; Syme, *Tacitus*, 84 n.

A. M.

MAXIMUS (2) of Tyre (c. A.D. 125-85), sophist, the author of forty-one extant *Διαλέξεις* (lectures), lived the life of an itinerant lecturer; he is known to have lectured in Athens, and the extant lectures were delivered in Rome, apparently in the reign of Commodus (180-92). He was well read in Greek literature, but apparently not in Greek philosophy except in Plato, of whom he claimed to be a follower. His lectures show no philosophical originality, and are simply eloquent exhortations to virtue decked out with quotations, chiefly from Plato and Homer; he belongs to the same genus as the sophists, though his views have no affinity with theirs, being borrowed from Cynicism and Platonism.

Ed. H. Ilobein (1910).

W. D. R.

MAXIMUS (3) (probably 2nd c. A.D.), author of the extant astrological poem *Περὶ καταρχῶν*, part of which later passed under the name of Orpheus. The *Suda* calls the author an Epirote or Byzantine, but identifies him with Julian's teacher Maximus (q.v. 4), who came from Ephesus; this, however, seems improbable, as the poem is quite unphilosophical.

Ed. A. Ludwich (1877).

W. D. R.

MAXIMUS (4) of Ephesus (d. A.D. 370), Neoplatonist philosopher. A pupil of Aedesius, who was himself a pupil of Iamblichus (q.v. 2). Maximus followed his master's tendency to emphasize theurgy and magic at the expense of the more serious side of Neoplatonism.

Maximus' own most distinguished pupil was the future Emperor Julian, to whom he was recommended by Aedesius. He is said to have foretold Julian's subsequent elevation to the throne, a prophecy which could readily be made without supernatural knowledge, and he no doubt encouraged the young prince in his abjuration of Christianity. In 361 Maximus was invited by Julian, now Emperor, to join his court at Constantinople, and remained with him until his death during his Persian campaign, for which he had prophesied a fortunate outcome. For some time he enjoyed the confidence of Valens, but fell into disfavour and was imprisoned in 364. His release was due to the intervention of Themistius. In 370 he was put to death for complicity in a plot to assassinate Valens. He is not the author of an astrological poem in hexameters sometimes attributed to him. Maximus is a typical member of the group of self-assured near-charlatans who exercised so harmful an influence on the brilliant but weak young Emperor.

MEALS. The times and names of meals in Greece varied at different periods. In early times breakfast (*ἀπρωτος*) was taken soon after sunrise, followed by a main meal (*δειπνον*) in the middle of the day and supper (*δωπρον*) in the evening. In classical Athens two meals—a light lunch (*ἀπρωτος*) in the forenoon and dinner (*δειπνον*) in the evening—appear to have been usual; but from the fourth century B.C. onwards an earlier breakfast (*ἀκράτημα*) was again added (or, among frugal people, substituted for lunch).

Among the Romans, too, dinner (*cena*) was in early times eaten in the middle of the day, with a light supper (*vesperna*) in the evening; but in course of time an evening *cena*, often beginning in the late afternoon, became usual; and lunch (*prandium*), consisting of fish or eggs and vegetables together with wine, was eaten towards midday and took the place of supper. These meals were preceded by a very light breakfast (*ientaculum*), which might consist of only bread and salt and rarely included more than a piece of bread and some fruit or cheese.

The *cena*, at least among the wealthy (to whom most of our information relates), consisted of three parts. A *gustatio* of eggs, shell-fish, or salad, taken with honeyed wine (*mulsum*), was followed by the *cena* proper. This often included several (up to seven) successive *fercula*, with one chief item (*caput cenae*), which might be a roasted animal served whole, preceded and followed by smaller, but still very substantial courses (e.g. lampreys, turbot, roast peacock, roast veal). The meal ended with *mensae secundae*, consisting of sweetmeats and fruit.

Such elaborate meals, however, must always have been the prerogative of a minority. But even among ordinary people the consumption of fish and meat gradually increased, and the early *cena*, of porridge and vegetables with only occasional meat, came to be regarded as characteristic of pristine simplicity. It may have been this development that caused dinner to be eaten, as it still is in many southern countries, at an hour when the day's work was done.

PW, s.vv. *Cena* (iii. 1895 ff.), *Kochkunst* (xi. 944 ff.), *Mahlzeiten* (xiv. 524 ff.); v. Müller-Bauer, *Griech. Privat- u. Kriegsaltertümer* (1893), 118 ff.; Blümner, *Röm. Privataltertümer* (1911), 160 ff.; Carcopino, *Daily Life in Ancient Rome* (1956), 262 ff. L. A. M.

MEALS, SACRED. To eat together is everywhere a sort of communion, varying in different cultures from a mere mark of friendliness to a close and binding connexion. If a god is present at the meal, it becomes sacred, and the human participants are his hosts or guests and so in association with him. Hence every meal in an ancient household which kept up the old customs was

sacred, for the household gods were present (cf. CHILDREN, WORSHIP, HOUSEHOLD; 'sacrae adsistere mensae', Juvenal 6. 365. O. 4, is to be present at a family meal). This is true also of the normal Olympian sacrifice, where the god and the sacrificers both partake of the victim, and equally of such rites as the *lectisternium* (q.v.), at which the god is a guest. It is most of all true of those rites in which the god himself is devoured (see DIONYSUS). In the Hellenistic mystery-cults this idea seems to have been strongly developed, ritual feasts, at which apparently the bond between god and worshippers was renewed, being a regular feature of them. These also served to mark the uniting initiates of a common cult; see for examples Cumont, *Rel. or.* 37, 65, 192, with 219, note 43; dining-rooms formed a regular part of Syrian temples, 256, note 52. It is therefore natural that such feasts were imagined as the portion of the blessed hereafter (ibid. 57, 61, 202 f.; 309, note 51). More examples will be found by consulting Cumont's index, s.vv. 'Banquet', 'Festini', 'Repas'. Nock in *Essays on the Trinity and the Incarnation* (1928), 124 ff., *Harv. Theol. Rev.* 1936, 77 ff.; Nilsson, *GGR* 12. 47, 144, 337. See also BIRTHDAY, EPULONES, THEOXENIA. H. J. R.

MEASURES. I. MEASURES OF LENGTH. 1. Measures of length were based primarily on parts of the human body, with the foot as unit both for fractions like finger and palm and for multiples like pace and arm-span. Pylos tablets designate tables as six-footers (*we-pe-za*) or nine-footers (*e-ne-wo-pe-za*), whether this is a measure or description of supports is uncertain. Homer is acquainted with the foot-standard, but the length of his foot is unknown. In historic Greece many standard feet are found, the absolute values for which are derived from surviving stadia (preserved with starting and finishing lines), calculated basic units of various buildings, and literary evidence providing correspondences with the Roman foot (296 mm), of which ancient examples survive. Of the two feet most generally used in Greek buildings the shorter (294-6 mm) approximates the Roman foot, the longer (326-8 mm) approaches the *pes Drusianus* of Gaul and Germany in the first century B.C. (330 mm). Compare also the Olympic foot of 320 mm, the Pergamene of 330 mm and the so-called Aeginetic of 333 mm. Subdivisions of the foot are taken from the fingers: thus

2	finger-breadths, δάκτυλοι	= 1	κόνδυλος, middle joint of finger
4	"	"	= 1 πωλαστή (Homeric δώρον), palm
8	"	"	= 1 διχάς or ἡμιπόδιον, half-foot
10	"	"	= 1 λεχάς, span of thumb and first finger
12	"	"	= 1 σπιθαμή, span of all fingers
16	"	"	= 1 πούς, foot.
2.	Higher dimensions are taken from the arms; thus		
18	δάκτυλοι	= 1	πυγμή, short cubit, elbow to start of fingers
20	"	= 1	πυγών, short cubit of Homer and Herodotus, elbow to end of knuckles of closed fist
24	"	= 1	πῆχυς, normal cubit, elbow to tips of fingers.

For longer distances:

2½	feet = 1	βῆμα, pace
6	feet = 1	ὄργυια, fathom, stretch of both arms
100	feet = 1	πλέθρον, breadth of the γῆς, acre.

Beyond this Homer uses phrases such as the cast of a stone or quoit or spear. The later Greek unit, the *στάδιον*, originally the distance covered in a single draught by

the plough, contained 600 feet, no matter what the length of the foot might be, and its exact length is therefore often doubtful. The *παρασάγγης* of 30 stadia was adopted from Persia.

3. The Roman foot (*pes*) of 296 mm was generally divided into 12 inches, corresponding to the division of the *libra* into 12 *unciae*, the names of the subdivisions are the same and are given under WEIGHTS. There was also a division into 16 *digiti*, similar to the Greek system and possibly derived from it.

For higher distances:

5	<i>pedes</i>	= 1	<i>passus</i> , pace
125	<i>paces</i>	= 1	<i>stadium</i>
1,000	"	= 1	mile, about 95 yards less than the English mile.

4. II. MEASURES OF AREA. Measures of area in both Greece and Rome were based on the amount ploughed in a day by a yoke of oxen. The Greek unit is the *πλέθρον*, measuring 100 × 100 = 10,000 square feet. Another unit, the *μέδιμνος*, found in Sicily and in Cyrenaica, represented the amount of land that could be sown by a *medimnus* of wheat. (Similarly, Mycenaean land measures seem to have been expressed by volumes of grain.) The Romans employed the *actus quadratus*, a square of 120 feet, two of which formed the *iugerum* of 28,800 square Roman feet = 5/8ths of an acre. Two *iugera* formed a *heredium*, 100 *heredia* a *centuria*.

5. III. MEASURES OF CAPACITY. Measures of capacity fall into two divisions, dry and wet (*μέτρα ξηρά, μέτρα ὑγρά*), corresponding to the primary products, corn and wine, of ancient agriculture. In the Mycenaean system the two divisions share the same symbols and ratios for the smaller measures; absolute values are not certain. In historic Greece the *kotyle*, which is basic to both wet and dry, is made up of six *kyathoi* or four *oxybapha*; its absolute value in various local systems ranges from 0.21 litre to more than 0.33 litre, the most usual being 0.24 and 0.27 litre. The dry measures are:

4	<i>kotylai</i>	= 1	χοῖνίξ, at Athens a day's corn ration for a man
8	<i>choinikes</i>	= 1	έκτεὺς
6	<i>hekteis</i>	= 1	μέδιμνος.

For liquid measures the table continues:

6	<i>kotylai</i>	= 1	ἡμίχους
12	"	= 1	χοῦς
12	<i>choes</i>	= 1	μετρητής.

6. The basic unit in the Roman system is the *sextarius* (0.546 litre), which is equivalent to the Greek *doktylion*; its components are:

48	<i>cochlearia</i>
12	<i>cyathi</i>
8	<i>acetabula</i>
4	<i>quartaria</i>
2	<i>heminae</i> .

For dry measures the higher denominations are:

8	<i>sextarii</i>	= 1	<i>semodius</i> , nearly an English gallon
16	"	= 1	<i>modius</i> .

For liquid measures:

12	<i>heminae</i>	= 1	<i>congius</i>
8	<i>congi</i>	= 1	<i>amphora</i>
20	<i>amphorae</i>	= 1	<i>culleus</i> , tun of 120 gallons.

The *amphora*, or quadrantal, by which the burden of ships was determined, was the volume of a cubic Roman foot, 25.79 litres.

MEDDIX *tuticus* or *summus*, assisted by a *meddix minor*, was the senior magistrate among the Oscan-speaking peoples. His authority differed from that of the Romano-Latin *praetura*, to which some communities, notably Bantia (q.v.), tended to assimilate the office, in being non-collegiate and yet lacking the absolute character of *imperium* (q.v.), though supreme in jurisdiction and administration. The relation of *m. minor* to *m. tuticus* recalls that of *magister equitum* to *dictator* (q.v.).

A. Rosenberg, *Staat der alten Italiker* (1913); J. Whatmough, *The Foundations of Roman Italy* (1937); G. Camporeale, *Atti d. Acc. Tor.*, 1957, 91 ff. A. N. S.-W.

MEDEA (Μήδεια), 'the cunning one', in mythology, daughter of Aetes king of the Colchians and his wife Eidyia ('the knowing'), grand-daughter of Helios and niece of Circe (q.v.). She is universally said to have been a witch, but shows a certain tendency to pass into a goddess (ἀθανάτου στόματος, Pind. *Pyth.* 4. 11, meaning the mouth of Medea; cf. Athenagoras, *Leg. pro Christ.* 14, a corrupt passage but sufficient to show that according to him she was worshipped somewhere). In the story of the Argonauts (q.v.) as we have it she plays a prominent part; when Aetes sets Jason a seemingly impossible task, Medea, being in love with him, helps him to perform it by magic. In other words, she is that common figure of folk-tale, the Ogre's Daughter (Stith Thompson, G 530. 2). But the Argonauts have in many cases highly specialized characteristics, as wonderful sight (Lyncceus), extraordinary speed (Euphemus), power of flight (the Boreadae) (Ap. Rhod. 1. 153, 182, 219); hence it is clear that there was another form of the story, whether older or not, in which they and not Medea helped Jason (cf. Grimm, *Kinder- u. Hausmärchen*, no. 246). Her love is elaborately motivated by Ap. Rhod. 3. 7 ff., but this would not be original, though it may belong to the earliest literary form of the story (cf. Pind. *Pyth.* 4. 213 ff.). Having helped Jason, Medea escapes with him in all known variants, and is regularly pursued; either her brother Apsyrtus leads the pursuit and she contrives his murder (so Ap. Rhod. 4. 410 ff.), or he is a child whom she takes with her, kills, and scatters his limbs in the way of Aetes, thus delaying him (Cic. *Leg. Man.* 22, and elsewhere). Returning to Iolcus, she renewed the youth of Aeson, Jason's father, by boiling him with virtuous herbs (fullest description in Ov. *Met.* 7. 162 ff., but earliest reference in *Nostoi*, fr. 6 Allen). This done, she persuaded the daughters of Pelias to attempt the like on their own father, but was careful to give them inefficacious herbs, thus rendering them guilty, technically, of his death. This story is as old as the fifth century (Pind. *Pyth.* 4. 250 calls Medea Pelias' slayer, cf. Pherecydes in the schol. there, and both Sophocles and Euripides wrote on it, respectively in the *Πύρρον* and the *Pelades*), but doubtfully part of the oldest form of the legend, since Hesiod (*Theog.* 997 ff.) represents her and Jason as settled in Iolcus and her child Medeus as born there.

Her connexion with Corinth seems due to the Corinthian school of epic poets, who traded on the ambiguity of the name Ephyrā (a town in Thesprotia where Jason and Medea lived, schol. *Od.* 1. 259, or Corinth). For her dealings with Creon see s.v. (1); after the murder of him, his daughter, and her children, she took refuge with Aegeus (q.v.) in Athens. After her banishment from that city, a late story (Hyg. *Fab.* 27) represents her as bringing about the death of Perses, Aetes' brother and enemy, with the help of her son by Aegeus, Medus; the country was thereafter called Media.

The tricking of the daughters of Pelias is found on vases from the late sixth century. To the mid fifth and later belong some with Medea, Aegeus, and Theseus; to

about 400 some with the capture of Talos. The slaughter of the children appears on fourth-century Italiote vases and was the subject of a famous late Hellenistic picture by Timanthes, which may be echoed in Roman paintings and gems (Brommer, *Vasenlisten*², 163, 348).

See also MAGIC, § 4.

H. J. R.; C. M. R.

MEDIA, the mountainous country south-west of the Caspian Sea which was for a century the centre of the Median Empire. The Medes, an Indo-European people ethnologically and linguistically akin to the Persians, appear as a group of tribes, some nomadic, some settled in fortified villages, against whom the Assyrians waged war. They were possibly in the neighbourhood of L. Urmia as early as the beginning of the first millennium B.C.

Deioces, whom Herodotus (1. 96-100) accounts the founder of the Median Empire, appears in the Assyrian records only as a local chieftain. The real unifier of the Medes seems to have been Phraortes (Khshathrita, c. 675-653 B.C.). His son Cyaxares (Uvakhshtra, 625-585 B.C.) conquered neighbouring territories and, in alliance with Nabopolassar of Babylon, defeated the Assyrians; Nineveh fell in 612 B.C. His empire included most of Iran, the northern territory once subject to Urartu, and Cappadocia as far as the river Halys. Of its organization little is known. Astyages (Ishtumegu, 585-549 B.C.) extended his boundaries at the expense of Babylonia, but was defeated by his vassal Cyrus, and the Median Empire passed to the Persians.

MEDICINA PLINII, an extant compilation made (probably A.D. 300-50) from Pliny's account, in books 20-32 of the *Naturalis Historia*, of the plants and animals used for medicinal purposes. Marcellus Empiricus describes it as being the work of a second Pliny. This work has to be distinguished from a work commonly but falsely ascribed to Plinius Valerianus, of which the first three books are a garbled version (6th or 7th c.) of the earlier work, while the last two books come from a different source.

MEDICINE. I. NON-RATIONAL ELEMENTS. Historians of Greek Medicine rightly stress its scientific character. This goes far back, for there are traces of science in the medical practice of the Homeric poems and the very earliest scientific works are medical. Nevertheless throughout antiquity and in every part of the ancient world other and lower types of Medicine were prevalent. Indeed, it is a remarkable fact that certain forms of non-rational medicine flourished more than ever at about the time that saw the rise of scientific medicine. No cultural element is so transmissible as irrational beliefs and practices concerning disease. These are susceptible neither of logical arrangement nor of true historic treatment, nor can their sources be entirely separated from each other. Such material can only be discussed under artificial headings based on mere convenience.

(a) References to practices on a very low anthropological level are scattered through the literature of classical antiquity. Sympathetic, contagious, and imitative magic, the influence of rulers, priests, and the dead upon disease, and the various elements with which folklore deals are all represented. They were long ago collected and analysed by Sir J. G. Frazer in *The Golden Bough*.

(b) Peculiar rites and beliefs are associated with the gathering of herbs in both early and late literature. There are collections of them attached to the *Inquiry into Plants* of Theophrastus and embedded in the *Natural History* of Pliny. Some of these customs are comparable to those in the Sanskrit Vedas. A fair case can be made for the existence of a stream of Indo-Germanic Medicine associated specially with herb remedies. Some of these practices persist among European peasants. (See BOTANY, THEOPHRASTUS, PLINY THE ELDER.)

(c) The Medicine of the New Testament is mainly that of possession by evil spirits. There is only a trace of demonism in the Old Testament and it is not prominent in classical writings until Christian times. Its presence often indicates Persian contacts. It is well illustrated in the writings of Philostratus. Its main source is probably Mesopotamian. (See POSSESSION.)

(d) All deities, both Chthonic and Olympian, had healing powers. There was also, among the Greeks and later among the Romans, a tendency to the formation of cults ascribing such powers to deceased physicians. The most prominent of these cults was that of Asclepius. A whole family of supernatural healers became associated with him. His history has an extraordinarily close parallel in Egyptian civilization. (See ASCLEPIUS.)

(e) Essential to Asclepian rites was 'Incubation', the temple-sleep and its accompanying dream. This, however, neither originated with nor was peculiar to the cult. Throughout antiquity advice concerning disease and preservation of health was drawn from dreams which were held to be sometimes curative. The *Oneirocritica* of Artemidorus (2nd c. A.D.) is an exposition of this. (See INCUBATION.)

(f) Dedication of votive models of affected parts, especially in Asclepian shrines, was a common practice. The model may bear a representation of the disease or an invocation to the deity or an indication of the remedy desired. Similar votives are found in all civilizations. Modern votives are often indistinguishable from ancient. (See VOTIVE OFFERINGS.)

(g) Amulets and periapts, inscribed with prayers, invocations, charms, or signs of power, were suspended or tied to the person to ward off evil or effect cure. Specially common in the Western Empire was the ocular cachet—an inscribed clay tablet to be applied to the diseased eye. Identical practices still persist. (See AMULETS.)

(h) Magical incantations of syncretic origin were used against disease. Characteristic of these is the inclusion of foreign words of power, especially names of foreign divinities. Most records come from the later classical period. (See MAGIC.)

(i) A peculiarity in Roman practice, not easily paralleled, was the association of bodily parts and even sensations, symptoms, and diseases with their own specific deities. These tutelary beings needed propitiation according to the part or function affected.

(j) There is an important body of herb-lore that is irrational but unassociated with 'superstitious' practices. Such is the drug list of Dioscorides. Only a minute percentage of his hundreds of herbs have the activities he ascribes to them. Yet these drug lists remained in use for centuries and generated the ancient herbals and the medieval and modern pharmacopoeias. (See BOTANY, DIOSCORIDES 2.)

(k) Apart from superstitious practices, Medicine in classical antiquity retained throughout certain relations to the current higher religion. (See § II.)

II. 2. RELATION TO RATIONAL RELIGION AND PHILOSOPHY. Celsus calls Hippocrates 'the first who separated medicine from philosophy'. In fact the works of the Hippocratic Collection that date from the fifth and fourth centuries B.C. have definite philosophical affinities. This

is true even of works which were written expressly in order to combat the function of philosophical presupposition in medical thought and practice.

3. Among the ancients there were many who took the 'practical' scientific attitude towards phenomena, regarding them as explicable without recourse to divine powers. It is true that some of the ancient philosophers, scientists, and physicians occasionally used language borrowed from religious terminology; but their modes of explanation nevertheless remained rational and scientific. They excluded divine caprice from natural processes and insisted on the uniformity of nature. However, the fact that there is an overlap between the terminologies of religious, philosophical, and scientific discourse is one reason, among others, why a translation into a modern language of the terminology of Greek Medicine is liable to be sometimes misleading.

4. Greek scientific medicine was singularly free from magical and superstitious practices and beliefs. But although it was thus proof against the danger of religious influence there were other dangers against which it was not so well protected. It is ironically significant that these dangers were the result of the insistent and radical rationality of Greek medicine. Like other forms of Greek science it was constantly prone to the temptation to produce an axiomatic system based on first principles from which the body of the science could then be deductively derived. Early Hippocratic and later medical literature contains, in addition to clinical treatises, a good number of discussions on methodological problems. It is clear from these that in all periods of the history of Greek medicine the doctors had to argue against the adoption of philosophical presuppositions in their medical work. These discussions ranged from the fifth century B.C. treatise *De Vetere Medicina* to the works of obscure authors in very late antiquity. It is interesting to note that even those doctors who most vigorously argued against the introduction of philosophical postulates and methods into what ought to be an empirical science themselves too failed to resist the lure of a *a priori* hypotheses; thus, the author of *De Vetere Medicina* is only one amongst many who, while arguing against *a priori* methods, introduced at the same time theoretical presuppositions such as the humoral theory which can be shown to be closely linked with other physical-philosophical notions such as those of the four elements.

5. Greek Medicine also suffered from two other drawbacks: (a) the exaggerated authority accorded to their predecessors by the ancient doctors. This is as true of the earlier period as it is of Galen and indeed of the inheritors of Greek medicine in the Middle Ages. (b) The attempt both in early and in later times to represent the doctrines of different doctors as belonging to unitary schools.

6. There was no unity of outlook among the earlier physicians, no 'primitive Hippocratic doctrine', for which historians of Greek Medicine, following Galen, have vainly sought. From Hellenistic times, however, the philosophic differences that divided the medical world, though no more profound than before, are certainly more clearly visible. They are conventionally and somewhat artificially treated under four 'schools', known as the Dogmatists, Empirics, Methodists, and Pneumatists, corresponding roughly to the philosophic sects Stoics, Epicureans, Sceptics, and Eclectics respectively.

7. Galen (129-99), summator of ancient Medicine, borrowed ideas from all four medical schools and all four philosophic sects, inclining most to the Dogmatists and Stoics. Since he was not only a selective but also an extremely voluminous writer, it is not surprising that he was not always consistent. His inconsistency did not, however, lessen his influence and in his *Uses of the bodily*

parts of man he reached conclusions that determined medical thought for nearly a millennium and a half. He claims in that work that the organs are so well constructed, and in such perfect relation to the functions to which they minister, that it is impossible to imagine anything better. Following Aristotle's dictum that 'nature makes naught in vain' (*Cael.* 271^a33, 291^b13), he seeks to justify the form and structure of all the organs, and of every part of every organ, with reference to the functions for which he believes they are destined. Moreover, he considers that he can discover the end served by every part and requiring it to be constructed as it is.

8. Galen was the last active scientific intellect of antiquity. His teleological message, delivered in a world of Stoic determinism, carried the implication of the worthlessness of research. His doctrine demanded *a priori* solutions of all the problems of physiology. Galen himself was among the most important proponents of this teleological view. It seemed that, according to it, the world was worth exploring only to verify the hypothesis. He explored it, but his theory removed the motive for further exploration (see ANATOMY AND PHYSIOLOGY). His view fitted well with the Christian attitude and works by Galen were studied and respected throughout the Dark and Middle Ages.

9. The writings of the ancient physicians before Galen had no association with the lower religious elements. This cannot be said for all the derivative works which appear after him. But there was one earlier cult which had a general relation to the practice, if not to the theory, of Medicine. It was by no accident that Asclepius became god of doctors as well as of patients. His worship, in its best presentation, had certain affinities with rational religion. It contained a psychological element that was of great value to rational practice. The physician's attitude to Asclepius and that of Asclepius to Medicine is indicated in the famous Hippocratic *Oath*. It is not misleading to say that the normal relation of Medicine to the best side of the Asclepian cult was fairly near what it is to the current practice of religion in a settled modern society.

III. 10. MEDICAL STATUS AND ORGANIZATION. The status of the Greek physician was at first not much above that of the higher craftsman. He carried his skill from town to town, establishing in each a workshop or surgery (*iatreion*). As nurses and assistants he had pupils bound by agreement, one form of which is the Hippocratic *Oath*. This was not a legal but a private contract; for there was no licenciation. Medical status was raised by the Alexandrian school, where for the first time there was systematic instruction. At Rome Medicine was originally the work of slaves or subordinates. In 46 B.C. Julius Caesar gave citizenship to all who practised there. Thus status rose further and way was made for such physicians as Galen, the friend of emperors.

11. The earliest scientific teacher in Rome, who founded the first regular school there, was Asclepiades (q.v. 3) of Bithynia (c. 40 B.C.). But schools, at first mere personal followings, combined at the beginning of the Christian era in the use of a meeting-place on the Esquiline. State-paid professors with public *auditoria* were available at Rome from the time of Vespasian (70-9). Subsidiary teaching centres were founded in other Italian towns and later in such transalpine centres as Marseille, Bordeaux, Arles, Nîmes, Lyon, and Saragossa.

12. State physicians existed in the time of Herodotus. We know little of their terms or duties. District physicians were early appointed in Italy and the custom spread to the provinces, beginning with the army and associated first with military *valetudinaria*. Inscriptions show that such men were held in respect. In the army itself, however, the medical staff had status equivalent only to that of higher non-commissioned officers.

13. From the military *valetudinarium* it was no great step to the construction of similar institutions for the numerous imperial officials and their families in the provinces. Motives of benevolence came in and public hospitals were founded in many localities. The idea passed to Christian times. The pious foundation of hospitals for the sick and outcast in the Middle Ages is to be traced back to the Roman *valetudinaria*. The first charitable institution of this kind concerning which we have clear information was established at Rome in the fourth century by a Christian lady of whom we learn from St. Jerome.

IV. 14. CLINICAL THEORY. There are sufficient common features in the practice of antiquity to make possible a general sketch, despite differing individual doctrinal allegiances throughout, and changes in the different periods.

15. First of all, and without any theory, there comes to every physician the duty of observation. His first question must be 'How ill is this patient?' We see the ancient physician at this task of observation in his records of actual cases. The most remarkable of these are the forty-two in the Hippocratic Collection, evidently from a practitioner's day-to-day note-book (*Epidemics*). They are models of succinct record, and are without any attempt at diagnosis or prognosis. Among them the modern physician can discern clearly a case of diphtheria, and examples of the 'typhoid state', and of 'Cheyne-Stokes breathing'. All forty-two cases were gravely ill and the majority died.

16. An outstanding feature of ancient Medicine is stress on foreknowledge of the course of the sickness. 'It is most excellent for a physician to cultivate *pronoia*. Since he foreknows and foretells the past, present, and future . . . men would have confidence to entrust themselves to his care. . . . By an early forecast in each case he can tend aright those who have a chance to survive and by foreseeing who will die . . . he will escape blame' (*Prognostic*). *Pronoia* is not quite our prognosis, which, however, it includes. It means knowing things about a patient without being told them. A great *pronoia* is the description of the signs of death, known still as the *Hippocratic facies*:

'The physician should observe thus in acute diseases. First, the face of the patient, if it be like to those in health, and especially to itself, for this would be the best of all; but the more unlike to this, the worse; such would be these: sharp nose, hollow eyes, collapsed temples; ears cold, contracted, and with their lobes turned out; skin about the face rough, distended, and parched; colour greenish or dusky. If it be so at the beginning and if this cannot be explained by other symptoms, inquiry should be made whether he has been sleepless; whether he be purged; whether he is suffering from hunger. If any of these be admitted the danger may be reckoned so far the less and it may be judged in a day and a night if the appearance proceed from these. But if none of these exist and the symptoms do not subside in that time, be it known for certain that death is nigh' (*Prognostic*).

17. After his *pronoia* the physician must consider the nature of the condition he is to treat. Most ancient medical works pass lightly over theories of disease. Nevertheless treatment to be rational must have some theoretical basis. The usual doctrine was simple. Just as matter was made of the four elements, so the human body was made of their surrogates, the four cardinal fluids or humours, Blood, Phlegm, Yellow Bile, and Black Bile (melancholy). Health meant that the humours were blended harmoniously; sickness that they were in disharmony. A determinant of health was the *innate heat*, which was greatest in youth, when most fuel is needed, and declined with age. Its abdication is death. The supporter of the innate heat is the *pneuma* (or *pneumata*)

which circulate(s) in the vessels. (See ANATOMY AND PHYSIOLOGY.)

18. Disease must be treated by rectifying any disharmony of the humours. Happily these have a natural tendency to equilibrium and, left to themselves, are likely to reach that state. This is the 'Hippocratic' doctrine of *Nature as the healer of diseases*, νοῦσαν φύσις ἰηρός, the *Vis medicatrix naturae* of the later Latin writers and of the present day. It was ridiculed by the more active—and more dangerous—practitioners as a 'meditation on death'.

19. The actual process by which the humours come into harmony is *pepsis* (Latin *coctio*, later elaborated as a series of 'digestions'). The turning-point at which *pepsis* is complete is the *crisis*, a term which still bears some of its original medical meaning. The crisis was expected on certain days. The physician must bring his remedies to bear especially at the critical time.

V. 20. TREATMENT. Disturbance in the balance of the humours was, however, only the immediate cause of disease. There were more remote factors which the physician needed to study. Injudicious modes of life, exposure to climatic changes, and the like could be directly corrected. For such disturbances as could not be healed on these preventive lines various therapeutic measures were available.

21. After rest and quiet the central factor in treatment is dietetics, concerning which there are exceedingly elaborate details. An entire book is devoted to the preparation and uses of barley-water! The general principles of dietetics, especially related to fevers, are substantially those of the present day. The physician also had at his disposal a variety of physical remedies—baths, incisions, clysters, etc. He employed cupping and bleeding too frequently.

22. After later times the ancient physician was no great user of drugs except, we may note, in the treatment of diseases of women; from works on these the greater part of the 300 constituents of the pharmacopoeia of the Hippocratic Collection are derived. At first drugs were given by themselves—they were 'simples'. From Alexandrian times onward prescriptions were liable to become very elaborate. The prescription of a Theriac by Andromachus, physician to Nero and the first to bear the title *Archater*, was one of the longest on record. About one-third of the herbs employed in a modern pharmacopoeia bear names known to the Greek physicians.

23. The general line of treatment—surgery excepted—was not very unlike that of an intelligent and rather conservative English country practitioner of about a century and a half ago. (For surgical resources of the ancients see SURGERY.) The ancient physician was, perhaps, a little less confident than his eighteenth-century successor, a little more cautious, a little more conscious of his helplessness.

24. Few medical works have had the influence of the great *Aphorisms*, a series of very brief generalizations by a highly experienced physician many of whose conclusions have been confirmed by later ages, some passing into medical commonplaces, others becoming popular proverbs. The work is included in the Hippocratic Collection but cannot be even approximately dated. The meaning of the first Aphorism is misrepresented by its usual truncated quotation. In depressing completeness it runs: 'Life is short and the Art long, the occasion urgent, experience deceptive, and decision difficult; yet not only must the physician be ready to do his duty but patient, attendants, and circumstances must co-operate if there is to be a cure.'

VI. 25. MATERIAL AND LITERARY SOURCES. Of material remains the most impressive are Asclepian sites excavated at Epidaurus, Cos, Pergamum, Athens, Rome, and else-

where. There is a doctor's house and nursing-home at Pompeii. Numerous instruments have been found at Pompeii and at many other places. Vase-paintings have yielded much information, especially for hygiene, bathing customs, athletics, etc. Sanitation is superbly represented by the aqueducts, water-supply, and drainage-systems of Rome. There are remains of military hospitals in the Empire, of which the best known are those at Novesium and Vetera (*Neuss* and *Xanten* on the Rhine frontier) in lower Germany and at Aquae Helveticae (*Baden* in Switzerland). In the latter numerous instruments were found. Many inscribed stone stamps used for impressing ointments, especially for diseases of the eyes, with name of maker and directions for use have been found in the western provinces.

26. The fund of Greek manuscripts is very large and is inadequately explored. Latin manuscripts containing versions and translations from Greek also yield information. The papyri are disappointing, but among them is a substantial fragment of the otherwise unknown historical work of Menon, pupil of Aristotle, giving views of some early doctors. There are also papyri illuminating the herbal tradition. Information is accumulating of works lost in the original but surviving in versions in Arabic, Hebrew, and Syriac manuscripts.

27. Light is cast on practice by innumerable allusions in literary texts. Here we consider only technical literature, which is so extensive that no one would claim to have studied the whole closely; there are modern critical editions of only about a half. Best explored is the Hippocratic Collection, but it is complete in no edition after Littré's (1839-61) and for many of its members we still depend on this. Of Galen's writings and pseudepigrapha only a small percentage is critically edited, and we still depend substantially upon an inferior edition completed in 1833.

28. For the earliest stratum of rational Medicine we have only the fragments of the pre-Socratic philosophers, notably those of Pythagoras, Alcmaeon, Heraclitus, Empedocles, Anaxagoras, and Democritus. For the fifth century there are several works in the Hippocratic Collection and fragments of several other medical writers. For the fourth century there is the bulk of the Hippocratic Collection, one work in which can be ascribed to Polybus, son-in-law of Hippocrates. There are also many relevant passages in the works of Plato, Aristotle, and Theophrastus. Specially interesting are fragments of the physician Diocles, contemporary with or a little older than Aristotle.

29. Of the earlier Alexandrian period there are fragments of Herophilus and Erasistratus, the poems on drugs by Nicander, and fragments of a number of herbalists and others. The later Alexandrians are more happily represented by Celsus *On medical matters* (in Latin from a Greek original), by finely illustrated texts of the herbal of Crataeus (c. 80 B.C.), of a commentary on the *Dislocations* of the Hippocratic Collection (c. A.D. 50), of Dioscorides *On materia medica* (c. A.D. 60), and of Soranus *On fractures and bandaging* and *On obstetrics* (c. 2nd c. A.D.). There are also fragments of the first Greek practitioner in Rome, the 'methodist' Asclepiades (q.v. 3) of Bithynia, and others.

30. Writers after Galen were numerous and mostly inferior. Important historically are the fourth- and fifth-century Latin translations of Dioscorides and of works both of the Hippocratic and of the Galenic corpus. Interesting for the soundness of its physiology is Nemesius, Bishop of Emesa, *On the nature of man* (c. 400). Solid derivative source-books are those of Oribasius (325-403), Aetius (c. 550), Paul of Aegina (625-90), and Alexander of Tralles (525-605). The last still shows some spark of originality but much superstition.

31. Of Latin works that *On acute and chronic diseases* by Caelius Aurelianus, a Numidian of the fifth century, is interesting both linguistically and as the only complete 'methodist' work. Among the more bizarre survivals are the medical verses of Quintus Serenus Sammonicus which introduce that word of power *Abracadabra*; the popular, irrational but also non-superstitious herbal of 'Apuleius Platonius Madaurensis' known in scores of early illustrated manuscripts; and the disgusting Sextus Placitus Papyriensis *On drugs from animals*. On the lowest level is Marcellus Empiricus of Bordeaux (c. A.D. 400), whose semi-insane assembly of folly and superstition is a happy hunting-ground for folklorists.

VII. 32. MODERN CRITICISM. Nineteenth-century scholarship produced an account of the origin and course of ancient Medicine that accorded substantially with the views of the ancient physicians from the third century onward as to the history of their art. The ancient tradition was modified but not fundamentally altered. Despite the difficulty in identifying the 'genuine' works of Hippocrates it was persistently held that from the older elements in the Hippocratic Collection a fairly coherent doctrinal system could be deduced, which was treated under the (sometimes admittedly conventional) name of 'Hippocrates'. The figure and part of the personal history of the 'Father of Medicine' were substantially retained.

33. Work of the last few decades calls for a fundamental change in this attitude. A middle way is impossible. The controversy turns primarily on the figure of Hippocrates (c. 400 B.C.) and upon the question of his share in the so-called 'Hippocratic Collection', which took its first form in the third century B.C. (See HIPPOCRATES.)

34. The 'Hippocratic' works, even of the older stratum in that collection, contain differences in outlook as great as those between Socrates and Anaxagoras. Parts of the 'Collection' are separated from each other by centuries in time and were written under widely different social and geographical conditions. To attribute all or many of their doctrines, or of the works that contain them, to a conventionalized 'Hippocrates' conserves nothing but confusion. Moreover, archaeological, textual, and historical investigation combine to render untenable the traditional account of the life of the 'Father of Medicine' even in a greatly modified form.

35. It has been assumed in this article that scientific Medicine did not take shape first with Hippocrates; that it was not originally connected with Cos or with the cult of Asclepius either at Cos or elsewhere; that we know almost nothing of Hippocrates except the approximate period of his life, and that he was regarded by his immediate successors as one—but only one—of several distinguished physicians of his age; that we have no evidence of the existence of any work by Hippocrates, and that we have some evidence that no work by him exists. These are negative conclusions; the positive are incorporated in §§ III, IV, and V. This critical attitude affects neither the value of the Greek picture of the ideal physician, nor the view that such qualities were to be found among the ancients, nor the inspiration and beauty of the 'Hippocratic' mode of life.

For the complete Hippocratic Collection and Galenic writings the reader must still rely on the editions of E. Littré (10 vols., 1831–62) and C. G. Kühn (20 vols., 1821–33). The collection of general information on Greek Medicine in F. Adams, *The Seven Books of Paul of Aegina* (3 vols., 1844–7), is still unexcelled. The best modern Hippocrates, by W. H. S. Jones and E. T. Withington (Loeb Library, 4 vols., 1922–31), is imperfect, as is H. Kühlwein and J. Ilberg, *Hippocratis Opera Omnia* (2 vols., 1894–1902). The *Corpus Medicorum Latinorum* contains several useful volumes. The progress of the *Corpus Medicorum Graecorum* is negligible. Works of other individual authors are given in the article under their names.

MEDIOLAN(I)UM, modern *Milan*, founded c. 396 B.C. on or near the site of Etruscan Melpum (Pliny, *HN* 3. 125) by the Insubres (q.v.), came under Roman control temporarily in 222, permanently in 194 B.C. (Polyb. 2. 34; Livy 5. 34; 34. 46). It obtained Latin rights in 89, Roman citizenship in 49 B.C. Under the Empire, as *municiptium* and later as *colonia*, it grew steadily. The principal north Italian road-centre, Mediolanum ultimately became the capital of the Western Empire. The frequent presence of the imperial court, especially in the fourth century, contributed to its prosperity; but, centrally situated in the fertile plain of Cisalpine Gaul (q.v.), it was independently important. After 300 Mediolanum was the seat of the governor of Liguria, the praetorian prefect, and the vicar of Italy. Attila (452), Odoacer (476), Theodoric (493), Uraia who sacked it (539), and Alboin (569) successively captured Mediolanum. Its famed bishop Ambrose (374–97) established its ecclesiastical independence. The Emperors Didius Julianus and Geta were born there.

MEDON (Μέδων), name of several mythological persons, the only one of importance being the herald in the *Odyssey*, who warns Penelope of the suitors' plot against Telemachus (4. 677 ff.) and is spared by Odysseus (22. 357 ff.).

MEFITIS, Italian goddess of sulphurous vapours arising from the ground (Verg. *Aen.* 7. 84 and Servius there); hence her temple at Cremona was outside the walls (Tac. *Hist.* 3. 33), though in Rome her grove was on the Esquiline (Varro, *Ling.* 5. 49). There are indications that her cult extended throughout Italy, but especially in the central (the most volcanic) regions.

Wissowa, *RK* 246; Latte, *RR* 190.

MEGACLES, son of Alcmaeon, of the family of the Alcmaeonidae (q.v.) at Athens. He was the successful suitor of Agariste, daughter of Cleisthenes (q.v. 2), tyrant of Sicyon (perhaps in 575 B.C.). Later he appears as head of the faction known as the *Paraloi*, in opposition to the *Pedieris*, led by Lycurgus, and the *Hyperakrioi* or *Diakrioi*, newly formed by Pisistratus (q.v.). These factions were named after regions of Attica, the Paralia or south, the Pedion or plain of Athens, and the Diakria or north-east, but the extent of the connexion is not agreed. When Pisistratus made himself tyrant (c. 560), Megacles combined with Lycurgus to expel him, but presently, worsted in renewed strife with Lycurgus, helped him to a second tyranny, in return for a promise to marry his daughter Coesyra. The marriage, however, led to a

further quarrel and Pisistratus again retired before a combination of the other two factions (c. 556). Nothing later is recorded of Megacles: if he survived till Pisistratus' third and final usurpation (c. 546), he was then banished with the rest of his family. He was father of Cleisthenes (q.v. 1) and Hippocrates, the father-in-law of Xanthippus (q.v. 1) and grandfather of Pericles.

T. J. C.

MEGALOPOLIS (ἡ μεγάλη πόλις: the compound form is Latin) was founded by Epaminondas between 370 and 362 B.C. as the centre of the Arcadian Confederacy. Most of the Arcadians (excluding the NE. and E. Arcadian towns) and the Sciritae of the Laconian borderland became its citizens; forty villages were completely or partially abandoned (Paus. 8. 27. 3-4). It lay in a plain, through which the headwaters of the Alpheus and Eurotas flow, and was therefore a centre of communications. It was one of the largest cities of Peloponnesus, and many of its buildings have been excavated, including the Thersilion, where the Arcadian federal assembly met, and a large theatre.

Megalopolis was often hard pressed by Sparta, and suffered from the lukewarmness or hostility of other Arcadian cities and the centrifugal tendencies of the mountaineers. It consistently took the Macedonian side in the fourth century. In 235 its tyrant Lydiadas (q.v.) abdicated and introduced Megalopolis into the Achaean Confederacy (Polyb. 2. 44. 5), in which it subsequently played a leading part under Philopoemen. The last great Megalopolitan was Polybius the historian. In Roman times Megalopolis became an ordinary provincial town (Strabo 388).

Paus. 8. 27. 30-2, Diod. 15. 72. P. K., *GL III i* 288 ff. *Excavations at Megalopolis*, 1890-1 (British School at Athens), E. Fiechter, *Das Theater in Megalopolis* (1931).

T. J. D.; R. J. H.

MEGARA was a town on the isthmus of Corinth, situated in a fertile but narrow plain between Mts. Geranea, Cithaeron, and Cerata, which separated it from Corinthia, Bocotia, and Attica respectively. Its communications with the Corinthian Gulf were difficult, but it had good harbours on the Saronic Gulf, and it was of some importance as a land of passage between Peloponnesus and central Greece. See Hammond, *BSA* 1954, 103 ff., 'The Main Road from Bocotia to the Peloponnese through the Northern Megarid'.

It was held in antiquity that Megara had once been part of the heritage of the rulers of Attica, until after the death of the Athenian king Codrus, when Megara was 'Dorized' to form one State from a number of villages. Between 730 and 550 B.C. Megara displayed considerable colonizing activity. On this problem, the relations of Megara and Corinth, and the process of Dorization, see Hammond, *ibid.* 92 ff., 'The Heraeum at Perachora and Corinthian Encroachment'. Its chief daughter-cities were Megara Hyblaea in Sicily, Chalcidion and Byzantium on the Bosphorus, and Heraclea Pontica in Bithynia. To this period we may also assign the rise of its extensive woollen industry. But c. 600 B.C. it came under the rule of a tyrant (see THEAGENES 1). The large fountain-house associated with his name has recently been excavated, *BCH* 1958, 688 ff. Megara subsequently fell a prey to domestic strife. Consequently it lost its western region, the Peraea Chora, to Corinth, and Salamis to Athens. Shortly before 500 it joined the Peloponnesian League, and it played its full part in the Persian Wars. After 460 it became a bone of contention between Athens and Corinth, and an attempt by Pericles to starve it into surrender by the 'Megarian Decree', which laid an embargo upon its Aegean and Pontic trade (432), was an important contributory cause of the Peloponnesian War.

In the fourth century it generally contrived, despite its position, to remain detached from the inter-city warfare of the period, and it recovered its early prosperity. It allied itself with Athens against Philip, but in the Hellenistic period it relapsed into obscurity. Megara was the temporary seat of the Socratic school of philosophers and is commonly believed to have been the home of the poet Theognis (q.v. 1). For the Megarian school of sculptors in the fourth century, see C. Picard, *Manuel d'archéologie grecque* iii (1948).

P. K., *GL I* m 940 ff. E. L. Highbarger, *The History and Civilization of Ancient Megara* (U.S.A. 1927).

M. C.; R. J. H.

MEGARA HYBLAEA, on the east coast of Sicily some 14 miles north of Syracuse, was founded by Megarian colonists who had previously failed to establish themselves at Trotilon and Thapsos nearby. The traditional foundation-date, 728 B.C., has been called in question by the discovery of pottery remains supposedly earlier than the earliest Syracusan material, and the alternative 750 B.C. has been proposed.

The city's proximity to Syracuse conditioned its history. After flourishing for some 250 years, during which time it colonized Selinus (q.v.), it was destroyed by Gelon (q.v.) in 483 B.C. (Thuc. 6. 4. 1-2). The firm date is a valuable *terminus ante quem* for the archaeology of Greek Sicily. Restored under Timoleon, to whose generation remains of a small Doric temple (? of Aphrodite) may be attributed, Megara prospered in the third century but was again destroyed in 214 B.C. by Marcellus (q.v. 1: Livy 24. 35). Some occupation continued, however, at least to the end of the republican period.

Excavation reports: Villard and Vallet, *Mélanges d'arch.* 1951-64, *BCH* 1952, 289 ff.; see also Kónonlos 1958, 100 ff.

A. G. W.

MEGARIAN SCHOOL, THE, founded at an uncertain date by Euclides (q.v. 1) of Megara, the companion of Socrates and a somewhat older contemporary of Plato's. It is not known what form the school took, but it seems probable that it was not a corporate body and it does not appear to have survived as a school for long after the immediate successors of Euclides. It adopted the doctrines of Parmenides and the Eleatics. Its members seem to have used this doctrine primarily as a basis for criticism of other schools. They developed a reputation for their skill in dialectical argument and were known for the invention of some ingenious sophisms. There are some indications also of contributions to ethical theory, but the exact nature of these is uncertain.

G. C. F.

MEGASTHENES (c. 350-290 B.C.), an Ionian who served on several embassies, 302-291, sent by Seleucus I to the court of the Indian king, Chandragupta (known to the Greeks as Sandrocottus), founder of the Maurya Empire in north India. Following a treaty between the two kingdoms in 302 Megasthenes paid several visits to Chandragupta's capital, Pataliputra, and acquired a knowledge of the districts between the Indus and the Ganges. This first-hand experience of Indian culture and topography was embodied in a history (*Ἰνδική*) in four books; book 1 dealt with the geography, including peoples and cities, books 2 and 3 the system of government, the functional classification of the citizens and religious customs, and book 4 the archaeology, history, and legends. Megasthenes' work appeared at a time when Western interest in India had been stimulated by the campaigns of Alexander and his successors. Despite a

credulous acceptance of fables and inaccuracy of observation it provided the fullest account of India so far known to the Greeks, and together with the lesser works of the historians of Alexander's expedition was the source for many centuries of the Western world's knowledge of that country. It was extensively used by Strabo and was the chief source of Arrian's *Ἰνδικά*; and its contents were handed down to later geographers and historians.

MEIDIAS, potter, in Athens, late fifth century B.C. The 'Meidias painter' who painted for him has a sweet, rich style, often used white for flesh, and added gold for ornaments.

J. D. Beazley, *Attische Vasenmalerei* (1925), 459, W. Hahland, *Die Vasen um Midias* (1930).

MELA (1), POMONIUS (*PIW* 104), of Tingentera (near Gibraltar), wrote under Gaius (A.D. 37-41) or early in Claudius' reign, a geographical survey in Latin of the inhabited world (*De Chorographia*) in three books. He describes (book 1) the earth's division into north and south hemispheres, and five zones (two habitable, the southern being an island of *Antichthonēs*); then the relative positions and boundaries of the three continents, surrounded by Ocean, which indented it by four seas, the Caspian (erroneously regarded as connected with the Northern Ocean), Persian Gulf, Red Sea, Mediterranean; then countries, Gibraltar Straits-Egypt, Palestine-Euxine; (book 2) Scythia, Thrace, Macedonia, Greece, Italy; south Gaul, Spain; then all the Mediterranean islands; then (book 3) the outer coasts of Spain, Gaul, Germany, unknown north Europe, and east Asia; British Isles, Thule, India, Persian Gulf, Red Sea; Ethiopians; west Africa. Inner Europe is neglected, so is inner though known Asia. Africa is all north of the equator. The work was a popular summary, with lists of names, but no mathematical details or distances, though there are some details of physical nature, climate, and customs of lands. Mela's idea of the known world is roughly that of Strabo.

TEXT. C. Frick (1880). Cf. E. Bunbury, *Hist. Anc. Geog.* (1879), ii. 352 ff.; Thomson, *Hist. Zanc. Geog.* 225 f. E. H. W.

MELA (2), LUCIUS (?) ANNAEUS, youngest son of Seneca the rhetorician, and father of Lucan, was *equus* and financier. Claiming Lucan's property after his death in the Pisonian conspiracy of A.D. 65, he was himself implicated and committed suicide (*Tac. Ann.* 16. 17).

E. P. R.

MELAMPUS (*Μελάμπος*) (1), prophet, using the voices of birds and reptiles for divination, missionary of Dionysus (post-Homeric tradition), and ancestor of the prophetic clan of the Melampodidae. Three principal stories are told of him. (a) Serpents licked his ears, and he became able to understand the speech of all creatures (schol. *Od.* 11. 290; Eustath. 1685, 25). (b) His brother Bias wished to marry Pero, whose father Neleus demanded as bride-price the cattle of Iphiclus son of Phylacus, which had been taken by him from Neleus' mother Tyro. Melampus undertook to get them, was caught and imprisoned, but so impressed his gaoler by foreseeing the fall of a roof, which he had heard of from the wood-worms, that Iphiclus, hearing of it, promised him the cattle if Melampus could discover why he was childless. By questioning a vulture, Melampus discovered that Iphiclus' father had unwittingly worked a charm of impotence against him. All was thus settled satisfactorily (*Od.* 11. 287 ff. and scholia). (c) He cured the daughters of Proetus (q.v.) of their madness.

See further Wolff in Roscher's *Lexikon*, s.v., Pley in *PW*, s.v., and art. DIVINATION. H. J. R.

MELAMPUS (2), (3rd c. B.C.), author of two extant works on divination, *Περὶ παλαιῶν μαντικῆς* (ed. H. Diels, *Abh. Berl. Akad.* 1907) and *Περὶ ἑλαίων τοῦ σώματος* (ed. J. G. F. Franz, *Scriptores Physiognomoniae Veteres*, 1780).

MELANIPPIDES, dithyrambic poet, of Melos. The *Suda* distinguishes two poets of the name, but there was probably only one, who was active from c. 480 B.C. to his death at the court of Perdiccas of Macedon (*Suda* s.v. *Μελανιππίδης*). His fame is attested by Xenophon (*Mem.* 1. 4. 3). He altered the structure of the Dithyramb by introducing *ἀναβολαί*, or lyric solos, instead of the antistrophe (*Arist. Rh.* 3. 9) and is mentioned by Pherecrates (fr. 145) as the first corrupter of the art of music (see MUSIC, § 10). His scanty remains are of a *Danaides*, a *Marsyas*, in which Athena flings away her flute in disgust because of its effect on her cheeks (fr. 3), and a *Persephone*. Meleager included some poems of his in his *Garland* (*Anth. Pal.* 4. 1. 7) and calls them Hymns.

TEXT. Page, *Poet. Mel. Gr.* 302-5.

CRITICISM. Pickard-Cambridge-Webster, *Dithyramb*, 30 ff. C. M. R.

MELANIPPUS, in mythology, one of the Theban champions opposed to the Seven (cf. ADRASTUS; Aesch. *Sept.* 414 and often). He was one of the Sparti (cf. CADMUS) by descent (ibid.): in Aeschylus he defends the Gate of Proetus against Tydeus (q.v.). His father was Astacus. He succeeded in wounding Tydeus mortally, but the latter with a final effort killed him and, in dying, asked for the head of his opponent. This was brought him by Amphiarus, who hated him, or Capaneus, and he gnawed it. Thereupon Athena, who had intended to make him immortal for his valour, turned away in horror and Tydeus died. The scene, with Athena leading the personified Athanasia by the hand, is found on two mid-fifth-century Attic vases (see J. D. Beazley, *JHS* 1947, 1 ff.).

See Apollod. 1. 75-6, Stat. *Theb.* 8. 716 ff. For Melanippus' cult see Farnell, *Hero-Cults*, 335. H. J. R.

MELANTHIUS (1) (5th c. B.C.), a minor tragic poet of Athens, who wrote an elegiac poem in honour of Cimon (*Plut. Cim.* 4). The comic poets attack his gluttony, effeminacy, and other defects (*Ath.* 8. 343 c). One of his plays was a *Medea*.

TGF 760.

A. W. P.-C.

MELANTHIUS (2) (4th c. B.C.), painter. Pupil of Pamphilus (q.v. 1), whom he probably succeeded as head of the Sicyonian school. The picture of Aristatus in his victorious chariot was painted by 'all those about Melanthius' including Apelles; no other work by him is mentioned. Apelles admitted his superiority in composition. He wrote on painting, and said that works of art, like characters, should show a certain stubbornness and harshness (in contrast to Apelles' boasted 'charm').

T. B. L. W.

MELANTHIUS (3) (c. 350-270 B.C.) is known from a quotation in the lexicon of Harpocration to have published an *Atthis* in two or more books towards the end of the third century. He also wrote, perhaps as an exegetes, a special work on the Eleusinian mysteries.

FGRII iii B. 326.

G. L. B.

MELEAGER (*Μελέαγρος*) (1), in mythology, son of Oeneus (q.v.), or of Ares (*Hyg. Fab.* 14. 16; 171. 1), and the former's wife Althaea. His story is told in two different forms, the Homeric and the non-Homeric; the former is typical epic, the latter typical folk-tale with the motif of a life-token (*Stith Thompson*, E 765. 1. 2). In the former he is a valiant warrior, whose aid is desperately

needed when the Curetes (q.v.) attack Calydon. Being angry with his mother, who had cursed him 'for the slaying of her brother' (*Iliad* 9. 567; see the whole passage), he refused to defend the city, till at last he yielded to the entreaties of his wife Cleopatra, daughter of Idas (q.v.) and Marpessa. Homer also says (*ibid.* 533 ff.) that Oeneus forgot to sacrifice to Artemis, and she therefore sent a great wild boar to ravage the country; Meleager then gathered huntsmen and hounds from many cities and killed the boar. Elsewhere (*Il.* 2. 642) it is mentioned in passing that he was dead by the time of the Trojan War, but nothing is said of the manner of his death. In the *Éhoiai* (fr. 135, 12 Rzsch) Meleager is killed by Apollo in battle with the Curetes; the text is very fragmentary, but cf. Paus. 10. 31. 3. This, then, continues the Homeric or normal heroic tradition. The other story cannot be traced further back than Phrynichus (q.v. 1) the tragedian (fr. 6 Nauck, from Paus. *ibid.* 4). As told by later writers (e.g. Apollod. 1. 65 ff.; ultimately from Euripides' *Meleager*?) it runs thus. When the boar-hunt began, Atalanta (q.v.) was the first to wound the beast. Meleager, who loved her, adjudged her the spoils when he himself killed the boar. His mother's brothers tried to take them from her and Meleager killed them. Althaea then had recourse to her power over his life. Shortly after his birth, the Moirai had come to the room and said that he should live until a brand then on the fire burned away; this is a theme which might be found in a modern Greek story, the belief in these spirits of birth being still prevalent. Althaea quenched the brand and put it in a chest; now, hearing of the death of her brothers, she took it out and burned it, and Meleager died.

Bacchylides (5. 93 ff.) combines the two versions; the Curetes and Aetolians fought over the boar's spoils (as in Homer, *op. cit.* 547 ff.); in the *mélée* Meleager accidentally killed his uncles, but Althaea did not reflect that it was an accident, and so brought about his death by means of the brand.

Since the name of the guinea-fowl, *μελεαγρίς*, suggests that of Meleager, a story grew up (see Thompson, *Gloss. Gk. Birds*² (1936), 199) that his sisters turned into them.

The hunt of the Calydonian boar, with Meleager in the lead, is a favourite subject of archaic and classical art. It appears in the east pediment of Scopas' Temple of Athena Alea at Tegea; and a statuette type of Meleager as a young huntsman has been associated with Scopas (Brommer, *Vasenlisten*², 235 ff.). H. J. R.; C. M. R.

MELEAGER (2) (fl. 100 B.C.), poet and philosopher, came from Gadara in Syria, lived in Tyre, and retired to Cos in old age. His poems on himself (*Anth. Pal.* 7. 417-19) show that he was trilingual, speaking Greek, Syrian, and Phoenician. His Menippean satires, Cynic discourses in prose mingled with verse, are lost. He was also a master of the epigram. He compiled the first large critical selection of poetic epigrams, calling it his *Garland* and likening each poet to a flower (*Anth. Pal.* 4. 1). The Greek Anthology (q.v.) contains about a hundred of his poems, nearly all about love. Many are adaptations of the work of earlier epigrammatists (especially Asclepiades, q.v.). They infuse erotic feeling into the traditional forms of epitaph and dedication, combining remarkable technical adroitness with apparently genuine emotion. Meleager's language is sometimes flamboyant in the manner of 'Asian' rhetoric, but his metre is controlled by fastidiously precise rules.

See ANTHOLOGY; CYNICS; and EPIGRAM.

Gow and Page, 3926 ff.; D. L. Page in *Miscellanea . . . Rostagni* (1963); K. Radinger, *M. von Gadara* (1895); L. A. Stella, *Cynque poeti dell'Antologia Palatina* (1949); W. and M. Wallace, *TAPA* 1930; T. B. L. Webster, *Hellenistic Poetry and Art* (1964), ch. 9;

A. Wifstrand, *Studien zur griech. Anthologie* (1926). J. Hubaux, *Mus. Belge* 1921, shows Virgil adapting his poems in *Ecl.* 8. G. H.

MELETUS (1) (5th c. B.C.), an Athenian tragic poet, attacked by contemporary comic poets for his dullness (*Suda*, s.v., schol. Ar. *Ran.* 1302, etc.), his immorality, and his starveling appearance, composed a tetralogy on the Story of Oedipus (schol. Pl. *Ap.* 18 b, quoting the *Διδασκαλίαι* of Aristotle), probably the father of the accuser of Socrates in 399 B.C. A. W. P.-C.

MELETUS (2), probably son of (1) above; the titular accuser of Socrates in 399. But he was then quite young, and was probably the tool of Anytus, who was Socrates' real opponent. The story that he was later put to death by the Athenians is doubtful. He is apparently not identical with the Meletus who in 399 accused Andocides of impiety. W. D. R.

MELINNO, authoress of a poem in five sapphic stanzas on the world-power of Rome, quoted by Stobaeus (3. 7), who calls her a Lesbian. Her dialect is Doric, and it is more likely that she came from some town of Magna Graecia which had been conquered by the Romans. Her date is much disputed. Some think that the similarity of her sentiments to those of Horace and the cult of 'Roma aeterna' point to the imperial age, while others claim that the absence of any mention of a *princeps* points to republican Rome, even so early as the Punic Wars. The first half of the second century B.C. seems the most likely date. There is no need to assume that she was influenced by Latin poetry.

TEXT. Diehl, *Anth. Lyr. Graec.* ii. 315-16.

CRITICISM. F. G. Welcker, *Kl. Schr.* (1845) ii. 160 ff.; C. M. Bowra, *JRS* 1957, 21 ff. C. M. B.

MELISSA (*Μελίτσα*, Bee). Like its Hebrew equivalent Deborah, this is occasionally found as a proper name, also as a title, especially of priestesses of Demeter (according to schol. Pind. *Pyth.* 4. 104); of Artemis (Aesch. fr. 87 Nauck); of Rhea (Didymus quoted below), besides the Asianic cult of the Ephesian Artemis, whose regular symbol is a bee; that, however, her priestesses were called *mēlissai* is not quite certain, see Ch. Picard, *Éphèse et Claros* (1923), 183 f. One or two minor heroines of mythology are so named, the least unknown being the sister of Amalthea (q.v.); both were daughters of Melisseus king of Crete, who was the first to sacrifice to the gods. While her sister fed the infant Zeus with milk, she provided honey for him, and was afterwards made the first priestess of the Great Mother, meaning presumably Rhea (Didymus in Lactant. *Divin. Inst.* 1. 22, from his commentary on Pindar, the source probably of the above scholion). Columella (*De Re Rust.* 9. 2. 3) mentions a 'very beautiful woman Melissa whom Iuppiter turned into a bee', generally taken to refer to the same story. See HONEY. H. J. R.

MELISSUS (1) of Samos commanded the Samian fleet which defeated the Athenians in 441 B.C. He was the last important member of the Eleatic school of philosophy (q.v.), agreeing with Parmenides in making reality changeless and single but differing from him in describing it as boundless and allowing it a past and a future. He held that it was 'full', without any void, but denied it the solidity of a physical body. Fragments of his book show him defending Eleaticism against philosophical theories of change, those of Anaximenes and Diogenes of Apollonia (rarefaction and condensation), Empedocles (rearrangement in a plenum), and probably the atomists (motion in a vacuum).

Testimonia and fragments in Diels, *Vorsokr.*¹¹ i. 258-76.

G. E. L. O

MELISSUS (2), GAIUS, Maecenas' freedman, invented a form of light drama in the *fabula trabeata*, whose characters were equestrian. He compiled a book of jests (*ineptiae*, Suet. *Gram.* 21) and was possibly the Melissus quoted several times by Pliny on natural history.

MELISSUS (3), AELIUS, contemporary with Gellius, who cites his *De loquendi proprietate* (18. 6. 1).

MELITA, modern *Malta*, a strategically situated island between Sicily and Africa with important megalithic monuments and excellent harbours. Phoenicians had colonized Melita by the seventh century, and it was in Carthage's hands by the fifth, but lost in 218, when Melita became a Roman ally administered by the governor of Sicily. Subsequently, although Phoenician was still spoken, Melita acquired Roman citizenship. Despite its barren and waterless condition Melita has always enjoyed industrial and commercial prosperity.

Pliny, *HN* 3. 92; Diod. 5. 12; Livy 21. 51; Cic. *Verr. passim*. A. Mayr, *Die Insel Malta um Altertum* (1909); F. Zammit, *Malta* (Malta, 1926); L. Viviani, *Storia di Malta* (2 vols., 1933-4); J. D. Evans, *Malta* (1959). E. T. S.; J. B.

MELITENE, a city in Cappadocia near the Euphrates (modern *Eski Malatya*). The ancient Hittite metropolis, Milid, gave its name to the district Melitene and this in turn appears as the name of the city when it became an important garrison town and road junction, part of the eastern frontier defences of the Roman Empire. For Strabo (12. 537) the district of Melitene contained no *polis*. Melitene controlled the important crossing of the Euphrates to Tormisa in Sophene, a district east of the river assigned by Pompey to the client king of Cappadocia and still ruled by a client of Rome in A.D. 54 (Tac. *Ann.* 13. 7). In c. A.D. 70 the Legio XII Fulminata was installed and soon the town was given city status by Trajan. After Diocletian's reorganization it became part of Armenia. Later Justinian renewed its walls (Procop. *Aed.* 3. 4). E. W. G.

MELITO, bishop of Sardis (d. c. A.D. 190), addressed a defence of Christianity to Marcus Aurelius (only fragments extant) in which he sees as providential the coincidence of Christ's birth with Augustus' establishment of the *pax Romana*. A sermon on the Pascha (preserved in three Greek papyri, a Coptic papyrus, some Syriac fragments, a Georgian version, and a Latin epitome) is written in a rich rhetorical style, with many parallels to the florid manner of Maximus (q.v. 2) Tyrius, making much use of the isocolon with anaphora and homoio-teleuton.

B. Altaner, *Patrology* (1960), 131 ff.; M. Testuz, *Papyrus Bodmer XIII* (1960); O. Perler, *M. sur la Paque* (1966). H. C.

MELOS, with Thera, the most southerly of the Sporades. The island was celebrated in neolithic times for its monopoly of obsidian, which was exported all over the Aegean area. There was a rich deposit at Phylakopi, where successive sites were occupied from the Early Minoan period; the examination of these sites has thrown most light on the early history of the Cyclades. It had very close connexions with Minoan Crete from the seventeenth century, and with the later Mycenaean world. In the Dorian migration it was colonized from Laconia. In the later seventh century it was an important artistic centre for vases, jewellery, and gems. In 480 the inhabitants sent a contingent of ships to Salamis. They were not, however, members of the Delian League, and remained neutral at the outbreak of the Peloponnesian War. Nicias attacked them in 426, and ten years later they were

brutally enslaved by the Athenians, who established a cleruchy on the island.

P-K, *GL* iv. cvii (d); *IG* xii. 3; C. Smith, etc., *Excavations at Phylakopi in Melos* (1904), *BSA* 1897-8; cf. *ibid.* 1910-11, 1 ff.; J. Boardman, *Island Gems* (1963). W. A. L.

MEMMIUS (1, *PW* 5), GAIUS, attracted the censure of Scipio (q.v. 11) at Numantia. As tribune (111 B.C.) he attacked the nobles who had had dealings with Jugurtha (q.v.), but was prevented by the veto of his colleague Baebius from interrogating Jugurtha. He was a vigorous prosecutor before the commission of Mamilius (q.v. 3). Praetor c. 104, he was later accused *repetundarum*, but acquitted, despite the testimony of his enemy Scaurus (q.v. 1). Competing with Glaucia for the consulship of 99, he was killed in a riot. E. B.

MEMMIUS (2, *PW* 8), GAIUS, married Sulla's daughter Fausta. In 66 B.C., apparently as tribune, he attacked the Luculli and succeeded in delaying L. Lucullus' triumph. As praetor in 58 he was hostile to Caesar. In 57 he went as governor to Bithynia. In 55 he divorced Fausta, who now married Milo (q.v.), and in 54 stood for consul with Caesar's support; but his chances were ruined by an electoral scandal which he himself revealed (see CLAUDIUS 12); eventually condemned *de ambitu*, he went into exile in Athens (52). In 50 he had hopes of restoration: we do not know if they were realized. He died before 46. His son Gaius was perhaps the *consul suffectus* of 34. Memmius was something of an orator and poet, and a literary patron; Catullus and Helvius Cinna (q.v. 3) accompanied him to Bithynia, and Lucretius dedicated his *De Rerum Natura* to him; hence he has attracted more attention than his life and character may be thought to deserve.

MEMNON (1), a mythical king of Ethiopia, was the son of Eos and Tithonus. He went to Troy to the aid of his uncle Priam, killed Antilochus, and was himself slain by Achilles, after which Zeus rendered him immortal. The legend of Memnon was probably first set forth in the *Aethiopis*, one of the lost poems of the Trojan cycle. The myth is mentioned in the *Odyssey* and by Hesiod, Alcman, and Pindar. Several of the dramatists treated the legend in plays now lost, and other writers refer to it frequently. Aeschylus associates Memnon with Susa, as does Herodotus, while Diodorus (using Ctesias) relates that Memnon was sent by Teutamus king of Assyria with a force of Ethiopians and Susans to the aid of Priam. Strabo and Pausanias likewise, following Herodotus, regard Susa as the city of Memnon. On his march to Troy Memnon was said to have left several great *stelai* along his route, and Herodotus notes that this has caused him to be confused with Sesostris. In spite of reference to Susa and the 'Ethiopians of Asia', there are unmistakable traces of Memnon's being localized in Egypt and Ethiopia. There was a Memnonion in Thebes which gave its name to a part of the city, and another at Abydos, the latter really a temple built for Osiris by Seti I. During the Ptolemaic period incubation was practised in the Memnonion at Abydos and *katochoi* attached to the worship of Isis and Sarapis resided there. In Roman times a peculiar cult and oracle of Bes had its location there. The colossi of Memnon whose stones, before the restoration of the statues, were said to sing at dawn, once stood before the temple of a king and are inscribed with the name of Amenhotep III. There have been many attempts to interpret the legend of Memnon. Several modern authorities believe him to have been a Hittite leader.

His final combat and his body carried away by his

mother are favourite themes in archaic and classical vase-painting. He is given regular heroic features, but often has negro squires in attendance, as he had also in Polygnotus' Underworld.

R. Holland, art. 'Memnon' in Roscher's *Lexikon*; P. Perdrizet, G. Lefebvre, *Les Grâces grecs du Memnon d'Abidos* (1919); A. Widemann, *Herodotus Zweites Buch* (1890). Inscriptions of colossi: A. and E. Hernald, *Les Inscriptions grecques et latines du Colosse de Memnon* (1900). Vase-paintings, Brommer, *Vasenlisten*², 259 ff., 290. T. A. B.; C. M. R.

MEMNON (2), a Rhodian of the fourth century B.C., began his career as a mercenary leader with his elder brother Mentor (q.v. 2). After the failure of Artabazus' revolt (353 B.C.) Memnon stayed with Mentor, and after his death he married his widow Barsine (later Alexander's mistress) and succeeded him as Persian general in Asia Minor. In 336 he fought successfully against Philip's generals. In 334 his ingenious plan to retire before Alexander, to waste the country, and to fight on sea, was rejected by the satraps. He took part in the battle of Granicus and escaped. Appointed commander-in-chief by Darius, he organized the maritime war and occupied several Greek islands, hoping to make the Greeks revolt (333). He died suddenly, a severe loss for Persia.

Arr. *Anab.* bks. 1 and 2, Diod. bks. 16 and 17. H. W. Parke, *Greek Mercenary Soldiers* (1933), Berve, *Alexanderreich* II, no. 407. V. E.

MEMNON (3) of Heraclea Pontica, after Caesar and probably before Hadrian, wrote the history of his city in at least sixteen books, perhaps following Nymphis; books 9-16 are substantially preserved by Photius. Book 13 had a long digression on the rise of Rome, and in general the wider issues in which the city was involved were treated. The remains allow study of the methods and style of Hellenistic local chronicle.

FGH III B, 336; b, 171.

A. H. McD

MEMOR, ?SCAEVA (? *Scaev(i)us*), a writer of tragedies (lost), contemporary with Martial, who composed an elegiac distich on his statue. His brother Turnus was a well-known satirist (Mart. 11. 9 and 10).

MEMPHIS, the traditional centre of Lower Egypt, was naturally the scene of Alexander's installation; it continued populous till the Roman conquest, being ranked by Strabo second to Alexandria. The fortification of Babylon, across the river, as a legionary camp under Augustus probably started its decline, and it sank to a provincial metropolis. Its importance under the Ptolemies was due largely to the cult of the Serapeum, which the religious policy of Augustus would not favour. There are few remains of Graeco-Roman buildings; the walls of the camp of Babylon stand amongst the houses of Old Cairo.

J. Ph. Lauer and Ch. Picard, *Les Statues ptolémaïques du Serapeion de Memphis* (1955); U. Wilcken, 'Das Serapeum von Memphis', *Urkunden der Ptolemäerzeit* I, 7; A. J. Butler, *Babylon of Egypt* (1894). J. G. M.

MEN (*Mḗn*), a Phrygian god, worshipped throughout Anatolia (cf. Strabo 557, 577, 580). He frequently bears a crescent moon behind his shoulders, or the crescent alone may represent him. The native form of his name was Man(n)es, and his lunar associations, if not original, may be due to a confusion with the Greek μῆν. In some respects he seems merely the counterpart of Attis. Both celestial (Οὐράνιος) and chthonic (Καταχθόνιος), he was invoked also as Lord (Τύραννος) and by numerous titles, such as M. Ασκατηνός, M. Κάρον, M. Φαρνάκου, M. Τιάμου (perhaps = Καταχθόνιος), found chiefly in restricted localities. He was a healing god, a protector of tombs, and a giver of oracles. Metics or slaves worshipped Men in Attica from the fourth or third century

B.C., but elsewhere in Greece only isolated inscriptions of Rhodes, Delos, and Thasos attest his cult. At Rome and Ostia a series of inscriptions to Attis Menotyrannus have been found.

In addition to the general articles (s.v.) in Roscher, *Lex.* and *PW.*, see the accounts of the shrine at Pisidian Antioch in *JHS* 1912 and *JRS* 1913 and 1918. F. R. W.

MENAECHMUS (fl. c. 350 B.C.), pupil of Eudoxus and friend of Plato, discovered the three conic sections and with the help of two of them solved the problem of doubling the cube. None of his works is extant.

MENANDER (Μένανδρος) (1), 342/1-293/89 B.C., by later consensus the leading writer of New Comedy (q.v.), although less successful than Philemon (q.v. 2) with his own contemporaries. An Athenian of good family, he was for a time a pupil of the philosopher Theophrastus, and had some association with Demetrius (q.v. 2) of Phalerum, the prop of the anti-democratic regime of 317-307 B.C. Making his début in 321 B.C. with *Orge*, he wrote over 100 plays, many of which must have been intended for country festivals or perhaps foreign performance. Nearly 100 titles are known, but some may be alternatives; when a play was revived, as frequently happened with Menander's after his death, it was sometimes renamed.

Menander's plays were lost in the 'Dark Age' of the seventh and eighth centuries A.D.; but in modern times numerous finds of papyri, attesting his popularity in antiquity, have so far brought to light one complete play, *Dyskolos* (*The Curnudgecon*), victorious in 317 B.C., and large enough parts of six others to allow of some literary judgement: these are *Epitrepontes* (*The Arbitrants*), named after a brilliantly written scene, and apparently a work of his maturity), *Perikeiromene* (*Cropped*, of which nearly half survives and the plot is clear), *Samia* (mostly preserved) and *Aspis* (the first half), *Sikyomos* (470 lines, of which 160 are more or less complete), and *Misoumenos* (tantalizing remains of a popular and dramatic play). There are smaller but still important fragments of *Dis Exapaton*, *Georgos*, *Heros*, *Theophoroumene*, *Kitharistes*, *Kolax*, *Phasma*, and two unidentified plays, *Fabula Incerta* and *Comodia Florentina*, now known to be *Aspis*, and mentioned above. Scraps of *Karchedonios*, *Koneiazomenae*, *Perinthia*, and a play first but falsely identified as *Misogynes* are less instructive. Some interesting fragments of unknown authorship may be by Menander, notably *P. Ghóran II*, *P. Antinoop*, 15, and the Didot papyrus (but see W. Bühler, *Hermes*, 1963, 345).

Ancient authors preserve over 900 quotations, ranging from a single word to sixteen lines, mainly for grammatical interest or sententious value. These give a false impression, as Menander used gnomes dramatically, and often with irony, more than for their own sake. Still less is to be learned from the collections of one-line gnomes (Μονόστιχοι) ascribed to Menander; of a total of over 800 lines thus known only a few originated with him (W. Gortler, *Μενάνδρου Γνώμαι* (Berlin 1963)).

Before the papyrus finds had revealed Menander's style there was little basis for guessing how far his work had been modified by his Latin adaptors Plautus and Terence: *Aulularia* from an unidentified play, *Bacchides* from *Dis Exapaton*, *Cistellaria* from *Συναριστώσαι*, *Stichus* from *Ἀδελφοὶ α'*, *Adelphoe* from *Ἀδελφοὶ β'*, *Andria* from *Ἀνδρία* and *Περυνθία*, *Eunuchus* from *Εὐνούχος* and *Κόλαξ*, and *Heauton-Timorumenos* can now be used with caution to supplement the picture of Menander's technique and achievement.

The plays are always set in contemporary Greece, usually in Athens or Attica, and although the characters are not unaware of a wider world, the plots treat their private domestic problems. These often have features traditional on the stage but unusual in real life: founding

children, kidnapped daughters, and scheming slaves cannot have been the experience of many Greek households. Menander was praised for 'representing life'; this means that his characters are lifelike, not that he was an unselective reporter. His plays always contain a love-interest: the range of situation is wide, extending from a young man's passion for a *hetaira* to crises of married life. But love is often the occasion rather than the subject of the drama, e.g. Kneemon and his misanthropy are at the centre of *Dyskolos*, and *Adelphoe* is concerned with the right relations between father and son. The more of Menander's work is recovered, the more diverse it appears in theme and treatment.

Menander was a skilful maker of plots and a master of variety and surprise. He wrote for the theatre; the audience was implicated by direct address and long narrative speeches gave scope for the virtuosity of actors. Terence changed this in the interest of realism, which he also pursued by eliminating prologues spoken by divinities. These, sometimes postponed until after an opening scene that whetted the appetite, gave the audience facts as yet unknown to the characters, enabling them better to understand the significance of the events that passed on the stage.

Menander's handling of verse (itself non-realistic) is masterly: his trimeters give the illusion of colloquial speech, while subtle variations of rhythm express the speaker's feelings or character, and the verse-form reinforces the natural emphasis. In his earlier plays at least he introduced variety by using, both for lively and for serious scenes, the trochaic tetrameter with its insistent rhythm. The last scene of *Dyskolos* (iambic tetrameters) even had a flute accompaniment.

Although there is in general an over-all unity of style, each character speaks in an appropriate way (Plut. *Mor.* 853 d). Thus in *Samia* Demeas and Nikeratos, in *Dyskolos* Getas and Sikon, Gorgias and Sostratos are contrasted in language as in character. Some of the non-Attic usages with which Menander was later reproached may have been deliberate pieces of characterization. The occasional use of tragic diction (stichomuthia in *Perikeiromene*, many lines in *Sikyonios*) is sophisticatedly ambiguous, neither simple parody nor completely serious.

Menander's characters range through the whole of society: rich and poor, young and old, slave and free. They include traditional figures, e.g. the soldier and the cook, but though these may retain hints of the traits that were caricatured in Middle Comedy, they become credible and individual human beings like the rest. He attempts no profound psychological insights and may leave to the audience the pleasure of deducing, as in real life, emotions and motives. The dialogue often proceeds so quickly that it requires an alert hearer to grasp all the implications. The same phrase may forward the action, describe a character, and illuminate the speaker. Contrast is a much used device; in *Bacchides* six men form seven contrasted pairs. Typically the persons are portrayed with mingled irony and sympathy, and although the dramatist is primarily an entertainer, he quietly inculcates the lesson that understanding, tolerance, and generosity are the keys to happiness in human relationships.

MENANDER (2), Milinda of Buddhist tradition (*Milinda Pañho*), born in the village Kalasi near Alasandā (identified with Alexandria of the Caucasus), greatest king of the Indo-Greeks, ruled c. 155–130 B.C. He led an expedition into the Ganges valley, reaching Pataliputra (Patna), but returned without annexing any part to his kingdom. He embraced Buddhism after a discussion with Nagasena, a Buddhist scholar-priest. Traditionally associated with the origin of the Buddha image and construction of stupas, he issued a copper coin with the Buddhist *Dharma-Chakra* (Wheel of the Law). His main coin-types, however, show Pallas on the reverse. He adopted the titles of 'Soter' and 'Dikaios'. A Kharosthi inscription is dated from his fifth regnal year and perhaps one of the reckonings used in later Kharosthi inscriptions starts from the first year of his reign. According to Buddhist tradition he handed over his kingdom to his son and retired from the world, but according to Plutarch he died in a camp and 'the cities celebrated his funeral as usual in other respects but in respect to his remains they put forth rival claims and only with difficulty came to terms, agreeing that they should divide the ashes equally and go away and should erect monuments to him in all their cities'.

W. W. Tarn, *Greeks in Bactria and India*² (1951); A. K. Naran, *Indo-Greeks* (1957). A. K. N.

MENANDER (3) of Ephesus compiled from native records, which he translated into Greek, 'the actions which took place under each of the kings [of Phoenicia?] among both the Greeks and the barbarians'. His Tyrian history is cited by Josephus (*AJ* 8. 144–6, *Ap.* 1. 116 ff.).

FGH iii. 783.

MENANDER (4, *PW* 16) of Laodicea (3rd c. A.D.) wrote commentaries on Hermogenes (2) and Minucianus (qq.v.). Two treatises *Περὶ ἐπιδεικτικῶν* pass under his name; the first (Spengel, *Rhet.* iii. 329 ff.) deals with hymns, prayers, encomia of countries and cities, etc.; the second (*ibid.* 368 ff.), by a less polished but livelier writer, gives rules for ceremonial addresses to the emperor and other officials, various forms of *λαλία* ('talk'), epithalamia, etc. Both books deal with a branch of rhetoric which has its interest for the student of ancient poetry as well as oratory, and provide useful material for the interpretation of propemptica (q.v.), epithalamia (q.v.), and other forms.

D. A. R.

MENDES, a he-goat represented usually on monuments as a ram, and identified by Herodotus and other Greeks with Pan, was worshipped in the Egyptian city of Mendes. The cult attained national prominence in the Ptolemaic period. The great Mendes stele (*Zeitschrift für ägyptische Sprache und Altertumskunde* xiii (1875), 33–40) refers to Ptolemy II 'son of the great living goat of Mendes' as having visited the temple 'as the kings before him had done'. The deceased queen Arsinoë II is called 'Arsinoë Philadelphus beloved by the goat', and her deification throughout the land is described. The stele also notes that the province of Mendes paid no taxes to the king but used its revenues for the worship of the god. The completion of the temple and the attendant celebration, the discovery of a new sacred animal, and various feasts and processions are mentioned.

Erman, *Religion der Ägypter* (1934), 362 ff.;

T. A. B.

MENEKRATES (1) of Xanthus, a fourth-century writer of the history of Lycia (Λυκιακά) in Ionic.

FRH 111. 769.

MENEKRATES (2) of Ephesus, probably born c. 340, wrote a didactic poem called *Erga* in imitation of Hesiod, and probably another poem on apiculture (*Melissurgica*).

TEXIS. H. Diels, *PPF* (1901), 171-2.

MENEDEMUS (1) of Eretria (c. 330-c. 265 B.C.) was sent by his city to Megara on military service. He was there won over to philosophy (perhaps after a visit to the Academy in Athens), and studied under Stilpo. He moved to Elis and joined the school founded by Phaedo; he became leader of it and transferred it to Eretria. He involved himself in politics and attained high office, but was forced into exile by political opponents. He took refuge at the court of Antigonos Gonatas in Macedonia and died there. As a philosopher he was called an eristic, and his positive contributions, if any, are unknown.

Diog. Laert. 2. 125-44.

D. J. F.

MENEDEMUS (2), Cynic philosopher of the third century B.C., from western Asia Minor, first a pupil of Colotes the Epicurean, later of Echeclus the Cynic, both of Lampsacus. He is best known from Colotes' polemic against him.

MENELAUS (1) (Μενέλαος, Μενέλεως), younger brother of Agamemnon (q.v.) and husband of Helen (q.v.). In all literature, beginning with Homer, Paris' kidnapping of his wife causes the Trojan War. In the *Iliad* he appears prominently in 3. 21 ff. (Paris avoids him, 96 ff.; he agrees to settle the dispute by a duel with Paris, defeats him, but is prevented by Aphrodite from killing him). In 4. 86 ff. Athena instigates Pandarus (q.v.) to wound him, in order to prevent the war from ending; he is slightly hurt, but cured by Machaon (q.v.). In 17. 1 ff. he distinguishes himself in the fighting over the body of Patroclus; elsewhere he is usually rather in the background, being inferior to Agamemnon in prowess and deliberately holding back (10. 121 ff.) so as not to seem to thrust himself before his greater brother. In the *Odyssey* he is seen safe at home with Helen after a long series of adventures on his return (4. 1 ff.) and is promised Elysium (4. 561 ff.).

Post-Homeric accounts supply details of his life before and after the period covered by the Homeric poems. He had previously met Paris (q.v.) at Delphi, and the oracle had warned them, but they had not understood (schol. *Il.* 5. 64). He was in Crete when Helen was carried off, and was warned by Iris of what had happened, (*Cypria* Photius). For his reunion with Helen after Troy fell see the same source. In Euripides' *Helena*, which follows Stesichorus' version of the story, Menelaus comes with the phantom Helen to Egypt, is shipwrecked, and meets the real one outside the palace of Theoclymenus, son of Proteus, who has been humanized into a Pharaoh. She has taken refuge at Proteus' tomb to avoid being forced to marry Theoclymenus. After a half-comic scene in which Menelaus realizes the situation, they plot with Theonoe, Theoclymenus' sister, to escape. Helen tells the king Menelaus is drowned, and gets the use of a ship to perform funeral rites at sea. Menelaus' men overpower the crew and sail away with him and her, the Dioscuri forbidding Theoclymenus to pursue.

For his cult as hero and occasionally as god see Farnell, *Hero-Cults*, 322 f.

H. J. R.

MENELAUS (2), sculptor, working in the first century A.D. Known from signature on group of Orestes and Electra in the Terme (Winter, *KB* 394. 4), for which he has adapted motives of the fourth century B.C., but Orestes wears his cloak Roman fashion. He called himself

pupil of Stephanus, who signed a statue of a youth in the style of the early fifth century (Winter, *KB* 394. 3). Stephanus was the pupil of Pasiteles, a south Italian Greek sculptor who became a Roman citizen in 89 B.C. and wrote a book on notable works of art. Menelaus has been identified with M. Cossutius Menelaus who signed a lost statue. The Cossutii had a workshop of long standing in Paros, and another of their freedmen, M. Cossutius Cerdo, made the two Polyclitan Pans in the British Museum.

G. Lippold, *Kopien und Umbildungen* (1923), 40, id. *Griech. Plastik*, 386, O. Rubensohn, *JDAI* 1935, 56, Bieber, *Sculpt. Hellenist.* Age 182.

T. B. L. W.

MENELAUS (3, PW¹⁶) of Alexandria, mathematician and astronomer, is dated by astronomical observations made by him at Rome in A.D. 98 (reported by Ptolemy, *Almagest* vi. 3), and was known to Plutarch (*de facie in orbe lunae* 17). Of his works only the *Sphaerica*, in three books, is extant (in Arabic translation). It is a textbook of spherical geometry, and contains the earliest known theorems on spherical trigonometry. Book I gives the definition of a spherical triangle (σφαιρικό τρίγωνον), and develops theorems about it modelled on Euclid's for the plane triangle. Book II is concerned with the solution of problems important for spherical astronomy in a more elegant way than such predecessors as Theodosius (q.v. 4). Book III treats the elements of spherical trigonometry. Prop. 1 is 'Menelaus' Theorem', which was used by subsequent ancient astronomers (e.g. Ptolemy) to solve spherical triangles. It is probable that much of Menelaus' work was original, and superseded earlier methods of solving spherical problems by, e.g., stereographic projection.

Other works by him included one on chords in a circle in six books (Theon, *Comm. in Alm.* 1st ed. Rome, 451) and another on the elements of geometry in three books (al-Birūnī, *Das Buch von der Auffindung der Sehnen im Kreise*, tr. Suter, *Bibl. Math.* 3 F. 11, 31 f.).

Arabic text of *Sphaerica*, with German translation, ed. M. Krause, *Abh. d. Ges. d. Wiss. zu Göttingen*, Phil.-hist. Kl. 3 F. n. 17 (1936). Latin translation by Ed. Halley, *Menelaus Sphaericorum Libri III* (Oxford, 1758).

COMMENT. A. A. Björnho, *Studien über Menelaos' Sphärik*, *Abh. z. Gesch. d. Math.* 14, 1902; Heath, *Hist. of Greek Maths* ii. 206 ff. For history of text and editions see Krause and Björnho, *opp. cit.*, and *Isis* 1938, 417 ff.

G. J. T.

MENENIUS (PW¹²) **AGRIPPA**, consul in 503 B.C. A plebeian, Menenius reputedly appeased the plebeians and brought them back to Rome after the first secession by telling the parable of the Belly and the Limbs (494 B.C.). The story is fictitious, but it is difficult to explain its origin and date (dates of the fourth, third, and first centuries have been suggested); it is either a fable common to the peoples of Aryan stock or the adaptation of an allegorical tale elaborated by Greek sophists.

Ed. Meyer, *Kl. Schr.* 1^a (1924), 358 ff., Ogilvie, *Comm. Livy* 1-5, 312 f.

P. T.

MENESTOR, a Greek writer on botany much quoted by Theophrastus. He applied the Pythagorean theory of the opposition of the warm and the cold to plants, dividing these into those which by their warm nature can grow even in water or in the cold parts of the earth, and those which from their cold nature need a warm climate. It has been much discussed whether his explanation of evergreenness by the doctrine of 'warm plants' or that of Empedocles by means of pores is the older, but on the whole it seems that he can be dated between Empedocles and Theophrastus. He may fairly be called the first Greek who made an inductive study of plants.

Testimonia in Diels, *Vorsokr.* 1^a i. 375-6.

W. D. R.

MENEXENUS of Athens, pupil of Socrates, was one of those present at the conversation in prison related in

Plato's *Phaedo*. He plays a considerable part in the *Lysis*, and a less prominent one in the dialogue called after him.

MENIPPE, name of a Nereid in Heaiod, *Theog.* 260, and of two or three insignificant heroines, as the mother of Eurystheus (schol. *Iliad* 19. 116, which also gives her several other names); the mother of Orpheus (q.v.), generally a Muse (Tzetzes, *Chil.* I. xii. 306).

MENIPPEAN SATIRE, distinguished by Quintilian (*Inst.* 10. 1. 95) as a separate sort of satire. Ultimately founded on Menippus (q.v. 1), it was characterized by its mixture of prose and verse. In Latin it is represented by Varro, Seneca, and Petronius, and descends to the pedantic fantasia by Martianus Capella (5th c.) and to the French *Satire Ménippée*.

J. Wight Duff, *Roman Satire* (1937), ch. 5.

J. W. D.

MENIPPUS (1) of Gadara (first half of 3rd c. B.C.), a slave at Sinope, became pupil of the Cynic Metrocles, bought his freedom, and acquired the Theban franchise. Originator of the serio-comic style (*σπουδογέλοιον*), in which humorous expression was given to philosophical views. His works include *Néκεια* (in which he imitated Crates), *Διαθήκαι*, *Ἐπιστολαὶ κεκομψυμέναι ἀπὸ τοῦ τοῦ θεῶν προσώπου*, *Διογένης πρᾶσις*, *Συμπόσιον*. His prose was interspersed with verses, whether quoted or original is uncertain. He influenced Meleager of Gadara and Lucian, and Varro's *Saturae Menippeae* are adapted from him. See IAMBIC POETRY, GREEK.

Dioq. Laert. 6. 29, 95, 99-101; *Corp. poes ep. Graec. lud.* II. 78-85; R. Helm, *Lucian und Menippus* (1906).

J. D. D.

MENIPPUS (2) of Pergamum (fl. c. 20 B.C.), Greek author of *Περὶ πλοῦτος τῆς ἐντὸς θαλάσσης* (Mediterranean), abridged, corrected, and augmented by Marcian. Book 1, Euxine, Sea of Marmora; 2, Mediterranean, north side; 3, south; Palestine, Asia Minor. It gave chiefly names and distances.

GGM 1. cxxxv ff., 563 ff.; A. Diller, *The Tradition of the Minor Greek Geographers* (1952), 147 ff.; 188.

F. H. W.

MENO, pupil of Aristotle, author of a doxographical compendium of the older Greek medicine—*Ἱατρικὴ συναγωγή*. A selection from it is contained in a London papyrus; ed. H. Diels (1893).

MENODORUS or **MENAS** was a freedman of Pompey and perhaps previously a pirate. In 40 B.C. he captured Sardinia from Octavian for Sextus Pompeius. In 39 he advised Sextus not to make the Pact of Misenum with Antony and Octavian, and was said to have suggested making away with them at the subsequent celebration. In 38, having aroused in Sextus suspicions of his fidelity, he restored Sardinia to Octavian, was rewarded with equestrian rank, and fought in the naval war against Sextus under L. Calvisius (q.v.). In 36 he returned to Sextus, but failed to recover his trust and again deserted to Octavian. He was killed in Octavian's Illyrian campaign of 35, at the siege of Siscia (q.v.).

G. W. R.; T. J. C.

MENODOTUS (1) of Perinthus, author of a history (*Ἑλληνικαὶ πραγματεῖαι*) probably beginning c. 217 B.C. as a continuation of the histories of Psaon of Plataea or Phylarchus.

FGrH II. 82.

MENODOTUS (2), Samian Greek (? identical with Menodotus (1), Diod. Sic. 26. 4), wrote (i) *Τῶν κατὰ τὴν Σάμον ἐνδόξων ἀναγραφὴ* and (ii) *Περὶ τῶν κατὰ τὸ ἱερὸν τῆς Σαμίας Ἥρας*.

FGrH III. 541.

MENODOTUS (3) of Nicomedia (fl. probably c. A.D. 120), follower of Pyrrhon, pupil of Antiochus of Ascalon, and leader of the empirical school of medicine. He was a voluminous author, and is often referred to by Galen.

MENOCEUS (*Μενόκευς*), in mythology, (1) father of Creon (q.v. 3; Soph. *Ant.* 1098 and elsewhere). (2) Creon's son, whose story is best known from Eur. *Phoen.* 905 ff. Tiresias revealed that Thebes could not survive the assault of the Seven unless atonement were made for the killing of the dragon by Cadmus (q.v.); the victim must be one of the Sparti, and unmarried, and no other was available. Menoeceus, despite his father's attempts to save him, killed himself over the dragon's lair.

H. J. R.

MENOETIUS (*Μενότιος*), father of Patroclus (q.v.; *Il.* 9. 202 and elsewhere). Of what country he was seems to have been uncertain even to Homer: see *Il.* 11. 765-6; 23. 85.

MENS, personified right thinking ('Mens Bona', Propertius 3. 24. 19 and elsewhere; it was her title at Paestum, Wissowa, *RK* 314). She was vowed a temple, by advice of the Sibylline books, in 217 B.C. after Trasimene (Livy 22. 9. 10; 10. 10; cf. Platner-Ashby, 339); it was dedicated two years later (Livy 23. 32. 20). A cult of Bona Mens became popular among slaves and freedmen in imperial times.

Latte, *RR* 240.

H. J. R.

MENTHE (*μένθη*) or **MINTHE** (*μίνθη*), i.e. mint. According to Strabo 8. 3. 14, 344 (more authorities given by Peter in Roscher's *Lexikon*, s.v.) she was Hades' mistress (a Naiad, daughter of Peitho, Photius s.v.), and Persephone trampled her underfoot, whereat she became the plant named after her, which smells the sweeter when trodden upon.

H. J. R.

MENTOR (1), in mythology, an old Ithacan, friend of Odysseus, who left his household in his charge (*Odyssey* 2. 225 ff.). Athena takes his shape to help Telemachus (*ibid.* 401 and elsewhere; cf. 24. 548).

MENTOR (2), Rhodian mercenary leader, brother-in-law of the satrap Artabazus (q.v.), whose service he and his brother Memnon (q.v. 2) entered. He married his niece Barsine, Artabazus' daughter. Both brothers took part in the Satraps' Revolt (362-360 B.C.) and received some territory in Troas. In 353 they fled with Artabazus. Mentor went to Egypt, entered again the king's service, and was general at the conquest of Egypt (343). He rose high in Persian service and was ordered to quell the dynasts of Asia Minor. Among them was Hermias (q.v. 3), whom he put to death (342). He had previously obtained the recall of Artabazus and Memnon. He probably died soon after.

Dem. 23. 150 ff.; Diod. 16. 42 ff. H. W. Parke, *Greek Mercenary Soldiers* (1933).

V. E.

MERCENARIES (GREEK AND HELLENISTIC).

(1) *From the earliest times till the Peloponnesian War* (431 B.C.) mercenaries play a small part in Greek warfare, being few in number and not clearly distinguishable from voluntary helpers. They are most frequently mentioned as forming the bodyguards of tyrants. But the early tyrants were often content to enrol citizens and, except in Sicily, did not maintain large armies of professional soldiers. Before the Persian conquests Greek mercenaries were employed to some extent in Egypt and Mesopotamia; afterwards they were mainly used as bodyguards

for the satraps of Asia Minor and were largely recruited from Arcadia.

(2) *Till the King's Peace* (386 B.C.). During the Peloponnesian War there grew a demand for auxiliary troops to supplement the ordinary hoplite. These were drawn especially from the backward parts of Greece and from Thrace. The end of the war released many soldiers for professional service, from whom Cyrus raised an army of more than 10,000 hoplites for his attempt on the Persian throne. In the Corinthian War Iphicrates (q.v.), leading a force of peltasts (q.v.), achieved such success that this type of soldier was established as an independent unit. Meanwhile in Sicily Dionysius I was founding an outstandingly powerful tyranny on a large professional army.

(3) *Till Chaeronea* (338 B.C.). The possibilities of using mercenaries were now fully exploited. The Persian satraps hired large armies to oppose the Great King, who replied by employing the same material. In Greece the city-states used mercenaries in their struggles with each other or remodelled their citizen-armies on a professional pattern. Many tyrants of a militaristic type arose, and in the Third Sacred War (356–346) Phocis showed how even a small State could be dominant so long as it had large financial resources. Philip II of Macedon, however, relied on mercenaries only as a supplement to the main body of his citizen-army.

(4) *Till Ipsus* (301 B.C.). Alexander employed mercenaries mostly for garrison duty and settlement abroad, and on separate expeditions away from his main column. The Persians until Arbela formed the bulk of their heavy infantry from Greeks. The Diadochi made the nucleus of their armies out of Macedonians, but the bulk of the troops were mercenaries, who were ready to change sides according to the fortunes of war.

(5) *Till Pydna* (168 B.C.). Warfare gradually depended less on foreign soldiers. In the Hellenistic kingdoms a small standing army of professional soldiers was maintained, but newly hired mercenaries were not used to form the main phalanx. In time of need they could reinforce it in other directions. Even barbarians were thus employed with their native equipment.

H. W. Parke, *Greek Mercenary Soldiers from the earliest times to the Battle of Ipsus* (1933), G. T. Griffith, *The Mercenaries of the Hellenistic World* (1935), M. Lantier, *Recherches sur les armées hellénistiques* (1949, 1950) H. W. P.

MERCENARIES (ROMAN). Contact with foreign powers such as Carthage and Macedon exposed Rome's weakness in cavalry and light-armed troops. This deficiency she remedied by obtaining contingents outside Italy which, in contrast with the Italian *socii*, were called *auxilia*. Some came from independent allies like Masiussa (q.v.), others were raised by forced levies or paid as mercenaries. Gallic *auxilia* served in the First Punic War, 600 Cretan archers fought at Lake Trasimene, Numidian cavalry turned the scale at Zama. During the next two centuries the number and variety of *auxilia* increased. Spain was a favourite recruiting-ground because of the superiority of the native over the Roman weapons, while Caesar obtained his cavalry from Gaul and Germany, and his archers and slingers from Crete and the Balearic Islands. Under the Principate the *auxilia* became part of the standing army. See AUXILIA.

G. Veith, in Kromayer-Veith, *Heerwesen und Kriegführung der Griechen und Römer* (1928), 311 ff. H. M. D. P.

MERCURIUS (Mercurius, Mircurios, Mircurios), the god of traders, Roman equivalent of Hermes; indeed, it is highly probable that he is Hermes (q.v.) introduced under a name, or title, suggestive of his commercial activities (cf. *merx*, *mercari*). He does not appear in the 'calendar of Numa', nor has he a flamen or any other

indication of primitive Roman (or Italian) cult. On the other hand, his temple is *extra pomerium*, being on the Aventine overlooking the Circus Maximus (see Platner-Ashby, 339); he is worshipped there with a goddess who is in essence the Greek, not the Roman Maia (q.v.), and its dedication day, 15 May, became a festival of merchants (Festus, 135, 4 Lindsay). From all this it is generally supposed that his cult is an early example of Greek, or hellenizing, commercial influence, comparable to that of Ceres, Liber, and Libera (see Ceres); the date of the temple is 495 B.C., see Latte, *RR* 162. Altheim, however, seeks by an ingenious combination to prove that he is an old Graeco-Etruscan deity comparable in functions to the Genius (q.v.; *Griechische Götter* (1930), 39 ff.), and supposes the connexion of the name with *merces* to be a false etymology. It is generally agreed that his ultimate origin is Greek, by whatever route and under whatever circumstances his cult reached Rome; his connexion with trade is equally undoubted. Under the Empire he, like many gods, sometimes takes the title Augustus (see Steuding in Roscher's *Lexikon* ii. 2818; cf. also A. D. Nock, *JHS* 1928, 33 f., 41 f.). His identifications with foreign gods (Steuding, 2826 ff.; see RELIGION, CELTIC) result from his equivalence with Hermes, also his mythology, save for one or two tales, probably Latin literary inventions.

H. J. R.

MEROBAUDES, FLAVIUS, a Spaniard, distinguished as soldier and poet. His works include, besides thirty hexameters in praise of Christ, fragments of a prose panegyric on the second consulship of Aetius (A.D. 437) and of a verse panegyric on his third consulship (446), and a *genethliac*on modelled on Statius, *Silv.* 2. 7.

TLT F Vollmer, *MGH, AA* xiv (1905).

A. H. W.

MEROË, the 'island' between the junction of the Bahr-el-Abiad with the true Nile and that of the Atbara with the Nile. The city Meroë (*Bakarawiga*), the southern and later the sole capital of the Kings and Queens of Napata, was known by hearsay to Herodotus. In the time of Ptolemy II the kingdom became partly hellenized. There were queens named Candace ruling there until the fourth century of the Roman Empire. In spite of ravages by the Abyssinians, the town was important until the seventh century. By the third century B.C. the Greeks knew the Nile well as far as Meroë. But despite further exploration of the Nile in Ptolemaic and Roman times (see NILE), even Ptolemy the geographer of the second century A.D. knew little beyond Meroë and falsely made the land a true island.

For excavations at Meroë see: E. Budge, *Egyptian Sudan* (1907) and *History of Ethiopia* (1928), J. Garstang, *Meroë* (1911), P. L. Shinnie, *Meroë* (1967); Thomson, *Hist. Anc. Geog.* 10, 66 f., 138, 273. E. H. W.

MEROPE (Μερόπη), in mythology, (1) a Pleiad, wife of Sisyphus (q.v.); she is the nearly invisible star of the group, for she hides her face for shame at having married a mortal, while all her sisters mated with gods (see Apollod. i. 85; Hyg. *Fab.* 192. 5). (2) Wife of Cressphontes king of Messenia; see AEPYTUS. (3) Wife of Polybus of Corinth, Oedipus' foster-father (Soph. *OT* 775); see OEDIPUS. (4) Daughter of Oenopion (see ORION; Apollod. i. 25). For more Merope see Stoll in Roscher's *Lexikon*, s.v.

H. J. R.

MERULA, LUCIUS CORNELIUS (PW 272), was made consul suffect (87 B.C.) by Octavius (q.v. 3) after the illegal deposition of Cinna (q.v. 1), chiefly because, as *flamen Dialis*, he could play no active part in war or politics. After Cinna's return he committed suicide, first piously resigning his priesthood, in which he was succeeded (briefly) by Caesar (q.v. 1).

E. B.

MESATOS. Fifth-century tragic poet who was third in the contest in the year, very possibly 463 B.C., when Aeschylus was victorious with his *Danaid Trilogy* and Sophocles was second, (*POxy.* 20. 2256). His existence was previously attested only by Schol. Ar. *Vesp.* 1502, and was widely doubted, but Wilhelm had conjectured rightly that his was the name in seven letters ending in -tos which occurs in the Victor-List between Sophocles, victorious in 468, and ? Aristias; he won either two, three, or four victories.

11. Lloyd-Jones, Appendix to Loeb Aeschylus, vol. II (1957), 505 ff. D. W. L.

MESENE, a kingdom at the head of the Persian Gulf, at the mouths of Tigris and Euphrates, also called Characene from its chief city, Charax. This was founded by Hyspaosines, who created an independent kingdom out of part of the Babylonian satrapy after the death of the Seleucid king Antiochus VII in 129 B.C. Coins dated by the Seleucid era begin with Hyspaosines and give names of thirteen kings down to A.D. 112. Thereafter coins have no longer Greek but Aramaic legends and give no dates. Names of kings are predominantly Iranian, as was that of Hyspaosines himself. Its inaccessibility enabled the kingdom to enjoy in practice independence of Parthia and it established direct trade relations with Palmyra and the trading cities of the Roman East, relations attested by Palmyrene inscriptions (especially frequent in the second century A.D.). But in c. A.D. 224 Ardashir conquered Mesene and made it a Sassanid province.

Phny, *HN* 6, 136 f., 145 f. S. A. Nodelman, *Nervus* 1960, 81 ff.; G. F. Hill, *B.M. Coins, Arabia, etc.* (1922), xciv f.; G. le Rider, *Syria* 1959, 259 f. E. W. G.

MESOPOTAMIA, the country between the Tigris and the Euphrates. The name is generally used to include the whole alluvial country south of the mountains, and the deserts on either side, i.e. the ancient kingdoms of Assyria and Babylonia, modern 'Iraq. Classical writers usually regarded Mesopotamia as excluding Babylonia.

As an important political and commercial link between Syria and Babylonia, Mesopotamia was colonized extensively by the Seleucids. It was a frequent battle-ground of Roman and Parthian armies, and the prosperity of the Greek cities diminished under the Arsacids. Mesopotamia was overrun by Trajan (114-17) (his *Provincia Mesopotamia* was promptly abandoned by Hadrian) and again overrun by L. Verus (162-5) and Septimius Severus (197-9) but was not permanently occupied. Part of Upper Mesopotamia, however, became Roman after the campaigns of Verus and was formed into a separate province, 'Mesopotamia', by Severus. See also ASSYRIA, OSROENE.

V. Chapot, *La Frontière de l'Euphrate* (1907); Jones, *Cities F. Rom. Prov.*, ch. 9, L. Dilleman, *Haute Mésopotamie et pays adjacents* (1962). M. S. D., E. W. G.

MESSAL(L)A(1), MANIUS VALERIUS (PW 247) MAXIMUS, as consul in 263 B.C., reduced the district around Aetna and drove back Hieron (q.v. 2), who then deserted the Carthaginian for the Roman cause. For having freed Messana, Valerius received the cognomen Messalla, which his predecessor Claudius (q.v. 5) may equally have deserved. He celebrated a triumph and decorated a wall of the Senate-house with a painting of his success. He was censor in 252. H. H. S.

MESSAL(L)A(2), MARCUS VALERIUS (PW 266, 268), name of two cousins, distinguished as 'Niger' and 'Rufus', born c. 102 B.C. and 100 B.C. respectively. Of patrician, but not recently prominent, family, they gained the favour of Sulla, who, as Dictator, married a Valeria (probably Rufus' sister) and made Niger Pontifex and

Rufus Augur. Both passed quickly through the lower offices and Niger became consul in 61. Rufus, delayed by the troubles of the 50s and involved in a bribery scandal (54), finally reached the office in 53. (Niger, *interrex* three times (*ILS* 46), perhaps presided at the elections.) As censor (55), Niger, with his colleague Servilius (q.v. 1), regulated the Tiber (*ILS* 5922). He was a friend and ally of Cicero and an active harrister until his death (c. 50), father of a great orator (see 3) and father-in-law of a famous jurist (SULPICIUS 1). Rufus, prosecuted for bribery (51), was defended by his uncle Hortensius (q.v. 2) and acquitted, but fined on another charge. Offended by Pompey, he fought for Caesar in the Civil War, and after Caesar's death devoted himself to writing books on history and religion that were widely read by ancient scholars but have perished. He died in 26.

Cichorius, *Rom. Stud.* 233, R. Syme, *JRS* 1955, 156. E. H.

MESSAL(L)A(3) CORVINUS, MARCUS VALERIUS (PW 261) (64 B.C.-A.D. 8), soldier, orator, statesman, and patron of letters, first distinguished himself at Philippi (42 B.C.) as supporter of Brutus and Cassius. Declining command of the Republican army after that disaster, he transferred his allegiance to Antony; but, disgusted with Antony's conduct, he joined Octavian (how soon, however, is not clear). He fought for Octavian against Sextus Pompeius (36) and in the Illyro-Pannonian War (35-34), subdued the Alpine Salassi (34-33), and as consul with Octavian (31) took part in the battle of Actium. After service in the East, as proconsul in Gaul he conquered the Aquitani, celebrating a triumph in 27. In c. 25 B.C. he was made *praefectus urbi* but resigned after a few days, 'incivilem potestatem esse contestans' according to Jerome, 'quasi nescius exercendi' according to Tacitus (*Ann.* 6. 11. 4). Already member of the College of Augurs, he became the first permanent *curator aquarum* in 11, and it was he who proposed the title of *Pater Patriae* for Augustus (2 B.C.). He reconstructed part of the Via Latina and several public buildings, gained fame as orator and historian, dabbled in poetry and philosophy, and was the patron of a literary circle—Tibullus, Lygdamus, Sulpicia, and the author of the *Panegyricus Messallae* (q.v., and see PASTORAL POETRY, LATIN, §2). Titles of several of his grammatical and stylistic treatises have survived.

HISTORICAL FRAGMENTS Peter, *HRRel.* II lxxviii ff. and 65 ff.; grammatical, H. Fuhrholz, *Gramm.* Rom. Frag. I. 503 ff.; rhetorical, Makovani, *ORF.* II 176. See also J. Hammer, *Prolegomena to an Edition of the Panegyricus Messallae* (U.S.A. 1925), R. Kuthan, *De duabus Messallae expeditionibus* (1923); Syme, *Rom. Rev.*, see index. J. H.; M. E. H.

MESSAL(L)A(4) MESSALLINUS, MARCUS VALERIUS (PW 264) (cos. 3 B.C.), son of (3) above, and a person of some distinction and oratorical talent but not to be compared with his parent. Legate of Illyricum in A.D. 6 and present with Tiberius on the campaign against Maroboduus, he was sent back to deal with the rebellious Pannonians and Dalmatians and reached Siscia after fighting a battle; he received *ornamenta triumphalia*. Later Messallinus spoke in the Senate on several occasions during the principate of Tiberius. His election as one of the *quindecimviri* in charge of the Sibylline books is celebrated in the longest poem (2. 5) of Tibullus, who enjoyed the patronage of Messallinus' father. R. S.

MESSAL(L)A(5), VIPSTANUS (PW 6), a military tribune in A.D. 69, took temporary command of a legion at the battle of Cremona. He was perhaps a source for the account of the campaign in the *Historiae* of Tacitus who names him twice (*Hist.* 3. 25, 28). Tacitus introduced him as a speaker in the *Dialogus*, as a defender of the classical orators against more contemporary fashions. Messalla

defended his half-brother Aquilius Regulus (q.v. 3) when he was attacked by Epirus (q.v.) in 70. He probably died young.
II. H. S.

MESSAL(L)INA (1), VALERIA (*PW* 403), granddaughter of Octavia (q.v. 2) on her father's and mother's sides, in A.D. 39 or 40 married at 14 her second cousin Claudius (q.v. 1), then 48 years old, and bore him two children, Octavia (q.v. 3) and Britannicus (q.v.). Claudius alone was blind to her sexual profligacy (which Juvenal travestied in *Satires* 6 and 10), whose climax was reached when in 48 she went through the formalities of a marriage service with C. Silius (q.v. 1). The freedman Narcissus (q.v. 2) turned against her and, while Claudius was in a state of stunned incredulity, ensured that she was put to death.
J. P. B.

MESSAL(L)INA (2), STATILIA (*PW* 45), third wife of Nero (A.D. 66), who put to death her fourth husband Iulius Vestinus Atticus, was great-great-granddaughter of Augustus' partisan T. Statilius Taurus and probably daughter of T. Statilius Taurus (*cos.* 44). She received some divine honours. After Nero's death she maintained a brilliant position, and is said to have been noted for her eloquence and literary culture as well as for her beauty. Otho contemplated marriage with her.

Suet. *Nero* 35. 1, *Otho* 10. 2; scholast. on Juvenal 6. 434. A. M.

MESSANA (modern *Messina*) was founded as *Zancle* c. 725 B.C., first by Cumaeans *Ἀχαιοί* and then by a contingent from Chalcis. An association with Naxos is apparently erroneous. Colonies were sent to Mylae (*Milazzo*) c. 717 B.C. (?) and to Himera (q.v.). Despite its position on the straits bearing its name, the city though prosperous was not of major political importance, and was overshadowed by Rhegium (q.v.), whose tyrant Anaxilas seized it in 400/89 B.C. (see *ANAXILAS* 1 for details). It received Samian aid, later, Messenian immigrants who changed its name to *Messene*. After 461, when coins show the Doric form *Messana* in use, the city's population was further mixed by a settlement of ex-mercenarys from Syracuse and elsewhere. Becoming independent of Rhegium it supported Syracuse in 427–424 and 415–413. In 396 the Carthaginians destroyed it; Dionysius I rebuilt it, and on the fall of Dionysius II it had its own tyrants until it again formed part of the Syracusan system under Timoleon and Agathocles. In 288 the latter's Campanian mercenaries, calling themselves 'Mamertini' (men of Mars), seized it, seeking Roman and Carthaginian aid and when Hieron II (q.v.) tried to suppress them. Both responded, and the ensuing imbroglio provoked the First Punic War (see *MAMERTINES*). After 241, Messana became a prosperous *civitas foederata*. Remains of antiquity on the site are meagre, thanks partly to the devastating earthquake of 1908.

Bérard, *Bibl. topogr.* 67 f.; Dunbabin, *Western Greeks*; G. Vallet, *Rhegion et Zancle* (1958). A. G. W.

MESSAPII immigrated into Calabria (q.v.) in the Early Iron Age. Probably they were Illyrians, not Cretans (despite M. Mayer in *PW* xv. 1175 f.). They undoubtedly spoke an Illyrian language: over 200 inscriptions, written c. 450–50 B.C. in a 'Tarentine-Ionic' alphabet, survive (J. Whatmough, *Prae-Italic Dialects* (1933), ii. 258 f.). The civilized Messapii, strictly neighbours of Tarentum, are scarcely distinguishable from the Calabri (who dwelt near Brundisium) and Sal(l)entini (who inhabited the 'heel' proper); the Apulian Peucetii (= Poediculi) and Daunii, although they supported Tarentum against the Messapii (Strabo 6. 281), also spoke Messapic. These peoples were collectively called *lapyges* (Polyb. 3. 88). In 473 B.C. the Messapii defeated Tarentum (*Idt.* 7.

170) and in 413 under King Artas supported Athens against Syracuse (Thuc. 7. 33). In 338 they helped to defeat Tarentum's mercenary, Archidamus, but in the Pyrrhic War supported Tarentum and were consequently subjugated by Rome (266: *Acta Triumph.*). Although only casually mentioned thereafter, they were never completely assimilated. Chief towns: Uria, Rudiae, Caelia, Brundisium, Uzuntum.

J. Whatmough, *Foundations of Roman Italy* (1937), 111 (with bibliography); O. Haas, *Messapische Studien* (1962). F. T. S.

MESSAPUS, (1) eponym of Messapia in south Italy (Strabo 9. 2. 13). (2) Son of Neptune, an Etruscan, invulnerable to fire and steel, one of 'Turnus' allies (Verg. *Aen.* 7. 691 ff.; cf. 9. 523; 12. 128).

MESSENE was founded in 369 B.C. to be the capital of Messenia (q.v.). Situated on the western slopes of Mt. Ithome in the lower Messenian plain, its natural strength was reinforced by city-walls (largely preserved) which furnish the finest example of fourth-century fortification on the Greek mainland. Extensive remains of Hellenistic and Roman public buildings have been excavated below the modern village of Mavromati (*BCH* 1964, 737 ff.) around an extensive Agora: theatre, propylaea, and syndnion on the east; portico with staircases on the north; a temple of Artemis and elaborate columned niches on the west. Attacked unsuccessfully by Demetrius (q.v. 7) of Pharos (214 B.C.), by Philip V of Macedon, and by Nabis of Sparta, it was captured by the forces of the Achaean Confederacy under Lycortas (182 B.C.) in revenge for the Messenians' execution of Philopoemen (q.v.). It retained considerable importance under the Roman Empire.
A. M. W.; R. J. II.

MESSENIA, the south-west region of Peloponnesus, bounded on the north by Elis, along the lower course of the river Neda, and Arcadia, and on the east by Laconia, where the frontier follows at first the main ridge of Taygetus, but further south runs to the west of it, and terminates at the river Choerius a few miles south of the head of the Messenian Gulf. Whilst west Messenia is a bleak, mountainous region, dominated by Mt. Aegaleos, with its few settlements along the coast (Cyparissia, Coryphasion-Pylos, Mothone, Asine, Corone), the central and eastern region watered by the river Pamisus and its tributaries was more populous, and the lower plain, *Μακάρια*, was renowned for its fertility.

The earlier prehistory of Messenia is represented particularly by the excavation of Malthi (possibly the Dorian of Paus. 4. 33. 6–7) overlooking and commanding the Messenian gap, the main east-west communication of the upper Messenian plain. It was a settlement of irregular house-blocks and winding lanes dating onwards from the Neolithic but developed and heavily fortified in the Middle Helladic period (M. N. Valmin, *The Swedish Messenia Expedition* (Lund, 1938)). In general it is clear that, despite the relatively unpromising terrain of western Messenia (from which Elean Triphylia can hardly be separated), this area developed very considerably from the end of the Middle Bronze Age to c. 1200 B.C. In saga Messenia was the kingdom of Aphareus who welcomed Neleus as a refugee from Thessaly (Paus. 4. 2. 5); on the death of Idas and the extinction of the Apharetid line Nestor inherited the greater part of the territory from both (Paus. 4. 3. 1). The bounds of the Neleid kingdom are set far to the north: in the Catalogue of the Ships Nestor (*Il.* 2. 592) possesses *Θυρόσσα, Ἀλφειοῦ πόντον* (cf. 11. 711–12: *Θυρόσσα, . . . τηλοῦ ἐν' Ἀλφείῳ νεῆτη Πύλου ἡμαθόεντος* (see *PYLOS*)). The disturbance called the Return of the Heraclidae drove Neleids into exile and gave new kings to Athens; also a basis in political mythology

for Athens' claim to be mother city of the Ionians among whom Neleids also reigned. The same Athenian connexion is implied (a late development?) in the Andania Mysteries (see below) and the coming of Lycus son of Pandion into exile to Messenia (Paus. 4. 3. 6). Abundant Bronze Age remains underline the importance and population of the region: as well as the palace at Ano Englianos (see PYLOS in Messenia) there may be mentioned the very early tholos tomb near the north end of the Bay of Navarino, the extensive discoveries at Tragana and sites to the east of Pylos, and especially the tholos at Routsí with inlaid daggers and other finds (ILN 6. 4. 1957). These date from the beginning of the Mycenaean period and later. To the north, in the region of modern Kyparissia and on the borders of Triphylia discoveries have been made at Mouriatadha (tombs and 'palace') which may be Nestor's Amphigeneia, and at Peristeriá (near the village of Moira) a very large tholos and other structures which may be Helos in his kingdom. Of great interest is the possible closer connexion than elsewhere with Crete (pottery baths, and the double axe at Peristeriá), cf. *The Delphic Hymn to Apollo*, 391 ff.; also with the Jipari Islands and regions beyond (British (?) spacer beads of amber at Peristeriá).

After the Dorian conquest Messenia came under Cresphontes, whose youngest son Aegyptus evicted and slew the usurper Polyphontes and gave his name to the Messenian royal line. After the First and Second Messenian Wars in the eighth and seventh centuries, associated with the heroic but unavailing leadership of Aristodemus (1) and Aristomenes (1) respectively (qq.v.), such inhabitants as had not left the country were, apart from a few communities of *periokoi*, reduced to the status of helots, and their lands occupied by the Spartan nobility. The Third Messenian War, after the great earthquake of 464 B.C., terminated, like the first war, in the surrender of the stronghold of Ithome after a long siege. Granted a safe-conduct, many of the survivors (of the *periokoi* only?) were settled by the Athenians at Naupactus (455). During the Peloponnesian War the Messenian helots were encouraged to sporadic revolts by the Athenian garrison established at Pylos after the victory at Sphacteria (425), in which Messenians from Naupactus played a decisive part. In 369 Messenia recovered its independence with the help of the Theban general Epaminondas. Its subsequent history is bound up with that of its new capital Messene (q.v.). It remained prosperous for a century or more. Later (in the second century) it became a pawn of greater powers until the Romans assumed full control.

Of special interest is the ancient town of Andania in the north-east on the borders of Arcadia and Elis, where Mysteries were celebrated in honour of a group of divinities, and claimed connexion with Attica and the Eleusinian Mysteries (cf. the inscription IG v. i. 1390 of 91 B.C.; Paus. 4. 1. 5 and 33. 4).

Huxley, *Early Sparta* (1962), *passim*; F. Kiechle, *Messeniensche Studien* (1959). A. M. W., R. J. H.

MESSENIA (CULTS AND MYTHS). Since the Messenians were in a condition of serfdom between the Third Messenian War and 369 B.C., their religious and mythical traditions were disturbed to a very considerable extent. In their capital the cults as seen by Pausanias suggest partly foreign influence, partly deliberate attempts at revival. He found (4. 31. 6 ff.) temples of Poseidon and Aphrodite, such as any Greek city might have; a cult of Artemis Laphria, imported from

Naupactus; shrines of Eleithyia, the Curetes (to whom holocausts of all manner of victims were offered), Demeter, Asclepius, and the local eponymous heroine Messene; also of the national hero Aristomenes, while Zeus was worshipped on Mt. Ithome under the local title Ithomatas. Some of these cults had peculiar legends connecting them with the country and polemizing against myths which claimed them for other regions. Outside the capital the most famous cult, which, however, is of Hellenistic date, is the Mysteries of Andania (Kern, *Relig. der Griechen* iii. 188 ff., and refs.; Nilsson, *GGR* i². 478, ii. 93 ff.). For a list, with references, of other cults, see Reincke in *PW* xv. 1241 (also ATARGATIS for cult of Syrian goddess).

Most of the legends of the country have come down to us in an excerpt by Pausanias of Rhianus' (q.v.) epic on the Messenian Wars (Paus. 4. 6. 1), mingled with material from other authors, as Myron of Priene (*ibid.*) and inquiries of his own. It is thus impossible to say how much of what he tells us is really Messenian tradition and how much Rhianus' learned imagination or the conjectures of some antiquarian. The central figure is Aristomenes, and the historical kernel nearly undiscoverable.

H. J. R.

METAGENES, Athenian comic poet, won two victories at the Lenaea in the last decade of the fifth century B.C. (IG ii². 2325. 128). We have fragments of four plays; in *Thurio-Persians* 'Thuri' is eulogized fantastically as a land of abundance (see CRATES I and MERICRATES); *Ὀμόρος ἡ Δακρυῖται* mentions (fr. 10) the betrayal of Naupactus to the Spartans in 400 (Diod. Sic. 14. 34. 2).

FCG ii. 751 ff.; CAF i. 704 10; FAG i. 838 ff.

METALLURGY. After extraction from the mine ore must be crushed. The use of grooved stone hammers was common in the west in early Roman times, though iron hammers replaced them slowly. Socketed stone hammers were too fragile for rough work. The broken pieces of rock were roughly sorted, all poor and sterile material being rejected. If washing was practised, the ore had to be finely milled. From Egypt there are stone rollers operated on saddle-querns, and the latter occur in Wales and the Balkans; more common and of later date are rotary millstones. Sieves were used to reduce the particles to equal size. Ore, especially when markedly denser than the gangue, can be profitably enriched by washing. This applies especially to gold, whether from placers or veins, and to lead-ore, but was used for ochre and is feasible for pyrites. Washing was often carried out in wooden bowls or cradles. Gold may be caught on rough cloth or fleece, a method attested on the Rhine, and in Colchis, where it gave rise to the Golden Fleece legend. The washing-tables at Laurium (q.v.) were well built and cemented, with several tanks to catch the ore. The washing process would normally be repeated several times. In northern Spain auriferous sediments were broken down by large volumes of water, and the washing must have been done in very large sluices, probably of wood.

Sulphide and hydrated ores are best roasted before smelting. Direct evidence for roasting has seldom been found, but certain furnaces are too large for smelting and may have served this purpose. The most primitive smelting-furnaces were banked-up bonfires or holes in the ground. The blast was at first introduced over the rim, but in Gaul some bowl-furnaces have a hole near the base and their height was raised by courses of stones round the lip. This led to the shaft-furnace, a structure often partially sunk in the ground. Vase-paintings of Greek smithies show a high-built shaft whence the bloom was extracted at the base, while the blast was introduced at the back. The shaft-furnace spread fairly rapidly

through the west; some in the Jura are thought to be pre-Roman. They probably did not reach England until after the Roman period. Most shaft-furnaces have only one hole at the base, for blast and tapping, though a few in central Europe have six. Whereas in a bowl-furnace only one charge can be smelted at a time, a shaft-furnace admits of continuous production. Fuel and ore can be added down the chimney, and the metal and slag can be tapped at the base. In fact, however, they were probably cooled and demolished frequently. Slag, unless fluxes are skilfully added, will clog the tapping-hole. Only those metals which were liquefied could be tapped. An iron-bloom could be extracted only by destroying the furnace, and the great number of furnaces at some sites shows that each was used only once. The fuel was charcoal, occasionally coal or peat. The blast was by hand; water-driven bellows were an invention of the Middle Ages.

After smelting, iron had to be purified by reheating and hammering. During this process it would become slightly steeled. For weapons it was specially forged: the Romans knew how to weld bars of softer and harder steel to secure toughness without brittleness, and how to give extra hardness only to the cutting edge. Lead would be cupelled to extract silver; the Romans knew bone-ash cupels, though the more primitive method of skimming the oxidized metal from the surface was used earlier. From perhaps the sixth century B.C. gold was freed of silver by cementation with salt, and rather later with some metallic sulphide. Copper would be purified and then alloyed and cast from crucibles into the forms required.

METAMORPHOSIS. Though the word itself is not early, it describes a kind of tale quite common in Greek from Homer on, that of a magical or miraculous transformation into a new shape. The origin of such stories, which have their analogies elsewhere, e.g. in Celtic literature, may perhaps be sought partly in real or fancied resemblances between inanimate and animate objects (e.g. the snake which in *Iliad* 2. 319 turns to stone may have as its origin a stone which looked like a snake, perhaps a fossil of some kind), partly in resemblances between the movements or cries of a bird or beast and those of human beings (the nightingale's song, for instance, see AEDON, PHILOMELA). An aetiological story would then grow up around it. Magicians, moreover, are very commonly supposed to be able to change their own shapes and those of others, and for a like power to be ascribed to gods is quite natural. In some cases we can point to the actual object which started the legend; Pausanias (1. 21. 3) says he has seen the Niobe (q.v.) of Mt. Sipylon (apparently a rock-formation, but see Frazer ad loc.) mentioned in *Il.* 24. 614 ff.; cf. also Paus. 8. 2. 7. Collections of such legends seem to have become popular in Alexandrian times; we know, for instance, of the *Ἐρεποιόμυθα* of Nicander, several times quoted by later writers, and Ovid's surviving *Metamorphoses* draws almost entirely on Greek sources. Hence in the later versions of many legends (see, for instance, ATLAS 1) a metamorphosis of some kind is added of which earlier accounts have no trace.

Cf. S. Eitrem, *PW* vi A. 803 ff.

H. J. R.

METAPONTUM (or **METAPONTIUM**), early Achaean colony, just west of Tarentum (q.v.). Once

large and prosperous, it survived various vicissitudes until ruined in the Second Punic War. It never fully recovered. Its site, malarial and deserted until recently, is now fertile and boasts remains of Greek temples and a modern museum. Pythagoras was buried here.

A. G. Woodhead, *The Greeks in the West* (1962). E. T. S.

METAURUS, a river in Umbria flowing into the Adriatic Sea, famous as the site of a victory which was Rome's Crowning Mercy of the Hannibalic War (207 B.C.). In this valley Hasdrubal (q.v. 2), who had hoped to join his brother Hannibal, was forced to fight by the Romans, who rolled up his line.

Polyb. 11. 1-3; Livy 22. 46-9. Kromayer-Veith, *Antike Schlachtfelder* iii (1912), 424 ff.; Walbank, *Polybius* ii. 267 ff. H. H. S.

METANIRA (*Μετάνειρα*), in mythology, wife of Celeus, king of Eleusis; she received Demeter hospitably, but spoiled her plan to make Metanira's child immortal by screaming when she saw him laid on the fire; see DEMETER. She had a cult in Eleusis (Paus. 1. 39. 2) near the well where Demeter sat; cf. Athenagoras, *Leg. pro Christ.* 14.

METELLA (1), CAECILIA (*PW* 'Caecilius' 134), daughter of L. Metellus Delmaticus (cos. 119 B.C.), and wife of Scaurus (q.v. 1), to whom she bore three children. After his death she married Sulla (1), to whom she bore twins, Faustus Sulla (q.v. 3) and Fausta (later wife of Milo). In 86 she escaped with them from Rome and joined him in Greece. In his dictatorship (81), when she was dying of a disease that she had perhaps caught from him, Sulla divorced her and had her carried out of his house, to avoid ritual contamination. E. B.

METELLA (2), CAECILIA (*PW* 136), known only from her tomb on the Via Appia near Rome. The epitaph (*ILS* 881) calls her daughter of Creticus (i.e. Metellus 8) and wife of Crassus, probably Marcus elder son of Crassus (4). T. J. C.

METELLUS (1), LUCIUS CAECILIUS (*PW* 72) (cos. 251 B.C.), thwarted a Carthaginian attack on Panormus, capturing the dreaded enemy war-elephants (250). The elephant was commonly portrayed on coins struck by the Metelli. Metellus was *magister equitum* in Sicily (249), consul II (247), Pontifex Maximus (243-221) and dictator to hold elections (224). He was blinded when saving the Palladium from the burning Temple of Vesta (241) and died in 221. H. H. S.

METELLUS (2), QUINTUS CAECILIUS (*PW* 81), son of (1), served as consul (206 B.C.) against Hannibal in Bruttium. In 205 he was dictator to hold the elections, and in 204 championed Scipio against Fabius in the Pleminius (q.v.) scandal. He served on the land commission for African veterans (201-200) and on embassies to Greece (185) and the Peloponnese (183). He was an enemy of Naevius (q.v.) and an orator of note (Malcovati, *ORF*² 9 ff.). H. H. S.

METELLUS (3) **MACEDONICUS**, QUINTUS CAECILIUS (*PW* 94), cos. 143 B.C., praetor in 148, he suppressed Andiscus (q.v.), and in 146 opened the campaign against the Achaean Confederacy. He was awarded a triumph, but secured the consulship only at the third attempt. In 143 and 142 he suppressed all the rebellious Celtiberians except the inhabitants of Numantia (q.v.) and Termantia. In 133 he was a severe critic of Tiberius Gracchus (q.v. 3), and for much of his career he was hostile also to Scipio (q.v. 11) Aemilianus. As censor in 131 he delivered a famous speech urging compulsory marriage in order to stimulate the birth-rate. In 121 he participated in the

attack on Gaius Gracchus (q.v. 4). He was eloquent, a capable general, a stern disciplinarian, and he did much to make his family outstanding in the political life of the next generation. When he died in 115 three of his four sons had already achieved the consulship. His public buildings included the Porticus Metelli.

Malcovati, *ORF* 106; H. Simon, *Roms Kriege in Spanien* (1962), 102; De Sanctis, *Stor. Rom.* iv. 3. 124, 234; A. E. Astin, *Scipio Aemilianus* (1967). A. E. A.

METELLUS (4) BALIARICUS, QUINTUS CAECILIUS (PW 82), son of (3), as consul (123 B.C.) and proconsul conquered the Balcares, and settled 3,000 Italians in Palma and Pollentia. He triumphed in 121 and was censor in 120 with Piso (q.v. 1). E. B.

METELLUS (5) DELMATICUS, LUCIUS CAECILIUS (PW 91), grandson of (2), consul in 119 B.C., opposed the law of Marius on election procedure. He attacked and defeated the Delmatae (see DALMATIA), triumphing in 117 and rebuilding two temples from the spoils. As Pontifex Maximus he tried three Vestals accused of unchastity, acquitting two (114—see CASSIUS 4). His daughter Metella (q.v. 1) married Scaurus (q.v. 1) and later Sulla (q.v. 1). E. B.

METELLUS (6) NUMIDICUS, QUINTUS CAECILIUS (PW 97), brother of (5). Elected consul (109 B.C.) to finish the war against Jugurtha (q.v.), he won two battles (one at the river Muthul) and stormed several towns (including Zama and Thala) with the help of his legates Marius (q.v. 1) and Rutilius (q.v. 1), but made little progress in guerrilla war. Marius, asking leave to stand for a consulate, was insulted by him and intrigued against him among officers and businessmen in Numidia and *equites* in Rome, until he was finally elected consul (107) and, by a special law, appointed to succeed him. In Rome, Metellus met great hostility, was put on trial (but acquitted), and finally triumphed when public feeling veered round in 106. Censor in 102, he tried to expel Saturninus (q.v. 1) and Glaucia (q.v.) from the Senate, but was prevented by his colleague and cousin, Metellus Caprinus (cos. 113). In 100, manoeuvred into being the only senator to refuse the oath to observe Saturninus' agrarian law, he had to go into exile. Attempts to recall him after Saturninus' death were opposed by Marius and his friends, but supported by the widespread Metellan family (led by his son (7)) and were ultimately successful. He returned in glory (99 or 98), but was never again prominent.

On his exile, E. S. Gruen, *Latomus* 1965, 576 ff.

E. B.

METELLUS (7) PIUS, QUINTUS CAECILIUS (PW 98), son of (6), acquired a name from his *pietas* in working for his father's return from exile. As praetor (89 or 88 B.C.), he enrolled enfranchised Italians, including his friend Archias (q.v.); he then served in the Social War, defeating Poppaedius (q.v.). Unable to defend Rome against Cinna (q.v. 1), he went into exile in Africa (87), retaining his *imperium*, and after Cinna's death collected a private army there. Defeated by the governor, he joined Sulla, thus giving him the formal approval of the Optimates, and conquered most of northern Italy for him. Made Pontifex Maximus and consul as Sulla's colleague (80), he was next sent to fight against Sertorius (q.v.) in Spain, where his movements can be traced in places named after him: Metellinum (*Medellin*), Castra Caecilia (near *Caceres*), and Vicus Caecilius (north of the Tagus). Unsuccessful until joined (against his will) by Pompey, he then won several victories, founded settlements, and acquired many clients, but offended opinion by excessive luxury and display. Returning (71), he—unlike Pompey—dismissed his army, triumphed, then lived in retirement until c. 63.

METELLUS (8) CRETICUS, QUINTUS CAECILIUS (PW 87), grandson of (3), perhaps praetor in 74 B.C. as colleague of Verres (q.v.), whom (with other Metelli) he supported in 70. Consul in 69 (with Hortensius, q.v. 2), he was next sent to Crete to eradicate piracy (see ANTONIUS 2). He fought successfully and captured many Cretan towns until Pompey tried to replace him under the law of Gabinius (q.v. 2). Having equal *imperium*, he ignored Pompey, who was soon called away to succeed Lucullus (q.v. 2). Crete became a province, but Metellus' triumph was delayed until 62 and he led the opposition to Pompey. He died in the late 50s. E. B.

METELLUS (9) CELER, QUINTUS CAECILIUS (PW 86), grandson of (4), and husband of Clodia (q.v.), was legate of his brother-in-law Pompey (66 B.C.); as praetor (63), he took a leading part in the farce of the trial of Rabirius (q.v. 1) and was given Cisalpine and a special command against the Catilinarians at the request of Cicero, yet he supported his brother (10) against him (see Cic. *Fam.* 5. 1–2). Consul (60), he turned against Pompey (who had divorced Mucia, q.v.) and in 59 opposed Caesar. He died before he could go to his province (Transalpine). E. B.

METELLUS (10) NEPOS, QUINTUS CAECILIUS (PW 96), brother of (9), was legate of Pompey in 67 B.C. and perhaps until 63, when he was elected tribune for 62. He harassed Cicero and, with the support of Caesar, tried to win a special command against Catiline for Pompey; when he and Caesar were suspended from office, he fled to Pompey. He was praetor (60) and perhaps governor of a Gallic province. Consul (57) with Lentulus (q.v. 5), he proposed Pompey's *cura annonae*, did not oppose Cicero's return from exile, but protected Clodius (q.v. 1). Proconsul in Hither Spain, he called in at the Luca meeting on the way. He died soon after his return to Rome. E. B.

METELLUS (11) PIUS (SCIPIO), QUINTUS CAECILIUS (PW 99), consul in 52 B.C., was son of Nasica (pr. 93; for the family see Cic. *Brut.* 211–12). He was adopted by Metellus (q.v. 7) Pius, possibly by will. Tribune in 59, and probably praetor in 55, he was (although now a plebeian) *interrex* in 53, and then became candidate for the consulate of 52. The elections were abortive, and Pompey (q.v.), who had recently married Scipio's daughter (widow of P. Crassus, q.v. 8), became sole consul: but he rescued his father-in-law from a bribery charge and made him his colleague in July. Thenceforward Scipio led the attack on Caesar and proposed the decisive motion in Jan. 49. The Senate granted him Syria, whence in 48 he brought two legions to Thessaly; he commanded the centre at Pharsalus. He escaped to Africa and became supreme general in the Bellum Africum. Caesar tried to bribe Scipio before Pharsalus, but detested him, and wrote a bitter passage on his activities in Syria (*BCiv.* 3. 31–3). Cicero despised him as a man ignorant of his family tradition (*Att.* 6. 1. 17). But his dying words in reply to the Caesarian soldiers who sought him out after Thapsus, 'Imperator se bene habet', passed into 'Republican' legend (cf. Livy, *Epit.* 114).

G. E. F. C.

METEOROLOGY. Although nature and natural phenomena had already been considered at length by the pre-Socratic philosophers, and though the word *μετεωρολογία* occurs in Plato (*Phdr.* 270 a), it was left to Aristotle to give an exact definition of what was comprised in the subject. In his four epoch-making books on meteorology he distinguished the respective spheres of meteorology and general natural science with great accuracy, confining the term meteorology to the study of the processes,

conditions, and phenomena of the atmosphere. Aristotle's work was continued by Theophrastus and the Epicureans, to whom Lucretius is greatly indebted in the meteorological sections of his poem. Lucretius also made extensive use of Posidonius, who, looking upon meteorology as the doctrine of the structure of the outer and upper world, had fitted it into a system of thought uniting harmoniously matter, mind, and spirit. It is still possible to reconstruct Posidonius' meteorological system, since his book was the main source of the two most important contributions to post-Aristotelian meteorology that have survived, namely Seneca's *Naturales quaestiones* and the poem *Aetna*. After the first century A.D. students of meteorology confined themselves to summarizing and popularizing the discoveries of their forerunners, which, through the Graeco-Byzantine commentators on Aristotle, came to be known to, and to exercise a beneficent influence upon, the scientific achievements of the Arabs.

TEXTS. Aristotle, *Meteorologicorum Libri quattuor*, ed. F. H. Fobes (1919); *Aetna*, ed. S. Sudhaus (1898), Alexander Aphrodisiensis' and Johannes Philoponus' commentaries on Aristotle, ed. M. Hayduck (1899, 1901). Useful selections are given in T. L. Heath, *Greek Astronomy* (1932).

METICS. In Greek States metics (μέτοικοι) were resident aliens who had acquired a definite status distinguishing them from other foreigners and giving them a recognized place in the community. There were commonly three groups of foreigners: temporary visitors, more permanent residents who had not attained the status of metics, and metics. Among the latter, in turn, some were distinguished by grants of special privileges. Metics were found in many States, but those of Athens are best known. There each metic must have a citizen as sponsor (*prostates*), must be registered in the deme in which he resided, and must pay an annual head tax (*metoikon*) amounting to twelve drachmas for a man and six for a woman not a member of the household of a husband or son. They could also be called on to assume liturgies—though not the trierarchy—and contributed to the *eisphorai*, probably more in proportion than citizens. Metics could not contract legal marriages with citizens and could not own houses or land unless they had received *enktesis* through a special grant. In return they had a share in the life of the community and received the protection of the courts, though the exact role of the *prostates* in court procedure remains a matter of dispute. Metics served in the army in separate divisions and were also used as oarsmen in the fleet. The privileges sometimes granted included *enktesis*, remission of financial burdens, equality with citizens in financial matters, and the right to serve alongside of citizens in the army. Metics were important chiefly in commerce and industry.

A. E. Zimmern, *The Greek Commonwealth* (1931), index, M. Clerc, *Les Métèques athéniens* (1891), and *De la condition des étrangers domiciliés dans les différentes cités grecques* (1898), C. METIS (Μῆτις), counsel personified. She was the consort of Zeus (Hesiod, *Theog.* 886 ff.) and wisest of gods and men. By the advice of Earth and Heaven Zeus beguiled her into letting him swallow her when she was pregnant, since he knew she would first bear Athena and then another child, very mighty, who would become ruler of the universe. Having swallowed her, he had her always with him to advise him, and Athena (q.v.) was in due time born from his head (924 ff.). The story would seem to be an early and crude blend of myth and allegory.

H. J. R.

METON (Μέτων), Athenian astronomer (5th c. B.C.), cited (with Euctemon) for observations of the summer solstice including one in 432 B.C., the reliability of which was questioned by both Hipparchus and Ptolemy (*Almag.* iii. 1). Meton also suggested a system of regular intercalation over a period of nineteen years (the Metonic cycle so-called) to bring the lunar month into correlation with the solar year; this cycle contained 235 lunar months (seven of which were intercalary) and 6,940 days, and gave a mean lunar month about 2 minutes too long and a solar year of 365 $\frac{1}{4}$ days (6,940 ÷ 19). Thus every seventy-six years the moon and the sun would be out of step by one day; 100 years later this was corrected by Callippus, who combined four Metonic cycles less one day into a new cycle of seventy-six years or 27,750 days. According to Geminus (*Isag.* ch. 8), who mentions Euctemon but not Meton in connexion with the nineteen-year cycle, of the 235 months 110 were 'hollow', i.e. of 29 days each, and 125 'full', i.e. of 30 days each. There is no evidence that the Metonic cycle ever came into regular use for the civil calendar of Athens; its purpose was to provide a fixed system of reckoning for dating astronomical observations, and it was soon superseded by the Callippic cycle which is regularly used by Hipparchus and Ptolemy. Meton appears as a character in Aristophanes' *Birds* (992 ff.) as a comic 'town-planner'.

D. R. D.

METRAGYRTES (Μητραγύρτης), a mendicant servitor of Cybele. *Metragyrtae* travelled in bands, begging, dancing, and prophesying. They were known to fifth-century Athens, and Cicero (*Leg.* 2. 22 and 40; cf. Dion. Hal. *Ant. Rom.* 2. 19) implies that these *famuli* were tolerated at Rome. They were generally eunuchs (q.v.), the Galli. Similar *agyrtai* (cf. Pl. *Resp.* 364 b) existed in other cults, chiefly oriental, and Apuleius (*Met.* books 8-9) gives a lively picture of those of the *dea Syria*. An inscription of Syria (*BCH* 1897, 59, no. 68) records the collections made on his travels by one such δοῦλος of Atargatis (cf. *SEG* vii. 358, 801). See ANATOLIAN DRUIDS.

METRE, GREEK

I. GENERAL PRINCIPLES

(1) The ancient metricians, of whom Hephaestion (q.v. 2) is the chief, do not help us greatly towards an understanding of Greek metric, and it is unlikely that they represent a tradition dating back to the classical period. We are thus mainly dependent on what we can ourselves discover from the poetry. A full appreciation of the Greek metres is rendered extremely difficult for us by the fact that we are accustomed in English verse to rhythms based on stress (which is solely determined by the sense), the differentiation between long and short syllables being virtually obliterated. Greek verse, on the other hand, whether it contained an element of stress or not (see below), is based principally upon a precise differentiation of time values, without the least relation to the sense of the words; and for this there are parallels in the verse of eastern nations. It is very doubtful if our ears, accustomed from childhood to stressed verse, are capable of being trained to a full appreciation of quantitative verse. Further, in two fundamental matters we are left in uncertainty. (a) Was there a verse stress (*ictus*)? (b) To what extent, if any, were the time values

* In Greek metric long elements, *longa* ('syllables' is an unsuitable term, since we are concerned with the parts of a verse-form, not with the parts of a word), usually alternate with short elements, *brevia*, or with pairs of *brevia* (sometimes, as in the dactylic hexameter and anapaestic dimeter, fused into single long elements, — for — — or — — —), or with elements in which either a short or a long syllable is allowed, *anapitua* (e.g. the first element of the iambic metron — — —). In the ionic (— — —) and dochmius (— — —) two *longa* are juxtaposed. In many cases a *longum* may

inherent in the syllables altered by the music in lyric (sung) verse?

(2) *Ictus*. The case for ictus is mainly based on (a) the alleged inconceivability of verse—particularly verse associated with dancing, marching, and other movements of the body—without ictus, (b) the alleged difficulty of differentiating between $\cup\cup$ dactyl and $\cup\cup\cup$ anapaest and between long, or between short, elements in a series of longs or of shorts, without ictus, and (c) the fact that certain lengthenings of short syllables occur in Homer far more often in 'arsis' than in 'thesis'. The opponents of ictus answer that verse without ictus is found in certain Eastern literatures, and that (b) may be disposed of by assuming slight variations in the values of long and of short elements. They also point out that there is no evidence in ancient theory for ictus, since this and other terms denoting striking (e.g. *percussio*) were used simply for the marking off of the parts of a verse by beating time, and they infer from this that ictus did not exist—an argument *ex silentio* which is hardly conclusive. Kalinka (Bursian, *Jahresb.* 250. 332-9) sums up the evidence. It is impossible to decide with any certainty between the contending views.

(3) In lyric iambs and trocheics a short element often seems to be omitted, $\cup\cup\cup$ appearing alongside of $\cup\cup$ or $\cup\cup\cup$ and $\cup\cup\cup$ of $\cup\cup$ or $\cup\cup\cup$; e.g. Aesch. *Ag.* 385 βιάται δ' ἡ τάλανα πειθῶ; Eur. *Phoen.* 1025 χαλαροὶ τ' ὤμοσσι τοῖς. Sometimes this occurs in two consecutive feet, so that we have $\cup\cup$ instead of either $\cup\cup\cup$ or $\cup\cup\cup$; e.g. Eur. *Phoen.* 1039 βροντῇ δὲ στεναγμός ($\cup\cup\cup\cup$). Similarly, by omission of the last long element, we find $\cup\cup\cup$ among minor ionics ($\cup\cup\cup\cup$). This dropping of an element ('syncopation') is particularly common at the close of a colon, where it is termed 'catalexis' (e.g. $\cup\cup\cup\cup$ and $\cup\cup\cup\cup$). Ancient metricians spoke also of 'brachy-catalexis' when two elements are omitted (e.g. what they analysed as $\cup\cup\cup$ and $\cup\cup\cup$). Catalexis is common in spoken, as well as in sung, iambs and trocheics. Further, the anapaestic dimeter $\cup\cup\cup\cup\cup\cup\cup\cup\cup$ has its catalectic form $\cup\cup\cup\cup\cup\cup$, in which two short elements are omitted.

Was the time value of the suppressed short element, or elements, actually missing? Or was it supplied by the compensatory lengthening of the following, or preceding, long element? In general, to what extent, if any, did the music alter the time values? These questions cannot be answered with certainty. The remains of ancient Greek music (see MUSIC, §§ 11-13) almost all have metrical as well as pitch signs, but they are extremely scanty, and only one, the music to a few dochmiacs from Euripides' *Orestes*, may go back to the fifth century B.C. This records no musical alterations of the metrical values. On the other hand the Seikilos inscription (not earlier than 2nd c. B.C.) provides clear examples of long elements protracted after missing shorts both in catalexis and earlier in the colon, and the hymns attributable to Mesomedes (early 2nd c. A.D.?) give similar evidence as regards catalexis. (The Berlin paean goes much further in altering the metrical values of the elements.) State-

be 'resolved' into two *brevia*, and substitution of this *biceps* for *anceps* and *breve* is sometimes allowed (e.g. $\cup\cup\cup$ for $\cup\cup$ or \cup in iambs). The Lesbian poets, Sappho and Alcaeus, do not allow the resolution of *longa* or the fusion of *brevia* except in dactylic hexameters.

This question has often been asked with reference to the 'arsis'. That term, applied to the *longa*, originally (probably) signifies the lifting of the foot, 'thesis', applied to the elements (*brevia* or *anceps*) between the *longa*, its placing on the ground. Arsis should therefore mean the weak beat, thesis the strong beat—if such a distinction existed. The modern terminology has inverted the meanings of the two terms. Wrong as it is, it has (at least in England) become canonical.

† It may be noted that protraction after a missing element is alien to our modern rhythmic instinct. We rhythimize 'A captain bold from Halifax, who dwelt in country quar-ar-ters', not 'quarter-

ments of ancient metrists about protraction after missing short elements are thus corroborated for the first century A.D. We have no proof, though the assumption is a reasonable one, that protraction was employed in the fifth century B.C. and earlier.

(4) *Line and colon*. Modern verse is built up of a succession of 'lines', the ending of a line being marked by the end of a word. Greek epic and elegiac verse and the spoken metres of tragedy and comedy are constructed on the same principle. The last element of the line is always a *longum*. For the pause at the end of the line makes the prosodic length of the final syllable indifferent, and thus a short syllable can fill a long element (*syllaba brevis in elemento longo*).

Greek lyric verse, though sometimes built on the repetition of a line (*κατὰ στρίχων* composition, see IV), far more often consists of a varied combination of shorter entities termed 'cola', which are nevertheless long enough (about eight elements) to possess a definite character as metrical entities. These cola sometimes consist of homogeneous parts (e.g. two iambic metra or four dactyls), sometimes of heterogeneous parts (e.g. the glyconic). In places they are divided off from each other by hiatus or *syllaba brevis in elemento longo*, which clearly mark a pause in the rhythmic flow. In other places they are linked together by 'enjambement', the run-over of a word from one colon into the next. In many places there is only diaeresis,* which may or may not indicate a pause. If we are to use the word 'line' at all in such cases, we can only use it of the whole series of cola between one pause and the next; and modern texts of Pindar are in fact printed in such long 'lines'. In the lyrics of drama, where a metrical system is seldom repeated more than once, we have often not sufficient data on which to determine the pauses and to divide up the structure into its lines. (These pauses do not invariably coincide with the ends of sentences or clauses, which in fact often end in quite different places in strophe and antistrophe; and the view that the tolerance of hiatus is in any way dependent on punctuation is untenable.) See further under IV.

II. THE METRES OF EPIC, ELEGIAC, AND DRAMATIC DIALOGUE

The lines are divided at fixed places by word-endings, either caesura or diaeresis.

(1) The dactylic hexameter, used by epic, didactic, and pastoral poets, consists of six feet,† the last of which must be a spondee. The first four are either dactyls or spondees, and the fifth, while almost always a dactyl, is occasionally a spondee. The line is divided by caesura somewhere near the middle. The commonest caesuras are (i) 'penthemimeral' (after 5/2 feet, *μήνιν ἄειδε, θεά:*), (ii) after the trochee of the third foot, *ἄνδρα μοι ἔννεπε, Μοῦσα*. (iii) The 'hepthemimeral' caesura (after 7/2 feet, *ὃς κε θεοῖς ἐμπιθήσαι*), is rarer. Diaeresis after the fourth foot (which then must be a dactyl) is particularly characteristic of the pastoral poets, and is hence termed 'bucolic'. The ending of a word after the third foot without caesura in that foot is strictly avoided. After the trochee of the fourth foot it is rare in Homer and Hesiod and nearly excluded afterwards.

(2) The elegiac couplet consists of a dactylic hexameter followed by a dactylic pentameter (or rather 2 × 2½ metra, i.e. two *hemepe*; see III. 5). The first half of the pentameter allows, the second does not allow, the

* Diaeresis means division between words at the end of a foot or colon, caesura, division within a foot.

† In dactylic the *metron*, or unit of measurement, is the foot; in iambs, trocheics, and anapaests it is the dipody, consisting of two feet. The term 'foot' is somewhat misleading when applied to these last three metres, implying as it does that there is a division after the second element; but its use is convenient for practical purposes.

The *major ionic* is — ∪ ∪. According to Hephaestion (cap. 11, 36. 15) one form of it, the *Αἰολικόν*, was much used by Sappho. He cites frs. 82a + 91 ∪ ∪ — ∪ ∪ — ∪ ∪ — ∪ ∪ — ∪ ∪ (where, as with minor ionics, we have the metron — ∪ ∪). But here, as often in other places in lyric and tragedy where major ionics have been detected, choriambic scansion, with a jumping-off element

('anacrusis') at the start (— ◡ ◡ ◡ —, etc.) is possible. Major ionics are far less well attested than minor ionics.

(14) The *archilochian dicolon* consists of enoplon and ithyphallic. Archilochus fr. 107 'Ἐραμυνίδη Χαρίλαε, χρῆμα τοι γελόειν. It is not infrequent in tragedy. Sometimes (Ilph. cap. 15, 47, 16) the division is ◡ ◡ ◡ ◡ ◡ || ◡ ◡ ◡ ◡ ◡ (prosodiac and iamb. dim. cat.).

(15) *Dactylo-epitrites* are formed of dactylic cola (hemipies, — ◡ ◡ — ◡ ◡) and cretics, which may be separated, preceded, or followed by *anceps* (normally *longum*). The term 'epitrite' is owed to the frequency of the sequence — ◡ ◡ —, a ratio of 3:4, λόγος ἐπίτριτος, taking the length of a *breve* as the standard. There are many variations in the expansion and contraction of the dactylic ingredient. The metre is first found in Stesichorus, and is very often used, in a strictly regularized form, by Pindar and Bacchylides. It occurs in tragedy, especially in certain plays (Aesch. *PV* 526 fl., 887 fl., Eur. *Med.* and *Andr.*), even in comedy (Ar. *Eq.* 1264 ff.). It is one of the easiest Greek metres to grasp.

Common cola of this type are the *iambelegus* (◡ ◡ ◡ — ◡ ◡ ◡ ◡) and the *encomiologum* (— ◡ ◡ ◡ ◡ — ◡ ◡ ◡ ◡), and the *praxilleion* (— ◡ ◡ ◡ ◡ — ◡ ◡ ◡ ◡) is of related type. The *archebuleion* is a praxilleion preceded by one or two short elements or one long one (◡ ◡ ◡ ◡ — ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡).

IV. THE ARCHITECTURE OF GREEK LYRIC VERSE

The principal building materials have been described above. It remains to consider how these are combined into organized structures. In modern verse we are familiar with the stanza form of, say, four lines. Such stanzas play a relatively small part in Greek verse. The following deserve mention.

(1) *Sapphic stanza*, ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ (possibly — polyschematist dimeter plus ◡ ◡ —) twice, followed by the same colon plus — ◡ ◡ ◡ ◡ (adoneus).

(2) *Alcaic stanza*, ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ (probably ◡ plus trochaic metron plus the colon — ◡ ◡ ◡ ◡ —, for which see III, 11) twice: ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ (◡ plus troch. dim.) — ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ('Alcaic ten-syllable'), a colon often used, especially as a *clausula*, in the lyrics of tragedy).

(3) *Skolion metre* (e.g. the Harmodius Song, *Carmina Convivialia* 10), phalaecean hendecasyllable twice: an enigmatical colon, ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ ◡ (perhaps a form of choriambic dimeter, with anapaest for iambus at the opening) — ◡ ◡ ◡ ◡ ◡ ◡ twice.

Sappho, Alcaeus, and Anacreon constructed their solo songs for the most part either (1) by the repetition of a single metrical unit, composition *κατὰ στίχον* (e.g. Sappho's second and third books were written in the '14-syllable' and '16-syllable sapphic' (see III, 5 and 11) respectively, and cf. Alc. frs. 347, 357: or (2) in stanzas, sapphic or alcaic, and cf. Sapph. frs. 94, 96, Alc. fr. 70, Anacr. fr. 13. Anacr. fr. 12 is a little more elaborate in structure, but equally simple in its constituents. There is, broadly speaking, no enjambement (contrast Anacreon's way of writing glycomics with Ar. *Eq.* 973-96). The colon is usually a line, in the modern sense of the term, and a modern reader feels that he is treading familiar ground. In contrast, choral lyric is, from the first, more complicated. Alcman's *Partheneion* (fr. 1) is a highly organized, though readily intelligible, structure, lec. + enopl. four times, 2 troch. trim., 2 troch. dim., dact. tetr., alc. 10-syll. or dact. tetr. cat. Hiatus and *syllaba brevis in elemento longo* occur frequently, while enjambement is eschewed.

Pindar's odes are extremely elaborate. The general character of the dactylo-epitrites is easily grasped, but the remainder, which are virtually all written in 'aeolic' metres (see III, 12, ad fin.), present numerous and

formidable difficulties. The constituent cola, among which the shorter forms (◡ ◡ ◡ ◡ ◡ ◡ and reizianum) are prominent, are interspersed with shorter entities (iambic monometers, cretics, etc.) and with non-aeolic cola. A colon is seldom repeated in juxtaposition. The whole structure has the elaborate intricacy of a tessellated pavement. The 'lines', marked by the presence of hiatus or *syllaba brevis in elemento longo*, occasionally consist of a single colon, but are normally longer, though seldom more than some 25 elements. *Pyth.* 1 str. 6 (dactylo-epitrites) runs to 30 elements. The contrast between short and long lines is well illustrated by *Ol.* 1 str. 3-6, where three separated cola are followed by a long combination at 6. Cf. also *Nem.* 2 str. 1 and 4.

In tragedy we find long lines e.g. at Aesch. *Pers.* 882-5, Eur. *Heracle.* 615-17, *Iltpp.* 771-5, *Bacch.* 383-6. The dramatists, unlike Pindar, tend to repeat the same colon many times in succession, and they do this in such a manner that the cola are in one place linked, in another separated; e.g. Aesch. *Supp.* 171-4, where 171-2 are linked, 173-4 separated; Soph. *OT* 1202-3, *OC* 1215-18; Ar. *Thesm.* 360-4. The division of a passage into its constituent cola (colometry, *καλωματός*) is often subject to doubt, particularly in aeolic systems. Where, as often, diaeresis coincides in strophic and in antistrophic, it is natural to take this as a guide. On this principle Soph. *OC* 668-80 = 681-93 would be regarded as constructed of a great variety of aeolic cola, while alternatively it can be analysed into more homogeneous elements if we assume frequent enjambement between cola.

On the whole, the lyrics of tragedy stand between the complexity of Pindar and the simplicity of Lesbian solo-song. Ionic and dochmiac systems are, it is true, very regular in character; and there are many homogeneous iambic systems (e.g. Aesch. *Ag.* 238-47, and often in the *Oresteia*, Soph. *Trach.* 132-40; Eur. *Tro.* 551-67). Other simple systems are Soph. *OT* 1186-96 (tel., glyc., pher., with reiz. clausula), *Trach.* 113-21 (hemiep. and chor. dim.), Eur. *Heracle.* 608-17 (dactyls), *Andr.* 501-14 (glyc., pher.), *Supp.* 971-9, and *Phoen.* 226-38 (glyc., pher., and chor. dim.). Against these we may set the elaboration of some of the lyrics in the *Alkestis*, and the great difficulty of *Bacch.* 135-67 and 576-603. The metres of comedy are in general far simpler than those of tragedy: e.g. Ar. *Eq.* 1111-30 and *Pax* 1329-57 (tel. and reiz.), Ar. 1553-64 (troch. dim. and lec.), *Ran.* 1251-60 (glyc. and pher.); though even in comedy complicated systems are to be found (e.g. Ar. *Lys.* 1247-70 and, naturally, many parodistic passages). The beginner will be well advised to start with Sappho, Alcaeus, and Anacreon, and feel his way through the early plays of Aristophanes and the dactylo-epitrite poems of Pindar to the complexities of tragedy.

V. STROPHIC RESPONSION

Most Greek choral poetry is 'strophic'. That is to say, a metrical system is repeated, the first occurrence being termed 'strophe', the second 'antistrophe'. In tragedy there is only one repetition, in satyric drama and comedy sometimes more (Eur. *Cyc.* 495 fl., Ar. *Pax* 346 fl.). The oldest extant piece of Greek choral poetry, Alcman's *Partheneion*, repeats the system many times, as does Pindar in his more elaborate odes. Pindar adds an epode to strophe and antistrophe, and then repeats the whole 'triadic' structure. (Triadic structure is already clearly present in Ibyc. fr. 1. There is no good ground for importing it into Alcman's *Partheneion*. The *Suda*, s.v. *τρία Στρεφιστόπον*, ascribes its invention to Stesichorus.) Epodes are also often found in drama (e.g. Aesch. *Pers.* 807-906, Soph. *Ant.* 876-82). In the *kommos* in the *Chephorae* (315-475) the structure is highly elaborate, and the antistrophes do not immediately follow the

astrophes: cf. Soph. *Trach.* 1004-42. Some passages are 'astrophic', the system not being repeated (e.g. Soph. *Trach.* 205-24, Eur. *Ilel.* 515-27; particularly in the monodies and duets of Eur.'s later plays). In an *ephythnum* (refrain) words, as well as metrical form, are repeated: e.g. Aesch. *Supp.* 117-75, *Ag.* 1455-1550.

Strophic response is usually very close, and often undeviatingly precise, syllable by syllable, for long stretches. The main divergencies from strictness are the response of - and ∪ in many metres. A syncopated iambic metron probably sometimes corresponds to a full metron (e.g. Eur. *El.* 1185 - 1201). A few surprising responses occur, notably that between polyschematist dimeter and glyconic (Corinna, fr. 5, *passim*, and several times in Euripides, e.g. *El.* 146 - 163). For loose response in comedy see Wilamowitz, *Verskunst*, 470-86.

The two works of fundamental importance are U. v. Wilamowitz-Moellendorf, *Griechische Verskunst* (1921), and P. Maas, *Greek Metre* (revised, and translated, with additional notes, by H. Lloyd-Jones, 1962). O. Schroeder analysed all the lyric passages of drama in *Aeschylus Cantica* (1916), *Sophocles Cantica* (1921), *Euripides Cantica* (1928), and *Aristophanes Cantica* (1930); the metrical schemata in H. Snell's Teubner editions of Pindar and Bacchylides are valuable. See also A. M. Dale, *The Lyric Metres of Greek Drama* (1948), especially for discussion of the most difficult passages in dramatic lyric. On particular metres: E. Fraenkel, 'Lyrische Daktylen', *Rh. Mus.* lxxii (1917-18), 161 ff., 221 ff.; J. Desroix, *Le Trimeterambique* (1931); J. D. Denniston, 'Lyric Iambics', in *Greek Poetry and Life* (1936); N. C. Conomis, 'The Dochmiacs of Greek Drama', *Hermes* 1904, 23 ff. J. D. D.

METRE, LATIN. With the possible exception of the Saturnian metre (q.v.), all Latin metres were borrowed from Greek (not necessarily through literature: cf. the trochaic 'versus quadratus' used in popular songs - e.g. *rex erit qui recte faciet, qui non faciet non erit*). This borrowing was complicated by three important differences between the two languages. (1) the sequences of long and short syllables inherent in Latin words and terminations (cf. Cic. *Orat.* 189) were not always readily adaptable to foreign metres, and the poet's choice of diction was consequently fettered (e.g. *Impērātor* is impossible in dactylic verse); (2) it is virtually certain that stress, not pitch, predominated in the Latin accent, and therefore the relation between word-accent and rhythmical beat (ictus) created problems unknown apparently to Greek; (3) the phonetic tendency of 'brevis breuians' (q.v.) in popular Latin speech made possible a limited degree of prosodial flexibility, especially in the less formal kinds of verse. As in Greek, attenuation ('elision', synaloepha) of a final vowel before the initial vowel of a succeeding word was the common practice, and syllables ending in -m were similarly treated; but whereas Latin elides long final vowels more freely than Greek (yet not unrestrictedly), it rarely halves their quantity (e.g. *an qui amat*, Verg. *Ecl.* 8. 108). Hiatus is tolerated only at fixed places in certain metres, for special effects (e.g. *femineō ululatu*, *Aen.* 9. 477), or as a bold licence (e.g. *Neptunō Aegaeo*, *Aen.* 3. 74). Obsolete quantities are occasionally revived by later poets (e.g. *vlit, labōr*); a few lengthenings are due to Greek models (e.g. *liminaque laurique dei*, *Aen.* 3. 91). In republican poets final -s after a short vowel was frequently neglected before a following consonant (e.g. *rationis potestas*, Lucr.). In dactylic and lyric metres the Romans often subject themselves to stricter rules than did the Greeks. The development of accentual metres in late Latin falls outside the scope of this article.

I. Metres of republican drama, introduced by Livius Andronicus, are fully represented in the comedies of Plautus and Terence; fragments of the tragedians are meagre. In general, these metres have three common features: (1) popular pronunciations based on 'brevis breuians' (e.g. *hōnis* as ∪ ∪) or synizesis (e.g. *cōrum*) are freely admitted; (2) word-accent and ictus often coincide, and it is possible that the effects of enclisis (e.g. *patrē-*

meus) may have made such coincidences more frequent than appears from a printed text; (3) where two short syllables are used as the resolution of one long, the first short syllable is usually an accented one; this principle embraces and may be the basis of many minor 'rules'. (A) Dialogue metres: (i) The iambic *scenarius* is the commonest (e.g. *nunc huc | ad Vēnē|ris fa|num uēn|lo u|sere*, Plaut. *Rud.* 94). Unlike the Greek comic trimeter, which allowed spondees (and dactyls) for ∪ ∪ only in the first, third, and fifth feet, the Latin line admitted √ - (- ∪ ∪ ∪) in every foot except the last (√ -); hence the line is felt to be not three *metra* but six feet (cf. Hor. *Ars P.* 251-62). There is caesura usually in the third foot, sometimes in the fourth; at the caesura hiatus is admitted (rarely in Terence). 'Porson's law' (cf. METRE, GREEK, II. 3) does not operate. As in other dialogue metres, resolutions of any long syllable are common (especially in comedy), but proceleusmatic feet (∪ ∪ ∪ ∪) are restricted in use. (ii) The iambic *septenarius* (a catalectic tetrameter, sometimes called 'laughing metre') is confined to comedy (e.g. *nam quom | modo ex|ibat | foras || ad portum se ai|bat i|re*, Plaut. *Rud.* 307). The seventh foot is generally a pure iambus and must be so if a monosyllable follows. The fourth foot must be iambic if, as usually happens, diaeresis follows. All other feet are √ -. Hiatus is permitted at the diaeresis; failing diaeresis, there is caesura in the fifth foot. (iii) The iambic *octonarius* has a pure iambus as its last foot; its fourth foot is also pure if, as is usual, diaeresis follows. The other six feet are √ -. Hiatus is found at the diaeresis; failing diaeresis, there is caesura in the fifth foot. (iv) The trochaic *septenarius* (or catalectic tetrameter) is widely used (e.g. *exi e | fano | natum | quantumst || hōminum | sācile|gissu|me*, Plaut. *Rud.* 706). It keeps only its seventh foot pure (- ∪) and so differs from the Greek metre, which kept the first, third, and fifth feet also pure. Diaeresis (with hiatus permitted, though not in Terence) is common after the fourth foot; failing diaeresis, there is caesura in the fourth foot. (B) The metres of *cantica* (i.e. lyrical monodies or duets, rare in Terence) are mainly iambic, trochaic, anapaestic, bacchiac, and cretic dimeters and tetrameters (catalectic and acatalectic); choriambic, glyconic, and ionic metres are occasionally used; to these must be added the *colon reziarium* (√ √ √ √), which, when preceded by an iambic dimeter, gives the *versus reziarius*. The relation between word-accent and ictus, the extent to which popular pronunciations, resolutions, and hiatus are used, and the admission of impure feet differ with the metre employed. For example: conflict of accent and ictus is usual in anapaests, though shortening by 'brevis breuians' is common; in bacchiacs and cretics popular pronunciations are avoided, but accent and ictus generally coincide, in bacchiacs the first part of the foot may be ∪, or ∪ ∪, or -, but it is rare for both long syllables of a foot (√ -) to be resolved, yet cretics normally have the form ∪ ∪ ∪, rarely ∪ ∪ ∪. Some cantica are composed in a single metre. In others the metre changes with the emotions expressed or when a new topic is introduced; in such passages the division into cola is sometimes uncertain. In a number of cantica it is possible to discern a metrical structure of strophe and antistrophe, especially when a general theme is followed by a particular application (e.g. Plaut. *Amph.* 633-44).

II. Dactylic verse, introduced by Ennius. (i) The hexameter is used with considerable variety of treatment as the metre of epic, narrative, didactic, and satiric poetry, and forms the first line of the elegiac couplet. Its first four feet may be dactyls or spondees, its fifth is regularly a dactyl, its sixth a spondee or trochee. A spondaic fifth foot (an Alexandrian mannerism) is frequent only in Catullus (but cf. *cara de|um sub|oles*,

magnum Iouis | incre|mentum, Verg. *Ecl.* 4. 49). Except for some cretic words in Ennius, no use is made of shortening by 'breuis breuians' and synizesis is rare. Ennius, Ovid, and imperial poets are sparing with elisions; Lucilius, Lucretius, and Virgil (especially in *Aen.*) employ them more frequently. The commonest caesura is after the long syllable of the third foot (penthemimeral); it is often accompanied by another masculine caesura in the fourth foot (hepthemimeral) or in the second foot (trihemimeral), or by both; if there is not a masculine caesura in the third foot, both hepthemimeral and trihemimeral are usual (e.g. o pas|si graui|ora, da|bit deus | his quoque | finem, Verg. *Aen.* 1. 199). The comparative infrequency of a feminine caesura in the third foot is a striking contrast to the Greek hexameter. In the fifth foot, however, feminine caesuras are more frequent than masculine. Monosyllables are avoided where they would create diaeresis near a main caesura. After Ennius they are progressively less frequent at the end of a line (where a disyllabic or trisyllabic noun, verb, or adjective is preferred); in Virgil they are used only for special reasons (e.g. restitutus rem, *Aen.* 6. 846, imitating Ennius); in Horace's *Satires* conversational tone is achieved by final monosyllabic adverbs and particles. Diaeresis with a clear break in the sense at the fourth foot (the so-called 'bucolic caesura') is a conspicuous but not common mannerism (e.g. Pollio et | ipse fa|cit noua | carmina: || pascite | taurum, Verg. *Ecl.* 3. 86). In general, there is conflict between word-accent and ictus in the first half of the hexameter, harmony in the second. Whether Latin poets sought this alternation and arranged their caesuras to ensure it, or whether it is the inevitable result of their preference for certain masculine caesuras, is a matter of controversy. It is also disputed whether the Romans read hexameters with normal prose accentuations, neglected them in favour of ictus, or in some way made both audible. By skilfully varying their caesuras, elisions, and sense pauses, and employing all the delicate resources of alliteration and assonance, the great Roman poets made the hexameter a sonorous but flexible instrument for the expression of all human emotions. (ii) The pentameter consists of two catalectic dactylic cola (*hemipeper*, - ◡ ◡ ◡ - ◡ ◡) separated by diaeresis. In the first colon spondees may be substituted for either dactyl, but not usually for both; no spondees are permitted in the second colon. A monosyllable before the diaeresis is avoided unless another monosyllable or a pyrrhic (◡ ◡) word precedes; the final syllable is usually long. Ovid and later writers normally end the line with a disyllable (though 'es' and 'est' are allowed), but earlier elegists admit polysyllables. Except in Catullus elision is restricted and is generally avoided at the diaeresis, in the second half of the line, and especially in the last dactyl. A symmetrical arrangement of words (e.g. aspicio *patriae* tecta relicta *meae*, Ovid) is a common feature of the best writers, and each couplet is normally complete in sense.

III. *Lyric metres.* Latin lyric verse is smaller in quantity and less complicated in form than Greek. The chief writers are Catullus, Horace, Martial, and Seneca (in his tragedies). Apart from iambic, trochaic, dactylic, and anapaestic lines of various lengths, the principal metres are glyconics, pherecrateans, asclepiads, phalaecean hendecasyllables, scazons (limping iambs), and the elements of the sapphic and alcaic stanzas (cf. METRE, GREEK); ionics (e.g. Hor. *Carm.* 3. 12) and the controversial galliambic (in Catull. 63) are rare. Popular pronunciations are virtually excluded and there is considerable strictness in matters of caesura, elision, and liaison (synaphea) between successive lines (for details see standard editions). The iambic and trochaic lines of lyric (excluding the 'trimeters' of Publilius Syrus and Phaedrus) are metrically purer than those of comedy,

since they are based on dipodies of the forms ◡ - ◡ - and - ◡ - ◡; resolutions of long syllables also are comparatively fewer, though Seneca admits them in his iambs more freely than Horace. Some of the metres (e.g. iambic dimeters and trimeters, hendecasyllables, asclepiads) are used in continuous passages; but more frequently lines of different length or metre are combined into couplets (e.g. Hor. *Carm.* 1. 7; *Epod.* 16) or four-line stanzas. Horace is especially fond of the alcaic and sapphic stanzas and combinations of asclepiads, glyconics, and pherecrateans, in all of which he restricts himself by rules unknown to Greek (e.g. in sapphics and alcaics he uses an epitrite (- ◡ - -) where Greek may have a ditrochee (- ◡ - ◡)).

METRODORUS (1) of Chios, pupil of Democritus, lived in the fourth century B.C. His *Ἡερί φύσεως* seems to have combined Atomism with the attempt to apply the Eleatic denial of change to the universe as a whole. He occupied himself mainly with the explanation of meteorological and astronomical phenomena. He also wrote historical works—a *Ῥωμικά* and perhaps also an *Ἰωνικά*.

Testimonia and fragments in Diels, *Vorsokr.* 11 n. 231-4.

W. D. R.

METRODORUS (2) of Lampsacus (331/330-278/7 B.C.) was one of the four *καθηγεμόνες* of Epicureanism, and the most important after Epicurus; Epicurus dedicated to him his *Eurylochus* and his *Metrodorus*, besides writing letters to him and mentioning him often in his works. He reckoned him not among original thinkers, but as first among those who could reach the truth with the help of others, and ordered that Metrodorus' memory as well as his own should be celebrated on the 20th of every month. The list of Metrodorus' writings is a long one, and considerable fragments remain, largely occupied with polemic against other schools, and confirming Epicurus' judgement as to his lack of originality.

Ed. A. Korte, *Jahrbücher für Classische Philologie*, Suppl. 17, 520 (1890); *Papyrus Herculanensis* 831 ed. A. Korte, *ibid.* 571 ff.; R. Westmann, *Plutarch gegen Kolotes* (1957).
W. D. R.

METRODORUS (3) of Stratonicea, an adherent first of the Epicurean school, then of that of Carneades (Diog. Laert. 10. 9, Cic. *De Or.* 1. 45).

METRODORUS (4), of Scepsis in Mysia, enjoyed the friendship of Mithridates but later (c. 71/70 B.C.) supported Tigranes and fell foul of Mithridates who may have been responsible for his death (Plut. *Luc.* 22). Mentioned several times by Cicero, he was celebrated for his powers of memory and his hatred of Rome. He wrote a book on Tigranes, a *History* (?), on gymnastic training (*Περὶ ἀλειπτικῆς*), and perhaps a *Περὶ ἡγῆσεως*. He is to be distinguished from an older homonymous philosopher of Scepsis.

FGH 184.

H. H. S.

METRONOMOI, overseers of weights and measures in Athens; five for the city, five for the Piraeus, elected by lot for one year. In other States their duties were carried out by the *Agoranomoi* (q.v.).

METROPOLIS, (a) the mother-city of a colony; (b) in Roman times an honorary title granted usually to the capitals of provincial *koina*, sometimes to other important cities; (c) in Egypt the administrative capital of a *nomos* (q.v.). Under the Ptolemies the *metropoleis*, though they usually had many Greek residents, possessed no official communal organization. Augustus placed on a special register the hellenized residents of the *metropoleis* (οἱ ἀπὸ μητροπόλεως), and these henceforth formed a hereditary class, paying poll-tax at a lower rate. He also established in each metropolis a body of magistrates (*ἀρχοντες*), who managed the gymnasium and the ephebic training, the market and corn supply, and the Greek temples. These were chosen—in theory probably by popular election from a hereditary class styled ἡ ἀπὸ γυμνασίου. Septimius Severus established in each metropolis a council (*βουλὴ*), which co-opted its members and nominated the magistrates and the principal officials of the *nomos* except the *στρατηγός* and *βασιλικὸς γραμματεὺς* (who were appointed by the prefect). The *metropoleis* officially became cities probably in A.D. 297, perhaps ten years later.

P. Jouquet, *La Vie municipale dans l'Égypte romaine* (1911); Jones, *Cities E. Rom. Prov.*, ch. 11. A. H. M. J.

METTIUS POMPUSIANUS (*PW*, s.v. L. Pompusius Mettius, but the identification is very doubtful) was consul under Vespasian. He was executed by Domitian because he possessed an imperial horoscope and had made a volume of extracts of royal speeches from Livy.

Suet. *Vesp.* 14; *Dom.* 10. 3; Dio Cass. 67. 12. G. E. F. C.

MEZENTIUS, king of Caere in Etruria, whose aid was invoked by Turnus against the invading Aeneas. According to the earlier story, told in Cato's *Origines*, Turnus and Aeneas alike fell in the subsequent conflict, and Mezentius was later killed or forced to submit in single combat with Ascanius. (Some authorities, e.g. Ovid, *Fasti* 4. 877–900, say he demanded payment to himself of the first-fruits of the vintage.) Virgil in *Aen.* books 7–10 develops him into a full-blooded, atheistical tyrant, killed by Aeneas after the death in his defence of his attractive son Lausus.

R. A. B. M.

MICON (*Mikwv*) (5th c. B.C.), painter and sculptor, of Athens. He painted (1) in the Theseum (soon after 475): Theseus and Minos; probably also Amazonomachy and Centauromachy. (2) In the Stoa Poikile (soon after 460) Amazonomachy. The Amazonomachies and Centauromachy are reflected on vases; one Amazon is named Peisianassa after Peisianax, who built the Stoa; one Centauromachy is very like the centre of the west pediment at Olympia, on which Micon may have worked as sculptor. (3) In the Anakeion: Argonauts. He painted Butes (in the Amazonomachy?) so that only head and eye appeared above a hill; analogies can be found on contemporary vases. His painting was closely connected with Polygnotus, but Polygnotan ἦθος is never attributed to him. He made a statue in Olympia of Callias, victor in 472; the Mariémont warrior may reproduce an original by him.

MIDAS (1), a legendary Phrygian king, of whom several stories are told, the most famous being the following.

Midas had a garden which a Silenus or satyr used to

visit. Midas had a curiosity to learn his wisdom, and so mixed wine with the water of a spring in the garden; the Silenus was thus made drunk and caught. What he told Midas seems to have been a subject for learned conjecture; according to Aristotle ap. [Plut.] *Cons. ad Apoll.* 115 b, he said that life was a penance and it was a misfortune to be born; Aelian (*VH* 3. 18) puts into his mouth a lecture on geography. The place of the garden also varies: see Hdt. 8. 138. 4 (somewhere in Macedonia), Xen. *An.* 1. 2. 13 (near Thymbria in Cilicia), Bion in Athenaeus 45 c (name given as Inna, between Thrace and Paconia).

Having to judge a musical contest between Apollo and Pan (or Marsyas, q.v. 1, Hyg. *Fab.* 191. 1), Midas voted against Apollo, who therefore bestowed ass's ears on him. He managed to hide these from most people with his head-dress, but was obliged to tell his barber; the latter, bursting with the secret, found relief by whispering it into a hole in the ground; reeds grew over this when he refilled it, and whispered the tale whenever the wind blew through them (*Ov. Met.* 11. 153 ff.).

Midas was very hospitable to a Silenus, whom his people had found wandering drunk and captured (a variant of the first story, probably). Dionysus therefore offered him anything he wished; he asked that all he touched might become gold. Soon after, he found that this applied to his food and prayed to lose the gift; by Dionysus' advice he bathed in Pactolus, which ever since has had golden sands (*Ov. ibid.* 90 ff.).

Whether any facts of cult or history lie behind the story of Midas is doubtful. H. J. R.

MIDAS (2), an historical king of Phrygia 738–696 B.C. (Eusebius). He was the first barbarian king to make presents to Delphi (Hdt. 1. 14); married the king of Cyme's daughter, who first struck coins in her native city (Heracles, *FHG* II. 216, Pollux 9. 83); and drank bull's blood when the Cimmerians overthrew his kingdom (Strabo 1. 61). In Assyrian records he appears as Mita, joins a confederacy against King Sargon (717), but becomes his vassal (707). His story anticipates that of the Lydian Gyges (q.v.).

P. N. U.

MIDDLE PLATONISM. The Platonism of the period between Antiochus of Ascalon (d. c. 68 B.C.) and Plotinus (b. A.D. 205), characterized by a revulsion against the sceptical tendency of the New Academy and by a gradual advance, with many individual variations, towards a comprehensive metaphysic, often including elements drawn from Stoicism, Aristotelianism, or Neopythagoreanism. See ALBINUS (1), APULEIUS, CELSUS (4), PLUTARCH. E. R. D.

MILESTONES. The earliest surviving Roman milestone (*ILS* 5801) dates from c. 250 B.C. Under the Republic they bear the names of consuls or other officials concerned with the building or repair of roads. In the Principate the full names and titles of the Emperor usually appear—occasionally nothing more. They may attest the date of new roads (e.g. *ILS* 208, 5834), or methods of financing reconstruction (e.g. *ILS* 5875). On trunk roads in Italy the distance given is often that from Rome, in the provinces from the provincial capital; but in most cases the distance is from the city on whose territory the milestone stood—often useful for the delimitation of those territories. In the Three Gauls and Germany from the time of Trajan distances were measured in *leugae* (1,500 paces). Milestones were usually cylindrical, about 6 feet high.

ILS 5801 ff. Schneider, *PW*, Suppl. vi, s.v. 'miliarium'.

G. H. S.; J. C. M.

MILETUS, southernmost of the great Ionian cities of Asia Minor, claimed partly Cretan origin; the successive strata of Minoan and Mycenaean settlement uncovered on the site lend colour to this claim, as also to the equation with Milawanda (acknowledged in the Hittite records to have belonged to the king of Ahhiyawa). In Homer the people of Miletus were Carians who fought against the Achaeans at Troy; and in the later Greek prose tradition the Ionic settlers, under their Coddrid founder Neleus, seized Miletus from Carians (whose women they took to wife). During the seventh and sixth centuries Miletus founded many colonies on the Black Sea and its approaches (including Abydos, Cyzicus, Sinope, Panticapaeum, Olbia, Istrus), led the way in Greek penetration of Egypt (Milesians' Fort and Naucratis; Necho's offering to the temple at Didyma after Megiddo, 608 B.C.), and had close contacts with Sybaris till its destruction in 510.

Miletus' sea-power and colonies were partly cause, partly result of her long struggle with the kings of Lydia. Alyattes made terms with Miletus (then under a tyrant Thrasylbulus, the friend of Periander), which apparently kept a privileged position when Croesus subdued Ionia and when Persia conquered Croesus' dominions c. 546. In 499 Miletus, instigated by its ex-tyrant Histiaeus and Aristagoras (1) (q.v.), started the Ionian revolt. After the naval disaster at Lade the city was captured, the temple at Didyma was burnt, and Miletus was left desolate (494).

Lade ended for Miletus a long period of great prosperity, interrupted by intervals of party struggles; to this period belong the Milesian philosophers Thales, Anaximander, and Anaximenes, the chronicler and map-maker Hecataeus, and the seated statues from Didyma (British Museum, *Catalogue of Sculpture* 1. 1, plates vi-xv). How far the archaic pottery generally known as Rhodian was really Milesian remains uncertain. Milesian woollen goods and furniture were world-famous.

After the Persian defeat at Mycale (479) Miletus joined the Delian League, but in the mid fifth century (perhaps after a revolt) the Athenians imposed a garrison and imperial controls on the city. In 412 Miletus revolted from Athens, only to fall under the Persian satrap. In the fourth century it came under the shadow of Mausolus, the ruler of Caria. Among Milesians of this period were Aspasia of Periclean fame, Hippodamus, town-planner of the Piraeus, and the dithyrambic poet Timotheus (c. 447-357). Miletus was captured and liberated by Alexander.

Delivered from the rule of Asander in 312, Miletus maintained friendly relations with the Hellenistic kings, by whom some of the buildings uncovered in the great German excavations were donated. It made treaties of isopolity (interchange of citizen rights) with its neighbours and colonies, and there was a large Milesian element resident in Athens. After becoming part of the Roman province of Asia (129 B.C.) Miletus lived on its past glories. St. Paul visited it (A.D. 51); Apollo performed a miracle at Didyma when the Goths besieged the city in A.D. 263; but its decline was assured by the silting up of its harbour.

MILK (γάλα, *lac*) in its fresh form was, if only for climatic reasons, not very important in the diet of the Greeks and Romans, though they knew of (and sometimes admired) 'milk-drinkers' among the northern barbarians. Cows' milk and butter (βούτυρον = 'cow-cheese'), in particular, found little favour; and the milk that was consumed—normally in the form of curds (ἀγύγαλα) or cheese—was

usually that of goats or sheep. The medicinal value of milk was well known; and the physicians recommended the internal or external use of fresh and curdled milk or whey (including also human and donkeys' milk) for numerous complaints, sometimes with the addition of water, salt, flour, or honey. Milk was used also for cosmetic purposes; and in religious ceremonies, where it is a natural first-fruit or drink offering, it always retained a place, especially in conservative rustic cults, though in many cases its early use was, as in the human diet, later superseded by that of wine.

PW, s.v. Milch (xv 1569 ff.), with references.

L. A. M.

MILLS. The early 'saddle-quern', in which grain is rubbed between a fixed flat lower stone and a smaller upper stone held in the operator's hands, continued in use for many centuries; but in the fifth century B.C. an improved version became current, with an enlarged upper stone containing a rudimentary hopper and operated by means of a pole pivoted behind the lower stone. Rotary grain-mills (which alone make working by animals, water, or wind possible) are not securely attested before the early second century B.C., but from then on both the small hand-quern and the 'hour-glass' animal-mill of which numerous examples have been found (especially at Pompeii) became very common. Geared water-mills (described by Vitruvius 10. 5. 2) were invented soon afterwards and gradually established themselves. In the absence of water, geared mills were sometimes driven by animals. (The windmill is a medieval invention.) Originally a household occupation, milling developed into an industry as mills became more complicated; and in imperial Rome the guild of miller-bakers (*pistores*) was of considerable importance.

L. A. Moutz, *Grain-Mills and Flour in Classical Antiquity* (1958).
L. A. M.

MILÓ, TITUS ANNIUS (PW⁶⁷ 67), of Lanuvium, tribune 57 B.C. Originally Pompey's man, he actively promoted Cicero's recall and organized gladiators against those of Clodius (q.v. 1). Their riots, which continued over five years, were varied by prosecutions for *vis*: in 57 Milo twice sued Clodius, who escaped by being elected aedile; in 56 a prosecution of Milo was also dropped, and he became praetor in 55. Late in 54 he inaugurated, with games costing 1,000,000 HS, a candidature for the consulate of 52 against Hypsaeus and Metellus (q.v. 11) Scipio; but disorder was still preventing the elections when Milo murdered Clodius near Bovillae 18 Jan. 52. Pompey then became sole consul and had Milo prosecuted before a court so heavily guarded that Cicero did not dare to speak (his *Pro Milone* was written and sent to Milo after the condemnation). Milo retired to exile at Massilia, thanking Cicero that his reticence allowed him to enjoy the mullets there. But in 48 he answered Caelius' appeal to re-create disorder and was captured and executed at Cosa.

In 54 he married Fausta, daughter of Sulla and divorced wife of C. Memmius (q.v. 2).
G. E. F. C.

MILON, an athlete from Croton of the later sixth century B.C.; six times victor in wrestling at the Olympian Games, six times at the Pythian. He is said to have carried a heifer down the course, killed it with one blow, and eaten it all in one day. Trying to rend a tree asunder he was caught in the cleft and eaten alive by wolves.

F. A. W.

MILTIADES (c. 550-489 B.C.) belonged to the noble Athenian family of the Philaidae, and was sent c. 524 by Hippias to continue the policy of Athenian hegemony in the Thracian Chersonese which Miltiades' namesake and paternal uncle had inaugurated under Pisistratus

(c. 555) and probably at his prompting. Miltiades ruled as absolute king over the natives, but he encouraged Athenian settlers and, after freeing Lemnos from Persia in the early years of the fifth century, he handed it over to Athens. He had previously been a vassal of Darius and accompanied him on the Scythian expedition (c. 513), but his claim to have proposed the destruction of the Danube bridge is disproved by the fact that Darius left him unmolested. He married Hegesipyle, daughter of the wealthy Thracian king Olorus, who bore him Cimon. His other children (including the notorious Elpinice) were by a previous marriage with an Athenian lady. After a short exile caused by a Scythian invasion Miltiades was restored by the Thracians (496). At the end of the Ionian Revolt, in which he had participated, he fled from the Persians and returned to Athens (493). Here he survived a trial for 'tyranny' in Thrace and became the most influential politician in spite of the opposition of the Alcmaeonidae. As one of the generals in 490 he won the support of Callimachus (q.v. 1) and most of his colleagues for engaging the Persians at Marathon (q.v.), where he won a decisive victory. Inaugurating a policy of naval expansion, he led an expedition to Paros (early spring 489), which he was unable to capture. On the accusation of Xanthippus (q.v. 1) Miltiades was fined 50 talents for having deceived the people, and soon afterwards succumbed to a wound incurred at Paros.

W. W. How, *JHS* 1919, J. Wells, *Studies in Herodotus* (1923), 112 ff., E. Cavaignac, *Rev. Phil* 1929; A. Passerini, *Miltiades e l'occupazione di Lemno* (1935), H. Berve, *Miltiades* (1937), V. Ehrenberg, *Polis and Imperium* (1965), 224 ff.; H. Bengtson, *Sitz. der Bayerischen Akademie, phil.-historische Abt.*, 1939, Heft 1. For Miltiades' plan in 490 B.C., cf. C. Hignett, *Xerxes' Invasion of Greece* (1963), 55 ff. and N. G. L. Hammond, *JHS* 1968, 26 ff., K. Kinzl, *Miltiades-Forschungen* (1968).

MIMNERMUS, elegiac poet and musician (Strabo 643) of Colophon (ibid.) and Smyrna (Paus. 9. 29. 4). His *flourit* is given as 632-29 B.C. by the *Suda*; this suits his interchange with Solon (fr. 6 and Sol. fr. 22). The eclipse of the sun to which he referred (Plut. *Mor.* 931 c) gives no help, as it may be either 648 or 585 B.C. His elegies were collected in two books (Porph. ad Hor. *Epist.* 2. 2. 101), one of which was called *Nanno* after the flute-girl he is said to have loved (Hermesianax ap. Ath. 597 f, Strabo 643). This seems to have been a collection of poems on very different themes, such as mythology about Tithonus (fr. 4), the Sun's magic bowl (fr. 10), and history about the foundation of Colophon (fr. 12, Strabo 633). The same book may have contained his account of the war between Smyrna and Gyges (fr. 13, Paus. 9. 29. 4). His other fragments are concerned largely with the pleasures of youth and the horrors of old age (frs. 1-3). But he tempers his hedonism with a respect for truth (fr. 8) and for warlike qualities (frs. 12-13). He seems to have written a *Smyrneis*, or historical poem on Smyrna, which may have been contained in the *Nanno*. He is remarkable for his musical use of the elegiac, his brilliant sustained images, the directness of his emotional appeal, and his love of pleasure.

MIMUS (μῖμος), an imitative performance or performer.

I. GREEK. In Greece, as elsewhere, the instinct for imitation found its expression in the mimetic dance. From early times solo performers, by play of gesture, voice, and feature, gave imitations of neighing horses, etc. (Pl. *Resp.* 396 b), and small companies, called in Sparta δεικνυλίκται (? 'masked men'), elsewhere αὐτοκάβδαλοι ('improvisers') or in Italiot towns φλόακες,

presented short scenes from daily life (e.g. 'The Quack Doctor') or mythology, probably on a hastily erected stage in the market-place or in a private house; such performers belonged to the social class of acrobats, etc. Xenophon (*Symp.*) tells of a mime 'of Dionysus and Ariadne', danced at a private banquet by a boy and girl; we note the connexion with Syracuse, the musical accompaniment, the use of dialogue, and the fact that the girl is also a sword-dancer and the concubine of the Syracusan dancing-master. In the fifth century Sophron of Syracuse wrote 'men's' and 'women's' mimes in Dorian rhythmic prose; the language was popular and included frequent proverbs; the surviving titles (e.g. 'The Old Fishermen', 'The Women Quacks', 'The Women Visitors to the Isthmia') indicate stock mime themes. Of the mimes of Sophron's son, Xenarchus, virtually nothing is known. In the third century the taste for realism brought the mime to the fore; Theocritus dressed traditional themes in his courtly hexameters (Idyll 2: the deserted heroine resorts to magic; 15: two Syracusan women visit the festival of Adonis in Alexandria; 21 (probably by an imitator of Theocritus): two old fishermen converse; 14 is also dramatic in form); these pieces, like those of the more realistic Herodas (q.v.), were probably intended for semi-dramatic recitation. Meanwhile the popular mime invaded the theatre; it now took the form either of παίγνια (? slight, often vulgar, performances) or of ὑποθέσεις, 'plots' (Plut. *Quaest. conv.* 7. 7. 4, 712 e), taken over from drama proper and presented in mimic fashion by the μαγιστοί (Ath. 621 c) or μολόγοι (the meaning of the various terms for performers, whether they suggest spoken or musical delivery, is uncertain); cf. the third-century Athenian lamp with its representation of three maskless performers and the inscription 'Mimologi; hypothesis: Mother-in-law'. The 'Alexandrian erotic fragment' is perhaps a sung mime: theme, the deserted heroine. In *POxy.* 413 we have (a) a farce mostly in prose, based on the plot of *Iph. Taur.* (?): a Greek girl, named Charition, aided by her brother, escapes from an Indian king and his followers by making them drunk; the barbarians speak pseudo-Indian; there is a low clowning part; (b) a prose mime: theme, the jealous mistress (cf. Herodas v), who tries to poison her husband and make love to her slaves; there are six or seven short scenes and seven roles, all unimportant except that of the archimima; here, as always, the interest of the mime is in character and situation rather than in action. In the Marissa wall-inscription we have a song-dialogue between a hetaera and the *exclusus amator* (see MAGODIA).

II. ROMAN (known also as *fabula riciniata*). Before the end of the third century B.C. the barefooted *planipes* appeared on the stage at Rome. The undatable epitaph of Vitalis (Duff, *Minor Lat. Poets*; Loeb, 636-9) points to solo, maskless displays; Cicero refers to extempore troupe performances of improbable themes like 'The Beggar turns Millionaire' (Phil. 2. 65). A popular feature at the Floralia was the appearance of the *mimae* (alias *meretrices*) naked. Sulla patronized the mime; soon it rivalled the *Atellana* as an after-piece; Dionysia received 200,000 sesterces yearly, and we read of a company of 60 *mimi* under an *archimimus*. Associated with Julius Caesar were the mime-writers Laberius, Syrus, and Matus. Favoured by the emperors, beloved by the rabble, still topical, farcical, and indecent, the mime (with the pantomime) practically monopolized the stage; a typical *mimus* was the close-cropped fool, dressed in the patch-work *centunculus*. Domitian had a real crucifixion inserted in a mime; Heliogabalus ordered mimic adulteries to be performed realistically; in the person of

Theodora a *mima* reached the throne. Unsubdued by their losing battle with the Church and even by the barbarian invasions, the strolling companies, it is claimed, have survived as the wandering *jongleurs* of the Middle Ages.

MINDARUS, Spartan admiral, 411/10 B.C. Exasperated by the duplicity of Tissaphernes (q.v.), he transferred the main Peloponnesian fleet from Ionia to the Hellespont, where Pharnabazus (q.v.) was willing to support him wholeheartedly. The Athenians defeated his fleet off Cynossema and again off Abydos (autumn, 411), thereby safeguarding the passage of their corn-ships. Early in 410 Mindarus recaptured Cyzicus, but he was there surprised by a superior fleet under Alcibiades and died in a vain attempt to save his ships from capture. Determined to end the stagnation of the campaign in Asia, he displayed energy and enterprise. It was his misfortune that while he was in command the Athenian forces were exceptionally well led.

MINERALOGY. Greek mineralogy embraced bold theorizing and shrewd observation, but the two seldom coalesced. Plato in the *Timaeus* (60 b-c) was the first to propound a theory about the formation of stone, although to what extent he meant this and similar speculations to be taken seriously is questionable. According to him, stone is formed when earth is filtered through water and compressed by the air into which the water is transformed. Aristotle at the end of *Meteorologica* 3 derives certain minerals from the action of the dry exhalation. Scarcely any evidence is adduced. Stones are cited from time to time in *Meteorologica* 4, which is concerned with the solidification, dissolution, and physical properties of 'homoeomerous' bodies in general.

The physical properties of stones and mineral earths form the main theme of Theophrastus' monograph *Περὶ λίθων*, a work which, brief as it is, traverses a wide range of topics, many of them for the first time. We find a digression on the combustibility of coal and other minerals, and references to the ease or difficulty of working various stones, the behaviour of fluxes in smelting, the burning of lime, the mining of ruddle and Samian earth, the nature of glass, and the preparation of white lead, verdigris, and quicksilver. Although there are descriptions of many stones and several mineral earths, these are mostly introduced in order to illustrate a point: the work is not intended to be an exhaustive survey. The opening paragraphs contain a summary of a theory concerning the formation of earths and stones. Thanks partly to its dependence on Platonic and Aristotelian concepts, and partly to its exploitation of simple concepts derived from artificial processes, this theory can be reconstructed in some detail. Certain facts presented in the body of the work bear upon it, and others seem to do so. Here, for once, theory and observation were allied. There is one surprising omission. No attempt is made to explain the action of the lodestone, a problem which elicited theories from Empedocles, Plato, Democritus, and the Epicureans, amongst others.

Theophrastus' outstanding work was perhaps too sober and allusive to exert much influence on speculative thought, although Juba (q.v. 2) and the Elder Pliny at least used its factual descriptions. In the Hellenistic period, writers such as Sotacus, Sudines, and Bolus (q.v.) of Mendes concentrated on the supposed magical and medicinal properties of gemstones, a tendency which is only too apparent in Pliny. Theoretical speculation was

correspondingly affected by mystification if we can judge from a theory intended to explain the formation of gemstones, traces of which, perhaps derived from Posidonius, can be found in Pliny and Seneca.

However, Pliny, uncritical though he was, preserves much that is of value. One need only mention as an example his account of amber, the true origin of which he presents for the first time. Other writers of the Roman period make their contribution. Vitruvius discusses the qualities of Roman building stones and describes in detail the preparation of pigments. Dioscorides in book 5 of the *Materia medica* has good notes on a number of minerals and is particularly enlightening on coral. Strabo provides interesting material, including digressions on the Aswan granite outcrops and the dangers of realgar-mining. Galen characteristically interrupts his descriptions with a note on the gendert of *λίθος*. The frustration and long-delayed success of his efforts to witness the ceremony of preparing Læmnian earth was an experience which could even now bedevil a visit to a Greek island. Solinus and Isidore of Seville summarize Pliny, although Solinus has information from elsewhere on topics such as sapphires, Whithy jet, and the coal burnt in the temple of Sulis at Bath.

Several books on stones are cited in [Plutarch], *De Fluvio*, but these are probably part of an elaborate fiction.

MINERVA (archaic *Menerva*), an Italian goddess of handicrafts, widely worshipped and regularly identified with Athena (q.v.). Altheim (*PW*, s.v.; cf. *Hist. Rom. Rel.* 235 and note 34; *Griechische Götter* (1930), 142, note 4) believes her actually to be Athena, borrowed early through Etruria; but most scholars think her native, and connect her name with the root of *memini*, etc. At all events there is no trace of her cult in Rome before the introduction of the Capitoline Triad, where she appears with Jupiter and Juno (qq.v.) in an Etruscan grouping. Apart from this she was worshipped in a shrine on Mons Caclius under the name of Minerva Capta, after the taking of Falerii in 241 B.C. (Ov. *Fasti* 3. 835 ff., where see Frazer; cf. Platner-Ashby, 343 f.). A much more important cult lay *extra pomerium* on the Aventine (Platner-Ashby, 342), but its age is unknown; it was the headquarters of a guild of writers and actors during the Second Punic War (Festus, 446, 26 ff. Lindsay) and seems to have been generally the centre of organizations of skilled craftsmen. Minerva's worship spread at the expense of Mars (q.v.) himself, the Quinquatrus coming to be considered her festival, apparently because it was the *natalis* of her temple (Ov. *ibid.* 812); it was also extended to five days, from a misunderstanding of the meaning ('fifth day after' a given date; see Frazer ad loc.). 13 June was called the *Quinquatrus minuscule* and was the peculiar feast-day of the professional flute-players (*tibicines*; cf. Ov. *Fasti* 6. 651 ff., and Frazer ad loc.).

MINES. Though ore had been extracted (both open-cast and underground) at other places much earlier, systematic exploitation was first developed at Laurium. The simple geological strata there made it easy to learn to prospect where no indications appeared on the surface. This experience was utilized by the Romans, who were

able to test dipping veins, though complex problems such as faulting defeated them.

Ancient shafts and galleries are normally small, as they were cut with hand-tools and it was desirable to obviate propping. Siliceous rocks were broken by fire-setting, a method known in the Bronze Age in Austria. Placer-mines were worked by panning, and for large-scale enterprises (in Spain and at Dolaucothly in Wales) water was brought by aqueducts for hushing (i.e. breaking down of softer beds by rush of water). Iron tools were normal in classical times, though stone hammers survived in many districts for crushing ore.

The miners were mainly slaves, both in the larger Greek mines and in the centralized workings of the Roman Empire. Overseers and engineers also were slaves; in the Empire legionaries were sometimes used. Later, criminals were employed at a few mines and quarries. The Romans sometimes kept their workmen permanently below ground. Some mines the Roman Government exploited directly; at others small concessions were leased, but both technically and socially the mining community was controlled by a procurator. Large lessees, individuals and companies, subject to little control, were common in the Republic but rare later, save at iron-mines. At Laurium concessions were leased to citizens; they were usually large enough to employ several slaves, but sometimes the lessee would himself work underground. In Egypt state-exploitation was the rule.

A developed mining-royalty never existed, though the State claimed dues from miners and authorized mining on other men's property. In earlier times the State *de facto* owned most mines. The idea of royalty was probably developed by the German kingdoms.

The chief difficulties of ancient miners were ventilation and drainage. The former was poor owing to narrow galleries and the use of naked lights, and the various artificial improvements were seldom successful. The best was to drive intercommunicating adits at different levels. The influx of water often caused mines to be abandoned. The Romans used various drainage-machines, such as the screw-pump and perhaps the chain-pump (1st c. A.D.), the water-wheel (2nd c.), and the suction-pump (late Empire); but these devices, being worked by human power, were expensive, and could be used only where the ore was profitable. Batteries of water-wheels superimposed to a depth of 75 metres have been found at Ruda (in Rumania). No machines were sufficiently powerful to reclaim a mine once abandoned. Where the ground-formation permitted, drainage was secured by adits, which were sometimes driven through a mile of sterile rock. The ore was hauled to the surface on trays or in sacks, often by boys who could move quickly in narrow galleries.

MINOAN CIVILIZATION. The Bronze Age civilization of Crete (c. 3000–1000 B.C.) was thus named by Sir Arthur Evans after Minos (q.v.). It was divided by him in

1905 into nine periods, Early, Middle, and Late Minoan (E.M., M.M., L.M.), each with three divisions, and further subdivisions have since been made using letters and Arabic numbers (e.g. L.M. I A, L.M. I B, L.M. III A 1, L.M. III A 2). Sixteen or more successive chronological periods can be defined in terms of changes in the shapes and decoration of the pottery within the framework of the Minoan civilization. Other classifications proposed, notably by D. LEVI (*PP* 1963, 81 ff.) and N. PLATON (Zervos, *L'Art de la Crète* (1956), 509 ff.), as yet lack definition.

This high civilization, the earliest on European soil, was not revealed until 1900 when Crete became independent of Turkish rule. The chief sites are: (1) *Cnossos* (Κνωσός, Κνώσος), with the largest city and palace, excavated by Evans from 1900 onwards. It lies on the west side of the Kairatos valley about 3½ miles from the sea, in the centre of the north coast of the island, and dominating the wide expanse of fertile rolling hills between the Lasithi Mountains (Dikte) to the east and Ida to the west. The palace was built on top of a 'tell' formed by the debris, some 20 feet deep, of a Neolithic settlement (*BSA* 1964, 132 ff.). The city round it may have covered half a square mile. (2) *Phaestus* with its city and palace occupied a hill at the west end of the Mesara plain in the south of the island. As at Cnossos the palace was built on the site of a Neolithic settlement. *Ayia Triadha* with a small palace 1½ miles west of Phaestus may have been its harbour town, although the sea is today 2 miles distant. Other important cities with palaces were at *Mallia* on the north coast east of Cnossos, and probably at *Khania* (ancient *Cydonia*) in the west. Towns with smaller palaces have been excavated at *Gournia* and *Zakro* (*Ergon* 1961, 221 ff., 1962, 159 ff., 1963, 159 ff., 1964, 134 f., 1965, 127 ff., 1966, 119 ff.), in the east, at *Kanli Kastelli* south of Cnossos (*Ergon* 1955, 104), and at *Monastiraki* west of Ida (Matz, *Forschungen auf Kreta*, 1942 (1951), 27 ff.). Other important town sites include *Tylissus*, *Arkhanes* and *Nirou Khani* all in the Cnossos area, and *Mochlos* and *Paluhastro* in the east.

The Early Minoan period (c. 3000–2200 B.C.) was preceded by a long Neolithic, best known at Cnossos. Copper tools were already in use by the end of the Neolithic there (*PM* ii. 14). But the pottery of E.M. I is so different in its shapes (spouted jugs) and style of decoration ('Pirgos' ware with pattern burnish, 'Ayios Onoufrius' ware with linear designs in red paint on a light ground) as to suggest the presence of a new people arriving from W. Anatolia or from further afield in Syria or Palestine. In E.M. II the arts of stone vase making, seal engraving, and writing seem to have made their first appearance. There is much evidence (stone vases, seal-stones, amulets) of contact with and influence from the direction of Egypt during this phase which corresponds to the end of the Egyptian Old Kingdom and First Intermediary Period. In pottery 'Vasiliki' Ware with mottled red and black surfaces, and small goblets with 'egg-cup' feet, are characteristic of E.M. II.

The flourishing period of the Minoan civilization lasted from M.M. I to L.M. I (c. 2200–1450 B.C.). This seems to have been a comparatively peaceful time, although defence walls are attested at Mallia (*Études Crétoises* xi (1959), 4. Cf. *Gnomon* 1961, 827). The island was heavily populated, with cities centred on palaces, with towns, villages, hamlets, and isolated farms. More ambitious 'villas' like Sklavokampos (*AE* 1939–41, 69 ff.) and Vathipetro (*PAE* 1949–56) may have controlled large estates. Writing was practised in hieroglyphic (on stone seals) and linear scripts (Linear A, on clay tablets and stone libation vessels). Two clay cups from Cnossos assigned to M.M. III have Linear A inscriptions written in ink inside them.

What Evans called E.M. III at Cnossos is in effect a phase there which was transitional between E.M. II and M.M. I A. Goblets with low 'egg-cup' feet are taller and narrower than those of E.M. II. In M.M. I A the finer vases at Cnossos begin to be decorated with bichrome designs in red and white on a dark (black or shades of brown and red) lustrous wash. The material assigned to E.M. III in other, notably the eastern parts of the island, appears to be much of it contemporary with M.M. I A at Cnossos: but vases are decorated in white alone. During or at the end of M.M. I A the first great palaces were built at Cnossos and Phaestus, whether owing to a natural evolution of society (Schachermeyr), or by invaders (Luwians) from Anatolia (Huxley). This inaugurated the period of the First Palaces (M.M. I-II).

In M.M. I B, corresponding to the early part of the XII Dynasty in Egypt (c. 2000-1900), the fast potter's wheel came into general use, and vases of great refinement were made including 'eggshell' ware, which imitated metal in fabric and shape. Some of the finest vases have polychrome decoration in dark red, orange, and white.

In M.M. II, contemporary with the late XII and XIII Dynasty in Egypt (c. 1900-1700), the art of the potter reached its highest perfection (Royal Pottery Stores at Cnossos, First Palace at Phaestus). During this period the great palaces at Cnossos and Phaestus were destroyed, whether in war or through natural causes such as an earthquake is uncertain.

The palaces were entirely rebuilt, inaugurating the period of the Second or Later Palaces, i.e. M.M. III-L.M. III A (c. 1700-1375 B.C.). The fine arts of gem engraving, jewellery (Aegina Treasure), metal working (Vaphio cups), and faience (Cnossos Temple Repositories), now reached their highest perfection. It seems that the earliest true pictures ('frescoes'), as opposed to mere decorative designs, painted on the plaster walls of palaces and houses date from this time (M.M. III) and not earlier. But the art of the potter declined, and fine decorated clay vases became rare in M.M. III, due to the increasing use of metal (copper, silver, gold) for table ware. Towards the end of M.M. III a fashion for decorating vases in 'dark on light' (black or brown paint on a light surface) developed at the expense of the earlier tradition of 'light on dark' (decoration in white and red on a black or brown wash). At first the new style of decoration was largely confined to irregular parallel stripes ('Tortoise Shell Ripple'). It reached its highest development in the next period (L.M. I), and especially towards the end of it (L.M. I B) with a rich and varied repertory of flower and marine designs (Plant and Marine Style).

Destruction occurred at Cnossos and some other sites in L.M. I A c. 1500 B.C.; this may have been due to an earthquake accompanying the eruption which overwhelmed the volcanic island of Thera (modern *Santorin*) about this time. Soon afterwards it seems Thera exploded, involving Crete, especially the eastern parts, in a general destruction which may have been followed by conquest from abroad (in L.M. I B c. 1450 B.C.) (see MYCENAE). After this disaster only the palace at Cnossos appears to have continued to exist as such. For Cnossos the succeeding period, L.M. II (c. 1450-1400 B.C.), was evidently one of prosperity with richly furnished 'Warrior Graves'.

In L.M. II vases including large 'amphorac' were decorated in an elaborate, but stiff and somewhat debased 'Palace Style'. The pottery of this period is thought to show some influence from Mainland Greece. A new script (Linear B) was now in use, but in Crete it is hardly attested as yet outside Cnossos, though it is known from several Mainland sites. The language of Linear B may be different from that of the earlier scripts; it has been

interpreted as a form of Greek (see MINOAN SCRIPTS), but this is contested.

The final destruction of the 'Last Palace' at Cnossos was dated by Evans c. 1400 B.C. But much if not most of the pottery which he attributed to a subsequent 'Re-occupation' of the palace site appears to belong to the period of its destruction; this may therefore be dated on the basis of the fine decorated vases to the beginning of the Amarna period in Egypt (L.M. III A, c. 1375 B.C. or not much later). From then onwards (L.M. III B-C) there was a marked decline in the arts of vase decoration and seal-engraving. No fresco paintings are attested after the time of the destruction of Cnossos in L.M. III A.

At some point in L.M. III the inhabitants of many of the coastal sites retreated to high defensible hills ('Kastri' at Palaikastro, Karfi in Lasithi (*B.S.A.* 1937-8, 57 ff.; 1960, 1 ff.)). But at Cnossos at least there is evidence of continuous occupation till the end of the Bronze Age and into the Early Iron Age (Sub-Minoan and Protohistoric) c. 1000 B.C.

Architecture. Palaces and houses were two or more stories high, with walls of rubble on 'megalithic' foundations of great blocks. For outside walls carefully squared stone was often used. The upper parts of walls were normally built of mud or mud brick. Walls were often strengthened by an elaborate timber framework. Square stone pillars, and round wooden columns, straight or tapering towards the bases, helped to support flat roofs and upper floors. The great palaces (Cnossos, Phaestus, Mallia) were built round large rectangular central courts, and had many staircases, together with smaller courts which might be surrounded by colonnades (peristyle), and 'light wells' for admitting light and air.

Religion centred upon a goddess, or group of goddesses, whose attribute was a double axe, with male deities in a subordinate role. The palaces themselves were in some sense sanctuaries, with many cult rooms. There were also numerous Sacred Caves and Peak Sanctuaries on the tops of high hills (Platon, *Kretika Khronika* 1951, 96 ff.). 'Horns of Consecration' served to mark places of cult. No great temples like those of contemporary Egypt have been recognized, but the town of Gournia had a small shrine with large clay cult statues in it. All such clay cult statues have been assigned to L.M. III (Alexiou, *Kretika Khronika* 1958, 179 ff.), but some including those at Gournia may be earlier (M.M. III-L.M. I). Dancing and bull-leaping probably formed part of religious or magical ceremonies.

Burial. At first (E.M.-M.M.) members of each community were buried together in caves, or in built tombs which might have rectangular rooms, but which were often circular and evidently beehive-domed ('tholos tombs') like the primitive round houses known in Cyprus (Khirokitia) and further east (*Antiquity* 1960, 166 ff.). Bodies might be placed in large-store jars (*piithoi*) or oval clay coffins. In time a fashion for small family tombs or individual graves developed, especially after the catastrophe of L.M. I B. Burials in L.M. III were often in rectangular clay coffins (*larnakes*) or bath tubs. What may be royal tombs have been identified at Cnossos (Temple Tomb, Isopata Royal Tomb). Inhumation was the rule, but one or two cremations are attested at Cnossos in M.M. III-L.M. I, others elsewhere in L.M. III.

MINOAN SCRIPTS. During the second millennium B.C. Crete developed its own form of writing, and a family of scripts is now known under the name Minoan. The earliest, found principally on seal-stones, is called pictographic. The pictorial signs were then simplified so that they could be represented by an outline, and in this form, known as Linear A, the script was widely used throughout Crete during the period approximately 1900–1500 B.C. It was doubtless used also by Minoan colonies overseas, but true inscriptions rather than potters' marks have so far been discovered only on Keos in the Cyclades. Linear A remains undeciphered in 1969, despite many ingenious attempts; but it is evident that the graphic system resembles that of Linear B (see below). The differences between A and B are perhaps broadly comparable to those between the Greek and Roman alphabets. The inscriptions in Linear A are of three kinds: (1) clay tablets, which from the use of ideograms and numerals can be identified as accounting documents; (2) inscriptions on movable objects, some at least of which are of a religious nature; (3) a small number of ill-preserved graffiti.

LINEAR B is the best-known member of the family, represented on more than 4,000 tablets including all fragments. It was first found at Knossos in Crete and regarded as a special form of Linear A; but subsequent discoveries at Pylos in Messenia, Mycenae, and Thebes show that it is rather the script of Mycenaean Greece. The mainland examples date from the thirteenth century B.C.; those from Knossos are apparently a little earlier. The script was shown in 1952 by Michael Ventris to be a notation for an archaic form of the Greek language (see DIALECTS, GREEK). It is written from left to right. It consists of three elements: (1) a system of about ninety signs, each of which represents an open syllable. There are five vowels corresponding generally to Greek *a*, *e*, *i*, *o*, *u*; length is not indicated. Combined with each of these is a series of twelve consonants. Five of these correspond to letters of the Greek alphabet (*δ*, *ε*, *μ*, *ν*, *σ*); but the stops are not usually distinguished for voicing or aspiration, thus one series of signs does duty for *κ*, *γ*, and *χ*; another for *π*, *β*, and *φ*, and a third for *τ* and *θ*. The liquids (*λ*, *ρ*) are represented by a single series of signs. There is a series for the labio-velar stops, eliminated in later Greek (*q^w*, *g^w*, *q^wh*); and another for the semi-vowel *y* produced by contact between *i* and a following vowel. There are also signs with more complicated values, often a combination of consonant, semi-vowel, and vowel, and a series partially agreeing with Greek *ζ*. These signs are used to spell words syllabically; extra vowels are inserted to represent consonant clusters, but continuants at the end of closed syllables (*λ*, *μ*, *ν*, *ρ*, *σ*, also diphthongal *ι*) are usually omitted. This has the effect of concealing much of the noun inflexion; but despite its ambiguities the orthography is adequate for making the stereotyped records which are the main function of the script. (2) A collection of ideograms or signs representing objects, including human beings and animals. These vary from accurate sketches which may show the number of handles attached to a vessel to formal patterns bearing little resemblance to the object designated. The ideograms do not stand for Greek words, but were in many cases taken over from Linear A. (3) A numerical system on a decimal base, using upright strokes for units, horizontal bars for tens, circles for hundreds, circles with rays for thousands, and even a sign for ten thousand. Each sign is repeated the necessary number of times up to nine.

The documents in Linear B are mainly tablets of unbaked clay; these are the day-to-day accounts and inventories kept in the Palaces, which although dull and repetitive do cast some interesting light upon economic conditions and the nature of the administration. The study of the language is also of importance for the history of Greek, though largely as confirming the accuracy of predictions made on comparative evidence. There is also a small number of jars with painted inscriptions in Linear B.

CYPRO-MINOAN is the name given to a related script found in Bronze Age Cyprus. It occurs in varying forms at different dates from the fifteenth to twelfth centuries B.C.; and a variant is also known from Ugarit on the coast of Syria. There is still far too little material to permit decipherment; but it is presumed to be the ancestor of the classical CYPRIOTE SYLLABARY.

THE PHAISTOS DISK is an isolated document found in a Middle Minoan context at Phaestus in Crete. It is almost certainly written in a syllabic script from right to left, but its place of origin is unknown, and its relationship to the Minoan scripts doubtful.

MINOS (*Μίνως*), a king of Crete; the traditions concerning him preserve faint reminiscences of the might of the civilization now called Minoan (q.v.), and 'Minos' may be a dynastic name or title. See, e.g., Thucydides i. 4 for a tradition of his sea-power. It is conceivable at least that the evil character given him in Attic legends, but not in the main stream of Greek tradition ([Plato], *Minos*, 318 d–e), has behind it a real contest between prehistoric Attica and Crete; cf. below. The evidence of Linear B for a Hellenic kingship in Knossos before its fall has raised again the problem whether Minos should be regarded as Greek or not.

In the *Odyssey* he was a king with special association with Zeus (19. 178) and continues to exercise rule among the dead (11. 568). He is consistently said to be son of Zeus and Europa (q.v.), and to have married Pasiphaë, daughter of Helios (Apollod. 3. 7). Her name, 'all-shining', has been interpreted as that of a moon-goddess, which is unnecessary, as it fits a fully human child of the sun-god (cf. Phaethon); but that both kings and queens of Minoan Crete were regarded as partly or wholly divine is quite possible. To settle the question whether Minos or another should be king, Minos prayed to Poseidon to send a bull from the sea for him to sacrifice. Poseidon did so, thus confirming his right to rule, but the bull was so handsome that Minos would not kill it. Poseidon (or, according to Ilyg. *Fab.* 40. 1, Aphrodite) therefore caused Pasiphaë to fall in love with it. By the help of Daedalus (q.v.) she was disguised as a cow and attained her end; consequently she bore a creature half-man, half-bull, 'Minos' bull', *Μίνως ταύρος*, the 'Minotaur(us)' of Latin and English. Daedalus constructed a maze, the labyrinth, to hide it in. The word is pre-Hellenic, connected with *λίβρος*, a double axe, the well-known Cretan religious symbol; a rite involving the use of a maze may underlie the story; see W. F. J. Knight, *Cumaean Gates* (1936), ch. 8.

Minos made war on Megara and Athens. As regards the former, for the legend of Minos, Nisus, and Scylla, see NISUS (1). At Athens he was provoked by the murder of his son Androgeus, and so made peace only on terms of receiving a yearly tribute of youths and maidens, whom he shut up with the Minotaur (Plut. *Thes.* 15; see THESEUS).

Minos' death was due to treachery. Daedalus having escaped, he pursued him to Sicily, where he found him

by a stratagem in the house of Cocalus, king of Camicus. He demanded his surrender, and Cocalus pretended to agree, received Minos with show of hospitality, and handed him over to his daughters to be bathed in the Homeric fashion. They killed him by pouring boiling water (or pitch instead of water) on him (II*dt.* 7. 170. 1; Apollod. *Epit.* 1. 13-15).

Minos appears occasionally in pictures of the Minotaur story on archaic and classical vases, Etruscan ash-urns of the Hellenistic age, and Roman sarcophagi; as Judge of the dead on a few south Italian vases.

Besides the larger dictionaries s.v., see Cook, *Zeus* ii, 930 ff.
H. J. R., H. W. P.; C. M. R.

MINTURNAE, important town on the Via Appia (q.v.) where it crossed the River Liris (q.v.) near its mouth. Rome reduced its original inhabitants, the Aurunci (q.v.), in the Latin and Second Samnite Wars and in 295 B.C. established a citizen colony alongside and west of the Auruncan settlement, which had consisted of a small rectangular fortification with polygonal-type walls and angle-towers. The near-by marshes, where Marius sought refuge from Sulla's minions (88 B.C.), rendered Minturnae somewhat unhealthy; but after Augustus restored it, the *colonia* lasted well into imperial times. The *capitolium* and *forum* of the republican colony have been excavated. When an imperial *forum* was built the old one became a portico behind the Augustan theatre, while the *capitolium* was eclipsed by three new temples, one embodying manumission records of the Sullan period. The west town-gate (*JRS* 1913, 155 ff.) embodies an aqueduct-castellum or distribution-chamber. Remains of an amphitheatre exist. The neighbouring grove and shrine of the sea-goddess Marica, mother of Latinus (q.v.), were greatly venerated from the sixth century B.C. on.

A. Schulten, *Hermes* 1898, 517 ff. (discussion of the *forma* of the field-system); J. Johnson, *Excavations at Minturnae* (U.S.A. 1913), i, ii, A. De Santis, *Galca, Formi, Minturno* (1955).

MINUCIANUS the Elder (2nd c. A.D.), rival of Hermogenes, wrote *Προγυμνάσματα*, a *τεχνη* (treatise of *ars* theory), and a commentary on Demosthenes. The *Π. ἐνχειρημάτων* (Spengel, *Rhet.* 1. 417-24) is probably by a third-century namesake. In rhetorical theory Minucianus, influenced by Aristotle and Theodorus, stood for philosophy, as opposed to sophistic, rhetoric; and he challenged without success the innovations of Hermogenes.

J. W. H. A.

MINUCIUS (1, *PIW* 40) **ESQUILINUS AUGURINUS**, LUCIUS, is said, as *consul suffectus*, to have been rescued by Cincinnatus (q.v.) from defeat by the Aequi on Mount Algidus (458 B.C.), and to have been a member of the two decemvirates. In 439 he dealt with a famine and a revolutionary attempt by Sp. Maelius. Although the traditional account was much elaborated by annalists of the Gracchan period, who invented his *transitio ad plebem* and vested him with a chronologically impossible *praefectura annonae*, Minucius was probably an actual public benefactor during a fifth-century famine. He was recorded in the *libri lintei* in 440/39 as *praefectus* (? *urbi*, rather than *annonae*) and the Senate decreed a statue for his help against Maelius; later (not before the third century) his descendants set up a commemorative column and statue near the Porta Trigemina (or Minucia). He need not be explained away either as a god, corresponding to Hercules *μυκηναίης*, or as the eponymous builder of the Porticus Minucia, which was not built before c. 106 or used for corn distributions until Claudius, while Cincius Alimentus shows that the story of Minucius was known in his time.

A. Momigliano, *Studia et documenta historiae et iuris* ii (1936); Ogilvie, *Comm. Livy* 1-5, 438, 550 ff. P. T.

MINUCIUS (2, *PW* 52) **RUFUS, MARCUS** (cos. 221 B.C.), helped to reduce the Istri. After the battle of Trasimene (217) he was appointed *magister equitum* to Fabius (q.v. 5) Cunctator by the Comitia, not by the dictator himself as was customary. Minucius disobeyed Fabius' orders and in his absence attacked Hannibal at Gerunium with considerable success. The People then appointed Minucius co-dictator with Fabius, an undermining of the nature of the office. As dictator he made a dedication to Hercules (*ILS* 11). The aristocratic tradition records that only the timely arrival of Fabius rescued him from an attack by Hannibal. He fell at Cannae (216).

For the view that Livy, unlike Polybius, implies that in 217 Minucius was not made co-dictator but only received *imperium* equal to that of a dictator, see T. A. Dorey, *JRS* 1955, 92 ff., whose further view that Minucius was dictator in 220 is rejected by E. Badian, *Gnomon* 1961, 497.

H. H. S.

MINUCIUS (3, *PW* 30) **AUGURINUS, GAIUS**, a tribune (probably 187 B.C.), who, after the attack of the Petilli (q.v.), accused L. Scipio of refusing to render an account of monies received from Antiochus; he imposed a fine, a demand for surety, and a threat of imprisonment, but was prevented by his colleague Gracchus (q.v. 2) from enforcing his demands.

Seullard, *Rom. Pol.* 142 f., 294 ff.

H. H. S.

MINUCIUS (4, *PW* 54) **RUFUS, MARCUS**, consul in 110 B.C. and proconsul in Macedonia, triumphed (106) and built the *porticus Minucia*, used under the Empire for grain distributions. He and his brother Quintus, as hereditary patrons of Liguria, settled a boundary dispute there (*ILS* 5946).

E. H.

MINUCIUS (5) **FELIX, MARCUS**, fl. A.D. 200-40, author of a dialogue in elegant, ironic Latin between a Christian, *Octavius*, and a pagan, Caecilius Natalis of Cirta (perhaps identical with a Caecilius Natalis mentioned in Cirta inscriptions of c. 210-17). The pagan case uses Fronto's discourse against Christianity. The Christian rejoinder uses Stoic matter from Cicero and Seneca, and has a long-disputed relation to Tertullian's *Apologeticum* which must be one of dependence. The target is philosophical scepticism without the *sinceritas* to abandon polytheism.

Ed. J. Brauget (1964); C. Becker, *Der Octavius des M. F.* (1967), *PW*, Suppl. xi, 952 ff., 1105 ff.

H. C.

MINYANS (*Μινυαί*), a prehistoric tribe, whose chief branches inhabited the Boeotian Orchomenus (*Il.* 2. 511) and Iolcus in Thessaly (*ibid.* 712). To the latter belong the legends of Athamas and Jason (1) (qq.v.). There were also families claiming Minyan descent in Laconia (the Aegaeids), Thera, and Cyrene; a Minyan tribe round Lepreum, destroyed by the Eleans c. 475 B.C.; and legends of former Minyans in Lemnos, descended from the Argonauts (*Pind. Pyth.* 4; *II dt.* 4. 145-8, who combines all these facts and legends into one story).

The fine wheel-made pottery, of 'soapy' surface, known as 'Grey Minyan', was so called by Schliemann because first found at Orchomenus. It first appears c. 1900 B.C., and has no probable connexion with the Minyae of legend. See MINYAS.

A. R. B.

MINYAS (*Μινυάς*). Founder of Orchomenus and eponym of the Minyae (*Pind. Isthm.* 1. 56); his 'treasury', shown at Orchomenus in Pausanias' time (*Paus.* 9. 38. 2), was a Mycenaean beehive-tomb, as was proved by Schliemann's investigations. He is also in some sense ancestor of the Argonauts (q.v.), they being commonly called Minyans, as *Pind. Pyth.* 4. 69; the reason given by

Ap. Rhod. 1. 230 ff., that most of them were descended from his daughters, does not agree with the surviving lists but may have with the primitive form of the story. His legend, if ever he had one (the lost epic *Minyas* may have had something to say of him), has vanished, and we know of him chiefly as a member of several genealogies, mutually inconsistent and connecting him with Orchomenus, Thessaly (Iolus), and several other regions. These are conveniently assembled by Fiehn in *PW* xv. 2015-8; see the whole article for ancient and modern literature.

H. J. R.

MIRACLES. Wonderful stories of the power of gods were common at all periods of antiquity, and many of them were attached to particular shrines. For instance, there is the very pretty tale of the ugly child miraculously made beautiful by Helen (Ildt. 6. 61; shrine at 'Therapnae'); another local legend told how Poseidon miraculously smote an impious intruder into his temple at Mantinea (Paus. 8. 10. 3). In Rome tales of this sort perhaps clustered most thickly around Vesta. For example, there is the legend of the Vestal Aemilia, during whose service of the goddess the holy fire went out. It being by no fault of hers, she prayed to Vesta to prove her innocence, and flung a strip of her robe upon the altar, which at once blazed to confirm her innocence (Dion. Hal. *Ant. Rom.* 2. 68. 3). One of Martial's flatteries of Domitian is the story of how a man who violated his 'sacred' fishpond was blinded, a regular form of divine punishment (Mart. 4. 30. 8 ff.; cf. F. Sauter, *Kaiserkult bei Martial u. Statius* (1934), 110 f.). The cult of Asclepius (q.v.) produced a vast quantity of miracles of healing, by no means all confined to his shrines (see, e.g., *Suda* s.v. *Θεόπομπος*). But miracles are more prominent in Hellenistic times, and especially in connexion with foreign gods, such as Isis and Sarapis. Among these international gods there was necessarily competition. Hence many stories of the manifestation of, e.g., Sarapis' power to convince the sceptical, prove his deity, and so on.

A. D. Nock, *Conversion* (1933), index under 'Miracles'. H. J. R.

MIRRORS (*κἀντοπρον*, *speculum*). The Greeks and Romans used disks of highly polished metal, usually bronze, as mirrors. The bronze alloy frequently contained a high proportion of tin.

Mirrors were introduced into the classical world from Egypt; the earliest examples have been found in the Shaft Graves at Mycenae, and there are a number of others from Late Helladic sites in Greece and Cyprus. Mycenaean mirrors usually had a short tang which was fitted into a bone or ivory handle. Mirrors of the Archaic and Classical periods were open disks polished on one side and equipped with decorated bronze handles; standing mirrors were sometimes given an elaborate figure support. Etruscan mirrors from the sixth century onwards were often richly engraved with figured scenes and decoration on the back; the handles were of ivory, bone, or wood. A new type of mirror without a handle and with the reflecting surface protected by a cover fitting over it became popular in Greece at the end of the fifth century B.C. Figures in relief or engraved decoration appear on the covers.

Some mirrors of gilt or silvered bronze were known in the fifth century and silver mirrors, which were coming into fashion in Hellenistic times, became very common in the Roman period. A few small wall-mirrors set in ornamental frames are known. Roman mirrors of the Early Empire are generally open disk mirrors with metal handles; the back of the disk is sometimes decorated with a relief. In later examples the handle is fixed to the back of the disk. Roman mirrors are rectangular as well as round.

The reflecting properties of glass were known to the ancients and there are references to glass mirrors in Roman times. A few surviving examples, which are all small and not very efficient, belong to the Roman period; they consist of little disks or rectangles of glass backed with lead or plaster and have been found on a number of sites. There is no evidence for the silvering of glass mirrors by means of mercury.

MISE (*Μίσση*), an obscure goddess, first mentioned in Hieronidas 1. 56, where the name of the festival, *κάθοδος*, suggests chthonian ritual. The forty-second Orphic hymn says she is bisexual and seems to identify her with both Dionysus and Demeter; she may well be Asianic.

H. J. R.

MISENUM, the northern headland of the Bay of Naples, with a similarly named town and harbour, reputedly the burial place of Aeneas' trumpeter Misenum, a former follower of Hector and drowned by an envious Triton (Verg. *Aen.* 6. 162 ff.). Cumae early used the harbour, but until imperial times Misenum was merely a villa resort (Octavian, Antony, and Sextus Pompeius signed their Treaty of Misenum at Puteoli, 39 B.C.; *Rev. Arch.* 1913, 253). Agrippa made the harbour Rome's chief naval station (31 B.C.), and the town subsequently became a *colonia* (Dessau, *ILS* 6335). The Elder Pliny was stationed here and perished when Vesuvius erupted, A.D. 79 (Pliny, *Ep.* 6. 16. 20). The harbour fell into disuse c. 400, and finally the Saracens destroyed Misenum. Remains exist of Marius' villa, later the property of Lucullus and the emperors.

K. Lehmann-Hartleben, *Die Antiken Hafenanlagen des Mittelmeers* (1923), 176. E. T. S.

MITHRAS (*Μίθρας*, -ης), an ancient Aryan (Indo-Iranian) god of light, truth, and the plighted word. In Persian Zoroastrianism, according to the *Avesta* (an oriental sacred text), he figures as the ally and agent of the good power, Ahuramazda, and as the implacable foe of Ahriman, the evil principle. In the *Avesta* tradition Mithras' titles include 'Lord of Light', 'God of Truth', 'Saviour from Death', 'Giver of Bliss', 'Victorious', and 'Warrior'. These partly explain his attraction for the Roman world, for its army, its merchant class, and the growing numbers in many ranks of its society who hoped for individual immortality and happiness beyond the grave. There is, however, no trace in the *Avesta* of the essential features of Roman Mithraism as a mystery-cult, with secret rites and stages of initiation through which the god's devotees had to pass. Again, although in the *Avesta* Mithras is also hailed as 'Lord of Wide Pastures', there is nothing there about that bull-slaying exploit, the tauroctony, symbol of life through death and of victory over death and evil, which lies at the heart of the Mithraic creed as we know it from the Roman evidence. The first indication that we have of Mithraic mysteries dates from the first half of the first century B.C. and comes from south-east Asia Minor, where, according to Plutarch (*Vit. Pomp.* 24), the Cilician pirates practised *τελεραί ἀπόρητοι* of Mithras. (Plutarch, incidentally, does not state, as he is often said to do, that the pirates, settled in Italy, brought the Mithraic mysteries to the West: he says that the West was first aware of them among the pirates in Cilicia and that these mysteries were still being celebrated in his own day.) That the Persian Mithras and the Roman mystery-god were one and the same is certain. Mithras normally appears in Roman art as wearing the Phrygian (Persian) cap and Persian trousers; Statius,

alluding (*Theb.* i. 719-20) to the tauroctony (of which he must have seen a representation), says that Mithras slew the bull 'beneath the Persian cave', and one of the Mithraic grades was that of *Perses*. But how, when, and where the god of the *Avesta* evolved into the Roman mystery-god is still an unsolved problem. Mithraism is often described as an oriental mystery-cult: but its shrines, most of its art and inscriptions, and the allusions to it in classical and early Christian writers belong essentially to the Roman world.

From the second half of the first century A.D. onwards Mithraism spread through the Roman Empire. The Romano-Parthian city of Dura-Europos (q.v.) had a fine shrine of Mithras; Syria, Asia Minor, and Spain have yielded some Mithraic temples and monuments, Greece proper has revealed extremely few. The areas most prolific in Mithraic finds of all kinds are central Italy, northern Africa west of Carthage, eastern Gaul, and, above all, the western and northern frontier provinces, the Rhine and Danube regions, and the line of Hadrian's Wall in Britain. The cult was also very flourishing in Rome and other great cosmopolitan centres and in the seaports of the western Mediterranean and beyond—Ostia, Puteoli, Aquileia, Carthage, and London. Soldiers and merchants were clearly the leading channels of its propaganda. The cult was exclusively confined to men.

Early Christian writers record the names of the seven Mithraic grades of initiation—Raven (*Corax*), Bride (*Nymphus*), Soldier (*Miles*), Lion (*Leo*), Persian (*Perses*), Courier of the Sun (*Heliodromus*), and Father (*Pater*). They also tell us that the Mithraists practised a form of baptism, a sealing on the forehead, and a ceremonial meal, and that they had to undergo tests and ordeals of some kind. These statements have all been confirmed by archaeology; and indeed the vast bulk of our evidence for the cult is archaeological and epigraphical.

The temples of Mithras are artificial caves (*spelaeae*), sometimes partly underground, to recall the cave in which Mithras caught and slew the mystic bull. They are oblong, with a central 'nave' and lateral 'aisles', generally raised above the level of the 'nave' in the form of benches on which the faithful reclined at sacred banquets. Occasionally (e.g. at Dura, Lambaesis, and London) columns or pilasters separate 'nave' from 'aisles'; very rarely (Lambaesis and London) the 'nave' terminates in a rounded apse. At the end of the 'nave', in the place of honour opposite the entrance, was a kind of reredos, normally carved, but sometimes painted (Rome, ancient Capua, Marino), and depicting the tauroctony. Mithras, accompanied by two standing torch-bearers, Cautes and Cautopates, kneels on the back of the bull and averts his gaze as he plunges his knife into the creature's shoulder: a dog and a snake lap up the life-giving blood; corn-ears sprout from the tail of the dying beast; and a scorpion, emblem of evil, seeks to attack its vitals. This tauroctony scene seems to have been modelled on a Hellenistic statuary group of a bull-slaying Nike kneeling on her victim's back (cf. the reverse-type of the ARMENIA CAPTA aureus of Augustus struck at an eastern mint). Episodes in the god's saga represented in Mithraic art include his birth from a rock, his hunting expedition on horseback, and his dealings with the Sun-God Sol (shown kneeling before Mithras, standing and clasping his hand, seated beside him at a sacred meal, and ascending to heaven with him in his chariot. Mithras and the Sun are, in fact, very closely linked and in his dedications the former is frequently addressed as *Sol invictus Mithras*).

There is no need to believe that the astrological elements that feature prominently in Mithraic art—the planetary gods, the signs of the zodiac, etc.—were directly derived from Mesopotamian sources as the worship of Mithras travelled westwards. By the time

that Mithraism reached the West, these things had long formed part of the common stock of Graeco-Roman cults.

A large proportion of those who made dedications in Mithras' honour were members of the well-to-do business classes (e.g. Ostia) and Roman army officers (e.g. Carrawburgh and Rudchester on Hadrian's Wall); there are three dedications by provincial governors (Lambaesis) and one by Emperors (Diocletian, etc., at Carnuntum).

To judge by the relatively restricted size of the temples, the individual Mithraic communities were small in numbers. But the wealth and high standard of culture of some, particularly of those in cities, is attested by two recent and important discoveries. First the Mithraeum found beneath the church of Santa Prisca on the Aventine in Rome. Here the tauroctony at the termination of the 'nave' is in stucco and on the floor immediately below it is a most unusual feature—the reclining stucco figure of a water-deity. On the side-walls of the shrine are two layers of paintings: the upper one, the work of a highly accomplished artist, shows processions of *Leones* with offerings and Mithras and the Sun banqueting. Also on these walls was made another very rare find, that of metrical texts some of which appear to give directions for a way of life, while others are fragments of hymns: one significant line reads: *et nos servasti eternali sanguine fuso*. Secondly the Mithraeum brought to light in 1954 in the Walbrook in London. This is distinguished by its unusual architectural features of apse and colonnades and by the fine works of art deliberately concealed within it in ancient times. These works include heads of Mithras, Minerva, and Serapis, a colossal right hand of Mithras Tauroctonus, a seated figure of Mercury, a Bacchic group, all in Italian (Luna) marble, and a circular, lidded, silver casket richly adorned with hunting scenes in relief. Such objects illustrate very vividly the syncretistic tendencies of Mithraism.

MITHRIDATES. The name of six kings of Pontus. It is disputed whether the series begins with Mithridates II of Cius or Mithridates Ktistes. According to an inscription of Chersonesus Pharnaces I used an era beginning in 337/6 B.C. when Mithridates II became tyrant of Cius, but Mithridates V in an inscription of Abonuteichus and Mithridates VI on his coins use one that began in 298 or 297, possibly the year when Ktistes was established in his kingdom. If the series of eight kings, six of whom were named Mithridates, begins with Ktistes, it is necessary to divide the long reign of Mithridates II (c. 250–c. 185) between two kings of that name (see below).

(1) MITHRIDATES II of Cius (I? of Pontus), a Persian noble who claimed descent from Darius the Great or one of his six associates, was tyrant of Cius from 337/6 to 302, when Antigonos I, suspicious of his loyalty, put him to death.

(2) MITHRIDATES I (II?) KTISTES (302–266 B.C.), son or nephew of (1), escaped from Antigonos I to Cimiata of Paphlagonia, and soon won Pontus, making Amaseia (q.v.) his capital. He joined the Northern League against the Seleucid kings, and was instrumental, with Nicomedes of Bithynia, in settling the Gauls in Phrygia. His successor was his son ARIOBARZANES, who gained Amastrius, but died c. 250 at a time of Gallic invasions.

(3) MITHRIDATES II (III?), son of Ariobarzanes (see

above), either ruled from c. 250 to c. 185 or, more probably, died c. 220 and was succeeded by (4) his son Mithridates III (?). Despite his marriage with Laodice, sister of Seleucus II, he aided Antiochus (q.v. 8) Hierax to expel Seleucus from Asia Minor. He made gifts to Rhodes after the great earthquake, but an attempt on Sinope by him or his son (220) was defeated with Rhodian aid. *See PHARNACES I.*

(4) MITHRIDATES IV PHILOPATOR PHILADELPHUS succeeded his brother Pharnaces I (q.v.) before 156, with his sister Laodice as queen. He became a friend and ally of Rome and supported Attalus II of Pergamum against Prusias II of Bithynia in 156–154. He probably died c. 150 B.C.

(5) MITHRIDATES V EUBERGETES, probably son of Pharnaces I, followed a philo-Roman and hellenizing policy while striving to enlarge his kingdom. He aided Rome against Carthage in 149–146 and against Aristonicus (q.v. 1) in 132–129, and received Phrygia as a reward from Aquilius. He had already gained control of Galatia, was named the heir of Pylaemenes of Inner Paphlagonia, and brought Cappadocia under his influence through the marriage of Ariarathes VI (q.v.) with his daughter Laodice. He was murdered at Sinope, his capital, in 120, and a suspiciously convenient will named his wife Laodice and his two minor children, Eupator and Chrestus, as his successors.

(6) MITHRIDATES VI, EUPATOR DIONYSUS ('the Great') (120–63), son of Mithridates V, fled from his mother and led a fugitive existence for some years, then suddenly captured Sinope, imprisoned his mother, killed his brother, married his sister Laodice (the first member of a large harem), and resumed his father's policy of expansion. He first acquired the north shore of the Euxine, from which he drew large revenues and many soldiers. He then occupied Lesser Armenia, eastern Pontus, and Colchis. Attempts (in alliance or rivalry with Bithynia) to secure control of Inner Paphlagonia and Cappadocia (*see* ARIARATHES VII–IX, ARIOBARZANES I) were foiled by Rome, and an attempt to expel Nicomedes IV (q.v.) from Bithynia was equally unsuccessful. Raids on Pontic territory in 88 by Nicomedes led to the First Mithridatic War. Mithridates occupied most of Asia Minor, where Roman exactions made him welcome as a deliverer, the islands of the Aegean except Rhodes, and (with Athenian help) much of Greece. Sulla's victories drove him out of Greece and led to a reaction against him in Asia, which he met by severe reprisals. He made peace at Dardanus in 85 on Sulla's terms, giving up all conquered territory. He easily repelled the raids of Sulla's lieutenant Murena in 81 (the Second Mithridatic War), and used the next years to tighten his hold on the Pontic coast, to foster close relationships with the pirate leaders, and lay up stores of treasure and supplies. Rome's decision in 74 to annex Bithynia precipitated the Third Mithridatic War. Mithridates occupied Bithynia, but the resistance of Cyzicus enabled Lucullus to cut off his army from supplies and destroy it. He was expelled from Pontus by Lucullus (72–71), and although a mutiny of the Roman army allowed Mithridates to recover much of his territory (68–67), he had not enough strength left to stand against Lucullus' successor Pompey. Defeated at Nicopolis, he fled to Colchis, sending orders for the massacre of his harem, and made his way to the Crimea. Here the sacrifices which he demanded for a new fleet and army raised his subjects in revolt, led by his son Pharnaces. Driven to bay, he found that a diet of prophylactics had made him immune to poison, and died by the sword at the age of 69. In cunning, courage, and organizing ability Mithridates was Rome's stoutest oriental antagonist, but he failed in the arts of a strategist, and could not keep the loyalty of his subordinates. His portraits show that he copied

Alexander in personal appearance. He was a true representative neither of the Hellenism which he affected nor of the Iranians who formed the most important element among his people.

T. R. S. B.

MNASALCES (not 'Mnasalcas'), of the deme Plateae in Sicyon, seems to have flourished c. 250 B.C. A satirical epitaph for him (perhaps composed while he was alive) by Theodoridas (*Anth. Pal.* 13. 21) refers to him as *ὁ ἐλεγεσποῖς*, which, however, may mean 'epigrammatist', and derides his plagiarisms and bombast. The first charge is to some extent supported by the extant epigrams; the second may refer to lyric compositions now lost. A few of Mnasalces' epigrams, e.g. *Anth. Pal.* 6. 128, 264; 7. 242, justify Meleager's description (*Anth. Pal.* 4. 1. 16) of them as 'the sharp needles of Mnasalces' pine', but most are devoid of originality.

J. Geffcken, 'Mnasalkes (2)', in *PW* xv. 2247 f.

E. A. B.

MNASEAS (3rd c. B.C.), Greek traveller of Lycia (*POxy.* xiii, no. 1611, 127 ff.), published geographical and antiquarian details uncritically in (i) *Περὶ πλοῦς*, (a) *Εὐρώπῃ*; (b) *Ἀσία*; (c) *Λιβύῃ*. (ii) *Δελφικῶν χρησμάτων συναγωγή*.

HHG iii. 149 ff.; iv. 659 ff.

MNESIMACHUS, a Middle Comedy writer (Ath. 7. 329 d). Victorious at the Lenaea c. 365–360 B.C. (*IG* ii². 2325. 147). Wrote *Ἀλκμείων* and *Βούδρις* (clearly mythological burlesques), *Ἰπποτρόφος*, *Ἰσθμιονίκης*, *Δύσκολος*, and *Φαρμακοπώλης* (comedies of everyday life), and *Φίλιππος* (a political play).

FCG iii. 567 ff., *CAF* ii. 436–42, *FAC* ii. 360 ff.

M. P.

MNEUIS, the sacred bull of the city of Heliopolis, who was worshipped there in the temple of Ra. His cult is similar in most respects to that of Apis at Memphis, although not so important in Greek and Roman religion. The cult of Mneuis was combined with that of Apis in the temple at Memphis.

A. Rusch, *PW*, s. v. Mneuis, cols. 2285 ff., A. Erman, *Religion d. Ägypten* (1934), 27 f.

T. A. B.

MODERATUS of Gades (c. A.D. 50–100) wrote *Πυθαγορικαὶ σχολαί* in eleven books. He tried to derive the main principles of Plato's metaphysics from Pythagorean teaching, and treated the Pythagorean theory of number as a symbolic representation of metaphysical doctrine, the monad being the principle of rest and harmony, the dyad the principle of change and multiplicity. Ancient references show him to have played a great part in the formation of Neoplatonic doctrine.

E. R. Dodds, *CQ* 1928, 135 ff., J. M. Rist, *TAPA* 1962, 389 ff.

W. D. R.

MODESTINUS (3rd c. A.D.) has left a short piece in hexameters on Cupid Asleep.

Duff, *Minor Lat. Poets*.

MOERIS, an Atticist lexicographer, to be dated (probably) not long after Phrynichus, and author of the extant *Λέξεις Ἀττικῶν καὶ Ἑλλήνων κατὰ στοιχείων* (sometimes called *Ἀττικιστής*). The work deals with sundry points of grammar (accidence and syntax) and, mainly, with diction—the choice of words and their correct, 'Attic', forms and proper meanings. It was based on Aelius Dionysius, Phrynichus, Philemon, and the *Synonymys* of Hieronymus Philon of Byblus. Moeris recognizes the distinction between Old and New Attic;

as models he accepts Plato, Aristophanes, Thucydides, Xenophon, the orators, Herodotus, and Homer, but, unlike Phrynichus, none of the tragedians; both reject Middle and New Comedy. In the nature, merits, and limitations of his work he resembles Phrynichus (q.v. 3).

EDITIONS. Hudson, 1712; Pierson, 1759; Bekker, 1833.

CRITICISM. A. Muidhoff in M. Schanz, *Beitr. z. hist. Syntax d. Griech.* 19 (1912). P. B. R. F.; R. B.

MOERIS, a lake in a basin on the west of the Nile valley, fed by the floods at high Nile. When Herodotus visited Egypt most of the basin was under water, though some land had been reclaimed in Pharaonic times; Ptolemy Philadelphus built dikes and canals to control the inflow, and so recovered about half the area of the lake. This created the Arsinoite nome, which was largely peopled by foreign settlers and flourished till the decay of the third century A.D. ruined the irrigation system. The lake is now known as the Birket el-Kurûn.

B. P. Grenfell and A. S. Hunt, *Fayûm Towns* (1900), J. Ball, *Contributions to the Geography of Egypt* (Cairo, 1939), 178 ff. J. G. M.

MOERO (or **MYRO**) of Byzantium (c. 300 B.C.), epic poetess; mother of the tragic poet Homerus; wrote poems of various kinds, including a *Curses* (*Ἀπαι*), a genre subsequently used by Euphorion and Valerius Cato.

F. Susemihl, *Gesch. griech. Litt. Alex.* (1891-2) i. 381.

MOESIA was in the first instance the country of the Moesi, a Thracian tribe situated on the lower Danube in present-day Serbia. Little is heard of the Moesi before 29 B.C., when they were defeated and subdued by M. Crassus (Cass. Dio 51. 25. 1). They were placed for the time being under a *praefectus* and loosely attached to the province of Macedonia or of Illyricum. The date at which Moesia was constituted a separate province is uncertain. The first imperial legate recorded there is A. Caecina in A.D. 6 (Cass. Dio 15. 29. 3), who left his province to defend Sirmium against the Pannonians. It is possible that an earlier legate was P. Vinicius (*cos.* A.D. 2) attested on a dedication at Callatis (*IGRom.* 1. 654). The organization of the province in a definite form appears to have taken place under Tiberius (App. *Ill.* 30). Henceforth Moesia extended along the lower Danube from near the river Drinus to the Black Sea; its southern frontier ran roughly along the main Balkan range. The governor of Moesia also had under his supervision the Black Sea coast to the Straits of Kertch, and from the time of Vespasian, if not before, a *Classis Moesica* patrolled its northern waters. Under Domitian (A.D. 85-6) Moesia was split into two provinces, Superior and Inferior, with the river Ciabrus as the boundary, and the defences of the latter province were strengthened by an earthen wall across the Dobrudja. After the Dacian Wars of Trajan Moesia Superior was extended to comprise the plain between the Danube, the lower Theiss, and the Maros; Moesia Inferior was enlarged so as to overlap Dacia on the east bank of the Aluta.

Moesia always remained a military borderland. Apart from the old-established Greek cities on the Black Sea coast and from Naissus on the upper Morava, all its chief towns grew out of the Roman camps on the Danube—Singidunum (*Belgrade*), Viminacium, Ratiaria, Oescus, Novae, Durostorum (*Silistria*), and Troesmis. Under Hadrian or soon after, these places were constituted colonies or *municipia* of Italian pattern. Under the Roman peace the wheat and orchard lands of the lower Danube valley were well developed, and the Latin language obtained a firm hold among the native population, which had received repeated increments by transplantation of Dacians and kindred peoples across the

Danube. During the invasions of the third century Moesia became a principal storm-centre, but its cities at any rate were held until the sixth or seventh century.

MOGONTIACUM (modern *Mainz*) commanded important routes into the heart of Germany, and between 18 and 13 B.C. a fortress was built here to hold two legions, serving as a base for the invasion of Germany. The timber fortress was replaced in stone in the second half of the first century A.D. and the garrison reduced to one legion after the rebellion of Saturninus (89). A large and impressive town grew up between the fortress and the Rhine, and the seat of the governor of Germania Superior was here. From the first century there was a fort on the right bank of the river guarding the head of the important bridge and there is some evidence that this was replaced in the fourth century by a new fort like that at Cologne (see *COLONIA AGRIPINENSIS*). The legionary fortress was still garrisoned around 300 and possibly later, but in the later fourth century it had been abandoned and part of its area was included within the new town walls. The town seems to have had a flourishing Christian community and was the seat of a bishopric. Mogontiacum was captured and destroyed by the barbarians in A.D. 406.

D. Haatz, in *Gymnasium Germania Romana I. Römerstädte in Deutschland* (1960); G. Behrens, *Das frühchristliche und merovingische Mainz* (1950). P. S.

MOLIONES (*Molione*), the twin sons of Molione (originally 'Siamese' twins, in the opinion of Schweitzer, *Herakles* (1922), 19; see *contra* Farnell, *Hero-Cults*, 208, who makes this form of the legend Hesiodic and so comparatively late). Certainly in Homer (*Il.* 11. 750 ff.) they are normal and mortal, though sons of Poseidon; their names are Cteatus and Eurytus and they are married and have sons (2. 621). In the former passage they are enemies of the Pylians; elsewhere (Apollod. 2. 139-40) they attack Heracles' men and are afterwards ambushed and killed by him. They are often (as in Homer) called *Ἀκροπίωνες*, Aetor being their mother's mortal husband.

II J. R.

MOLOSSI, common name of tribes forming a tribal State (*koinon*) in Epirus, which originated in northern Pindus (including the Orestae, *FGGrH* 1 F 107) and expanded southwards, reaching the Ambraciot Gulf c. 370 B.C. The king exchanged oaths with his people in an annual ceremony and commanded the tribal army, and the royal house, 'The Aeacidae', claimed descent from Neoptolemus, son of Achilles. The earliest inscriptions, of the reign of Neoptolemus in 370-368 B.C., mention ten *damiorgoi*, a *prostates*, and a *grammateus*, all named by one of the ten constituent tribes. 'The Molossians and their Allies' formed a military coalition, analogous to 'The Lacedaemonians and their Allies', in which the Molossian king held the command as *hegemon*; Alexander the Molossian demonstrated its potentiality in south Italy in 334-330 B.C. When the State was absorbed into the Epirote Alliance, the Molossian king commanded the army of the Alliance, and in this capacity Pyrrhus (q.v.) won his victories in Italy and Sicily. After the fall of the monarchy c. 232 B.C. the Molossian State was a constituent part of the Epirote Confederacy, until it alone sided with Perseus of Macedon in 170 and was annihilated by Rome in 167 B.C.

Eph. Arch. 1956, 3 (inscriptions); Hammond, *Epirus*. N. G. L. H.

MOMOS (*Mōmos*), fault-finding personified, a literary figure, hardly mythological (though he occurs in Hesiod,

Theog. 214, among the children of Night) and quite divorced from cult. Callimachus makes use of him (*Dian.* 113 and fr. 393 Pf.) as the mouthpiece of views which he opposes, while in Lucian (as *Iupp. Trag.* 19 ff.) he amusingly voices the author's satires on the conventional (popular Stoic) theology, or otherwise makes fun of his fellow gods. He is a figure in a fable, also cited by Lucian (*Nigr.* 32; cf. *Hermot.* 20, *Ver. Hist.* 2. 3).

H. J. R.

MONA (1) The Isle of Man (Caesar, *BGall.* 5. 13. 3).

(2) Anglesey. As a centre of Druidism it was attacked by Suetonius Paulinus (A.D. 60), who was baulked of success by Boudicca's revolt. It was reduced by Agricola in 78. It shows scant traces of romanization, but copper-mining and the *pax Romana* increased the quality and quantity of its village life. A late Roman fort exists at Holyhead. Welsh tradition speaks of an Irish invasion (5th c.), repelled by Cunedda, whose descendants ruled here.

MONARCHY (βασιλεία). Greek monarchy includes several entirely separate institutions. The kingdom of 'heroic' times denotes the Mycenaean lordship as well as the Homeric and legendary kingdom. Its core was military leadership, but the Mycenaeans were at the same time priest-kings and heads of an elaborate royal household. In the period of renewed migrations the king was the military chief of the tribe again; the Spartan, and even more the Macedonian, kings were survivals of this type. It was a hereditary kingship, acknowledged by the assembly of the armed people, and its power was limited by other 'kings', i.e. the heads of the aristocracy, and their council. The second type was what the Greeks called tyranny (q.v.), an individual and democratic rulership arising from the aristocratic *polis*. The third species of Greek monarchy was more theoretical. Usually Greeks of the fifth century B.C. knew monarchy only as barbarian despotism. But the political philosophy of the Sophists and the Socratic Schools, fighting against democracy, established the ideal of the rule of the strongest or of the best man, of the ruler 'by nature' (φύσει). Some of the writers of the fourth century, especially Xenophon and Isocrates, became rather impressed by some real attempts to found monarchies, e.g. the younger tyranny in Syracuse, the rules of Jason of Phrae, of the kings of Cyprus, of Mausolus of Caria; and the conflict between the Greek city-states and Philip of Macedon found its reflection in the antithesis of democratic and monarchic ideas. The reigns of Alexander and his successors ended the theoretical controversies, as far as any practical purpose went. Hellenistic monarchy combined the people's kingship of Macedon, the individual ambitions of Greek 'royal men', and oriental traditions of theocratic despotism. Its characteristic features were: rule over a large territory, dynastic government and succession, and ruler-worship. This monarchy was supported by the philosophical idea of the rule of the truly wise man. It exercised a marked influence on Roman monarchy and imperial administration.

MONETA, a title of Juno (q.v.). The name is probably connected with the root of *monere* ('mindful', 'reminder') and hence is used occasionally (Livius Andronicus, in Priscian, 2, 108 Keil; Ilyg. *praef. Fab.* 3 and 27) to translate Nemesis. There is no indication, however,

that any cult of a goddess so named, independent of Juno, ever existed. Her temple stood on the Arx under S. Maria in Aracoeli (see Platner-Ashby, 289 f.; Nash, *Pict. Dict. Rome* i. 515 ff.), having been vowed in 345 B.C. and dedicated the next year (Liv. 7. 4-6), apparently replacing an older shrine where the sacred geese had been kept (Plut. *Cam.* 27). Cicero (*Div.* 1. 101) explains the title by a story that a warning voice was heard from it directing the proper sacrifice after an earthquake. An adjoining building contained the mint of the Roman State for some time (Liv. 6. 20. 13; cf. Platner-Ashby, loc. cit. and 345 f.); hence *moneta* came to mean 'mint', and so passed into modern languages. H. J. R.

MONEY. In Minoan Crete (as in all Ancient Oriental cultures) metal measured by weight seems to have been used as money. The usage persisted in non-Hellenic Italy until finally superseded by Roman coinage. Cattle were used as money in the early Iron Age (Homeric Greece and Italy). Tools also were passed as tokens, the form and not the weight or metal purity being of importance for exchange. In the time of Homer money chiefly took the form of axes, which occur in finds and (perhaps) in Linear A and B inscriptions. Written sources and finds point to the use in early Greece and prehistoric Europe of tripods, cauldrons, rings, anchors, metal 'cakes', and scales for weighing (the 'talent' of Homer, unless this was a bar of gold). *Oboloi* also (iron spits), which later gave the name to a small Greek coin, are well known, both by tradition and from finds and an early inscription. This primitive 'tool' money was connected with public sacrifices and religion.

A few decades before 600 B.C. the coinage was invented in Asia Minor, where East and West met, and was perfected in the Greek motherland, where small silver coins replaced local 'tool' money. It combined the principle that the exterior of any medium of exchange should be of conventional type and unalterable form, with the Ancient Oriental preference for bars of a given weight and metal content.

Changes in the price of bullion, of course, influenced the policy of Greek and Roman mints. The ratio of silver to gold was 1 : 13 or 13½ in the Lydian and Persian Empires of the sixth century; 1 : 14-17 in the later years of Pericles; 1 : 10 in Athens during the Peloponnesian War; 1 : 11-12 in Greece and Persia in the early fourth century; 1 : 10 from the later years of Philip; 1 : 13½ c. 280 B.C.; 1 : 10 c. 189 B.C.; 1 : 9 under Sulla; 1 : 12 under Augustus; 1 : 13 under Nero and Vespasian; 1 : 8-11 in the early third century A.D.; 1 : 10 in the early fourth century; 1 : 18 under Constantine the Great; 1 : 16.8 340; 1 : 14.4 397; 1 : 18 from 410 to 422 or so; 1 : 14.4 538; 1 : 6 c. 541; 1 : 12.5 in the later sixth century.

The ratio of bronze to silver was 1 : c. 110 in the fifth century; 1 : 50-70 from Alexander's time to c. 220 B.C.; 1 : 120 from c. 220 to c. 149 B.C.; 1 : 112 from c. 149 to 89 B.C.; 1 : 56 from 89 B.C. to, perhaps, the third century A.D.; 1 : 125 in A.D. 306 and 1 : 100 in A.D. 538. The decline in value of the precious metals during Alexander's campaigns, and their rise in consequence of the economic crisis in the third century A.D., can clearly be seen from these figures.

By a law of Constantine (A.D. 325) the imperial treasury had to accept both minted and unminted gold at the same rate, and gold coins had to be valued according to their actual weight. The Greek preference for coined money was not to the same extent shared by the Late Roman world, which had seen the terrible inflation of the third century A.D. and reverted to necessity to a more primitive currency system. See COINAGE (GREEK, ROMAN.)

MONOPOLIES. The earliest Greek State monopolies (for certain crafts in Sparta and Epidamnus) were political rather than economic. A later stage of progress in public administration is represented by the State currency control of the Attic Empire in the fifth century B.C. and of Olbia after 400; monopolies for the production of sulphur in Cyrene, of alum in Lipara, and of salt in Rome, as well as others for the import or export of certain products in Athens, Clazomenae, Heraclea, Lampsacus, and Selymbria; of banking in Byzantium; and of trade and craftsmanship in the camp of the Persian satrap Datames (early 4th c.).

Hellenistic monopolies—in striking contrast to the Classical period—were more concerned with the State's own citizens than with foreigners. We find ferry control in Delos and Miletus; salt control in the empire of Lysimachus; control of salt, oil, and perhaps parchment, perfumes, and public baths in parts of the Seleucid Empire. A complete monopoly system in the Ptolemaic Empire covered the production, sale, and import of oils, textiles, beer, leather, perfumes, papyrus, the output of mines and quarries, currency and banking, hunting, fishing, meat sales, goose-breeding, and the management of public baths. This system included gigantic commercial and industrial enterprises, for which schedules regulating production were issued annually, wholesale and retail prices were fixed, and prohibitive customs duties imposed, very few enterprises escaping notice.

The monopolies of the Roman Principate were nothing more than exclusive local concessions to private capitalists. We know of such in Roman Egypt, controlling salt, oil, perfumes, baths, dyeing, kiln-dried bricks, alum, the goldsmith's trade, the wool trade, ferries, some Indian imports from the Red Sea, and (perhaps) beer, papyrus, and painting. Other sources mention control of banks in Mylasa and Pergamum, ferries in Myra, bakeries in Ephesus; a salt-monopoly in Palmyra, a complete regional sales control in Baetocaece (in Syria); a monopoly of balsam in Palestine, of purple in Tyre, of wood in the Lebanon. The *metallum Vipascense*, a mining district in Spain, had public monopolies which covered banking, auctioning, fulling, leather production, baths, and the barber's trade. Late Roman monopolies for salt, silk, purple, production of arms, and the various monopoly experiments of Justinian should also be mentioned. See AGRICULTURE, BANKS, COMMERCE, FINANCE, INDUSTRY.

MONOTHEISM. Apart from the influence of developed Judaism and Christianity, no such thing as monotheism, i.e. the refusal to use the predicate 'God' of any but one Being, existed in classical antiquity; even theistic philosophers acknowledged the existence of subordinate deities besides the supreme one. Locally it was usual enough to refer to one particular deity as 'the god' or 'the goddess', e.g. Athena at Athens, Apollo at Delphi. But a further tendency towards monotheism may be detected at any rate in Greek popular religion as interpreted by non-philosophical authors. This takes the form of an increasing supremacy of Zeus. Even in Homer (*Il.* 8. 18-27) he is much stronger than all the other gods put together; later authors tend to use 'Zeus', 'the gods', 'God' indiscriminately, e.g. Hesiod, *Op.* 42 and 47, where the same act is ascribed, first to 'the gods', then to Zeus. To Aeschylus (*Ag.* 160 ff.) Zeus is the supreme moral governor of the universe, though even there the existence of other gods is clearly recognized (160 ff.). Hellenistic writers favour vague phrases like τὸ θεῖον, τὸ δαιμόνιον.

Nilsson, *GGR* 12, 220, 421, ii, 546.

MONS SACER, a hill near Rome just beyond the Anio (q.v.) on the road to Nomentum (q.v.). In 494 and 449 B.C. the plebeians left Rome, returning only when the patricians granted concessions guaranteed by a *lex sacrata*. The Mons Sacer, for obvious aetiological reasons, was represented as the destination of the seceding plebeians (Livy 2. 32; 3. 52; Festus, 422, 423 L.).

E. T. S.

MONTANISM was a prophetic movement among the Christians of Asia Minor. It emerged in Phrygia probably c. A.D. 172 (cf. Eus. *Chron.* under 12th year of Marcus Aurelius), though Epiphanius (*Haer.* 48. 1) gives 156-7 as the beginning. Montanus was soon joined by two prophetesses, Prisca and Maximilla, and together they proclaimed the approaching descent of New Jerusalem near the Phrygian village of Pepusa. Their message seems to have been purely eschatological and apocalyptic, with a reiterated stress on the glory of martyrdom, the requirement of ritual purity attained by rigorous fasts and penances, and freedom from the encumbrances of daily life. The movement was strongly opposed by the bishops throughout Asia Minor, who denied the validity of prophecy uttered, like Montanus', while the prophet was in a state of ecstasy. Despite the non-fulfilment of the prophet's promises, Montanism gained a firm hold on the country areas of Phrygia, and an important series of Montanist inscriptions openly proclaiming the Christian beliefs of those commemorated have been found in the Tembris valley in northern Phrygia. Dating 240-79, they are the earliest undisputedly Christian inscriptions outside the Roman catacombs. It became an organized Church with a hierarchy that included the ranks of Patriarch and Koinonos (companion of Christ) as well as bishops, presbyters, and deacons. Though it persisted in Asia Minor until the eighth century its greatest triumph was its spread to Roman Africa where it won the allegiance of Tertullian (q.v.) c. 207. Montanism shows how apocalyptic hopes often underlay the apparent calm of rural Asia Minor in the Antonine period. Its immediate success showed also that rural Christianity was likely to take different forms from those accepted in the Graeco-Roman towns.

Euseb. *Hist. Eccl.* 5. 16 f. and Epiph. *Adv. Haer.* 48 preserve fragments of Montanist prophecies and of anti-Montanist works. N. Bonwetsch, *Texte zur Geschichte des Montanismus* (Lactmann's Kleine Texte, no. 129, 1941). See also P. de Labriolle, *La Crise montaniste* (1913), W. Scheepeler, *Der Montanismus und die phrygische Kulte* (German transl., 1929); W. M. Calder, *Bull. Rylands Libr.* 1923, 300 ff. and *Anatolian Studies*, 1955, 27 ff.; W. H. C. Frend, *Martyrdom and Persecution . . . in the Early Church* (1965), 290 ff.

MONUMENTUM ANCYRANUM. The so-called Monumentum Ancyranum is one of the four documents written by Augustus which were deposited with the Vestal Virgins and were read in the Senate after his death. It was 'a record of his enterprises (*index rerum a se gestarum*), which he wished to be engraved on two bronze tablets placed outside his Mausoleum' (Suet. *Aug.* 101). The proper title is consequently *Index rerum gestarum*. Neither a MS. copy nor the original inscription near the Mausoleum is preserved. But copies were set up in some, if not all, of the provinces. The greater part of the text has been recovered from a copy found in 1555 at Ancyra (q.v.) in Galatia, on the walls of a mosque which had been the temple of Rome and Augustus. It consists of the original Latin text and a Greek translation. Another copy, far more fragmentary, has been found at Apollonia in Pisidia. The Greek translation is here the same as in the text of Ancyra, which proves its official inspiration. A third fragmentary copy of the Latin text was found at Antioch in Pisidia in 1914 (so-called Monumentum Antiochenum). As Antioch was a Roman colony, it was probably considered unnecessary to add a Greek text.

The Monumentum Ancyranum contains four parts: (1) the *honores* received by Augustus (chs. 1-14); (2) a statement of the money spent on public objects from his private means (chs. 15-24); (3) the *res gestae* proper, an account of his victorious expeditions and conquests (25-33); (4) a concluding statement about his position in the Roman State. A short appendix, written after his death, follows.

The document represents itself as composed in Augustus' last year, apparently after 27 June A.D. 14 (cf. chs. 4 and 8), but since the *Res Gestae* were already mentioned in the testament of Augustus, which was written on 3 Apr. A.D. 13, the text obviously has been retouched either by Augustus himself or by the editor. Further, possibly the document was written by Augustus many years before his death and then revised more than once. Yet no certain evidence of successive stages has been discovered.

The document has a clear internal unity. Part I demonstrates Augustus' exceptional position in the State and his fundamental respect for Roman liberty. In parts 2 and 3 Augustus justifies his position by what he achieved with his own private money and under his own military command. The concluding sentences state again that he restored the Republic and consequently obtained a superior authority and the qualification of *pater patriae*. The style is that of the Roman texts concerning triumphs. The content gives us a profound insight into the way in which Augustus wished to be appreciated.

MOPSUS, two diviners of the same name, for the legend is quite irreconcilable with the mythological chronology. In one set of authorities (e.g. Pind. *Pyth.* 4. 191) he is the Argonauts' prophet and therefore is contemporary with the generation before the Trojan War; he is son of Ampyx or Ampycus (Ap. Rhod. 1. 1083)

and comes from Titaresos (i.e. Dodona); he dies on the journey (4. 1502 ff.), bitten by a serpent in Libya. In another (as Paus. 7. 3. 2) he is son of Manto, daughter of Tiresias (q.v.), by Rhacius the Cretan; he is connected with the oracle at Claros, and there meets Calchas (q.v.) and causes his death by outdoing him in a contest of divination; this was after the Trojan War. He shared with Amphilocheus (q.v.) his oracle-shrine in Cilicia. His name occurs in local place-names there, and in the late eighth-century bilingual hieroglyph inscription at Karatepe (e.g. G. L. Huxley, *Crete and the Luwians* (1941), 47 ff.).

H. J. R.; H. W. P.

MORGANTINA (Latin *Murgantia*), a city of east-central Sicily long unidentified, can now be certainly located on Serra Orlando, a steep-sided ridge projecting for some 3 kilometres eastwards from Aidone. Its acropolis, still called 'Citadella', commands a wide expanse of the western part of the Piana di Catania, and is the site of the earliest settlement (early 7th c. B.C.), the Italic affinities of which reflect Strabo's (6. 1. 6) story of the Morgetes. Greek pottery and masonry suggest that settlers, probably from Catania or Leontini, established themselves c. 560, on good terms with the natives. In the fifth century and afterwards the city was within the Syracusan orbit, save for its capture by Ducetius (q.v.) in 459 (Diod. Sic. 11. 78. 5) and its cession by Syracuse to Camarina in 424 (Thuc. 4. 65). Refortified under Timoleon, it was replanned and resettled under Agathocles and Hieron II (qq.v.). The agora on two levels, linked by a monumental stairway, was flanked by a theatre, stoa, and other public buildings. It suffered in the Second Punic War, having supported Carthage, and was handed over for settlement to Rome's Spanish auxiliaries. By the end of the republican period it had lapsed into decay; Strabo refers to it (6. 2. 4) as no longer existing.

E. Sjöqvist, *Atti del settimo congresso internazionale di archeologia classica* II (1961), 61 ff.; id. *Koninklijk* 1962, 52 ff.; R. Stillwell, *Koninklijk*, 1965/5, 579 ff.; E. Sjöqvist and R. Stillwell, excavation reports in *AJArch* 1957 and succeeding years. A. G. W.

MORMO (*Μορμό*, also *Μορμολύκη*, *Μορμών*), a figure like Empusa, Gello, and Lamia (qq.v.), and equated with the last two by schol. on Theoc. 15. 40; he says she was a queen of the Laestrygonians (q.v.) who lost her own children and so tries to kill those of others. Her name is sometimes a mere interjection (Theoc. loc. cit.; Ar. *Eq.* 693). See Tamborino in *PW*, s.v. H. J. R.

MORPHEUS. Three of the sons of Sleep, Morpheus, Ikelos or Phobetor, and Phantasos, send respectively visions of human forms (*μορφαί*), beasts, and inanimate objects (Ov. *Met.* 11. 633 ff.).

MORSIMUS, son of Philocles and grand-nephew of Aeschylus, oculist and tragic poet, a frigid or uninspired writer, often ridiculed by comic poets of the fifth century (*Suda*, s.v.; Ar. *Pax* 803 and schol.), though he may have had his admirers (Ar. *Ran.* 151).

MORYCHUS (*Μόρυχος*). Lexicographers and paroemiographers (q.v.) explain a saying 'sillier (*μωρότερος*) than Morychus, who neglects inside affairs and sits outside' as alluding to a statue of Dionysus in Sicily, surnamed Morychus, which was outside his temple; their authority is Polemon. H. J. R.

MOSAIC. The history of mosaic work in the classical world begins c. 400 B.C. with the pavements, showing two-dimensional, mainly white-on-dark, geometric and figured designs, made of natural, unshaped pebbles for the floors of private houses at Olynthus. Somewhat more

elaborate pebble pavements, with a more extended use of colour, dating from the late fourth and early third centuries, have come to light in houses at Pella; and northern Greece seems to have been the centre from which this technique passed to other lands—southern Greece, Sicily, Asia Minor, and Alexandria. Recent finds at Moigantuna have suggested that it was Sicilian mosaicists of the mid third century B.C. who invented the new technique of making both black-and-white and coloured pavements of marble, stone, and tile tesserae, for abstract patterns, at first irregularly shaped, then squared, and smoothed flat on the upper surface (*opus tessellatum*), and, for three-dimensional figure work, subtly cut and curved and similarly smoothed (*opus vermiculatum*: cf. *emblemata vermiculata* (Lucilius); *vermiculatae ad effigies rerum et animalium crustae* (Pliny, *HN* 35. 2)). We learn from Athenaeus (*Deipnosophistae* 6. 207 c) that Hieron of Syracuse sent to the reigning Ptolemy a luxury ship with floor mosaics in which the whole story of the *Iliad* was represented; and it seems that this type of 'painting with tesserae' spread from Sicily along the trade routes to Alexandria, Delos, Pergamum, and eventually, from the second century B.C. onwards, to Rome and other Italian sites. One of the most famous Hellenistic mosaicists was Sosus of Pergamum, of whom it is recorded (Pliny, *HN* 36. 184, where Sosus' works appear to be classed as examples of *lithostrotum*) that he made a representation of a floor strewn with the unswept debris of a meal (*asarotos oikos*) and a panel (*emblemata*) showing doves drinking from a wine-cup: there are Roman mosaic copies extant of both these pictures. Of surviving Hellenistic mosaic pavements, some of the best preserved are in private houses at Delos, dating, for the most part, from the second century B.C.

The Hellenistic *emblemata*, with its surround of abstract or geometric patterns, was essentially a picture intended to be seen from a single viewpoint, like an easel or mural painting. It resembled a patterned rug laid in the centre of, or at the entrance to, a room. But in Italy and other western lands, particularly in northern Africa, there soon developed a tendency to regard a mosaic pavement as a carpet covering the entire floor with an all-over design that could be enjoyed from every angle; and under the Early Empire the *emblemata* gradually passed out of fashion. In Italy in the later first, second, and third centuries A.D. the favourite type of pavement was the all-over black-and-white one, either composed entirely of geometric and floral motifs or of figure scenes drawn in black silhouette against a white ground. Meanwhile, in the provinces, gay polychrome pavements, both abstract and figured, were immensely popular, on into the fourth century, when they also appeared more frequently in Italy. On eastern sites, such as Antioch-on-the-Orontes, where there has been excavated a splendid series of datable pavements running from c. A.D. 100 to the sixth century, the Hellenistic *emblemata* tradition persisted till the fourth century, but was then replaced by the Western idea of a mosaic as an all-over carpet design in which the interest is diffused throughout the floor.

Another technique employed for Roman pavements is that of *opus sectile* (distinguished from *opus tessellatum* by Vitruvius (7. 1. 3) and Suetonius (*Div. Jul.* 46)), in which the mosaic consists of relatively large, thin, shaped pieces of coloured marble forming all-over geometric or floral patterns. This technique is found on floors dating from the first century B.C. to the fourth century A.D.; and in the late-antique period it was also used for elaborate figure scenes on walls. The term *museum opus* occurs in late literary sources as applied exclusively to wall and vault mosaics, of which many more examples dating from before the Christian Empire have survived than was formerly supposed. Wall mosaics made of glass-paste

tesserae are known as fountain and nymphaeum decorations and even as figured panel pictures at Pompeii and Herculaneum; and we have examples of mosaics on the walls and vaults of baths, tombs, etc., of the second, third, and fourth centuries, the Christian mosaics of the mid third century in the Mausoleum of the Julii under St. Peter's in Rome, and the 'neutral' fourth-century vault mosaics in the Church of Santa Costanza, also in Rome, being among the most notable instances. The earliest Christian floor mosaics, such as those in the fourth-century cathedral and house-oratories at Aquileia (q.v.), display an intriguing mixture of pagan and Christian motifs. Church mosaics on walls and vaults of the fourth and fifth centuries featuring exclusively biblical and other sacred subjects lie outside the scope of this article.

MOSCHION, tragic poet, probably of the third century B.C., wrote a *Telephus* and two historical plays, the *Themistocles* and the *Men of Phaeae*, the theme of which was perhaps the death of Alexander of Phaeae. A long fragment on the origins of civilization recalls in some points Aeschylus, *PV* 436 ff., and his style, though uneven, shows greater boldness than that of most of the late tragic poets.

TGF 812-16.

A. W. P.-C.

MOSCHUS of Syracuse, described by the *Suda* as a pupil of Aristarchus, must have flourished c. 150 B.C. This agrees with the *Suda's* further statement that the chronological order of the three Bucolic poets was Theocritus, Moschus, Bion. The same authority calls Moschus a grammarian, but no traces of such activity survive unless we identify him with the Moschus mentioned by Athenaeus (11. 485 e) as author of a work on Rhodian Words.

WORKS. Three extracts (respectively thirteen, nine, and eight hexameters) are preserved by Stobaeus from Moschus' *Bucolica*. The first contrasts the pleasures of the countryman with the hard lot of the fisher. The two others are erotic *paegna*, having little or no connexion with Bucolic. The three extracts are probably complete, as it were epigrams in hexameters. Similar in kind are two other pieces, twenty-nine hexameters entitled 'The Runaway Love' and an epigram (*Anth. Plan.* 4. 200) on Eros as Ploughman. Finally, several MSS. of the Bucolic Corpus assign to Moschus an epyllion in 166 hexameters with the title *Europa*, in which the Rape of Europa by Zeus is gracefully narrated. The disproportionate space (25 lines) given to the description of Europa's basket is in the Alexandrian manner, as is also the introductory dream. Moschus' style is sometimes too sugared, but he has the merit of using a fairly simple vocabulary. Metrically the fragments and *The Runaway Love* conform to Callimachus' rules, but the *Europa* is less strict, a fact which has led some to dispute Moschus' authorship. He is also credited in some sources with the *Lament for Bion* and the *Megara*. The former must be by some disciple of Bion (q.v.); the latter, a duet in hexameters between Heracles' mother and wife (who gives her name to the piece), in which they vie with each other in bewailing the anxieties caused by his long absence, may be a

product of Moschus' muse in a tearful mood, but may equally well belong to some other late Hellenistic poet.

E. A. B.

MOTYA (modern *S. Pantaleo*), an islet which an artificial causeway joined to western Sicily, in Elymian territory. Colonized by the Phoenicians in the early seventh century, it became one of the three great military and commercial strongholds of Carthaginian Sicily (Panormus and Solocis being the others). Nevertheless it underwent a good deal of Hellenic cultural influence. Dionysius I (q.v.) sacked it in 397 B.C. after a memorable siege, and it was not resurrected thereafter, the Carthaginians preferring to colonize Lilybaeum (q.v.) nearby. (Pausanias (5. 25. 5) appears to confuse Motya with Motycia (modern *Modica*) in southern Sicily.)

J. I. S. Whitaker, *Motya* (1921); Dunbabin, *Western Greeks*, esp. 22, 126 ff.; B. S. J. Isserlin et al., *The Annual of Leeds University Oriental Society* 1962-3, 84 ff.; V. Tusa, *Motya I-III* (1964-7).

A. G. W.

MOUNTAIN CULTS. There is no classical Greek or Italian cult of a mountain as such, but several indications that such cult may once have existed. Mountains are fairly prominent in Greek myths; thus Atlas (q.v.), at once mountain and Titan, although classically placed in Africa (the Atlas range), probably was originally a mountain of Arcadia. Helicon and Cithaeron contend for a prize of song (Corinna, fr. 1 Page), and Helicon is represented by a wild-looking figure (*BCH* xiv, plates ix, x; cf. Kern, *Rel. d. Griech.* 1. 42). Earth brings forth the mountains in Hesiod (*Throg.* 129), though they are not said to be gods but haunts (*ἐναιολοί*) of the gods. This is in accordance with much that is told of various deities, Pan (*Hymn. Hom.* 19 Allen, 7), the Nymphs (Eur. *Bacch.* 951, and often; the next line mentions Pan also), Rhea (Eur. *Hel.* 1301 ff., where she is curiously identified with Demeter), and above all Zeus, among whose best-known titles are Olympian and Lycaeus. It is quite possible (see Kern, *ibid.*; cf. 77) that Zeus, who as 'cloud-gatherer' may be seen at work on the tops of hills, absorbed or displaced many ancient cults of mountain gods: for his mountain-cults cf. Cook, *Zeus* II, 868 ff., and art. *HYPSISTOS*. Of cults on mountains of gods other than Zeus who are certainly not themselves mountains personified there is abundant evidence from the familiar Cretan representation (see, e.g., Nilsson, *GGR* I², Tafel 18, nr. 1) of a goddess standing on top of a conventionalized hill onwards, as in the case of all the deities mentioned above. See *TMOLUS*.

For Italy, the clearest example of a mountain cult is perhaps Soranus (identified in historical times with Apollo or Dis Pater, Verg. *Aen.* 11. 785; Servius ad loc.), the god of Mt. Soracte; the legend, connected as it is with a cave on the mountain (Servius *ibid.*) suggests a divine power which actually lives in Soracte and does not simply choose to roam on the sides or summit. See Wissowa, *RK* 238, and contrast Latte, *RR* 148.

H. J. R.

MUCIA (*PW* 'Mucius' 98) **TERTIA**, daughter of Scaevola (q.v. 4), sister or cousin of two Metelli (qq.v. 9 and 10), married Pompey (c. 80 B.C.) and bore him Pompeius (5) and (6). Unfaithful to him in the 60s, she was divorced by him on his return to Rome—a step that turned the Metelli against him. She later married Scaurus (q.v. 2) and in 39 tried to mediate between her son Sextus Pompeius and Octavian.

E. B.

MUCIANUS, GAIUS LICINIUS (*PW* 116 a) (*cos. suff. c. A.D. 65, cos. II suff. 70, cos. III suff. 72*). He served under Corbulo in 58 and was governor of Lycia-Pamphylia. Nero appointed Mucianus governor of Syria about the time when he sent Vespasian to Judaea. Reconciled with Vespasian after earlier disagreements, Mucianus encouraged his designs and secured the allegiance of Syria. Leading the Flavian army through Asia Minor and the Balkans, he was anticipated by Antonius Primus in the invasion of Italy and defeat of the Vitellians, but was able on the way to repel a Dacian incursion into Moesia. He arrived in Rome a few days after its capture, repressed the ambitions of Primus, and controlled the government for Vespasian, whose chief adviser he remained. He is said to have urged that Emperor to banish the philosophers from Rome. Mucianus possessed various accomplishments (for a pointed sketch of his character, cf. Tac. *Hist.* 1. 10). He wrote a book of geographical *mirabilia*, largely used by Pliny the Elder. He was dead by 77.

Syme, *Tacitus*, see index.

R. S.

MULOMEDICINA is the Latin equivalent for *Hippiatrica*. The subject was dealt with by all agriculturalists (Cato, Varro, Columella, Celsus, Gargilius Martialis, Palladius), but also by poets who wrote on country life (Verg. *G.* 3. 295) and by naturalists (Pliny, book 8). The earliest special treatises preserved are those of Pelagonius and Vegetius (4th c. A.D.).

Latin writers, if physicians, accept semeiotics and cures and reject magic, in accordance with their Greek sources. Yet Latin literature seems not only dependent but also original. The fact that Latin authors were translated into Greek (e.g. Pelagonius) indicates that 'the barbarians' held views of their own. They were interested in veterinary medicine from a business point of view (Varro, *Rust.* 2. 5. 11), cattle being the most valuable property (*pecunia*). The insistence on the segregation of sick animals from the healthy stock, first mentioned by Columella and demanded long before any such segregation of human beings was thought of, may well be Roman; in the time of Vegetius it was under State control. See also *SURGERY*, § 10.

TEXTS. Pelagonius, M. Ihm (Teubner, 1892); Vegetius, E. Lommatsch (Teubner, 1903); Palladius, bk. 14, J. Svennung (1926); cf. G. Ihorck, *Mnem.* 1918.

J. Svennung, *Untersuchungen zu Palladius*, etc. (1935).

See also *HIPPATRICI*.

L. E.

MUMMIUS (*PW* 7 a) **ACHAICUS, LUCIUS** (*cos.* 146 B.C.), commanded as praetor in Spain in 153 B.C. against the Lusitanians, whom after an unsuccessful opening he decisively checked, celebrating a triumph in 152. As consul he succeeded Metellus in command against the Achaean Confederacy, and after crushing Diaeus took Corinth, which he sacked and destroyed, and dissolved the Confederacy. He shipped the treasures of Corinth to Italy, apparently less appreciative of their artistic value than would have been expected from his association with the Scipionic circle. He was censor with Scipio Aemilianus in 142, modifying Scipio's severity.

A. H. McD.

MUNDUS (etymology unknown), a ritual pit (see *PITS*, *CULT*). (1) The traditional site in the Comitum where Romulus in founding the city dug a pit, put in first-fruits, and earth from each country from which his followers came, afterwards filling it up and putting an altar upon it (Ov. *Fasti* 4. 821 ff.; Plut. *Rom.* 11). (2) The *mundus Cereris*, a structure of unknown site, vaulted, divided into two parts, and with a cover which was removed on 24 Aug., 5 Oct., and 8 Nov., which days

were *religiosi* when the way was supposed open to the lower world (Festus, 144, 145 Lindsay, quoting Cato and Ateius Capito; Varro ap. Macrobi. Sat. 1. 16. 18). These have only the name in common.

S. Weinstock, *Röm. Mitt.* 1910, 111 ff., H. J. Rose, *SMR* 1911, 3 ff., Latte, *RR* 141 ff. (who revives Warde Fowler's theory that this was in origin a store for seed-corn).
H. J. R.

MUNICHIA (or **MUNYCHIA**) was the citadel of Piraeus, a steep hill on its east part (284 ft.) with a small well-fortified harbour below it on the east, and a larger, land-locked harbour to the south-west (Zea). Hippis began to fortify it in 510 B.C. (Arist. *Ath. Pol.* 19. 2). A theatre of Dionysus on its north-west slope was the place of assembly of the hoplites in 411 and of the Athenian Assembly frequently thereafter. It was the scene of street-fighting in 403, when Thrasybulus took Piraeus (Xen. *Hell.* 2. 4. 10-16), and the chief seat of the Macedonian garrison which controlled Athens, with interruptions, from 322 to 229. Its especial goddess was Artemis. See also **PIRAEUS**.
T. J. D., C. W. J. L.

MUNICHUS (*Μονίχος*), (1) eponym of the Attic harbour Munichia, Photius s.v. *Μονυχία* (an inferior spelling of the name), who says he was a king (of Attica). (2) A pious seer, son of Dryas, king of the Molossians. He and his family, attacked by robbers and in danger of being burned alive in their fortress, were changed by Zeus into birds (Ant. Lib. 14).
H. J. R.

MUNICIPIUM. *Municipium* originally meant an Italian community (see **SOCI**, **CIVITAS**) which accepted *civitas sine suffragio*. This denoted not an inferior citizenship but a kind of alliance whereby the *municipium* and Rome exchanged social rights, *conubium* and *commercium* (q.v.), much as in the first treaty between Rome and Carthage (506 B.C.). Such *municipes* retained full local autonomy, except in foreign policy, and provided Rome with troops (see **MUNUS**). They became Romans only by settling in Rome. *Municipium* thus resembled *ius Latii*. *Municipia* were liable to occasional, and eventually annual, visits of Roman judicial authorities—*praefecti*—and were sometimes called *praefecturae* (q.v.). The first Italian *municipes*, from Campania and Volturnum (c. 338 B.C.), were willing allies. Later this status was given to conquered peoples, notably the Sabines and Picenum, and was eventually regarded as a limited, inferior franchise, mediating full incorporation in the Roman State, by the grant of *ius suffragii*, of Italian peoples, which were then called *municipia civium Romanorum* (see **CIVITATES**). First the Sabines were thus incorporated (268 B.C.), others later (Arpinum, Fundi, Formiae in 188 B.C.), but some *municipes* remained *sine suffragio* till 90 B.C. Latin States incorporated by Rome, though properly known as *oppida civium Romanorum* before 90 B.C., were sometimes called *pro municipis*. The magistrates of the early incorporated boroughs were known as aediles, dictators, praetors, or *octoviri*. After 89 B.C. all the communities of Latins and *socii Italici* except the Transpadanes became *municipia civium Romanorum*. A uniform system of *quattuorviri* was substituted for their diverse magistracies. Between 89 and 44 B.C. new and old *municipia* and *oppida civium Romanorum* were assimilated to one another (see **OPPIDUM**). Lands once organized on a village system were combined into artificial *municipia* (see **CONCILIABULUM**, **PAGUS**, **VICUS**). Henceforth *municipium* meant any self-governing Italian borough irrespective of origin, apart from colonies (q.v.). In the Principate citizen rights were extended to provincial communities, when sufficiently italianized, in a similar fashion. Latin rights were usually given first (see **IUS LATI**). Thereby a

native *civitas* became a *municipium Latini iuris*, with a municipal charter of Roman type. Later it might be granted full citizen rights, though many *municipia* remained 'Latin'. The whole population, both of town and countryside, was affected. a *municipium* was not a purely urban municipality, though life centred in the towns. *Municipia* spread thus throughout the Western Empire, rapidly in the Mediterranean regions—Narbonensis, the Spains, Africa, and Mauretania—slowly in the German and Balkan provinces (except Dacia), still more slowly in northern Gaul and Britain, where *municipia* were exceptional, their place being taken by the non-urban, pre-Roman cantons (see **CIVITAS**). In and after the second century municipal ambition, centred on the imitation of Rome, caused provincial municipalities to apply for colonial rights (see **COLONIZATION, ROMAN**; **IUS ITALICUM**). Local government rested with the councils (see **DECURIONES**) and the magistrates. The *quattuorviri* introduced in 89 B.C. developed into two *quattuorviri* or *duoviri iuridicundo* and two *quattuorviri* or *duoviri aedilicia potestate*, or two aediles. The duoviral system prevailed in the provinces. Quaestors sometimes existed for finance, and there were municipal priesthoods. Every five years the upper magistrates, as *duoviri quinquennales*, etc., held a general census for the central government. The municipal system declined in the third and fourth centuries with the general economic collapse of the Empire (see **DECURIONES**).

ANCIENT SOURCES: Cicero; Festus (esp. s.v. *municipium, praefecturae, vicus*); Pliny, *HN*; Strabo, *pavim*, *Digest* esp. 50. Inscriptions: *CIL* and *ILS pavim*, esp. *Lex (Rubria) de Gallia Cisalpina, Lex Tarantina, Tabula Heracleensis, Lex Malacitana, and Lex Sulpensiana*.

MODERN VIEWS. (a) Republic: Abbott and Johnson, *Municipal Administration in the Roman Empire*; Beloch, *Röm. Geschichte*; E. G. Hardy, *Roman Law and Charters*; Z. Z. Konopka, *Fox xxx* (Origins of *Civitas sine suffragio*); E. Kornemann in *PAW*, s.v. 'Municipium', *Conventus*, *Klio* 1905, 'Hörs und Urbs', Mommsen, *Staatsr.* in 1; A. Rosenberg, *Staat der alten Itali* (1917); H. Rudolph, *Stadt und Staat im römischen Italien* (1935, over-schematic); A. N. Sherwin White, *The Roman Citizenship* (1939); A. I. Toynebe, *Hannibal's Legacy* (1965), 131-61, usefully summarizes many modern views. (b) Empire: Above and W. Liebenau, *Stadtverwaltung im röm. Kaiserreich*; Mommsen, *The Provinces of the R.E.*; J. S. Reid, *The Municipalities of the Roman Empire*, *Rostovtzeff, Roman Empire*. See particular provincial histories, esp. T. R. S. Broughton, *The Romanization of Africa Proconsularis* (1929); L. Teutsch, *Das römische Städtewesen in Nordafrika* (1962).

A. N. S.-W.

MUNUS meant originally the duty of a Roman citizen to the State. The chief *munus publicum* in the Republic was military service. With the introduction of voluntary enlistment this fell into neglect, and the *munus* came to mean simply the obligations of an individual to his municipality, the *munera municipalia*. These were of diverse kinds, and concerned the maintenance of roads, waterworks, and buildings, and especially the payment of taxes. The municipal system worked smoothly as long as the local magistrates saw to it that the *municipes* performed their *munera*, according to their various degrees of liability, which were determined by wealth and position. In the late Empire the *munus publicum* reappeared, in effect, in the liability of the municipal councillors for the imperial taxes, with disastrous results for the municipal system; for the magistracies themselves came to be regarded as burdensome *munera* (see **DECEMPRIMI, DECURIONES**).

For bibliography see **MUNICIPIUM**.

A. N. S.-W.

MURCUS, L. STATUS, perhaps of Marsian origin, was a legate of Julius Caesar in Gaul and Africa (48-46 B.C.), and probably praetor in 45. As proconsul of Syria (44/3) he forced, with help from Marcus Crispus, the surrender of Bassus at Apamea, and was acclaimed *imperator*. He went over to the Liberators and was very active in command of a fleet under Brutus and Cassius in 42. In 41 he joined

Sextus Pompeius in Sicily, but was later distrusted and killed by him (40/39). He issued a coinage, with *obv.* head of Neptune, *rev.* a military trophy, *MVRCVS IMP* (see Sydenham, *CRR*, n. 1315). H. H. S.

MURENA, LUCIUS LICINIUS (*PW* 123), served in Asia under his father in the 80s B.C. He was quaestor (c. 75), legate of Lucullus (q.v. 2), *praetor urbanus* (65), and then governed Transalpine. Elected consul for 62, he was accused of *ambitus* by Sulpicius (q.v. 2) Rufus, his defeated rival, and by Cato (q.v. 5); he was defended by Crassus (q.v. 4), Hortensius (q.v. 2), and Cicero (in an extant speech) and though perhaps guilty he was acquitted. With his colleague Silanus (q.v. 1), he passed a *lex Licinia Iunia* on the promulgation of bills. He is not heard of again. E. B.

MURRINA VASA. According to Pliny, these were cups and bowls made from a soft mineral found in Persia, and especially in Carmania. The mineral showed a variety of pleasing colours, purple and red predominating, but blending into red and producing iridescence at the edge of a cup. This colouring, added to the fact that pieces large enough for carving vessels were rare, made *murrina* extremely valuable in Pliny's time (Pliny, *HN* 37. 18–22). His description suits fluor spar. Some of the material, however, may have been burnt agate from India (*Periplus Maris Erythraei*, 49, *μουρρίνη λίθεια*). Propertius, who speaks of 'myrrhine cups baked on Parthian hearths' (4. 5. 26), may have confused Persian fluor spar with Indian burnt agate. But possibly he is referring to a practice, used nowadays, of heating the block of fluor spar and then smearing it with pine resin so as to prevent its disintegrating when struck. The pleasant aroma mentioned by Pliny might well have been caused by the resin.

MUSAEUS (1), a mythical singer, closely related to Orpheus, by others connected with Eleusis. Aristophanes (*Ran.* 1032–3) makes the distinction that Orpheus taught mysteries and abstinence from flesh, Musaeus taught cures of diseases and oracles. Oracles attributed to him were in circulation, and Onomacritus was driven out by Hipparchus, the son of Pisistratus, for having added a forged oracle to his collection. Plato speaks of him together with Orpheus and calls both descendants of Selene and the Muses (*Resp.* 364 e). Musaeus is a 'descriptive' name; his personality is pale and thoroughly mythical.

On some Attic vases of the second half of the fifth century a youth with a lyre is named Musaeus and shown with Apollo, or with Muses (in the latter case if it were not for the inscription we should inevitably read the figure as Apollo).

M. P. Nilsson, *Harv. Theol. Rev.* 1935, 192; O. Kern, *Orphicorum fragmenta* (cf. index viii) M. P. N., C. M. R.

MUSAEUS (2) of Ephesus (? Alexandria), epic poet; author of a *Perseid* and poems in honour of Eumenes and Attalus I of Pergamum.

MUSAEUS (3) **GRAMMATICUS** (? late 5th c. A.D.), epic poet, author of *Hero and Leander*, a Greek poem of some competence and romantic grace, which influenced Marlowe.

Text. A. Ludwich (1912). COMMENTARY. K. Koel, *Krit.-exeg. Kommentar zu Musaeus* (1906).

MUSES, Greek deities of poetry, literature, music, and dance; later also of astronomy, philosophy, and all

intellectual pursuits. Throughout antiquity the prevailing conception of Muses follows Hesiod (*Th.* 25 ff.). Muses approach the poet on Helicon and give him sceptre, voice, and knowledge. Hesiod is also responsible for the canonical number of nine (*Od.* 24. 60 may be ambiguous) and the traditional names of the Muses. The frequent appeals to single Muses (W. Minton, *TAPA* 1960, 292) do not, as has been supposed (K. Marót, *Die Anfänge der griechischen Literatur*, 1960) necessarily preclude the existence of others (W. Stanford, note on *Od.* 24. 62). In late Roman times the Muses were differentiated according to their function (*Anth. Pal.* 9. 504, 505). Calliope is Muse of the heroic epic, Clio of history, Euterpe of flutes, Terpsichore of lyric poetry (dance), Erato of lyric poetry or hymns, Melpomene of tragedy, Thalia of comedy, Polyhymnia of the mimic art, and Urania of astronomy. These functions and names vary considerably and names of other Muses are known.

Daughters of Zeus and Mnemosyne, the Muses sing and dance at the festivities of Olympians and heroes, often led by Apollo. They have few myths of their own. The Thracian poet Thamyris, who competed against the Muses, lost his sight and song (*Il.* 2. 594). They were judges in the contest of Apollo and Marsyas (q.v. 1). The Sirens tried once to compete with the Muses; defeated, they lost their wings and jumped into the sea (Steph. Byz., s.v. *Ἀπτερα*; J. Pollard, *CR* 1952, 60).

The most ancient cults of the Muses were in Pieria and Asara (A. R. Burn, *BSA* 1949, 323; G. Roux, *BCH* 1954, 22), but smaller cults existed throughout Greece. Horace (*Carm.* 1. 12. 6) was mistaken in associating the Muses with Pindus (A. Fitton Brown, *Greece and Rome* 1961, 22). Pythagoreans, Plato, and Aristotle organized their schools as associations for the cult of Muses (*thiasoi*). Thus Museum (Alexandria) came to mean a place of education and research. An interesting private cult of Muses was established by Epicteta in Thera (*IG* xii. iii. 330). The earliest representation of a Muse in art occurs on a Middle Corinthian kotyle from Ithaca (*BSA* 1948), while Calliope appears on the François Vase.

The Muses are among the most lovable and most influential creations; personifications of the highest intellectual and artistic aspirations, they yet retained a personal character. Poets, scientists, and philosophers from Homer (*Od.* 8. 488) to Ausonius (App. III) and from Heraclitus to Proclus celebrate the Muses as bringing to humanity the purifying power of music, the inspiration of poetry, and divine wisdom.

II; J. R. T. P.

MUSEUM (*Μουσαῖον*), originally a place connected with the Muses (q.v.) or the arts inspired by them. Euripides speaks of the *μουσαῖα* of birds, the places where they sing. When a religious meaning was attached an altar or a temple was built to mark the spot. But the predominant significance of the word was literary and educational. Thus Mount Helicon had a Museum containing the MSS. of Hesiod and statues of those who had upheld the arts (Ath. 14. 629 a). Almost any school could be called 'the place of the Muses' (Libanius). There was a Museum in Plato's Academy and in Aristotle's Lyceum.

By far the most famous Museum was that of Alexandria, founded by Ptolemy Soter probably on the advice of

Aristotle's famous pupil, Demetrius of Phalerum. It was distinct from the Library. Both were near the palace, but of neither is the exact site clearly identifiable. The Museum housed a band of scholars, who were supported by a generous salary granted by the Ptolemies and later by the Caesars, who appointed a President (*ἐπιστάτης*) or Priest (*ιερεὺς*) as head of the institution. Lectures were secondary to research, but there were many discussions in which the kings joined. Dinners or symposia, illuminated by witticisms, epigrams, and the solution of problems, were frequent and characteristic. Learning was held in repute and many literary prizes were given. The papyri show how great was the influence of the Museum on the smaller towns. The buildings, splendidly furnished by the Ptolemies, included a communal dining-hall, an *exedra* for discussions and lectures, a *peripatos* planted with trees.

Circa 146 B.C. political upheavals caused learned men, including the great Aristarchus, to flee from Alexandria, which was henceforth rivalled by Pergamum as well as by Athens, Rhodes, Antioch, Berytus, and Rome. The Museum suffered in reputation, but Cleopatra, the last of the Ptolemies, still took part in its discussions. According to a doubtful tradition Mark Antony gave the Pergamene library to Alexandria to make up for loss by fire during Caesar's siege, 47 B.C. Renewed prosperity came under the Pax Augusta. The early emperors visited the Museum and extended its buildings, and Hadrian bestowed special care on it. The Museum was visited by famous literati like Plutarch, Dio Chrysostom, Lucian, and Galen. In A.D. 216 it suffered under the tyranny of Caracalla. It was destroyed, probably by Zenobia, in 270, but seems to have resumed its activities. It suffered by the foundation of a library at Constantinople, whither many scholars fled to avoid the theological controversies of Alexandria. The *Suda* gives the last member of the Museum as Theon, the father of Hypatia (c. A.D. 400). In the Ptolemaic period the Museum was famous for science and literary scholarship; in the second century for the New Rhetoric; in the third century for Neoplatonism. In the fourth century Ammianus (22. 16) reports scientific activity, but admits a decline.

Muller-Graupe, PW, s.v. 'Museum' Wilamowitz, *Hell. Dicht.* i (1924), 160 ff.; G. Faidier-Feytaud, *Hommages à Joseph Bidez et à Franz Cumont* (1940), 97 ff. T. J. H.

MUSIC. 1. IN GREEK LIFE. When the embassy from Agamemnon visited Achilles in his tent and found him playing on a lyre and singing lays about heroes (Ilom. II. 9. 186-9), they expressed no astonishment that a hardy warrior should seek relaxation in music of his own making. That is symbolic of the Greek attitude to an art which was woven into the very texture of their lives. It was an important feature of many public religious observances, of marriage and funeral rites, and of harvest and vintage festivals; banquets and convivial gatherings were not complete without it. At the Pythian Games, attended by crowds of competitors and spectators from every Greek State, musical contests had been instituted alongside of the athletic ones from the very beginning; and though such contests were not established at the Nemean and Isthmian Games until comparatively late (and apparently never at the Olympic Games), there were many other festivals, such as the Panathenaea at Athens and the Carnea at Sparta, where prizes were offered for singing to the accompaniment of cithara or aulos (*κυθαράδι*, *αὐλωδί*) or for instrumental solos (*ψιλή κυθάρις*, *ψιλή αὐλῆσις*). The victors in these contests were honoured no less than the athletes (cf. Pind. *Pyth.* 12).

Nearly every form of Greek poetry was, or had at some time been, associated with music: even the poems of

Homer were originally chanted or recited to the accompaniment of a stringed instrument (see § 9). In the compositions of the lyric poets the tune was scarcely less essential than the words; poet and composer were one and the same; words and music must often have been conceived together. In choral lyric poetry the dance was a third element in an integrated artistic whole.

This wealth of music was far from being the preserve of professional performers. The more elaborate kinds, especially of instrumental music, were, indeed, left to professional musicians; but in classical times instruction in singing and lyre-playing was a regular part of the education of the freeborn citizen. There thus existed a musically educated public which could not only judge between good and bad performances but could itself take its part in singing hymns, paeans, dithyrambs, and dramatic choruses.

2. MUSIC AND THE PHILOSOPHERS. A philosophic sanction was first given to the study of music by the Pythagoreans. The founder of the school is said to have discovered that the chief concordant intervals (*συμφωνίαι*) could be represented by simple numerical ratios: the Octave (*τὸ διὰ πασῶν*, sc. *χορδῶν*) by the ratio 2 : 1, the Fifth (*τὸ διὰ πέντε*) by 3 : 2, and the Fourth (*τὸ διὰ τεσσάρων*) by 4 : 3. If a lyre string were stopped midway by a movable bridge, either half would give a note an octave higher than the note of the whole string; if the string were stopped at a point a third of the distance from one end, the remaining two-thirds would give a note a fifth higher than the whole string. It was thus demonstrated that music, more directly than the other arts, brought men into contact with Number, which for the Pythagoreans was the ultimate reality; music, or at least the study of music, was thereby justified in the eyes of serious men.

Plato's attitude to music is that the art is capable not merely of affecting the emotions temporarily but of permanently influencing the character. This point of view is clearly seen in his discussion of the musical education which would be suitable for the virtuous citizens of his ideal State (*Resp.* 398 c-399 d). He rejects styles of music (*ἁρμονίαι*) which are plaintive (Mixolydian and Syntonolydian) or effeminate (Ionian and Lydian), and leaves only the Dorian and Phrygian, which represent (*μυροῦνται*) courage and sobriety. In his later work, the *Law* (653 d-673 a; 795 a-812 c), his opinion is still unchanged that the training of the young in good and carefully selected music will contribute to the attainment of virtue.

Aristotle also regards music as important and discusses its uses in his *Politics* (8. 1339^a-1342^b). Less puritanical than Plato, he would allow all types of music for purposes of relaxation; but he holds that rhythms and melodies are representations (*μιμήματα*) of moral qualities and as such have an effect on the soul. For educational purposes, therefore, only the 'most ethical' types of music (*ἁρμονίαι ἠθικώταται*) should be used. At the same time he criticizes Plato for including the Phrygian, and would himself apparently confine instruction to the Dorian, which for him is the golden mean in music.

It is impossible to pass these opinions over as idle fancies when they are not only attested by two such different minds as Plato's and Aristotle's, but are implicit in many of the references to music in other writers (e.g. Aristophanes). The direct ethical effect of music may, indeed, have been exaggerated, as Aristoxenus hinted (*Harm.* 31) and as the Epicureans and Sceptics contended (cf. the *De musica* of Philodemus, 1st c. B.C.). Quite probably conventions and associations with poetic texts had much to do with the attribution of *ἦθος* to the modes; but at least it is evident that the Greeks associated their

various *ἁρμονίαι* with distinctive feelings and emotions; and the keenness with which they felt the differences between the modes is well illustrated by the story of Philoxenus (Arist. *Pol.* 8. 1342^b), who tried to compose his dithyramb 'The Mysians' in the Dorian but had to return to the appropriate *ἁρμονία*, which was the Phrygian. Furthermore, this attitude of respect for the power of music found expression in an artistic conservatism. In Argos, for instance, the purity of music was regulated by law; and at Sparta venturesome innovators are said to have had their instruments destroyed.

3. IN THE ROMAN WORLD. The cultivated classes under the Republic seem to have regarded music with tolerant contempt; Cato adduced as the final proof of the worthlessness of an opponent the fact that he sang ('præterea cantat'); practical music did not, as in Greece, form part of a gentleman's education. The status of professional actors and musicians was low (they were *infames*), but they gained some protection by organizing themselves into guilds, and we learn from Livy (9. 30) of a 'strike' in 311 B.C. by the *collegium tibicinum*. This story at least shows the importance attaching to the *tibia* in cult, since the absence of the musicians raised a question of *religio* (see MUSIC IN WORSHIP). The use of horns and trumpets in the cult of the dead was doubtless due to Etruscan influence, but the armed dance of the *Salii* and the songs of the Arval Brethren are likely to have been indigenous. In the field of entertainment, there was first an influence from Etruria (Livy 7. 2) and then from Hellenistic Greece, but music played a more important role in the plays of Plautus than in the Greek New Comedy. The Roman army made use of the *tuba*, the *cornu* (a large almost circular horn), and the *lituus*, all of which instruments had been developed by the Etruscans.

From the second century B.C. onwards, Greek and oriental influences were paramount, including the cults of Dionysus, Cybele, and Isis, with their characteristic instruments, which also penetrated into light entertainment. There was an influx of foreign musicians, but talented native amateurs make their appearance under the Empire and include an Emperor in the person of Nero.

Unlike the Greeks, the Romans developed a taste for large instrumental ensembles (Sen. *Ep.* 84. 9-10), but in this they may have been anticipated by the Alexandrians. They seem to have made no specific contribution to musical theory. Subjected first to Etruscan and then to Greek influences, they doubtless borrowed and assimilated much; in the absence of musical documents we are unable to assert or deny that indigenous elements survived. At least we can conclude, from literary and monumental evidence, that music played a considerable part in the popular life of Rome.

4. EVIDENCE FOR GREEK MUSIC. For knowledge of Greek music we may turn to: (i) actual fragments of musical scores; (ii) remains of musical instruments; (iii) later types of music supposed to be descended from the Greek; (iv) ancient treatises. (i) The musical scores are few and fragmentary; only one is claimed to be classical (see § 12). (ii) The few surviving auloi have lost their mouthpieces; despite patient research (e.g. K. Schlesinger, *The Greek Aulos*, 1938) no agreed conclusions have been reached about the scales they were constructed to play. (iii) It is not inconceivable that modern Greek folk-song retains some elements derived from the ancient art, but it is virtually impossible, after so many centuries of foreign influence, to define features which may be due to Greek inheritance. The influence of classical antiquity upon the music of the Eastern and Western Churches may have been much slighter than was formerly assumed. (iv) The most straightforward line of approach is provided by the treatises on music, though theory unchecked by

musical documents can be misleading (see § 7). A fifth possible source of illumination is the use of analogies drawn from other musical cultures, but these are difficult to apply profitably, except on a basis of agreed facts about the ancient music.

Of the theoretical books the earliest is the *Harmonics* (*Ἀρχαί* and *Στοιχεῖα*) of Aristoxenus (q.v.), which is of fundamental importance. Part of book 11 and the whole of book 19 of the ps.-Aristotelian *Problems* (*Προβλήματα*) are concerned with music, and probably include fourth-century material; Euclid's *Division of the Monochord* (*Κατατομή κανόνος*) contains a series of mathematically formulated propositions about musical intervals. A treatise *On Music* (*Περὶ μουσικῆς*), attributed (wrongly?) by the MSS to Plutarch, contains much historical material, derived partly from Aristoxenus. To the second century A.D. belong the *Introduction to Harmonics* (*Εἰσαγωγή ἁρμονικῆ*) of Cleonides (formerly attributed to Euclid), which gives a valuable outline of Aristoxenian theory; Theon of Smyrna's *Mathematics useful for reading Plato* (*Τὰ κατὰ τὸ μαθηματικὸν χρῆσима*), which includes excerpts from Archytas and other reputable authorities; Claudius Ptolemy's *Harmonica* (*Ἀρμονικὰ*), in three books, which is indispensable; the *Handbook of Harmonics* (*Ἀρμονικὸν ἑγχειρίδιον*) of Nicomachus of Gerasa; and the *Introduction to Harmonics* (*Ἀρμονικὴ εἰσαγωγή*) of Gaudentius. To the third century A.D. probably belong the three books *On Music* (*Περὶ μουσικῆς*) of Aristides Quintilianus and the *Introduction to Music* (*Εἰσαγωγή μουσικῆ*) of a certain Alypius, which is our chief source of information for the musical notations. To the fourth century A.D. belongs the *Introduction to the Art of Music* (*Εἰσαγωγή τέχνης μουσικῆς*) by an otherwise unknown Bacchius (*Βακχεῖος*). In Latin the chief works are the *De musica* of Boethius and the ninth book of the *De nuptiis Philologiae* of Martianus Capella.

It is obvious that most of these treatises are far removed in date from classical Greek music; and though much of their doctrine is traditional, we cannot always be sure when the writers are relying upon older authorities. Unfortunately their testimony is not unanimous in a number of important matters and they are silent about some topics on which information is desirable.

5. ANCIENT AND MODERN MUSIC. (i) The most striking difference between the music of the Greeks and that to which western Europeans are accustomed is that the ancient art made use of a large number of scales or modes, which, in the view of most authorities, differed from each other in the sequence of the intervals composing them and (probably) in tonality. It was to these modes that the Greeks attributed the varying ethical effects of music. Our Major and Minor scales are often called modes, but they give only a poor idea of modal music; for though the sequence of intervals is different and the Minor is distinguished from the Major by the flattening of its third and sixth notes, both scales have a common tonic or key note (actually the lowest note of the scale), in relation to which the importance and function of the other notes is determined. A better, though still imperfect, idea of the ancient modes may be obtained from Gregorian music, in which the tonal centre does not occupy the same relative position in every scale.

(ii) The second difference lies in the size of the intervals used in the modes. Our scales consist only of tones and semitones; the semitones (on the pianoforte at least) are made as nearly equal as possible, and twelve of them complete an octave. In Greek music tones and semitones were not all equal and the enharmonic *diess* (*δίεσς*, sometimes translated as 'quarter-tone') was smaller than any interval with which we are familiar. Neither modern nor Gregorian music can afford us any example of this wide variety of intervals; we must listen to Indian, Arabian,

five have simple ethnic designations. The range from the lowest note of the Hypodorian to the highest of the Hyperlydian was rather more than three octaves, and so corresponded to the combined capabilities of normal male and female voices. Though Aristoxenus is silent on the point, it is reasonable to suppose that the original purpose of the *tonoi* was to bring the various octave species within the same vocal range. That is why the pitch order of the *tonoi* is the reverse of the pitch order of the species of the same names; and why the terms *tonos* and *harmonia* are equated in some writers. Claudius Ptolemy (*Harm.* 2. 9) points out quite legitimately that since there are only seven species of the octave, only seven *tonoi* were really necessary. It is also worth noting that the use of the tetrachord Synemmenôn in the Immutable System provided a means of modulation from one *tonos* to another *tonos* a fourth higher; for the conjunction between the tetrachords Mesôn and Synemmenôn could be treated as if it were the conjunction between the tetrachords Hypatôn and Mesôn of another *tonos*: thus:

(d) *Genera and 'colours'*. So far we have been concerned only with tetrachords containing no other interval than a tone or semitone. The structure of the tetrachords themselves, however, admitted a number of variations known as *genera* (*γένη*) and 'colours' (*χρῶμα*). The two extreme notes of a tetrachord were regarded as fixed (*φθόγγοι ἐστῶτες*), while the position of the two inner notes (*φθόγγοι κινούμενοι*) was variable; and the two lowest intervals of the tetrachord were together called a *pycnum* (*πυκνόν*) if their sum was less than the remaining interval of the tetrachord. The *genera* were three in number: the diatonic (*γένος διατονικόν*), the chromatic (*γ. χρωματικόν* or *χρῶμα*), and the enharmonic (*γ. ἐναρμόνιον* or *ἀρμονία*). The diatonic itself was subdivided in the Aristoxenian theory into two 'colours', the High (*σύντονον*) and the Soft (*μαλακόν*); and the chromatic into three 'colours', the Tonic (*τοναιόν*), the Hemiolic (*ἡμιόλιον*), and the Soft (*μαλακόν*). If we take the tone as a unit, the intervals constituting the various kinds of tetrachords can be set out as follows:

High (<i>σύντονον</i>) diatonic	$\frac{1}{2}$	1	1
Soft (<i>μαλακόν</i>) " "	$\frac{1}{2}$	$\frac{2}{3}$	$1\frac{1}{2}$
Tonic (<i>τοναιόν</i>) chromatic	$\frac{1}{2}$	$\frac{1}{3}$	$1\frac{1}{2}$

When we make allowances for the fact that this doctrine of *genera* is only a theoretical systematization of the actual practice of musicians, it becomes obvious that a Greek composer had a great wealth of subtle intonations at his disposal, and that Greek melodies must have had a delicacy and fineness of outline to which the melodies of modern music can offer no parallel.

7. THEORY AND PRACTICE. The predecessors of Aristoxenus in musical theory were the Pythagoreans and the Harmonists (*ἀρμονικοί*). The Pythagoreans, however, were more interested in tracing numerical

relationships in concordant intervals than in establishing a comprehensive theory; and it is significant that the dying Pythagoras was reputed to have adjured his followers to study the monochord, which was a piece of scientific apparatus and not a musical instrument at all. As a whole, the school devoted its attention to the Dorian scale; and intervals whose ratios they evaluated were considered satisfactory only if they conformed to one or other of the favourite Pythagorean formulae, such as $x : nx$ or $x : x + 1$. The Harmonists, on the other hand, were much more interested in the practical art; but it is evident from what Aristoxenus himself tells us about their work (*Harm.* 2, 6, 36, 37, 40) that they were not capable of organizing their knowledge into a really homogeneous system of theory. They did not analyse all the scales, but restricted their study to the enharmonic ones whose compass was an octave; they interested themselves in the search for a small unit of measurement (cf. *Pl. Resp.* 531 a), the *diesis*, which they used in the construction of diagrams of close-packed intervals (*καταπύκνωσις*), without any regard for melodic or unmelodic sequences; and they were at variance with one another in their pronouncements about the order of the *tonoi* and the intervals which separated them.

The homogeneity of the system of Aristoxenus cannot be denied. It seems to provide a means whereby any melody, when reduced to its elements, might be related to a scale whose 'colour', *genus*, *species*, and *tonos* could be defined. But apart from the fact that no theory can profess to give more than the osteology of an art, the Aristoxenian theory, as it has come down to us, is unsatisfying.

(i) Underlying it all is the idea that sound can be regarded as a line, at any point of which the voice could rest (though not at all in succession); and that an interval, since it may be thought of as a linear distance between two such points, can be subdivided exactly into any given number of equal parts. But the Pythagoreans had already laid the foundations of a true acoustic science when they demonstrated that the size of an interval can properly be expressed only by a numerical ratio. There is, in fact, no such interval as a semitone, if by that term we mean an interval which taken twice will produce a 9 : 8 tone, for the ratio involved ($3 : 2\sqrt{2}$) is irrational. The intervals 18 : 17 and 17 : 16 can be called semitones, and 36 : 35, or 35 : 34, or 34 : 33, or 33 : 32 may be called 'quarter-tones'; but when Aristoxenus speaks of a *hemitónion* or a *diesis*, his vague description does not give us sufficiently precise information about Greek intonations.

(ii) In Plato and Aristotle and other writers we read of *ἀρμονίαι* most of which had ethnic names: Ionian, Lydian, Dorian, Phrygian. The word itself, when used in this musical sense, is most easily explained by the assumption that each *ἀρμονία* involved a new tuning of the lyre. Though Aristoxenus (*Harm.* 36) refers to those 'who confined their attention to the seven octave scales (*ἐπὶ ὀκταχόρδων* Westphal; *ἐπταχόρδων* MSS.) which they called *ἀρμονίαι*', he himself does not use the plural *ἀρμονίαι* in a technical sense. His octave scales are called *species* (*εἶδη τοῦ διὰ πασῶν*), and their names are not identical with those used for the *ἀρμονίαι*. There is amongst them no Ionian or Syntonolydian; and the names of three of them include the prefix *Hypo-* (*ὑπο-*) which is not found in earlier writers. Even if we identify the *species* with the *ἀρμονίαι* and equate, for instance, the Syntonolydian and Lydian of Plato with the Aristoxenian Lydian and Hypolydian respectively, it is quite impossible to believe that the *ἀρμονίαι* had their origin as *species* within a two-octave scale which itself evidently belongs to a comparatively advanced stage of musical development. It would be worth much

to know what modifications, if any, had to take place before the *ἀρμονίαι* could be theoretically treated as octave *species*.

(iii) A further obscurity, and one of considerable importance, concerns the form of the *species* in the chromatic and enharmonic *genera*. The problem is simple in the case of the Dorian *species* which is bounded by fixed notes (*φθόγγοι ἐστῶτες*) of the Greater Perfect System; for its enharmonic form would be: $1 \frac{1}{2} 2 1 \frac{1}{2} 2$. The enharmonic form of the Lydian, however, which is bounded by movable notes (*φθόγγοι κινούμενοι*) would appear to be: $\frac{1}{2} 2 \frac{1}{2} \frac{1}{2} 2 1 \frac{1}{2}$; and it is scarcely credible that such a sequence was ever a musical possibility.

(iv) Nothing is said by Aristoxenus about the tonality either of the Greater Perfect System or of the individual octave *species*. Yet if these *species* were virtually the old *ἀρμονίαι* or a developed form of them, we cannot understand them fully until we know what note had the function of a tonal centre in each. One of the ps.-Aristotelian *Problems* (19. 20) states that all the best melodies make a frequent use of Mese, and we may conjecture that this note was in fact a tonic. But unfortunately it is not clear whether the writer meant the Mese of the Greater Perfect System (i.e. a Mese *κατὰ δύναμιν*) or the fourth note ascending (i.e. a Mese *κατὰ θέσιν*) of any octave *species*.

So far we have mentioned only those deficiencies of the Aristoxenian theory which are evident from an examination of the system itself. Further problems arise when we try to relate it to other evidence. (i) Aristides Quintilianus (21-2) gives an account (possibly derived from some work of Aristoxenus himself) of the six *ἀρμονίαι* mentioned by Plato in the *Republic*. Of the scales which Aristides describes, only one (the Lydian) is identical with an Aristoxenian *species* (the Hypolydian); the Phrygian and Mixolydian have an internal structure somewhat different from the corresponding Aristoxenian *εἶδη*; the Dorian has an additional tone at the bottom; and the Ionian and Syntonolydian are less than an octave in compass. Several of them seem to involve a mixture of *genera*. There is no reason to reject in its entirety the evidence of Aristides, which, so far as concerns the Mixolydian, is in part confirmed by a passage of Plutarch (*De mus.* 1136 d); and the truth would appear to be that the old *ἀρμονίαι* were not parts of a homogeneous musical system. (ii) There is other evidence also for defective and anomalous scales used by Olympus and Terpander and analysed by Philolaus (Plut. *De mus.* 1134 f-1135 b, 1137 b-d; [Arist.] *Pr.* 19. 32; Nicom. 253 Jan.). (iii) In connexion with the older types of music, prominent mention is made (Plut. *De mus.* 1134 f, 1141 b; Aristid. Quint. 28) of intervals called *σπονδειασμός* (a rise of three *dieses*), *ἐκλυσις* (a fall of three *dieses*), and *ἐκβολή* (a rise of five *dieses*). Intervals of these magnitudes have a very unimportant place in the system of Aristoxenus (cf. his *μαλακόν* diatonic, § 6). (iv) Claudius Ptolemy (*Harmon.* 2. 14) has preserved the evaluations for the *genera* made by his predecessors and has added some of his own. He gives the size of the tone as 11 : 10, 10 : 9, 9 : 8, and 8 : 7; he states that the sequence 28 : 27, 8 : 7, 9 : 8, which is also given by Archytas (4th c. B.C.), was the standard diatonic tuning in his day. The smaller intervals of the enharmonic vary from 46 : 45, which is less than a quarter-tone, to 24 : 23, which is larger than a third of a tone; the chromatic intervals vary between 28 : 27 and 12 : 11. Though the enharmonic usually has an interval of ratio 5 : 4 (a major third) at the top, and the chromatic an interval of 6 : 5 or 7 : 6 (a minor third) at that place, in both *genera* the two lower intervals are of varying sizes; and it seems that the distinction between the *genera* is not as clear or as definite as the Aristoxenian theory postulates. (v) Though the widely varying dates (see § 12) of

the fragments of Greek music warn us not to press their evidence too far, it is noteworthy that they exhibit a number of melodic progressions which violate the doctrines of Aristoxenus.

8. THE LIMITS OF DOUBT. Despite the defects of the Aristoxenian system which have just been mentioned and the conflicting evidence from other sources, it would be widely accepted that, in the earlier stages, Greek music made use of a number of modal scales which, because they involved separate tunings of the lyre, were called *ἀρμονίαι*. As the compass of the lyre and cithara was extended, the relations between the *ἀρμονίαι* were more clearly apprehended and, at the expense perhaps of the elimination of some apparent anomalies, they came to be regarded as segments of a single two-octave scale based upon homogeneous tetrachords. On the other hand, we know nothing, apart from the evidence of Aristides Quintilianus and Plutarch, about the original structure of the *ἀρμονίαι*. We cannot say whether each of them had a diatonic, chromatic, and enharmonic form or whether the various *genera* and 'colours' were in practice associated with particular *ἀρμονίαι*. Nor can we make any positive assertion about the tonality of the *ἀρμονίαι* or of the octave *species*; the theoretical treatises are almost silent on the point and the musical fragments are not decisive.

9. INSTRUMENTS. Musical instruments (*ὄργανα*) of many types were known to the Greeks; it was therefore by definite preference that only the lyre and cithara among strings and the aulos among wind-instruments ever attained artistic importance. The lyre or cithara predominated in lyric poetry, though the aulos shared in the accompaniment of Pindar's odes and monopolized the dithyramb and the dramatic choruses; the lyre prevailed in Athenian education, the aulos had its place in social and military life; both were prominent in cult.

(i) *Strings* (*ἐντάτα*). The lyre (*λύρα*), of which the cithara (*κιθάρα*) was a more elaborate form, was characterized by strings of equal length, vertically strung and sounded by plucking. It thus differed from: (a) bowed types, which were unknown to Greece; (b) harps, with strings of unequal length, known but not employed in serious music (e.g. *ψαλτήριον*, *τριγωνον*, *σαμβύκη*). Pitch was regulated by the tension (and perhaps the thickness) of the strings; and, in the absence of a finger- or fret-board, each string would normally provide one note only, by contrast with the lute (*παιδοῦρα*, ? *σκιδαφός*), for which there is little or no evidence before the time of Alexander (*JHS* 1905, 62 ff.). We cannot, however, deny the possibility that (a) the octave-harmonic was obtained by stopping the string at its middle point (*διάληψις*); (b) the string was shortened by finger-pressure near the cross-bar to raise its pitch by a small interval. The strings (*χορδαί*, *νεύραι*), of gut or sinew, were stretched from a holder (*χορδοτόνον*) fixed to the body over a bridge to the cross-bar (*ζυγόν*) which joined the two side-pieces, where there was a tuning-apparatus of thongs or pegs (*κόλλοις*).

The sound-box of the lyre was formed of the carapace of a tortoise (*χελύς*), or a wooden structure of similar shape with ox-hide stretched over its concavity (cf. *Hymn. Hom. Merc.* 41 ff.); from it sprang two slender curved side-pieces (*πήγεις*, *κέρατα*) of horn or wood. The vaulted wooden body of the cithara was larger and more solidly built, the lower part of the arms constituting a substantial prolongation of the sound-box. The instrument rested against the body of the performer and was supported in position (as also was the lyre) by a belt (*τελαμών*) attached to his left wrist.

The *barbitos* (*βάββιτος* or *-ος*) was a variety of lyre having longer strings and therefore a lower pitch. The instrument of Sappho and Alcaeus, it is seen in art in convivial contexts. Two varieties of cithara can be distinguished

in vase-paintings: the more elaborate flat-based instrument of the professional citharodes, which first appears in the seventh century and can reasonably be associated with Terpander (see § 10), and a simpler instrument with rounded base, to which modern scholars have given the name of 'cradle-cithara'. The latter appears to be descended from a rudimentary cithara seen in artistic representations of the eighth century, to be identified with the *phorminx* or *kitharis* of Homer.

The *phorminx* is shown with from three to five strings (though Minoan and Mycenaean citharas already had seven or more). From the seventh century onward, seven strings become canonical for both lyres and citharas, and in art this number is seldom exceeded; though eight-stringed examples are seen even in the sixth century, we should not put too much trust in the painters' accuracy. There is literary evidence that in the later fifth century innovators such as Phrynis and Timotheus (Timoth. *Pers.* 242; Pherecrates ap. Plut. *De mus.* 1141 f) added strings up to the number of twelve; and this is to some extent confirmed by the monumental evidence. The strings were plucked by the left hand directly (*ψάλλειν*), by the right hand with the aid of a *plectrum* (*πλήπτειν*), but the respective functions of the two hands are not entirely clear. The left hand probably followed the vocal melody; it may have damped strings as well as plucking them. The right hand may have been used for preludes and interludes and such independent accompaniment as there may have been.

As to the *πηκτίς* and *μαγαδίς*, it is uncertain whether they were distinct from one another and whether they belonged to the class of lyre or (more probably) harp. They had many strings, which made playing in octaves possible: hence the term *μαγαδιζειν*, for doubling a vocal part at the octave.

(ii) *Wind* (*μπνευστά*). The *αὔλος*, commonly mis-translated 'flute', was akin rather to the clarinet or oboe. The exact nature of the vibrator is, despite a passage of Theophrastus (*Hist. Pl.* 4. 11. 4), a matter of uncertain inference, but it was probably a double-reed (*ζεῦγος*, *γλωττα*, *γλωττίς*). This was inserted into a cylindrical or slightly conical pipe, and the extrusion of the reed was partially hidden by one or more bulbs (*όλμοι*). K. Schlesinger, however, in *The Greek Aulos* (a mine of information about the behaviour of reed pipes) maintains that the double-reed gave place at a certain stage to a single-reed. The pipe, of reed, wood, bone, or ivory, was open at the lower end and pierced with lateral holes. Of these the early aulos had probably from three to five, which would seem to provide a very limited range. The Elgin auloi and the recently discovered Brauron aulos (BSA 1963), late sixth or early fifth century, have six, one of which may have been a vent-hole. Auloi were generally played in pairs (cf. the Latin *tibiae*), the pipes being often, though not always, held in position by a band (*φορβεία*) which passed round the cheeks and over the head of the player, assisting him to blow strongly. Since the pipes had each its own reed-mouthpiece, they may have spoken separately and together provided a more extended scale. If they were sounded simultaneously, one may have served as a drone (though there is no positive evidence for this), perhaps a variable drone; in some styles, it is not impossible that there was a rudimentary harmony between the notes of the two pipes (cf. Plut. *De mus.* 1137 b-d). The pipes were not always of the same length: in the Phrygian auloi, the left was longer, with a bell, and consequently lower in pitch. Of such a type, no doubt, were the *tibiae impares* of the Roman *pallata* (illustrations in Fleischhauer, *Musikgeschichte in Bildern*).

In the early period a separate pipe (or pair of pipes) may have been required for each mode (*άρμωμία*). Later the potentialities of the instrument were greatly enlarged,

particularly by Pronomus and the Theban school of the later fifth century. Length and the number of holes were increased (the longest of surviving auloi has 15 or 16, the shortest 6), and a device was introduced by which the holes not required for a particular scale could be closed by a perforated metal ring operated by a small projection (*κέρας*). In this way it was possible to play a number of different modes on one pair of auloi; and instruments were no longer classified according to mode, but by general range of pitch. Aristoxenus (ap. Ath. 634 e) distinguishes five types (in descending order of pitch): *παρθένιοι*, *παιδικοί*, *κιθαριστήριοι*, *τέλειοι*, *υπερτέλειοι*; and he states (*Harm.* 20) that between them they embraced a range of more than three octaves. Furthermore, a practitioner of the highly individualistic art of aulos-playing had at his disposal many professional tricks such as overblowing, cross-fingering, partial obturation of holes, regulation of the reed and of his own breath, whereby he could extend the capabilities of his instrument.

A pipe held horizontally is occasionally seen in later art, and this may be the *παγίανλος*, whether it was a genuine cross-flute or an aulos in which the reed was introduced obliquely by a lateral tube. The *syrinx* (*σῦριγξ*) was blown directly, like a flageolet, and might consist of a single pipe (*σ. μονοκάλαμος*) or of a raft of pipes (*σ. πολυκάλαμος*). In Greece the pipes (commonly seven, though more and less are shown) were of equal length, but stopped internally at graduated intervals; the 'stepped' variety is Etruscan and Roman. The pitch was high. The *syrinx* was doubtless part-ancestor of the water-organ (*ὕδραυλις*), in which rows of graduated auloi were supplied with air hydraulically. This instrument, invented by Ctesibius of Alexandria in the third century B.C., became popular in the Roman world.

Brass instruments (with bone mouthpiece) were primarily employed for military purposes. Both the straight trumpet (*σάλπιγξ*, *tuba*) and the curved horn (*κέρας*, *cornu*) were known. The Etruscan-Roman *lituus* was straight in the upper part, but bent back strongly and flared at the extremity.

(iii) *Percussion*. Tambourines (*τύμπανα*), cymbals (*κύμβαλα*), and castanets (*κρόταλα*) infiltrated from orgiastic cult (e.g. of Dionysus and Cybele) into the realm of light entertainment.

10. *HISTORY*. The history of Greek music overlaps the history of Greek poetry, for the main function of music was to accompany poetic texts. Thus the principal types of musical composition correspond largely to the types of poetry, and our scanty sources mention as leading composers many who are better known to us as poets: Archilochus (evidently an important influence), Sappho, Pindar, Sophocles; unfortunately, no detailed account of the musical side of their work can be given. There are others, however, known primarily as musicians; and we know of types of performance that were primarily musical.

Musical history really begins in the seventh century with Terpander and Archilochus. In the background are folk-song, work-song, song (personal or choral) occasional to the principal events of human life, and above all cult-song. In the background is the epic tradition: a Phemius or Demodocus singing epic verse to the lyre. In the background is also an elusive foreign influence; for Greek music was not racially pure. Recent research into Egyptian, Babylonian, and Palestinian music has shown possible points of similarity; indeed, the Greek tradition itself avowed an influence from the Orient, not only in the names of certain modes, but in the legendary figure of Olympus the Mysian. But the contrast is not a simple one, and Olympus himself is a composite figure, representing a fusion of the Hellenic and the oriental. The instrument with which he is con-

nected, the aulos, first appears in art during the seventh century, but it would be rash to assume that it was previously unknown in Greece; the antithesis of Hellenic lyre and Asiatic aulos needs to be used with great caution, not least because the Greek cithara has itself close connexions with the Orient. Doubtless new styles and techniques were introduced from the East in the early seventh century, but we are not in a position to separate the new from the old.

Terpander (mid 6th c.) came from Antissa in Lesbos, but his activity is associated with Sparta. His chief claim to fame is that he first impressed his individuality upon the traditional *νόμοι κιθαρωδικοί* so that they were handed down as his personal compositions. Styles, rather than definite melodies, in origin (see Sachs, *Musik d. Altertums* (1924), 64), these *νόμοι*, which were vocal solos accompanied by the cithara, became the subjects of competition. The texts are said to have been epic, with a prelude written by the composer-executant; the melody was severe and eschewed modulation. About the same time the obscure *Clonias* (of Tegea?) performed the same service for the analogous *νόμοι αὐλωδικοί*. But more famous names connected with the aulos are those of *Polymnestus* of Colophon and *Sacadas* of Argos. The former's fame was recognized by Pindar (fr. 178), and Plutarch speaks of him as an innovator who, nevertheless, did not depart from the severe style. Sacadas was the most famous executant of the sixth century. For not only was he singer-composer of *νόμοι αὐλωδικοί*, but player-composer of the famous *αὐλητικός νόμος Πυθικός* (a purely instrumental piece, dealing with Apollo's victory over the Python) in which he won in 586 the first of three successive victories at the Pythian Games. The accounts that late authorities give of the structure of this piece reveal an element of 'programme-music'. It is interesting too that purely instrumental music (*ψαλλὴ αὐληγίς*) should have won and kept an important place in a Greek festival at all; even solo cithara-playing (*ψαλλὴ κιθάριστις*), which would seem a bleak entertainment, found its way into the Pythian and other festivals.

Doubtless the main triumphs of Greek music in this period were in choral lyric, an indissoluble complex of poetry, melody, and dance, which culminated with Pindar, Simonides, and the early tragedians. To later—and moralizing—theorists this was the epoch of the 'educative' style, in contrast to the 'theatrical' or 'popular' style that developed in the fifth century. The process of transition cannot be traced in detail. An important factor may have been the evolution of the aulos (see § 9), which increased the available range of melody and facilitated modulation. String-players, too, envious of the freedom of their fellows, added strings to the cithara (see § 9). Furthermore, the balance of importance between choir and instrumentalist began to change. The chief factor, however, was mental rather than technical. Individualism was in the air and convention suspect; and the interpreter of a tradition intimately associated with religion became a virtuoso bent upon giving pleasure to an audience. Thus variety (*ποικιλία*) took the place of simplicity: the melodic range was extended, modulation (and perhaps vocal and instrumental embellishments) cultivated; rhythmical structure became freer; the poetry mattered less in comparison with the melody.

The types of music especially affected were the dithyramb and the *νόμος κιθαρωδικός*. The latter was revolutionized by *Phrynis* of Mytilene. The former, under *Melanippides* and *Cinesias*, broke away from strophic structure into free verse (cf. Pickard-Cambridge-Webster, *Dithyramb*², 38 ff.). *Timotheus* of Miletus (c. 450-360) was a master of both forms; and, indeed, the distinction between them was blurred, for while *Timotheus* seems

to have introduced a choral element into the *νόμος*, *Philo-xenus* (his contemporary) introduced *solī* into dithyramb. The impure poetic style favoured by composers of *νόμοι* and dithyramb alike can be judged from the *Persae* of *Timotheus*, a *νόμος*, which has in great part survived. The rhythms are varied but uninteresting; the diction is turgid, obscure, and undistinguished. But the work is a libretto rather than a poem; and we should not condemn the music unheard, though we may suspect that lack of taste was not confined to the poetic text. How far the new style affected other types of music it is hard to say. Certainly it was not unchallenged in the fourth century; and, when we come to the earliest of our substantial fragments, the Delphic *Paeans*, we find a strong archaizing tendency. We gather from Polybius (4. 20), however, that the music of *Philo-xenus* and *Timotheus* had become 'classical' in the Arcadia of the second century B.C.

II. THE NOTATIONS. (i) *Melodic*. To note their melodies the Greeks used alphabetic forms, written, in the case of poetic texts, above the syllables. Two systems of notation for the fifteen *tonoi* are recorded in late authorities (notably *Alypius*), who also assert that one was used for vocal, the other for instrumental melody (*σήματα τῆς λέξεως, τῆς κρούσεως*). This is confirmed by the Berlin papyrus, where both notations are so employed. It should be observed, however, that (a), with the possible exception of the *Orestes* papyrus, we have no case of the employment of both in the same piece; (b) the second Delphic Hymn is noted in the instrumental notation, which suggests that, where vocal and instrumental melody were identical, the notations might be employed indifferently.

The history of the notations is obscure and their interpretation controversial. The vocal notation can hardly have preceded the general adoption, towards the end of the fifth century, of the Ionic alphabet on which it is based; the instrumental notation, the origin of whose forms is uncertain, may well be earlier, but, being designed for a system of *tonoi*, it implies a developed theory. That system was not, however, the fifteen *tonoi* of *Alypius*. For instance, in both notations the signs above Dorian *nete hyperbolaiôn* repeat those an octave below with the addition of an acute accent and probably did not belong to the original scheme; at the lower end the instrumental notation has adapted the forms below Hypolydian *proslambanomenos* from the vocal notation. It would seem, then, that the original scope of the instrumental notation was two octaves and a tone, and that it was designed for a restricted number of *tonoi* with restricted range.

The instrumental notation is characterized by triads, in which the same form appears in three positions (e.g. $\text{F } \underline{\text{L}} \text{ } \text{J}$), representing the three notes of an enharmonic *pycnon* (see § 6 d). Thus the highest note is a semitone above the lowest, and the highest and lowest notes of the various triads combine to form a semitonal series of fixed pitch. But this notation as applied to the chromatic and diatonic shows some peculiarities: all three *genera* have a common sign for *parhypate*, despite its varying pitch; and, while the sign for diatonic *lichanos* correctly implies an interval of $1\frac{1}{2}$ tones from *hypate*, chromatic *lichanos* is identical with the enharmonic, unless distinguished by a diacritical mark. There were thus two conflicting principles at work, those of absolute pitch and relative function; and it is to this conflict, and to the adaptation of the original enharmonic scheme to additional *genera* and *tonoi*, that many of the much-canvassed anomalies are due: namely, the employment of the same sign with different values, of different signs with the same value. (Sachs, in *Zeitschrift f. Musikwissenschaft* vi, proposing a radically new interpretation, relates the instrumental notation to a pentatonic tuning of the lyre; but

see CQ 1956, 169 ff.) The vocal notation corresponds to the instrumental note for note, but replaces the triads by a continuous alphabetic series. Most of the letters of the alphabet are employed (in descending order) within the range of the central octave of the Dorian *tonos*; above and below are altered forms of the same series.

(ii) *Rhythmical*. Symbols could be used to elucidate the rhythm. (a) The signs —, ˘, ˘˘, ˘˘˘ placed over a note indicated that its length was that of two, three, four, and five time-units (or χρόνοι πρώτοι) respectively. The last two are known from theory only. (b) A rest (χρόνος κενός), or a protraction of the preceding note, was indicated by Λ or ˘, which might be used in conjunction with the signs of quantity: e.g. ˘˘. (c) Dots (στιγμαί) might be used to distinguish the structure of the metrical foot, and ancient authority states that the function was to mark the *arsis* (ἀρσις). On the whole our fragments confirm this, but the evidence is complicated (see *Symb. Osl.* 1955, 73 ff., *POxy.* (xxv) 117 ff.). (d) A subscript curved hyphen might be used to bind together notes sung to the same syllable.

12. *THE FRAGMENTS*. The following constitute the corpus of surviving Greek melody.

A. *In papyri*. (i) *PRain.* G 2315 (c. 200 B.C.). A musical setting of Euripides *Orestes* 338–44 may be Euripidean, since the poet's own score was apparently extant in the time of Dionysius of Halicarnassus (*Wien. Stud.* 1962). (ii) Cairo 59533 (Zenon), c. 250 B.C., contains a brief fragment, possibly from a tragedy (*JHS* 1931). (iii) *PBerl.* 6870 (possibly an anthology, written later than A.D. 156, contains: (a) twelve lines of a paean in a Hellenistic manner; (b) three lines for instrument only; (c) four lines in a lyric metre addressed to the suicide Ajax; (d) three lines for instrument; (e) half a line of lyric. The instrumental pieces have no discernible connexion with the vocal fragments they follow; all five make elaborate use of rhythmical notation (*Sitz. Berlin* 1918). (iv) *POxy.* (xv) 1786, third century A.D., contains a Christian hymn in a rough-and-ready anapaestic metre; melodic and rhythmical notation are Greek, but the antecedents of the melody might be oriental. (v) *POsl.* inv. no. 1413 (an anthology?), second century A.D., contains two short fragments, one anapaestic, one iambic, both probably from Hellenistic tragedies, not obviously connected with one another (*Symb. Osl.* 1955). (vi) *POxy.* (xxv) 2436, second century A.D., contains a fragment perhaps from a satyr-play; the music, if not the text, is post-classical. (vii) *PVienna* G 29.825 a–f. Brief fragments of various dates (*Wien. Stud.* 1962). (viii) G 13763 (*Hermes* 1966). (ix) *PMich.* inv. no. 2958, second century A.D.: contains a fragment, apparently of tragic dialogue (*JEG. Arch.* 1965).

The date of composition, with the possible exception of (i), is in all cases unknown.

B. *On stone*. (x–xi) The most extensive fragments of Greek music that survive are two paeans, both seriously incomplete, found in 1893 during the French excavations at Delphi. The second can be dated 128–127 B.C. and ascribed to a certain Limenius; the first may well have the same date and authorship. Both are written in paeanic or cretic metre, which, in the absence of rhythmical notation, suggests 5/8 time. The second paean is followed by a brief prosodion in an Aeolic metre. Melodically, these two paeans strikingly illustrate the Aristoxenian scale-system, tetrachordal structure being clearly marked and the 'standing-notes' emphasized (see § 6 d). (xii) An inscription of the second century B.C. or later, found at Aidin near Tralles, presents us with a brief but intact and attractive melody, commonly known as the 'Epitaph of Seikilos'. The words are a kind of skolion in free iambics, the rhythm being elucidated by notation.

C. *In manuscript*. (xiii–xvi) Four melodies have come down among the manuscripts of the ancient treatises. (xiii–xiv) The Hymn to the Muse should in fact be regarded as two separate pieces, both of uncertain date, but earlier than (xv–xvi). (xv) The Hymn to Nemesis is attributable to Mesomedes, a contemporary of Hadrian. (xvi) Similarity of style suggests the same authorship for the Hymn to the Sun. (xvii) Short snatches of melody occur in Bellermann's *Anonymus* (§§ 97–101, 104). Their apparent purpose is to illustrate types of rhythm.

The melody to the opening lines of Pindar's first Pythian ode, published by A. Kircher in his *Musurgia Universalis* (1650), is under such grave suspicion of being a forgery that its evidential value is negligible (see *CPhil.* 1936, 120 ff.).

13. *MELODY, RHYTHM, AND THE GREEK LANGUAGE*. Two important principles of composition emerge from a consideration of the fragments. Both in melody and in rhythm a Greek composer had less apparent freedom in setting words than his modern successors. This is explicable from the nature of the Greek language: (a) by virtue of its pitch-accent it possessed, even when spoken, an inherent melody—in the phrase of Aristoxenus, λογῶδες τι μέλος; (b) it possessed clearly marked long and short vowels, which formed the basis of quantitative metres.

(a) In the majority of extant compositions this word or sentence melody is respected: an accented syllable is set to a note which is not lower and is frequently higher than other syllables of the same word (for details see *Symb. Osl.* 1955, 64 ff.). Yet this principle is not observed by all the vocal fragments or by all equally. They fall into three groups: (1) in iii (a), v, vi, ix–xiv exceptions are absent or negligible; (2) in i, iii (c), vii a–b the accent seems to be altogether disregarded; (3) iv, xv, xvi show the influence of the accent, but with more frequent exceptions. The phenomena of (3) may reflect the gradual breakdown of the pitch-accent which was taking place during the period of their composition. This explanation will not, however, account for (2), which includes the *Orestes* fragment; but it should be observed that i is strophic, v may well be; and, if (as is probable) strophe and antistrophe were sung to the same melody, the accent was then bound to be disregarded.

(b) The rhythms of Greek music were practically identical with the metres of Greek poetry; and, where the natural quantities of the syllables are distorted, such a distortion is also a concern of the metrist. Only in the Berlin Paean (where — — — is rhythmized as, e.g., ˘ ˘ ˘) is there a considerable divergence between rhythm and metre. In judging this apparent restriction of the musician's freedom, however, it must be remembered that the Greek lyric metres themselves were elaborate partly because they were musical and choreographic as well as poetic rhythms.

ANCIENT SOURCES. (a) *Theoretical Works*. (i) *Collections*. M. Meibomius, *Antiquae Musicae Auctores Septem* (2 vols., Amsterdam, 1652, containing: Aristoxenus, Euclid with Cleonides, Nicomachus, Alypius, Gaudentius, Iacchus, Aristides Quintilianus, Martianus Capella) C. von Jan, *Musici Scriptores Graeci* (1895, containing: Aristotelis loci, ps.-Arist. *Problems*, Euclid, Cleonides, Nicomachus, Baechius, Gaudentius, Alypius). MUSIC IN WORSHIP. Both in Greece and Italy music, vocal and instrumental, formed an important part of worship at all periods. To begin with Homer, the embassy sent to Chryse in *Iliad* 1. 472-4 spend the whole day after their arrival singing a hymn (*παῖνον*) to Apollo, who is pleased with it. This paean remained typical of his worship, and the quintuple rhythm characteristic of it was named after it. In like manner the dithyramb was appropriated to Dionysus (q.v.). Neither of these, however, was exclusively the property of Apollo or Dionysus; e.g. paeans were composed to Asclepius (see Powell, *Coll. Alex.* 133 ff.). The singing of some kind of hymn (q.v.) appears regularly to have accompanied any formal act of worship, and instrumental music (strings and wind) also is commonly mentioned: cf. SACRIFICE.

Much the same is true for Italy. Hymns are continually met with, some traditional, as those of the Salii (see MARS) and Arval Brothers (Henzen, *Acta Arualium*, cciv). Instrumental music was so regular and necessary an accompaniment of ritual (e.g. Cic. *Har. Resp.* 23, the proceedings are vitiated 'si . . . tibicen repente conticuit') that the *collegium tibicinum et fiducium qui sacris publicis praesto sunt* formed an ancient and important guild with a holiday of its own, cf. MINERVA. One reason for this was doubtless to drown any slight noises which might be of ill omen.

Very little is known of the style of this music, but it is fairly certain that there was no prohibition of the introduction of new forms. H. J. R.

MUSONIUS RUFUS, GAIUS, of Volsinii, Stoic, seems to have been born before A.D. 30 and to have died before 101/2. About A.D. 60 Rubellius Plautus was banished by Nero to Asia Minor, and Musonius followed him. After Rubellius' death he returned to Rome, but in 65-6, on the discovery of the Pisonian conspiracy, he was banished to Gyaros. He returned to Rome, probably under Galba. He was again banished by Vespasian, but returned again in the reign of Titus. We do not know of his having written books, but many of his apophthegms and discourses have been preserved. Among his pupils were many philosophers (notably Epictetus) and many leading Roman citizens.

Ed. O. Hense (1905); one letter in R. Hercher, *Epistolog. Graec.* 401-4; M. Pohlenz, *Die Stoa* (1955-9); M. P. Charlesworth, *Proc Men* (1936), 33 ff.; C. E. Lutz, *YCIS* 1947, 3 ff. W. D. R.

MUTINA, a prosperous wool-trading town in Cisalpine Gaul (q.v.), controlling important roads and passes (Strabo 5. 218); modern *Modena*. Although Boian and possibly Etruscan settlements existed here from early times, Mutina is first mentioned in 218 B.C. when already a Roman stronghold (Polyb. 3. 40—inexact; Livy 21. 25). Rome apparently held Mutina uninterruptedly, making it a citizen colony in 183 which Ligurians sacked in 177; the Romans immediately restored it (Livy 39. 55; 41. 16). Mutina is famous for its successful resistance to Pompey in 78 and to Antony in 43 (the *bellum Mutinense*) (Plut. *Pomp.* 16; App. *BCiv.* 3. 49 f. etc.). Subsequently it is rarely mentioned. E. T. S.

MYCENAE (Μυκῆναι, Μυκῆνη) situated in the north-east corner of the Argive plain in the foothills of Mounts Prophet Elias and Zara, dominated the roads to the north and Corinthia, to the west and central Peloponnesus and, through Tiryns and Argos, the sea-way, some 8 miles away, to the Cyclades and the east. Perseus was its reputed founder, but excavations proved that it was inhabited in the Early Helladic Period (c. 2500-1900 B.C.) by people akin to the pre-Hellenic population of the Cyclades and Crete. Then the site was already called by its non-Greek name. In the Middle Helladic period (1900-1660 B.C.) the site was taken over by Greek-speaking Indo-Europeans and towards the end of that period its importance and wealth increased immeasurably, as proved by Grave Circles A and B. The excavation of Circle B in 1952-4 proved that the shaft graves were sepulchres and not depositories as was suggested by Evans.

The Middle Helladic settlement occupied the entire hill. The palace of the rulers, who were buried in the shaft graves, perhaps stood on its summit. No remnants of that palace survive nor traces of an original citadel. Concurrently with the last shaft graves and cists were developed chamber tombs used for the people and tholos or beehive tombs used for royalty; these were produced to the end of the Mycenaean Age.

Phases A and B of the LH III period (c. 1400-1200 B.C.) form the great era of Mycenae. Then were constructed the Cyclopean walls and the palace on the summit. Of its first Cyclopean enceinte, built about 1340 B.C., there survive the north and parts of the west and south walls. Grave Circle A was outside the citadel. Well towards the middle of the thirteenth century the citadel was extended to the west and south, the Lion and Postern Gates were erected, Grave Circle A, now included in the citadel, was rearranged, and the palace on the summit was rebuilt, especially its Megaron, the guest room unit. In the last quarter of the thirteenth century the Great Ramp was built, the south-west staircase was added to the palace, and towards the end of the century the north-east extension was built with its subterranean cistern. Storage rooms in the thickness of the north wall were then constructed. Within the citadel were built other structures for officials and for public use such as the granary. Beyond the citadel in LH IIIB times were erected the 'Treasury of Atreus' and the 'Tomb of Clytemnestra', the most perfect examples of tholos tombs. The people lived in the area around the citadel in groups of houses surrounded by the graves of their relatives. The graves especially prove that Mycenae was well-populated and prosperous to the end of the LH IIIB period.

The second half of the thirteenth century B.C. witnessed a number of destructions. The latest, occurring about 1200 B.C., has been attributed to the Dorians or to the so-called Illyrian migration; perhaps they resulted from internal dissension and strife reflected in the stories of murders in the royal family of Mycenae. The destructions

resulted in the weakening of the State, in the breaking down of law and order in the country which forced people to emigrate elsewhere, thus bringing about the depopulation of the area indicated by the graves of the LH IIIC period. That period (c. 1200-1120) is characterized by progressive decline culminating in the final catastrophe of Mycenae at the hands of the Dorians c. 1120 B.C.

In Geometric times few people built their homes on the hill and again in the Archaic period the summit was terraced and a temple was constructed from which sculptured fragments survived. A small contingent of Mycenaeans was at Thermopylae in 480 B.C. and its soldiers fought at Plataea in 479 B.C. Some time c. 468 B.C. Mycenae was destroyed by Argos, but in the third century B.C. its walls were repaired by the Argives, a temple was built on the citadel, while its slopes were covered with houses. A lower fortified city was developed and a theatre was built. The town gradually decayed and by the time of Pausanias seems to have been inhabited only by a few shepherds.

MYCENAEAN CIVILIZATION developed in the mainland of Greece in the Late Bronze Age. It is subdivided into Periods I (c. 1580-1500 B.C.), II (c. 1500-1400), and III (c. 1400-1120), the last of which is considered to be the most characteristic. In essence it is a continuation of the Middle Helladic culture transformed by Minoan influences, which were very strong in Period I, reached their apogee in the first half of Period II, and then declined while native elements reasserted themselves; yet Minoan elements persist to the end.

Graves found at Mycenae, Prosymna, Laconia, West Messenia-Triphylia, etc., constitute the main source of information for Periods I and II. The shaft graves of Circles A and B of Mycenae, forming the transition from MH to Mycenaean, provide evidence of affluence, of advanced techniques in metal and precious stone work sometimes indistinguishable from Minoan. Bronze swords, gold ornaments decorated in repoussé and granulation, objects made of hammered sheets of metal, of gold wire drawn to form spiraliform patterns, miniature engravings on the bezels of gold rings or on gems, articles of rock crystal, including the duck bowl from Grave Omikron, are among the examples of the jeweller, the lapidary, and the metal worker. Especially should be noted swords with engravings on their blades and the inlaid daggers from Circle A with wild life and hunting scenes, the earliest examples of a technique that persists throughout the Age. Sculpture is represented by stelai from Grave Circles; the work is primitive, made probably in imitation of wood carving, but it marks a departure from Minoan practice. Vases of exceptional merit were produced; they exhibit good fabrics, true and pleasant forms, and a geometric and naturalistic plant decoration—spirals, ivy sprays, etc.—in a lustrous paint on a slipped surface. In Period II is developed the Palace style with an exuberant decoration painted on three-handled jars, and the Ephyrean goblets with a restrained decoration mostly of a single element.

Concurrently with the later shaft graves and cists family chamber tombs were made and used for the people and tholos or beehive tombs for royalty. The origin of these tombs is not established, but their development is well defined. Very few tholos tombs have been found even partially intact: the Vaphio and Routsis tombs of

Period II, and the Dendra tombs of IIIA. Chamber tombs with their contents intact are numerous, and they help to establish the burial customs of the people. Inhumation was used universally.

Period III is the era of Mycenaean civilization *par excellence*. Tholos and chamber tombs are the usual types. Of the former the most advanced are the Treasury of Atreus and the tomb of Clytemnestra in Mycenae and the Treasury of Minyas at Orchomenus; all three were erected after 1300 B.C. The construction of citadels and palaces is the most characteristic feature of the period. Mycenae, Tiryns, Gla provide the best-preserved citadels. Their fortification walls, built in Cyclopean style, range from 12 to 45 feet in thickness and perhaps stood to a height of 40 feet. A main and a postern gate gave access to the citadel, but sally ports and other smaller openings were usual. Better known is the Lion Gate of Mycenae, named after the relief placed over its lintel. It dates from c. 1250 B.C.

Palaces are known from Mycenae (cleared by Tsountas), Tiryns (cleared by Schliemann), and Pylos (cleared by Blegen). They exhibit an orderly plan with a megaron forming an important and often the principal constituent. The Megaron, a rectangular roofed structure with one of its short sides open, facing a court open to the sky, is a typical mainland structure with a long history going back to the Neolithic period. In the three examples mentioned it comprises a portico—Homer's *aiethusa*, a vestibule—*prodomos*, and a main room—*domos*, with a circular low hearth in its centre. Four columns surrounding the hearth supported the roof, and the throne of the king, placed against the wall to the right of a person entering, added grandeur to the *domos*. Corridors and other compartments, including a bathroom and guest rooms, were arranged around the Megaron all decorated with gay frescoes, similar to those of the Minoan world from which the art was derived, but now are added hunting and war scenes. The artistic merit of furniture is indicated by the Pylos tablets and by fragments of ivories found by Wace, which evidently were applied as inlays. The construction is rubble masonry with timber casings covered with plaster, and the wooden columns were of Minoan type, with shafts tapering downwards. Architectural decoration, exemplified by the facades of the Treasury of Atreus, consists mainly of elongated rosettes, the Mycenaean triglyph, and spirals carved on coloured marble slabs. In general the post and lintel system was used, though the corbel vault was employed in the construction of the tholos tombs and the inverted V arch in the roofing of passages. Subterranean fountains and an elaborate system of roadways characterize the period.

The goldsmiths continued to produce small and larger articles used for adornment and the repoussé and granulation techniques were still in use. Gold beads impressed with a design—rosettes, shells, shields, etc.—were strung together to form necklaces or applied on garments and furnishings. Blue paste and faience were used in making beads and pendants, and glass paste enlivened sculptured motifs; perhaps this paste was Homer's *kyanos*. Ivory carving, already used in Periods I and II, became very popular. The raw material, imported from Syria, was made into pyxides with elaborate carvings, into small rectangular plaques bearing crested griffins and sphinxes carved with exquisite feeling and decorative sense, into mirror handles with figure compositions, into small figured forms—columns, eight-figured shields, small animals—even into female figurines. An outstanding example of ivory carving is the group of two women and a boy found by Wace. Light touches of colour, even gilding, may have enhanced the decorative effect of these ivories. Gems, in smaller numbers than before, continue to be produced, indicating that this art was not abandoned.

The metal workers produce large and small vessels of bronze and lead, swords and daggers, helmets and corselets; a good example of a bronze corselet was found recently in a tomb at Dendra.

The potter's industry now reached its maximum prosperity. Vases produced in IIIB present such uniformity and lack of local variations that the term 'Koine' is applied to their art. The pictorial style, with chariot representations, etc., from Rhodes and Cyprus forms the only exception. Usually the designs are stylized, often placed in a metopic arrangement, and seem to be unimaginative. Their draftsmanship, however, is good and the quality of the vases excellent. Among shapes the stirrup jar, the high stemmed kylix, the deep two-handled bowl, and the crater are popular. In Period III clay figurines covered with a painted decoration become very common. The female figurines fall into three main types: the crescent or Ψ type, the ovoid or Φ , and the kouro-trophos type. Their exact significance is not established to the satisfaction of all, but perhaps they stand for the divinity of blessing (type Ψ) and divine nurses (type Φ and the kouroutrophoi). During Periods IIIA and B Mycenaean civilization finds its greatest expansion over the Mediterranean area and commercial activity reaches its apogee. Its products are found from southern Italy to Syria and Palestine and its trading stations from Taranto to Ras Shamra in Syria.

A script known as Linear B, developed from the Minoan Linear A, was used in IIIB. It is not certain whether this script was developed in the mainland or in Crete, whether it was widely used and understood or was the special preserve of a class of scribes and a few officials. We find it incised on clay tablets or painted on stirrup jars especially. Numerous tablets were found at Pylos and Chios; limited numbers come from Mycenae and Thebes. Inscribed vases are known from Orchomenus, Thebes, Eleusis, Mycenae, and Tiryns. The inscriptions on the tablets, thanks to the monumental achievement of Michael Ventris, can be partially read with assurance (see MINOAN SCRIPTS). The tablets are inventories, containing accounts of flocks and land, records of assessment, of distribution of materials for production, of commodities produced, and of deliveries. No tablets have been found thus far with literary, judicial, or historical texts. The surviving texts are brief, unimaginative, and dry, but they form a most important source of information for the religious, political, and social structure of the Age. The language of Linear B is Greek; consequently the Mycenaeans were Greek-speaking Indo-Europeans. The political regime at Pylos and Chios was an autocratic monarchy with a centralized, bureaucratic administrative system. The *wanax* exercised supreme authority. Next to him was the *lawagetas*, 'the Leader of the Host', who, like the *wanax*, was given a *temenos*, a slice of land, as a prerogative of his office. Below these we find a number of officials major and minor—*tereta*, *eqeta*, *korete*, *porokorete*, *qasireu*, *moroqa*, etc.—whose duties, prerogatives, and relative positions remain uncertain. Land was held by the *wanax*, by individuals, and by the *damos*, the community, and a well-established system of land tenure existed at Pylos. There was a special class of priests and priestesses; artisans were divided into well-defined classes, and slaves were numerous. Whether this political system prevailed at Mycenae, Athens, and Thebes cannot be determined as yet, but their Cyclopean walls and palaces may indicate their rulers' great authority.

Period IIIC, following a series of destructions and the breaking down of law that occurred c. 1200 B.C., is one of decline. An early effort at recovery in the Argolid proved short-lived and gradually decay set in which terminated with the destruction of the large citadels of Mycenae and Tiryns c. 1120 B.C. by the Dorians, who,

taking advantage of the disintegration of the States, delivered the *coup de grâce* to the Mycenaean world and civilization. The close-style is the best and the granary type the most common pottery produced in IIIC. In some areas of the mainland, i.e. the east coast of Attica, and in the islands of the Aegean prosperity continued, but gradually those areas, too, passed into the less brilliant proto-historic era.

MYGDON (Μυγδών). In *Iliad* 3. 184 ff. Priam relates that he went as an ally to a Phrygian army gathered under Mygdon and Otreus to fight the Amazons on the Sangarius. The Coroebus of Verg. *Aen.* 2. 407 was Mygdon's son, [Eur.] *Rhes.* 539. Mygdon is apparently the eponym of the Thracian or Phrygian Mygdones. H. J. R.

MYIA, said to have been daughter of Pythagoras, is mentioned in Clem. *Strom.* 4. 19. 121, 224 as a Pythagorean philosopher. A letter purporting to be by her is printed in R. Hercher, *Epistolog. Graec.* 608.

MYLASA (Τὰ Μύλασα), modern *Milâs*, the principal non-Greek city of Caria and capital of the country under the Hecatomnid rulers. It is probable (*BSA* 1961, 98 ff.) that the early seat of government was at Peçin Kale, some five miles south of Milâs, and that the city at Milâs was founded by Mausolus. This same ruler later transferred the capital to Halicarnassus. The Hellenistic and Roman city at Milâs continued to be of importance, but its site at the foot of a mountain was considered ill-chosen (Strabo 659). Mylasa had three notable temples of Zeus, namely Zeus Osogos, Zeus Carius, and Zeus Stratus, the last situated in the hills to the east at Labraynda and approached by a paved Sacred Way. After Magnesia in 189 B.C. Mylasa was excepted from the grant of Caria to the Rhodians, and in 167 joined in an uprising of the subjects of Rhodes on the mainland; this was suppressed, but immediately afterwards the Senate revoked its gift of territory to Rhodes (Polyb. 21. 46, 30. 5). In 40 B.C., when Q. Labienus, at the head of a Parthian army, overran Caria the Mylasans were persuaded by Hybreas, a distinguished citizen and rhetorician, to resist him; for this Labienus punished the city savagely, but it soon recovered, probably with help from Augustus (Dio Cass., *Dittenberg.* *SIG* 768). Strabo's assertion (659) that Physcus was the port of Mylasa is an error: the name of the port (modern *Kulluk*) was Passila (Steph. Byz. s.v., cf. *Stadiasmus* 291). Among the ruins at Milâs the most notable are a handsome mausoleum of Roman date and an arched gateway bearing a relief of a double axe, a symbol which also occurs on the coins of the Hecatomnids and of Mylasa itself. G. E. B.

MYLITTA, a goddess, certainly akin to Ishtar and perhaps specially concerned with childbirth, worshipped at Babylon and identified by Herodotus (1. 131) with Aphrodite. In honour of Mylitta every Babylonian woman, once in her lifetime, had to prostitute herself to a stranger: she sat in the temple area, and remained there till accosted by a stranger in the name of the goddess. The fee offered might be of any amount, and was

dedicated to Mylitta (Hdt. 1. 199; cf. LXX, *Epist. Jerem.* 42-3 [c. 300 B.C.]). See PROSTITUTION, SACRED.

F. R. W.

MYLLUS. The *Suda* and Zenobius (5. 14) mention him as a writer of Old Comedy. But he may be merely one of the typical figures of farce — 'The Squinter': cf. Cratinus, fr. 89.

MYOS HORMOS, 'Mussel-Harbour', *Abu Scha'ar* on the Egyptian coast of the Red Sea, was founded by Ptolemy II (274 B.C.) and connected with Kenah on the Nile by a well-equipped desert-trade. Very important for oriental trade, it was later surpassed by Berenice.

Warrington, *Indian Commerce*, 6 ff.

E. H. W.

MYRINA (ἡ Μύρινα), one of the cities of the Aeolian League, situated on the coast north of Cyme at the mouth of the river Pythicus or Titnaeus (now *Koca Çay* or *Güzelhisar Çayı*); supposedly founded by Myrina, queen of the Amazons; of the Greek settlement nothing is recorded. In the Delian League Myrina was assessed at one talent, the highest figure in Aeolis after Cyme. Destroyed by the great earthquake of A.D. 17, the city was rebuilt with Tiberius' help, apparently under the name of Sebastopolis (Pliny *HN* 5. 121). Otherwise Myrina is chiefly remarkable for her possession in imperial times of the ancient temple and oracle of Apollo at Gryneum (temple of white marble in a beautiful grove; Strabo 622, Paus. 1. 21. 7) and for the hundreds of terracotta figurines from the tombs excavated by the French in 1880-2. These tombs are no longer to be seen, and the ruins in general are scanty.

E. Potliet-A. J. Reinach, *La Necropole de Myrina* (1887); G. E. Bean, *Aegean Turkey* (1966), 106 ff.

G. E. B.

MYRON, Greek sculptor, fl. c. 480-445 B.C. Native of Eleutherae, on the boundary of Boeotia and Attica. Reputed pupil of Ageladas and rival of Pythagoras (Pliny 34. 57). He was the greatest representative of the period of experimentation in Greek sculpture, and is said to have been much interested in symmetry (Pliny 34. 58). A detailed description by Lucian in his *Eikones*, 4, has made possible the identification of Myron's Discobolus, 'Discus-thrower', in several marble copies of Roman date. The best preserved is a statue formerly in the Lancelotti Palace, now in the National Museum of the Terme in Rome. Its appearance on engraved gems testifies to its fame. Another major work by Myron was a group of Athena and Marsyas, described by Pliny (34. 57) and recognized in representations on Roman coins of Athens, on a red-figured oinochoe in Berlin, on a marble vase in Athens, and in several marble statues. The Marsyas is best represented in a marble statue in the Lateran Collection, the Athena in one in Frankfurt. The contrast between the quietly standing goddess and the agitated Marsyas is well brought out. Of the attributions made to Myron on grounds of style one of the most persuasive is perhaps that of an Anadumenus, 'a youth winding (a fillet) round his head', reconstructed by Amelung from various parts; likewise a standing Heracles in Boston and Oxford. His famous cow has been thought to be reproduced in a bronze statuette in the Cabinet des Médailles.

G. M. A. R.

MYRONIDES, Athenian general at least in 458/7 and 457/6 B.C., known by his leadership of 'the oldest and the youngest' (Thuc. 1. 105. 4) in the Megarid against a Corinthian army, and by his victory at Oenophyta over the Boeotians. He is probably not identical with the ambassador Myronides, sent with Cimon and Xanthippus to Sparta in 480, and one of the Athenian generals at

Plataea. Comic poets praised Myronides as a representative of the 'good old times'. Eupolis in his *Demoi* puts him on the stage; he probably died shortly before the performance of this comedy (412).

Ehrenberg, *PW*, s.v., Suppl. vii (superseding vol. xvi); J. M. Edmonds, *Mnemos.* 1939.

V E.

MYRSILUS of Methymna (fl. c. 250 B.C.), author of a history of Lesbos (Λεσβικά) who was interested in early folk movements.

FGH iii. 477.

MYRTILUS, Athenian comic poet and brother of Hermippus (q.v. 1), won a victory at the Lenaia c. 430 B.C. (*IG* ii². 2325. 125). We have two titles, *Τιτανόπαρες* and *Ἐρωτες*.

FCG ii. 418 ff.; *CAP* i. 251-4; *FAC* i. 474 ff.

K. J. D.

MYRTIS, Boeotian poetess, said to have been the teacher of Corinna (*Suda*, s.v. *Κόρινθα*) and of Pindar (id., s.v. *Πίνδαρος*). Corinna (fr. 15) blames her for competing with Pindar. No fragment of her work survives, but Plutarch (*Quaest. Graec.* 40) gives an abstract of her poem on the Boeotian hero Eunostus.

J. M. Edmonds, *Lyra Graeca* (1952), iii. 2-5; Page, *Poet. Mel.* C. M. B.

MYSTERIES were secret cults which generally include mystic ideas. Their characteristic is that certain initiations were needed for admission. It has been suggested that this is due to the fact that the old mysteries of Greece, at least for a part, go back to an emotional pre-Greek religion which survived in secret societies. In regard to certain mysteries, e.g. those of Eleusis and Phlya, it is also to be taken into consideration that they were family cults to which the head of the family admitted whom he pleased.

The gods with whom the old Greek mysteries are connected were Demeter and Dionysus, and the Eleusinian Mysteries are the most famous of all. In origin they were an agrarian cult, originating in the Mycenaean Age, akin to the Thesmophoria and celebrated in Boeotia (Sept./Oct.) on the occasion of the sowing. After the union of Eleusis with Athens, some time before 600 B.C., the Athenian State took charge of the mysteries. The *mystai* gathered at Athens where an announcement was made excluding murderers and those who spoke a foreign language. The *mystai* bathed in the sea, and the sacred things which previously had been brought to Athens were brought back to Eleusis in the great lakechos procession (lakechos may be a personification of the shouts that accompanied it, and was later confused with Dionysus; a Linear B tablet from Cnossos, however, suggests that he is a relic of the Minoan divine child). In the evening the mystery rites began in the mystery hall at Eleusis which was illuminated by many torches. In spite of many ingenious hypotheses the chief rites are unknown. We hear of *λεγόμενα*, *δεικνύμενα*, *δράμενα*, (1) things recited, from which the Eumolpidae, 'those who sing beautifully', have their name; (2) things shown, from which the chief priest, the *ιεροφάντης* (see *HIEROPHANTES*), has his name; (3) things performed, by the priests or the *mystai* or by both. There were three stages, *μύησις*, initiation in the Lesser Mysteries at Agra(e) on the Ilissus, *τελετή*, the preliminary, and *εποπτεία*, the highest rite, to which the *mystai* were admitted the year after; the name indicates that the *epoptai* 'saw' something. The Homeric hymn to Demeter, composed before Eleusis was united with Athens, gives some information concerning the preliminary rites, the fast, the sitting on a chair decked with a ram's skin, the drinking of the *kykeon*. The information concerning the highest rites which is found only in ecclesiastical authors, in particular what relates to sexual

symbols by which the *mystes* became a son of the goddess, a matter of which modern scholars have made much, is to be regarded with caution; so is the statement that the highest mystery shown was a corn-ear.

The rape of Kore-Persephone by Pluto is the central subject of the hymn, and it has been suggested that in the mysteries this rape and the bringing back of Kore to Demeter were dramatically represented. There were two pairs of deities: the Mother and the Maid and Pluto and Persephone, who is identical with Kore. Triptolemus, the hero of agriculture, and Eubuleus (q.v.) were also given a certain role. The myth that during four months of the year Kore was absent, dwelling with Pluto, and then was reunited with her mother and dwelt eight months in the upper world is to be referred to the seed-corn which, from the harvest in June to the sowing in October, was stored in subterranean silos and was brought forth at the festival of the sowing: the Corn-maiden was reunited with the Corn-mother. She was also wife of Pluto, the god of the wealth, i.e. the corn store, and Lord of the Underworld. The hymn ends by promising, to those initiated, wealth and a happy life in the Underworld, of which other authors speak confidently: the *Frogs* of Aristophanes proves that this happiness consisted in the continued celebration of the mysteries in the Underworld. Moral notions came to be associated with the mysteries, and righteousness and gentleness were added to ritual purity. At the end of the sixth century B.C. the conception of agriculture as the foundation of a civilized and peaceful life arose; Triptolemus was its hero. Since the end of the fifth century B.C. individual edification came more to the front. The Eleusinian Mysteries had no fixed doctrine; they consisted in rites which might be interpreted variously, provoking various individual experiences and thus they were able to conform to the religious needs of every age. They were so impressive that to the end of paganism they were the most venerated part of Greek religion.

There were other mysteries of Demeter, those at Agrae near Athens (see above under 2), those at Phlya in Attica, which were old but remodelled according to the ideas of a later age, at Pheneus in Arcadia, and at Andania in Messenia which were revived (or instituted) after the liberation of Messenia. The orgia of Dionysus (see DIONYSUS) which were celebrated only by women were mysteries in a certain sense. So were the Orphic mysteries (see ORPHISM). Dionysiac religion lent itself readily to mystical ideas, but the Dionysiac mysteries mentioned in Greece, e.g. those of Lerna and the Herois at Delphi, seem to be late creations. In the Hellenistic age Dionysiac mysteries developed and flourished; Ptolemy IV regulated them by an edict, and the repression of the Bacchanalia (q.v.) by the Roman Senate is well known. Many Dionysiac mystic cults are recorded from the Roman age. The mysteries of the Phrygian god Sabazius, who was akin to Dionysus, are found at Athens at the time of Aristophanes and at that of Demosthenes, a sign of the growing propensity for foreign and mystic cults: another is the popularity of the mysteries of the Cabiri (q.v.) at Samothrace. The Cabiri were especially venerated as the protectors of seafarers, but we know very little of the cult; in the 'Cabirion' near Thebes it seems to have been influenced by Orphic ideas. The propensity for mystic cults grew in the Hellenistic age and still more in Roman times and was satisfied by cults introduced from the Orient, those of the Great Mother and Attis, Isis and Osiris, Mithras. We cannot here discuss details (see the respective articles), but may note certain general features. These mysteries were in a certain measure bound up with syncretism; the supporters of paganism in its last days were often initiated into various mysteries. Religion was detached from the old ties, the family and the State, and

was individualized; man was able to choose his gods. The adherents of a certain cult (especially foreign) formed associations, sometimes headed by professional priests, an oriental feature. The religious precepts were more detailed and binding than before. There were sacred symbols and rites with magical efficacy, purifications, asceticism, baptisms, sacraments. The adherents were sometimes divided into two classes; sometimes there were several grades of these. The highest promise of the mysteries was a happy after-life. The rise of dualism which considered the corporeal world as evil stressed the need of salvation which was conferred by participation in the mysteries: they promised even the deification of man. The myth was a symbolic expression of the doctrine and the god was the prototype of man, suffering, dying, and rising to a new life. See also AFTER-LIFE.

The literature is copious. As regards Eleusis it is summarized and commented upon in the very critical study of G. E. Mylonas, *Eleusis and the Eleusinian Mysteries* (1961), see also Nilsson, *GGR* i. 677 ff.; D. Sabbatucci, *Saggio sul misticismo greco* (1965).

M. P. N., J. H. C.

MYTHOGRAPHERS. Since mythology was much studied in antiquity, at least to the extent of collecting and systematizing the traditional stories, and commenting on them in the light of rather crude and shallow theories (as that the myths were philosophical allegories, or had arisen from misunderstandings of ambiguous phraseology, tendencies exemplified by Heraclitus and Palaephatus respectively, see below), we hear of a number of writers on the subject and the works of a few survive fairly complete. The movement may be said to start with the school of Hesiod (q.v.; *Theogony* and *Ehoiai*). It certainly may properly be taken to include sundry of the early logographers, such as the two or three writers called Pherecydes, Acusilaus of Argos, Hellanicus, and Herodorus (see Rose, *Handb. Gk. Lit.* (1951), 296 ff.), for although their aim was generally to write history, they used of necessity for the earlier periods the only material available, namely myths. Later, the voluminous writings of Callimachus (b. c. 310 B.C.) and other Alexandrian scholars included many treatises more or less purely mythological in content; foreign mythologies also were discussed by Berosus and Philon of Byblos (Rose, op. cit. 367).

The composition, however, of compendia of mythology is relatively late, although some semi-philosophical works, such as the absurd treatise of Euhemerus (q.v.) and the rationalizing essay of Palaephatus (Rose, 369), might be considered as types of annotated handbooks of the subject; they are related in their way to Heraclitus' little book on Homeric allegories and Cornutus' Stoic treatise on the inner meaning of myths (ibid. 355, 411). All the surviving works fall not earlier than the time of Augustus, and most are later. One, the *Bibliotheca* of the so-called Apollodorus, of whose personality nothing is known, is valuable for the good information possessed by the author and his not infrequent citations of his sources, direct or indirect. It consists of three books; the rest is lost, though something is preserved in an epitome surviving in two forms. This work was an attempt at a complete mythical history of Greece; the other surviving treatises specialize. Parthenius, the earliest (contemporary and friend of Cornelius Gallus), collects love-stories, primarily as poetic material for Gallus to work up. The Pseudo-Eratosthenes, epitomizing, it would seem, a treatise of the real one (b. c. 275 B.C.), is himself much later; his subject is catasterisms, i.e. the metamorphoses of terrestrial persons and objects into constellations. Antoninus Liberalis, whose name shows him not earlier than the second century A.D., collects metamorphoses, but not those into stars. The incompetent

author of the *Parallels* which have come down under the name of Plutarch finds, or more commonly invents, Roman stories which are parallel to Greek ones. He is to be dated to the second century A.D.

Latin has not left us many such works, though not a few were written, e.g., by C. Julius Hyginus, Augustus' librarian (Rose, *Handb. Lat. Lit.* 3 (1954), 446). The author known as Hyginus who wrote the *Fabulae* (more properly *Genealogiae*) whereof we have a late and bad series of extracts may have been contemporary with the Antonines (ibid.); his so-called *Poetica Astronomica*, if it is his, largely depends on the genuine Eratosthenes, probably not directly. The *Mitologiae* of Fulgentius (three books) may be of about the end of the fifth century; the three miscellaneous collections known as the *Mythographi Vaticani* (ed. Bode, 1834) are medieval, but contain, amid many blunders, some scraps of material not found elsewhere.

H. J. R.

MYTHOLOGY. Although etymologically the word means no more than the telling of tales, it is used in modern languages to signify a systematic examination of the traditional narratives of any people, or all peoples, with the object of understanding how they came to be told and to what extent they were or are believed, also of solving various other problems connected with them, such as their connexion with religion, their origin (popular or literary), the relations, if any, to similar stories told elsewhere, and their chronology, relative or absolute. The examination of folk-tales (*Märchenforschung*) is really a branch of mythology, but has grown to such proportions, owing to the abundance of material, that it may be regarded as a separate discipline and will receive only brief mention here.

The most characteristic object of mythological study is the myth proper. This may be defined as a pre-scientific and imaginative attempt to explain some phenomenon, real or supposed, which excites the curiosity of the myth-maker, or perhaps more accurately as an effort to reach a feeling of satisfaction in place of uneasy bewilderment concerning such phenomena. It often appeals to the emotions rather than the reason and, indeed, in its most typical forms seems to date from an age when rational explanations were not generally called for. For example, it was commonly said (Hdt. 7. 129. 5) that the gorge of the Peneus had been created by Poseidon (q.v.) cleaving the mountain-chain which formerly closed in Thessaly on that side. To Herodotus himself this was merely a picturesque way of saying that the gorge had been formed by an earthquake, a solution very like the 'cataclysmic' school of geological theory once popular in modern Europe. But it seems far more probable that the originator of the story had a vivid mental picture of the gorge, which to his eye suggested a great cut, being hewn out by a gigantic and powerful being, and that, finding the picture satisfactory to his imagination, he was not troubled with any question as to its probability. This is not to say that no myth contains intellectual features, for many of them do; to take a crude example, the originator of the quaint tale of the deceiving of Zeus by Prometheus (Hes. *Theog.* 535 ff.) must have asked himself why those parts of a victim which were burned on the altars of the celestial gods were the least valuable. Late myths often show signs of elaborate speculation, e.g., the identification of Virbius (see DIANA) with Hippolytus (q.v. 1) in Verg. *Aen.* 7. 761 ff. clearly arises from a sophisticated and learned explanation of the facts that Diana was worshipped at Aricia along with a male being and that horses were not allowed in her grove. The only male associated with and subordinate to Artemis, with whom Diana had long been identified, was Hippolytus; now he had been brought to life by Asclepius

after being killed by his own team; he must therefore be Diana's attendant and the taboo on horses must arise from him, and her reluctance to have anything more to do with such dangerous creatures.

Myths therefore deal principally with the doings of gods, their ritual and their relationships to one another, or else with natural phenomena in some way striking, and they are characteristically aetiological, having for their aim to furnish an explanation of something. If the main characters of the story are human, or supposedly so, and the tale concerns their doings in battles or other adventures, it is usual to speak, not of myth but of saga or legend. Here the mental process giving rise to the story seems to be different. A real event of some kind, such as a raid or a great and dangerous hunt, impresses those who take part in it and also their contemporaries; it continues to be told from generation to generation, often getting into the hands of a professional maker (finally a professional writer) of such narratives, and so acquiring all manner of additions, modifications, and re-handlings intended to make it a better story. Nevertheless, it regularly has behind it the original fact, which may obtrude itself in curious ways (e.g. in the ballad of Chevy Chase, which springs from the historical Battle of Otterbourne, the Scots are divided into three parts and attack from higher ground, though the rest of the fighting has been changed almost past recognition). Even if the story is pure fiction, it will be modelled upon real semi-historical narratives, and may then be conveniently called pseudo-saga.

The *Märchen* (see FOLK-TALES; neither that nor 'fairy-tale' is a wholly satisfactory equivalent) seems always to have been told for pure amusement, with no basis in speculation or fact.

Finally, it must be realized that any two, or all three, of the above forms may be almost inextricably blended in any given story; thus the tale of the Argonauts (q.v.) has manifest elements of *Märchen*, and the adventures of Heracles (q.v.) have also laid myths under contribution.

In order to reach such conclusions as the above, it is necessary to have a sufficient body of material, carefully examined to show its age and origin; else the investigator will perpetually be misled into taking a late or foreign story for the genuine product of the people he is studying, e.g. such a narrative as that in Ovid, *Fasti* 2. 305 ff., either for a genuine part of the Greek tradition concerning Heracles or a native Italian story throwing light on the nature of Faunus, instead of what it is, a typical Alexandrian humorous aetiology, perhaps Ovid's own invention. We may therefore look upon K. O. Müller (1797-1840) as in some sense the father of modern mythology, owing to his consistent emphasis on the historical origins of Greek traditions, i.e. the time and place, so far as they could be discovered, when the earliest form of each tale appeared. With him may be bracketed a slightly earlier investigator, C. A. Lobeck (1781-1860).

Hardly less important for the researcher in any given branch of mythology, e.g. that of Greece, is a knowledge of similar stories told elsewhere, especially among peoples likely to have influenced those he is studying. Here a great service was performed by Max Müller, whose use of Sanskrit material led investigators in the late nineteenth century to examine Greek (and other) material against a comparative background, thus getting a perspective such as earlier researchers had not had. It needed only to widen the scope of comparison, and this was done chiefly by Andrew Lang.

Some account of the progress of the subject is given in any good modern manual of classical mythology, e.g. Nilsson, *GGR* 12 13 ff. For some methodological considerations see Rose, *Modern Methods in Classical Mythology* (1930) For light thrown on Greek myths by art see especially C. Robert, *Bild und Lied* (1881). H. J. R.

MYTILENE (or **MITYLENE**; the former was the official form), the chief city of Lesbos (q.v.), situated in the south-east of the island, with a fine double harbour, and facing the Anatolian mainland. The population was predominantly Aeolian—both Sappho and Alcaeus resided in Mytilene. In the sixth century B.C. overseas expansion led directly to war with Athens, indirectly to *stasis*, only relieved by the mediation of Pittacus. Under Persian control Mytilene participated in the forlorn hope of the Ionian Revolt. Its two secessions from the Delian Confederacy (428 and 412) resulted in the loss of its fleet, its fortifications, and much of its land, and brought it to the verge of destruction. During most of the fourth

century, however, it was a faithful ally of Athens. In 333 it fell to Memnon, but was soon retaken by the Macedonian fleet. After Alexander's death Mytilene passed successively under Antigonus', Lysimachus', and the Ptolemies' rule. Through tactful diplomacy it kept on good terms with Rome, becoming a favourite holiday resort. Its revolt against excessive taxation following the Mithridatic War led to the storming of the city by Minucius Thermus (80), but Pompey restored its freedom, and this privilege, though suspended by Vespasian, was confirmed by Hadrian.

N

NABATAEANS, a people of north-Arabian caravan-traders, who achieved great wealth by conveying south-Arabian goods to the Mediterranean. In 312 B.C. Antigonus, Alexander's successor, vainly tried to conquer their capital, Petra (q.v.). Their kings also remained independent of the Seleucids. In 169 B.C. Aretas I held Moabitis; in c. 96 B.C., Aretas III (q.v.) occupied Damascus, but withdrew before Tigranes in 70; in 66 he besieged Jerusalem, until Scourus compelled him to leave Judaea. The Nabataeans thenceforward became allies and vassals of Rome under their kings: Obodas II (probably c. 62–c. 47), Malchus I (q.v. 2: c. 47–30), Obodas III (30–9), Aretas IV, q.v. (9 B.C.–A.D. 39), Malchus II (c. 40–71), Rabulus (71–106). About 30 B.C., however, they lost their northern possessions around the Hauran. Trajan in A.D. 106 transformed their kingdom into the Roman province of Arabia. Their territory still extended, by that time, over Sinai, the port of Aela, and the coast of the Red Sea to Leuce Come. At this port and at Hejra, the caravanners took over Arabian incense and myrrh, Persian pearls, Indian spices, perfume, and cotton, and Chinese silk. The Nabataeans used Aramaic for their inscriptions. Their main deities were the vegetation-god Dusares, and Allat, a warrior goddess of the morning star. The ruins of Petra are among the most spectacular in the Near East.

Starcky, in *Bulletin Archéologique* xviii, no. 4 (1955), and *Suppl. au dict. de la Bible* vii (1964), cols. 886 ff.; N. Glueck, *Deities and Dolphins, the story of the Nabataeans* (1966); J. I. Miller, *The Spice Trade of the Roman Empire* (1969), see index.

H. S.

NABIS, son of Demaratus, probably descended from the Spartan king of the latter name (q.v.), followed Machanidas in 207 B.C. as guardian of the young Spartan king, Pelops, and on Pelops' death (of which he was accused) seized the crown. Forming a mercenary guard, he drastically restored the revolutionary programme of Cleomenes (q.v. 2) in alliance with the Cretan pirates. In 204–3 he raided Megalopolis, but was in 201 repelled from Messene and in 200 defeated by Philopoemen. In the Second Macedonian War he gained Argos, betrayed to him by Philip V, but went over to Flamininus, only to find himself in 195 charged with tyranny and forced to give up Argos and the Laconian ports. In 193, attempting to regain the ports, he was subdued by Philopoemen and Flamininus. He was assassinated in 192 in an Aetolian *coup d'état* in Sparta. A revolutionary type, his career and policy have suffered unduly in the Achaean tradition of Polybius.

A. H. McD.

NAEVIUS, GNAEUS, of Italic stock from the neighbourhood of Capua (Gell. 1. 24), in close contact with Greek cities and Roman colonies. He served in the First Punic War (264–241 B.C.—he himself said so, Gell. 17. 21. 45). In 235 B.C. he was active on the Roman stage. He was outspoken and offended the Metelli (one insult—*fato Metelli Romae fiunt consules*, implying that the Metelli had no ability for high office and showing by its iambic metre that it was delivered from the stage—was long remembered, cf. Cic. in *Verr.* 1. 29). About 204 B.C. (as can be inferred from Cic. *Brut.* 60), he was imprisoned (cf. Pauli Festus s.v. *barbari* with Plaut. *Mil. Glor.* 210 ff.), and later perhaps went into exile, for, under the year 201 B.C., Jerome says that he died at Utica. Later unfounded gossip connected him with the great Scipio Africanus (cf. Gell. 7. 8. 6), but it is the quarrel with the Metelli which is well attested (Caesius Bassus ap. *Gramm. Lat.* vi. 266 knew a public reply by them in Saturnians—*malum dabunt Metelli Naevio poetae*). See LIBEL AND SLANDER in Rome, § 3.

Tragedies: very scanty fragments and some six titles (two coincide with titles of Livius Andronicus—perhaps Naevius readapted the same originals). One important fragment from the *Danae* (5 R.) *eam nunc esse inventam probris compotem scis* is a bacchiac tetrameter but, since it reports Danae's disgrace, it must represent a messenger-speech in trimeters—so Naevius, like Livius (q.v. 1), must have produced *cantica* of his own from trimeter speeches. A decisively new step taken by Naevius was the production of original tragedies from Roman material—*fabulae praetextae*. Three examples are known, the *Romulus*, the *Clastidium* (the winning of the *spolia opima* by M. Claudius Marcellus in single combat against the Gaul Viridomarus in 222 B.C.), and the *Lupus* (the story of the twins).

Comedies: some twenty-eight titles are known but the fragments are very meagre. One, from the *Tarentilla* (75 ff. R.), describing a girl flirting in a circle of young men, gives some idea of his vigour and liveliness. Otherwise the fragments simply make clear a considerable linguistic debt on the part of Plautus to Naevius.

Bellum Poenicum: this was an epic (the division into seven books was the work, a century later, of C. Octavius Lampadio), written in old age (cf. Cic. *de senect.* 50), and regarded as his most important work by later scholars (the epitaph in Gell. 1. 24 refers only to it). The arrangement of the fragments is a matter of controversy, but it

seems possible that Naevius began with his account of the First Punic War and that the mythological sections, indicated by the fragments, were introduced in a series of digressions throughout the work. Certainly book iii contained a large part of the 'archaeology'; but scepticism is necessary on details. The most interesting mythological fragments indicate that, to some extent, Naevius was Virgil's predecessor in his account of the wanderings from Troy and that he even brought the Trojans to Carthage to meet Dido (fr. 23 Morel). It is even harder to judge the style of the *Bellum Poenicum* from its fragments than that of Livius Andronicus' *Odyssea*: the metre is the same Saturnian, there is a similar use of elevated archaisms, alliteration emphasizes the solemnity of the style which cannot, however, avoid sometimes giving the impression of bald prosiness, despite the invention of compound adjectives like *argutentens* and the introduction of a traditional epic theme like the description of a shield (the probable explanation of fr. 19 Morel). Yet, in spite of shortcomings, this was an entirely original venture in Latin, and a long step forward from Livius Andronicus' 'translation' of Homer.

NAISSUS (modern *Niš*) in Moesia (after Diocletian in Dardania), first visited by Roman troops in 75/72 B.C., was probably the earliest permanent military camp in Moesia. Though of great strategic importance, little is known of its history: it became a *municipium* under M. Aurelius or later. Here Claudius II decisively defeated the Goths in A.D. 269. Frequently visited by Roman Emperors, especially by Constantine the Great, who was born at Naissus, it was destroyed by the Huns in 441, but was partially restored. Under Justinian Naissus flourished anew, but was seriously threatened by the Slavs. It was destroyed or at least sacked by the Avars in 596, but continued to exist as a Slav town.

F. A. W. S.

NAMATIANUS, RUTILIUS CLAUDIUS, the author of the *De Reditu Sui*, an elaborate poetical itinerary, was of Gallo-Roman extraction, probably from Toulouse. An adherent of the old paganism, he yet held under Honorius the offices of *magister officiorum* (A.D. 412) and *praefectus urbi* (414). He had been well trained in the schools of grammar and rhetoric and had a sound knowledge of Greek. Biographical and self-revealing, his poem comes to us in two books, the first of which begins abruptly, while the second is a fragment (68 lines). In Sept. 416 or Oct. 417 (but see Lana in bibliog.) he left Rome to look after his estates in Gaul, which, like Italy, had suffered from barbarian inroads. In two months, by the safer sea route, he reached Luna and here the poem breaks off. He probably reached Gaul, as the poem could not have been composed in its present form during the journey. Besides presenting in rhetorical fashion descriptions of the coastal scenery of Etruria, the poem mirrors both contemporary events and the author's outlook—as well as the minds of the pagan nobility, with whom he shared the belief in Dea Roma and Rome's glorious mission which he celebrates in a long rhetorical eulogy of the *regina pulcherrima mundi* based, perhaps, on a speech by Aelius Aristides on the same theme. He resented the prevailing opposition to paganism. Hence his invectives against Judaism, monasticism, and Stilicho, the barbarian general (then dead), who had burned the Sibylline books; for to Namatianus and his class anti-

paganism and the barbarians were the forces that were undermining ancient institutions and disintegrating the Empire. His lucid, though rhetorical, Latinity and his accomplished elegiacs show that he had studied the best models in Latin literature.

F. J. E. R.

NAMES, PERSONAL. I. GREEK. Greek personal names exemplify the normal Indo-European pattern. One name was the rule both for men and women, and most names were compounded of two elements and honorific in meaning (*Ἀματο-κράτης*, *Κλεο-βοῖλη*, cf. Vinda-farna, Vladi-mir, Siegfried, Bron-wen). Simple names included shortened forms of compound names (*Νικίας*) and names indicating personal characteristics (*Σίμων*), associated circumstances (*Δίδυμος*), and so on. Many names incorporated the name of a deity (see next article). There was a wide variety of possible terminations. The choice of names was immense and was not restricted by law or rigid custom, though there were tendencies such as that of giving a boy the name of his father's father. In Homer patronymics (*Ἀτρεΐδης*, etc.): forms like *Ἀτρεΐων* and the Aeolic *Τελαμώνιος* are less frequent) occur freely with and instead of single personal names, but in classical times they either denote a *genos* (q.v.) or have become personal names without patronymic force; and fathers' names are added, when necessary, in the genitive, this and other determinatives indicating *genos*, deme, or city, though required in particular contexts, were never used in address. Nicknames (*Ἀλακκόπλουτος*) were not transmitted to descendants. Hellenistic rulers often had both nicknames (*Ἀντήρης*) and honorific (including divine) surnames (*Φιλοπάτωρ*, *Σελήνη*). Slaves sometimes had names like those of free persons, but were more commonly given names indicative of origin (*Θεσσαλίς*), appearance (*Ξαθίας*), qualities (*Ὀνίσκος*), etc.

II. ITALIAN. The Romans and other peoples of Italy, including the Etruscans, shared a system of personal nomenclature which differed sharply from the Indo-European pattern in giving every man and (in principle at least) every woman two or more names, and those generally simple and seldom honorific. This system was established before our records begin; and how it grew up, and what traces, if any, of the Indo-European pattern can be discerned in it, are difficult questions. The two basic names were the *praenomen* or personal name and the *nomen* or name of the *gens* (q.v.). Most Roman and many other Italian men had one, sometimes more than one, additional name (*cognomen*). These 'tria nomina' were characteristic of Roman citizens (Juv. 5. 127, Plut. *Mar.* 1).

2. If any of these three types perpetuates Indo-European practice it must be the *praenomen*, and there are perhaps indications that originally it stood alone. Moreover, some *praenomina* contain honorific or divine elements (Servius, Mar-cus). Others indicated, or had once indicated, physical peculiarities (Gnaeus from *naevus*) or circumstances of birth (Spurius, Quintus). The choice of personal names must originally have been large, but the constant addition of the clan-name and perhaps other factors began early to reduce the number, so that rather less than a hundred male *praenomina* (including Etruscan) are known altogether, and the Roman

upper class used only fifteen or so, with some *gentes* and families restricting themselves to a mere handful. *Praenomina* in common use were regularly written in abbreviated form (L., Q., etc.) except when they occurred alone. Among women, the addition of the clan-name led eventually to a tendency to discard their *praenomina* (of which a fair number are known, including some corresponding to the male ones, as Gaia, Quinta); this tendency was least marked among the Etruscans, but in the Roman upper class, as the literature shows, it amounted to almost complete abandonment.

3. The *nomen*, which as the simple term indicates was presently felt to be the most important name, was generally formed by adding an adjectival suffix (usually -ius, with or without a short connecting element such as -e-, -id-, -il-, -on-; -a-, -as-, -anus, and -enus are characteristic of the north) to the stem of an existing name. Many are thus formed from *praenomina*: these probably arose as patronymics, Marcus, for example, standing for Marci (filius); the Aeolic patronymics in -ios (see above) suggest that this development was of great antiquity. Other *nomina* were formed from *cognomina* (Plancius), or from place-names (Norbanus). A very large number of *nomina* are known. One's *nomen* was necessarily that of one's legal father; women, at least in historical times, did not assume their husband's *nomen*.

4. *Cognomina* were primarily extra personal names; most show this by their meanings. They denote physical peculiarities (Naso), mental qualities (Cato), occupations (Pictor), offices (Censorinus), objects associated with the person (Scipio), origin (Camerinus), or adoption (see below). Some are diminutives (Marcellus), some foreign (Philippus). Often, especially in large *gentes*, they were handed down and so came to indicate divisions and even subdivisions of *gentes* (e.g. the Corneli Scipiones Nasicae). But several plebeian *gentes*, including some distinguished ones (e.g. the Antonii) were never so divided, and personal *cognomina*—distinguished as *agnomina* by the late grammarians—continued to be coined all the time. *Cognomina* were apparently not invented for women in republican times; but they sometimes took the family *cognomen* (Metella).

5. In informal contexts Roman men were addressed or referred to by one name (*praenomen* in the family, *nomen* or *cognomen* among friends); formality required *praenomen* with *nomen* (as when a senator was asked for his *sententia*) or with *cognomen*, the official nomenclature in its fullest form included determinatives indicating descent and tribe (see *tribus*), e.g. M(arcus) Tullius M(arcus) f(ilius) M(arcus) n(epos) C(or) n(cha) tribu) Cicero. Women also could add their father's *praenomen* in this way.

6. An adopted son took his adoptive father's full names, but might add a *cognomen* formed by suffixing -anus or -inus to the stem of his original *nomen* (Scipio Aemilianus), or, more rarely, *cognomen* (Lentulus Marcellinus); or (unattested before the first century B.C.) he might retain his original *cognomen* unaltered (Varro Lucullus).

7. Slaves were usually called by their own names, or were given names indicative of origin, etc., as in Greece: the ancient forms Marcipor (Marci puer), etc., fell into disuse as households became large, and in inscriptions of the late Republic servile nomenclature is usually of the form Aphrodisius Ploti G(ai) s(eruus). Freedmen and enfranchised foreigners took their patron's *praenomen* and *nomen*, adding their original name as a *cognomen* (M. Tullius Tiro).

8. The above system underwent various modifications from the late Republic onwards. These included, in aristocratic circles and the imperial family, the revival of old *praenomina* (Faustus Sulla) and use of *cognomina* as

praenomina (Germanicus), with the assumption of the *praenomen* Imperator (q.v.) by the Princeps himself; and, generally, a tendency to refer to persons by *nomen* and *cognomen*, sometimes in the reverse order; the inordinate multiplication of names; the use of *signa* or alternative names; and, eventually, the abandonment of the traditional system and reversion to single names.

NAMES, THEOPHORIC PERSONAL (GREEK).

In all times and places, probably, a majority of Greeks bore names derived from vocabulary words. Distinct from these, personal names derived from names of deities, though a minority, make up the largest unified class of personal names. Usually conscious of the meanings of names, the Greeks discriminated among theophorics. Not only did they exclude deities of ill-omen, such as Plouton, but also deities of insufficient dignity, such as Kourotrophos—although in Athens she received more sacrifices than any other deity. Theophoric names were of two principal kinds, adjectival such as Διονύσιος, verbal such as Ἀπολλύδαμος or Διονύτης. Here too there was discrimination: it was all right to be Poseidon-like (Ποσειδώνιος), but no one was *Ποσειδογόνος, because his mythological sons were an uncouth lot. Again, it was proper, and common, to be Δημήτριος, but never *Δημητριάδωρος. A boy could be named after a goddess, even Ἀρτεμιώδωρος, or a girl after a god.

So many Athenians are known to us by name that the statistics are substantial. Down to 403/2 B.C., only 6.5 per cent had theophoric names; from 403/2 to 30/29 B.C., out of 16,000 names, 15.6 per cent are theophoric; and under the Roman Empire, down to A.D. c. 800, as many as 30.0 per cent are theophoric. These figures doubtless are a reflection of conservatism yielding only slowly. Of deities originally outsiders but admitted to Athens, Asklepios, in 420 B.C., is the chief; as the principal god of cures, his cult soon became strong and perpetual. Yet only six Athenians are known to have been named for him in the fourth century B.C. (none before), again six only in the third century, then fifty-five in the second and first centuries to 30/29 B.C., but 202 under the Empire. The first generation of great change was that c. 150 B.C., when tradition weakened, foreign cults became familiar in Delos, and the ever-working tendency to find new names led to more exotic choices. But even so, no deity of foreign origin had as many persons named for him then as did Asklepios. Sarapis and Isis were the major new Hellenistic cult, yet the names are very modest in number until under the Empire Isis has 301 (Sarapis 48).

Still as judged by personal names, no other cult menaced the Olympians, of whom three led the others. Apollo, with 11 before 403/2, then 258 down to 30/29 B.C., and thereafter 334, had perhaps normal figures. Zeus began with 55 down to 403/2, then 546 in the period to 30/29, but a reduction to 258 under the Empire. What Zeus lost Dionysos gained: he had 13 before 403/2, then 286 in the centuries till 30/29, but 514 under the Empire. It is notable that Aphrodite, with none before 403/2 and only 19 before 30/29, reached 383 under the Empire, of which 108 were Ἐπαφρόδιτος (= felix) et sim.

The same conservative forces brought it about that many a Christian bore a pagan theophoric name. 'Iaiδaυos was not alone: the list of pagan theophoric names borne by Christians is a long one, and they continued to be common among Christians at least through the fourth century.

History of the study: E. Sittig, *De graecorum nominibus theophoris* (Diss. Philol. Halenses, vol. xx, pars 1, 1911), 1 ff. Sittig takes up the subject deity by deity; table at end. Names in -yeu- and -δωv-: W. Froehner, *ARW* 1912, 380 ff. Olympian and foreign deities in Athens: S. Dow, *Harv. Theol. Rev.* 1937, 216 ff., 228 f. S. D.

NARBO, modern *Narbonne*. The name, which originally denoted the hill-fort of Montlaurès, appears in Hecataeus (c. 500 B.C., *FGH* 54). It became the centre of a Celto-Iberian kingdom (coins *NERONC*) which was absorbed by the Volcae. In 118 the *colonia Narbo Martius* was founded in the plain, and Montlaurès was dismantled c. 71. Caesar's tenth legion was settled in the new town, which became the capital of Narbonensis, the seat of the imperial cult and an important trading-centre. Enlarged by Claudius, its full title was *Colonia Julia paterna Claudia Narbo Martius decumanorum*. Damaged by fire in the second century, it declined in prosperity, and apparently lost its position as capital to Nemausus. In 462 it fell finally to the Visigoths.

C. H. Benedict, *A History of Narbo* (U.S.A. 1941); P. Hélène, *Les Origines de Narbonne* (1937); G. F. Hill, *Coins of Narbonensis* (1930); *CIL* xii. 521; Gremer, *Manuel* ii. 483 ff. C. E. S.

NARCE, a Faliscan town, 3 miles south of Falerii, in the valley of the Treia, a tributary of the Tiber. Remains of walls and fortifications are visible, but archaeological exploration has in the main been confined to the numerous cemeteries. The earliest material comes from Iron Age *pizzo*-tombs, the latest from third-century B.C. chamber tombs; it is all in the same general tradition as that from the other sites in the area. See *FALISCANS*.

Mon. Ant. iv (1804), *pavani*, E. H. Dohun, *Italic Tomb-Groups in the University Museum* (Philadelphia, 1942), M. W. Frederiksen and J. B. Ward-Perkins, *PBSR* 1957, 67 ff. D. W. R. R.

NARCISSUS (1), in mythology, a beautiful youth, son of Cepheus (the Boeotian river) and Liriope, a nymph. He loved no one till he saw his own reflection in water and fell in love with that; finally he pined away, died, and was turned into the flower of like name. The story may arise from the magical danger of seeing one's own image in a mirror (see Frazer, *GB* iii. 94), but Ovid gives an explanation (his own?) of it; Narcissus was punished for his cruelty to Echo (q.v.). Hera had deprived her of normal speech because her chatter prevented the goddess catching Zeus at his amours with the other nymphs; she could only repeat what others said. She tried to make love to Narcissus with fragments of his own speech, but he repulsed her and she so wasted away with grief that there was nothing left of her but her voice (*Ov. Met.* 3. 342 ff.). Other explanations, Paus. 9. 31. 7-8; Conon, 24. H. J. R.

NARCISSUS (2). As private secretary (*ab epistulis*) to Claudius, this freedman acquired prodigious wealth (400 million sesterces, it was said) and exercised large political influence. He was even sent to the north of Gaul in A.D. 43 to expedite the embarkation of the expeditionary force to Britain and received *quaestoria ornamenta* in 48 as a reward for the exposure of Messalina (q.v. 1). His power was afterwards eclipsed by that of Pallas and Agrippina, whose marriage with Claudius he had not favoured, and he was unsuccessful in seeking to promote the interests of Britannicus. After the murder of Claudius in 54 he was immediately arrested and driven to suicide. J. P. B.

NARNIA (modern *Narni*), formerly Nequinum, strongly placed Umbrian hill town, which Rome captured and converted into a Latin Colony (299 B.C.). In imperial times it was a flourishing *municipium* on the Via Flaminia with a famous bridge over the Nur (Augustan: one arch survives). The Emperor Nerva was born here. E. T. S.

NARRATIO, rhetorical statement of a case (following the *exordium*), a feature stressed as vitally important by Apollodorus (see *APOLLODORUS* 5) and by Quintilian (*Inst.* 4. 2).

For three genera of *narrationes*, *Rhetorica ad Herennium* 1.8 12, for requisite brevity, perspicuity, plausibility, Cic. *De Or.* 2. 326 ff., *Orat.* 124.

NARSES, a Persarmenian general of Justinian, was sent with an army to Italy in A.D. 538 to assist Belisarius (q.v.), with whom he was soon on bad terms; accordingly, Justinian recalled him in 539. But in 550 he was appointed to the supreme command in Italy, where he was brilliantly successful. His major victories were won at the battle of Taginae in 552, where he defeated the Ostrogothic king Totila at Rome, which he captured in the same year, and at the Mons Lactarius, where he defeated and killed Totila's successor Teias. He also defeated the Alamanni, who had invaded Italy, at the battle of Capua, and won numerous lesser engagements. By 554 he had completed the subjugation of Italy, which he administered for the following thirteen years. E. A. T.

NAUARCHOS (ναύαρχος), admiral. The geographical conditions of Greek warfare, with its demand for 'amphibious' operations, discouraged the separation of naval from military commands: thus, Athenian fleets were always commanded by *strategoi* (q.v.). *Nauarchos* was a general term for the commander of a navy, of a squadron however small, even of a single ship. As an official title it appears comparatively late, the outcome of a greater specialization in certain States, mostly such as lacked an established naval tradition. The most important were Sparta (c. 430-360 B.C.), Syracuse under Dionysius I and II, Ptolemaic Egypt (and probably Macedonia, Pergamum, and the Seleucid kingdom), the Achaean League, and Rhodes. Everywhere (except perhaps at Pergamum) the *nauarchos* was admiral-of-the-fleet, with no colleague, his tenure varying from the single year (usually) of Greek republican admirals to the long commands of admirals (e.g. in Syracuse and Egypt) who served a monarch.

Struck, *PW*, s. v. 'Nauarchos'.

G. T. G.

NAUCRATIS, on the Canopic branch of the Nile, was a Greek 'treaty port' which under Saite Pharaohs became the chief centre of cultural relations between Greece and Egypt. According to Herodotus it was the sole emporium for Greek traders, who received concessions (*τεμεώνη*) from Amasis. The chief of these, established jointly by the Ionian cities of Chios, Teos, Phocaea, Clazomenae, the Dorian Rhodes, Cnidos, Halicarnassus, Phaselis, and Aeolian Mytilene, was called the Hellenium and appointed magistrates of the mart; Aegina, Samos, and Miletus had separate concessions. Excavations by Petrie and Gardner (1884-6) and Hogarth (1899, 1903) have produced abundant potsherds (many with dedications to 'the gods of the Greeks') Hera, Apollo, and also Aphrodite and the Dioscuri) dating from the latter years of the seventh century onwards, and show that the history of Greek Naucratis did not begin with Amasis' charter. According to Strabo Naucratis was founded by Milesians who, in the reign of Psammeticus, had founded the 'Milesians' Fort' near the Bolbitine mouth of the Nile. Sappho's brother Charaxus travelled to

Naucratis on business. The city continued to flourish through the classical period.

After Alexander's conquest of Egypt, the trade of Naucratis passed to Alexandria; some references in the correspondence of Zenon suggest that there was still some business done there in the middle of the third century, and inscriptions show that buildings were erected under the earlier Ptolemies; also, about the time of the conquest it struck the only civic silver and bronze coins known in Egypt. It was allowed to retain its Greek constitution by the Romans, and this served as a model for the constitution of Antinoöpolis in the reign of Hadrian. But there is no record of any active life there.

P. N. U. and J. G. M.

NAUKRARIAI (ναυκραταί, from ναύκρατος, ship's captain), early local divisions of Attica; according to Aristotle (*Ath. Pol.* 8. 3) there were twelve to each of the four old *phylai* (q.v.). Originally each naucrary will have been responsible for supplying and manning one ship for the Athenian fleet (traditionally fifty ships strong: *Iliad* 2. 556, Hdt. 6. 89); later, perhaps under the tyranny, they were given administrative duties, including the collection of taxes. According to one account Cleisthenes (q.v. 1) raised their number to fifty, to suit his ten new *phylai*; but it is hard to see how a territorial division of Attica into fifty naucraes can have coexisted with that into the thirty *trittyes* (q.v.); and Aristotle (*Ath. Pol.* 21. 5) says Cleisthenes replaced them as administrative units by the *demoi* (q.v.). In any case their replacement for naval purposes by the *boule* (q.v.) and trierarchs (see *TRIERARCHY*) can hardly have been long delayed after the massive enlargement of the fleet begun by Themistocles (q.v.) in 483.

Each naucrary was headed by a *naukratos* who commanded the ship it had provided; and the forty-eight *naukratoi* formed a corporate body with *prytaneis* (q.v.). Herodotus says (5. 71. 2) that in the time of Cylon (q.v.) these administered the State: an exaggeration, but they were doubtless powerful.

Busolt-Swoboda, *Griech. Staatsk.* (i, 1920; ii, 1926), see indexes; Hignett, *Hist. Athen. Const.*, see index; F. R. Wust, *Hist.* 1957, 176 ff. A. W. G.; T. J. C.

NAUMACHIA. The word was used for a naval battle, shown as a great spectacle, or for an artificial lake constructed for the purpose, the best known being that excavated by Augustus in 2 B.C. on the right bank of the Tiber (near S. Cosimato), 1,800 feet long and 1,200 wide with an island in the middle, fed with water from a new aqueduct, the aqua Alsietina. Julius Caesar had been the first to give such an exhibition in 46 B.C., on the left bank of the Tiber. Prisoners of war and condemned criminals did the fighting; and some famous sea fight of history (e.g. Salamis, the Athenians at Syracuse, Actium) was re-enacted. Claudius exhibited a great *naumachia*, with 19,000 combatants, on the Fucine lake in A.D. 52 (*Iac. Ann.* 12. 56 f.). Similar displays were sometimes given on private estates and by flooding amphitheatres (the Colosseum at Rome in A.D. 80 and elsewhere, as archaeology shows, e.g. at Capua and at Nîmes).

Friedländer ii. 74 ff.; Platner-Ashby, s.v.

J. P. B.

NAUMACHIUS (perhaps as early as the 2nd c. A.D.), author of a poem on wifely dutifulness, of which Stobaeus (68. 5, 74. 7, 93. 23) cites portions.

NAUPACTUS, in western (Ozolian) Locris, with an excellent harbour and small coastal plain cut off from the interior by mountains, commands the narrowest entrance of the Corinthian Gulf; its least difficult land-contacts are with Amphissa and eastern Greece. A legend, probably derived from the name of Naupactus ('ship-construction'), records that the Dorians crossed into the Peloponnese from Naupactus. Its value as a naval base was appreciated by the Athenians, who seized it and peopled it with exiled Messenians (456 B.C.). During the Peloponnesian War it was the main Athenian station in the west. After Sparta had expelled the Messenians (399), Achaean colonized and held it, until Philip captured it and gave it to Aetolia (338). With the collapse of the Aetolian Confederacy, Naupactus lost its importance.

L. Lerat, *Les Locriens de l'Ouest* (1952), 38 ff.; P-K, *GL* 2. 2. 320 ff. N. G. L. H.

NAUPLIUS, (1) eponym of Nauplia; son of Poseidon and Amymone (q.v.). (2) His descendant (Nauplius 1-Proetus (q.v.)-Lernus- Naubolus-Clytoneus-Nauplius II, Ap. Rhod. 1. 134-8), father of Palamedes (q.v.) and Oeax. He was an Argonaut (Ap. Rhod. loc. cit.) and plays a part in two other well-known stories. Auge (see *TELEPHUS* 1) was entrusted to him after her delivery to sell overseas; he gave her to Teuthras, king of Teuthrania, who married her (Apollod. 2. 147). He was instrumental in wrecking the Greek fleet on its return from Troy (his namesake had been a wrecker also, Apollod. 2. 23, indeed, the two are identical, *Notoi*, quoted there), for to avenge the death of Palamedes he lit false lights at Caphareus in Euboea (Eur. *Hel.* 767 ff., 1126 ff., and many later authors).

Wagner in Roscher's *Lexikon*, s.v.

II J R.

NAUSICAA, daughter of Alcinous (q.v.; *Od.* 6. 15 ff.). The night of Odysseus' landing in Scheria (see *ODYSSEUS*), she was moved in a dream by Athena to go down to the washing-place at the river-mouth and wash the family linen with her handmaids. Having done so the next morning, she and her maids played ball, and a cry from one of them woke Odysseus. He improvised a loincloth from a branch, came out of the hollow under trees where he had spent the night, and appeared before the girls. The maids ran away, but Nausicaa, given courage by Athena, stood her ground. He then made known his wants to her and she gave him food, drink, and clothing and showed him the way to the city, modestly directing him to walk the last part of the distance alone, lest the gossips should see them together and accuse her of husband-hunting. This very charming episode was handled in the lost *Nausicaa* of Sophocles and a few other post-Homeric works; Hellanicus, in Eustathius on Homer, 1796. 42 ff., says she married Telmachus and had by him a son Perseptolis, an obvious next-best to marrying Odysseus, as Alcinous wished on their first meeting (*Od.* 7. 311 ff.).

II J R.

NAUSIPHANES of Teos (b. c. 360 B.C.), Atomist, studied under Pyrrhon of Elis, probably while they were fellow soldiers in Alexander's campaigns, and before the end of these campaigns established himself as a teacher at Teos, where Epicurus studied under him c. 324. He was essentially a follower of Democritus, and was the channel through which Democritus' physics and theory of knowledge passed to Epicurus. He departed from Democritus' ethical views by insisting that the philosopher should take part in public life, and devoted himself largely to the exposition of a theory of rhetoric, which was later bitterly attacked by Philodemus.

Testimonia and fragments in Diels, *Vorsokr.* 11 2 246-50.

W. D. R.

NAUTODIKAI (*ναυτοδίκαι*) in the late fifth and early fourth centuries B.C. were Athenian officials who presided over certain trials, primarily ones involving merchants. They were probably instituted in order to relieve other magistrates at a period when Athenian commercial and imperial success had increased the number of such trials.

See DIKASTERION.

U. Kahrstedt, *Klio* 1939, 148 ff., I. Gernet, *Droit et société dans la Grèce ancienne* (1955), 179 ff. D. M. M.

NAVIES (Greek and Roman). Apart from the Homeric fleets, which served only for transport, the construction of navies followed closely upon the expansion of Greek commerce in the age of colonization. The first recorded sea-battle took place between Corinth and Corcyra in 664 B.C. (Thuc. 1. 13. 4). The new commercial States found warships especially necessary to guard their coasts, to check piracy, and later to assure the free flow of grain and other vital products; also, their growing prosperity permitted maintenance of a fleet more easily. The expense, however, remained an impediment to large-scale, protracted naval operations throughout the Greek and Hellenistic periods, especially when mercenaries replaced citizen rowers (after 400 B.C.). Until the Roman Empire, the peace-time navy of a State consisted usually of a number of hulls, with rigging and oars, laid up in the docks of the harbour (q.v.), from which the galleys were launched only in case of need. Sporadic piracy in consequence flourished; great expeditions in war-time required extra construction and levies of sailors.

The peculiarities of the ancient war galley (see NAVIGATION) also influenced the character of naval power. It was impossible to keep up successfully a lengthy blockade,asmuch as the galleys suffered in storms and furnished but cramped quarters to their crews. Thus, even the most heroic attempt, that of Bibulus to keep Caesar's reinforcements from crossing the Adriatic in the winter of 48 B.C. (Caesar, *BCiv.* 3. *passim*), eventually failed. The simple construction of the warship made it much easier for the so-called naval powers suddenly to be challenged by a State previously without a fleet, as by Sparta at various times in the Peloponnesian War (e.g. Thuc. 3. 26 ff.) and by Thebes under Epaminondas in 364 B.C. (Diod. 15. 78-9). The general object of naval strategy was to protect one's own coast and commerce, to destroy the opponent's fleet and commerce, and to assist land invasions by feints, transport of troops, and acquisition of bases.

Early navies, small in number, were composed chiefly of *pentekonters*, the forty triremes of Polycrates of Samos (Hdt. 3. 44) forming one of the largest squadrons before the fifth century. The Persian Wars brought great changes. Fleets grew in size; the trireme (q.v.) became the standard galley; naval tactics improved greatly. Athens benefited chiefly, under the leadership of Themistocles, who secured the construction of 200 triremes at Athens before 480 (see TRIEMARCHY); thereafter, apart from a short period after the Peloponnesian War, it remained the pre-eminent naval power in Greece until 322, when its fleet of 170 galleys was destroyed at Amorgos by a Macedonian fleet of 240 ships.

Although navies in the Hellenistic age did not surpass the size of these two fleets, they entailed an immensely greater expense, which lay beyond the resources of the small States. The standard vessel was now the quinquereme (q.v.), with a crew twice as large as that of the trireme, and after the time of Alexander even larger vessels were built. Throughout this period Macedonia generally held the Aegean and Egypt the rest of the eastern Mediterranean, but the balance of naval power shifted frequently. By 188 B.C. all had yielded to Rome.

Although Rome had possessed some previous naval organization (see DUOVIRI NAVALES), its first great naval effort came in the First Punic War, during most of which the Romans maintained a fleet of over 200 quinqueremes. Unskilled in naval warfare, they relied upon their soldiery and used boarding tactics exclusively; ships were built in heavy fashion, the number of marines, small on Greek vessels, was increased, and the *corvus*, a grapple, was extensively used (Polyb. 1. 20 ff.). The classical tactics of manœuvre, with the *diekplus* (q.v.), steadily gave way as the Romans overcame first Carthage, the chief naval power in the western Mediterranean, and then the Hellenistic States.

After 167 B.C. Rome permitted her fleets to decay and, in emergencies, conscripted ships and crews from her Greek allies. In the civil wars the contestants again built up huge squadrons, which were merged at last into the fleets of Antony and Octavian. To the campaign of Actium the former brought 500 warships and the latter 400. After his victory Octavian organized part of these into the first permanent fleet the Mediterranean had known (Tac. *Ann.* 4. 5). Based on Misenum and Ravenna, with auxiliary squadrons off Syria, Egypt, and Mauritania, and on the Black Sea, Rhine, Danube, and English Channel, the Roman imperial navy eradicated Mediterranean piracy for the first and last time previous to the nineteenth century. During the third and fourth centuries this navy vanished, but the Byzantine navy in part perpetuated the Graeco-Roman naval tradition.

ANCIENT SOURCES. Thucydides (1. 13 ff.) and Herodotus (8.6 ff.) reveal most clearly the nature of ancient navies.

MODERN LITERATURE. F. W. Clark, *The Influence of Sea-power on the History of the Roman Republic* (U.S.A. 1915); J. Kromayer and G. Veith, *Herrwesen und Kriegführung der Griechen und Römer* (1928); F. Miltner, *PW*, s.v. 'Seekrieg'; H. A. Omerod, *Piracy in the Ancient World* (1924); W. L. Rodgers, *Greek and Roman Naval Warfare* (U.S.A. 1937); C. G. Starr, *The Roman Imperial Navy* (U.S.A. 1960); W. W. Tarn, *Hellenistic Military and Naval Developments* (1930); J. H. Thiel, *Studies on the History of Roman Sea-power in Republican Times* (Amsterdam, 1946) and *History of Roman Sea-power before the Second Punic War* (Amsterdam, 1954). C. G. S.

NAVIGATION. The Mediterranean, tideless, broken by numerous peninsulas and islands, calm in summer, has always furnished encouragement to the seafarer, and to none more than the Greeks, whose experience became the basis of Graeco-Roman naval knowledge. The progress of navigation, however, was impeded by the lack of instruments for determining direction and distance, such as the compass, sextant, and log. Ships, also, were generally small, and, although they could sail within a few points of the wind, their sails, tackle, and steering apparatus were deficient.

The season of sailing was accordingly limited to the months when visibility was good and the sea mild; when storm clouds veiled the stars, the sailor sought the shore or some harbour. Hesiod (*Op.* 663 ff.) would restrict navigation to fifty days in midsummer, and usual practice placed its limits at March and October. As confidence and experience grew, and ships (q.v.) increased in size and stability, the period of sailing could be extended. Martial (6. 80) mentions Egyptian roses at Rome in winter, and other evidence from the Roman Empire (e.g. Tac. *Ann.* 12. 43) indicates some seafaring in winter by the more hardy travellers.

Although the Romans themselves were not seafarers, the Roman Empire marked the height of ancient navigation. The scourge of piracy was eliminated; traffic by sea increased enormously. Ships, moreover, tended to stand further out from land. As late as 400 B.C. the route from Greece to the west lay by Corcyra and thence to Italy; in like manner, the importance of Rhodes in the Hellenistic period was partly the result of its key situation on the route from Egypt and Syria to the Aegean via Cyprus and Caria. Under the Empire,

travellers to the east usually went straight to Alexandria from Puteoli, rather than cross Macedonia as under the Republic (Philo, *In Flacc.* 5. 26-7). Alexandrian merchants at this time, after the discovery of the monsoon winds, voyaged directly to India, but Mediterranean craft never sailed regularly about Spain to Gaul and Britain.

The speed of vessels did not rise greatly in the ancient world. The average speed for cargo ships was approximately three to four knots; voyages of eight days from Puteoli to Alexandria and of six days from Gadcs to Ostia were records (Pliny, *HN* 19. 3-4). Seasonal winds were often employed, as by the Alexandrian grain fleet under the Empire, which sailed to Puteoli in June and caught the etesian winds back to Alexandria in August. Systematic descriptions of coasts (*Pertplus*) appeared in the Hellenistic Age, a period in which physical aids to navigation such as harbours (q.v.) and lighthouses (q.v.) were constructed. This work continued under the Roman Empire.

NAXOS (1), the largest and most fertile of the Cyclades (q.v.), famous for its wine and worship of Dionysus. Tradition represents Carians, Thracians, and Cretans as its early inhabitants. It had an important Late Mycenaean settlement. In the archaic period it was important as a source of white marble and of the emery with which it could be worked. Its artists played a leading role in the development of early monumental sculpture and architecture ('Ionic' order) in Greece. Naxos was mistress of the Cyclades in the late sixth century under the tyrant Lygdamis. For its concern with the Ionian revolt the city was sacked by the Persians in 490 B.C. After the Persian wars Naxos joined the Delian League, was the first to revolt ('Thuc. 1. 98), and became tributary to Athens, and a cleruchy was established about 450. As a member of the second Athenian League, the island again revolted without success. In the third century Naxos was a member of the Islanders' League; subsequently it was of little importance.

NAXOS (2), on what is now *Capo Schiso*, by *Giardini*, was the first Greek colony in Sicily (735 B.C.). Founded by the Chalcidians under Thucles, its sanctuary of Apollo Archegetes was particularly venerated by the Siceliot Greeks. Chiefly important as colonizer of Leontini and Catana (qq.v.), it was not in itself a powerful city. Captured by Hippocrates (q.v.) c. 495/4 B.C., it formed part of the empire of Gelon and Hieron (who in 476 tried to 'domicize' it). After 461 it was in opposition to Syracuse, allied with Leontini (427) and Athens (415). In 403 Dionysius I (q.v.) captured and destroyed it. Though the site was not wholly deserted, the city was effectively replaced by Tauromenium (q.v.).

G. L. B.

NEAPOLIS, modern *Naples*, was founded in fertile territory by Cumae c. 600 B.C. Its early history being unknown, ancient authors invented the tale that its original name was Parthenope. Neapolis became the chief Greek centre of Campania (c. 425) and received refugees from Cumae (q.v.) into its suburb Palae(o)polis. In 327 the anti-Roman policies of these Palaeopolitans constrained Rome to capture Neapolis. Palaeopolis disappeared; Neapolis became a favoured allied State that furnished Rome naval help and repulsed Pyrrhus and Hannibal. In republican times Puteoli outstripped Neapolis, but by Cicero's day, despite a treacherous massacre of its inhabitants in 82 (App. *BCiv.* 1. 89), Neapolis was a flourishing *municipium* where Virgil and others, seeking beauty or Hellenic culture, sojourned. Subsequently Neapolis became a *colonia* but retained its Greek institutions and language until the late Empire. In the Gothic Wars it suffered severely (Procop. *Goth.* 1 and 3), but was always important. Here Statius was born and Romulus Augustulus, last Western Emperor, virtually imprisoned.

NEARCHUS (1), potter and vase-painter, in Athens. Known from four signatures on small black-figure vases and one on a black-figure plaque of about 550 B.C. and dedication of Antenor Kore (about 530). His sons 'Tleson and Ergoteles signed 'little master' cups.

G. M. A. Richter, *AArch.* 1932, 272; A. Rumpf, *Sakamides* (1937), 19, Beazley, *ABV* 82. T. B. L. W.

NEARCHUS (2) of Crete, Alexander's friend, commanded the fleet which circumnavigated the coast from the Indus to the Tigris. His honest and trustworthy chronicle, written before 312 B.C., was not a history of Alexander, but gave an account of India, which Strabo and Arrian used, and of his voyage, which is reproduced in Arrian's *Indike*. After the death of Alexander Nearchus played a subordinate part under Antigonus I and Demetrius I. He was probably killed at the battle of Gaza (312 B.C.).

See ALEXANDER (3), Ancient Sources, and Pearson, *Lost Histories*, ch. 5. W. W. T.

NECHEPSO, titular author with Petosiris of a comprehensive astrological work, the basis of the later astrology. He probably invented the astrological significance of the signs of the zodiac, as well as making many other innovations. 'Nechepso and Petosiris' may have been the pseudonym of a single author, and his date may be placed c. 150-125 B.C.

Ed. E. Riess, *Philol. Suppl.* 6 (1901-3), 325 ff.

W. D. R.

NELEUS (Νηλεΐς) and **PELIAS** (Πηλεΐας) in mythology, sons of Tyro, daughter of Salmonus (q.v.) by Poseidon; he approached her in the shape of the river-god Enipeus, whom she loved (*Od.* 11. 235 ff.). Here (237) she is apparently already married to Cretheus (for the relationships see AEOLUS 2); later, as in Apollodorus (1. 90), he is her guardian. Apollodorus also says that she exposed the children, who were picked up by a horse-herder. Tyro was ill-used by Sidero, her stepmother, till her sons grew up, recognized her, and pursued Sidero into a temple of Hera, where Pelias killed her at the altar. For the rest of his story see JASON, MEDEA. Neleus married Chloris, daughter of Amphion of Orchomenus (*Od.* 11. 281 ff.), who bore Nestor and other sons, also Pero, cf.

MELAMPUS (1). But Heracles attacked Pylos, Neleus' kingdom, because Neleus would not purify him from the blood-guilt of Iphitus (*Il.* 11. 690 ff., Hes. fr. 14 ff. Rzach; schol. *Il.* 2. 336), and killed all his sons save Nestor (q.v. 1). His own death is variously told, see Weizsäcker in Roscher's *Lexikon* iii. 110. H. J. R.

NEMAUSUS, town in Gallia Narbonensis (modern *Nîmes*), originally a Celtic settlement, capital of the Volcae Arecomici. It was probably a *colonia Latina* by 28 B.C. and the seat of an important mint. In 16 B.C. it was laid out with walls enclosing c. 550 acres. Very important remains of public buildings exist: amphitheatre, precinct of *Deus Nemausus*, and a temple erected by Agrippa (16 B.C.) and rededicated to C. and L. Caesar (the 'Maison Carrée'). The Pont-du-Gard forms part of its aqueduct. Perhaps in the second century it became the capital of Narbonensis.

Grenier, *Manuel* iii. 143 ff. (general), 393 ff. (temple), 613 ff. (amphitheatre), iv. 88 ff. (aqueduct), 493 ff. (precinct of Nemausus); F. Vittinghoff, *Röm. Kolonisation* (1952), 101 ff.; R. Neumann, *Quellbezirk von Nîmes* (1937); A. C. Balty, *Études sur la Maison Carrée de Nîmes* (1960). C. E. S.

NEMEA was an open valley on the north borders of the Argolid, in the territory of Cleonae. It was the scene of Heracles' encounter with the lion, and of the Nemean Games (q.v.). The fourth-century temple of Zeus, the great altar, palaestra, and gymnasium have been excavated. Nemea is also the name of the river flowing north and forming the boundary of Corinth and Sicyon, the scene of the first battle of the Corinthian War (394; Xen. *Hell.* 4. 2. 13 ff.).

C. W. Blegen, 'Excavations at Nemea', *Art and Archaeology* 1925, 175 ff.; *ATArch.* 1927, 421 ff.; N. Clemmensen and R. Valløe, 'Le Temple de Zeus à Némée', *BCH* 1925, 1 ff. T. J. D.

NEMEAN GAMES, THE, according to one legend were founded by Adrastus of Argos, when he led the Seven against Thebes; according to another by Heracles after he had slain the Nemean lion: but we know little of them until 573 B.C., when they became a Panhellenic festival. They were held in the sanctuary of Nemean Zeus (see NEMEA), and were at first managed by the people of Cleonae, afterwards by Argos. The games were conducted on the same lines as those at Olympia, the prize was a crown of wild celery, and they took place every second and fourth year in each Olympiad. F. A. W.

NEMESIANUS, MARCUS AURILIUS OLYMPIUS, from Carthage, late in the third century A.D. composed four pastorals (long ascribed to Calpurnius (1), q.v.), and an incomplete didactic poem in 325 verses on the chase. But he also distinguished himself in poetic contests and meditated an epic on the deeds of the imperial brothers Numerianus and Carinus (S.H.A. *Carus, Numerianus, et Carinus*, 11; *Cyn.* 63-78). His *Cynegetica* is best dated between the death of the Emperor Carus, 283, and that of Numerianus, 284. It seems to refer to his pastorals as lighter productions which had preceded (58-62).

WORKS (1) *Eclogae*: these four short poems, 319 lines in all, show the influence of Virgil and Calpurnius. In I the shepherd Timetas' threnody on Meliboeus recalls the praises of Daphnis in Verg. *Ecl.* 5; in III the song demanded from Pan is a parallel to that of Silenus in Verg. *Ecl.* 6. IV (62-72) borrows magical ideas which Virgil in *Ecl.* 8 drew from Theocritus: here too, Nemesianus restores the pleasant music of the refrain which was part of the Theocritean tradition in Virgil. His diction and metre gain by his Virgilian imitations, though his period accounts for shortenings like *laudandō*, *devotiō*, *exercetō* (*Ecl.* 2. 80, *Cyn.* 83, 187). From Calpurnius he borrows freely, especially in eclogue III.

(2) *Cynegetica*: 102 lines are introductory; then, departing from the order in Grattius (whom he probably had read), he devotes 223 lines to indispensable preliminaries for hunting—dogs (rearing, training, diseases, breeds), horses, nets, and traps. The poem breaks off on the verge of the chase—'venemur dum mane nouum'.

(3) *De Aucupio*. Two fragments on birdcatching (28 hexameters) are ascribed to Nemesianus.

His style, though unoriginal, is agreeable. He at least declares his independence of mythology (*Cyn.* 15-47) and certain notes of enthusiasm in him lend colour to the almost conventional claim to be breaking new ground (8-14) in his didactic poem; while in his feeling for pastoral environment there are suggestions of the open air in spite of his book-borrowings. He is rather less inclined to lose himself in details of the essentials for the chase than Grattius is. See PASTORAL POETRY, LATIN, § 5.

NEMESIS (1). One of the most puzzling of Greek goddesses, owing to the wide divergence between her mythology and her position in cult and morals. Her best-known shrine was at Rhamnus in Attica, where she appears to have been a deity of the type of Artemis (q.v.; see Farnell, *Cults* ii. 488 ff.). Zeus pursued her amorously, and to avoid him she took all manner of non-human forms, especially those of fish (*Cypria*, frs. 6 and 7 Allen). Finally (Apollod. 3. 127, continuing what seems to be the same story) she changed into a goose, he into a swan, and so she laid the egg which a shepherd found and gave to Leda (q.v.). This is the sort of story which might be told of almost any minor goddess or nymph. The fact that in Smyrna (Paus. 9. 35. 6) there were statues of the Charites in her temple, of old workmanship ascribed to Bupalus, would suggest that there at least she had something to do with the fertility of the soil.

But in the vast majority of cases she is nothing but retribution or righteous indignation, particularly that of the gods at human presumption, personified. This identification extends to her Attic cult, cf. Catull. 66. 71 (64. 395 seems to make her a war-goddess, but he may mean that she appeared to rouse men fighting in a good cause); and a local worship in Boeotia, apparently of Nemesis Adrasteia, was said to have been founded by Adrastus (q.v.), because of the resentment he felt against the Thebans (Antimachus, fr. 53 Wyss). Adrasteia is certainly the 'unescapable' power before which all must bow (*προσκυβειν την Αδράστειαν*, Aesch. *PV* 936, Pl. *Resp.* 451 a). But she in turn is, or is identified with, a goddess of the Phrygian Ida, associated with the Dactyli (*Phoronis* in schol. Ap. Rhod. 1. 1120; see IDAEAN DACTYLS). Possibly in this case some accidental resemblance of a foreign to a Greek word has come into play; Nemesis of Rhamnus may have been originally the goddess who deals or distributes, *vémeti*, appropriate gifts to her worshippers, and was afterwards made abstract, a process like that which Fors Fortuna (q.v.) seems to have undergone. It does not appear that her statue, for which see Rosbach in Roscher's *Lexikon* iii. 153-4 (see the whole art. for good discussion and literature and cf. Herter in

PW, s.v.), had the characteristic pose of later representations of her (see Volkmann in *ARW* 26. 296 ff., 31. 57 ff. for this and other points), which are shown spitting into the breast-fold of her robe (cf. Theoc. 6. 39). For her later developments in cult and literature, which last to the days of Theodosius, see Rossbach.

H. J. R.

NEMESIS (2) succeeded 'Delia' in the affections of Tibullus (2. 3. 51; 5. 111; Ov. *Am.* 3. 9. 31; Mart. 8. 73. 7).

NEMĒSIUS, fl. c. A.D. 400, bishop of Emesa in Syria, perhaps identical with the governor of Cappadocia to whom (c. 385) Gregory (q.v. 2) of Nazianzus addressed four letters and a protreptic poem inviting him to become a Christian. His essay in Christian Platonism, *On the Nature of Man*, is remarkable not only for its wide reading in medical and philosophical sources, e.g. Galen and Porphyry, but also for its Christian standpoint and its thesis that the spiritual life of man is conditioned by the body's natural limitations.

Fd. Migne, *PG* xl. 508 ff. Translation and commentary by W. Teller (1955) J. Quasten, *Patrology* 3 (1960), 351 ff.

H. C.

NENIA. The derivation from νηϊάτων [Φρήν] is given by Pollux 4. 79 [80] but it may be an independent Latin onomatopoeia. Usually *nenia* means a dirge containing lamentation and praise of a deceased person (Diomedes, Keil, *Gramm. Lat.* 1. 485: 'cum lamentatione'; Festus, 158 Lindsay: 'carmen quod in funere laudandi gratia cantatur ad tibiam'). It was sung to a flute accompaniment by a hired mourner (*praefica*), whose assistants made responses (Serv. ad *Aen.* 6. 216) before the house of mourning, during the funeral procession, and beside the pyre. It never became a literary genre. No example has reached us: we have only an anapaestic parody (Sen. *Apocol.* 12). *Nenia* is also the goddess of the dying; she had a temple at Rome.

From the idea of empty repetition (cf. Plaut. *Ain.* 808 and Cato ap. Gell. 18. 7. 3), it came to mean children's rhymes (Hor. *Epist.* 1. 1. 63), a magical litany, a senseless rigmorale (*nugae*). But it could also signify 'end' (Plaut. *Pseud.* 1278) or *coda* (Hor. *Carm.* 3. 28. 16). In Ausonius it signifies *epicedium* (q.v.); in Sidonius Apollinaris, a metrical epitaph.

C. F. ; G. W. W.

NEOPHRON, of Sicyon, was said by Dicaearchus and in the pseudo-Aristotelian *ὑπομνήματα* to have written a *Medea* which was adapted by Euripides in his play of that name (Argum. Eur. *Med.*), but the truth of this is very doubtful and the three extant fragments are almost certainly later than Euripides (see D. L. Page, Euripides, *Medea* (1938), xxx ff.). The *Suda* says that he wrote 120 tragedies and was the first to introduce into his plays 'paedagogi and the torture of slaves'—perhaps an inference based on his supposed priority to Euripides; such priority is inconsistent with the *Suda's* further statement that he associated with Alexander the Great, who put him to death with Callisthenes (the *Suda* elsewhere calls Alexander's victim Nearchus).

A. W. P.-C.

NEOPLATONISM, the revived Platonism—really a new synthesis of Platonic, Pythagorean, Aristotelian, and Stoic elements—which was the dominant philosophy of the pagan world from the middle of the third century A.D. down to the closing of the pagan schools by Justinian in 529, and strongly influenced medieval and Renaissance thought. The following phases may be distinguished in its history. (1) A long period of preparation, extending from the time of Antiochus (d. c. 68 B.C.) and Posidonius (d. c. 50 B.C.) down to that of Plotinus, during which we can trace the movement towards a

comprehensive synthesis. In the work of such second-century writers as the Neopythagorean Numenius and the Middle Platonist Albinus (q.v. 1) there is much that foreshadows Plotinian Neoplatonism. (2) The oral teaching of Ammonius Saccas at Alexandria (early 3rd c.), of Plotinus at Rome (244/5–269/70), and of Plotinus' immediate pupils Porphyry and Amelius. Plotinus' *Enneads* (published posthumously, c. 300–5) gave Neoplatonism its abiding shape, and are incomparably its most important philosophical product. See PLOTINUS, PORPHYRY. (3) The period of diffusion in the fourth century when Neoplatonism becomes the fashionable creed of the pagan reaction, with its chief teaching centres in Syria and later at Pergamum, while it also begins to influence Christian thought through Gregory of Nyssa and Augustine. To this period belong Iamblichus (q.v. 2); Sallustius, author of the *De dus et mundo*, a curious popular handbook of Neoplatonic religion (ed. and transl. A. D. Nock, 1926); Eunapius, who made out of the lives of his Neoplatonic teachers a pagan hagiology (*Vitae Sophistarum*, ed. and transl. W. C. Wright, Loeb, 1922); and the Latin Neoplatonists Calcidius (Commentary on Plato's *Timaeus*, ed. Waszink, 1962), Marius Victorinus, and Macrobius (q.v.). (4) The Athenian School (Syrianus, Proclus, Simplicius, etc.) and the Alexandrian (Hypatia, Synesius, Olympiodorus, etc.), belonging mainly to the fifth and sixth centuries, fall outside the limits of date of this dictionary; as does the survival of Neoplatonism in writers like 'Dionysius the Areopagite' and John the Scot, and its revival by Psellus at Byzantium in the eleventh century and by Pico and others at the Renaissance.

NEOPTOLEMUS (1), in mythology, son of Achilles and Deidameia; see ACHILLES. After his father's death he was sent for to Troy by the Greeks, because his presence was one of the necessary conditions for taking the city (Soph. *Phil.* 114 f., 345 f.). Odysseus acting as messenger (*Od.* 11. 508–9; Soph. *ibid.* 344 adds Phoenix). Arrived there, he showed himself a notable warrior and wise counsellor (*Od.* *ibid.*), killing among others Eurypylos, son of Telephus. He was one of the chosen party who manned the Wooden Horse, and came through that and the other dangers of the war unharmed. So far Homer (Sophocles' details presumably are from some cyclic epic, however); later authors do little more than enlarge and embroider. After the war, Homer says no more of him than that he returned safely and Menelaus sent Hermione to be married to him (*Od.* 3. 188–9; 4. 5 ff.). For the sequel of this marriage see HERMIONE. There is, however, a curious double version of the story of his visit to Delphi, which has left its mark on Pindar. In the sixth Paean it is said (100 ff.) that Neoptolemus, having been fetched from Scyros and taken to Troy, incurred the wrath of Apollo by killing Priam at the altar of Zeus Herceius (cf. Verg. *Aen.* 2. 513 ff.); the god therefore swore that he should never reach home. Consequently, he was killed at Delphi in a dispute with 'the servants'. (Elsewhere it is explained that this arose from the local practice of the priests of seizing their portion from the sacrifice.) This seems to have given much offence

in Aegina; therefore in *Nem.* 7. 33 ff. Pindar retold the tale with a different emphasis. Neoptolemus did go to Delphi and was killed there in a quarrel; but he went with the best of intentions (for details see Farnell's commentary), and the ultimate reason of his death was that one of the Acaciae must needs enjoy heroic honours at that spot. He never returned to Scyros or Phthia, but, being driven by winds off his course, made his way to the Molossian territory, the kings of which country claimed descent from him through his son by Andromache (q.v.), Molossus; hence the name Pyrrhus borne by the most famous of them, that being the alternative name of Neoptolemus (e.g. *Cypria*, fr. 14 Allen, which says Pyrrhus was his original name; Neoptolemus means 'young warrior'). His cult at Delphi is a historical fact, but it practically dates from the Gaulish invasion, according to Pausanias (1. 4. 4); earlier than that his tomb had been held in no honour, but it was thought that he had been seen fighting alongside the Hyperborean heroes against the attackers.

Neoptolemus is shown on archaic or classical vases leaving Scyros, receiving his father's arms from Odysseus, and especially as the centre of the Ilupersis, killing Priam and Astyanax; also sacrificing Polyxena on Achilles' tomb (Brommer, *Vasenlisten*², 298 f., 313, 323, 331 ff.).

See the larger dictionaries s.v.; Farnell, *Hero-Culte*, 311 ff.; J. E. Fontenrose, *The Cult and Myth of Pyrrhus at Delphi* (1960).

NEOPTOLEMUS (2) of Parium (3rd c. B.C.; earlier than Aristophanes of Byzantium, probably later than Eratosthenes), Greek writer. His works included poems, literary criticism and philological treatises. His views on poetry, known to us through a summary by Philodemus, are said by Porphyry to have been adopted in essentials by Horace in the *Ars Poetica*. See also GLOSSA, GREEK; LITERARY CRITICISM IN ANTIQUITY, § 8.

NEOPYTHAGOREANISM, the revived Pythagorean school, or rather direction of thought, which appeared at Rome and Alexandria in the first century B.C. and persisted until it was merged in Neoplatonism. It combined in varying proportions a small amount of early Pythagorean tradition with elements derived from Platonic, Peripatetic, and Stoic sources, the whole being accommodated to contemporary religious tendencies. Neopythagorean writers appear to have been interested mainly in theological speculation, in the symbolism of numbers, and in glorifying Pythagoras as the founder of a way of life and author of a religious revelation. There is little trace of a systematic body of philosophical doctrine held in common by them: some of them were Stoicizing monists, others Platonizing dualists. The historical importance of Neopythagoreanism lies chiefly in the influence which it exercised (a) on Neoplatonism, especially in the post-Plotinian period; (b) on Jewish thought through Philo and Christian thought through Clement of Alexandria. For individual Neopythagoreans see NIGIDIUS FIGULUS, APOLLONIUS (12) OF TYANA, NUMENIUS.

(a) ANCIENT SOURCES. Alexander Polyhistor (c. 80 B.C.) ap. Diog. Laert. 8. 24 ff (cf. M. Wellmann, *Hermes* 1919, and A.-J. Festugière, *Rev. Ét. Grec.* 1945); two accounts in Sext. Emp. 10. 261 ff. (Platonizing), 281 ff. (Stoicizing); Photius cod. 249 (cf. O. Immisch, *Sitz. Heid. Ak.* 1919); 'Ocellus Lucanus', ed. R. Harder with Germ. comm. (1926); fragments of Nigidius, A. Swoboda (1889), of Numenius, E. A. Leemans (1937); of other Neopythagoreans, Mullach, *Fragm. Phil. Graec.*

E. R. D.

NEPET(E), the modern *Nepi*, a small but strategically important town, 25 miles north-west of Rome, situated on the edge of the territory of the Faliscans (q.v.) and together with Sutrium (q.v.) controlling the road through the Ciminian forest into central Etruria, as well as the direct route to southern Umbria, later the Via Amerina. After the conquest of Veii in 396 B.C. it fell into Roman hands, receiving a Latin colony either in 383 (Livy 6. 21. 4) or in 373 (Vell. Pat. 1. 14. 2). Created a *municipium* after the Social War, it was modestly prosperous under the Empire. In late antiquity (Procop. *Goth.* 4. 35) it became once more of strategic importance, a role which it retained throughout the Middle Ages.

J. B. W.-P.

NEPOS, CORNELIUS (PW 274) (c. 90-c. 24 B.C.), born in Cisalpine Gaul, moved to Rome, but took no part in politics; he was familiar with Cicero, with whom he exchanged letters, and with Pomponius Atticus. Catullus dedicated his book to Nepos in eulogistic verses. Fronto (Loeb ii. 168) tells us that Nepos was also a publisher.

WORKS: 1. *De Viris Illustribus*, in at least sixteen books (Charisius, *Gramm.* 1. 141. 13 Keil), dealing with foreigners as well as Romans. The categories of generals, historians, kings, poets, are certain; and fragments on the Gracchi suggest a section on orators. It was published before the death of Atticus, apparently in 34; before 27 a second edition appeared, including non-Greeks and expanding the *Atticus*. Of this we have *De Excellentibus Ducibus Exterarum Gentium* (see Loeb *Nep.* 357 ff.), and two 'Lives' from *De Historicis Latinis*, besides fragments.

2. *Lost Works: Chronica*, a universal history in three books (Catull. 1); *Exempla*, anecdotes in at least five books (Gell. 6 (7). 18. 11); fuller *Lives of Cato* (Nep. *Cato* 3. 5) and *Cicero* (Gell. 15. 28. 2); a work on Geography, cited by Mela and Pliny. His light verse (Pliny, *Ep.* 5. 3. 6) was probably never published.

Nepos was the writer of the first surviving biography in Latin. The idea of a parallel treatment of foreigners was probably taken from Varro's *Imagines*. His defects are hasty and careless composition (perhaps less marked in his first edition) and lack of control of his material. He is mainly eulogistic, with an ethical aim, but also gives information about his hero's environment. As historian his value is slight; he names many sources, but rarely used them at first hand. His style is essentially plain, but contains colloquial features and many archaisms, not used for artistic effect, but from indifference. His rhetorical training appears in attempts at adornment, neither uniform nor discriminating.

LIFE AND WORKS. Introduction to Commentaries and Translations, Schanz-Hosius 1. 351 ff. F. Leo, *Griech.-Röm. Biogr.* (1901), ch. 10, D. R. Stuart, *Epochs of Greek and Roman Biogr.* (U.S.A. 1928), see index; E. M. Jenkinson in *Latin Biography* (ed. T. A. Dorey, 1967), 1 ff.

NEPTUNUS, Italian god of water (not of the sea, though his identification with Poseidon, q.v., extended his cult in this direction; it was then purely Greek in form, the *exta* being thrown raw into the sea, Livy 29. 27. 5; it is in virtue of this capacity that the absurd identification of Consus with 'Neptunus Equester', i.e. Poseidon Hippios, takes place, Livy 1. 9. 6). The etymology of his name is quite uncertain; in Etruscan

it is *Neūn(u)s*. His festival is of the oldest series (Neptunalia, 23 July); we know concerning its ritual only that arbores, *umbræ*, of boughs were commonly erected (Festus, 519, 1 Lindsay), but it may be conjectured that its object was to obtain sufficient water at this hot and dry time of year. His cult-partner is Salacia (Gell. 13. 23. 2); she may be the goddess of 'leaping', i.e. springing water (*saltre*), but was identified with Amphitrite as he was with Poseidon.

For his temple see Platner-Ashby, 360 f.; Nash, *Pict. Dict. Rome* ii. 120 ff. Cf. Wisniewa, *RK* 225 ff.; L. Delatte, *Ant. Class.* 1935, 45 ff.

NERATIUS (PW 15) PRISCUS, LUCIUS, a considerable Roman jurist of the age of Trajan and Hadrian; born at Saepinum in Samnium. He was *praefectus aerarii Saturni*, *cos. suff.* 97, *legatus Augusti pro praetore* of Pannonia, and he was at one time, we are told, thought of by Trajan as his successor (and see under HADRIAN). Neratius was, with Celsus (q.v. 3), the last head of the Proculian School (see SABINUS 2), and was a member of the *consilium* of Hadrian and perhaps Trajan. The excerpts from his writings in the *Digest*, which illustrate well the penetration of his mind, come mainly from his *Membranae*. His reputation as a jurist is evidenced by the frequency with which his opinions are cited by later jurists, and by the fact that Paulus (q.v. 1) wrote a commentary *ad Neratium*.

Syme, *Tacitus*, 762.

B. N.

NEREUS, an old sea god, son of Pontus and father by the Oceanid Doris of the Nereids. He lives with the Nereids in the depths of the sea (*Il.* 1. 358; Hes. *Th.* 233 ff.), particularly in the Aegean Sea (Ap. Rhod. 4. 771 f.). Hesiod and Pindar extol his righteousness. To give fair praise to an enemy's achievement is quoted as an advice of a sea god, presumably Nereus, by Pindar (*Pyth.* 9. 94). Like other 'Old Men of the Sea' he has great wisdom and even the gift of prophecy (*Hor. Carm.* 1. 15). These abilities bring him into a strenuous contest with Heracles. Bachelylides (17) and Pherecydes relate that Heracles had to catch Nereus unawares in order to learn the whereabouts of the Golden Apples. Panyassis (*Ath.* 11. 469 d) makes Nereus give the cup of the Sun to Heracles. When Peleus wrestles with Thetis, Nereus, his future father-in-law, looks on. Later he attends the wedding of Peleus (François Vase) and brings presents. In his contest with Heracles Nereus transforms himself into fire, water, and many other shapes (*Apollod.* 2. 5. 11). In addition to his fifty or hundred daughters, the Nereids (A. D. Nock, *Mélanges de l'Univ. Saint-Joseph*, 1960-1, 297), he is said by Lucian (*Trag.* 87) to have educated Aphrodite. It is uncertain whether a small cult in Gythium belonged to Nereus or to some other sea god (Paus. 3. 21. 9). The earliest representations of him in art go back to the early sixth century B.C. In an Athenian pediment and on vases he watched Heracles fight Triton. As a dignified spectator Nereus is a great favourite with vase-painters, but sometimes he is also shown wrestling with Heracles (J. Boardman, *BICS* 1958, 6). The only inscription referring to Nereus survives on the famous Hellenistic frieze of Pergamum.

Pind. *Pyth.* 9; *FGH* 1. 65 (Pherecydes). L. Bloch in Roscher, *Lex.*, s.v.; E. Huschke, *Ath. Mitt.* 1921/2, 5^b.
G. M. A. H.; J. R. T. P.

NERO (1) (NERO CLAUDIUS CAESAR, *PW* Suppl. iii, s.v. Domitian 29), Roman Emperor A.D. 54-68, was born 15 Dec. 37 of Cn. Domitius Ahenobarbus (*cos.* A.D. 32) and the Younger Agrippina (q.v. 3). For the circumstances of his accession see CLAUDIUS (1).

To strengthen his doubtful claim stories were spread of his miraculous childhood (Suet. *Nero*, 6; Tac. *Ann.*

11. 11), and stress laid on his descent from the divine Augustus. In his inaugural speech he promised to rule 'ex praescripto Augusti' (*Tac. Ann.* 13. 4). He showed modesty by declining an honour with the phrase 'cum meruero', *pietas* by consecrating Claudius and by gratitude to Agrippina ('optima mater'), and clemency by his unwillingness to sign a death-warrant—'quam uellem nescire litteras'. His enthusiasm for art made flatterers hail him as Apollo.

Between artistic son and imperious mother trouble was likely: Otho (q.v.) encouraged Nero to free himself. Agrippina retorted by sympathy for the dispossessed Britannicus (q.v.): Britannicus was poisoned (55), and Agrippina went into retirement. Poppaea (q.v.), Otho's ambitious wife, wishing to marry Nero, planned to eliminate both Agrippina and Nero's wife Octavia. Though Nero preferred literary pursuits or amusement, there was some good legislation (*Tac. Ann.* 13. 51) and able governors—Galba, Suetonius Paulinus, and Corbulo (qq.v.)—were sent to the provinces: here the credit should probably be ascribed to Seneca and Burrus (q.v.), the Prefect of the Praetorians, who apparently controlled serious policy.

But Nero soon became his own master. In 59 he had Agrippina murdered, while the death of Burrus (who was replaced by two Prefects, Tigellinus, q.v., and Faenius Rufus) and the retirement of Seneca (62) left him uncontrolled. Octavia was divorced and murdered. Now Poppaea could marry Nero: in 63 she bore him a daughter who lived three months.

Nero's emancipation meant free rein for his artistic passions. His enthusiasm for art and horsemanship seem genuine enough; he wanted to lead Rome from gladiatorial shows to humaner things. He founded games: the *Iuvenalia* (59), where nobles were encouraged to compete, and the *Neronia* (61); he opened a *gymnasium*, and distributed free oil to competitors 'Graeca facilitate'. He eagerly displayed his own powers in public, to the scandal of traditionalists. His voice, 'exigua et fusca' (Suet. *Nero*, 20), hailed by his admirers as divine, may have been passable; his poetry, modernistic and laborious, was probably his own, for Suetonius had seen his notebooks with their erasures (*ibid.* 52). At Naples his *première* brought thunderous applause from trained Greek hands; Greeks alone deserved to hear him, and he resolved on a Greek tour.

Meanwhile his extravagance, vanity, and fear, coupled with sense of power—'negavit quinquam principum scisse quid sibi liceret' (*ibid.* 37), made him unpopular. His helpers and associates were low-born, or Greek and Oriental freedmen, avaricious and arrogant. The expense of wars in Britain and Armenia compelled him to deprecate the coinage and rob the rich. The law of *maiestas* (q.v.) was revived (62); wealthy nobles, Faustus Sulla, Rubellus Plautus, and Torquatus Silanus, were executed on suspicion. A fire that ruined one-half of Rome (64) increased his unpopularity, as he seized the opportunity to build himself the colossal *Domus Aurea* (q.v.); rumours circulated that he had instigated the fire, and recited his own poems over the burning city, and Nero tried to make the Christians scapegoats (see CHRISTIANITY). By the end of 64 all classes had good reason to hate or fear him.

Hence a conspiracy to assassinate Nero and make C. Calpurnius Piso (q.v. 9) Emperor. The scheme was betrayed (65); Piso and his accomplices, Faenius Rufus, Seneca, Lucan, knights, tribunes, and soldiers were executed. But Nero now suspected all, and more judicial murders followed, including Ostorius Scapula, C. Petronius, *arbiter elegantiae*, and the Stoics Thrasea Paetus and Barea Soranus (qq.v.). Poppaea had died in 65, and next year Nero married Statilia Messallina (q.v. 2). In 66 Tiridates, kneeling, received the diadem of Armenia from

him, but a Jewish revolt forced him to send Mucianus to govern Syria and Vespasian to pacify Judaea. By now Nero had left for Greece. The successful general Corbulo was ordered to meet him at Cenchreae and was forced to suicide, probably in Oct. 66; and two popular governors of the Germanics, the 'fratres Scribonii', soon met the same fate (Dio 63. 17). Meanwhile Nero had proclaimed 'Freedom for Greece': 'other emperors have freed cities, Nero alone a whole province' (*SIG* iii. 814). In 67 he toured the country, competing (invincibly) in the great games, collecting works of art, and starting to dig a Corinth canal. Amid the buffoonery executions continued; disaffection grew among the Western provinces and armies; and in Rome there was famine, perhaps because corn ships were being diverted to Greece. In the winter 67/8 the freedman Helius, who had been left in charge at Rome, crossed to Greece to summon Nero urgently home.

He reached Rome in January. In March C. Julius Vindex (q.v.), governor of Lugdunensis, rose against him; Galba (q.v. 1) in Spain declared himself 'legatus S.P.Q.R.', and in Africa Clodius (q.v. 2) Macer revolted. The situation might have been saved by military action, but Nero could only conceive fantastic schemes of revenge or of reducing his enemies to penitent tears by his art (Suet. *Nero*, 43). The Praetorians, bribed by their prefect Nymphidius (q.v.) Sabinus to acclaim Galba, deserted Nero, who fled from Rome and on 9 June 68 committed suicide.

A vicious ancestry and repressed childhood, followed by absolute power, made Nero vain, egotistic, and assertive. Yet his devotion to art was real. Some good he achieved, yet mainly where (as in the solution of the Armenian problem, or the rebuilding of Rome with wider streets) it was grandiose and involved glorification of himself. Jealous fear of all eminence—noble, military, or literary—forced him to persecution and murder; his crimes alienated all, nobles, people, and soldiery, while his phil-Hellenic outlook and theatrical performances shocked Roman sentiment. Greek longing for him is reflected in the mysterious belief that he would 'return'; for the rest the tribune's verdict holds good—'odisse coepi, postquam patriciae matris et uxoris, auriga et hystrio et incendiarius extitisti' (*Ann.* 15. 67).

ANCIENT SOURCES. Tac. *Ann.* 13–16, supplemented by Suet. *Nero*, and Dio Cass. 61–3. E. M. Smallwood, *Documents illustrating the Principates of Gaius, Claudius, and Nero* (1967).

NERO (2), GAIUS CLAUDIUS (*PIW* 246) (cos. 207 B.C.), after serving under Marcellus in 214 B.C., took part in the siege of Capua as praetor (212) and propraetor (211). After the defeat of the elder Scipios he was sent to Spain, where he secured the land north of the Ebro (210). He again served under Marcellus in Italy (200). As consul in 207 with his former enemy M. Livius Salinator (q.v.) he took up his command against Hannibal in south Italy. When Hasdrubal's dispatches to Hannibal were intercepted, Nero boldly led part of his army by forced marches (traditionally 240 miles in six days) to join Livius. At the battle of Metaurus the two consuls defeated Hasdrubal, Nero turning the tide of battle by a skilful tactical movement. Nero reported his victory to Hannibal by flinging Hasdrubal's head into his camp. When Nero held the censorship with Livius in 204 the old enmity was renewed. He probably served on the

embassy which delivered the Senate's ultimatum to Philip V in 200. H. H. S.

NERO (3), TIBERIUS CLAUDIUS (*PIW* 254), Cicero's choice for the hand of Tullia (q.v. 2) in 50 B.C., was quaestor in 48 and commanded Caesar's fleet in the Alexandrian war. In 46 he was entrusted with the settlement of veterans in Narbonese Gaul. In 44, however, he proposed that Caesar's murderers should be rewarded. Praetor in 41, he supported L. Antonius (q.v. 6) against Octavian, and took part in the defence of Perusia. Early in 40 he escaped, attempted in vain to procure a slave-rising in Campania, and joined Sextus Pompeius in Sicily with his wife Livia (q.v.) and infant son Tiberius, the future Emperor. Presently, disagreeing with Sextus, he joined Antony in Achaea, and returned to Rome after the Pact of Misenum (39). Shortly after this Octavian persuaded him to divorce Livia so that he might marry her himself. His second son Drusus (q.v. 3) was born about the time of the marriage. He died in 33.

Syme, *Rom. Rev.*, see index.

T. J. C.

NERO (4), JULIUS (*PIW* 146) CAESAR, the eldest of the three surviving sons of Germanicus and Agrippina, was, after the death of Tiberius's son Drusus in A.D. 23, at the age of 17, next in succession to the Principate. Twice commended to the Senate by Tiberius, he held the quaestorship, probably in 26, but in 29 Tiberius, believing the accusations of Sejanus against him and his mother, denounced him in a dispatch to the Senate. He was deported to Pontia and put to death there in 31. J. P. D.

NERVA (1), MARCUS COCCAEUS (*PIW* 16), Roman Emperor A.D. 96–8, was grandson of M. Cocceius Nerva (q.v. 4), born at Narnia in Italy, probably in 30. As praetor designate in 65, he received *ornamenta triumphalia* on the suppression of the Pisonian conspiracy. Not discredited by his friendship with Nero, who admired his verses, he was *cos. I ord.* in 71 with Vespasian. He attained distinction as a jurist and became *cos. II ord.* in 90 with Domitian. The report of his temporary exile during Domitian's last years may be doubted.

When Domitian (q.v.) was assassinated on 16 Sept. 96 without leaving an indicated successor, public opinion reacted violently against his autocracy. Whether or not Nerva had been privy to the plot, the Senate regarded him as the best representative of its ideals, since he was a *nobilis* (q.v.), eloquent, peaceful, just, and likely to rule according to its view of the constitution. It therefore bestowed on him the imperial powers, including the title *Pater Patriae*. It also 'damned' Domitian's memory, annulled his official *acta*, ordered his statues to be destroyed, and prosecuted the informers who had been active in his later years. But Nerva failed to check the spirit of vendetta, itself encouraged by his own 'reformist' programme, which abolished treason charges and was reflected in such coin legends as *Libertas Publica*, *Salus*, *Aequitas*, *Iustitia*. Above all, he lacked military support; hence the wishful *Concordia Exerctuum* coins. Unrest in the frontier armies was disturbing (cf. Pliny, *Ep.* 9. 13. 11; Philostr. *VS* 1. 7. 1) and the opposition of the Praetorians dangerous. The latter in 97 exacted the execution of Domitian's assassins. To placate both them and the legions, Nerva, who was himself childless and infirm, formally adopted Trajan (q.v.) in Sept. 97, and gave him powers almost equal to his own. On 25 Jan. 98 Nerva died, after sixteen months of morally blameless rule; he was consecrated, and his ashes were placed in Augustus' Mausoleum.

In his brief and inexperienced administration, Nerva sought to be enlightened and progressive, though he

chiefly favoured Rome and Italy. But he was hampered by financial difficulties, probably occasioned by Domitian's buildings and campaigns. Nerva himself spent sixty million sesterces on land allotments for poor citizens; he is credited with creating the alimentary system (see ALIMENTA), which Trajan more probably initiated. The cost of postal services in Italy was taken over by the government. In Rome granaries were built; corn distribution and the aqueducts (q.v.) received attention. Legislation was just and humanitarian. Foreign policy was uneventful save for a brief Suebic war (Pliny, *Pan.* 8; cf. *ILS* 2720).

With the pendulum swinging sharply back from autocracy to constitutionalism, *libertas* and *principatus* (*res olim dissociabiles*; Tac. *Agr.* 3. 1) were reconciled, and Augustan ideals of government, the right of free speech, and the principle of dynastic adoption could in some measure be revived. But without military support Nerva could not uphold the complex burden of power—*ruens imperium super imperatorem* (Pliny, *Pan.* 6. 3). *Providentia Senatus*, expressed in his accession, required *Concordia Exercentium*, symbolized by the adoption of Trajan, for its fulfilment.

C. H. V. S.; M. H.

NERVA (2), LUCIUS COCCAEUS (*PW* 12), of undistinguished family, was sent by Octavian to Antony (in Syria) in 41 B.C., returned with him to Italy in 40, and helped to negotiate the Pact of Brundisium. In the spring of 37 he accompanied Maecenas to Brundisium on another diplomatic mission, which led to the Pact of Tarentum. The journey is described by Horace (*Serm.* 1. 5). He was brother of Nerva (3) and probably of C. Cocceius Balbus, consul *suffectus* in 39. He himself is not known to have held any office.

Syme, *Rom. Rev.*, see index.

G. W. R.; T. J. C.

NERVA (3), MARCUS COCCAEUS (*PW* 13), supported L. Antonius (q.v. 6) in 41 B.C. Pardon by Octavian, he held a command in the East, perhaps as governor of Asia 38/7, and was consul in 36. He attended the *Iudi saeculares* in 17 B.C. as *quindecimvir sacris faciundis* (q.v.).

Syme, *Rom. Rev.*, see index.

T. J. C.

NERVA (4), MARCUS COCCAEUS (*PW* 14), probably grandson of (3), was consul *suffectus* and from A.D. 24 *curator aquarum*. A close friend of Tiberius, he accompanied him into retirement in 26 but in 33, disgusted (it was said) by Tiberius' society and financial policy, he starved himself to death. A distinguished lawyer, he developed the school founded by Antistius Labeo (q.v. 1) and later known as Proculian (see SABINUS 2); his son, Marcus, father of the Emperor, also belonged to it.

O. Lenel, *Palingenesi Juris Civilis* (1889) i. 787 ff., H. F. Jolowicz, *Hist. Introd. to Rom. Law* (1952), 388 ff.

T. J. C.

NERVII, a Belgic tribe occupying parts of Hainault and Flanders who were defeated by Caesar after a fierce struggle in 57 B.C. Under the Empire they contributed six cohorts to the *auxilia* and were graded as a *civitas libera* (Pliny, *HN* 4. 106). Numerous villas and potteries indicate general prosperity and their capital Bagacum

(*Bayay*) became an important commercial centre. After the barbarian invasions of the third century, however, its forum was converted into a *castellum*, much of the wall of this survives, together with an earlier cryptoporticus.

Caesar, *BCall.* 2. 15–28 C. Julian, *Hist. de la Gaule* ii (1909), 462 ff.; Grenier, *Manuel* iii. 315 ff.

A. L. F. R.

NESTOR (1) (*Νέστωρ*), in mythology, surviving son of Neleus (q.v.), who lived to a great age (he is more than two generations old in *Iliad* 1. 250 ff., i.e. over 60, schol. ad loc., not 200 odd years, as *Ov. Met.* 12. 187 ff., makes him), retaining some mental vigour and bodily strength long after his youth was passed. The *Iliad* gives a humorous, kindly portrait of an old and respected but rather ineffectual man, full of advice generally either platitudinous or unsuccessful, the really useful counsellors being Odysseus and at times Diomedes (qq.v.). His tactics are archaic (*Il.* 4. 301 ff., cf. Lang, *World of Homer*, 58); he leads the embassy to Achilles with suggestions (9. 179), and when it fails has nothing more to say, except 10. 204 ff., where he advises sending a scout to discover what the Trojans are doing. He is very fond of long narratives of his early successes in war (as 11. 670 ff.) or sport (23. 626 ff.); a particularly delightful touch is his long speech of advice to his son Antilochus (23. 306 ff.), which he himself admits the younger man does not need. In the *Odyssey* (3. 4 ff.) he is safe at home in Pylos (q.v.), and there entertains Telemachus (q.v.). For the death of his son see ANTILOCHUS. His return was due to his realization that things were being ill-conducted after the fall of Troy and disaster impended (*Od.* 3. 165 ff.); at Achilles' funeral he stops the panic of the Greeks at the wailing of Thetis and her attendants (24. 50 ff.). Later works do no more than add details; it is he who settles the dispute over the arms of Achilles by suggesting that Trojan prisoners should be asked whether Ajax or Odysseus was more to be dreaded (Quint. Smyrn. 5. 157, cf. 318; cf. schol. *Od.* 11. 547). So far as we know, there was no tradition of when or how he died; his grave was shown in Pausanias' day (Paus. 5. 36. 2).

For a discussion of the topographical problem of identifying Nestor's Pylos, see MESSENIAN, PYLOS, and PYLOS in Triphylia.

H. J. R.

NESTOR (2), LUCIUS SEPTIMIUS, of Laranda, lived in the reign of Septimius Severus (A.D. 193–211), and wrote, among other works, an *Ἰλιάς λεπτογράμματος*, in each of the twenty-four books of which one letter of the alphabet did not appear, and *Μεταμορφώσεις* (*Anth. Pal.* 9. 129, 364). Inscriptions show his relations with members of the Roman aristocracy. His son was the epic poet Peisander (q.v. 3) of Laranda.

M. Guarducci, *Riv. Fil.* 1961, 180 ff., J. and L. Robert, *Rev. Ét. Grec.* 1944, 240, 1951, 204, R. Meiggs, *Roman Ostia* (1960), 346.

J. D. D.

NEXUM, a solemn transaction of the oldest Roman law, with copper and scales (*per aes et libram*; see MANIPATIO), by which a man was reduced to bondage on account of debt. Because of the ambiguity of our literary sources (Varro, Livy), the nature and effects of this institution are obscure. It is disputed whether it was a loan, resulting in immediate execution (without judgement) against the debtor, if he did not repay at the appointed term, or whether it was a kind of self-sale or self-pledge by which the debtor enslaved himself to the creditor to guarantee him the payment of the debt. *Nexum* is mentioned in the XII Tables, but it fell out of use when *Lex Poetelia Papiria* (c. 326 B.C.) prohibited bondage and enchantment for private debts.

Immense literature: see F. de Zulueta, *Laws Quarterly Review* xxx (1913) and citations in M. Kaser, *Röm. Privatrecht* i (1955), 148.

A. B.; B. N.

NICAËA (1), now *Iznik*, in Bithynia, was founded as Antigonia by Antigonus (q.v. 1); Lysimachus renamed it Nicaea. Noted as an example of town-planning, it formed an exact square with four gates, the central position being occupied by a gymnasium (Strabo 12. 565-6). The gates, located at the four cardinal points, can be seen from the principal crossroads. Pompey assigned it a vast territory; it became a rival of Nicomedia (q.v.), and remained important under the Roman Empire (Pliny, *Ep.* 10. 39, consulted Trajan about work on its theatre and gymnasium). At the first of two church councils held there the Nicene Creed was formulated (A.D. 325).

Jones, *Cities E. Rom. Prov.*, see index, A. M. Schneider, *Istanbul Forschungen* 1938, 1943. O. A. W. D.

NICAËA (2), now *Nice*, a Greek colony, was founded on Ligurian territory by Massilia, to whose jurisdiction it continued to belong. In 154 B.C., Q. Opimius relieved it and the neighbouring port Antipolis (modern *Antibes*) from attacks by Ligurians. Under the Empire it was overshadowed by its neighbour Cemenelum (now *Caenue*), which has substantial remains: an amphitheatre, shops, and baths.

R. G. L. M. Latouche, *Histoire du comté de Nice* (1932), *Carte archéologique de la Gaule romaine*, FOR 1 (1931), 8 ff., pl. iv. O. A. W. D.

NICAENETUS (*PW* 2) (probably second half of 3rd or beginning of 2nd B.C.), of Samos or Abdera (perhaps born at Abdera but migrated early in life to Samos). Athenaeus in quoting from Nicaenetus' *Epigrams* calls him 'the Epic Poet' and refers to his treatment in various works of Samian history. Nicaenetus also wrote a *Catalogue of Women* (Ath. 13. 590 b), and an epyllion called *Lykus* (Parth. 1), describing the adventures of that hero. The most attractive of the epigrams is that preserved by Athenaeus (15. 673 b), an invitation to a picnic at Hera's temple in Samos. *Anth. Pal.* 6. 225 is probably a literary reminiscence of Callimachus (fr. 126) and Apollonius Rhodius (*Argon.* 4. 1309, 1323, 1358).

TEXIS Powell, *Coll. Hec.* 1. 4; M. Gabathuler, *Hellenistische Epigramme auf Dichter* (1937), 65. E. A. B.

NICANDER, of Colophon. Nicander describes himself as 'reared by the snowy hill of Clarus' (*Ther.* 958), and as 'scuted by the Clarian tripods of the Fat-Shooter' (*Alex.* 11), and was apparently hereditary priest of Apollo of Clarus (*Vita*, citing Dionysius of Phaselis). His date is variously given. The confusion may be due in part to the existence of another Nicander, son of Anaxagoras, mentioned as an epic poet in an inscription of Delphi (*SIG* 452), which is best assigned to 258. The internal evidence of the two extant poems favours a date in the second century.

WORKS. Two didactic poems in hexameters, the *Theriaca* and *Alexipharmaca*, survive complete. The first is an account of various snakes and other poisonous creatures and the best remedies for their bites. The second enumerates vegetable, mineral, and animal poisons and their antidotes. The matter of both poems is taken from the prose-treatise of Apollodorus the Iologus (early 3rd c.). *Thebatica*, *Oetaica*, *Europa* (?), *Sicilia*, *Cimmerii* and many apparently Epics. Better known is the *Heteroionumena* (Metamorphoses), since it was used by Antoninus Liberalis and Ovid. The *Georgica*, on which Cicero (*De Or.* 1. 69) cites a flattering opinion of the *docti*, had some influence on Virgil. So perhaps had his *Melissurgica* (On Apiculture). More in the vein of the two extant poems were the *Prognostica* and *Collection of Cures*. The former was a versification of the (pseudo-) Hippocratic treatise on this subject (the *Suda*). All the above seem to have been in hexameters, but the *Ophiaca* (schol. *Ther.* 377), which recounted legends connected

with snakes, was probably in elegiacs, cf. frs. 31-2, as also was perhaps a poem on Hunting (frs. 97-100). Of three other works, *Aetolica*, *Colophoniaca*, and *About Poets or About Poets from Colophon*, it is not established whether they were in prose or verse. A collection of Glosses and a treatise on Temple Utensils were certainly in prose.

The *Suda* describes Nicander as 'grammarian, poet, and doctor'. The last is probably a false inference from the nature of many of his writings, but the order of the first two is significant. As the *Suda* later puts it, Nicander was a *metaphrastes*, i.e. converter into verse, of any topic that came to hand, whether a medical dissertation or a collection of *paradoxa*. To judge by the *Theriaca* and *Alexipharmaca*, Nicander had little gift and, indeed, little inclination for enlivening his arid themes with flights into real poetry. Digressions are few and similes almost non-existent. But neither was Nicander a scientist. He took over from his sources the bad with the good and thus we find in his poems absurd errors due to popular superstition alongside exact descriptions of plants and medical prescriptions so detailed and precise that the remedy could be made up today. But a grammarian of a sort Nicander undoubtedly was. He describes himself (*Ther.* 957) as *Homereius* and he can at least claim the title as being one of the most diligent seekers after Homeric glosses among the Alexandrians. Like Euphron and the author of the *Alexandra* he has no scruples about altering the meanings of words nor about playing fast and loose with normal grammar. In metre his handling of the hexameter conforms in general to the rules laid down by Callimachus.

Nicander was read and cited by a certain number of later writers on the subjects with which he had dealt, but he received more attention from professional scholars drawn to him by the obscurity of his language and style. Theon wrote a *hypomnema* on him, as did Plutarch, and the names of other students are mentioned in the Scholia. The result is that the latter, especially those on the *Theriaca*, often contain valuable material.

TEXIS A. S. F. Gow and A. F. Scholfield, *Nicander* (1953) (text, translation, notes, and general bibliography); O. Schneider, *Nicandrea* (1856).

GENERAL LITERATURE W. Kroll, 'Nikandros' (10) and (11) in *PW* xvii 250 ff.; H. Schneider, 'Vergleichende Untersuchungen zur sprachlichen Struktur der beiden erhaltenen Lehrgedichte des Nikander', *Klass. Phil. Stud.* 1962. E. A. B., C. A. T.

NICANOR (1) of Stagira (c. 360 (?)–317 B.C.), perhaps shared with Alexander the tuition of Aristotle, whose daughter he later married. He may have commanded Alexander's Greek fleet (334), but he is first identified for certain in 324, when he brought to Greece several rescripts of Alexander, including the decree for the return of exiles. In 319 he commanded Cassander's garrison at Munychia, and from this position he soon secured the Piraeus also. He next commanded Cassander's fleet and defeated Cleitus (q.v. 2) near the Bosphorus (318); but he quarrelled with Cassander, who had him condemned to death for treason by the Macedonian army-assembly.

Diod. 17. 109, 18. 64, 68, 72, 75; 11. Derve, *Alexanderreich II*, no. 557. G. T. G.

NICANOR (2) of Alexandria (2nd c. A.D.), wrote on the punctuation of the *Iliad*, of the *Odyssey*, and of Callimachus; also a general work *Περὶ στίγμων*. He recognized three kinds of full stop, three of the comma, and two of the colon. In punctuation he dominates the Homeric scholia as Hierodorus does in accentuation, Aristonicus in Aristarchan textual criticism, and Didymus in erudition.

FRAGMENTS. *Περὶ Ἰλ. στίγμων*, Friedlaender (1851), *Περὶ Ὀδ. στίγμων*, Curnuth (1875). P. B. R. F.

NICARCHUS, Greek epigrammatist, seems to have been nearly contemporary with Lucilius (q.v.), whom he imitates. The Greek Anthology contains about forty of his poems, some of them very coarse, like the mimes of his period, and some (e.g. *Anth. Pal.* 11. 251) very funny.

F. J. Brecht, *Motive- und Typengeschichte des griech. Spottepigramms* (Philol. Suppl. 22, 1930).

NICETA, bishop of Remesiana (*Bela Palanka*, Yugoslavia) (late 4th c. A.D.), pioneer of Christianity among the barbarians and friend of Paulinus (q.v.) of Nola, wrote an *Explanatio symboli* (an important exposition of the Apostles' Creed) and other treatises; many impute to him the great Church hymn, *Te Deum laudamus*.

Ed. A. E. Burn, *Niceta of R., Life and Works* (1905). A. H. W.

NICIAS (1) (c. 470–413 B.C.), Athenian politician and general. During the period after the death of Pericles he became the principal rival of Cleon (q.v.) in the struggle for political leadership. He was a moderate and opposed the aggressive imperialism of the extreme democrats, his aim being the conclusion of peace with Sparta as soon as it could be attained on terms favourable to Athens. Elected frequently to serve as *strategos*, he led several expeditions in which, thanks to his cautious competence, he suffered no serious defeat and won no important victory. He was largely responsible for the armistice concluded in 423, and the Peace of 421 appropriately bears his name.

He now favoured a policy of retrenchment and objected to the ambitious schemes of Alcibiades (q.v.) who advocated Athenian intervention in the Peloponnese and later an expedition to Sicily. Despite his disapproval Nicias was appointed with Alcibiades and Lamachus (q.v.) to conduct this enterprise. Alcibiades was soon recalled, and little was accomplished in 415, but in 414 Syracuse was invested and almost reduced to capitulation. The death of Lamachus, the arrival of the Spartan Gylippus, and the inactivity of Nicias, now seriously ill, transformed the situation, and in spite of the efforts of Demosthenes (q.v. 1), who brought reinforcements in 413, the Athenians were themselves blockaded. Nicias, who refused to withdraw by sea until too late, led the vanguard in a desperate attempt to escape by land. His troops were overwhelmed at the river Assinarus, and he was subsequently executed. The narrative of Thucydides, though giving due credit to Nicias for his selfless devotion, shows very clearly that the Athenian disaster was largely due to the inadequacy of his military leadership.

Thuc. bks. 3–7; Plut. *Nicias* A. B. West, *CPhil* 1924, 124 ff. and 201 ff.; H. D. Westlake, *Individuals in Thucydides* (1968), chs. vi and vii.

H. D. W.

NICIAS (2), painter, pupil of Antidotus (pupil of Euphranor), Athenian. Pliny dates 332 B.C. He painted statues for Praxiteles (about 340) and refused to sell a picture to Ptolemy (after 306). His works included Nemea (signed as encaustic), Necromanteia (after *Iliad* book 11), Alexander, Io, Andromeda. The Io and Andromeda are reflected in versions in Pompeii and Rome (Pfuhl, 646–7) which have a similar colour scheme to the fourth-century Alexander sarcophagus (Winter, *KB* 336–7). He advised the choice of large subjects such as cavalry and sea battles (contrast Pausias, q.v.). His treatment of light and shade made his figures stand out. According to Rumpf, 'diligentissime mulieres pinxit' (Pliny, *HN* 35. 130) means that he was the first to represent women plastically; monumental evidence supports this.

Overbeck, 1109, 1726, 1810–26, Pfuhl, 821; A. Rumpf, *JDAl* 1934, 6; *Mulerei u. Zeichn.* 143.

T. B. L. W.

NICIAS (3) of Nicaea, author of philosophic *διαδοχαί*

('successions' of philosophers), which have been thought to be the basis of Diogenes Laertius' work.

NICOCHARES, Athenian comic poet and son of Philonides (q.v.), produced *Δίκωνες* in 388 B.C. (hyp. 4 Ar. *Plut.*) and in *Galatea* (fr. 3) ridicules the same person as Ar. in *Plut.* 303 f. We have ten titles, several implying mythological burlesque; *Galatea* could possibly be one ancestor of Theoc. 11.

FCG II. 842 ff., CAF I. 700–4; FAG I. 926 ff.

K. J. D.

NICOLAUS OF DAMASCUS, born of distinguished Greek family about 64 B.C. and liberally educated, became the adviser and court historian of Herod the Great, perhaps before 20 B.C., certainly from 14 to 4 B.C., accompanying him twice to Rome. Returning to private life after Herod's death, he re-emerged to represent Herod Archelaus in Rome, but did not resume court life.

Besides dramatic composition (tragedies and comedies) and writings on philosophy and natural science of a Peripatetic character, he published an autobiography, a panegyric biography of Augustus' youth, and a Universal History in 144 books from the earliest times to the death of Herod the Great. It reached the Persian Empire in seven books (preserved in excerpts), treated the Mithridatic Wars in books 96–110, and with books 123–4, preserved in Josephus' *Jewish Antiquities* 14–17, came to Herod and described in full contemporary events to 4 B.C.; the introduction to Josephus' *Jewish War* is also based upon this work. The early narrative reproduced ultimately, among others, the tradition of Xanthus, Ctesias, perhaps Dinon and Hellanicus, Ephorus, Posidonius, Caesar; the whole work, the greatest World History since Ephorus, followed the rationalistic, rhetorical Ionic historiography of Ctesias, using also, especially in the treatment of Herod's family circumstances, the dramatic technique which marked his biographical writing.

FGH II A. 324, C. 229.

A. H. McD.

NICOMACHUS (1), son of Aristotle; to him, according to an ancient account, Aristotle dedicated the *Nicomachean Ethics*; but possibly the name is due to his having edited the work, as Eudemus may have edited the *Eudemian Ethics*.

NICOMACHUS (2), New Comedy poet, whom the *Suda* confuses with a tragedian of the same name. Fr. 1 describes a cook magnifying his art.

FCG IV. 583 ff.; CAF III. 386 ff.

NICOMACHUS (3) of Gerasa (*PW* 21), arithmetician and Neopythagorean (between A.D. 50 and 150), wrote: (1) *Introduction to Arithmetic* (*ἀριθμητικὴ εἰσαγωγή*), in two books, giving the Pythagorean theory of numbers (classification of numbers, odd, even, prime, etc., 'perfect' and 'friendly' numbers, 'polygonal' and 'pyramidal' numbers, arithmetical and geometrical progressions, means, etc., sum of the series of cube numbers); (2) *Ἐγχειρίδιον ἀριθμητικῆς* (manual of harmony); (3) *Θεωλούμενα ἀριθμητικῆς*, on mystical properties of numbers. Extracts from this are preserved in the compilation of the same name attributed to Iamblichus (q.v. 2); (4) *Introduction to Geometry* (*γεωμετρικὴ εἰσαγωγή*, see *Introd. arith.* 2. 6. 1). This is entirely lost.

The *Introduction to Arithmetic* was translated into Latin by Apuleius (Cassiod. in Migne, *PL* lxx. 1208 B). Boethius' *De Institutione Arithmetica* is an adaptation of it. Commentaries on it were written by Iamblichus and Philoponus (6th c.).

EDITIONS. (1) by R. Hoche (Teubner, 1866); (2) in C. Jan, *Music Scriptores Graeci* (1895); (3) *Theologoumena Arithmetica*, ed. V. de Falco (Teubner, 1922).

TRANSLATION of (1), with commentary and introduction on life,

etc., by D'Ooge, Robbins, and Karpinski (U.S.A. 1926); Iamblichus' commentary, ed. Pistelli (1894), Philoponus' commentary, ed. R. Hoche (Leipzig, 1864 Bk 1) (Hirlin, 1867 Bk 11).

COMMENT Heath, *Hist. of Greek Maths* i. 97 ff. T. H., G. J. T.

NICOMACHUS (4) **FLAVIANUS**, VIRIUS, Roman aristocrat of the fourth century A.D., a member of the Amician house, and a strong champion of the old paganism. After a distinguished public career he wholeheartedly supported the pagan regime of the usurper Eugenius, and on his defeat by Theodosius I committed suicide (A.D. 394). He wrote *Annals* which were possibly used by Ammianus (q.v.). His son, who was *praefectus urbi* for the first time in 393/4, shared in the revision of the text of Livy carried out by the Nicomachi and others; he married the daughter of Symmachus (q.v. 2).

LS 2946-8. H. Bloch, *Conflict between Paganism and Christianity* (ed. A. Momigliano, 1963), ch. 8. J. A. T.

NICOMEDES, the name of several kings of Bithynia:

(1) **NICOMEDES I** (c. 279-c. 255 B.C.), son of Zipoetes (before 315-c. 279), who had taken the royal title in 298, inherited his father's struggle against Antiochus I. He joined the Northern League, purchasing the aid of Hecaleia by returning Cierus, invited the Gauls across the Bosphorus, and assisted them to settle in Phrygia. He founded Nicomedia c. 265, and received honours at Cos and Olympia. At his death his son Ziaelas (c. 255-c. 230) seized the throne in defiance of the guardians of his father's will in favour of his minor children, but continued his hellenizing policy.

(2) **NICOMEDES II EPIPHANES** (140-c. 127 B.C.), son of Prusias II (q.v.), cultivated the favour of the Greek cities, and, a faithful ally, aided Rome in the war against Aristonicus (133-129), but his request for territory in Phrygia was refused in favour of Mithridates V of Pontus.

(3) **NICOMEDES III EUERGETES** (c. 127-c. 94 B.C.), son of Nicomedes II. His gifts to Greek cities won him the title Euergetes. Yet because of the condition of Bithynia, when Marius requested aid from him against the Cimbri (104) he declared that most of his men had been seized and enslaved by Roman *publicani*, and the Senate decreed that no free man from an allied State should be held in slavery. His attempts to divide Paphlagonia with Mithridates VI of Pontus and to win Cappadocia by marrying Queen Laodice were foiled by Roman intervention (see *ARIARATHES VII-IX*).

(4) **NICOMEDES IV PHILOPATOR** (c. 94-75/4 B.C.), son of Nicomedes III. Mithridates VI of Pontus promptly drove him out in favour of his brother Socrates (c. 92), but a Roman commission under M'. Aquilius restored him (90-89). Under pressure from Aquilius and his Roman creditors he raided Pontic territory, and precipitated the First Mithridatic War (88). Restored by Sulla in 85/4, he ruled thereafter in such peace as Roman officials and business men allowed him. Julius Caesar was sent as envoy to him to get ships for the siege of Mytilene (81/80). At his death (late 75 or early 74) he bequeathed his kingdom to Rome.

App *Mth.* references in Polybius, Diodorus, and Memnon; *OGI* 340-6. Th. Reinach, *Trois royaumes de l'Asie mineure* (1888); *Mithridate Eupator* (1896). J. L. Histoire par les monnaies (1902), 167 ff.; Rostovtzeff, *Hellenistic World*, see index. Magie, *Rom. Rule Asia Min.* 311 ff. and index; G. Vitucci, *Il regno di Bitunia* (1953). T. R. S. B.

NICOMEDES (5, *PW* 16), mathematician (?c. 200 B.C.), was the discoverer of the cochloidal or conchoidal curves, by means of which he solved the problem of trisecting the angle and that of doubling the cube. See especially Eutocius, *Comm. in Arch. de Sph. et Cyl.* (Heiberg²), 98 ff.

Heath, *Hist. of Greek Maths* i. 238 ff., 260 ff.

NICOMEDIA (*Νικομήδεια*) was founded by Nicomedes I c. 265 B.C. to replace Astacus (on a more northerly site). It became the capital of the kingdom and of the Roman province of Bithynia. In 29 B.C. Augustus authorized a provincial temple to Rome and himself at Nicomedia which became the meeting-place of the provincial assembly. Adorned with splendid buildings, it accumulated titles of honour, and in the third century A.D. was styled 'greatest metropolis, leading city of Bithynia and Pontus, Hadrianic Severianic Nicomedia, twice *neocorus*, sacred asylum, friend and ally of the Roman people'. It suffered from frequent earthquakes, and in 256 or 257 was sacked by the Goths; but it received favours from several Roman Emperors and became the eastern capital of Diocletian. Its prosperity depended on an extensive and fertile territory, a good harbour, and its location on the trunk road from the Danube provinces to the eastern frontier. Nicomedians appear in almost every province of the Empire. In spite of these advantages Pliny's letters and Dio's speeches yield evidence of disordered finances and social discontent.

P. Ruge, *PW*, s.v. 'Nikomedeia'; Rostovtzeff, *Hellenistic World* (see index), Magie, *Rom. Rule Asia Min.* 305 and index. T. R. S. B.

NICOPHON, Athenian comic poet, won one or more victories at the City Dionysia and the Lenaia in the last decade of the fifth century B.C. (*IG* ii², 2325. 67, 131) and produced *Adonis* in 388 (hyp. 4 Ar. *Plut.*). We have six titles, mostly implying mythological burlesque (including *Birth of Aphrodite*; see *POI.VZ.F.I.105*).

FCG ii. 848 ff.; *CAF* i. 775-80, *FAC* ii. 934 ff. K. J. D.

NICOPOLIS was the name of several towns with a Greek-speaking population, built to commemorate Roman victories.

(1) *Nicopolis of Pontus*, the site of Pompey's victory in 66 B.C. over Mithridates, where he settled a mixed colony of veterans, wounded, and natives; the scene also of Pharnaces' victory over Caesar's lieutenant Domitius in 47. Being a strategic point in the system of frontier roads it grew in importance under the Empire, received *ius Italicum*, and finally became the metropolis of Lesser Armenia.

(2) *Nicopolis ad Istrum*, on the main axial road through Thrace from Philippopolis to the Danube, founded by Trajan after the Dacian Wars.

(3) *Nicopolis in Epirus*, on the isthmus of the Bay of Actium. Augustus created this town by sweeping into it the population of the neighbouring Greek communities. It secured much of the former trade of Ambracia and was the scene of the 'Iudi Actiaci', a quadrennial festival of equal rank with the Olympian Games, under Spartan stewardship. Its theatre is well preserved.

F. Cumont, *Studia Pontica* ii (1906) 302 ff.; Jones, *Cities of Rom. Prov.* 152, 172; Magie, *Rom. Rule Asia Min.* see index. (3) Hammond, *Epirus*, 62. M. C., T. R. S. B.

NICOSTRATUS (1), Middle Comedy poet, regarded by Apollodorus as a son of Aristophanes. Some of the twenty-one titles known may be of comedies by Nicostratus (2); they are unusually intriguing, e.g. *Heisiod*, *Παρακολυμβάσα*, *Ψευδοστρυγίαιας*, but the forty-odd citations give very little away.

FCG iii. 278 ff.; *CAF* ii. 219 ff., iii. 730; *FAC* ii. 28 ff. K. J. D.

NICOSTRATUS (2), New Comedy poet, mentioned in a list of Lenaeon victors after Menander, Diphilus, and Philippides, and probably as winner of the second prize at the Dionysia in 311 B.C. (*IG* ii², 2325. 165, 2323a. 43). On a Delian inscription of 280 B.C. (*IG* xi. 107) he is named with two other comic poets, Philemon and Ameinias.

See reference under **NICOSTRATUS** (1). W. G. W.; W. G. A.

NIGIDIUS FIGULUS, PUBLIUS (praetor 58 B.C.), scholar and mystic, 'iuxta Varronem doctissimus' (Gellius), friend of Cicero, active supporter of Pompey, died in exile in 45. He displayed an enthusiasm for Pythagoreanism and along with it astrology, and was said to engage in magic. He wrote comprehensive works on grammar (*Commentarii grammatici*), theology (in particular *De dis*), and various branches of natural science. His scholarship was too abstruse to win public esteem and he was eclipsed by his contemporary, Varro (q.v. 2). Fragments of his works survive in Gellius and other writers. See also SCHOLARSHIP, LATIN.

TEXT. A. Swoboda, *P. Nigidi Figuli operum reliquiae* (1889). A. della Casa, *Nigidi Figulo* (1963). A. H. W.

NIKE, the goddess of Victory in Greek religion. Nike is first mentioned by Hesiod (*Th.* 383) as daughter of the Titan Pallas and of Styx, and as sister of Zelos, Kratos, and Bia (Rivalry, Strength, and Force). With these she was honoured by Zeus because she fought on the side of the gods against the Titans (q.v.). She is here an abstraction or symbol of decisive victory for the gods. The poets of athletic contests see Nike in vivid terms. Bacchylides (11. 1 Kenyon) depicts her standing next to Zeus on Olympus and adjudging the award for 'areta' to gods and men. The victorious athlete sinks into the arms of Nike (Pind. *Nem.* 5. 42). Here Nike is already victory of an athletic, not only a military, contest. She rules over all contests. She is invoked by the chorus of Aristophanes (*Eq.* 581) and on vases she crowns women of victorious beauty or craftsmen of extraordinary skill.

Statues of Nike begin in the archaic period with the famous one from Delos. Some scholars have connected this statue with the base inscribed by Archermus, the sculptor who is said to have first represented Nike as winged (schol. Ar. *Av.* 574). The wooden image in the temple of Athena Nike was unwinged (Paus. 3. 15. 7). The Persian Wars resulted in a great popularity of Nike. The Athenians dedicated her statue in Delphi after the battle of Salamis (Hdt. 8. 121) and she becomes very frequent on vases. She decorates a trophy, writes on the helmet, aids in preparations for the fight, the battle, or the athletic or musical contest, and brings the sacrifice after the victory. She stands on or flies over the chariot of the victorious mortal charioteer (Bacchyl. 3. 5) or serves as charioteer for Heracles on his way to Olympus. The invention of this type of small flying Nike enabled the artists to use her as an attribute. Thus she appeared in Phidias' images of Athena Parthenos and of Zeus of Olympia. These masterpieces are lost as well as the later paintings of Nicomachus and Apelles (Pliny, *HN* 35. 108. 93), but the famous Nike by Paconius found in Olympia, the balustrade of the temple of Athena Nike in Athens (R. Carpenter, *The Sculpture of the Nike Temple Parapet*, U.S.A. 1929), and the Hellenistic Nike of Samothrace (J. Charbonneau, *CR Acad. Inscr.* 1950, 262) show the fire and enthusiasm with which Greek artists conceived the goddess.

As befits a race fond of competition the Greeks invoked Nike in most flattering terms and she had cults in Olympia (Paus. 5. 14. 8), Ilium, Tralles, and elsewhere. She enjoyed favour with Hellenistic rulers and as Victoria was worshipped by the Romans. As symbol of Victory over death Nike was a favourite motif of Roman allegorical art.

NILE, Egypt's river (explored by ancient Egyptians to the Upper Blue Nile and the confluence of the Bahr-el-

Gazal with the White Nile), was known to Homer as 'Aegyptos river', to Hesiod first as Νεῖλος. It was opened to westerners after 665 B.C. Cambyses the Persian (c. 525 B.C.) reached the desert south of Koroska, but Herodotus knew little beyond Meroe. None knew the cause of summer-time flooding; Anaxagoras' conclusion (melting snows) was good guess-work. Ignorant folk believed that the Nile was joined to the Indus, until Alexander's explorations disproved this. False ideas about the flooding continued, though Aristotle guessed correctly. The foundation of Alexandria and Ptolemaic trading up the river and through the Red Sea changed matters. The White Nile (Astapous), the Blue Nile, and the sources of the Astaboras (*Athara*) became known, and flooding by waters from Abyssinian heights was confirmed. According to Juha, the Nile rose in Mt. Atlas and emerged in east Sudan after two journeys underground. Explorers sent by Nero passed the confluence of the Sobat with the White Nile, but were blocked by sudd (masses of decayed plants). Later, the Blue Nile was further explored. Lastly, c. A.D. 100 a traveller named Diogenes (Ptol. *Geog.* 1. 9. 3, 4, etc.) reported from the E. African coast that inland 'Mountains of the Moon', snow-capped, supplied two lakes, from each flowed a stream uniting into the Nile. This vaguely indicates Lakes Victoria and Albert, the Ruwenzori Range, and Mts. Kenya and Kilimanjaro.

Cary Warmington, *Explorers*, 165 ff.; (Pelican) 202 ff.; E. H. Warmington, *Greek Geography* (1934), index, M. Cary, *Geographical Background*, 207 ff. (but he is wrong about Coptos), Thomson, *Hist. Anc. Geog.*, esp. 275 ff.; Hyde, *Greek Mariners*, 255 ff. E. H. W.

NIMBUS, a circular cloud of light which surrounds the heads of gods, emperors (Serv. *Aen.* 2. 616; 3. 587), and heroes. The belief that light radiates from a sacred or divine person is a common one and the nimbus only a special form which was developed in classical religion and art. Assyrian art, for instance, represents some gods with rays around their shoulders (Th. Dombart, *Journ. Soc. Oriental Research Toronto* 1932, 38) and Greek art shows deities of light, such as Helios, with a radiate crown. Greek vases and Etruscan mirrors of the fifth century afford the earliest examples of nimbus, often combined with the crown of rays; under the Roman Empire the nimbus becomes very common. The temple of the Palmyrene gods in Palmyra has an early dated example (A.D. 32). Almost all pagan gods of any importance are occasionally represented with a nimbus in Pompeian wall paintings, African mosaics, and the painting and reliefs of Palmyra and Dura. In late ancient art emperors, consuls, and other dignitaries, and sometimes even portraits of dead commoners have the nimbus. In Christian art only Christ was represented with nimbus at first, but it was soon extended to the Virgin, the major saints, and angels.

NINNIUS CRASSUS (? early 1st c. B.C.), author of a translation of the *Iliad*.

Baehr, *FPR* 281; Morel, *FPL* 51.

NIOBE (Νιόβη), in mythology, daughter of Tantalus and wife of Amphion (qq.v.). They had a large family, six sons and six daughters (Hom. *Il.* 24. 604, the oldest mention of her, which seems to imply that the story was already well known and she a stock type of bereavement), or seven of either sex (Ov. *Met.* 6. 182-3); the number varies in different accounts (see for this and other details Apollod. 3. 45 ff. and Sauer in Roscher's *Lexikon*, s.v.). She boasted that she was at least equal to Leto (q.v.), who had borne but two children, Apollo and Artemis. Thereupon the two children of Leto killed all the children of Niobe. According to Homer, Zeus also turned

all the people into stone; Niobe lived long enough to eat at least one meal when 'wearied with tear-shedding', and then became a stone which is still on Mt. Sipylon. The gods buried the children on the tenth day. These details, except Niobe's own metamorphosis, do not appear in later accounts. The stone, according to Pausanias (1. 21. 3), was a natural formation looking somewhat like a woman; cf., however, modern opinions in Frazer ad loc. See METAMORPHOSIS.

It is fairly evident that the story, the kernel of which must be very old, has been modified in the interests of genealogy. It can hardly be that the daughter of Tantalus of Sipylon was originally married to Amphion of Thebes, of whom Telesilla (ap. Apollod. loc. cit. 47) gets rid again by making him perish with the children. Again for genealogical reasons the pathos is modified by making a son and a daughter survive (ibid. 46 f.).

In art the deaths of the children and the grief of their mother at the sight are a common and favourite subject.

See Roscher's *Lexikon*, s.v.

H. J. R.

NIREUS (*Nireús*), in mythology, the commander of a small party (three ships) from Syme (*Iliad* 2. 671 ff.); he was the son of Charops and Aglaia and the handsomest man in the Greek army except Achilles, but a weakling. He was killed by Eurypylos, son of Telephus (Quint. Smyrn. 6. 368 ff.).

H. J. R.

NISIBIS (modern *Nusaybin*), a city in Mygdonia in north-eastern Mesopotamia. After the end of the Assyrian Empire it disappears from history until the Hellenistic age when Seleucus Nicator settled Macedonians on the old site. Its new name, Antioch of Mygdonia, first appears on coins of Antiochus IV, but soon the city resumed its older name. Nisibis was part of the empire of Tigranes the Great (q.v. 1) when Lucullus' troops stormed it (68 B.C.); later Artabanus III recovered it for Parthia and assigned it to a vassal, Izates of Adiabene. Trajan's ephemeral occupation apart, it first became a Roman city as a result of Verus' campaign. Septimius Severus rewarded it for its loyalty to him by making it a *colonia* (Cass. Dio 75. 3. 2) and it has the title *metropolis* on its coins from Severus Alexander onwards. As a frontier fortress city it suffered many vicissitudes during the wars of the Romans against the Parthians and Sassanid Persians, whose king Sapor II thrice failed to take it (338, 346, and 350). Finally, after Julian's disastrous campaign, Jovian ceded it to Persia, its population, loyal and Christian, preferring to abandon the city rather than live under Persian rule (363) (Amm. Marc. 25. 7-9). It was partly resettled with Persians, although it was the Arab element that gradually became dominant. Never again recovered by Byzantium it fell to the invading Arabs in 640.

Nisibis was always an important centre of trade. In the treaty of 297/8 between Diocletian and the Persian Narses it was specified that Nisibis should be the only Roman market for trade exchanges between the two empires, and fourth- and fifth-century regulations continued to enforce this monopoly (*Cod. Just.* iv. 63. 4). A school of Syriac literature initiated by Ephraem (q.v.) of Nisibis in the fourth century continued to flourish long after the Arab conquest.

Jones, *Cities E. Rom. Prov.*, ch. 9; G. F. Hill, *RM Couns. Arabia etc.* E. W. G.

NISUS. (1) Legendary king of Megara, whose life together with the fate of the city depended on a lock of red hair on his head. His daughter Scylla cut this off and betrayed the city to Minos king of Crete who was besieging it, either for a bribe (Aesch. *Cho.* 613-22) or for love of him (Ov. *Met.* 8. 1-151). Nisus was turned into a sea-eagle, Scylla into a bird *ciris* (see D'A. W.

Thompson, *Gloss. of Gk. Birds*² (1936), s.v.; Hyg. *Fab.* 198. 4 calls it a fish) pursued by him. The story is told at length in the pseudo-Virgilian poem *Ciris*. See also Ov. *Met.* 8. 6 ff., Strabo 8. 6. 13, Stith Thompson, K 976. Cf. AMPHITRYON.

(2) Son of Hyrtacus, hero of a famous episode in Verg. *Aen.* 9. 176-502; also prominent in the foot-race in 5. 286-361.

(3) Roman grammarian of the second half of the first century, used by Suetonius and Velius Longus; his works are now lost.

R. A. B. M.

NOBILIOR, MARCUS FULVIUS (*PW* 91) (cos. 189 B.C.), the victor over Actolia, was curule aedile in 196, praetor in 193 in Spain, subduing Oretania and Carpetania (193-192), and as consul in 189 defeated the Aetolians, capturing Ambracia and sending its art treasures to Rome. In 188 he won Cephallenia, taking Same, and intervened between the Achaeans and Sparta. He triumphed, despite complaints about Ambracia, building the temple of Hercules Musarum. Censor in 179 with M. Aemilius Lepidus, he reformed the *Comitia Centuriata* and carried out a large building programme. A patron of Greek culture (Ennius accompanied him to Aetolia), he was attacked by Cato. One son was consul in 159, another consul in 153 at Numantia.

De Sanctis, *Stor. Rom.* iv 1 210, 456, 605; Scullard, *Rom. Pol.* 141 ff., 180 ff., 266. A. H. McD.

NOBILITAS. When the Plebs (q.v.) attained legal equality with the Patricians (q.v.), the magistracies were in theory open to all citizens (cf. Cic. *Sest.* 137). Yet in the lists of magistrates the same families tend to recur, while newcomers always form a slow trickle. Gradually the patrician aristocracy was transformed, largely with its own co-operation, into a new oligarchy increasingly plebeian in composition; though socially patrician status always conferred special distinction. These new rulers were the *nobiles*: men 'known' to all, both by name and even by features, since the masks of their ancestors (see *IMAGINES*) were a common sight in the streets of Rome. These men naturally had an advantage in elections; and it was increased by their network of family and client relationships. Thus they came to have a right to be elected, until by the late Republic the defeat of a *nobilis* by a social inferior might by itself raise a presumption of corrupt practices (see Cic. *Mur.* and *Planc.*).

The word '*nobilis*'—never a strict term of law—became increasingly exclusive. As praetorships multiplied, it was only the consulate that gave a family this final distinction: as Sallust says (*Jug.* 63. 7, with tendentious exaggeration), it was regarded as 'polluted' if held by an outsider. In fact, though exclusive, the *nobilitas* never became a closed caste. At all times a proportion of non-noble men of senatorial and occasionally even of non-senatorial birth (see *NOVUS HOMO*) rose to the consulate, usually with the support of noble families (see, e.g., CATO 1, CICERO 1). These men were, in general, perfectly absorbed into the oligarchy, thus ensuring its vitality.

Under the Empire the word was purely a social label; it was still chiefly applied to the descendants (on either side) of republican consuls, though sometimes slightly extended. *Nobiles* were raised to (usually harmless) dignity by 'good' Emperors and jealously persecuted by 'bad' Emperors. Most noble families were extinguished by the Antonine period; though the Acili Glabrones survived to the fourth century A.D.

M. Gelzer, *Kl. Schr.* i (1962), 1 ff. id., *The Roman Nobility* (1969); A. Zetzelus, *Class. & Med.* 1938, 40 ff.; 1945, 150 ff. E. B.

NOLA, in Campania 25 miles east of Naples. Oscan-speaking Nola came under Roman domination c. 313

B.C. It resisted Hannibal, but became a Sabellian stronghold in the Social War (90 B.C.). After 80 B.C. it was thoroughly romanized. Augustus died here (A.D. 14). Destroyed by Vandals (A.D. 455), it recovered and is still a populous town. E. T. S.

NOMENTUM, modern *Mentana*: old Latin town on the edge of Sabine territory, 14 miles north-east of Rome. Rome annexed it in 338 B.C. Famed in imperial times for its wine and country villas, it was linked with Rome by the Via Nomentana, which crossed the Anio (q.v.) by a still standing bridge. E. T. S.

NOMOPHYLAKES (νομοφύλακες) were a kind of official known to have existed in several Greek cities. In Athens, according to one authority (Philochorus), the office was instituted when Ephialtes (q.v. 1) deprived the Aeropagus (q.v.) of most of its powers in 462/1 B.C.; but this statement is disbelieved by some modern scholars, and even if it is true the office cannot have become permanent, since it seems not to have existed in the time of Demosthenes and Aristotle. But it certainly existed in the late fourth century; it was probably instituted, or reinstituted, in the 320s. At this period there were seven *nomophylakes*. Their chief duty was to attend meetings of the *boule* (q.v.) and the *ekklesia* (q.v.) and veto actions or proposals which seemed to them illegal or contrary to the interests of Athens. They had some kind of power to check magistrates who acted illegally, and they also had some religious functions.

W. S. Ferguson, *Klio* 1911, 271 ff.; F. Jacoby, *FGH* in B, Suppl. (1954), commentary on 328 F 64. D. M. M.

NOMOS (1) (νόμος) was the Greek name for the ancient administrative districts of Egypt; under the Seleucids the term is also found in Palestine, where it was probably introduced by the Ptolemies. The Egyptian *nomoi* probably numbered thirty-six in the third century B.C., but by the third century A.D. had increased to nearly sixty. They were subdivided into toparchies, and these into villages. Each was governed by a *στρατηγός*, who completely overshadowed the old native governor (*νομαρχης*). He was assisted by many departmental officials. Of these only the royal scribe (*βασιλικὸς γραμματεὺς*) retained any importance under Roman rule. The *nomoi* were abolished c. A.D. 300, becoming the territories of the *metropoleis* (q.v.).

H. Gauthier, *Les Nomes d'Égypte depuis Hérodote jusqu'à la conquête arabe* (1915). A. H. M. J.

NOMOS (2). The word *νόμος*, applied originally to a tune, was applied especially to a type of melody invented by Terpander as a setting for texts taken from the epic (Procl. ap. Phot. *Bibl.* 320 a, 32 ff.). Such *νόμοι* could be used for the flute or for the lyre. Later the word was used for a choral composition constructed astrophically like *Timotheus' Persae*.

Cf. U. von Wilamowitz-Moellendorf, *Timotheus: Die Perser* (1901), 89 ff.; H. Farber, *Die Lyrik in der Kunsttheorie der Antike* (1936), i 33 f., ii 37 ff. C. M. B.

NOMOTHETAI (νομοθέται) was a general word for 'law-makers' but in Athens it was used especially for a committee appointed to draft or revise laws. In the fifth and fourth centuries B.C. the following committees are known to have had this title, and there may well have been others on different occasions.

(a) In 411 *nomothetai* were appointed in connexion with the drawing up of the constitution of the Five Thousand ('*Thuc.* 8. 97. 2).

(b) In 403 *nomothetai* were appointed by the *boule* (q.v.) to draft and publish proposed additions to the laws; and another body of 500 *nomothetai* was elected by the *demoi*

(q.v.) to consider these proposals in conjunction with the *boule* (Andoc. 1. 82-4).

(c) In the fourth century the *ekklesia* (q.v.) at the beginning of each year voted whether the existing laws were satisfactory or not, and if it was decided that any were unsatisfactory *nomothetai* were appointed from among the year's jurors (see DIKASTERION) to consider proposals for new laws to replace the rejected ones; men were appointed to address the *nomothetai* in defence of the old laws, so that the procedure resembled an ordinary trial by jury (Dem. 24. 20-3).

(d) In the fourth century also it was the duty of the *thesmothetai* (q.v.) each year to examine the laws and, if they found any anomalies or inconsistencies, to ask for the appointment of *nomothetai* to deal with them (Aeschin. 3. 38-40). D. M. M.

NONIUS MARCELLUS (early 4th c. A.D.), lexicographer and grammarian. The first twelve books of his *De compendiosa doctrina* (ed. W. M. Lindsay, 3 vols., 1903) deal with points of grammar (e.g. *de numeris et casibus*), books 13 to 20 (but book 16 is lost) with miscellaneous information (e.g. *de genere nauigiorum*). The material is arranged with more or less strictness in alphabetical order and each topic is illustrated by quotations. The foundation of the work seems to have been Nonius' own excerpting from a range of authors which included many republican poets. These authors he used in a stereotyped order of his own. In addition he had access to some work like that of Plavius Caper from which he took other citations. For many fragments of early writers, and especially of Varro's poetry, Nonius is our chief authority.

Cf. Schanz-Hosius, § 826; W. M. Lindsay, *CR* 1906, 440, and for Nonius' sources and methods of citation, F. della Corte, *La poesia di I. Varro ricostituita* (1938). J. F. M.

NONNUS of Panopolis in Egypt (5th c. A.D.?), the main surviving exponent of an elaborate, metrically very strict style of Greek epic that was popular between the third and sixth centuries. His *Dionysiaca* in forty-eight books is a monotonously lush jungle of mythological learning and sensual description, much influenced by the novel (q.v.) and by epideictic rhetoric. The greater part (books 13-40) is devoted to Dionysus' conquest of India. Nonnus is probably also the author of a curious hexameter version of St. John's Gospel in a similar style.

Dionysiaca TEXT with translation: R. Keydell (1959); W. H. D. Rouse (1940, Loeb).

Paraphrase of St. John's Gospel. TEXT: A. Scheindler (1881).

GENERAL: G. d'Ippolito, *Studi Nonniani* (1964). M. L. W.

NORBA, on an inaccessible bluff overlooking the Pomptine Marshes (q.v.) south-east of Rome, received a Latin Colony (492 B.C.) to contain the Volsci (q.v.). Although always loyal to Rome, it was destroyed by Sulla (82 B.C.) and never recovered. Fine polygonal walls survive, and stylobates (fourth century B.C. and later).

G. Lugli, *La tecnica edilizia romana* (1957), 137 ff. E. T. S.

NORBANUS (1, *PIV* 5) (**BALBUS**?), GAIUS, Popularis with a non-Latin *nomen*, began his career with the tribunate (103 B.C.), in which he successfully prosecuted Caepio (q.v. 1), using force against the intercession of Didius (q.v. 1) and a L. Cotta. Accused of *maiestas* for this (probably 95) by Sulpicius (q.v. 1), in an Optimate attack on the interests of Marius, he was defended by Antonius (q.v. 1), whose quaestor he had been (probably 99), and acquitted (see especially Cic. *De or.* 2. 197 f.). Praetor c. 91, he kept Sicily safe during the Social War and defeated a rebel attack on Rhegium (87). Consul (83) with L. Scipio Asiagenus (to symbolize the unity of patrician nobles and *novi homines* behind the government),

he was twice defeated by Sulla and Metellus (q.v. 7) in Campania, and as proconsul (82) by Metellus near Faventia. He fled to Rhodes and there committed suicide to escape extradition.

NORBANUS (2, *PW*, s.v. Appius 13), A. LAPIUS MAXIMUS, *cos. suff.* A.D. 86, *cos. II suff.* 95, as legate of Lower Germany crushed the rebellion of Antonius Saturninus (q.v. 3) in 89, and won great credit for destroying the conspirators' papers before Domitian arrived. Although he won a second consulate, a rare honour in this period, he does not seem to have been employed again by Domitian or by subsequent emperors.

E. Ritterling, *Fests des römischen Deutschland unter dem Prinzipat* (1912), 24. G. E. F. C.

NORICUM, a Roman province in the Alps, south of the Danube, between Raetia and Pannonia. The root of the word is Illyrian, as are pre-Roman finds in the interior and the east. This Illyrian element, however, was Celticized from the south (3rd/2nd c. B.C.) and from the Danube (2nd/1st c. B.C.). Though the Celtic Taurisci were the chief tribe, Noricum (apparently derived from the Celtic *Norici* dwelling round *Noreia*, the ancient capital) became in the first part of the second century B.C. the name of the Celtic federal State, which had its own coinage. It was of considerable importance in Caesar's time, as shown by the fact that Caesar accepted aid from Noricum in 49 B.C., and that Ariovistus' second wife was the daughter of the king of Noricum. To secure the northern frontier of Italy, the Taurisci north of the Odra were made tributary (35 B.C.), and then the kingdom of Noricum was peaceably incorporated into the Roman Empire by P. Silius Nerva, governor of Illyricum (16 B.C. or later). Perhaps for some time under a *praefectus civitatum*, Noricum was put under an equestrian governor who resided at Virunum (q.v.) and commanded the *auxilia* and the *iuventus Noricorum*. The first known governor is A. Trebonius (*ILL* iii. 4810; cf. *JÖAI* xxix (1935), Bbl. 261). Owing to the Marcomannic wars the newly raised Legio II Italica was quartered in Noricum (first at Albing, before 101 at Lauriacum), and its commander became the governor of Noricum as a *legatus Augusti pro praetore*, residing at Ovilava; the financial *procurator* remained at Virunum. After Gallienus had eliminated senators from military command, Noricum was put again under equestrian administration (cf. the governor *Aelius Restutus v(ir) p(erfectissimus) a(gens) v(ices) p(raesidis)*, *RIÖ* xi (1910), 151 f., no. 42). Under Diocletian Noricum was divided into two parts under *praesides*: *N. Ripense* on the Danube and *N. Mediterraneum* in the south, the former also having a *dux* as military commander. In the fifth century Noricum was overrun by German tribes and was occupied after 493 by Goths, by Franks (c. 536), by Langobards (568), and shortly before 600 by Slavs and Avars.

NORTIA, an Etruscan goddess, the native form of whose name is uncertain. Her chief place of worship was Volsinii (Livy 7. 3. 7, cf. Wissowa, *RR* 288, for archaeological evidence). The most remarkable rite was the periodical driving of a nail into the wall of the temple (Livy, loc. cit.). The purpose was certainly not, as Livy there supposes, merely to serve as a record of time, one

nail being driven each year, but rather (cf. *ibid.* 3-4; Warde Fowler, *Roman Festivals* (1899), 234 f.; Latte, *RR* 154) to nail down evil and make it harmless (here an epidemic; perhaps at Volsinii all the ill of the past year). Another ancient interpretation was that it signified the unchanging fixedness of destiny; hence Nortia was identified with Fortuna (schol. on Juvenal 10. 74), and by implication with Necessitas (Hor. *Carm.* 1. 35. 17 ff.).

H. J. R.

NOSSIS (fl. c. 300 B.C.), Greek poetess from south Italian Locri, has twelve epigrams in the Greek Anthology, mostly inscriptions for votive offerings and for works of art. She praises love like Mimnermus (*Anth. Pal.* 5. 170) and connects herself with Sappho (7. 718), but her quatrains are frail trifles. There may have been more poetic energy in her lyrics, which have not survived.

NOTITIA DIGNITATUM. The Notitia Dignitatum is preserved in a copy, made in 1551, of an original MS., now lost, which existed at Speir. It is divided into two parts, covering the Eastern and Western halves of the Roman Empire as it was divided in A.D. 395. Each part contains an index and a series of entries for each of the high offices of State from the praetorian prefects to provincial governors in order of precedence; but for provincial governors (*consulares*, *correctores*, *praesides*) one specimen only of each grade is given. The entries give the title and rank of the officer, a brief description of his functions, including a list of his subordinate officers; in the case of military officers a list of units under his command; a list of his *officium*; and in the East the number of postal warrants to which he was entitled. Each entry is accompanied by an illustration, showing the insignia of the office, and in the case of *magistri militum* (q.v.) the shields of their regiments, and in the case of *duces* (see *dux*) their forts. Some pages were missing from the archetype, and certain offices, including both *praepositi sacri cubiculi*, are therefore lacking.

The document is clearly the 'notitia omnium dignitatum et administrationum tam civilium quam militarium' maintained by the *primicerius notariorum*. It is also clearly the copy of the Western *primicerius*, since some chapters of the Eastern half are in an abbreviated form, and the Western half has been corrected to a later date than the Eastern. Neither half can be earlier than 395. The Eastern half is earlier than 413, since it omits the *comes Ponticae dioceseos* (*Cod. Theod.* vi. xiii. 1), and probably not much later than 395, since its army lists contain no unit demonstrably raised after that date and several units raised by Theodosius I are clearly recent additions. The Western army lists on the other hand contain units raised as late as 421. Both halves contain a number of inconsistencies, such as are inevitable in a document which has been subject to piecemeal revision. The inconsistencies are most numerous in the military chapters of the Western half. It may be inferred that the Western half like the Eastern was compiled about 395 and extensively revised in the next twenty-five years.

Edited by O. Seeck, *Notitia Dignitatum* (1876). J. B. Bury, *JRS* 1920, 131 ff.; Jones, *Later Rom. Emp.* iii, app. ii, 347 ff.

NOVAESIIUM, modern Neuss on the Rhine. Excavation (H. v. Petrikovits, *Bonner Jahrbücher* 1961) has shown that there was a series of military stations earlier than the stone legionary fortress excavated by C. Koenen (*ibid.* 1904), starting with an auxiliary-sized fort c. 20/10 B.C. and followed by several for forces larger than one legion alone. The stone fortress was evacuated A.D. 02-6 and superseded by a new auxiliary fort which survived till the

Frankish invasions of the third century. Both the legionary and the later auxiliary stations had their attached civil settlements and there was also a separate civil settlement. The walls of the stone fortress were reconstructed in the second half of the third century or the fourth and seem to be those repaired by Julian. P. S.

NOVATIAN(US), Roman presbyter, anti-pope (A.D. 251), and founder of the *Novatian* (or *καβαροι*), a dissident sect which, persisting for about three centuries, held intransigent views concerning ecclesiastical purity. He apparently suffered martyrdom under Valerian. The first theologian in Rome who wrote in Latin, he composed several works, few of which survive, viz. *De Trinitate* (ed. W. Y. Fausset, 1909; H. Weyer, 1962), two letters to Cyprian (*Ep.* 30 and 36 in the Cyprian collection, *De Cibus Iudaicus* (ed. G. Landgraf and C. Weyman, *Archiv f. lit. Lex.* 1900, 226), and perhaps [*P's.-Cyp.*] *De Spectaculis* and *De Bono Pudicitiae* (Hartel, *CSEL.* iii. 3). Novatianus was well versed in rhetoric, philosophy (Stoic), and theology, and had an exceptional sense of style.

NOVEL, GREEK (Germ. *Roman*, *Liebesroman*; Fr. *Roman*; Ital. *Romanzo*).

A romantic composition in rhetorical prose, of considerable length (the complete novels extant vary from a minimum of four to a maximum of ten books). Five complete examples, two summaries, and a sizeable number of papyrus fragments are preserved. The authors of the complete novels (Achilles Tatius, Chariton, Heliodorus, Longus, Xenophon Ephesius) are all comparatively late; only Chariton wrote before the second century A.D. Nevertheless Rohde's thesis, according to which the genre Novel was a creation of the Second Sophistic, has been disproved by the papyrus fragments (most important of these is the 'Ninus-Romance'), which have shown that this literary form must have developed in Alexandrian times. The origins of the genre are much debated: according to one school (Rohde, Lavagnini, Giangrande) the Novel is ultimately derived from Alexandrian Love-elegy, whilst another school (Schwartz, followed by Rattenbury and Kroll) derives the Novel from Alexandrian historiography, which 'degenerated' into the 'fabulous'. A third school (Kerenyi, Merkelbach) regards the Novel as the ultimate development, into a lay genre, of religious prototypes. The problem as to the origins of the Greek Novel is made more complicated by the fact that the genre, once established, acted as a literary collecting-basin and admitted features from other genres (e.g. letters (q.v.), from *Epistolography*; sophistic *ekphrasers* (q.v.); short stories, after the example set by writers of the Classical Period, who had admitted 'short-stories' into their works by way of digressions; possibly characters from New Comedy) so that the original nucleus of the literary form under discussion is not easy to identify.

The extant novels, even the *Daphnis and Chloe* of Longus, of which the pastoral setting seems to be an exceptional experiment on the part of the author, show similarities of plot, matter, and style which, with the supporting evidence of the summaries and the papyrus fragments, may be called characteristic. The Novel flourished from the second century A.D. onwards, i.e. as Rostovtzeff and Altheim have emphasized, in the period of mass education: like the modern *feuilletons*, it was chiefly meant for the general public. Hence its poor characterization, compensated by the positive merit of the plots, which, however stereotyped, are ingeniously constructed and developed so as to captivate the interest of the readers of popular fiction. The central figures are

a young man and his betrothed or wife, whose reciprocal faithfulness, moral rectitude, and physical courage are tested by a prolonged series of adventures; the couple invariably overcome all their tribulations, to live happily ever after (the happy-ending feature being very much after the taste of the general public). During their extensive wanderings, the hero and the heroine meet friends and enemies, who, although rather stereotyped, conveniently enable the writer to insert shorter stories into the wider framework of the novel. The erotic element rarely leads to pornography, but the poverty of characterization renders the love-scenes tedious in their artificial sentimentality. *Ekphrasers* after the fashion of the Second Sophistic are often included: these, too, must have been in favour with the novelists' public, who wanted to learn about strange animals and unusual phenomena or—like the modern viewers of 'Westerns'—enjoy the elaborate description of a battle.

The absence of contemporary references to Greek novels as well as the character of their material suggests that they were not esteemed by the intellectuals: the genre, significantly enough, did not acquire a specific name (Photius calls the Novel *δράμα*; Clitophon in Ach. Tat. i. 9. 1 calls his story *μὴν τὸ δράμα*; cf. Ach. Tat. i. 2. 3, *μῦθοι ἐρωτικοί*, and Long. i. 1. 1, *ἱστορία ἔρωτος*). On the other hand, the authors of the novels were skilled men of letters, who, like the modern authors of *feuilletons*, wrote for the lower middle classes: not only the writers, but also their readers possessed a notable degree of culture, as is testified by the literary vocabulary and elaborate style in which the novels are composed, as well as by the fair number of unhackneyed literary allusions interspersed in the novels.

As is demonstrated by the comparatively large number of papyrus fragments, the novel enjoyed great popularity in imperial times: this was partly due to the fact that it aptly met the literary needs of the new lower middle classes, and partly to the fact that its adventurous elements (battles, rebellions, etc.) appealed to the public, in so far as they portrayed well the predicament of the private citizen caught, powerless and uncommitted, in the politico-military crises of that period, the age of the absolute Monarchies. The Byzantines admired the Greek novelists; Photius summarized and highly praised several of them, and Byzantine writers continued the genre, not without success. In feudal Western Europe the *Romance of Chivalry* held the field, but in the sixteenth century the newly expanded commercial *bourgeoisie* 'discovered' the Greek Novels, which were then published in French, Italian, Spanish, German, and English translations: the 'bourgeois' character of the Greek novel made them immensely popular, and such popularity lasted down to the Romantic period (Goethe was an enthusiastic admirer of Longus).

TEXTS. For each of the five complete novels the only reliable editions are now those listed under each author, the papyrus fragments are edited by B. Lavagnini, *Eroticorum Graecorum Fragmenta Papyracea* (Teubner, 1922), and by F. Zimmermann, *Griechische Roman-Papyri u. verwandte Texte* (1936, with excellent Commentary, Grammatical Index, Index Verborum, and Bibliography).

problem of the 'short-story' in antiquity cf. P. Lavagnini, *Studi sul romanzo greco* (1950), 185 ff.; W. Aly, *Volkmärchen, Sage und Novelle bei Herodot und seinen Zeitgenossen* (1921); W. Aly, *PW* n.v. Novelle; S. Trenkner, *The Greek Novella in the Classical Period* (1958).

NOVEL, LATIN. In spite of two great names, there is no continuous tradition of prose fiction among the Romans as there was with the Greeks. We hardly reach fiction, and then only in the form of short stories, before L. Cornelius Sisenna (119–67 B.C.), otherwise known as a historian, translated into Latin the *Μηλοισιὰς* of Aristides (2nd c. B.C.), tales with an obscene flavour (Plut. *Crass.* 32; [Lucian], *Amores* 1; Ov. *Tr.* 2. 443).

The adaptations by Terentius Varro (116–27 B.C.) of the satires of Menippus of Gadara (2nd c. B.C.) cannot be regarded as at all close in type to the novel, being rather of the nature of 'character-sketches', but their form, a mixture of prose and verse, reappears in Seneca's *Apocolocyntosis* and in Petronius' (q.v. 3) *Satyricon* (although in Petronius verse is used more for illustrations and plays an unimportant part). The *Apocolocyntosis*, a skit on the Emperor Claudius, may be classed as fiction, but the *Satyricon* is the earliest Latin work which is comparable with the modern novel. Enough of this survives to show that it consisted of a continuous narrative, and it seems to have been of considerable length. It contained at least two *Μηλοισιὰς*, the stories of the Widow of Ephesus (chs. 111–12) and of the Pergamene Boy (85–7). As this brilliant work, which is in part a parody on romantic novels, is seldom mentioned in ancient sources it is possible that earlier Latin novels may have existed, whether serious or comic.

Far more use of *Μηλοισιὰς* was, however, made by Apuleius (q.v.) about the middle of the second century; his *Metamorphoses* began 'at ego tibi sermone isto Milesio varias fabulas conseram'; and his romance is, indeed, a series of them strung on the thread of a plot—the change of Lucius into an ass and his adventures in animal form—which is sometimes lost sight of for long periods. On the other hand, book 11 (the successive initiations of Lucius into the mysteries) provides a surprisingly elevated ending to the novel. Clodius (q.v. 4) Albinus also wrote *Μηλοισιὰς* (S.H.A. *Clod.* 11. 7, 12. 12).

At the very end of the Classical Period we have the anonymous *History of Apollonius, King of Tyre*, perhaps written in Greek in the third century and translated into Latin, christianized, and adapted in other ways about the sixth century; it belongs rather to the tradition of Greek than of Latin fiction, and is chiefly interesting as the ultimate source of Shakespeare's *Pericles, Prince of Tyre*.

Fragments of Sisenna and of Varro's *Memphian Satires* in Bucheler's *Petronius* ed. min.; R. Helm, *Der antike Roman* (1956); B. E. Perry, *The Ancient Romances* (1967). S. G., M. S. S.

NOVENSIDES, a group of Roman deities of totally unknown function. The view that they are to be etymologized as *nou-en-sides*, the 'newly settled in' gods, i.e. comparatively recent borrowings from non-Roman sources, such as Minerva and Apollo, stands or falls according to what etymology is accepted for *indiges* (s.v. *INDIGETES*) and the second explanation there offered). The *nouensides* seem to be the more important class, to judge from their being mentioned before the *indigetes* in the formula of *deutio* (Livy 8. q. 6), where the name is written 'Nouensiles', a characteristic Italian variation of *d* and *l*. Wagenvoort (*Roman Dynamism*, 83) would connect the first syllable with *nuere* and for the suffix compares *utensilis*: hence 'mobile, active' deities. The ancients generally connected the name with *nouem*, occasionally with *nousus*, see Arnobius, *Adv. Gent.* 3. 38–9 (136, 19 ff. Reifferscheid).

Latte, *RR* 45, n. 1.

H. J. R.

NOVIOMAGUS, a Batavian settlement near Nijmegen (perhaps the *oppidum Batavorum* of Tac. *Hist.* 5. 19). It was destroyed in A.D. 70, and the Romans established a legionary fortress (garrisoned until c. 100) near by. The civil population settled on lower ground to the west, where an important commercial town developed, which traded extensively with Britain and the north and was raised to colonial status by Trajan. It suffered badly in the invasions of the third century. Pottery finds persist beyond the fourth century, but by then a new fortified settlement was growing up further east.

W. v. Massow, *Die Grabmäler von Noviomagus* i. u (1932). O. B.

NOVIUS (fl. c. 95–80 B.C.: Cicero quotes from him in *De Or.* ii. 255, 279, 285—dramatic date, 91 B.C.), Latin composer of *fabulae Atellanae*, which he and his older contemporary Pomponius (q.v. 1) made literary. Forty-three titles show the stock Atellan characters, country-bumpkins, rustic and other occupations, literary allusions and parodies of tragedy; in popular language with broad jokes. See *ATTELLANA*.

FRAGMENTS O. Ribbeck, *CRF* 254 (3rd ed. Teubner, 1897). P. Frassinetti, *Fab. Atell. Frag.* 1955, 47 ff. F. H. W.

NOVUS HOMO, a term used in the late Republic (and probably earlier) for the first man of a family to reach the Senate, where he normally remained a 'small senator' (cf. *BAfr.* 57), though his descendants might rise higher; and in a special sense for the first to attain the consulate and hence *nobilitas* (q.v.). These two senses must be carefully distinguished. The former feat was not very difficult, provided a man had at least an 'Equestrian' fortune (see *EQUITES*), aristocratic patron, and military or oratorical ability; the latter, despite the exclusiveness of the nobility and the conservatism of the voters who mattered, was far from rare, since noble families—some, like the Valerii Flacci, traditionally more so than others—were always ready to ally themselves with promising men for their mutual advantage. It was in this way that the nobility was constantly reinvigorated. But a man very rarely rose from outside the Senate straight to the consulship. In this sense of the phrase, only about fifteen *novi homines* are attested in the middle and late Republic, though in fact there may have been more. Most of these are men of exceptional ability and ambition, exceptionally fortunate, too, in the time and conditions of their candidature (see *DENTATUS* 2, *CATO* 1, *MARIUS* 1, *CICERO* 1). The ambitious *novus homo* contrasts with those really 'known' (the *nobiles*) as *per se cognitus*; and he has to win his own connexions and *clientelae* to balance their inherited ones. Hence a typical pattern of career and outlook develops. During his rise he prides himself on his *virtus* and tends to compare it with that of the founders of noble families, whose degenerate descendants he denigrates. (See, e.g., Sall. *Jug.* 85; Cic. 2 *Verr.* 5. 180 f.) But he is not a reformer. After attaining the consulship he aims at defending the order in which he has risen and at recognition as an equal by the nobles. Some (e.g. Cato, in part through longevity, and apparently Coelius (q.v. 2)) more or less fully succeed in this; others (e.g. Marius and Cicero) are never quite accepted.

Under the Empire men of this sort, at first from Italy, later also from the provinces, can rise high on their own merits, the more so as they generally give the Emperor less cause for jealousy and suspicion.

J. Vogt, *Homo novus* (1926); and see *NOBILITAS*.

E. B.

NUCERIA (1), large town at foot of peninsula of Surrentum (q.v.): modern *Nocera Inferiore*. Originally peopled by Oscan-speaking Alfaterni, it has regularly changed hands whenever war visited Campania (q.v.). In A.D. 59 it and neighbouring Pompeii (q.v.) staged a bloody riot.

were employed, sometimes even in the same document. Inscriptions seem to show a preference for the additive method, especially in official contexts, and this preference is occasionally carried to the extent of ignoring the signs V and L (so *IIIIII* for *VI* and such forms as *XXXXXX* for *LX*). The rule is that when two figures stand side by side, the smaller, if to the right, is to be added to its neighbour, if to the left, to be subtracted from it (*VI* = 6; *IV* = 4); exceptions occur, but are very rare. For numbers above 1,000, for which the additive method might be clumsy, modifications of the basic signs were evolved (so *D* = 5,000; *ↀ* = 10,000) and, later, as an alternative, the use of superscript bars to denote that a figure is to be multiplied by 1,000 (*X* = 10,000) and of superscript bars with dependent verticals at either side to denote that it is to be multiplied by 100,000 (*ↀ* = 1,000,000).

From the second century A.C. the figure-signs began to be used also as *sigla* for words or components of words with a numerical reference (so *X* = *denarius*, *II* = *duoviri*) and eventually for ordinal adjectives and adverbs and for distributives as well as for cardinal numbers. It was probably to distinguish such usages, in circumstances where confusion with letters or with cardinal numbers might occur, that the practice of using a medial bar was introduced (so *X̄* = *denarius*) and subsequently a superscript bar (so *IĪ* = *duoviri*; *V̄* = *quinquies*). From the Augustan period onwards this use of a superscript bar was extended, although it never became invariable. In a comparatively small number of cases it appears also above an ordinal number, presumably in error, and creates confusion with the use of the bar to denote multiplication by 1,000.

Cursive forms of the figures are usually recognizable without undue difficulty (cf. *II* = 30), though *ↀ* = 6, common especially in Christian texts, is at first sight obscure.

For fractions, a duodecimal system was used. A horizontal stroke was the sign for the unit of $\frac{1}{12}$ (*uncia*) and *S*, from *semis*, for $\frac{1}{6}$. The appropriate number of horizontal strokes provided the notation for $\frac{1}{12}$ to $\frac{6}{12}$ (= — is $\frac{6}{12}$) and, when preceded by *S*, for $\frac{1}{12}$ to $\frac{11}{12}$ (*S* — — is $\frac{11}{12}$). For smaller fractions a number of *sigla* were developed; lists may be found in the epigraphic handbooks, see EPIGRAPHY, LATIN, bibliography.

NUMBERS, SACRED. Most nations have sacred or magical numbers. Some of these are explicable (e.g. seven is the traditional number of the planets), and of others it may be conjectured that they are the last term of some very old and primitive system of counting, or an important term in such a system (e.g., five perhaps because it is the number of the fingers of one hand); others are entirely obscure. For Greece the following may be noted, apart from Pythagorean mysticism and the divinatory calculations given below. Three is very common in all ritual, especially magical; the dead are invoked thrice (Ar. *Ran.* 1.175–6); gods are frequently invoked in threes, as Zeus, Athena, and Apollo often in Homer, or grouped in threes, as the Charites (generally); charms are commonly repeated thrice, Theoc. 2. 41; other magical actions, Theoc. 6. 39. Hence nine is of importance (nine Muses usually, sometimes nine Corymbantes and nine Curetes), being 3×3 . Four is Hermes' number, being his birthday (Hymn. *Hom. Merc.* 19), perhaps explaining why it is a holy day (Hes. *Op.* 770). Seven is Apollo's number (see Rose, *Handb. Gk. Myth.* 135, cf. Hes. *ibid.* 771). This is without doubt oriental;

twelve, though traditionally the number of the signs of the Zodiac, need not be Eastern (twelve gods, see Weinreich in Roscher's *Lexikon*, art. 'Zwölfgötter'; twelve labours of Heracles, q.v.). Finally, there is a tendency to round larger numbers off to fifty (see W. H. Roscher, 'Die Zahl 50 in Mythos', etc., *Abh. sächs. Ges. Wiss.*, 1917). The numerical values of letters of the alphabet are the basis of an elaborate system of divination, see Bouché-Leclercq, *Histoire de la divination dans l'antiquité* (1879) i. 261 ff.; for an attempt to find a like system in early times see Eisler, *Orpheus the Fisher* and *Weltenmantel und Himmelszelt*. Numbers which exceed a familiar 'round' number by one, e.g. 13 (12 + 1) are occasionally of importance, see O. Weinreich, *Triskaidkadische Studien* 1916; *RGVV* xvi. 1).

In Italy triads of gods are common, not only under Etruscan influence (as the Capitoline triad), but outside it (Jupiter, Mars, and Quirinus are native Roman). Four is of significance (a prayer said four times, Ov. *Fasti* 4. 778); five appears to have had some sacral connotation, see Wissowa, *Gesammelte Abhandl.* 166, cf. Plut. *Quaest. Rom.* 1 and Rose *ad loc.* Other numbers seem to be Greek.

The references in the text may be supplemented by Keith in Hastings, *ERE* ix. 407 ff., and bibliography, 413, for speculation over numbers in Pythagoreanism, Nilsson, *GGR* ii. 398. H. J. R.

NUMENIUS of Apamea (2nd c. A.D.), leading Pythagorean. His works included a treatise *On the Good* and a history of the Academy, designed to show how far it had departed from Plato's (and Pythagoras') teaching; of both these fairly substantial fragments survive. His system combined Greek with oriental elements. He anticipated Plotinus in his doctrine of three gods, and in asserting the potential identity of the human soul with its divine Grounds; he also has ideas in common with Gnosticism (q.v.) and with the *Chaldaean Oracles* (q.v.), and he shows some knowledge of Judaism and Christianity (which he interpreted allegorically). The extent of his influence not only on Plotinus, who was accused of plagiarizing from him, but also on Origen, Porphyry, and later Neoplatonists renders him a significant historical figure.

FRAGMENTS, Ed. E. A. Leemans (1937).

DISCUSSION: H.-C. Puech in *Mélanges Hudez* (1934), 745 ff.; E. R. Dodds in *Les Sources de Plotin* (*Entretiens Hardt* v), 1 ff.; P. Merlan, *Philol.* 1962, 137 ff. E. R. D.

NUMERI had a variety of meanings in military terminology. (i) *numerus* was the generic name for any military unit (Tac. *Agr.* 18. 'sparsi per provinciam numeri'); (ii) hence it was frequently used to describe formations which had no normal title, such as the *equites singulares Augusti* or the *frumentarii*; (iii) and in particular as the title for units formed from unromanized tribes which could not easily be assimilated to the normal auxiliary pattern. These 'national' *numeri* are found from the time of Trajan onwards; they were generally employed at some distance from the areas in which they had been raised (e.g. *numeri Brittonum* in Germany). (iv) *numeri* had also the meaning of military roster (in *numeros referre* means 'to enter on the rolls'), in which sense it was supplanted by *matricula* in the fourth century or earlier.

J. C. Mann, *Hermes* 1954, 501 ff.; J. F. Gilliam, *Eos* 1957, 207 ff. G. R. W.

NUMERIANUS, MARCUS AURELIUS (PW 174), younger son of Carus (q.v.), was appointed Caesar in A.D. 282 and shared in the campaign against Persia. After the death of Carus, July 283, he became Augustus. Having little military talent, he withdrew from the Persian territory occupied by his father. He died in mysterious circum-

stances on the way to Nicomedia in 284. The army chose Diocles (later Diocletian), commander of the guard, to succeed him, and he struck down Aper, praetorian prefect and father-in-law of Numerian, as being the latter's murderer.

NUMICUS (or **NUMICIUS**), (modern *Rio Torto*?), the creek near Ardea in Latium where Acneas allegedly perished. The Romans subsequently venerated him as Jupiter Indiges in a grove on its banks. Near by was another grove, sacred to Anna Perenna.

B. Tilly, *JRS* 1936, 1 ff.

E. T. S.

NUMIDIA, originally the country of the Numidae or African Nomads, lying west and south of Carthaginian territory. Later the title was given to a Roman province, covering a triangle broadening out from its apex on the Mediterranean coast north of Circa across the High Plateaux (Atlas Mountains) down to the Saharan *limes*. This Numidia was bounded by Mauretania Caesariensis on the west and the province of Africa on the east. Though not as fertile as the latter, Numidia produced corn, wine, and olives on the plains, and bred horses, cattle, and sheep on the uplands.

The original Berber inhabitants were nomad herdsmen, who sometimes practised a primitive agriculture. Those on the coast came under the influence of Utica, Carthage, and the other Phoenician colonies. By the time of the Second Punic War their small clans had coalesced into the tribal confederacies of the Masaesyli under Syphax and the Massyli under Mastinissa (q.v.). Their cavalry were formidable, but disunion made them difficult allies politically. Under Mastinissa nomadism was abandoned for agriculture, and town life developed. Mastinissa was followed by Micipsa (148–118 B.C.), Adherbal (118–112), Jugurtha (q.v., 118–106), Hiempsal (106–60), and Juba I (60–46). As Numidia supported Pompey (47–46), the native dynasty was overthrown. It was established as the province of Africa Nova (46), then (30–25) made a client kingdom under Juba II (q.v.), and later united with the old province of Africa until separated by Septimius Severus. Christianity spread rapidly in the third century and in the fourth Numidia became the stronghold of the Donatist (q.v.) schismatics.

When the frontiers of Africa Proconsularis were placed on the river Ampsaga (*Rumel*), the Third Augustan legion moved into Numidia under its legate, and was stationed successively at Theveste and Lambaesis (qq.v.). Military colonies were founded at Thamugadi, Madauros (qq.v.), and elsewhere; cereals and olives were cultivated largely; the slave-trade with the Sahara increased. Traffic moved along the great roads which radiated from Theveste to be shipped from Carthage, Hadrumetum, Taparura, and the Syrtic ports. The richest parts of Numidia were in the Tell (see *ATLAS MOUNTAINS*) and round Circa (q.v.).

On its southern frontier Numidia was protected by the forts of the *limes*, which ran from the Tunisian shoals or salt lakes westward and north-west to Aumale. Between the military roads were districts ruled by native chieftains, who occasionally rebelled. The frontier held till the fifth century when Saharan raiders and Berber tribesmen sacked a number of towns during the Vandal occupation of Africa.

W. N. W.

NUMMULARII, quoted in inscriptions as subordinate officers at the mint, but probably not technical workmen, who are properly called *offinatores*. The *nummularius* of Martial (12. 57. 7) disturbs sleep by thumping the

heavy *sestertii* of Nero on his dirty table, in the intervals of business ('otiosus'). He is a money-changer. So was the *nummularius*, whose hands Galba cut off, 'non ex fide uersanti pecunias' (Suet. *Galba* 9), he had cheated over the exchange. This passage shows that the *nummularii* were under official control; they may even have been directly employed by the mint to put on the market the new coin as it was struck.

The passage in Petronius, *Satyricon* 56, where Trimalchio asks 'quod autem putamus secundum litteras difficillimum esse artificium? ego puto medicum et nummularium', does not necessarily imply the meaning of 'moneyer'.

H. M.

NYMPHIDIUS (PII⁵) **SABINUS**, GAIUS, son of a court freedwoman, claimed to be the son of the Emperor Gaius (q.v. 1). He probably commanded an auxiliary regiment in Pannonia (*ILS* 1322) and then became a tribune in the guard. In 65 he was given the *consularia ornamenta* by Nero and made *praefectus praetorio* with Tigellinus (q.v.). In 68, by promise of an enormous donative, he induced the praetorians to desert Nero for Galba, but he had designs upon the Principate himself. He forced Tigellinus to resign, and intended to demand from Galba the praefecture for life without colleague. But he met with unexpected opposition from the praetorians, and was killed by them.

R. L. J., G. L. F. C.

NYMPHIS of Heraclea in Bithynia, statesman and historian. Enough remains of his history of Heraclea (in Memnon's epitome) to show how good it was; this and his character as a politician suggest that his lost history of Alexander and his successors (after 247 B.C.) may be a real loss.

FGH III B, no. 412. Fragments and Commentary, cf. *ibid.* no. 434 (Memnon).

W. W. T., G. T. G.

NYMPHODORUS (fl. c. 335 B.C.), Syracusan Greek, wrote (i) *Νύκτας περιπλοῦς*, (ii) *Περὶ τῶν ἐν Σικελίᾳ θαυμαζομένων*, and possibly (iii) *On strange things in Sardinia* (Ath. 6. 265 c; 13. 588 f, 609 c; Ael. *NA* 16. 34).

FGH III 572.

NYMPHS, female spirits of nature representing the divine powers of mountains, waters, woods, and trees, and also of places, regions, cities, and States. As the word *νύμφη*, young unmarried woman, implies, nymphs were thought of as young and fair. Calypso is described as a nymph (*Od.* 1. 14). They like dancing and music and can inspire mortals with poetry and prophetic power. In contrast to gods nymphs are mortal (*Ov. Met.* 8. 771), although Hesiod endows them with extreme longevity. They are daughters of Zeus.

Since nymphs are called after that part of nature in which they dwell, or after their functions, or after the specific geographic locality where they reside, there is an infinite variety of nymphs known. Alseides, Napaeae, and Dryades are nymphs of forests and groves (the last were originally nymphs of the oak but came to stand for nymphs of the woods in general). Hamadryades, the tree nymphs proper, were believed to die when their tree decays (*Serv.* on Verg. *Ecl.* 10. 62), for the nymph is the life-spirit of the tree. Orestiads are the nymphs of the mountains, Lemoniads those of the meadows. All kinds of waters are inhabited by nymphs, such as the Naiads, the Potameids, the Creneids, and the Hydriads. The difference between these broader classifications of nymphs and the nymphs representing a locality was recognized by the ancients (*Myth. Vat.* 2. 50). Examples of local nymphs are the Acheloids, named after the river Achelous, or the Nysiads, named after the mountain Nysa where Dionysus was born. Many local goddesses

are brought under this category of nymphs and married to founders of the cities.

Most of the nymphs are benevolent to mankind. They bring flowers to gardens and meadows, watch with Apollo and Hermes over the flocks, and frequently, as patronesses of healthful springs, aid the sick. Such nymphs are often associated with Asclepius. As goddesses of woods and mountains they give success to hunters. Yet nymphs also partake of the wilder aspects of nature. They are akin to Satyrs (q.v.) and Sileni, and associate with Pan. They range with Artemis over the mountains and take part in the Dionysiac *thiasus*. Folklore tales, similar to those attaching to fairies and mermaids, are told about some of the nymphs. Those of the woods scarce travellers. A man who sees nymphs becomes 'possessed by nymphs'. They take mortals whom they love with them as they did Hylas and Bormus (Theoc. 13. 44 and schol. Ath. 14. 619 f). The drowning of a girl in the Nile was associated with them (*SEG* vii. 473). They punish unresponsive lovers as did the nymphs who blinded Daphnis (Diod. 4. 84).

The cult of nymphs was widely spread through Greece from Homeric times on (*Od.* 13. 356; 17. 205), and extended over the Roman provinces under the Empire. The Hill of the Nymphs at Athens is named after an inscription discovered there (M. Ervin, *Platon* (1959), 146). Nymphs were often worshipped in caves; an interesting example is the cave in Vari which was transformed into a sanctuary of the nymphs by their faithful devotee Archedemus (*AJArch.* 1903, 263). In art nymphs are represented on a vase of Sophilos and on the François vase as undistinctive draped females. However, the female partners of padded dancers are naked (M. Edwards, *JHS* 1960). A special type of votive relief for the nymphs was developed in Attica in the late fifth and the fourth centuries B.C. The dancing nymphs are led by Hermes, while Pan and Achelous look on (R. Feubel, *Die attischen Nymphenreliefs* (1935)); sometimes a cave and an altar

indicate the rustic sanctuary. Shepherds often dedicated these humble votives.

NYX. Naturally enough, Night is frequently personified by the Greek poets as by those of other peoples. But the significance of Nyx in Greek mythology goes far beyond this. She was a great cosmogonical figure, feared and respected even by Zeus (*Hom. Il.* 14. 259). In Hesiod she is born of Chaos and mother of Aether, Hemera, and lesser powers. Frequent touches in the description recall her nocturnal aspect, but this is scarcely seen in the Orphic theogonies, where her influence over creation is immense (cf. ORPHIC LITERATURE, ORPHISM). In the Rhapsodies she is born of Phanes and succeeds to his power. When in turn she hands the sceptre to her son Uranus she continues to advise the younger generations, Uranus, Kronos, and especially Zeus, in the task of world-making. Her influence is due to her oracular powers, exercised from a cave. There are signs that in an earlier Orphic version Phanes was absent and Nyx the primal power. The theogony of the Birds (*Ar. Av.* 693 ff.) makes her prior to Eros (Phanes), and this supposition suits the awful dignity of Nyx which Homer and 'Orpheus' alike emphasize, and the vague reference of Aristotle (*Metaph.* 1071^b27) to *theologoi* who derive everything from Night. Nyx was primarily a mythographer's goddess, with little cult, but one may mention her connexion with oracles (not confined to Orphic literature, see *Plut. De sera* 22; schol. *Pind. Pyth. Argum.*) and a dedication to her in the temple of Demeter in Graeco-Roman Pergamum (*SIG* 1148, n. 2).

O

OASIS, derived from an Egyptian word, was the name by which the Greeks called any watered and habitable land in deserts, particularly in north Africa. Though really depressions, oases were regarded as elevations. They were of some importance as trading-stations and sources of alum, and several of them were garrisoned by the Ptolemies, and later by the Romans. The oases of the Sahara were described by Herodotus (4. 181-5) as a chain extending from east to west, about ten days' journey apart. The most renowned of them, near Egypt, were (i) the 'Ammonium' (*El Siwah*), 6 mls. \times 3, 20 days from Thebes and 12 from Memphis, famed for springs, salt, old Egyptian temples, and the oracle of Ammon (q.v.); (ii) 'Oasis Magna' (*El Khargah*), 80 mls. \times 8-10, 7 days from Thebes, with a Greek and Roman population. (iii) 'Oasis Minor' (*El Dakkel*), south-east of the Ammonium, a source of wheat under the Roman Empire. (iv) 'Oasis Trinytheos' (*El Bakhariah*), north of Oasis Magna, with artesian wells and alum deposits.

For the oasis of Palmyra see PALMYRA.

Thomson, *Hist. Anc. Geog.* 69 f., 264.

E. H. W.

OBSEQUENS (*PW* 2), IULIUS (probably 4th c. A.D.), composed tables of prodigies from 249 to 12 B.C. (extant for 190-12 B.C.; the earlier part and perhaps an introduction lost). Based on the epitomized Livian tradition,

further 'contaminated', or on consul lists to which Livian details of prodigies were added, it represents late heathen justification of the forms of the old faith.

Edited by O. Jahn (1853); O. Roszbach (1910), with Livian *Periachae*. A. H. McD.

OCEANUS (mythological), son of Uranus (Sky) and Ge (Earth), husband of Tethys, and father of the Oceanids and River gods (*Hes. Th.* 133, 364). In Homer Oceanus is the river encircling the whole world and accordingly is represented as a river by Hephaestus on the rim of the shields of Achilles (*Il.* 18. 607) and Heracles (*[Hes.] Sr.* 314). From Oceanus through subterranean connexions issue all other rivers. Styx, the river of Hades, is part of it (*Hes. Th.* 786). Oceanus begins at the columns of Heracles, borders on the Elysian fields and Hades, and has its sources in the west where the sun sets. Monsters such as Gorgons, Hecatonchires, Hesperides, Geryoneus, and Eurytion, and outlandish tribes such as Cimmerians, Aethiopians, and pygmies, live by the waters of Oceanus (*Od.* 1. 22; 11. 13; *Il.* 3. 3). Those regions of Oceanus are the land where reality ends and everything is fabulous.

In Greek theories of the world Oceanus is conceived as the great cosmic power, *θεῖον γένεα* (*Il.* 14. 201, 246, 302; W. Jaeger, *Poidea* 1 (1930), 149), the water, through which all life grows, and in Greek mythology as a benign

old god. Sometimes the elemental, sometimes the personal, aspect is more emphasized. The belief that sun and stars rise and set in the ocean is expressed mythologically in the statement that stars bathe in Oceanus (*Il.* 18. 489), and the Sun traverses it in a golden bowl by night to get back to the East (Minnermus in *Ath.* 11. 470 a-b). The rise of rational geographical investigation in Herodotus, Eratosthenes, and others narrowed the significance of Oceanus down to the geographical term of 'Ocean'.

Oceanus never became quite personal enough to accumulate many myths. Pherecydes supplied a humorous sequel to the myth of Sun in the golden bowl, when Heracles set out across the Ocean in the same golden bowl in which the Sun used to cross, Oceanus began to rock. Heracles threatened him with his arrows and Oceanus was frightened (*Ath.* 11. 470 c).

In art Oceanus appears early (François vase), is represented on the famous Gigantomachy of Pergamum, and becomes really common in Roman times, especially on sarcophagi, with Earth as a counterpart.

P. Weizsäcker, *s.v.* in *Real-Encycl. d. class. Altert.*, E. Maec, *Libya* 1958, 99; B. Ashmole, *JHS* 1967, 4. G. M. A. H.

OCEANUS (geographical). Expeditions outside the Straits of Gibraltar by Phoenicians and (after c. 630 B.C.) by Greeks, and exploration of the Red Sea and Persian Gulf under Darius I, showed that the Oceanus of mythology (see preceding article) was a salt-water 'ocean' indented with seas (so Herodotus). But erroneous notions persisted. Poets tried to relegate the river Oceanus beyond the newly found Outer Sea. Hecataeus believed that Oceanus flowed from east to west (*Hdt.* 4. 8), and the Caspian Sea (q.v.) was commonly regarded as one of its inlets. After the voyage of Pytheas (q.v.) in the Atlantic the action of the Ocean tides came to be understood, though the early Roman navigators in Atlantic waters were puzzled by them. As the sphericity of the earth became known (since c. 350 B.C.), geographers imagined that eastern Asia might be reached by sailing westward from Europe, and c. 120 B.C. Eudoxus (q.v. 3) of Cyzicus attempted the circumnavigation of Africa. But the belief that the Ocean extended all round the inhabited earth was never proved. Some geographers conjectured that the southern Ocean contained another continent, or that it was a vast land-locked sea (so Ptolemy); the northern Ocean was supposed to be frozen or too shallow or glutinous for navigation.

F. Giesinger, *PW*, s.v. 'Okeanos'

F. H. W.

OCELLUS (or **OCCELUS**) of Lucania occurs in Iamblichus' list of Pythagoreans (testimonia in H. Diels, *Vorsokr.* 1. 440-1), but the work *Περὶ τῆς στοιχείων φύσεως* bearing his name and known as early as the first century B.C. is undoubtedly spurious. It shows considerable traces of Aristotelian influence, and may probably be dated about 150 B.C.

Ed. R. Harder (Berlin, 1926).

W. D. R.

OCRICULUM, near modern *Otricoli*, an Umbrian settlement on the left bank of the Tiber, 44 miles from Rome and later on the *Via Flaminia*. It was allied to Rome (308, or 207/95 B.C.) and was sacked in the Social War. Of the later Roman town there survive a theatre, amphitheatre, basilica, and baths. It was known for its pottery industry. Milo (q.v.) had a villa there.

T. Ashby, *JRS* 1921, 161 ff., C. Pietrangeli, *Rend. Pont.* 1942, 47 ff.; id., *Otriculum* (1943). H. H. S.

OCTAVIA (1, *PW* 95), daughter of Octavius (q.v. 4) and

Ancharia and so half-sister of Augustus, married Sextus Appuleius; their sons Sextus and Marcus were consuls in 29 and 20 B.C. respectively.

Syme, *Rom. Rev.*, see index; M. W. Singer, *TAPA* 1948, 268 ff. T. J. C.

OCTAVIA (2, *PIW* 96), daughter of Octavius (q.v. 4) and Atia, and sister of Augustus, married (by 54 B.C.) C. Marcellus (q.v. 5). In 40 Marcellus died and, to seal the Pact of Brundisium, she was immediately married to Antony. She spent the winters of 39/8 and 38/7 with him in Athens, and in 37 helped with the negotiations which led to the Pact of Tarentum. When he returned to the East, Antony left her behind. In 35 Octavian sent her to Antony with token reinforcements for his army; Antony forbade her to proceed beyond Athens. She rejected Octavian's advice to leave Antony's house, and though divorced by him in 32 brought up all his surviving children by Fulvia and Cleopatra along with their two daughters and her three children by Marcellus. Her nobility, humanity, and loyalty won her wide esteem and sympathy. She died in 11 B.C.

OCTAVIA (3), **CLAUDIA** (*PW* 428), daughter of Claudius and Messallina, was born by A.D. 40. She was betrothed in infancy to L. Junius Silanus, and in 49, after Silanus' repudiation and death, to Agrippina's son L. Domitius Ahenobarbus (Nero), whom she married in 53. Nero, who disliked and neglected her, divorced her in 62 for sterility (a charge of adultery having failed) in order to marry Poppaea (q.v.), and sent her to live in Campania under military surveillance. When a rumour that she had been reinstated provoked demonstrations of popular approval, he contrived fresh charges of adultery and treason, banished her to Pandateria, and presently had her put to death (9 June). For the *praetexta* on her fate, see below, *OCTAVIA*.

Iconography. V. Poulsen, *Opusc. Romana* iv (1962), 107 ff. G. W. R., T. J. C.

OCTAVIA, the one extant *praetexta*, dramatizes in 983 lines the fate of Nero's neglected Empress. Seneca is brought in as a character to protest against the Emperor's barbarity, and Agrippina's ghost comes to foretell Nero's doom in words so true to fact as to show that they were written after the event of A.D. 68. Commonly printed with Seneca's tragedies, it is not by him, but by someone who wrote in his manner soon after Nero died. There is too much melancholy repetition and too little epigram for Seneca, and there are metrical differences.

TEXT. Editions of Seneca's tragedies, e.g. F. Leo. With notes, C. L. Thompson (USA 1921), C. Hosius (1922); T. H. Slater (1949), A. Santoro (1919 and 1955). See R. Helm, *Sitz. Berlin* 1934; M. Törni, *L'Octavia* (1934), S. Pantzerlium *Thomas, Symbolae Osloenses* 1945, 48 ff.; F. Giannotti, *L'Octavia attribuita a Seneca* (1954), C. J. Harrington, *CQ* 1961, 18 ff. J. W. D.; G. B. A. F.

OCTAVIUS (1, *PW* 17), **GNAEUS**, curule aedile (172 B.C.?), a member of the embassy assuring Greek allied rights in 169, was praetor in 168, commanding the Roman fleet against Perseus, whom he captured at Samothrace. He celebrated a naval triumph, and from spoil built the *Porticus Octaviae*. Consul in 165, he led the embassy to the East in 163/2 which attempted to settle Syria in Roman interests after the death of Antiochus Epiphanes, destroying ships and elephants, and was murdered in a patriotic riot at Laodicea.

R. Niese, *Gesch. der griech. und maked. Staaten* iii (1903), 243. A. H. McD.

OCTAVIUS (2, *PW* 31), **MARCUS**, as tribune 133 B.C. vetoed the agrarian bill of his relative Ti. Gracchus (q.v. 3) and, persisting in opposition, was illegally deposed by a special vote of the assembly. This turned many men, who were not opposed to reform, against Gracchus. C. Gracchus (q.v. 4) in 123 proposed a bill aimed at further punishing Octavius, but withdrew it at his mother's request.

D. C. Earl, *Latomus* 1960, 657 ff.

E. B.

OCTAVIUS (3, *PW* 20), **GNAEUS**, grandson of (1), failed to gain the aedileship, but became consul in 87 B.C. as a supporter of Sulla. Opposing his colleague Cinna (q.v. 1), he attacked him and his adherents and drove those who escaped death out of the city (thus starting the *bellum Octavianum*). He then had Cinna deposed and the *flamen* *Dialis* Merula appointed in his place, thus practically seizing sole power. Cinna, collecting an army, with the aid of Marius, Carbo (q.v. 2), and Sertorius (q.v.) besieged Rome; Octavius, despised by his own men, proved unable to defend it and had to call on Pompeius (q.v. 3) Strabo and Metellus (q.v. 7) for help. After Pompeius' death the Senate surrendered the city against his will and he was killed wearing his consular robes.

E. B.

OCTAVIUS (4, *PW* 15), **GAIUS**, from a wealthy equestrian family of Velitrac, rose to the praetorship (61 B.C.) and governed Macedonia with conspicuous ability. He died on his way back to Rome in 58. Velleius (2. 59. 2) sums him up as 'gravis, sanctus, innocens, dives'. By his first wife Ancharia he was father of Octavia (1) and by Atria (q.v. 1) of Octavia (2) and Gaius, the later Augustus.

Syme, *Rom. Rev.*, see index.

G. W. R.; T. J. C.

ODAENATHUS, **SEPTIMIUS**, a Palmyrene noble of consular rank, on the capture of Valerian assumed the title of king and at the head of local troops inflicted a severe defeat on Sapor (A.D. 260). Gallienus rewarded him with the post of *dux* and, it would seem, *corrector totius orientis*, and Odaenathus on his behalf crushed the usurper Quietus at Emesa. From 262 to 267 he led the Roman army of the East and his own Palmyrene troops against Persia, reconquering Mesopotamia, but failing to capture Ctesiphon; he was rewarded with the title of *imperator*. In 267 he and his eldest son were murdered. Odaenathus' main interest was to protect the Eastern trade of his own city against the Persians, and he was content to acknowledge the suzerainty of Gallienus, since his nominal submission gave him command over the Roman army of the East. He was succeeded by his widow Zenobia (q.v.).

A. H. M. J.

ODEUM (ὠδεῖον), a small theatre or roofed hall for musical competitions and other assemblages. The earlier Athenian Odeum, which according to Plutarch (*Pericles*, 13) was built by Pericles, was a building of a different kind. Plutarch's description, 'many-seated and many-columned', suggests a resemblance to the Telesterion at Eleusis—a square building—and his description of the roof as conical or pyramidal (said to have been copied from the tent of Xerxes) also seems to imply approximate equality of length and breadth. The Odeum abutted on the theatre of Dionysus on the east; it has not been fully excavated and its form and extent have not been precisely determined. Vitruvius (5. 9) states that Pericles ornamented the building with stone columns and with the masts and spars of ships captured from the Persians, and that it was destroyed by fire during the Mithridatic war and rebuilt by King Ariobarzanes.

Pausanias (7. 20. 6) uses the name Odeum for certain theatres of Roman type (see *THEATRES*)—the Odeum of Herodes Atticus, built as a memorial to his wife Regilla, who died in A.D. 160, and a similar building at Patrae, both of which have been largely reconstructed in modern times for the performance of plays. He also mentions an odeum in the Athenian agora (1. 8. 6); this is almost certainly a handsome covered theatre of which remains have been found (*Hesp.* 1950, 31 ff.) and very probably identical with the Agrippaeon in which, according to Philostratus (*VS* 2. 5. 4, 2. 8. 3-4), sophists gave rhetorical displays.

H. W. R.; R. E. W.

ODOACER, the first barbarian king of Italy (A.D. 476-93), was a German who served under several Roman commanders before rebelling in 476, when he deposed Romulus (q.v.) Augustulus and was proclaimed king. He recognized the overlordship of the Eastern Emperor Zeno and won the support of the Roman Senate. He ruled Italy capably and, although himself an Arian, he interfered little with the Catholics. He was overthrown in the campaigns of 489-93 by Theodoric (q.v.) the Ostrogoth, to whom he surrendered Ravenna, where he was treacherously murdered (493).

E. A. T.

A. H. M. Jones, *JRS* 1962, 126 ff.

ODYSSEUS (Ὀδυσσεύς, Lat. *Vlixes*, a dialect form, not Ulysses), son and successor of Laertes king of Ithaca, husband of Penelope and father of Telemachus (qq.v.). Like Achilles (q.v.) he comes from a fringe of the Achaean world and is a favourite of Homer. Throughout the *Iliad* he is both brave and sagacious; he gives prudent counsel (e.g. 19. 154 ff.); he is enterprising and so chosen by Diomedes as his companion in the night expedition (10. 242 ff.); he displays great valour in battle, especially 11. 312 ff., where he and Diomedes stop the rout of the Greeks and Odysseus continues to fight after Diomedes is wounded till he himself gets a flesh wound and Menelaus and the greater Aias (qq.v.) rescue him. He is one of the three envoys sent to carry Agamemnon's offer to Achilles in book 9. In the funeral games of Patroclus he wins the foot race, Aias the Laocian coming in second (23. 778-9); he draws a wrestling match with the greater Aias (708 ff.).

He is the central figure of the *Odyssey*, which, by direct narrative of the poet and his own tale of his adventures in books 9-12, covers his career from the fall of Troy till ten years later. Leaving the Troad, he attacked the Cicones, but was beaten off with loss (9. 39 ff.); he was then caught by a storm, visited the country of the Lotophagi (q.v.), and wandered thence to the land of the Cyclopes (q.v.). Escaping from Polyphemus, he next visited Aeolia, the home of Aeolus (q.v. 1), who gives him a sack containing all the winds save the one which will bring him home. But while Odysseus sleeps his crew untie the sack, a storm arises and blows them from the coast of Ithaca back to Aeolia, where Aeolus refuses to have anything more to do with them (10. 19 ff.); after six days' sailing they reach the Laestrygonians (q.v.), and Odysseus barely escapes with his own ship and crew. He reaches Aeaea, the home of Circe (q.v.), and is told by her that he must, in order to reach home, go to Hades and consult the ghost of Tiresias (q.v.). This he succeeds in doing, sees many of the ghosts, and is told by Tiresias that after reaching home he is to sacrifice to Poseidon in a place where salt is unknown and an oar mistaken for a winnowing-fan, thus appeasing the god's anger for the blinding of his son Polyphemus. He will then find an easy death 'from the sea' (11. 134) in old age. Returning to Aeaea, he is

given directions for his further voyage; by means of these he passes the Sirens (q.v.), runs between Scylla and Charybdis (qq.v.) with the loss of six men to the former, and comes to the island where the cattle of the Sun pasture. Here his men insist on landing, but, being windbound and short of provisions, they eat of the cattle. Helios demands revenge, and when they leave the island the ship is caught in a gale and destroyed by a thunderbolt; Odysseus alone escapes, and drifts to the island of Calypso (q.v.). Seven years later she lets him go by order of Zeus (5. 43 ff.) on a boat of his own making. Poseidon wrecks him, he swims ashore at Scheria and there is relieved by Nausicaa (q.v.) and sent home, after munificent entertainment, by Alcinoos (q.v.). Meanwhile Telemachus has returned from his search for news of his father; Odysseus, disguised as a beggar by Athena, enters his own palace and disposes of the suitors of Penelope with the help of his son and the two faithful thralls, Eumaeus and Philoetius (21-2). He is reunited to Penelope, and an attempt by the kinsmen of the suitors to take vengeance is stopped by Athena, who makes peace between the two parties after the father of Antinous (q.v. 1) has been killed by old Laertes (24. 523).

The lost *Telegonia* continued the story. Odysseus performs his pilgrimage, meeting with some subsidiary adventures; Telegonus, his son by Circe, sets out to look for him, lands in Ithaca, and starts to plunder it; in the succeeding fight he kills Odysseus. Circe then makes the survivors immortal; she marries Telemachus and Penelope Telegonus.

Later authors, especially the tragedians, tend to blacken Odysseus' character. In Homer he is cunning and lies fluently on occasion; in some of the later legends he is a cowardly rascal. As early as the *Cypria* he tries to avoid coming to Troy, but is outwitted by Palamedes (q.v.), and he and Diomedes murder him (fr. 21 Allen). The same pair steal the Palladium, and Odysseus tries to murder Diomedes on the way back, to get all the credit himself (*Little Iliad*, fr. 9). In the surviving *Philoctetes* of Sophocles and apparently in that of Aeschylus also (see Rose, *Handb. Gk. Lit.* 169) his cunning is contrasted with the straightforwardness of Diomedes, or Neoptolemus, who accompanies him.

Odysseus had occasional worship as a hero in historical times, though, curiously enough, not in Ithaca (see Farnell, *Hero-Cults*, 326). There is no sufficient reason to suppose him other than a real local chieftain originally, though no doubt his actual doings are hopelessly overlaid with details of Homer's imagination or that of later writers. The plot of the *Odyssey* in particular is a folk-tale, as was pointed out by Nilsson (*Mycenaean origin of Gk. myth.* (U.S.A. 1932), 96, the motif is in Stith Thompson K 1815. 1).

By the most probable theory the scene of his wanderings is outside known territory, however much vague reports of foreign lands may have helped to provide details (see, however, V. Bérard, *Les Phéniciens et l'Odyssee*, 1902-3). But during and after the period of colonization numerous identifications of places in the *Odyssey* with those in or on the way to Italy and Sicily became very popular. Of these perhaps the most plausible is that of Scheria with Corcyra; for some account of this see A. Shewan, *Homeric Essays* (1935), 242 ff. The site of Ithaca itself has been hotly disputed (*ibid.* 1 ff.), though the traditional place, the modern *Thaki*, is probably the one Homer means.

The Polyphemus adventure is loved from the seventh century; archaic art also represents Circe, the Sirens, and the quarrel with Aias; in the fifth century and after, the stealing of the Palladium, the death of Dolon, the Nekyia, Nausicaa, Eumaeus, the slaying of the suitors, and other scenes appear. From the later fifth century Odysseus

often wears the conical *pilos*, said to have been first given to him by Apollodorus of Athens (schol. *Il.* 10. 265).

Besides the literature cited in the text, J. Schmidt in Roscher's *Lexikon*, s.v., gives much useful material. For the literary tradition W. B. Stanford, *The Ulysses Theme* (1962) In art, Brummer, *Vasculisten*, 300 ff. H. J. R., C. M. R.

OEA (neo-Punic *W'y't*; modern *Tripoli*), a Phoenician port between the Syrtes, at the terminus of a trans-Saharan route. Under Rome a city of Africa Proconsularis, it became a *colonia* in the second century A.D. It was visited by Apuleius (*Apol.* 73), had a bishop by A.D. 256, and was the only city of the Tripolis (q.v. 1) to survive into medieval times. In 69 Oea summoned the Garamantes to her aid against Lepcis, and Valerius Festus had to drive them out of the province (*Tac. Hist.* 4. 50). Little remains of ancient Oea except a well-preserved four-way arch of A.D. 163-4.

D. E. L. Haynes, *The Antiquities of Tripolitania* (1956), S. Autigemma, 'Un sepolceto punico-romano in Tripoli', *Reports and Monographs of the Dept. of Antiquities in Tripoli* iv (1958) O B.

OEBALUS, an early Spartan king, who had a hero-shrine at Sparta (Paus. 3. 15. 10). He has no legend, merely a place in several mutually contradictory genealogies, for which see Wörner in Roscher's *Lexikon*, s.v. Hence *Oebalius*, *Oebalides*, etc., in Latin poetry often mean Spartan, and the name itself is now and then used for some minor character of Spartan or Peloponnesian origin (as Verg. *Aen.* 7. 734). H. J. R.

OECLES (*Οἰκλῆς*) or **OECLEUS** (*Οἰκλέους*), in mythology, father of Amphiaræus (q.v.; Aesch. *Sept.* 609 and often). He has neither a consistent place in genealogy nor a legend of the smallest importance.

OEDIPUS (*Οἰδίπους*, anciently, and probably correctly, taken to mean 'swell-foot'), in mythology, son of Laius king of Thebes and his wife Iocasta (Epicaste in Homer, *Od.* 11. 271 ff.). The story is told there that he married his mother unwittingly, and when it was found out she hanged herself, but he continued to be king. He afterwards fell in battle and had a great funeral feast (*Il.* 23. 679 f.). Hesiod says (*Op.* 162-3) that some men of the heroic age fell before Thebes fighting for the flocks of Oedipus; he may therefore have been killed in warding off a raid. Clearly this is inconsistent with his later story, dating in essentials from the cyclic epics *Thebais* and *Oedipodia* but best known from the tragedians.

Laius had been warned by Apollo that if he begot a son that son would kill him (*Ar. Ran.* 1184-5). This was his punishment for sinning against Pelops (q.v.), who had been his host while he was in exile from Thebes; he had carried off Pelops' son Chrysippus (Soph. *OT*, argument). Nevertheless, he neglected the warning (Aesch. *Sept.* 842; Soph. *OT* 711 ff.); a son was born and Laius exposed him, running a spike through his feet (to prevent his ghost walking?). The infant was found by a shepherd of Polybus king of Corinth, who was herding on the summer pastures of Mt. Cithaeron; Polybus, who was childless, adopted him and passed him off as his own, naming him Oedipus from the state of his feet. But Oedipus, being taxed in young manhood with being a supposititious child, went to Delphi to ask who his parents were. He was told that he would kill his father and marry his mother. Determining never to revisit Corinth, he wandered to Thebes, killing Laius in a chance encounter by the way. Arrived at Thebes, he found the city plagued by the Sphinx, a monster which destroyed those who could not solve a riddle she asked. He guessed it and she killed herself; or he overcame her in fight (Robert, *op. cit. infra*, ch. 2). His reward was the hand of the widowed queen. They had four children, Eteocles and Polynices,

Antigone (q.v. 1) and Ismene (the *Oedipodia*, fr. 1 Allen, made a second wife, Euryganeia, their mother after Iocasta's death). But the secret of the relationship came out; Iocasta hanged herself, Oedipus either blinded himself or (Euripides, fr. 541 Nauck) was blinded by Laius' servants. Thus he ceased to be king, going into exile or retirement. The former is Sophocles' version, the latter that of the lost epics, followed by Euripides (*Phoenissae*) and Statius (*Thebais*). His death is variously told, corresponding to his various cults (see Farnell, *Hero-Cults*, 332 ff.). The Attic version of his disappearance from earth at Colonus is told by Sophocles, *OC*.

But two explanations of the story seem possible. Either Oedipus is a real person, about whom fabulous details had gathered, following on the whole the lines of well-known folktales (so Rose, *Modern Methods in Class. Myth.* (1930), 24 ff.), or he is pure *Märchen*, taken up by epic (so Nilsson in *Gnomon* 1932, 18). See, however, M. Delcourt, *Oedipe ou la légende du conquérant* (1944).

Oedipus and the sphinx (which sits on a column) is a common subject in fifth-century Attic vase-painting, and seems to have been found also in sculpture (see Budde and Nicholls, *Cat. of Greek and Roman Sculpture in the Fitzwilliam Museum, Cambridge*, 20 ff., nos. 40 and 41). Other episodes are occasionally shown—the death of Laius, Euphorbus, and the baby Oedipus (Brommer, *Vasenlisten*², 340 ff.).

C. Robert, *Oedipus* (1915).

H. J. R.; C. M. R.

OENEUS (Οἰνέως), in mythology, king of Calydon, husband of Althaea and father or reputed father of Deianira and Meleager (1) (q.v.). The names of husband and wife ('Wine-man' and 'Healer') and the story that Dionysus was the real father of Deianira (Hyg. *Fab.* 129, and Rose ad loc.) suggest that they were originally wine-gods. Oeneus is also connected with Ares, who is his grandfather in Nicander ap. Ant. Lib. 2, Meleager's father in Hyg. *Fab.* 171. 1. Peniboea, daughter of Hipponous or Olenus, whom he married after the death of Althaea and who was the mother of Tydeus, is variously said to have been with child by Ares, Oeneus, or a certain Hippostratus (Apollod. 1. 74 f.; Diod. Sic. 4. 35. 1-2). In his old age he was robbed of his kingdom by his brother Agrius, but restored by Diomedes (q.v. 2) or Tydeus (Hyg. *Fab.* 175 and Rose ad loc.). Phercydes in schol. *Iliad* 14. 120). An obscure story apparently from Ps.-Apollod. (see Wagner's Teubner ed., 186) says that Agamemnon and Menelaus (q.v.v.) were put in his charge for a time to escape Thyestes.

H. J. R.

OENOMAUS of Gadara (c. A.D. 120), Cynic philosopher. Works (of which a few fragments remain): *Περὶ κυναιμωδῶ; Πολιτεία; Περὶ τῆς καθ' Ὁμηρον φιλοσοφίας; Περὶ Κράτητος καὶ Διογένηος καὶ τῶν λοιπῶν; Γοῖτων φύρα* (— *Κατὰ χρηστηρίων*); *Κυνὸς αὐτοφονία*; and tragedies. The fragments of *Γοῖτων φύρα* show it to have been a lively attack on the belief in oracles, an attack resting in part on the belief in freewill. He aimed at a Cynicism which did not follow slavishly either Antisthenes or Diogenes, and defined Cynicism as 'a sort of despair, a life not human but brutish, a disposition of soul that reckons nothing noble or virtuous or good'.

W. D. R.

OENONE (Οἰνώνη), a nymph of Mt. Ida, loved by Paris (q.v.). When he deserted her for Helen she was bitterly jealous, and on learning that he had been wounded by Philoctetes (q.v.) with one of Heracles' arrows, she refused to cure him. Relenting too late, she came to Troy and found him already dead, whereat she hanged herself or leapt upon his funeral pyre.

Apollod. 3. 154-5, Parth. 4, Quint. Smyrn. 10. 259 ff., all with small variations.

H. J. R.

OENOPIDES of Chios (fl. c. 450-425 B.C.), astronomer and mathematician, discovered the obliquity of the ecliptic, and introduced improvements in elementary geometry; he may have been the first to require that only the ruler and the compasses should be used in the solution of simple problems.

Diels, *Vorsokr.*¹¹ i. 393-5.

W. D. R.

OFELLA (thus in the Greek sources), QUINTUS LUCRETIUS (*PW* 25), a Marian leader who joined Sulla and captured Praeneste for him (82 B.C.), sending him the head of Marius (q.v. 2). Persisting (though a mere *equus*) in an attempt to stand for the consulate of 81 despite Sulla's warning, he was killed at Sulla's orders. In the Latin sources the name is 'Afella'.

OGULNIUS (*PW* 5) **GALLUS**, QUINTUS (cos. 269 B.C.), as tribune of the *plebs* together with his brother Gnaeus, in 300 carried a law (*Lex Ogulnia*), despite the opposition of patricians and Appius Claudius (q.v. 4), by which plebeians became eligible for the highest priesthoods, and gained the majority in the college of the augurs. According to Beloch (*Rom. Gesch.* 350 f.) the *Lex Ogulnia* was passed in 296, when the Ogulnii were aediles. In this year they used fines from usurers for dedications and to set up near the *Ficus Ruminalis* a figure of the she-wolf suckling Romulus and Remus, which was soon commemorated on Rome's earliest silver coinage (Sydenham, *CRR* 2, n. 6). In 292 Q. Ogulnius headed the delegation sent to Epidaurus to bring Asclepius (q.v.) to Rome, which in 293 had been visited by a pestilence. In 273 he was a member of the diplomatic mission to the court of Ptolemy II.

P. T.

OGYGUS (Ὠγγυός, etymology and meaning uncertain), a primeval king, generally of Boeotia (as Paus. 9. 5. 1), but of Lycia, Steph. Byz. s.v. Ὠγγυῖα; of Egyptian Thebes, schol. Lycophr. 1206; of the Titans, Theoph. ad Autol. 3. 29. The first Deluge was in his time, Euseb. *Praep. Evang.* 10. 10. 7.

H. J. R.

OIL (cf. OLIVE CULTURE). Olive oil, the widespread use of which is characteristic of the Mediterranean region, was the main source of fat in the diet of Greece and Rome, since butter (βούτυρον — 'cow-cheese') was always considered food for barbarians, while oils and fats from other vegetable and animal sources, though not unknown, were comparatively unimportant. Oil was used as an ingredient of many cooked and baked foods, as fat for frying, and in serving salads and other dishes. Many grades and varieties were distinguished, depending on the kind of olive used, on its degree of ripeness when picked, and on the stage in the extraction process at which the oil was obtained. In this process the aim was to avoid crushing the kernels and to separate the oil from the bitter watery liquid (ἀμύρρη, *amurra*) also contained in the fruit, which was fit only for manure and for some of the purposes for which kerosene is used nowadays. The difficulty of achieving this stimulated the invention of special apparatus in which the olives could be crushed after they were gathered (preferably by hand). For this purpose an earlier roller-mill came to be replaced by the *trapetum* (described by Cato, *Agr.* 20-2), in which a pair of stones turning round a solid column could be adjusted to the correct distance from the walls of the basin in which they revolved. After crushing, the kernels were eliminated and the first and best oil (*flos olei*) drawn off. Then the pulp was pressed in a beam or screw press (*torcular, torcularium*), sometimes after being soaked in hot water, to produce more oil (*oleum sequens, oleum cibarium*) of a lower quality. (This pressing was sometimes done in stages, the quality of the oil becoming worse as the pressure was raised.)

Finally, the different grades of oil were transferred to separate settling vats, from which the heavier *amurca* could be drawn off through spouts at the bottom, and stored before use in the *cella olearia*. In addition to its dietary use, oil was commonly employed also in unguents and toilet preparations, in medicine, in lamps, and in religious ceremonies. Its importance in Christian ritual at one time helped to spread its use to parts of Europe not naturally suited to olive culture.

PW, s.v. *Oleum* (xvii, 2454 ff.); A. G. Drachmann, *Ancient Oil Mills and Presses* (1932), Forbes, *Stud. Anc. Technol.* iii, 101 ff., 131 ff., 146 ff. L. A. M.

OINTMENTS served for medical purposes, mere pleasure, and religious ceremonies. The medical application, of course, was determined only by the expediencies of treatment. Half-way between remedy and luxury was the use of ointments in the gymnasium and as stimuli. To the side of luxury belonged, in spite of climatic conditions in the Mediterranean, the use of ointments before, during, and after the bath, at dinner, at almost any time of day or night. Neither the reprobation of the moralists nor governmental restrictions could check this indulgence; people liked ointments, elaborate mixtures, the attribute of Aphrodite, rather than pure oil, that of Athena. Moreover, the use of ointments was a sign of nobility and distinction and therefore was important also in the veneration of the gods and in burial ceremonies.

Material for the fabrication of ointments came from all over the world. Both wholesale trade and retail business were considerable, and hardly of any detrimental effect on the economic life as has been claimed; rather they provided a good tax revenue.

The receptacles in which ointments were kept, vases of various shapes and boxes, are among the most refined objects of art. Dry ointments were also wrapped in papyrus, to serve this purpose was the final destination of many an ancient book.

Hug, PW I A 1851, s.v. 'Salben', A. Schmidt, *Drogen u. Drogenhandel im Altertum* (1924), J. I. Miller, *The Spice Trade of the Roman Empire* (1966), see index. Economic implications correctly evaluated, Rostovtzeff, *Roman Empire*; Handbooks on Greek and Roman antiquities. Archaeological material ('Elekthos', 'Aryballos', 'Alabastron', 'Pyxis', 'Pikrochloe') surveyed by G. M. A. Richter and M. J. Milne, *Shapes and Names of Athenian Vases* (1935), with bibliography. L. E.

OKNOS, delay or hesitancy personified; a figure of Greek folklore. For some reason he is associated with the lower world (Plut. *De tranq. amm.* 473 c; cf. Paus. 10. 20. 1, Polygnotus' picture of Hades). He is always making a straw rope, which an ass eats as fast as he twines it (cf. the futile labour of the daughters of Danaos, q.v.; this may explain his infernal associations). Another version seems to be that he loads the ass with sticks, which fall off as fast as he puts them on (Apul. *Met.* 6. 18); perhaps the rope is to tie them.

See Hofer in Roscher's *Lexikon*, s.v.

H. J. R.

OLBIA, a colony of Miletus, situated near the mouth of the Hypanis (Bug), and within easy reach of the estuary of the Borysthenes (*Dnieper*). It was founded in the late seventh century, and may have been preceded by a settlement on the island Berezan in the outer estuary. It was a fishing-centre and the terminal point of a trade-route up the Hypanis into central Europe; but its main importance lay in its export of wheat from the 'Black Earth' area of south-west Russia, much of which it bought for resale from the Scythian hinterland. Olbia enjoyed its highest prosperity in the sixth century and until the middle of the fifth, at which time it was visited by Herodotus. It apparently had no share in the grain trade with Athens in the later fifth and fourth centuries,

and in the third century it suffered from the growing insecurity of its hinterland (*SIG* 495— a record of frequent danegelds paid to marauding chieftains by a wealthy citizen). It was sacked c. 60 B.C. by the Dacian king Burebistas, and the rebuilt city appeared to Dio Chrysostomus (c. A.D. 80) impoverished and half-barbarized, though its inhabitants professed a passionate regard for Homer. It recovered some of its prosperity when Hadrian gave it a garrison, but it was destroyed by the Alans in the third century.

E. H. Minns, *Scythians and Greeks* (1913), 451 ff.; *Arch. Rep.* 1962-3, 42 ff.; M. Danoff, *PW Suppl.* ix, 1092 ff. M. C.; J. B.

OLEN, mythical epic poet, before Musaeus (q.v.); a Hyperborean or Lycian; said to have brought the worship of Apollo and Artemis from Lycia to Delos, where he celebrated their birth among the Hyperboreans in hymns which continued to be recited there (Hdt. 4. 35; Callim. *Del.* 304-5; Paus. 1. 18. 5; cf. *ibid.* 8. 21. 3). See HYMNS.

W. F. J. K.

OLIGARCHY, the 'rule of the few'; on its connexions with the old nobility and its growth out of aristocracy see ARISTOCRACY. The chief difference consisted in the replacement of birth by wealth as the decisive qualification: oligarchy was plutocracy. There were many conflicts between the old nobility and the *nouveaux riches*, but finally 'money made the man' (Alcaeus and Theognis, *passim*). This also meant a victory of urban over tribal organization.

In oligarchy political power was confined to a minority of the citizens; the majority had citizenship, but without full political rights. The method of selecting the 'few' varied greatly, according to the economic conditions of each city. In most States the landowners predominated for a long time, but movable wealth was gradually put on an equal level. In addition, the ruling few might be limited to a fixed number which differed in different States, often rising to the 'rule of the Thousand'. Sometimes there was a scale of several citizen classes distinguished by wealth and accordingly by political rights (timocracy). In his classification of oligarchies (*Pol.* 6. 1292^a 38 ff., 1293^a 11 ff.) Aristotle differentiates between aristocracy and oligarchy rather than between the actual forms of oligarchy. Political power in oligarchies was generally concentrated in the council. In cases where the number of citizens was very small, the assembly could preserve a real activity. It is difficult sometimes to distinguish the assembly from the council, e.g. the 600 in Massilia. Membership of the council was usually by election and expired only at death; sometimes, as in the case of the Areopagus (q.v.), the council was composed of retired high officials formerly elected by the assembly. Some characteristic features of oligarchy appear in Sparta, always its champion. But Sparta represented a particular form of State, and its institutions must not be considered as typically oligarchic.

I. Whibley, *Greek Oligarchies* (1896); G. Glotz, *The Greek City* (1929), V. Ehrenberg, *The Greek State* (1960) V. E.

OLIVE CULTURE. We know from finds that olives were grown in the Mediterranean area and Minoan Crete during the Neolithic age. Plantations are mentioned by Homer, and oil was exported from Attica before and after the time of Solon. As soon as it became possible by imports of grain to satisfy most of the requirements of the Greek people, crops such as olives and grapes took the place of grain and were very widely cultivated in Greece during the classical age. There was a similar increase of olive cultivation in Italy after the Second Punic War. From the later first century A.D., exports of oil and wine from Italy being no longer able to compete

with the increased local production of the Roman provinces, a more equable cultivation became a characteristic of the Mediterranean areas.

Methods of cultivation were much improved from the classical Greek period to the early Principate, bringing about a world-wide interchange of varieties. Two hundred trees, for example, were exported from Attica to Egypt under Ptolemy II. At least twenty-seven varieties were known, and improved mills and presses increased production. The grafting of olive-shoots on fig-trees and vines was successfully performed, and wild olives were grafted on the cultivated stocks to improve production (*terebratio*). Cheap labour, mostly servile, was used for the harvest. Olives were more remunerative to the large owner than to the small peasant, as it might take fifteen years to ensure a profitable return on an investment in a new plantation.

In Cato's time the average profit was c. 6 per cent on the capital invested. A model plantation of 160 acres described by Cato employed a slave overseer, his wife, five slave labourers, three ox-drivers, one ass-driver, a swineherd, a shepherd, with its oil mills, cattle, and working implements. Rome seems to have occasionally restricted cultivation in the provinces to protect Italian growers. Olive cultivation in the ancient world created a tradition in most Mediterranean countries which has never been completely lost even today. See AGRICULTURE, OIL.

OLYMPIA, the main sanctuary of Zeus in Greece, was situated in a rich and lovely tract of Elis, in a hollow between the low hills that flank the river Alpheus. Strabo states that its fame was first derived from an oracle of Earth, like that at Delphi, and a pre-Hellenic occupation of the site is proved by the discovery of pottery and houses of the Bronze Age at the foot of Kronos Hill, elsewhere at Olympia, and in the vicinity. There have been numerous finds of Mycenaean material on the lower Alpheus, and at Olympia at the site of the new museum. According to Pindar the Olympic festival was founded by Heracles, and this tradition was also held at Elis; but the local belief was that Pelops originated it after his victory over Oenomaus. The games were said to have started in the ninth century, but the first Olympiad was dated 776 B.C.

The sanctuary of 'Altis' was a walled enclosure, which came into full occupation soon after the Dorian Invasion. The oldest shrine was that of Pelops. There were two temples, that of Hera, dating from the seventh century and originally constructed of wood, and that of Zeus, completed in 457. On the north side, under Kronos Hill, lay eleven 'Treasures' (q.v.) of various Greek States in a row. The only building on the east side, other than a portico, was the circular 'Philippeum', built by Philip II of Macedon to commemorate himself. Innumerable statues of athletic victors stood in the Altis. Outside it were many large buildings of various dates: the Palaestra, a hostelry known as the Leonidaem, of fourth-century date, used by officials, a Prytaneum, and a Bouleuterium.

Olympia was excavated by German archaeologists in 1881, although an earlier expedition from France in 1829 had secured parts of the sculptured metopes of the temple of Zeus, now in the Louvre. The German excavators found the remaining metopes and almost 80 per cent of the pedimental sculptures. Among other notable discoveries were the head of Hera (or a sphinx) from the Heraeum, the Victory of Paonius, the Hermes

and Dionysus, and a bronze head of a boxer attributed to Silanion. Renewed German excavations have revealed a great deal more. It appears that the archaic stadium was replaced by a monumental stadium before mid fifth century. This in turn was superseded about the middle of the fourth century by the stadium still visible which has been restored. The first, mid-fifth-century, monumental stadium extended much further to the West than the later one, projecting into the sanctuary area and forming one unit with it. From these excavations have come an immense number of fine bronzes, including dedicated arms (such as a helmet taken by the Athenians from the Persians) and metal objects of oriental as well as Greek origin, e.g. from Urartu in the Lake Van region of eastern Anatolia. Other excavations on the traditional site of the workshop used by Phidias, when he created the gold and ivory figure of Zeus (Paus. 5. 15. 1), have revealed moulds for hammering metal and casting glass, fragments of ivory, and a mug inscribed with the name of Phidias. The moulds used for hammering out the gold drapery of the Zeus seem to indicate a date (stylistic) in the 30s of the fifth century and establish that the Zeus was made after the Athena at Athens. An edict of the Emperor Theodosius, enjoining the destruction of all pagan shrines, made an end of Olympia as a show-site.

OLYMPIAN GAMES. According to tradition the Olympic Games, held once every four years, were founded in 776 B.C., and a list of the winners from that year to A.D. 217, drawn up by Julius Africanus, has been preserved for us by Eusebius. In A.D. 393 they were abolished by the Emperor Theodosius I. At first they were confined to one day and the contest consisted only of running and wrestling; but in the early years of the seventh century B.C., perhaps under the influence of Pheidon, tyrant of Argos, they were reorganized and enlarged, and races for chariots and single horses were introduced. The foot-race, one length of the stadium, always remained the principal event. In early times most of the victors were from Sparta, but as the games attained Panhellenic status Spartan superiority declined and many victors came from Sicily and Italy as well as from other cities of the Greek mainland and islands.

The games were in honour of Olympian Zeus. In his precinct, the Altis, lying between the rivers Alpheus and Cladeus, stood his temple, together with the statues of victorious athletes (see OLYMPIA). The first of the five days, to which the games in 472 were extended, was spent in sacrifices and general festivity, while the competitors and judges took the oath of fair dealing. On the second morning the herald proclaimed the names of the competitors, and the day passed in chariot- and horse-races together with the pentathlon competition for men. The boys' contests came on the third day; the men's foot-races, jumping, wrestling, boxing, and pankration on the fourth, the last event being the race for men in armour. On the fifth day there were sacrifices, and in the evening a banquet at which the victors were entertained. The prizes consisted of chaplets of wild olive.

E. N. Gardiner, *Olympia* (1925). For the other literature see ATHLETICS. F. A. W.

OLYMPIAS, daughter of Neoptolemus of Molossia married Philip II of Macedon in 357 B.C. and bore him two children, Alexander (in 356) and Cleopatra. Passionate and mystical, she gave her son these qualities; but his practical and imaginative mind was not hers. Her

relations with the polygamous Philip became strained, but the story that she was his real murderer was only Cassander's propaganda. Devoted as Alexander always remained to her, he wisely refused to let her exercise any power, and he supported his governor in Macedonia, Antipater, against her. In 331 she quitted Macedonia for Epirus, which for years she virtually ruled. After Alexander's death she waged a propaganda war against Antipater's house, until in 317 Polyperchon invoked her help against Antipater's son Cassander in Macedonia. Macedonians regarded Alexander's mother as sacred; she mastered Macedonia without a blow, murdered Philip III, and made her grandson (Alexander IV) sole king. But her unbridled passions, displayed in an orgy of murder, ruined her chances and brought Cassander back; she had to surrender, and Cassander's army condemned her to death. But even so they dared not touch her themselves; she was finally killed by relatives of her victims. Her grave at Pydna was revered.

W. W. T.

OLYMPIEUM, the temple of Zeus Olympius at Athens; begun by Antistates, Calleschrus, Antumachides, and Porinus, architects employed by Pisistratus, but abandoned after the latter's death, and not resumed until Antiochus Epiphanes employed the Roman architect Cosutius to continue the work. It was completed at the order of Hadrian (Vitr. 7 *praef.*). The Pisistratean building was planned as a Doric temple. Cosutius changed the order to Corinthian, but in general seems to have adhered to the original plan, dipteral at the sides, tripteral at the ends. The cella was of the open-roofed type called 'hypaethral' (Vitr. 3. 2). The stylobate measured c. 135 by 354 feet, and the Corinthian columns were nearly 57 feet in height.

The cult was of great antiquity, being founded by Deucalion, according to Pausanias (1. 18. 7-8), and associated with other ancient cults such as those of Ge and Kronos.

The name is also used of other shrines of Zeus such as the large temple at Acragas (q.v.).

W. B. Dinsmoor, *Architecture of Ancient Greece* (1950), 91, 280 f.; R. E. Wycherley, *GRBS* 1964, 161 ff. H. W. R., R. E. W.

OLYMPIODORUS (1) (fl. 307-280 B.C.), democratic Athenian commander, secured Aetolian help against Cassander (c. 306), whom he subsequently repulsed from Elatea. He gave support to Lachares (q.v.), but after the recapture of Athens by Demetrius Poliorcetes became virtually tyrant, holding the archonship for two successive years (294-292). In 287 he led an insurrection against Macedon, seizing the Museum; later he helped Demochares to take Eleusis and, perhaps between 280 and 277, temporarily liberated Piraeus (Paus. 1. 26. 3).

OLYMPIODORUS (2) of Gaza, sceptical philosopher, pupil of Carneades (who lived 214-129 B.C.). See Zeller, *Phil. d. Griechen* 3^a. 1. 544.

OLYMPIODORUS (3) of Thebes (Egypt). Greek historian. Born before A.D. 380, he died after 425. We do not know where he lived, but we are informed that in 412 he was sent as an ambassador to the Huns and in 415 he visited Athens. A typical Egyptian 'intellectual' of the late fourth century, he remained a pagan. He gave poetry as his profession, but he is known to us as the writer of twenty-two books of history (or, rather, of memoirs) from A.D. 407 to 425, which he dedicated to Theodosius II.

The work is lost, but was summarized by Photius (*Bibl.* 80) and used by Zosimus and Sozomenus. It contained many references to personal experiences, learned excursions, details on the life of the contemporary governing class and of the barbarians, and on superstitious beliefs he probably shared. He claimed Homer as his fellow countryman.

Fragments in *FHG* iv. 58, and L. Dindorf, *Hist. Graec. Min.* i (1870), 450. E. A. Thompson, *CQ* 1944, 43 ff.; G. Moravcsik, *Byzantinoturcica* 1 (1958), 468 (with further bibli.). A. M.

OLYMPUS (1), the highest mountain of the Greek peninsula, situated on the borders of Macedonia and Thessaly. It rises at one point to 9,573 feet, and there are several other heights of over 9,000 feet. Famous as the reputed home of the gods, it was important in religion and mythology and is frequently mentioned by poets. The huge massif covers a large area extending inland from the coast of Pieria, and it therefore served to shield Greece on the north-east: invaders from this direction were compelled, unless prepared to follow very high and difficult tracks, either to force the narrow defile of Tempe (q.v.) or to use the mountain passes of Petra and Volustana to the west of Olympus. It also contributed to the isolation of Thessaly by cutting it off from Macedonia and the Thermaic Gulf.
H. D. W.

OLYMPUS (2), in Cyprus (modern *Troodos*), rises to 6,403 feet and constitutes the main mountain mass of the south-west part of the island. Heavily wooded, on its lower slopes are modern mines of asbestos, and in antiquity there are said to have been gold-mines. It is today used as both a summer and winter resort. T. B. M.

OLYNTHUS, a city north of Potidaea on the mainland of the Chalcidic peninsula. Originally Bottiaeian, it became a Greek city after its capture by Persia (479 B.C.) and repopulation from Chalcidice; its position and mixed population made it the natural centre of Greek Chalcidice against attacks from Athens, Macedonia, and Sparta. In 433 the city was strengthened by further migration and received territory from Macedon (Thuc. 1. 58), and it soon became the capital of a Chalcidian Confederacy issuing federal coinage; by 382 the growth of the Confederacy aroused the enmity of Sparta, which reduced Olynthus after a two-year siege and disbanded the Confederacy (Xen. *Hell.* 5. 2. 11 f.). When Sparta collapsed, Olynthus re-formed the Confederacy and resisted Athenian attacks on Amphipolis; when that city fell to Philip II of Macedon Olynthus allied with him against Athens (Diod. 16. 8), expelled the Athenian cleruchy from Potidaea, and received Anthemus from Philip (357-356). Alarmed by the growing power of Philip, Olynthus intrigued with Athens, harboured rivals to the Macedonian throne, and with Athenian assistance defied Philip; the city fell by treachery (Dem. 19. 266 f.) and was destroyed (348). Excavations have revealed the layout of the city.

OMPHALE, in mythology, a Lydian queen, daughter of Iardanus (Apollod. 2. 131, which see for the story, which is much older, perhaps going back to Creophylus and mentioned in Tragedy, e.g. Soph. *Trach.* 248 ff.). Heracles (q.v.), having killed Iphitus son of Eurystus of Oechalia, could find no one to purify him (cf. NELEUS) and applied to Apollo. The god would give him no answer till Heracles started to carry off his tripod, saying he would found an oracle of his own. Zeus stopped the

quarrel with a thunderbolt, and Apollo said he could be purified and rid of the madness which afflicted him if he was sold as a slave and the price given to Eurytus. Hermes arranged the sale and Omphale was the buyer. According to Apollodorus, she set him labours of the usual type, against brigands, etc., none of which has a Lydian setting or geography; Alexandrian poets (see, e.g., *Ov. Her.* 9. 53 ff.) make great play with the theme of her setting him to women's work. The length of the slavery varies (one year in Soph., three in Apollod.), and it is commonly said he had a son, Lamus, by Omphale (*Ov. loc. cit.*).

See further Tümpel and Sieveking in Roscher's *Lexikon*, s.v.; W. R. Halliday, *Plutarch's Greek Questions* (1928), 187. H. J. R.

OMPHALOS, the navel, a name given to objects, especially stones, of navel shape. Such stones were cult-objects in the most primitive religion of the Aegean region. They remained attached to several cults when a higher level of religion had been reached. The most famous omphalos was that in the adytum of Apollo's temple at Delphi (q.v., and see *APOLLO*, § 4). Late authors call it the tomb of Python or of Dionysus; this raises the question of the relation of the omphalos to omphaloid tombs and omphaloid altars. It may be a tombstone in the shape of a beehive tomb. Two omphaloi have been found at Delphi. One is the marble omphalos seen by Pausanias before the temple; its surface is covered with a sculptured network that represents the woollen fillets placed around the omphalos. The other, found down-slope from the temple, may be the true omphalos.

Any centrally located place was called the omphalos of its region, as Phlius of the Peloponnesus. So Delphi's omphalos was thought to mark the centre of the earth. The story was that Zeus, desiring to find the centre of the earth, started two eagles of equal speed at the same moment, one from the eastern edge of the world, one from the western; they met at Delphi. This story led to the placing of two golden eagles beside the omphalos, which were taken by Philomelus in the Sacred War.

Harrison, *Themos* (1927), 306 ff.; J. Bousquet, *BCH* 1951, 210 ff.; J. Fontenrose, *Python* (1959), 374 ff. and fig. 28. J. E. F.

ONASANDER (*Ὀνάσανδρος*, the preferable spelling), whom tradition makes a Platonic philosopher, wrote his *Στρατηγικός* under Claudius. It is a treatise on the duties of a commander, a dull exposition of commonplace military and ethical principles, for which the author disclaims any originality; it was enormously popular during the Renaissance.

A. Köchly, *Ὀνάσανδρου Στρατηγικός* (1860). Illinois Greek Club, *Onasander* (Loeb, 1923), with full bibliography. W. W. T.

ONESICRITUS of Astypalaea, seaman, Cynic, and Alexander-historian, was with Alexander in India; he steered Alexander's ship down the Jhelum, and was Nearchus' lieutenant on his voyage. He has left a reputation as a liar, but his book did not profess to be history; it was an historical romance resembling Xenophon's *Cyropaedia*, with Alexander as a Cynic hero and culture-bringer. It formed an element in the vulgate, and Strabo and Pliny used it for natural history; but it exercised little direct influence.

Jacoby, *FGH* 134. T. S. Brown, *Onesicritus* (1949). See *ALEXANDER* (3), bibliography, Ancient Sources. W. W. T.

ONOMARCHUS, Phocian commander in the Third Sacred War (q.v.). After the Phocian defeat at Neon (354 B.C.) he was elected *strategos autokrator* and em-

ployed the temple funds at Delphi to bribe Thessaly into neutrality and to hire mercenaries. Defeating the Locrians and Boeotians, he refunded Orchomenus in Boeotia, and forced Philip II of Macedon to evacuate Thessaly (late 353). All-powerful from Olympus to the Corinthian Gulf, Onomarchus hoped with Athenian and Spartan aid to crush Thebes; but he was drawn northwards by Philip's invasion of Thessaly. Marching towards his ally, Lycophron of Pherae, probably in co-operation with an Athenian squadron, Onomarchus was defeated and killed at the battle of the Crocus Field (352). An able and unscrupulous individualist, Onomarchus made Phocis a first-class power; gambling on the dwindling assets of Delphian moneys, he came near to success. N. G. L. H.

OPHELLAS, Macedonian officer under Alexander and one of the *hetairai*; sent by the satrap Ptolemy to subdue Cyrene (322 B.C.). He became governor there; but we know nothing certain of his attitude in the Cyrenean revolt of 313/12, nor whether he was concerned with the constitutional reforms of that period (see *CYRENE*). At any rate, he became almost independent. There is little information about his relations with Carthage. But he took part in Agathocles' (q.v.) campaign to Africa, when, overestimating his forces, he hoped to subdue Carthage, and to found an African realm. Married to Eurydice of the Philaid family, he was able to induce many Athenians to join him. Having assembled a large body of Greek soldiers and colonists, he lost many of his men during the march through the desert. Eventually the two Greek generals joined forces. But soon after (probably 309), Ophellas was murdered by Agathocles, who took over his troops. Almost all the colonists perished.

V. Ehrenberg, *Polis und Imperium* (1965), 539 ff.

V. E.

OPHION (*Ὀφίων*), Orphic god, husband of Eurydice and ruler of the universe before Kronos (q.v.), *Ap. Rhod.* 1. 503 ff.; Kern, *Orph. frag.* 98, no. 29.

OPHTHALMOLOGY was greatly advanced by the Greeks. Twenty operations were devised; until the beginning of the eighteenth century only four were added. The treatment of more than thirty diseases was not essentially changed until the beginning of the seventeenth century. This great achievement, mostly due to the Hellenistic physicians, was closely connected with the development of human anatomy and probably with that of mathematical optics. Other factors may have contributed to a special interest in the subject and thereby to the amazing success: the frequency of eye diseases in the Mediterranean world, the importance of sight for every human being, the valuation of sight peculiar to the Greeks.

As regards anatomy, the fabric of the eye was almost entirely unravelled. Seven membranes were distinguished, the optic nerve was accurately described. The theories of vision were less satisfactory, depending too much on the various philosophical conceptions; Galen assumed that a sight-spirit proceeds from the brain along the nerves, envelops the object seen, and then returns to the crystalline humour, thus completing the act of vision. The explanation of diseases, in spite of all anatomical knowledge, was based mainly on humoral conceptions. The therapy consisted in certain dietetic measures and also in the local application of collyria, the great variety of which is attested by the innumerable seals of Roman oculists. As for surgery, it suffices to refer to the astounding operations for cataract, as described by Celsus and as practised by Antyllus (2nd c. A.D.).

Easer, 'Das Antlitz der Blindheit in der Antike', *Janus*, Suppl. iv (1961). L. E.

OPIL(L)IUS, AURILIUS (early 1st c. B.C.), a freedman who wrote on philosophy, rhetoric, and grammar, and was cited as an authority by Varro and Verrius Flaccus. One of his works in nine books was entitled *Libri Musarum*. He interested himself in determining the canon of the genuine works of Plautus, an author whom he frequently cited in his explanations of the meanings of words.

C. Funaioli, *Gramm. Rom. Frag.* 86-95. Schanz-Hosius, §195.2. J. L. M.

OPIMIUS (*PW* 4), LUCIUS, as praetor in 125 B.C. crushed the revolt of Fregellae (q.v.), but was not allowed to triumph. As consul (121), with his colleague Fabius (q.v. 8) away in Gaul, he was in charge of Rome; interpreting the so-called '*SC ultimum*' (q.v., then first used) as giving him unlimited powers, he proceeded against C. Gracchus (q.v. 4) and Flaccus (q.v. 3), killing many citizens and in a special *quaestio* condemning (it is said) 3,000. He then dedicated the restored temple of Concordia. Prosecuted by Decius (q.v. 5) in 120, he was defended by Carbo (q.v. 1) and acquitted, thus establishing the '*SC ultimum*' in constitutional practice. Head of a commission that divided Numidia between Jugurtha (q.v.) and Adherbal, he was accused before the tribunal set up by Mamilius (q.v. 3) and went into exile. Cicero saw his tomb at Dyrrhachium. E. II.

OPPIAN of Cilicia (late 2nd c. A.D.), author of Greek hexameter poetry, the *Cynegetica*, for each verse of which Caracalla gave him a piece of gold, and possibly also the *Haliectica*, which may, however, be by another Oppian, of Syria, early third century A.D.; the poems do not contain much new scientific knowledge on their subjects, but have some grace and power of expression.

TEXT A. W. Mar (Loeb, 1928).

W. F. J. K.

OPPIDUM means not a community—*civitas*, *pagus*, *municipium*, or *colonia* (qq.v.)—but the town centre of such a community, or else any urban agglomeration in Italy or the provinces to which no territory was juridically attached. In Roman territory before 89 B.C. the chief *oppida* were those of the ex-Latin incorporated States. In them was centred the local administration of their former *territorium*. The towns of the indigenous Romans, known as *fora* and *conciabula*, had less authority, if any, over the locality. All these *oppida* were, however, assimilated to *municipia* between 89 and 44 B.C., becoming the centre of self-government for the adjacent territory. In the provinces regular communities of Roman citizens (Italian immigrants or enfranchised natives) were at first called *oppida civium Romanorum*, whether administered like villages by boards of *magistri*, or with a fuller constitution. Later these were assimilated to the

Italian *municipia* and adopted the usages of the Italian model.

See bibliography under *MUNICIPIUM* (Modern Views, (a) Republic). A. N. S.-W.

OPPIUS (1, *PW* 8), GAIUS, a tribune of 215 B.C. who carried a war-time sumptuary measure (*Lex Oppia*) forbidding women to own more than half an ounce of gold, wear multi-coloured dresses, or ride in two-horsed vehicles in Rome. It was repealed in 195 despite the fierce opposition of Cato, whose original speech is probably not reflected in that composed by Livy (34. 2-4).

II H. S.

OPPIUS (2, *PW* 9), GAIUS, Caesar's friend of equestrian rank and manager with Balbus (3) of his affairs. He corresponded with Cicero on Caesar's behalf and after Caesar's death helped Octavian. He wrote a number of biographies, certainly of Scipio (5) Africanus, probably of Caesar and Cassius (6); and he also wrote for Octavian (perhaps c. 32 B.C.) a pamphlet to prove that Caesarion (q.v.) was not Caesar's son. Some ancient critics wrongly attributed to him the *Bellum Alexandrinum*, *Africum*, and *Hispanense* (qq.v.).

Peter, *HR Rel.* n. lxiii 1, 46 ff., Schanz-Hosius i. 350 f.; Syme, *Rom. Rev.*, see index. A. M.; T. J. C.

OPRAMOAS of Rhodiapolis in Lycia is famous for the huge inscription (E. Kalinka and R. Herberdey, *Tituli Asiae Minoris* (Vienna, 1901-), n. 905) engraved on his temple tomb, which records the honours decreed to him by the Lycian Confederacy between A.D. 124 and 152, and the letters of the procurators and legates of Lycia-Pamphylia and of the Emperor Antoninus Pius relative to these decrees. He gave more than 600,000 *denarii* to the Confederacy and its constituent cities for games, buildings, distributions, etc., and perhaps hoped by bringing his munificence to the Emperor's notice to achieve senatorial rank. He lived to see his great-grandchildren senators.

A. H. M. J.

OPS, Roman goddess, of obscure functions. Her festivals (Opalia, 19 Dec.; Opiconsivia, 25 Aug.) by their dates and the title of the latter suggest association with Consus (q.v.; Consualia, 15 Dec. and 19 Aug.), but the December festival also has a connexion with Saturnus, (q.v.; Saturnalia, 17 Dec.), and, indeed, she is regularly associated with him by the ancients, he being identified with Kronos and she with Rhea. Her oldest place of worship was a small chapel in the Regia (Varro, *Ling.* 5. 21; Festus, 202, 20 Lindsay), for her other shrines, see Platner-Ashby, 372; Rohde, 750 ff. Her titles are Consiva and Opifera, Festus *ibid.* and *Fast. Arval.* on 23 Aug. (Volcanalia, where she is one of a group of deities receiving sacrifice).

II J. R.

OPTATIANUS PORFYRIUS, PUBLILIUS (4th c. A.D.), poet. From exile he sent (before A.D. 325) a verse panegyric to Constantine and after his recall he became *praefectus urbi*. His poems (ed. E. Kluge, 1926) are full of ingenuities, such as acrostics and deliberate limitations of the kind of words employed; some are arranged to have the shape of altars, water-organs, etc.

Schanz-Hosius, §§ 783-4.

J. F. M.

OPTIMATES, POPULARES. Following the model of the Greek upper classes, those at Rome regarded themselves as 'the best men' combining moral with social superiority. After the end of the 'Struggle of the Orders', in the third century B.C., there is evidence of a move towards a more democratic society. But at the same time the new *nobilitas* crystallized, and the oligarchy emerged

triumphant from the Hannibalic War. Until 133 B.C. there was no serious challenge to it. Ti. Gracchus (q.v. 3), starting in part from faction politics, became the first to attack its predominance. With the legislation of his brother Gaius, a new class (see *EQUITES*) emerged, intended to be a check on the oligarchy, whose moral superiority C. Gracchus denied (cf. *ORF*² 48, fr. 17). Henceforth a *Popularis* tradition of challenging the identification of birth with merit was established. It attained its climax in the career of Marius (q.v. 1), but disappeared as a serious factor in politics with his eclipse in the 90s.

The early *Populares* also established characteristic methods: politically, as defenders of 'liberty' against 'faction', they worked through the People rather than the Senate and extended freedom of voting (q.v.); economically, they sought to relieve poverty and to rally the poor to their support by agrarian, colonial, and grain laws. Against these challenges, which they described as based on sectional interests, harmful to the State, and likely to lead to tyranny (*regnum*), the *Optimates* (or *bom*) became a conservative political force, based on (but not co-extensive with) the traditional oligarchy. They used the word '*popularis*' in a derogatory sense — 'demagogue'; but the tradition of the Gracchi and Marius was cherished by the masses: Cicero, in public speeches, often called himself a *Popularis* (stressing his non-senatorial birth), and, to discredit opponents like Rullus and Clodius (qq.v.), claimed to be defending the true *Popularis* tradition against them.

This was not pure verbal trickery. In practice, after Sulla, 'popular' methods were generally divorced from serious principle. Drusus (q.v. 1) had shown that they could be used for *Optimate* purposes, and his son, guided by Crassus (q.v. 3), made this policy acceptable to much of the oligarchy. With some exceptions (e.g. Cornelius, q.v. 1), the *Populares* of Cicero's generation, many of them aristocrats, traded on the old traditions for their own advancement, trying no longer to improve the system and make it work, but to rise in it and to gain control of it. In the early stages of a noble's career, especially the tribunate (high in popular affection since the Gracchi), 'popular' methods became acceptable behaviour. Violence was used, no longer to counter that of the *Optimates* (as in the days of the Gracchi and, to some extent, still in those of Saturninus, q.v.), but from set policy, for intimidation. Against this, Cicero, in his political works, tried to redefine the *Optimate* ideal so as to work out a morally and politically acceptable idea of an élite; see, for a popularized version of it, his exposition in *Sest.* 96 f. (contrasted with '*Populares*' in the derogatory sense), which in effect is close to the aim of the earlier *Populares*, even though (after generations of experience of the Roman mob) he would have given the People less power than they.

Augustus agreed with him (and, even more, with Crassus and Drusus) in recognizing that the People did not want political power; and, like them, he used many of the traditional methods of the *Populares* to attach the People to a stable regime in which they had no part. But he also saw that, after the Civil Wars, the *Optimates* were prepared to give up the struggle for political power, if given social eminence and economic security. According each section what it chiefly wanted, and combining Cicero's two opposed programmes, he succeeded in keeping power to himself.

ORACLES (*oracula*, *μαντεῖα*, *χρηστήρια*). The primary meaning of *oracle* is the response of a god to a question asked him by a worshipper. It may also indicate an oracular shrine. There were many established oracular

shrines in the ancient world, several of which had widespread fame. In each the god was consulted by a fixed mode of divination. At the most primitive oracles the god's will was revealed by the casting of lots or by the observation of signs: the movements of objects thrown into a spring, the movements of the god's image when carried, the markings of the entrails of victims sacrificed upon the god's altar, the rustle of the leaves in the god's sacred oak. At healing-oracles, after the performance of preliminary rites, the consultant slept all night in the shrine (see *INCUBATION*) and received a dream-vision. At the most highly developed oracles the god spoke through the mouth of a man or woman. Such was the method at Delphi, where a woman, the Pythia, after a period of preparation, mounted a tripod, heard the consultants' questions, and gave them answers.

At the major oracles the consultants had to go through preliminary rites of sacrifice and purification, and were admitted to consultation only if all signs were favourable. At some shrines their questions were submitted in writing, and the answer was returned to them in writing. At others the consultant approached the god directly. Most authentic responses were either directions to perform some religious act, such as to make sacrifice to a certain god or to found a cult, or sanctions of constitutions, laws, policies, and enterprises. The famous predictions of the future, in clear or ambiguous language, are either not authentic or dubious.

Many of the gods spoke oracles at some of their sanctuaries, but Apollo was most esteemed as an oracular god. He had many oracles of the inspirational type: the world-famous Delphi, Didyma, and Claios, and several shrines in Lycia, Troas, and Boeotia. Zeus, also esteemed as an oracular god, spoke through signs at Dodona and Olympia. Asclepius at Epidaurus, Rome, and elsewhere, and Amphiaraus at Oropus sent healing visions. Trophonius at Lebadea had the most famous of hero-oracles.

Aside from the Egyptian-Libyan oracle of Ammon at the oasis of Siwa in the Sahara, which many Greeks consulted as an oracle of Zeus after 500 B.C., the great oracular shrines were Greek. Oracular temples were rare in Italy. Most popular was the lot-oracle of Fortuna Primigenia at Praeneste. On extraordinary occasions the Roman government or ruler consulted the Sibylline Books, which were kept by the *duoviri* (later *quindecimviri sacris faciundis*).

ORBILIUS PUPILLUS, LUCIUS, of Beneventum, teacher and grammarian (Suet. *Gram.* 9), migrated to Rome aged 50 (63 B.C.). His pupils included Horace (*Epist.* 2. 1. 69 ff.), who calls him *plagiosus* ('Whacker') from thrashings during lessons on Andronicus' translation of Homer's *Odyssey*. An embittered critic of contemporary characters and conditions, he merits attention as scholar and teacher (J. Collart, summarized in *Rev. Ét. Lat.* 1953, 71). G. C. W.

ORCADES, *Orkney* and *Shetland Islands*, were probably discovered by Pytheas (q.v.), and were visited by the fleet of Agricola (q.v. 1), who temporarily subdued them.

Pomponius Mela gave their number as 30-40; Ptolemy mentioned the islands, but placed them incorrectly. Orcas Headland of Britain was the northern end of Scotland—*Dunnet Head* or else *Duncansby Head*.

ORCHOMENUS (local form Erchomenos), name of cities in Phthiotic Achaea, Boeotia, and Arcadia. Saga seemed to connect Thessaly and at any rate Boeotian Orchomenus, since the legendary Minyae had Thessalian origins and Argonaut connexions (cf. the Thessalian origins of the Neleids of Pylus, who also claimed a special connexion with Poseidon like the Minyae). For the connexion of east Arcadia and Arcadian Orchomenus with Boeotia and Thessaly, see F. Kiechle in *Kadmos* 1 (1962), 105. The Arcadian Orchomenus appears as *πολύμηλος* in the Homeric Catalogue of the Ships (*Il.* 2. 65) and with other north-eastern Arcadian towns *Αἰπύσιον παρὰ τῷ μβον* manned sixty ships provided by Agamemnon. It was an important city of Arcadia in archaic times and appears on the Serpent Column from Delphi as a participant in the battle of Plataea. More important was Boeotian Orchomenus, of which the wealth is stressed in its personal names (Chryses, Chryse, Chrysogencia). It is called *Μυρτιάς* in the Catalogue (*Il.* 2. 511), and appears to have been the dominant city of Boeotia before the rise of Thebes. It stood on a promontory on the north of the Copaic plain. It was an important Neolithic and Bronze Age site (see F. Schachermeyr, *Die ältesten Kulturen Griechenlands* (1955) and had a Late Bronze Age palace and beehive tomb. The association in Greek tradition of the Minyans and wealth is taken to imply that the Copais was then drained, and indeed this is the implication of the story (Paus. 9. 38. 7) that Heracles temporarily destroyed its drainage system and vindicated the independence of Thebes. On the other hand, the association of Orchomenus with Poseidon and its membership of the Amphiclony of Kalauria with the worship of Poseidon Kalauraitis might suggest an interest in sea traffic, though Poseidon was not necessarily a sea god. It was among the first Boeotian cities to coin (c. 550 B.C.), and appears then not to have belonged to the Boeotian Confederacy. It declined continually, as a result of the hostility of Thebes and the flooding of Lake Copais, and was destroyed by the Boeotian Confederacy in 364. None the less the impressive fortifications of mid fourth century or later date, 'among the finest specimens of ancient Greek fortification in existence' (J. G. Frazer, on Paus. 9. 38. 1) underlines its strategic position. The Nymphs were especially worshipped there (Pind. *Ol.* 14).

P. K., *GL* 1 n. 472 f. 11 Schlicmann, *Orchomeno* (1881), II Buile and E. Kunze, *Orchomenos* 1 in (1907 14); A. de Ridder, 'Fouilles d'Orchomène', *BCH* 1895, 137 ff. (archaic period); cf. Frazer on Paus. 9. 38). T. J. D.

ORCHOMENUS. (1) Eponym of the Boeotian Orchomenus, a vague genealogical figure. He is son of Zeus and the Danaid Isonoe (schol. Ap. Rhod. 1. 230; obviously late, cf. DANAUS) and father of Minyas (q.v.); son of Minyas (Paus. 9. 36. 6 and elsewhere); his brother, and so son of Eteocles (not the Theban) (schol. Pind. *Isthm.* 1. 79). (2) Eponym of the Arcadian Orchomenus (Paus. 8. 36. 1). H. J. R.

ORESTES, in mythology, son of Agamemnon and Clytemnestra (qq.v.). In all accounts he avenged the death of his father, but the story is variously told in authors of different ages.

(1) Homer says that when Orestes reached manhood

he killed Aegisthus (q.v.), and implies that he also killed Clytemnestra; it was a most laudable and exemplary deed, for which he won great reputation. No details are given, save that till the vengeance was accomplished Orestes was in exile (he came from Athens, *Od.* 3. 307), as indeed he must have been to escape. It is a straightforward telling of a quite possibly real event, and no regrets are expressed by anyone at his having to kill his mother; she was 'hateful' (*Od.* 3. 310), and in any case Orestes, as head of the family, would be her only possible judge and executioner. See *Od.* 1. 29 ff.; 298 ff.; 3. 310; 4. 546-7; 11. 458 ff.

(2) Stesichorus (we may neglect the shadowy and perhaps fabulous Xanthus of Sicily, Aelian, *VH* 4. 26) told a slightly different and much more elaborate story in his *Oresteia* (see Vürtheim, *Stesichoros' Fragmenta und Biographie*, 45 ff.). The scene was transferred to Sparta, an interesting reflection of the political situation; Sparta is Menelaus' kingdom, not Agamemnon's, in Homer. Here Simonides (schol. Eur. *Or.* 46) and Pindar (*Pyth.* 11. 16) followed him. Orestes was apparently a baby when his father was killed, for his nurse rescued him (fr. 8 Vürtheim), whereas in Homer only eight years intervene between the murder and the revenge. Whether Stesichorus said that he was sent to Strophius of Phocis and that the latter's son Pylades became his close friend and helper (Pindar, *ibid.* 15. 35) does not appear from the scanty remains; but Clytemnestra was put on her guard by a boding dream (fr. 9) and, most important of all, Orestes was haunted after her death by the Erinyes and given a bow by Apollo with which to keep them away (fr. 7). See further ELECTRA.

(3) The tragedians elaborate three points especially: the manner of the return, the characters of Orestes and his sister, and the consequences of the deed. In Aeschylus (*Choeophoroe*) he returns by strict command of Apollo, gets access to the palace as a stranger, bringing news of his own death, can scarcely bring himself to kill Clytemnestra, and is at once haunted by the Erinyes, of whom he is rid in the sequel (*Eumenides*). Sophocles (*Electra*) brings him into contact with his mother by a like stratagem, but otherwise has a Homeric atmosphere, with no Erinyes and no remorse, only a little natural hesitancy, which Electra does not share. Euripides modernizes the whole setting (*Electra*, *Orestes*) and makes brother and sister hateful monomaniacs. He also, following local legends (cf. IPHIGENIA), makes the ridding of Orestes from the Erinyes (who are purely subjective phantoms of his disordered conscience) a long process, involving a journey to the land of the Tauri (*Iphigeneia in Tauris*).

(4) Later and less known versions of the story elaborate sundry minor points and tell parts of the adventures of Orestes and his companions differently. Some of the accounts we have may be due to lost tragedies, while others are local traditions; others are seen, by the date of the vases and other works of art by which we know them, to be old, although our literary authorities say nothing about them. See C. Robert, *Bild und Lied* (1881), 149 ff.; Höfer in Roscher's *Lexikon*, s.v. For example, Pausanias was shown (1. 28. 5) an altar which Orestes set up in commemoration of his being freed from the Erinyes by verdict of the Areopagus (as in Aeschylus), a stone at Troezen (2. 31. 4) on which he had been purified, and another at Gythium where he was cured of madness (3. 22. 1); also a place near Megalopolis in Messene where he had bitten off a finger in his madness and so been cured (8. 34. 1-3). In Hyginus, *Fab.* 122. 3, Orestes kills Aletes son of Aegisthus, but Artemis rescues Aegisthus' daughter Erigone from him. See also ANDROMACHIE, HERMIONE, NEOPTOLEMUS (1).

Of his death there is no consistent account. His childhood has no real legend, but he is introduced as a

subsidiary figure into one or two stories, see, for instance, TELEPHUS (1).

The death of Aegisthus occurs on a metope from Foce del Sele before the middle of the sixth century, and is very popular on late archaic and early classical vases (see E. Vermeule, *AJArch.* 1966, 1 ff.). On late fifth- or fourth-century vases appears Orestes' meeting with Electra at the tomb, his purification at Delphi, and the Tauric adventure, which reappears in Roman paintings and sarcophagi (Brommer, *Vasenlisten*², 321 ff.).

M. Delcourt, *Oreste et Alcéméon* (1959), and see references in the text. H. J. R., C. M. R.

ORESTHEUS, in mythology, a king of Actolia, grandfather of Oeneus and son of Deucalion (qq.v.). He had a bitch which brought forth a stick; this he buried and from it sprang a vine. From its branches, ὄζοι, the Ozolian Locrians were named, and Orestheus called his son Phytios, 'Plant-man'. Athenaeus, 35 a-b and Pausanias, 10. 38. 1 (= Hecataeus of Miletus). For the connexion of the family with wine cf. OENEUS. H. J. R.

ORGEONES (ὀργῶνες), celebrants of religious rites (ὄργια). Groups of worshippers already so called existed at Athens in the time of Solon, who guaranteed their rights of association. Another law, variously attributed by modern scholars to Solon, Cleisthenes, and Pericles, obliged *phrateres* (see PHRATRIAI) to admit to their number both *orgeones* and *homogalaktes*, i.e. *gennetai* (see GENOS). It follows that at this time *orgeones* were Athenian citizens who did not belong to the aristocracy: but it cannot be assumed that they included all such. Solon's law refers also to groups of *θιαῶται*, and the epigraphic evidence for religious associations, mainly of Hellenistic date, reveals the co-existence of *orgeones*, *thiasotai* (see THIASOS), and groups who used neither term. Each group of *orgeones* resembled a *genos* in being an organized corporation with a local shrine or shrines, property, funds, a constitution and officers, and in meeting periodically to worship and feast, to pass decrees, and to enrol new members: but, although membership was to some extent hereditary, the original principle of association was not kinship, and the specific object of worship not a supposed ancestor, but one or more minor local gods or heroes, or foreign deities such as Bendis (q.v.) and the Anatolian mother-goddess (see CYBELLE), to whose cults alien *orgeones* were admitted. The last *orgeones* known to us worshipped the Semitic goddess Belela, in the early third century A.D. The appellation is little met with outside Attica.

ORIBASIOS (c. A.D. 320–c. 400), Greek medical writer. Born in Pergamum, he studied medicine at Alexandria under Zeno of Cyprus, and practised in Asia Minor. He became the personal physician of Julian (q.v.), who took him to Gaul (355). Closely involved in the proclamation of Julian as Emperor (361), Oribasius accompanied him until his death in Mesopotamia (363). Banished for a time to Gothic territory, Oribasius was soon recalled by the Emperor Valens and continued to practise his profession until an advanced age. His principal works are a collection of excerpts from Galen—now lost—and the *Collectiones medicae* ('*Ἱατρικὰ συναγῶγαι*'), a vast compilation of excerpts from earlier medical writers, from Alcmaeon of Croton (c. 500 B.C.) to Oribasius' contemporaries Philagrius and Adamantius. Both of these works were written at the behest of Julian. Of the 70 (or 72) books of the *Collectiones* only 25 survive entire; but the rest can be in

part reconstructed from the *Synopsis ad Eustathium*, and the treatise *Ad Eunapium*, epitomes of the *Collectiones* in 9 books and 4 books respectively made by Oribasius himself, and from various excerpts and summaries, some of which are still unpublished. Oribasius was a convinced pagan, and his medical encyclopedia is a product of the vain effort of Julian and his circle to recall the classical past. For the medical historian its importance lies in the large number of excerpts from lost writers—particularly those of the Roman Period—which it preserves, usually with a precise reference to the source; Oribasius adds nothing of his own. His work was constantly quoted and excerpted by early Byzantine medical writers, the *Synopsis* and the *Ad Eunapium* were twice translated into Latin in Ostrogothic Italy, and Syriac and Arabic translations of portions of Oribasius' work form one of the principal channels by which knowledge of Greek medicine reached the Islamic world.

CMG vi; I. Bloch in M. Neuburger and J. Pagel, *Handbuch der Geschichte der Medizin* i (1902), 513 ff.; H. O. Schlieder, *PW Suppl.* 7. 797 ff. R. B.

ORIENTATION is the placing of any person or thing so as to front a definite point, generally a quarter of the compass, as north or south. This was not infrequently done in building ancient temples. In Greece they commonly faced more or less due east (e.g. the Parthenon), although examples of other positions are not wanting (e.g. Apollo at Bassae has the long axis N.–S.). This may be a consequence of the east being the lucky quarter, that from which light comes. If so, the same motives were at work in determining the position of a Greek augur, who regularly faced north and counted lucky those omens which appeared on the right (e.g. *Iliad* 12. 237 ff., where 'right' and 'east' are explicitly identified). Contrast, however, Hippocrates, *Περὶ διαίτης ὁρίων*, 8 (Kühnwein), which says the left is the lucky side in some cases; cf. Psellus (ed. Hercher), *Philol.* 1853, 167, 23 ff. To curse one turned west (Lysias 6. 51), and occasionally the dead were buried facing west (Plut. *Solon* 10; cf. Rose, *CR* 1920, 141 ff., for suggestions). In Italy the common augural position and the correct direction for an Etruscan temple were facing south; for the former, however, there was also an eastward position (Livy 1. 18. 6; cf. Rose, *JRS* 1923, 82 ff.). In general a *templum* had two axes, N.–S. and E.–W. Racial differences may have something to do with this. Sporadic examples of Italian graves apparently oriented have been found (F. von Duhn, *Italische Gräberkunde* 1 (1924), index under 'Orientierung'). H. J. R.

ORIENTIUS, a Gaul of the fifth century A.D. who composed an elegiac exhortation to a Christian life.

ORIGEN (1) (ORIGENES ADAMANTIUS) (probably A.D. 185 or 186 to 254 or 255; Euseb. *Hist. Eccl.* 7. 1, Hieron. *De Vir. Ill.* 54) was born at Alexandria of Christian parents. His life is known to us chiefly from Eusebius, who devoted the greater part of the sixth book of his *Ecclesiastical History* to him, collected many of his letters (now lost), and joined with Origen's pupil Pamphilus in writing an *Apology for Origen*, of which one book is extant in a translation by Rufinus (Migne, *PG* xvii. 521–616). Origen received his education from his father Leonides (who perished in 202 in the persecution under Septimius Severus) and later in the Catechetical School of Alexandria under Pantaeus and Clement (q.v.). He became a teacher and was so successful that, though still a layman, he was recognized, at first informally then in 203 officially, as head of the School. In order better to understand pagan thought he attended the Neoplatonic lectures of Ammonius Saccas. He also visited Rome.

Literally applying the precept in Matthew xix. 12, he underwent castration (Euseb. *Hist. Eccl.* 6. 8). His career as a teacher was interrupted in 215 by the massacre of Alexandrians known as the Fury of Caracalla. Origen withdrew to Palestine, but after a time was recalled by his bishop Demetrius. He now engaged in extensive literary work and acquired such personal influence in the Eastern Church as to become its unofficial arbiter. On a journey to Greece in this capacity he allowed himself, without the consent of his bishop, to be ordained priest by the bishops of Caesarea and Jerusalem (c. 230). This irregularity caused umbrage to Demetrius, who may also have taken exception to certain elements in Origen's teaching. Origen was banished from Alexandria and deposed from the presbyterate, on what precise grounds is not known; but the decision was disregarded in Palestine, and Origen in 231 settled at Caesarea where he continued his labours. In the Decian persecution (250-1) he was repeatedly tortured. His health gave way and he died at Tyre at the age of 69.

WORKS

Origen's writings were voluminous and their range wide, but only a small proportion has survived. He was a pioneer in textual criticism of the Bible, in exegesis, and in systematic theology.

(1) *Critical*. His chief work in this sphere was the *Hexapla*, begun before 231 and not completed till 244-5. In it were set out in six columns (a) the Hebrew text of the O.T., (b) the same transliterated in Greek characters, (c) and (d) the two Greek versions thereof by Aquila and Symmachus, (e) the LXX, (f) the revision of this by Theodotus. Only a few fragments of the work are extant. Origen's critical work led him into controversy with Julius Africanus; his *Letter to Africanus* survives.

(2) *Exegetical*. He wrote commentaries on the greater part of Scripture. Some of these took the form of scholia on obscure passages; others of homilies on numerous books of the O.T. and N.T., many of which homilies are preserved in the original or in Latin translations by Jerome or Rufinus; others again, *τράποι* or volumes, are elaborate commentaries on divers books of the O.T., and on the Gospels of St. Matthew and St. John (fragments or considerable parts of some of these are extant). Origen's method of exegesis was allegorical, seeking out a moral as well as a mystical sense in the literal words.

(3) *Doctrinal*. The *De principis* (*Περὶ ἀρχῶν*) is a remarkable exposition of Christian dogma written before Origen left Alexandria. Setting out from certain points of doctrine given by the tradition of the Church, he proceeds by speculation to show how these can 'be arranged as a whole by the help either of statements of Scripture or of the methods of exact reasoning' (*DCB* iv. 119). Considerable fragments of the original Greek survive; and the work is preserved in full in a 'translation', frequently adjusted in the interests of orthodoxy, by Rufinus.

(4) *Apologetic*. A certain Celsus, a Platonist and 'an enlightened advocate of the reformed paganism' (Bigg), had, probably in 176, in his *Λόγος ἀληθῆς* written an elaborate indictment of Christianity. Origen's reply, *Contra Celsum*, written c. 249, which survives, deals with this point by point.

(5) *Devotional*. Two of Origen's works in this category have come down to us, *De Oratone* (*Περὶ εὐχῆς*) and *Exhortatio ad martyrium* (*Προτροπὴ πρὸς μαρτύριον*). The former, written probably c. 231, treats of prayer in its various aspects. The latter was written c. 235 to his friends Ambrosius and Proctetus, who suffered in the persecution under Maximin.

The *Philocalia* is a collection of excerpts from Origen's writings by Gregory of Nazianzus and Basil. It preserves the original text of many passages known otherwise only in Latin translations and is interesting as showing what

in the fourth century were regarded as characteristic points in Origen's teaching.

Origen exerted great influence and left important schools of followers; but the venturesome nature of his speculations aroused controversy, and he himself came repeatedly under ecclesiastical condemnation.

TEXTS *Opera omnia*, C. de la Rue (Paris, 1733-50); C. H. E. Lommatsch (1831-48); Migne, *PG* xi-xvii; Origen's *Werke*, in *Die griechischen christlichen Schriftsteller* (1890 ff.); Origen's *Philocalia*, ed. J. A. Robinson (1893). GENERAL LITERATURE Euseb. *Hist. Eccl.* bk. 6, Jerome, *De Vir. Ill.* 54, B. F. Westcott in *DCB*, s.v. C. Bigg, *The Christian Platonists of Alexandria* (1886, revised 1913); O. Bardenheuer, *Geschichte der altkirchlichen Lit.* ii⁴ (1914), 96 ff.; B. J. Kidd, *History of the Church to A.D. 401* (1922) i, ch. 15; L. de Faye, *Origène, sa vie, son œuvre, sa pensée*, 3 vols. (1923-8), D. Duménil, *Origène* (Paris, 1948, Engl. Tr. 1955), H. Chadwick, *Early Christian Thought and the Classical Tradition* (1966).

ORIGEN (2), Platonist philosopher, third century A.D. Like his Christian namesake and contemporary, he is said to have studied under Ammonius (q.v. 2) Saccas; but Cadiou's reduction of the two to a single person is hard to reconcile with the available evidence. He wrote only two works, both now lost, *Περὶ τῶν δαιμόνων* and *Ὅτι μὴ οὐρανὸς ὁ θεοποιεῖς* (Porph. *Plot.* 3. 30); the latter title refers to his refusal to distinguish the Creator from the Supreme God as Numenius and Plotinus did (Procl. *Theol. Plat.* 2. 4).

Zeller, *Phil. d. Gr.* iii. 2⁴, 513 ff.; R. Cadiou, *La Jeunesse d'Origène* (1946), ch. 4, K.-O. Weber, *Origènes der Neuplatoniker* (1962; includes collection of fragments). E. R. D.

ORION (Ὠ(α)ρίων), in mythology, a gigantic hunter, identical, at least in name, with the constellation as early as Homer (*Il.* 18. 486, cf. *Od.* 11. 572-5), an unprecedentedly early star-myth. He was Eos' love and killed by Artemis (*Od.* 5. 121-4), bigger and handsomer even than the Alodae (q.v.; *Od.* 11. 309-10). A part of his story in later authors is evidently astral; he pursued the Pleiads, or Pleione their mother (schol. Pind. *Nem.* 2. 16), a clear reference to the relative position of the constellations.

There is some reason for saying that he is Bocotian. A rather late legend (Aristomachus in Hyginus, *Poet. Astr.* 2. 34; see Frazer on Ovid, *Fasti* 5. 404) says that Ilyrieus, eponym of Ilyria, asked for offspring from three gods (their names vary) whom he had hospitably received. They made water (οὐρησαν) on a bull's hide and bade him bury it; in time a child was born, which he called Urion, the name afterwards becoming Orion. For more Bocotian legends about him see Rose, *Handb. Gk. Myth.* 116; Küentzle in Roscher's *Lexikon* iii. 1028 ff. He is also connected with Chios. He loved Merope, daughter of Oenopion ('Wine-face'), king of that island, but Oenopion disapproved, made him drunk, and blinded him. He therefore waded through the sea (in one version he is Poseidon's son, and has the power to walk through water) till he came to the furthest east, and there got his sight back from the sun's rays. He was finally killed by Artemis for insulting her, or by a scorpion sent by Earth, because he boasted that he would kill all animals. The story varies greatly in detail; see Küentzle's art., cited above.

ORMENUS, (1) father of Ctesius king of the island Syrie and grandfather of Eumaeus (*Od.* 15. 414). (2) Name of two Trojan warriors, *Il.* 8. 274 and 12. 187. (3) Eponym of the city Ormenion on the Gulf of Pagasae (Demetrius of Scepsis in Strabo 9. 438, cf. *Il.* 9. 448).

H. J. R.

ORNAMENTA of a specific magisterial rank (*consularia*, *praetoria*, *quaestoria*) were granted sparingly in the late Roman Republic and increasingly in the Empire. To members of the Senate (especially princes of the imperial house) they gave, for voting in the Senate, the status of (but not, as far as their careers were concerned, promotion to) a higher rank (thus differing from *adlectio* (q.v.)). For those outside the Senate—under Tiberius, equestrians; under Claudius, freedmen (Narcissus (q.v. 2) received *quaestoria*, Pallas (q.v. 3) *praetoria*, *ornamenta*)—they gave, in costume, attendance, and precedence at public festivities and in burial ceremonies, the rights of ex-consuls, ex-praetors, etc. (In the *municipia* (q.v.) similar honorary magisterial distinctions were conferred.) Under the Empire when the triumph (q.v.) was the prerogative of the Emperor, successful generals, to whom *triumphalia ornamenta* were awarded, could on public occasions carry the insignia (e.g. the laurel crown) which belonged under the Republic to those who had celebrated triumphs. J. P. B.

ORODES II (c. 56–c. 38 B.C.), son of Phraates III of Parthia and brother of Mithridates III (Dio Cass. 30. 56), with whom he disputed the throne in a struggle lasting many years, and finally gained sole control. In 53, when Parthia was threatened by a Roman invasion, Orodes marched against Rome's ally Armenia, while his general Suren opposed Crassus in Mesopotamia. After the Roman defeat at Carrhae, Orodes' son Pacorus invaded Syria unsuccessfully. During the civil wars the Parthians sided against Caesar and the Caesarians and in 40 B.C. Parthian armies overran Syria, Palestine, and much of southern Asia Minor. Antony's general, Ventidius, however, had defeated and ejected them by 38, killing Pacorus. The inconsolable Orodes was murdered by his son Phraates IV (q.v.) shortly after appointing him his successor.

For Orodes I and III, see **ARSACIDS**.

ORONTES (modern *Nahr el 'Āsi*), chief river of Syria. It rises near Heliopolis (*Baalbek*), flows north-east past Emesa (*Homs*) and Arcthusa, bends west past Epiphania (*Hama*) and then, below Apamea, flows due north, and finally south-west through Antioch, to enter the Mediterranean below Seleucia Pieria, after a journey of 170 miles. Strabo's statement (16. 2. 5 ff.) that it flows partly underground and his aetiological story of Orontes, who is said to have bridged it and given it its name, are without foundation. (It appears as A-ra-an-tu on an inscription of Assurnasirpal.) Its valley was renowned for its fertility (Strabo, loc. cit.) and has always been the main route followed by traffic and armies from the north making for Egypt. E. W. G.

OROPUS, a coastal district on the north-east frontier between Boeotia and Attica with its centre at Skala Oropou, dominated geographically to Boeotia, of which it was originally part. By the beginning of the fifth century it had been annexed to Attica, but not incorporated; it was lost in 412, and changed hands repeatedly later, being most often Boeotian. It was the landward end of the nearest Athenian route for supplies from Euboea (Thuc. 7. 28), a position that favoured the Oropians and probably gained for their reputation as grasping custom-house officers ([Dicaearchus] fr. 59. 7, in *FIIG* II. 256). In the territory was the Sanctuary of Amphiaraus (q.v.), whose cult and legend were probably brought from Thebes at the end of the fifth century. Oracles were given by the interpretation of dreams and cures effected.

The chief remains are of a temple, stoa (perhaps for incubation), and theatre of the third century.

OROSIUS, PAULUS, a Spaniard, presbyter at an early age, fled before the Vandals to Africa in A.D. 414 and became a pupil of Augustine (q.v.). His *Communitorium de errore Priscillianistarum et Origenistarum* led Augustine to address to him a work on the subject. During a visit to the East, at Jerusalem in 415, he prosecuted Pelagius (q.v.) for heresy. On his return Augustine moved him to write a Christian chronicle, the *Historiae adversum Paganos*, in seven books, from the creation of the world to the founding and history of Rome until A.D. 417. The chronology followed Eusebius and Hieronymus (Jerome); the Roman account drew on pagan sources, including an epitome of Livy, Tacitus' *Historiae*, Justin, and Eutropius; the work gave the perspective of Augustine's *City of God*.

ORPHEUS, the founder of Orphism, generally said to be a Thracian. His fame in Greek myth as a singer is due to the poems in which the Orphic doctrines and myths were set forth. A metope found under the treasure-house of the Sicyonians at Delphi represents him (the inscription reads 'Ὀρφέας') on board the Argo with a lyre in his arms. The first mention in literature is found in Ibycus or perhaps in Alcaeus. Aeschylus and Euripides say that he attracted trees and wild beasts and even stones and was able to charm whom he wished. In vase and wall paintings, even in the Catacombs, he is often represented singing. The Christians referred the representation to the Prince of Peace of whom Isaiah speaks. The best-known myth tells how his wife Eurydice was killed by the bite of a snake, and Orpheus went down to the Underworld and persuaded its lord to allow him to bring her back on the condition that he should not turn round and look at her before he reached the upper world. There may have existed an early version, in which the ending was happy; but the common tradition that he was not able to fulfil the condition existed probably in the fifth century B.C. The myth is probably connected with some Orphic poem called the 'Descent into the Underworld'. Another myth, also represented in vase paintings, tells that Orpheus was killed and dismembered by Thracian women or Maenads. His severed head floated singing to Lesbos. This myth was the subject of Aeschylus' tragedy *Bassarai*. Some scholars think that Orpheus in fact may have been a real personage, the founder of Orphic religion, others take him to be purely mythical. The question must be left undecided.

From the early classical period Orpheus playing to the Thracian men or killed by the Thracian women became popular subjects in Attic vase-painting. Polygnotus showed him in the Underworld, and the subject appears in later art, as does the oracular head. Orpheus charming the beasts is a popular subject in Roman art.

ORPHIC LITERATURE. Many poems were in circulation at an early date under the name of Orpheus (q.v.). Euripides and Hipponas hint at their existence, Plato is the first to quote verses from them, and Aristotle speaks of the 'so-called Orphic epics'. The fame of Orpheus as a singer is, apart from his mythical reputation,

due to these poems. It is said that Onomacritus, who lived at the court of Pisistratus, wrote Orphic poems. A few fragments are preserved. For their content and meaning see ORPHISM. A list of Orphic poems and authors, due to an Alexandrian scholar, Epigenes, is preserved in Clement of Alexandria and the *Suda*. The majority of these poems are *pseudepigrapha*. The dates and personalities of the alleged authors are unknown to us and were unknown to Epigenes himself. The most important poem was the *Rhapsodic Theogony*, from which Neoplatonic writers quote many passages. Its age is controversial; most probably it is a compilation, not very much earlier than the authors who quote it, but it may have incorporated earlier elements. Under the name of Orpheus are preserved some late poems: the *Argonautica*, which is dependent on Apollonius Rhodius, the *Lithica* (on precious stones), which has hardly anything to do with Orphism, and a number of Hymns to various gods, probably composed in Asia Minor in the Roman age. The poems are edited together with the fragments by E. Abel, *Orphica* (1885). As regards the fragments this defective edition is superseded by the fundamental work of O. Kern, *Fragmenta Orphicorum* (1922); idem, 'Die Herkunft des orphischen Hymnenbuchs' in *Genethliakon C. Robert* (1910), 89 ff.

M. P. N.

ORPHISM, a religious movement originating in the archaic age, the first Greek religion which had a founder (see ORPHEUS) and laid down its doctrines in texts (see ORPHIC LITERATURE). The early poems being lost, our knowledge of the Orphic system depends on late sources. It comprised a cosmogony and an anthropogony. At the head of the cosmogony was Chronos, the Time which never grows old; of him were born Aither (q.v.), Chaos, and Erebus. Chronos formed an egg in the Aither and from this Phanes (q.v.) sprang forth, the creator and first king of the gods. His daughter Night assisted him and bore to him Uranus and Gaia. Then follows the common myth of Kronos and Zeus. Zeus was praised as the beginning, the middle, and the end of all; the contradiction thus implied to the creation by Phanes was solved by the statement that Zeus swallowed Phanes and all was created anew. By Demeter Zeus had the daughter Kore-Persephone who bore Dionysus, who was also (but not by the specifically Orphic writers) named Zagreus. Zeus wanted to hand over his royal power to the child, but the wicked Titans lured it to them with toys, tore it to pieces, and devoured its limbs. Yet Athena saved its heart and brought it to Zeus, and of him a new Dionysus, the son of Semele, was born. The Titans were struck by the lightning of Zeus and burned to ashes; from the soot man was formed.

The important question is how much of this belongs to the old Orphism of the sixth and even the seventh centuries B.C. in which it spread abroad, especially in Attica and south Italy. Plato quotes an Orphic verse referring to the six generations of Orphic cosmogony, and Aristophanes in his *Birds* (685 ff.) expounds a cosmogony which shows some likeness with that quoted above. It begins with Chaos, Night, Darkness, and Tartarus, adding that neither earth, nor air, nor heaven existed. Black-winged Night bore a wind-egg in the bosom of Darkness and from this emerged Eros (who takes the place of Phanes), gold-winged and like the swift whirlwinds. The high-sounding epithets betray the imitation of hieratic poetry. But significantly the role of Zeus as the second creator is lacking. A little later Isocrates testifies to the fact that Orpheus more than others told crude and immoral stories of the gods. So far Orphism was dependent on old cosmogonic myths, embodying crude folk-tale motives, and especially on Hesiod, but enlarged them and developed them in a speculative sense.

The anthropogony is in fact the only really original contribution of Orphism to the development of religious thought. The killing of Dionysus-Zagreus is mentioned by Pausanias in a reference to an Orphic poem attributed to Onomacritus; he says that Onomacritus took over the name of the Titans from Homer and instituted orgia for Dionysus and invented the story that the Titans caused the sufferings of Dionysus. The authenticity of this information can hardly be doubted, for Plato speaks of the 'Titanic nature' of man as a proverbial saying in the sense of his innate evil nature, which can only be understood as referring to the crime of the Titans as told by the Orphics. Because man had been formed of the ashes of the Titans who had devoured the Divine Child, he contains within himself something of the divine and something of the evil Titanic nature. Pindar tells that those who can give Persephone atonement for her ancient grief (i.e. the devouring of her child) are reborn to higher life. Further, Plato says that the followers of Orpheus called the body a prison of the soul, and that others with comparable ideas called it (*σῶμα*) a tomb (*σῆμα*). First it is to be noted that evidently the body is the evil and the soul the divine part of man. Abstinence from killing animals and eating their flesh was the best known feature of Orphic life, noted, e.g., by Euripides and Plato. The reason for this prohibition may be found in the uncleanness of the body or in the crime of the Titans or most probably in the belief in metempsychosis (see TRANSMIGRATION). This belief is not expressly ascribed to the Orphics, but it may be inferred from the fragment of Pindar quoted above, and it is to be remembered that Orphism is no isolated religious phenomenon but is in various ways related to the mystic movements and beliefs of the archaic age which it took up and systematized. Plato tells of sorcerers who produced books by Musaeus and Orpheus and through sacrifices according to these and pastimes called initiations promised deliverance and purification from guilt and from pains in the after-life: the righteous were to be rewarded by a symposium in the Nether World. The Orphics had appropriated the belief in punishments in the Underworld. Though it was not peculiar to them it had a special note: whosoever had not undergone the purifications in this life was to lie in the mire in the Nether World; the initiated and righteous were to live in happiness. This belief appealed to the broad public and was important for Orphic practice. In the archaic age there was a tendency, opposed to general Greek ideas, to scorn this life and to attribute a higher value to the other life in which the soul is freed from the fetters of the body. This is consistent with Orphism. Gold leaves from the Hellenistic age, found in tombs in south Italy and Crete, contain verses to be spoken on arrival in the Underworld, in which the dead man presents himself as a child of Earth and Heaven and asks for a drink from the Lake of Memory; it is also said that he has escaped from the sorrowful wheel. These texts may not be specifically Orphic, but at least they belong to a kindred movement.

Although Dionysus is an important Orphic god, there is an apparent hostility between the adherents of Orpheus and those of Dionysus. This is understandable from the fact that the Orphics transformed the central sacred rite of the orgia, the omophagy, into the primeval crime of the Titans. On the other hand, Orpheus is connected with Apollo; he is even sometimes said to be his son. The reason is that both laid stress on purifications and righteousness. The Orphic view of man involved a mental attitude of self-denial and seriousness in religious matters; it required ethics of a high standard. But its high ideas were mixed up with crude myths and base priests and charlatans misused them in practice. In the classical age it was despised; only Pindar and Plato understood its great thoughts. It sank down to rise again with the

recrudescence of mystic ideas in a later age. See also AFTER-LIFE.

ORTYGA, old name of Delos ('Quail Island'); its nymph was identified with Asteria (q.v.). But as some half-dozen other places were called Ortygia, it is by no means certain that all references (e.g. *Od.* 5. 123) are to Delos. See SYRACUSE.

Höfer in Roscher's *Lexikon*, s.v.

OSCAN ('Oṡkoi, Opici, Obsci, Osci), prehistoric inhabitants of southern Italy. Their original habitat, Campania (q.v.) and much else, gradually shrank. They may be identical with the historical Aurunci (Aousones, with rhotacism and -co suffix) (qq.v.). When Sabelli (q.v.) replaced them in Campania and elsewhere, their name survived for the newcomers' language, which the ancients called 'Oscan'. Samnites, Frentani, Campani, Lucani, Bruttii, Mamertini, and Apuli all spoke Oscan, the three first-named writing it in a modified Etruscan alphabet, the others in Greek or Latin characters. The dialects of the central Italian Pacligni, Marrucini, Vestini, Marsi, Sabini, and Aequi (?) resembled Oscan. Many Oscan inscriptions survive, mostly dating from 300 to 90 B.C. Oscan with Volscian and Umbrian forms one group of Italic languages, Latin and Faliscan forming the other. It differs greatly from Latin in sound changes, word forms, and vocabulary, less in syntax (see DIALECTS, ITALIC). Official and educated classes in Italy long continued to use Oscan; but the Social War ensured its ultimate displacement by Latin. Strabo (5. 233) makes the astonishing statement that Atellan farces, the only Oscan literary form known to us, were performed in Oscan at Rome in his day. Certainly the language was still spoken at Pompeii in A.D. 79 and in country districts survived even longer.

OSIRIS represented the deceased Pharaoh. He died, was brought to a new life, and reigned in the Underworld. He was associated with fertility, and in Herodotus (2. 144) is identified with Dionysus. The Egyptians believed that men (and sacred animals as well) were identified with Osiris, hence Osirified, in the next life. In Hellenistic times, although the name and character of Sarapis indicate his relationship to Osiris, the latter appears sometimes in the cult of the Egyptian deities along with Sarapis, Isis, Anubis, and Harpocrates. In Egypt Osiris remained primarily the god of the Underworld. With the construction of the elaborate mysteries of Isis and their spread throughout the Roman Empire, Osiris travelled along with Isis as a central figure in the liturgical and ritual drama.

OSROËNE, kingdom in north-west Mesopotamia, bounded on three sides by the Khabûr and Euphrates, and on the north by Mt. Masius. In the second century B.C. it broke away from Seleucid control and formed a separate kingdom with Edessa (q.v.) as its capital. Its kings bore Semitic names, and the population was mainly Aramean, with an admixture of Greeks and Parthians.

As a Parthian vassal State and a buffer between two empires Osroëne played a prominent and ambiguous role in the struggle between Rome and Parthia. After the campaigns of L. Verus it became a Roman dependency, later a province. Long coveted and more than once overrun by the Sassanids, it was at last conquered by the Arabs (A.D. 638).

A king-list survives in a Syriac chronicle ascribed to Dionysius of Tell-Mahrê (probably c. A.D. 800). Of its kings, named Abgar, the following may be noted: Abgar I (94-68 B.C.); II (68-53), the betrayer of Crassus; V (4 B.C.-A.D. 7 and 13-57), famous for his spurious correspondence with Christ; VII (109-16), who entertained Trajan in Edessa; L. Aelius Septimius Abgar VIII (177-212; 212-14 jointly with his son), who became a Christian.

OSSA, a mountain of nearly 6,500 feet in Thessalian Magnesia. On the north it is separated from the massif of Olympus by the defile of Tempe (q.v.), but on the south it forms with Pelion an almost unbroken wall which shuts off the interior of Thessaly from the sea.

OSTIA, at the Tiber's mouth, some 16 miles from Rome, was, according to the main Roman tradition, the first Roman colony, founded by King Ancus Marcius (q.v. 1), in order to provide salt. The earliest traces of settlement, however, beneath late republican Ostia, are not earlier than 350 B.C., and most scholars have rejected the tradition. But an earlier settlement associated with salt workings would have been outside the Roman Ostia now largely excavated, and the area near the medieval saltbeds has not yet been fully explored.

The earliest Ostia known to us was a rectangular fort of some 5½ acres, protected by strong walls of Fidenae tufa. The plan of straight streets intersecting at right angles was largely preserved through later rebuilding and the Forum of imperial Ostia marked the centre of the fourth-century colony. This colony was probably the first of a series along the western coast of Italy designed to protect the coast against raiders, for Rome had yet no fleet.

The confrontation with Carthage in the third century forced Rome to develop her navy and Ostia became Rome's main naval base; in the Hannibalic War the squadron based on Ostia is frequently mentioned in Livy's narrative. But when Carthage had been crushed the need for maintaining a strong navy seemed to have lapsed and Ostia became more important to Rome as a harbour town providing the essential services for the ships that brought goods from overseas to Rome.

During the second century Rome's defeat of Carthage and eastern victories led to a sharp increase in her imports. The growing population depended increasingly on imported corn and growing wealth increased the appetite for luxuries as well as necessities; the river harbour at Ostia became much busier. Smaller merchantmen could make the journey up river to Rome, combining oars with sail, but the larger merchantmen and particularly the grain carriers had to unload their cargoes at Ostia, where they were stored until they could be sent up-stream in small boats that were rowed or towed. The increase in the shipping that used Ostia's harbour attracted more men to the town, and building extended outside the walls. Between the main street and the river, the area most important to trade, building was controlled and the plan remains orthodox and regular into the Empire; but the area south of the main street remained irregular. The first extension of Ostia was probably on the Rome-

side; later the town spread towards the coast and the river mouth.

Ostia's importance to Rome is well illustrated by the fighting between Marius and Sullans. When Marius (q.v. 1) returned from Africa (87) he captured Ostia before advancing on Rome; he knew that by controlling Ostia and the Tiber he could starve Rome. Later (c. 68) Ostia was raided and sacked by pirates. But these setbacks were not lasting. More serious were the unsettled years following Caesar's murder, especially when Sextus Pompeius controlled the western seas. Few towns in Italy can have felt more relief than Ostia when Augustus brought back peace, security, and trade. A reflection of the Augustan revival can be seen in new building. Agrippa (q.v. 3) may have been responsible for Ostia's first permanent theatre, to which was added a large area surrounded by colonnades where local and overseas traders advertised their business. At the north end of the Forum a Capitolium was built. Under Augustus' two successors new building included a temple of Rome and Augustus and an aqueduct which freed the growing population from dependence on wells.

The growth of Ostia was further stimulated when Claudius built a new harbour some 2 miles to the north (see PORRUS). Later Trajan added an inner land-locked basin as the Claudian harbour did not give adequate protection against sudden storms. The great improvement in harbour facilities, and the increased accumulation of wealth in Rome, especially in the emperor's hands, increased Rome's demand for imports and Ostia's population increased to meet the new demands. In the two generations that followed the building of Trajan's harbour Ostia's prosperity reached its peak, and great changes came in the town's architecture and in the composition of her governing class.

The most striking feature of Ostia's rebuilding under Trajan and Hadrian was the domination of tall brick apartment blocks, which replaced the atrium-type 'Pompeian' houses of the late Republic. These blocks, reflecting contemporary housing at Rome, were designed for an expanding population in an area limited by town walls and cemeteries, but they seem to have had little of the squalor that the writers of the period imply for Rome. Individual apartments vary in size but many of them have seven or more rooms. In the three-quarters of the town now excavated there is no recognizable slum area, though the living quarters over the shops, which line nearly every street, were probably overcrowded and badly lit. Independent houses which were not uncommon in the late Republic become much rarer in the second century A.D. and when built they were much more economic in space than the old atrium houses. On the other hand, the number of villas on the sea-shore to the south of the town steadily increased, among the new builders being the Younger Pliny.

Second-century Ostia was more attractive in its private and public buildings and in its amenities than we expect a harbour town to be. The main streets were lined with arcades; in the big blocks the elevations were unspoiled by fussy decoration and relied on the spacing and scale of their windows for their effect. Few houses had their own water supply, but public cisterns fed from the aqueduct were liberally distributed. The drainage system and sanitation were considerably better than England knew before the middle of the nineteenth century. The Forum became an impressive centre when Hadrian built a new Capitolium on a high platform at the north end, facing the Julio-Claudian temple of Rome and Augustus at the south end. Along the west side ran a large basilica. Public baths provided the main recreation, steadily increasing in number until there were at least seventeen sets, the three largest being handsomely equipped with

sculpture and mosaics. There was also a small theatre and an amphitheatre, which has not yet been excavated. Statues of emperors and local dignitaries were to be seen in public gardens as well as public buildings. Ostia's vital importance to Rome ensured the favour of emperors and the growth in trade encouraged public benefactions.

Great changes came over the governing class during the Empire. In the Republic and Early Empire the town seems to have been controlled by a comparatively small group of families whose members could expect to hold the duovirate several times. The wider distribution of wealth from increasing trade broke down social barriers and the second-century records include many new men. Some have come to Ostia from other towns, others are the sons of men who came to Ostia as slaves. It is probable that slaves did most of the hard manual work and they may have accounted for nearly half the population (c. 50,000); but good service could win freedom early and though freedmen were debarred from office they could earn enough money to ensure that their sons entered the Council. They themselves meanwhile could rise to office in the trade guilds, where there was no distinction between freedman and freeborn.

The religious pattern changed no less. From the Republic we have evidence for the cults of Vulcan, Castor and Pollux, Hercules, and other Roman gods. Foreign cults spread quickly and widely in the Empire. Cybele was probably the first to be adopted. Later came the Egyptian gods and, probably not until the Antonine period, Mithras, who eventually could claim no less than fifteen lodges. Of Christianity there is little firm evidence before the third century but we may be certain that in a town so closely linked with Rome there was a Christian community in the second century. There was also very little evidence indeed of Judaism until in 1962 a large synagogue was discovered near the ancient sea-shore. But though oriental cults were popular in second-century Ostia the old temples of Hercules and the other gods of the Roman tradition were kept in repair and attracted worshippers.

Ostia flourished through the Antonine period and Septimius Severus left his mark on the town. But the confusion of the third century, with its rapid succession of brief reigns and contracting trade, led to the decline of Ostia and the shifting of emphasis to Portus (q.v.). There was little new building and much less trade. But by the fourth century the town had acquired a new character. The big apartment blocks were being neglected, and when fires destroyed them they were not rebuilt. By contrast a large number of new independent houses were built in all parts of the town, which show that there were still rich men in Ostia. These houses, which vary considerably in plan, make lavish use of marble and lay great emphasis on the play of water within the house. Lead pipes with the owner's name reveal that among them were Roman senators. When St. Augustine stayed at Ostia with his mother Monica before returning to Africa he could stay with friends, probably known to him by their connexion with Africa. Ostia had become more a residential than a trading town and as at Rome in the Senate so among Ostia's rich men there were keen opponents of Christianity. When the last bid to restore paganism was made in 392 it is significant that the temple of Hercules at Ostia was restored. Some of the Mithraea that have been excavated were violently destroyed. The struggle between Christianity and Mithraism probably continued long after Constantine's conversion.

During the fourth century Ostia could remain a congenial setting for the rich, but the middle class which depended on trade had collapsed, and there was a wide gulf between rich and poor. In the fifth century life became increasingly insecure from invading armies and

sea raiders. A much-reduced population hung on until in the ninth century the Pope built and fortified a small new settlement, Gregoriopolis, on the Romeward side of the old town. Ostia was left to become a quarry for builders and treasure hunters until publicly organized excavation started in the nineteenth century.

Ostia's inscriptions are collected in *CIL* xiv and supplement; a second supplement arranges the inscriptions topographically. L. Paschetto, *Ostia Colonia Romana* (1912); J. OSTORIUS SCAPULA, PUBLIUS, of equestrian family, *consul suffectus* before A.D. 47, when he succeeded Plautius as governor of Britain. He consolidated a frontier for Britain along the Severn, Tees, and Trent rivers with the Fosse Way as a line of communication in the rear, while the hinterland was secured by a *colonia* at Camulodunum (*Colchester*). Attempts at the offensive against Welsh tribes were less successful: an advance to the Irish sea proved premature; and though Ostorius defeated Caratacus, somewhere in the Marishes, he was unable to subdue the Silures and Ordovices of Wales, and died worn out in A.D. 52.

OSTRACA. Potsherds were not habitually used for writing in Greece, except as voting tablets at Athens. In Egypt such use began after the Greek conquest; the first dated example is of 274 B.C. Nearly all early Ptolemaic ostraca are tax-receipts; later, orders and lists are common, and letters, school exercises, magical spells, and religious texts, pagan or Christian, were inscribed on them. The Thebaid is the most prolific source of ostraca of all periods, especially Thebes itself, with Hermonthis and Crocodilopolis; a fair number have come from Elephantine and Coptos; a single group is recorded from Pelcis in Nubia, another from Tentyra. Oxyrhynchus has produced some hundreds, nearly all Byzantine. In the Fayûm they are rare before Roman times; one lot from Philadelphia is the only considerable find of Ptolemaic date; under the Empire they occur on most town-sites till c. A.D. 400. No ostraca have been reported from the Delta. Outside Egypt Latin ostraca have been found near Carthage. Except in the Fayûm, few have been obtained by scientific excavation: they are usually found in ancient rubbish-mounds or in house-ruins.

OSTRACISM (ὄστρακισμός) in Athens in the fifth century B.C. was a method of banishing for ten years a prominent citizen who had become unpopular. Each year in the sixth prytany (see PRYTANEIS) the question whether an ostracism should be held that year was put to the vote in the *ekklesia* (q.v.). If the people voted in favour of holding an ostracism, it took place on a day shortly

afterwards, probably in the eighth prytany. It was held in the *agora* under the supervision of the *archontes* (q.v.) and the *boule* (q.v.). Each citizen who wished to vote wrote on a potsherd (ὄστρακον) the name of the citizen whom he wished to be banished. The voters were marshalled by *phylai* (q.v.) in enclosures erected for the occasion, to ensure that no one put in more than one *ostrakon*. When all had voted, the *ostraka* were counted, and, provided that there was a total of at least 6,000, the man whose name appeared on the largest number was ostracized. (An alternative view, attributed to Philochorus, *FGrH* 328 F 30, is that the ostracism was valid only if at least 6,000 *ostraka* were cast against one man.) The man ostracized had to leave the country within ten days and remain in exile for ten years, but he did not forfeit his citizenship or property, and at the end of the ten years he could return to live in Athens without any disgrace or disability.

The date of the institution of ostracism has been a matter of dispute. According to the standard account (Arist. *Ath. Pol.* 22) the law about it was introduced by Cleisthenes (q.v. 1) in 508/7, but the first ostracism was not held until 487. Some modern scholars accept this account, and offer various conjectural explanations of the twenty years' interval. Others maintain that the law cannot have been passed until shortly before the first ostracism in 487, and that Cleisthenes therefore was not its author; a statement attributed to Androtion (*FGrH* 324 F 6) has been adduced in support of this view, but there is no general agreement about its interpretation or value. A third view, that the ostracism in 487 was not the earliest, and that Cleisthenes himself was the first victim of his own law (Ael. *VH* 13. 24), is generally rejected.

The man ostracized in 487 was Hipparchus son of Charmus, a relative of the ex-tyrant Hippasus (q.v. 1). He was followed in 486 by Megacles, one of the Alcmaeonidae (q.v.), and in 485 by some other adherent of Hippasus' family. No doubt these three had all become unpopular because it was thought that they favoured the Persian invaders and the restoration of the tyranny. Xanthippus (q.v. 1) was ostracized in 484, and Aristides (q.v. 1) in 482; but both of these returned from exile in 480, when an amnesty was declared in an attempt to muster the full strength of Athens to resist the invasion of Xerxes. Other prominent men known to have been ostracized are Themistocles (q.v.) about 470, Cimon (q.v.) in 461, and Thucydides (q.v. 1) son of Melesias in 443. Hyperbolus (q.v.) was the last victim of the system; his ostracism is usually dated in 417, though some scholars have placed it in 416 or 415. Ostracism then fell out of use, although the law authorizing it remained in force in the fourth century. The *graphe paranomon* (q.v.) was found to be a more convenient method of attacking politicians.

It is often hard to tell why a particular man was ostracized. Sometimes (as in the cases of Cimon and Thucydides) the Athenians seem to have ostracized a man to express their rejection of a policy for which he stood and their support for an opposing leader; thus an ostracism might serve a purpose similar to that of a modern general election. But no doubt individual citizens were often actuated by personal malice or other non-political motives, as is illustrated by the story of the yokel who wished to vote against Aristides because he was tired of hearing him called 'the Just' (Plut. *Arist.* 7. 7).

Many hundreds of *ostraka* have been found in modern excavations. Most of them date from the period before 480. The names include not only all the men whom we know to have been actually ostracized, but also a considerable number of others. Some are men quite unknown to us, and it may well be that they were not prominent politicians but merely had an odd vote cast against them by some malicious personal acquaintance. Particularly

interesting is a find of 190 *ostraka* all inscribed with the name of Themistocles by only a few different hands (*Hesp.* 1938, 228 ff.). Presumably they were prepared for distribution by his opponents. This suggests that he was the victim of an organized campaign, and it illustrates the importance of ostracism as a political weapon in fifth-century Athens.

Ostracism existed also at Argos, Megara, and Miletus. At Syracuse there was a similar system called 'petalism', because the names were written on olive leaves (*nérala*).

OTACILIUS (PW 12) CRASSUS, TITUS, praetor in 217 B.C., was balked of the consulship for 214 by Fabius Maximus; he received a second praetorship. He served in Sicily 216-211, raiding the African coast (215 and possibly in 211) and commanding a fleet at the siege of Syracuse. His exploits in 212 (*Livy* 25. 31) and his candidature for the consulship before his death in 211 are doubtful. On the relations of the Otacili with the Fabii see J. Pinsent, *Phoenix* 1964, 18 ff. H. H. S.

OTHO, MARCUS SALVIUS (PW 21) (A.D. 32-69), whose father received patrician rank from Claudius, was husband of Poppaea Sabina (q.v.) and friend of Nero. As Nero fell in love with his wife (afterwards divorced), he was sent to Lusitania as governor in 58 and remained there until Nero's death (68). He supported Galba (q.v. 1) and hoped to be his heir. Disappointed, he organized a conspiracy among the Praetorians and was hailed Emperor (15 Jan. 69). He tried to appear as the legitimate successor of Nero. Egypt, Africa, and the legions of the Danube and the Euphrates declared for him. But the legions of the Rhine had already chosen Vitellius (q.v. 1), and their military preparations were far advanced. By early March their advanced guard had crossed the Alps, and an Othonian expedition to southern Gaul achieved little. His generals Vestricus Spurinna and Annius Gallus (7) (qq.v.) held the line of the Po, but his armies from the Danube arrived only gradually. Though defeated in a minor engagement the Vitellians were soon heavily reinforced: yet Otho insisted on a decisive battle before he could oppose equal strength. His troops advanced from Bedriacum, c. 22 miles east of Cremona, and were irretrievably defeated. He committed suicide on 16 Apr. 69.

Otho's profligacy seems not to have impaired his energy or his interest in government. But he was a slave to the Praetorians who had elevated him.

Ciaceri* (1940); F. Klingner, 'Die Geschichte Kaiser Othos bei Tacitus', *Sächsische Sb. Phil.-hist. Kl.* 1940. See also on GALBA (1). A. M.; G. E. F. C.

OVATIO was a minor form of triumph (q.v.). It might be granted to a general who could not claim a full triumph, e.g. if his victory had not involved the destruction of a large number of the enemy or if he had handed over his army to a successor. He entered Rome on foot or horseback instead of in a chariot, dressed in a *toga praetexta* and without a sceptre, wearing a wreath of myrtle instead of laurel, and the procession was much less spectacular. For a list of Roman *ovationes* see *PW*, s.v. The last recorded one is in A.D. 47, that of Plautius (q.v. 4).

H. H. S.

OVID (PUBLIUS OVIDIUS NASO, 43 B.C.-A.D. 17), poet, was born at Sulmo (q.v.) on 20 Mar. The story of his life is told in one of his own poems (*Tr.* 4. 10). He came of an old equestrian family and was intended by his father

for an official career. His studies at Rome under Arellius Fuscus and Porcius (2) Latro (qq.v.; see also *DECLAMATIO*) are described by the Elder Seneca (*Contr.* 2. 2. 8, 9. 5. 17). He visited Athens (*Tr.* 1. 2. 77), probably in the course of a Grand Tour in the company of his friend the poet Macer (*Pont.* 2. 10. 21 ff.). After holding some minor judicial posts (Wilkinson, 15) he abandoned public life for poetry. As one of the group of poets round Messalla (q.v. 3), who had encouraged his first poetical essays (*Pont.* 1. 7. 27 f.), Ovid stood somewhat apart from the main Augustan literary movement which centred on Maecenas. He knew Horace, and Propertius was his friend (*Tr.* 4. 10. 46), but his warmest tribute to a contemporary poet is his elegy on the death of Tibullus (*Am.* 3. 9), like himself a protégé of Messalla. It is possible to overestimate the political significance of these literary groupings, but the point may have some bearing on the problems of his exile (Wilkinson, 294; Thibault, 89 ff.). Ovid was married three times and had one daughter, probably by his second wife. His third wife was connected with the influential Paullus Fabius Maximus, the addressee of a famous Ode of Horace (4. 1; cf. *Pont.* 3. 3). His poetry quickly brought him into prominence, and by A.D. 8 he was the leading poet of Rome. In that year he was suddenly banished by Augustus to Tomis (q.v.) on the Black Sea, for reasons said to be notorious (*Tr.* 4. 10. 99) but not explicitly described by him and never satisfactorily explained subsequently. Two counts against him are repeatedly referred to in the poems of exile: *carmen*, the *Ars Amatoria*; and *error*, an indiscretion whose nature he does not specify, though he insists that it was not a crime (*scelus*). So much is clear, that Augustus took Ovid's offence, whatever it was, as a deep personal affront (*Tr.* 2. 133 f.), but important objections can be made against all the theories hitherto proposed, and the problem, in default of further evidence, must be regarded as insoluble. Augustus' resentment seems to have been reflected in the choice of Tomis as the place of Ovid's exile. It was a superficially hellenized city on the extreme edge of the Roman Empire, subject to periodical attacks from the fierce tribes of the region; the *Tristia* and the *Epistulae ex Ponto* are full of complaints of the dangers of the situation, of the miseries of the climate (these are certainly not exaggerated), and, cruellest of all, of the spiritual and cultural isolation of the place. At Tomis, in spite of repeated appeals to Augustus and later to Tiberius, Ovid passed what remained of his life. The date of his death is uncertain: Jerome gives A.D. 17, a date which it is perhaps hazardous to dispute on the evidence of *Fast.* 1. 223 ff. (cf. Bömer ad loc.).

WORKS (all extant poems written in elegiac couplets except the *Metamorphoses*).

(1) **Amores**. Three books of love poems arranged on the Alexandrian-Augustan principles of artful disorder coupled with formal symmetry (book 1 contains fifteen poems; 2, 20; 3, 15). What we possess is a revised edition published shortly before the *Ars* (*Ars Am.* 3. 343); the original edition in five books may have appeared as early as 20 B.C. (Munari ed. xv). The obvious resemblances to Tibullus and Propertius (Corinna as 'heroine' ~ Delia, Cynthia) should not be pressed: the individual turn which Ovid gave to the genre must be criticized on its merits (cf. Lee). Indeed it may be argued that the 'movement' (cf. W. Marg-R. Harder, *Liesesgedichte*² (1962), 168) of the *Amores* from acceptance of love and elegiac poetry (1. 1) to rejection of both (3. 15) is in some sort a criticism, as being almost a *reductio ad absurdum*, of Propertius.

(2) **Heroides** (so called by Priscian, *Gramm. Lat.* ii. 544 Keil; but cf. *Ars Am.* 3. 345 *epistula*). The correct form may have been *Epistulae Heroidum*: G. Luck, *Die*

röm. Liebeslegie (1961), 223 f.). These poems fall into two groups. 1-14 (the Ovidian authorship of 15, the *Ep. Sapphus*, is doubtful), published between the two editions of the *Amores* (*Am.* 2. 18), are letters from legendary women to absent husbands or lovers. Ovid may have owed the idea to Propertius (4. 3); in his hands the form is rather that of the dramatic monologue than the epistle, and the influence of his rhetorical training in character-drawing (*ethopoeia*) can be clearly seen. He himself claimed originality for his treatment (*Ars Am.* 3. 346). 16-21, formerly suspected but now generally and rightly attributed to Ovid, are in pairs (the idea apparently suggested by his friend Sabinus, *Am.* 2. 18. 27 ff.), with the girl answering the man. Their date is disputed, but certain metrical features may suggest that they were composed contemporaneously with the *Fasti* (Latta, 2-7). Certainly they are in Ovid's most mature and assured manner, and in the variations given in each pair of letters to the basic theme of romantic love we may also see the influence of the *Metamorphoses*.

(3) *Medicamina Faciei Femineae*. A poem on cosmetics of which only 100 verses survive. It predated the third book of the *Ars* (*Ars Am.* 3. 205 f., also important for establishing the title of the poem).

(4) *Ars Amatoria* (for the title cf. Sen. *Contr.* 3. 7. 2, Eutyches, *G.L.* v. 473 K.). A didactic poem in three books on the arts of seduction and intrigue, published not before 1 B.C. (1. 171 ff.). Books 1-2, for men, were the original extent of the poem; book 3, for women, was added at their request. Ovid almost certainly took the hint for the poem from Tibullus (1. 4), but Roman love-elegy had already shown a didactic tendency (Wheeler, *CPHil.* 1910-11); and the popularity of didactic poetry on frivolous themes is attested by Ovid himself (*Tr.* 2. 471 ff.). The scale and treatment, however, are original: the parody of serious didactic literature, the brilliant vignettes of contemporary Roman society, the occasional note of satire, the mythological illustrations, and the vivacious wit that pervades the whole poem combine to render it unique in ancient literature. Only Pope, in *The Rape of the Lock*, has excelled Ovid in this kind of writing.

(5) *Remedia Amoris*. A mock-recantation, varying in clever and unexpected ways (Prinz, *Wien. Stud.* 1914, 1917) the lessons of the *Ars*. It contains a striking self-indictment (361 ff.) against certain critics of Ovid's outspokenness.

(6) *Metamorphoses*. An epic poem in fifteen books, Ovid's only surviving work in hexameters. Essentially it is a collection of stories from classical and Near-Eastern legend, given formal unity in three ways: (i) every story describes, or at least alludes to, a change of shape, (ii) the stories are linked together in complexes of varying size, and the complexes are themselves linked by elaborate devices of association and contrast; (iii) there is a chronological progression from the great initial metamorphosis of Chaos to Order (Cosmos) to the (from the Augustan standpoint) culminating metamorphosis, the apotheosis of Julius Caesar, the intention being to achieve a continuous poem (1. 4, *perpetuum carmen*). This was the work on which Ovid rested his hopes of immortality (15. 871 ff.), and it is evident that he composed it with unusual care. Both theme and structure were Alexandrian. The idea of transformation had previously been exploited by Nicander, by the obscure Boios or Boio (whose *Opviboryovia* was apparently adapted by Macer, *Tr.* 4. 10. 43), and by Parthenius (qq.v.); the obvious model for a long poem formed from originally unconnected stories was Callimachus' *Aetia*, and Callimachean also is the ingenuity with which Ovid links and frames his episodes (criticized by Quintilian, *Inst.* 4. 1. 77; cf. Wilkinson, *Ovidiana*, 231 ff.). For his material Ovid drew freely on the whole

range of Greek poetry, from Virgil (in the latter books), and from many sources now inaccessible. In spite of all these debts the *Metamorphoses* is a highly original poem. Ovid perceived what later epic poets, except Lucan, would or could not perceive, that there could be no question of rivalling Virgil on his own ground; and he had the genius to adapt his apparently unsuitable material to the needs of an Augustan poem. The *Metamorphoses* is a contradiction in terms, a modern epic. It must have been composed contemporaneously with the *Fasti* from c. A.D. 2 onwards; it had not received its final revision at the time of his exile (*Tr.* 1. 7. 11 ff.).

(7) *Fasti*. A poetical calendar of the Roman year with a book for each month. At the time of his exile it was incomplete, and only the first six books (Jan.-June) survive. These were partially (1. 3; 2. 15) revised at Tomis. Here too Ovid's models were Alexandrian. His astronomy is indebted to Aratus' *Phaenomena* (see ARATUS 1), and his aetiological treatment of Roman history and religion to Callimachus, though a lead had already been given by Propertius (4. 2, 4. 9, 10). The *Fasti* is perhaps Ovid's least successful work. As an attempt at a specifically Roman poem it lacks the spontaneity of his other work, and the elegiac couplet, though employed with astonishing virtuosity, is not a suitable medium for sustained narrative. It is an important source of information on Roman religion.

(8) *Tristia*. Five books of poems addressed to the emperor, Ovid's wife, and other (unnamed) persons at Rome. Book 1 was written on the journey to Tomis and offers more variety and incident than the others; it and book 2 must have been dispatched shortly after Ovid's arrival in A.D. 9. Book 2 is an elaborate defence of the *Ars Amatoria* addressed to Augustus, valuable as a source for ancient literary history but extremely puzzling if seriously intended as an apologia (cf. Marg, *Atti* n. 345 ff.). Books 3-5 (A.D. 10-12) describe the rigours of his exile and plead for leniency.

(9) *Epistulae ex Ponto*. Four books, distinguished from *Tr.* 3-5 only by the naming of all the addressees (*Pont.* 1. 1. 17 f.). Books 1-3 were put together from poems of various dates (*Pont.* 3. 9. 53) and published in A.D. 13; book 4 probably appeared posthumously (4. 9 written in 16).

(10) *Ibis*. A curse directed at an unnamed enemy, possibly the man referred to several times in the *Tristia* (e.g. 1. 6. 13 f.), published c. A.D. 11 (La Penna, vii-xix). The idea for the poem and the name *Ibis* were borrowed from Callimachus' attack on Apollonius; *Ibis* 53-6 seem to show that the Callimachean original was in elegiacs, but otherwise the relationship between the two poems is obscure. Rhetorical fertility and abstruse mythological learning combine to render the *Ibis* a technical *tour de force*, but it reads more like a literary exercise than genuine polemics.

(11) *Lost and spurious works*. Ovid's tragedy *Medea* (*Tr.* 2. 553) was praised by Quintilian (*Inst.* 10. 1. 98) and Tacitus (*Dial.* 12). Two verses survive. The *Gigantomachia* ostensibly attested by *Am.* 2. 1. 11 ff. is probably a literary fiction (Wilkinson, 48 n.). The fragments of the lost works are collected by S. G. Owen (O.C.T. of *Tristia*, etc.) and F. W. Lenz (Paravia ed.² (1956) of *Halieutica*, etc.). Neither the *Halieutica* (Housman, *CQ* 1907, 275 ff.) nor the *Nux* (Lee, *Ovidiana*, 457 ff.) is by Ovid.

MAN AND POET. Ovid was born too late to be emotionally committed to the Augustan regime, as Virgil and Horace were; his commitment was rather to poetry itself (*Tr.* 4. 10. 41-2; cf. also G. Murray, *Essays and Addresses* (1922), 116). No ancient poet, not even Virgil, can have read more poetry and given back in his own work more of what he read and so made his own: for the fact that

much of the experience which he transmutes into poetry is literary experience does not impair its validity (cf. Kenney, 47 n. 1). The raw material of his art is human emotion; the history of his most characteristic work from the *Amores* to the *Metamorphoses* is the history of an exploration, steadily increasing in range and penetration, of the heart and its passions. His early training in the schools of declamation was calculated to encourage his preoccupation with the communication of emotion (*pathos*: cf. S. F. Bonner, *Roman Declamation* (1949), 62 f.). It also stimulated his immense natural fertility of expression. Ovid's astonishing linguistic and metrical dexterity is the product of unobtrusive but far-reaching technical innovation. It is well known that he refined the already strict rules of the Latin elegiac couplet, but the metre has inherent limitations which even Ovid could not transcend. His complete domination of his medium can more profitably be studied in the *Metamorphoses*. His hexameter is not, as it tends to be represented, merely an emasculated version of Virgil's: it is a uniquely suitable instrument created by Ovid for the particular kind of epic he had chosen to write, allowing unobtrusive but effective variations in pace and colour as the tone of the narrative required. Its versatility becomes more apparent where circumstances allow a comparison between hexameter and elegiac versions of the same story (e.g. *Met.* 5. 341 ff. ~ *Fast.* 4. 417 ff.; Heinze, *passim*, Wilkinson, 279 f.). What raises the poem to a position alongside the *Aeneid* (Wilamowitz, *Hell. Dicht.* 1. 241) is the transfiguring effect of Ovid's marvellous creative imagination on his stories, whether familiar or recondite, grave or gay, and his ability to extract and illuminate whatever in them in any way contributes to our understanding of humanity. It is in this extraordinary power to isolate the significant moment in each scene or episode that the secret of his influence on later writers and artists must be sought. Ovid's defects are those of his qualities. He was not an Augustan as Horace and Virgil were Augustans: compared with the superbly controlled *Aeneid* the *Metamorphoses* is exuberantly unclassical. *Non ignoravit vitia sua sed amavit*, remarked Seneca (*Contr.* 2. 2. 12); and there are occasions (e.g. *Met.* 13. 789 ff.) when his disregard for the classical canons of restraint and proportion, always in the interest, it should be remarked, of a designed artistic effect, is almost insolent. Well it may be. *Exit in immensum fecunda licentia vatium* (*Am.* 3. 12. 41): this is the freedom of a genius that recognizes no laws but its own. Ovid's poetry invites the reader to an enjoyment of the sensual universe that is uncorrupted by the pessimistic reservations familiar in Greek poetry from the very earliest times. If gaiety on the whole predominates over sadness in his work, that is something that need not be excused: there is *gravitas* enough and to spare elsewhere in Roman literature. It is, however, a mistake to label Ovid an unreflecting hedonist. Other poets surpass him in profundity, but his catholic sensibility has no parallel in the literature of the ancient world.

OVINIUS, as tribune of the plebs, proposed a measure (the *Lex Ovina* or *plebisctum Ovium*) which formulated regulations for the future enrolment of senators. The precise content of the enactment is obscure. That it was responsible for transferring the right to hold a *lectio venatus* from consuls to censors is a pure supposition. All that can be said with assurance is that the censors were required by the law to give precedence in the *lectio* to all worthy ex-magistrates (or possibly ex-curule magistrates). The exercise of excessive personal or factional influence over the composition of the Senate was thus curbed, and for the future a guarantee of a seat in the Senate was afforded by the honourable tenure of high office. The date of the measure is also in doubt, but the opposition aroused by the *lectio* of Appius Claudius the censor in 312 B.C. has been thought to suggest that he was operating the procedure for the first time.

OXYRUS (*Ὠξυρ, modern *Amu Darya*). This river was known by name to Herodotus and Aristotle, but was apparently confused by them with the Araxes (q.v.). It was discovered by Alexander, and some Indian merchandise was known to come by it, and thence by the Caspian and the rivers Cyrus and Phasis to the Euxine. But later information about it was from hearsay only, and the belief persisted that it flowed into the Caspian—which may have been true of prehistoric times. Its efflux into the Aral Sea was never located by Greek geographers.

OXYRHYNCHUS (*Behnesa*) is now represented only by extensive mounds beyond the Bahr Yusuf to the west of the Nile, which have proved the richest source of papyri in Egypt yet discovered. The first scientific exploration of the site was by Grenfell and Hunt in 1897; since their last campaign there in 1906 other diggers, official and unofficial, have reaped good harvests. The proportion of Ptolemaic papyri is small: most are Roman and Byzantine. Apart from the information derived from these papyri, practically nothing is known of the history of the town.

Kees, *PW*, s.v. *Oxyrynchos*, cols. 2043 ff.; E. G. Turner, *JEGP Arch.* 1952, 78 ff.; id. *Akten des VIII. Intern. Kongr. für Papyrol.* (1955) 141 ff.; *Oxyrhynchus Papyri*, i-xxxi (1898, in progress). J. G. M.

OXYRHYNCHUS, The historian from. In 1906 some 900 lines of a lost Greek historian were discovered at Oxyrhynchus in Egypt. The writer dealt in considerable detail with events in the Greek world, 396–395 B.C., and was an authority of the first importance. The papyrus indicates a strict chronological arrangement by summers and winters, competent criticism and analysis of motives, a first-hand knowledge of the topography of Asia Minor, and certain details found in no other work on the period. It was probably a continuation of Thucydides beginning with the autumn of 411, was written between 387 and 346, and its elaborate scale suggests that it covered only a short period, perhaps to the battle of Cnidos, 394. Three further fragments (ninety lines) were published in 1949.

Its authorship has been much discussed. Grenfell and Hunt (*POxy.* v. 842) preferred an attribution to Theopompus (q.v. 3), later strongly supported by E. Meyer; the case for Ephorus was ably argued by E. M. Walker, in spite of his previous advocacy of the shadowy Cratippus

(q.v.), and more recently F. Jacoby has argued for Daimachus (q.v.). The close resemblance of the text with Diodorus book 14 coupled with significant divergences indicates that Diodorus' source, Ephorus, had P, as the editors termed the author of the papyrus, before him for his universal history. Moreover, there is reliable evidence of the use which Ephorus made of Daimachus. However, the question of authorship does not yet admit of a definite solution. Ephorus and Theopompus are now largely discounted, the former on grounds of date and arrangement, the latter for reasons of style. As between Cratippus and Daimachus the evidence points towards the latter even if we reject Jacoby's view that Cratippus was a late Hellenistic writer (disputed by A. W. Gomme, *CQ* 1954, 53).

P

PACUVIUS, MARCUS. Born in 220 B.C. in Brundisium, nephew and successor of Ennius, died aged about 90. The name is Oscan and appears in the original form in an epigram by Pompilus (Varro, *Sat. Men.* 356). Gellius (1. 24) quotes an epitaph, striking in its modesty, perhaps by Pacuvius himself. Pliny (*HN* 35. 19) reports a painting of the poet (who was a painter himself) in the temple of Hercules in the *Forum Boarium*. Only thirteen titles of plays are known and this may reflect a small output (he was the first Roman to confine himself to tragedy, as Plautus had done in comedy): only *Antiope* indicates an original by Euripides (contrast Ennius and Accius), several indicate Sophoclean originals, while others suggest post-Euripidean originals (cf. Accius). Cicero (*Tusc.* 2. 48 ff.) praises the passage of *Niptra*, where the wounded Odysseus groans in pain, as better than that of Sophocles because Pacuvius has composed more stoically and had more regard for *gravitas*. A certain independence and originality may well have characterized Pacuvius' use of his Greek material: e.g. in *Chryses* a character scorns divination in an un-Sophoclean way but reminiscent of a fragment of the *Chrysippus* of Euripides, which Pacuvius may have imported into the Sophoclean play. Pacuvius composed a *praetexta* with the title *Paulus* (certainly Aemilius Paullus, victor of Pydna in 168 B.C.), but of his *Saturae* nothing is known. His style was characterized by an exuberance of invention: bold coinages, neologisms, Grecisms, and especially compound adjectives (like the infamous 408 R: *Nerei repandirostrum incurvicervicum genus*). Varro and Cicero considered him the greatest Roman tragic poet, the Augustans ranked him with Accius, and later generations (Quint. 10. 1. 97) inferior to Accius.

PADUS (Ligurian *Bodincus*, Greek *Ἡπιδανός*, modern *Po*): Italy's longest river with numerous tributaries. It rises in the Cottian Alps, flows about 400 miles eastward through Cisalpine Gaul (q.v.), and enters the Adriatic near Ravenna. Its valley was inhabited in pre-

historic times by *terramaricoli* (see *TERHAMARA*), and from Etruscan days dikes have protected its reclaimed riparian lands. In antiquity navigation as far as Turin was possible but hazardous owing to the swift current. Since ancient times floods and the silt carried down have considerably altered its lower course and delta.

Polyb. 2. 16; Strabo 4. 2011.; 5. 212, 217; Pliny, *HN* 3. 117–22. C. Jacini, *Il faggio del Po* (1937) with full botanical geography. F. T. S.

PAEAN. The Paean seems originally to have been a hymn addressed to Apollo in his role as Healer (*Il.* 1. 473; schol. Ar. *Plut.* 636), but it was early used for other purposes, such as (1) military, as in *Il.* 22. 391, Aesch. *Sept.* 635, schol. Eur. *Phoen.* 1102; (2) sympotic, when all the guests sang it in unison after the libations and before the symposium, as in Alcman fr. 98. 2, Aesch. *Ag.* 247, Ath. 149 c, Pl. *Symp.* 176 a, Xen. *Symp.* 2. 1; (3) on public occasions such as the ratification of peace (Xen. *Hell.* 7. 4. 36; Arr. 7. 11); (4) in the Hellenistic age Paeanes were addressed to successful individuals, such as Lysander (Plut. *Lys.* 18) and Titus Flamininus (Plut. *Flam.* 16). Paeanes were by no means confined to Apollo, but were also sung to Zeus (Xen. *An.* 3. 2. 9), Poseidon (id. *Hell.* 4. 7. 4), Dionysus, Asclepius, and Hygieia. See also *HYMNS*. C. M. B.

P(A)ELIGNI, a central Italian tribe always closely associated with the Marrucini, Marsi, and Vestini (qq.v.). Their language greatly resembled Oscan (q.v.). Allies of Rome before 300 B.C., the Paeligni remained loyal until the Social War, when their principal town, Corfinium (q.v.), became the Italic capital. After 90 B.C. they were rapidly romanized. Ovid (q.v.), born at Sulmo (q.v.), is their most celebrated native son. E. T. S.

PAEONIUS, Greek sculptor, native of Mende in Thrace. He is known to us by an original work found in Olympia in 1875—a marble statue of a flying Victory, mounted on a triangular base. The inscription on the latter states that the statue was dedicated by the Messenians and Naupactians and that Paeonius made it. The occasion was evidently the victorious battle of Sphacteria

in 424 B.C., a date also suggested by the style of the statue with its transparent drapery and sweeping folds. Replicas of the head are in the Palazzo Venezia and the Vatican. The inscription on the base of the Victory also states that Paeonius made the acroterial figures of the temple of Zeus at Olympia. Pausanias' statement (5. 10. 6) that he was responsible also for the East pediment of that temple must be due to a confusion. It was thought by Pomtow (PW Suppl. iv, 1308 ff.) that the lost statue that surmounted a monument, likewise erected by the Messenians and Naupactians, at Delphi, was the bronze prototype of the marble Victory by Paeonius at Olympia. But this seems problematical, for (1) it is not certain that the monument in Delphi was surmounted by a Victory; (2) the inscription does not mention Paeonius as the sculptor; and (3) it was not customary in fifth-century Greece to make exact copies of other statues.

G. M. A. R.

PAESTUM (*Ποσειδωνία*), coastal town of Lucania (q.v.), famous for its roses, pottery, well-preserved walls and Doric temples. Founded c. 600 B.C. with Doric-speaking colonists by Sybaris (q.v.), it quickly burgeoned. Lucani, who captured it c. 390, held it until 273 when Rome made it a Latin colony. Paestum stoutly resisted Hannibal and continued its municipal life under the Empire until spreading marshes rendered its site uninhabitable. The so-called 'Basilica' (mid sixth century) and 'Temple of Neptune' (mid fifth century) were in fact dedicated to Hera, while the 'Temple of Ceres' (late sixth century), lying to the north, was dedicated to Athena. The museum houses interesting paintings from Sabellian tombs and remarkable sixth-century metopes from the Heraeum unearthed near by at the mouth of the Silarus (modern *Sele*).

A. D. Trendall, *Paestan Pottery* (1936); U. Zanotti-Ianico *Heraion alla foce del Sele* (1952); H. Riemann, *PW* (1955), s.v. 'Poseidonia' (with bibliography); F. Krauss, *Die Tempel von Paestum* (1950); P. C. Sestieri, *Paestum* (1950). E. T. S.

PAETUS, LUCIUS CAESENNIUS (PW 9), *cos.* A.D. 61, was ordered by Nero in 61 or 62 as legate of Cappadocia to advance to Armenia. His mission failed and he capitulated to the Parthians on disgraceful terms in his camp at Rhandaia. Dismissed, but unpunished, in 70 he was appointed governor of Syria by Vespasian (whose relative he probably was) and in 72/3 annexed the kingdom of Commagene.

A. M.

PAGANALIA, Roman festival of the *pagi*, or village communities. They were *sacra publica* (Festus, 284, 20 Lindsay), but not *pro populo*, because not on behalf of the people as a whole. They are also called *paganicae feriae*, Varro, *Ling.* 6. 16, who says they were 'agri culturae causa susceptae', and *Paganalia*, Macrobius, *Sat.* 1. 16. 6, who lists them among *feriae conceptivae*, or movable feasts.

H. J. R.

PAGANUS, an inhabitant of a *pagus* (q.v.). Hence, by imperial times (as Tacitus, *Hist.* 3. 24, where Primus derisively calls the Praetorians *pagani*, cf. Julius Caesar's *Quirites*, Suet. *Divus Iulius* 70; Pliny, *Tra.* 86 b), one who stays at home, a civilian. Hence, in Christian use, one who is not a *miles Christi*, a heathen (*fides pagana*, Tert. *De Corona* 11, and so often; used also of non-Jews, cf. Augustine, *Retract.* 2. 43, who says it is the usual term for polytheists). But other authors (as Orosius 1, prol. 9, Prudentius, c. *Symm.* 1. 449) imply that this use is derived from the sense of 'rustic', 'uncultured', rather than 'civilian', which is preferred by Latte, *RR* 371.

H. J. R.

PAGASAE, a Thessalian city situated on the western shore of the land-locked Bay of Volos. After the decline of Iolcus (q.v.) it became the principal harbour-town of this area. It may originally have belonged to the Magnes (q.v.), but when occupied by the Thessalians it served as the port of Pherae. Since it commanded the only convenient outlet from the Thessalian plain to the sea, it virtually monopolized the export of corn, meat, and slaves, thus contributing largely to the rise of the Pheraean tyranny. Philip captured Pagasae in 353 B.C. and subsequently terminated its dependence upon Pherae. The walls, probably built by Philip, are impressive, but the site was ill chosen, and Pagasae was later supplanted by Demetrias (q.v.).

F. Stählin and E. Meyer, *Pagasa und Demetrias* (1934), a detailed archaeological and historical account. H. D. W.

PAGUS, an area of land with its population as distinguished from the *oppidum* or *vicus* (qq.v.) which housed the inhabitants, was the smallest unit of the Italian territorial system. Every community, tribal or urbanized, consisted of a group of *pagi*, which thus persisted after the municipalization of Italy. Within the Roman State before 90 B.C. the *pagi* of those parts where the municipal system was undeveloped were the only intermediaries between the *populus Romanus* and the individual citizens. In the provinces agricultural immigrants from Italy settled in *pagi*, whereas groups of Romans in provincial towns were known as *conventus*. Such *pagi*, which were usually attached to the nearest Roman municipality, assisted the spread of Roman civilization in the neighbouring native *civitas*, whose *oppidum* the *pagus* might share, and with which it was eventually united as a *municipium* or *colonia* (qq.v.). The provincial communities also, especially the great cantons of Gaul, were sometimes subdivided into *pagi*. The administrative powers of a *pagus* varied with its comparative independence. In Italy they had boards of three or four aediles or *magistri*; Roman or peregrine *pagi* in the provinces might form a miniature *res publica*.

For bibliography see **MUNICIPIUM** (Modern views (a) Republic). A. N. S.-W.

PAIGNION, a title, of which *jeu d'esprit* is a rough equivalent, applied to various very different types of literature. It was used of the satirical poems of Crates the Cynic and of poems of Philetas and Theocritus, and generally of effusions of a light character (LSJ, s.v. *παῖγνιον*, III. 3). Gorgias (fr. 11. 21) similarly designates his *Helena*, the prototype of later essays in light-hearted whitewashing and denigration composed by Isocrates (*Helena*) and later by Asiatic rhetoricians; cf. Polyb. 12. 26 b *Ἐγκώμιον Θεραπίου, Ψόγος Πηνελόπης*. See also **MIMUS** and **TECHNOPAIGNIA**.

J. D. D.

PAINTING. The Mycenaean rulers were inspired by the frescoes of the Cretan palaces to have their palaces decorated with wall-paintings of religious scenes, battle-scenes, scenes of hunting and sport, and decorative motifs. That any of this colourful and conventional art survived even in Athens, which escaped destruction, is perhaps unlikely. Figure-painting starts again in the second half of the eighth century under the impact of imported oriental works (and perhaps of the epic). The scenes on geometric vases are in silhouette with filling ornament; the composition is paratactic and completely disregards spatial relations. From the late eighth century eyes, etc., are reserved, and later the silhouette changes gradually into outline; extreme parataxis is abandoned, but figures are still composed of typical views—head profile with frontal eye, frontal body, profile legs (cf. particularly Proto-Attic and Melian vases). Corinth was

early famous for painting; her claim is justified by the clay metopes from Thermon, the elaborate scenes on Corinthian vases (650–550 B.C.) and the Pitsa wooden pictures (late 6th c.). From c. 625 B.C. the black-figure style predominates in Athens for vases and plaques; the red-figure style begins c. 530 B.C. After 540 B.C. forms are more rounded and clothing more decorative and elaborate (see EXECIAS, ANDOCIDES 2). Ionian pictures of c. 525 B.C. are echoed by the Caeretan hydriae (Embassy to Achilles, Busiris, etc.). From c. 515 B.C. painters experiment with uneven stance, back views, frontal faces, etc., which later become common (see EUPHRONIUS, EUTHYMIDES; cf. Pliny on Eumarus of Athens, *figuras omnis imitari ausum*).

In the early fifth century three-quarter faces and varied expressions, ascribed to Cimon of Cleonae, appear on the vases of the Cleophrades painter and his contemporaries; the frontal eye gradually changes into the profile eye. Between 470 and 460 further advances were made by Micon (q.v.) and Polygnotus (q.v.); in their large pictures the surface of the wall was divided by undulating lines representing hillocks, which supported or partly hid the serious figures of men 'better than ourselves', arranged in groups united by a common emotion. The use of perspective was greatly developed by Agatharchus (q.v.), painting c. 430, and shading by Apollodorus, c. 430. Parrhasius (q.v.), painting from c. 450, achieved plastic effects by his outline; he also developed further the painting of facial expression. Aglaophon, c. 420, painted in the rich, sweet style, known from the vases of the Meidias painter (see MEIDIAS). Zeuxis (q.v.) united the romantic, emotional, and realistic tendencies of the late fifth century, the art which Plato rejected in the *Republic*.

The Sicyonian school in the early fourth century (see PAMPHILUS 1 and MELANTHIUS 2) in revolt against the colour effects of Zeuxis, etc., insisted on line, composition, and severity; their art influenced mirrors, ivories, and Attic and Tarentine vases. Aristides (q.v. 2) continued the emotional tradition of Parrhasius, etc.; he 'first painted soul, feelings, and passions'. Encaustic (q.v.), of which Pausias (q.v.) was the first great master, made greater realism possible and he used his technique in painting flowers and garlands; Nicus, who unlike Pausias chose large subjects, made his figures stand out from the canvas (copies of his Io and Andromeda have been recognized). Interiors are first quoted for the late fourth century—Alexander and Roxane by Acton (q.v.) and Boy blowing the fire by Antiphilus. A great artist in the late fourth century painted a Battle of Alexander with Darius, of which a mosaic copy survives, a brilliant composition of crowded figures in a shallow strip of space. The Pella mosaics with hunting and mythological scenes are late-fourth-century originals in the Sicyonian tradition.

For later artists literary sources are less informative, and the contributions of different schools are difficult to assess. Art-collecting is attested for Ptolemy III and the Pergamene kings, and copying begins at least in the mid second century. To the third century may be assigned the grave stele of Hediste from Pagasae and the original of the Women at breakfast by Dioscorides (mosaic; c. 100 B.C.); both have shallow interior scenes. Hediste is a realistic portrait; the Women at breakfast and its companion, the Komos, are pictures of scenes from New Comedy. The original of the Arcadia and Telephus from Herculaneum should from the subject be Pergamene, second century; the diagonal composition gives the picture considerable depth; the basket of fruit in the foreground is a still life, a descendant of Pausias' flowers, a relative of Sosus' Drinking doves, and an ancestor of small pictures in Pompeii.

A further step—to make landscape or architecture dominate human figures—was apparently taken in the

second century (perhaps in Alexandria), although it has only survived in Roman copies from the Esquiline and Boscoreale.

In mainland Greece the mosaic in Delos with Dionysus riding a panther reflects the same neo-classical style as the contemporary sculpture of Damophon (q.v.). Timomachus of Byzantium, the last great painter recorded, painted Medea and Iphigenia in the time of Julius Caesar; reflections in Pompeii show that his figures derived from the fourth century or earlier. The Aldobrandini marriage may also be an eclectic original of c. 50 B.C.

Roman Italy was flooded with Greek originals from the early third to the end of the second century B.C., and from the early first century B.C. with Greek artists. Nothing is known of the technique of copying and adapting. The small pictures (like the tragic actor) appear true and good; the large (like the scenes in the Villa of the Mysteries) are coarse and unattractive. The so-called First Style of wall-painting admitted pictures only in narrow friezes, usually at the top of the walls. The Second Style begins in Pompeii, Delos, and Athens early in the first century B.C.; the simple architecture leaves room for large pictures. The painted architecture of the Third Style (20 B.C.–A.D. 20) is elaborate and fantastic, and frames academic groups set against a landscape background. The pictures of the Fourth Style (extending into the Flavian period) are also set in fantastic architecture; and the painting is often impressionistic (cf. the putto in the Catacomb of Domitilla).

The earliest of the Mummy portraits found in Egypt belong to the first century A.D.; the series lasts into the fourth century, most of the portraits (which were cut out of their frames and inserted in the mummies) are in the encaustic technique (q.v.), and many are excellent pictures. After the austerity of the Trianic period and the softer, more impressionistic style of the late second and third century, they begin to show the hieratic rigidity of Early Christian art, which also appears in contemporary wall-paintings, mosaics, and the best drawings on gold glass.

T. B. L. W.

PALAEOMON, QUINTUS REMMIUS, a manumitted slave who under Tiberius and Claudius won a reputation for his evil life, arrogance, and unusual learning. Martial (2. 86. 11) pours scorn on his verses. He was the first Roman to write a really comprehensive grammatical treatise (see GRAMMAR) which influenced all subsequent writers (e.g. Charisius, Diomedes, Priscian). The extant *Ars Palaemonis* (ed. Keil, *Gramm. Lat.* v. 533; cf. also vi. 206) is apocryphal.

See SCHOLARSHIP, LATIN, IN ANTIQUITY; Schanz-Horsius, § 475; K. Barwick, *Remmius Palaemon und die römische ars grammatica* (1922) = *Philol. Suppl.* xv. 2. J. F. M.

PALAEOGRAPHY is the science that studies writing upon papyrus, wax, parchment, and paper; it teaches us to read old writings and to observe their changes particularly for criteria of date and place. It is also concerned with the layout of the written leaf and the form of the book. We here confine ourselves to Greek and Latin writing. In both languages the written letters change under the influence of three forces: the first, the desire to make letters with less labour, and the second, the need of being legible, oppose each other; the third, regard for beauty, whether in the individual letter, the line as a

whole, or the page, tends to careful work, but sometimes the scribe, forcing the letters into one mould to attain a pleasant regularity, makes them hard to distinguish.

1. Writings may be classed as *Book-hands* and *Cursives* or everyday hands: both have existed side by side as far as our documents go back; the book-hand is conservative, but the cursive may change very quickly; its forms tend to invade the book-hand. Hands are also divided into *Majuscules* and *Minuscules*: in *Majuscules*, comprising *Capitals*, *Uncials*, and early *Cursives*, the letters lie in the main between two parallel lines, though, e.g. Φ in Greek or F in Latin *Capitals* and several letters in Latin *Uncials* (e.g. h and q) project above and below them. *Uncials* is the name given to the earliest book-hand deviating from *Capitals*, marked by certain rounded forms. It means 'inch-high', being taken from Jerome's attack upon the elaborate letters in gold and silver on purple parchment fashionable in his day. Later Cursive in both Greek and Latin developed many tall and tailed letters and these passed into the book-hands derived from it. Such hands are called *Minuscules*, scripts in which the bodies of the letters lie between two inner lines but the 'ascenders and descenders' reach out towards two outer lines above and below; only one line is actually ruled, upon which the letters stand, or from which in Greek after A.D. 1000 they hang.

2. The *Materials* that receive writing deeply influence its development, as against papyrus and paper, parchment encourages a more careful and heavier style; wax produced in letters special deformations that have left their mark on all subsequent Latin writing, e.g. in d, g, f. Papyrus was the general material from classical times till the fourth century A.D., after which it was, save in Egypt, a mere survival. In the fourth century parchment, hitherto rare though of very ancient use, won a sudden victory. Paper, adopted from China by Islam, spread through Europe in the thirteenth to fifteenth centuries.

3. Papyrus (see *PAPYROLOGY*), which did not stand folding well, was mostly used in the form of a roll, the text being in narrow columns; the criss-cross structure of papyrus guided the scribe in keeping these vertical and his lines regular. The bound book arose in Egypt in the second century A.D., though at first made of papyrus, it suited parchment better; its form was perhaps suggested by that of the wax codex of joined tablets. Its rise was probably associated with the spread of Christianity (see *BOOKS*). Writing on parchment involves elaborate cutting and folding of the double leaves which make up the quires, and laborious pricking and ruling to guide the scribe. The methods of doing this may indicate date and place of writing.

4. The *Ink* used on papyrus is finely divided carbon and gum ('Indian ink'), chemically very stable but sensitive to damp. That used on parchment is a solution of oak-galls and iron, not always satisfactory chemically. Pens were of reed and in medieval times of quill. Writing on parchment was often erased and a new text written over it: this is called a *Palimpsest* (q.v.). The older writing may be read by photography under ultra-violet rays. The difficulty of reading manuscripts, apart from bad preservation, is due to the unfamiliar forms of the letters, the non-division of the words, and the use of abbreviations. The first trouble is much increased by the presence under cursive influence of *ligatures*, i.e. combinations in which two or more letters are knotted together and lose their original shapes, e.g. &, a combination of C and T.

5. *Abbreviations* are divided into *suspensions*, in which the first letter or the beginning of a word is given but not the ending (sign: a dot or a transverse stroke); *contractions*, giving the first letter, generally some of the middle of a word and always the last letter (sign: a *tittle* or horizontal stroke above); and *specific signs* denoting

particular words, syllables, or letters. These largely go back to ancient shorthand, e.g. in Latin to the *Notae Tironianae* (see *TACHYGRAPHY*). Numerals are marked by titles, so sometimes foreign words, or by flanking signs, also used for 'quotes'. A letter wrongly written may be dotted above or, more usually, below.

These difficulties tend to increase as time goes on, save that later manuscripts begin to divide the words. Division into paragraphs is at first rare and inconspicuously marked; later it is indicated by the methods still in use. Punctuation too is at first scarce and irregular, and never becomes very helpful.

6. A scribe sometimes is good enough, especially in later times, to add at the end of a manuscript a note, called a *colophon*, giving his name with place and date of writing: the Greek era runs from 5508 B.C. We also find *subscriptions* (q.v.), notes by scribes or correctors, and these are sometimes dated.

The study of the decoration of manuscripts and of miniatures may now help the editor of Renaissance texts, but he must solicit the help of the art historians (e.g. at the Warburg and Courtauld Institutes).

7. *Greek Writing* has a simple history: starting with epigraphic capitals it soon adopted rounded shapes for ϵ , ζ , ω and made small changes in some other letters. The *Uncial* thus established continued as the only book-hand until the ninth century, the cursive meanwhile developing independently. The uncial changes very little until parchment encouraged scribes to make the vertical strokes thick and gradually arrive at a heavy style (miscalled 'Slavonic') too elaborate for ordinary books. Accents and breathings, hitherto sporadic, and used mostly in difficult texts, now become general. About A.D. 800 scholars in Constantinople got right away from the heavy uncial (which lingered on for another three centuries in liturgical use), and deliberately designed a new book-hand, a *Minuscule*, founded on the cursive: this was the vehicle of Greek literature until the introduction of printing, but it degenerated steadily through the centuries, admitting capricious forms and abbreviations and complicated ligatures combining the letters with the accents; these survived into printing, but have now been eliminated.

8. The *Latin Book-hand* until the fifth century shows two varieties, the rare *Square Capital* and the more usual *Rustic* made quickly with a slanting pen. Only school-books and law-books were produced in an easier style with an admixture of cursive forms. This contributed to the Latin *Uncial*, which became the regular book-hand from the fourth to the eighth century, its characteristic letters are λ , σ , ϵ , η , ι , m , q , u ; it sometimes admits b and d . When more cursive letters, a , s , m , p , r , f , are used (but n remains), the script is called *Half-uncial*: books written in it are few, but it is the ancestor of the script called *Insular*, developed by the Irish in the fifth and sixth centuries and taught by them to the English and in many monasteries on the Continent. We gave up its use for Latin in the tenth century, but retained it for Anglo-Saxon. The Irish used it for Latin till the fifteenth century and still keep it for their own language.

9. Meanwhile from the sixth century the cursive began to be used for books, and by A.D. 800 had been made tolerable in every Latin-using country save 'Insular' Ireland and England; South and North Italy, Spain, Gaul, and Germany each had fair 'National' hands labelled *Lombardic*, *Visigothic*, and *Merovingian*, but they are all still disfigured by ligatures. In the late eighth century book-production was systematized at Tours under Charles the Great, in these books *Square* and *Rustic Capitals*, *Uncial* and *Half-uncial*, were used for headings, prefaces, initials, etc., and a *Minuscule* called *Caroline* or *Carolingian*, eliminating most of the ligatures, was

owners being Fulvius Flaccus, Lutatius Catulus, Cicero, Crassus, Milo, P. Sulla, M. Antony, Livius Drusus, and Hortensius. The house of Hortensius was acquired by Augustus (Suet. *Aug.* 72) and became the nucleus of a group of palace buildings in association with the new temple of Apollo (Vell. Pat. 2. 81). The house of Hortensius is generally identified with the so-called House of Livia and the Temple of Apollo with the large temple platform to the south of it (*Att. Accad. S. Luca* 1 (1951-2), 26 ff.). An Augustan triumphal arch was erected on the *clivus Victoriae* (*AJArch.* 1923, 400). Tiberius built a large palace, *domus Tiberiana* (Tac. *Hist.* 1. 27) on the Cermalus, or north-west summit, to which Gaius added a vestibule contiguous with the temple of Castor. Nero made important additions to the palace buildings both before and after the Great Fire of A.D. 64 (*Not. Scav.* 1949, 48 ff.). Domitian was responsible for the Flavian state-apartments and new residential palace buildings including a monumental garden (*hippodromus*). The architect Rabirius designed the Flavian buildings. Domitian also extended the *domus Tiberiana* towards the *nova via*, as did Hadrian still further. Severus built out towards the south-east, masking his work with the Septizodium (q.v.). The palaces continued to be used until the sixth century, when they were repaired by Theodoric and Athalaric.

G. Hulsén, *Forum und Palatin* (Berlin, 1926, U.S.A. 1928); G. Lough, *Roma antiqua* (1946), id. *Mont Palatinus* (1960), F. Gjerstad, *Early Rome III* (1960), 45 ff.; Nash, *Pict. Dict. Rome II*, 163 ff.; I. A. R.; D. E. S.

PALATINI. In the Late Empire this term referred to two distinct bodies, (i) the higher officials of the various ministries of the *comitatus*, or Emperor's personal staff, who received an increasing number of privileges from Constantine and his successors, (ii) the senior branch of the field army, which, like the *comitatenses*, or junior branch, included *rexillationes* of cavalry and *legiones* of infantry, but contained also infantry formations of a new type, *auxilia*. See COMITATENSES.

Jones, *Later Rom. Emp.*

G. R. W.

PALFURIUS SURA, an able orator (Suet. *Dom.* 13) and active *delator* under Domitian, is mentioned in Juvenal, 4. 53-5, as an upholder of the Emperor's unlimited claims over property. After Vespasian expelled him from the Senate he turned Stoic.

PALIBOTHTA (*Pataliputra*, now *Patna*), situated on the Royal Road from the river Beas down the Ganges valley, was the capital of the Mauryan kings of north India (c. 300 B.C.). The Seleucid kings kept Greek residents, Megasthenes (q.v.) and Demachus, at the court of Kings Chandragupta and Bindusara. In his account of India Megasthenes gave a good description of the city's fortifications, a stockade and a moat. It remained an important royal seat, though little noticed by later Greek or Roman visitors to India.

Strabo 2. 70, 15. 702; Pliny, *HN* 6. 63; Ptol. *Geog.* 1. 12. 9, etc. E. H. W.

PALICI (*Παλικαί*), twin gods of the pool now known as *Lago Naftea* or *Petia*, more learnedly as *L. dei Palci*, in Sicily, which still sends up a considerable amount of natural gas. Of the bulky ancient literature we have left some extracts in Macrobius, *Sat.* 5. 19. 15 ff., also Diod. Sic. 11. 88. 6 ff., Servius on *Aen.* 9. 581. For some modern writers see Bloch in Roscher's *Lexikon* iii. 1281. Their legend was that a local nymph, Thalia, being with child by Zeus, begged to be swallowed up in the earth to escape Hera; this was granted her, and when she bore twins they made their way up through the pools known as Delloi. The most noteworthy thing about their

worship was that a suspected person might go to the pools and swear he was innocent; if he lied, he lost his life by the power of the gods (the gases are in fact somewhat poisonous); if not, he returned safe and might claim damages from his accuser.

II J. R.

PALIMPSEST (*παλίψηστος*), a term applied to manuscripts in which the original text has been scraped or washed away, in order that another text may be inscribed in its place. As the term properly implies scraping, it must have originally been applied to such materials as leather, wax, or vellum, and only by analogy to papyrus, which could be washed, but not scraped. The term seems to occur first in Catullus (22. 5); cf. Plut. 2. 504 d, 779 c, where it is treated as synonymous with *εκαπλος*. When vellum was scarce (especially, it seems, about the ninth century) early manuscripts were not infrequently treated thus; and since the removal of the original writing was seldom complete, valuable texts of the Bible, Cicero, Plautus, Gaius, Lucianus, etc., have been recovered from such palimpsests.

V. Gardthausen, *Gr. Palaeographie* (1911) 1. 103 ff., E. M. Thompson, *Intro. to Gr. and Lat. Palaeography* (1912), 1. 6. G. K.

PALINURUS, the helmsman of Aeneas who was overcome by the god of Sleep, fell overboard, was washed up on the shore of Italy, and there murdered by Lucanians (Verg. *Aen.* 5. 814 ff.; 6. 337 ff.). Cape Palinurus (*Capo Palmuro* today) between Elea and Buxentum was named after him. Roman fleets were wrecked there in 253 and 36 B.C. A settlement of the sixth/fifth century has been excavated since 1957.

R. Naumann, *Palinuro* (1958), *Atti d. pr. congr. di stud. sulla Magna Grecia* (1962), 272 f., 276 ff. II. H. S.

PALLADAS, Greek epigrammatic poet, lived in Alexandria in the fourth century A.D. He was a poor schoolmaster with a shrewish wife (*Anth. Pal.* 9. 168 f.), and also, in an era of expanding Christianity, a pagan or an agnostic (cf. *Anth. Pal.* 11. 384). After its long desuetude he revived the art of the poetic epigram. About 150 of his poems—some coldly reflective, some savagely bitter (*Anth. Pal.* 11. 340, cf. 7. 681 f., 11. 292), some hopelessly pessimistic—are in the Greek Anthology. With his bleak frankness, he recalls certain poetic ideals of a vanished 'classical' Greece.

A. Franke, *De P. epigrammatographo* (Leipzig, 1899), L. A. Stella, *Cinque poeti dell'Antologia Palatina* (1949), G. Luck, 'P. Christian or pagan?', *Harv. Stud.* 1958, 455 ff., C. M. Howra, 'P. and Christianity', *Proc. Brit. Acad.* 1959, 'P. and the converted Olympians', *Byz. Zeitschr.* 1960, 1 ff.; 'P. and Tyche', *CQ* 1960, 118 ff.; Alan Cameron, *JRS* 1965, 17 ff.; *CQ* 1965, 215 f. G. II.

PALLADIUM, an ancient sacred image of Pallas (Athena), said to have been sent down from heaven by Zeus to Dardanus, the founder of Troy (Arctinus ap. Dion. Hal. 1. 69), or to his descendant Ilus (Ov. *Fasti* 6. 419-22). It was believed that the protection of the city depended on its safe custody. Greek legend told that Diomedes and Odysseus, at the instigation of Calchas or Helenus, carried off the Palladium and thus made possible the sack of Troy (Serv. ad *Aen.* 2. 166, Sil. Ital. 13. 36-50). Virgil adopts this legend (*Aen.* 2. 162-79), but adds that the theft was followed by the displeasure of the goddess. The more common Roman tradition was that the Palladium was rescued from the fires of Troy by Aeneas, who brought it to Italy, where it was ultimately placed in the *penus Vestae* as a pledge of the safety of Rome (Dion. Hal. loc. cit.; cf. Cic. *Phil.* 11. 24). The Palladium was believed to have saved Rome from the attack of the Gauls in 390 B.C. (Sil. Ital. 13. 79-81), and when the temple of Vesta caught fire in 241 B.C., it was rescued by the Pontifex Maximus, L. Caecilius

Metellus (Ov. *Fasti* 6. 436–54; Cic. *Scatur.* 48). These two legends are clearly inconsistent; Ovid (*Fasti* 6. 433–5) is content not to judge between them, but stories were invented to reconcile them, such as that the image stolen by the Greeks was only a copy (Dion. Hal. loc. cit.), or that Diomedes brought the Palladium to Italy and handed it over to Aeneas at Lavinium (Sil. Ital. 13. 51–78). The truth probably is that many cities possessed such talismans, which owing to the fame of the Trojan image all came to be known as Palladia; in Greece Argos and Athens claimed the Palladium, and in Italy not only Rome but Lavinium and Luceria and the Græco-Roman city of Heraclea in Lucania (Strabo 6. 1. 14).

R. G. Austin, *Verg. Aen.* II (1964), 83 ff.

C. B.

PALLADIUS (1), RUTILIUS TAURUS AEMILIANUS (4th c. A.D.), a knowledgeable agriculturalist with estates in Italy and Sardinia, experienced in climatic conditions and soil-variations, wrote a practical manual once thought to contain fourteen books only—an introductory book followed by one for each month of the year, and an appendix 'de institutione' in elegiacs (cf. Columella 10). In 1926 Svennung published the ed. princeps of an extra book *de medicina pecorum*, establishing it as the true fourteenth book (cf. *de inst.* 12; see *CR* 1937, 19). Palladius' prose style is utilitarian, with no 'frills' (1. 1. 1 'neque enim formator agricolae debet artibus et eloquentia rhetores aemulari'); his verses are metrically sound, and are conscientious and even ingenious, considering his subject. His sources include Columella, Gargilius Martialis, and others, with various unnamed 'Graeci'; but he constantly quotes from personal experience. Medieval scholars found him useful, notably Albertus Magnus, and a translation into Middle English exists.

TEXT: J. C. Schmitt, Teubner, 1898 (i–xiii, with *de inst.*); J. Svennung, *Erasmus* 1926 (*de med. pec.*, cf. *Gnomon* 1937, 382 ff.); J. H. Schmalz, *Glotia* 1915, 172 ff.; H. Widstrand, *Palladiusstudien* (Uppsala, 1926, cf. *Gnomon* 1937, 388 ff.); id. *Erasmus* 1928, 121 ff., and 1929, 129 ff. (on *de med. pec.*); J. Svennung, *Untersuchungen zu Palladius* (Uppsala, 1935), important also for many fields of study in Late and Vulgar Latin; G. Hoerck, *Mnemos.* 1938, 146 ff. (on *de med. pec.*); Teuffel Schwabe, *Geschichte der römischen Lit.* (1900), II 217; Schanz-Hosius *Inv.* I. 189 ff.; H. Fischer, *Mittelalterliche Pflanzenkunde* (1929).

R. G. A.

PALLADIUS (2) (c. A.D. 364–c. 430), a disciple of Evagrius Ponticus and a monk in Egypt and Palestine until Chrysostom made him bishop of Helenopolis (c. 400), wrote: (1) *Dialogus de Vita S. Joannis Chrysostomi*, based on personal knowledge (c. 408); (2) *Historia Lausiacae*, a collection of biographical notes, one of the chief sources for early monasticism (419–20); (3) Part I of a work on Indians and Brahmins, incorporated into the Alexander Romance.

EDITIONS (1) P. R. Coleman-Norton (1928, 1958²); (2) C. Butler, 2 vols. (1898–1904).

S. L. G.

PALLAS (1), Παλλὰς, -ἄδος, title of Athena (q.v.) (apparently by derivation 'maiden'). A late legend, Philodemus, *De piet.* 6 Gompertz, Apollod. 3. 144 (spurious), says she was a friend of Athena whom the goddess accidentally killed and made the Palladium (q.v.) to commemorate her.

H. J. R.

PALLAS (2), Πάλλας, -αῖπος, (a) a Titan (Hes. *Theog.* 376); (b) a giant, killed by Athena (Apollod. 1. 37); (c) an Attic hero who with his sons opposed Aegeus and was overcome by Theseus (q.v.); Plut. *Thes.* 13; Apollod. 3. 206); (d) the son of Evander the Arcadian, an ally of Aeneas, killed by Turnus (Verg. *Aen.* 9. 104, 514 ff.; 10. 441 ff.); (e) son of Hercules and Evander's daughter (Dion. Hal. *Ant. Rom.* 1. 32. 1).

H. J. R.

PALLAS (3), freedman of Antonia and financial secretary (a *rationibus*) of her son, the Emperor Claudius. His

wealth, success, and arrogant temper made him deservedly unpopular. Devoted to Agrippina and alleged to be her lover, he successfully promoted her candidature in the competition after the execution of Messalina; he also hastened Claudius' adoption of her son. The Senate voted him *ornamenta praetoria* and a sum of money; he refused the money and received public commemoration for virtue and frugality (Tac. *Ann.* 12. 53; cf. Pliny, *Ep.* 7. 29. 2; 8. 6. 1, who indignantly quotes the senatorial decree inscribed on the tomb of Pallas on the Via Tiburtina). After the accession of Nero, Pallas, like Agrippina, was gradually and firmly thrust aside from power. Compelled to resign his office, he stipulated that no questions should be asked, that his accounts be regarded as balanced. Finally, he was put to death by Nero, because of his wealth, it is said (A.D. 62).

S. I. Oost, *AJPhil.* 1958, 113 ff.

R. S.

PALMA FRONTONIANUS, AULUS CORNELIUS (*PW* 279) was *cos. I. ord.* in A.D. 99, governor of Tarraconensis c. 101, and governor of Syria c. 104. Operating with Legio VI Ferrata, he annexed Nabataea and formed it into a province by 106; the conquest was easy and coins commemorated *Arabia adqusta*. Palma was honoured with *ornamenta triumphalia* and was *cos. II. ord.* in 109. Rich and influential, he apparently gave offence to Hadrian in Trajan's lifetime, and was put to death in 118 for alleged participation in the 'conspiracy of the four consuls' (see HADRIAN).

Lambrechts, *Senat*, no. 42. Syme, *Tacitus*, 53, 222 n. 5, 244, 599. C. H. V. S.

PALMYRA (Aramaic *Tadmor*) owed its wealth to its position as an oasis between Syria and Babylonia. Owing to the disturbed condition of Mesopotamia in the first century B.C. it captured the trade between these two countries, organizing caravans direct across the desert, which it policed from the Euphrates to Damascus and Emesa. A large number of caravan-inscriptions is preserved. The city was formed by the amalgamation of an ancient Amorite and Aramaic stock with an increasing Arab element, from which the dynasty of Odaenathus (i.v.) was to arise. It was slightly hellenized, Aramaic being regularly used (often with a Greek version added) in the inscriptions, which cover the period from 44 B.C. to the fall of the city. Palmyra was raided by Antony. It was probably annexed c. A.D. 17 by Germanicus; Pliny's statement (in Titus' reign) that it was an independent buffer State is an anachronism, for Vespasian built a road from Palmyra to Sura in 75. It retained some independence, however, maintaining its own militia for policing the desert. Septimius Severus made it a Roman colony. Under Odaenathus and Zenobia (q.v.) it ruled the Eastern Empire for a brief space, but after its reduction by Aurelian in 273 it never recovered. The ruins, which include the great temple of Bel, several other shrines, a theatre, colonnaded streets, and a monumental arch, are impressive. The necropolis, with its curious tower tombs, has produced many examples of a markedly oriental school of sculpture. The local civilization, as exemplified by art and costume, is made up of Hellenistic and Parthian elements, borrowed from the Graeco-Iranian metropolis of Seleucia-on-the-Tigris, with which there was a constant exchange of caravans. The cults are almost entirely Semitic, and some of them, in the third century A.D., show an interesting tendency towards henotheism.

PAMPHILA of Epidauros, a scholar and historian (of literature) at Rome under Nero. Her chief work,

Σύμμικτα ἱστορικὰ ὑπομνήματα, was summarized by Favorinus.

FIGG iii. 520.

PAMPHILUS (1) (4th c. B.C.), painter, of Amphipolis. Pupil of Eupompus of Sicyon (contemporary of Parrhasius); teacher of Apelles, Pausias, Melanthius (2) (qq.v.). He painted a 'Battle at Philus' (probably 367 B.C.) and the Heracleidae, referred to by Aristophanes (*Plut.* 385: before 388 B.C.). His pupils paid him a talent for a course lasting twelve years. He insisted on a knowledge of arithmetic and geometry, and had drawing introduced in Sicyon as a school subject.

Overbeck, 1746-53; Rumpf, *Malerei u. Zeichnen*. 132. T. H. L. W.

PAMPHILUS (2) of Alexandria (fl. A.D. 50), lexicographer. He wrote a *Τέχνη κριτική, Φυσικά, Περί βοτανῶν*, and, in ninety-five books, a great lexicon — *Περί γλωσσῶν ἥτοι λέξεων*—which absorbed many previous specialist collections (cf. GLOSSA, GREEK). It was used by Athenaeus, and abridged by a succession of epitomators; the surviving lexicon of Hesychius of Alexandria represents the last stage in this process. Cf. DIOGENIANUS (2).

P. H. R. F.; R. B.

PAMPPOS, cited by Pausanias as a pre-IHomeric writer of hymns, but judged from the fragments to have been a Hellenistic poet.

Maus, *PW* xviii. 3 352.

PAMPHYLIA was traditionally colonized by a mixed multitude of Greeks led by Amphilochus, Calchas, and Mopsus; the local dialect, which is related to Arcadian, confirms this tradition. The name in early times denoted all the coast from Phaselis to Coracesium, but was later restricted to the plain where lay Magydus, Perga, Silyum, Aspendus, and Side. Despite Cimon's victory on the Eurymedon these cities remained under Persian rule till they surrendered to Alexander. Though occupied by Ptolemy I and III Pamphylia was generally subject to the Seleucids till 189 B.C. when it was ceded to Rome by Antiochus III; most of the cities were received into the Roman alliance by Cn. Manlius, and the Attalids gained only the strip of coast where they founded Attaleia. Pamphylia was probably part of the province of Cilicia from 102 till c. 44, when it was transferred to Asia. In 36 it was granted by Antony to Amyntas, who coined in Side, and from 25 B.C. was part of Galatia till in A.D. 43 Claudius formed Lycia-Pamphylia. Reattached to Galatia by Galba (the Lycians having been freed), it was reunited to Lycia by Vespasian, remaining a separate *κοινόν*.

Jones, *Cities of Rom. Prov.* 124 ff.; R. Syme, *Klio* 1934, 122 ff., 1937, 227 ff.; B. Levick, *Rom. Colonies in S. Asia Minor* (1960).

A. H. M. J.

PAN (*Πάν*), a god native to Arcadia (q.v.). His name, of which a form *Πάων* also exists, is probably to be derived from the root found in Lat. *pa-sco*, and interpreted 'the Feeder', i.e. herdsman. Since Arcadia was not rich in large cattle the goat was its characteristic beast, and Pan is half-goatish in shape (human body to the loins, goat's legs, ears, and horns). A vague deity, he is not unheard of in the plural, Panes. The ancients regularly associated his name with *pās* or *pān* (see *Hymn. Hom. Pan.* 47; *Pl. Crat.* 408 c); hence in late theologizings he becomes a universal god (see Kern, *Relig. d. Griechen* iii. 127 ff.). This, however, has nothing to do with either his native worship or any normal developments of it.

He is regularly son of Hermes, the only other Arcadian deity of importance ('Homer' and Plato, locc. cit., and often); but his mother varies. He has little mythology,

hardly more than a couple of late stories of his love affairs, see ECHO, SYRINX; another is that he loved Pitys the nymph of the fir-tree, who ran away from him and changed into her tree-shape (Nonnus, *Dion.* 42. 258 ff.). In general he is amorous, as is natural in a god whose chief business it was to make the flocks fertile. When they did not increase a primitive rite was resorted to of flogging his statue with squills (Theoc. 7. 106 ff., where one of the scholia says it was when hunting was unsuccessful). This was no doubt meant at once to arouse the god and to strike fresh vigour into him. He was also on occasion formidable; it is well to be quiet at noonday (still a haunted time in Greece, see, e.g., Schmidt, *Volksleben d. Neugriechen*, 94), because he is asleep then and will be angry if disturbed (Theoc. 1. 15 ff.). He can induce 'panic' terror (like that of a frightened and stampeding flock or herd) among men, as Polyb. 20. 6. 12 Butner-Wobst (the actual word is not pre-Hellenistic). He sends nightmares (Artem. 2. 37; 139, 18 Hercher), but not all dreams of him are bad (*ibid.* 12 ff.). In general, he is thought of as loving mountains, caves, and lonely places (i.e. the regular haunts of flocks in hilly country) and as musical, his instrument being the pan-pipe (still used by shepherds; cf. SYRINX).

He has few relations with other gods. On Mt. Lycæon he and Zeus both had shrines (Paus. 8. 38. 5). Selene was one of his loves, and he trapped her by attracting her attention to a fine fleece (Verg. *G.* 3. 391 ff., and Servius ad loc.), or bribed her with sheep ('Probus', ad loc.).

His cult began to spread beyond Arcadia early in the fifth century B.C. Pindar, whose piety embraced quite minor deities, wrote him an ode (ll. 85-90 Bowra). Athens adopted him and gave him a cave-shrine on the Acropolis in the year of Marathon, when he was supposed to have promised and given help against the Persians (for the legend of his appearance to the runner Philippides see Herodotus 6. 105. 2-3). There were yearly sacrifices and torch-races in his honour (*ibid.* 4); L. Deubner, *Attische Feste* (1932), 213, doubts the latter, which, indeed, are hard to connect with Pan. Elsewhere he is not attested before the fourth century (Farnell, op. cit. *infra*, 432).

Of higher developments he has none. Aeschylus (*Ag.* 56) makes him an avenger of wrongs done to beasts; Plato (*Phdr.* 279 b-c) includes him among the gods to whom Socrates prays for inward beauty; pastoral poets make him a kind of divine patron of their literature; but these have nothing to do with his cult.

A creature with man's body and arms, goatish head, legs, and tail, appears on Attic vases and elsewhere from the early fifth century, often in numbers (Panes); he is shown with the nymphs on many late fifth- and fourth-century reliefs. (See Brummer, 'Pan im 5. u. 4. Jhdt. v. Chr.', *Marburger Jahrb. für Kunstwissenschaft* 1949/50.)

Farnell, *Cults* v. 431 ff., and the larger dictionaries s.v. Nilsson, *GRG* v. 235. H. J. R., C. M. R.

PANACEA (*Πανάκεια*), 'All-Healer', daughter of Asclepius (q.v.); Pliny, *IIN* 25. 30 and often).

PANAENUS (fl. 448 B.C., Pliny), painter, brother (or nephew) of Phidias (q.v.), Athenian. He helped Phidias with the colouring of the Olympian Zeus and painted mythical scenes on screens between the legs of the throne. In the temple of Athena in Elis he put on a plaster mixed with saffron (for fresco?), and painted the inside of the shield of Colotes' Athena. The best sources ascribe to him, rather than to Micon or Polygnotus, the 'Battle of Marathon' in the Stoa Poikile (soon after 460); on the left, equal combat, with Miltiades urging on the Athenians and Plataeans; in the centre, Persians fleeing into the marsh; on the right, the fight round the ships with

Cyngeirus and Callimachus; attendant gods and heroes, Theseus rising from the ground.

(Overbeck, 696, 698, 1054, 1083, 1094 1108; Rumpf, *Malerei u. Zeichn.* 95. Pluhl 717.

I. B. L. W.

PANAETIUS (c. 185–109 B.C.), son of Nicagoras of Rhodes, Stoic philosopher. He attended the lectures of Crates of Mallos at Pergamum and then went to Athens, where he became a disciple of Diogenes the Babylonian, then head of the Stoa, and of his successor Antipater of Tarsus. Between 170 and 150 he must have returned to Rhodes for a short time, since he became priest of Poseidon Hippios at Lindus. In about 144 he went to Rome and soon joined the circle which gathered around P. Scipio Aemilianus. About 140–138 he accompanied Scipio on his travels in the Orient. After that he lived alternately in Rome and in Athens. In 129 he succeeded Antipater as head of the Stoa; and he held this position until his death in 109.

In spite of his Stoic creed Panaetius was an admirer of Plato and Aristotle and adopted the Peripatetic doctrine of the eternity of the universe. He tried to adapt Stoic ethics to the requirements of the life of the Roman *grands seigneurs* with whom he associated, by putting into the foreground the more active and brilliant virtues of magnanimity, benevolence, and liberality as against the more passive virtues of fortitude (*not* to be disturbed in danger) and justice (*not* to do wrong), preached by his predecessors. His work *Περὶ τοῦ καθήκοντος* was used by Cicero in his *De Officiis*.

Tatakis, *Panaetius de Rhodes* (1931); L. Labowsky, *Die Ethik des Panaetius* (1934); M. van Straaten, *Panaetius, sa vie, ses écrits et sa doctrine avec une édition des fragments* (1946); M. Pohlenz, *Die Stoa*² (1948–55). K. von F.

PANATHENAEA, an Athenian festival celebrated every year, and every fourth year with much greater pomp (the Great Panathenaea), on the 28th Hecatombaeon (July/Aug.), which was considered to be the birthday of Athena. It comprised a procession, sacrifices, and games. Citizens, maidens carrying sacred implements, youths conducting the sacrificial animals, metics, chariots which were to take part in the contests, and the cavalry figured in the procession. A famous representation is found on the frieze of the Parthenon. An embroidered *peplos*, hoisted on the mast of a ship set on wheels, was brought to the goddess. The flesh of the numerous victims was distributed among the people. The prize of the games was oil from the holy olives, stored in amphorae with a representation of Athena brandishing the spear and of one of several kinds of games.

E. Pfuhl, *Die Atheniensium pompis sacris* (1900), 3 ff.; L. Deubner, *Attische Feste*² (1959); J. A. Davidson, *JHS* 1958, 23 ff.; K. Peters, *Studien zu den panathenäischen Preisamphoren* (1942); for the Hellenistic and Roman amphorae. G. R. Edwards, *Hesp.* 1957, 320 ff. M. P. N., J. H. C.

PANDAREOS (Πανδάρως), name of either one or two obscure mythological persons, the father of Aedon (q.v.), and, if this is not the same Pandareos, the father of two daughters whose story is told in *Od.* 20. 66 ff., wherein see the ancient commentators. Their names were Cleothera and Merope, and they were left orphans (the scholiast says Zeus killed their father and mother because Pandareos had stolen his dog from Crete). Hera, Athena, Artemis, and Aphrodite befriended them, brought them up, and gave them all manner of good qualities; but while Aphrodite was visiting Zeus to arrange their wedding, the Harpyiae (q.v.) carried them off and gave them to be servants to the Erinyes (q.v.). Cf. Roscher, *Lexikon*, s.v. H. J. R.

PANDARUS, a Trojan, son of Lycaon (*Iliad* 2. 826–7), and an archer favoured by Apollo. At the instigation of Athena, he broke the truce between the Greeks and Trojans by shooting at and slightly wounding Menelaus (q.v. 1; 4. 88 ff.); wounded Diomedes (5. 95 ff.), and was killed by him (290 ff.). H. J. R.

PANEGRIC, LATIN. The origins of Latin panegyric are to be sought in the ancient institution of the *laudatio funebris* (q.v.). Such speeches of Cicero as the *Ninth Philippic*, the *Pro Lege Manilia*, and the *Pro Marcello* show developments and extensions of eulogy in relation both to deceased and to living persons. The *Pro Marcello* combines *laudatio* and *gratiarum actio*. In the imperial age the *gratiarum actio*, formerly addressed to Senate or People, was delivered in honour of the Emperor. A *senatus consultum* passed under Augustus required newly elected consuls to return thanks publicly to gods and Emperor, but by Pliny's time the Emperor's praise had supplanted that of the gods. This consular *gratiarum actio* provided the model for panegyrics addressed to the Emperor or his representative on various occasions.

A collection of such speeches was found by Aurispa, 1433, in a Mainz manuscript (now lost) under the title of *XII Panegyrici Latini*. Its contents are (numeration according to W. A. Baehrens' ed. 1911): I. Pliny's (q.v. 2) *gratiarum actio* to Trajan on Pliny's elevation to the consulship. II. Latinus Pacatus Drepanius' panegyric to Theodosius. Pacatus (q.v.), a Gaul, had been sent to Rome to congratulate Theodosius on his victory over Maximus. III. Claudius (q.v. 16) Mamertinus' *gratiarum actio* to Julian, at Constantinople, on Mamertinus' elevation to the consulship. IV. Nazarius' panegyric to Constantine (in his absence) on an important imperial anniversary. V. Anonymous Gallic orator's *gratiarum actio* to Constantine, at Trèves, for benefits conferred on Autun. VI. Anonymous Gallic orator's panegyric to Constantine, at Trèves. VII. Anonymous orator's panegyric to Maximian and Constantine, at Trèves, in celebration of Constantine's marriage to Fausta. VIII. Anonymous Gallic orator's panegyric to Constantius, at Trèves, after the death of Allectus and the recovery of Britain. IX. Eumenius' (q.v.) *Pro Instaurandis Scholis Oratio*, in honour of all four Emperors, at Autun, in presence of a provincial governor. X. Panegyric of a Gallic orator (named Mamertinus in the editions) to Maximian, in Gaul (at Trèves?), on Rome's birthday. XI. *Panegyricus Genethliacus* to Maximian by the author of X. XII. Anonymous orator's panegyric to Constantine, at Trèves, after the defeat of Maxentius.

Although Pliny's speech is prefaced to the collection as the model of later panegyricists, the later speeches are much shorter, the longest, by Pacatus, being less than half as long as Pliny's. Otherwise there is considerable similarity, and Pliny's methods of adulation are imitated with progressive exaggeration. Former Emperors, historical and mythological heroes, the gods, and nature herself are disparaged in favour of the Emperor, whose most neutral and even unpraiseworthy actions and characteristics are eulogized with fantastically ingenious artificiality. The authors' outstanding virtue is the purity of their latinity, which is almost Plinian, if scarcely Ciceronian. The speeches are by no means equal in quality: they contain frequent passages of real beauty and eloquence, in spite of their general tawdriness. *Pro Instaurandis Scholis* is a pleasing speech, to whose author some of the anonymous panegyrics have been attributed. The *panegyrici* are of considerable historical interest, and throw much light on fourth-century Gaul.

Examples of panegyric not included in this collection are Ausonius' (q.v.) *Gratiarum Actio* and Ennodius' (q.v.)

Panegyricus, addressed to Gratian and Theodoric respectively.

Verses panegyric are represented by the pseudo-Tibullian *Panegyricus Messallae* (q.v.), the anonymous *Laus Pisonis* (q.v.), Statius' *Silvae* 5. 2, and the panegyrics of Claudian and Apollinaris Sidonius (qq.v.). Its methods resemble those of prose panegyric.

TEXTS. Teubner (E. Baehrens, W. A. Baehrens, 1874 and 1911); O.C.T. (R. A. B. Mynors, 1964). Edition: Budd (E. Galletier, 1940-55). Style, diction, etc.: R. Pichon, *Les Derniers Écrivains profanes* (1906), Schanz-Hosius in (1922; for authorship problems).

W. S. M.

PANEGYRICUS MESSALLAE, aptly characterized by Sellar as 'a strange specimen of a fly preserved in amber', a tasteless and bombastic eulogy of Valerius Messalla (q.v. 3) Corvinus in 212 hexameters, which opens the fourth book of the collection of Tibullian poetry. That is why it survives. Fruitless attempts have been made to identify the unknown author with Tibullus, Propertius, and Ovid. Once wealthy, but now vexed by 'the sense of loss', he tries hard, by celebrating Messalla's exploits, to find favour in his eyes—and to secure a reward. The piece was composed between 31 and 27 B.C.

Text in editions of Tibullus; with commentary, in the older editions by Heyne and Dissen; G. Némethy, *Lygdani Carmina, acc. Panegyri. in Messallam* (1906). See F. Hankel, *De Panegyrico in Messallam tibulliano* (1874); H. Hartung, *De Panegyrico ad Messallam pseudo-tibulliano* (1880); R. S. Radford, *TAPA* 1920; (most exhaustive) S. Ehrensgruber, *De Carminibus panegyricis Messallae pseudo-tibulliano* (1889-99); cf. Schanz-Hosius in.

PANGAEUS, a mountain in Thrace (q.v.), lying between the lower reaches of the Strymon and the sea-coast; it extends for some twenty-five km. from south-west to north-east, and at its highest point reaches 1956 m. The name first appears in Pindar, *Pyth.* 4. 180, and in Aeschylus, *Persae* 494, and Herodotus (6. 46; 7. 112) mentions the gold and silver mines. Casson concluded, after exploring the mountain, that the bulk of the gold (q.v.) and silver (q.v.) deposits from Pangaeus were found round, and not on, the mountain. Geologically the higher part of the mountain is not of a metalliferous nature, consisting, as it does, of crystalline white marble. There are few traces of mines, and it is clear that the ancients found it easy and lucrative to wash gold from the streams that discharge from the sides of the mountain into the plain. (Aristotle, *Mirabilia* 45, speaks of gold being brought to the surface by constant rain in Paonia.) According to Perdrizet, the Scaptisyle mines worked by Thasos (q.v.) were on the eastern slopes of Pangaeus. Probably Athens first took an interest in the mines in the time of Pisistratus (Arist. *Ath. Pol.* 15. 2), and, with the reduction of Thasos in 463 B.C., they passed to Athenian control, which was later strengthened by the foundation of Amphipolis (q.v.) in 437/6 B.C. Possession of the mines passed from Athens to Macedonia, when Philip II (q.v.) captured Amphipolis in 357 B.C., and advanced his frontier to the Nestos (Strabo 7. 331, fr. 35; Diod. 16. 8. 6). Under Philip the mines produced 1,000 talents of gold annually. Philip (q.v.), one of Philip's foundations, was a centre for the mining of Pangaeus (Strabo 7. 331, fr. 34). In Roman times the mines played no great part.

J. M. R. C.

PANIONIUM, the place where the common festival of the twelve Ionic cities was held and *probouloi* met to discuss common policy in time of need. It was founded after the destruction of the city of Melie (perhaps early seventh century B.C.) and revived in the fourth century at the end of Persian rule. The site lay on the territory of Priene north of Mt. Mycale. Traces of an altar 60 feet long have been uncovered on top of a hill near the sea

(Otomatik Tepe), and of the council chamber on the slope; but nothing remains of the temple of Posidon Heliconius.

PANKRATION (παγκράτιον). In this event boxing and wrestling were combined with kicking, strangling, and twisting. It was a dangerous sport, but strict rules were enforced by umpires who closely watched the combatants. Biting and gouging were forbidden, but nearly every manoeuvre of hands, feet, and body was permissible. You might kick your opponent in the stomach; you might twist his foot out of its socket; you might break his fingers. All neck holds were allowed, the favourite method being the 'ladder-grip', in which you mounted your opponent's back, and wound your legs round his stomach, your arms round his neck.

F. A. W.

PANNONIA, the territory of the Pannonii, a group of Illyrian peoples who had absorbed Celtic influences to varying degrees, lay south and west of the Danube between Carnuntum (q.v.) and Sirmium in the Save valley. In 119 B.C. the Romans campaigned against them, capturing Siscia (q.v.). In 35 B.C. Octavian advanced against them and captured Siscia, where he established a garrison. Fighting broke out in 16 B.C. with a Pannonian invasion of Istria and continued in Pannonia in 14. In 13 M. Agrippa and M. Vinicius advanced eastward down the Save and Drave valleys. After Agrippa's death (12 B.C.) the conquest of the Pannonians, notably the Breuci, was completed by Tiberius and Roman control was extended to the Danube. Pannonia north of the Drave appears to have accepted Roman rule without a struggle, probably owing to fear of the Dacians further to the east. Some fighting is attested under Sex. Appuleius in 8 B.C. but the Pannonians remained more or less peaceful until A.D. 6 when the Breuci joined the Dacians in revolt, under two chiefs called Bato (qq.v.). After the end of the war in A.D. 9 Illyricum was divided into provinces known later as Pannonia and Dalmatia (q.v.). The province was governed by *legati Augusti pro praetore* of consular rank. Early under Trajan, probably in 103, Pannonia was subdivided into two provinces, *Superior*, comprising the western part with capital at Carnuntum, *Inferior*, a smaller area in the east with capital at Aquincum (q.v.). *Pannonia Superior* was governed by a consular legate, *Inferior* by a praetorian, the latter being upgraded to consular under Caracalla by a boundary alteration which equalized the strength of the two provincial armies. Following the reforms of Gallienus the senatorial legates were superseded by equestrian *praesides*. Under Diocletian both provinces were subdivided, *Pannonia Superior* into *Pannonia Prima* in the north (capital Savaria) under a *praeses* and a *dux*, *Pannonia Ripariensis* or *Savia* in the south (capital Siscia) under a *dux*; *Pannonia Inferior* into *Valeria* in the north (chief places: Aquincum and Sopianeae) under a *praeses* and a *dux*, and *Pannonia Secunda* in the south (capital Sirmium) under a *consularis* and a *dux*. During the fourth century Pannonia suffered greatly from barbarian invasions. The end appears to have come with the incursion of Radagaisus and the Ostrogoths in 405, causing large numbers of Romans to flee to Italy.

J. J. W.

PANNYCHIS, an all-night festival or vigil in honour of a deity, e.g. Demeter at the Halaea (Deubner, *Attische Feste*, 62); Artemis at the Tauropolia (ibid. 208). Since

these were on occasion made an excuse for illicit love-affairs (see Menander, *Epit.* 234 ff. Allinson), it is not surprising that Pannychis appears as an attendant of Aphrodite (see Höfer in Roscher's *Lexikon*, s.v.). It was also a common name for a hetaera, as in Lucian, *Dial. Meret.* 9 (name of a speaker). H. J. R.

PANORMUS (modern *Palermo*), founded by the Phoenicians early in the seventh century B.C., became the main Carthaginian *point d'appui* in north-western Sicily. Despite its name it was never Greek, and save for a brief capture by Pyrrhus (q.v.) in 276 was continuously in Punic hands until taken by the Romans in 254 (Polyb. 1. 38). It is mentioned sporadically in the sources, usually as a Carthaginian base of operations (e.g. in 480). A *civitas libera et immunis* under Roman rule, it became a *colonia* under Augustus, with recolonization under Vespasian and Hadrian (*Lib. Colon.* 211). Its superb position, with a notable harbour backed by the fertile Conca d'Oro, ensured its importance and prosperity; it became the capital of Arab, Norman, and modern Sicily. But few traces of ancient Panormus now survive.

There is no good ancient description, but cf. Diod. Sic. 22. 10; Callias fr. 2 (*FGrH* no 564); Silius Ital. 14. 201-3. Foundation date, Rhys Carpenter, *AArch.* 1958, 42 ff. Geography and antiquities, E. A. Freeman, *History of Sicily* 1 (1891), 249 ff.; B. Pace, *Arte e civiltà della Sicilia antica* 1 (1935), *passim*. See also HAMILCAR (2), HERCULE.

A. G. W.

PANSA CAETRONIANUS, GAIUS VIBIUS (*PW* 9), defended Caesar's interests as tribune in 51 B.C., governed Bithynia in 47-46 and Cisalpine Gaul in 45, and was designated by Caesar consul for 43. In March 43 he led four legions of recruits by the Via Cassia to join Hirtius (q.v.) against Antony. He was wounded in a preliminary engagement at Forum Gallorum, 8 miles from Mutina, and after the battle of Mutina he died. Gossip alleged that Octavian had poisoned him. G. E. F. C.

PANTHEON, a temple in the Campus Martius, built with adjoining Baths and water gardens by M. Agrippa in 27-25 B.C. It was completely rebuilt early in the reign of Hadrian who preserved Agrippa's name on the frieze (*CIL* vi. 896), and later repaired by Septimius Severus and Caracalla. The building consists of a rotunda (43.30 m in internal diameter) of brick-faced concrete, stuccoed externally to imitate masonry, with a pedimented portico (33.10 m wide and 13.60 m deep) of granite Corinthian columns, eight in front and two groups of four behind. The portico is linked with the rotunda by a rectangular structure as wide as the porch and as high as the rotunda. The rotunda is 43.30 m high with a circular skylight 9 m in diameter at the top of the dome; the cylindrical wall (6.20 m thick) contains four rectangular and three semi-circular recesses with free-standing columns. The door, breaking the circle, is flanked by niched buttresses, a common structural device which also occurs in the body of the wall. The wall itself is converted by semicircular chambers into eight piers built as niches, all vertically linked by a very elaborate system of relieving arches extending to the haunch of the richly coffered dome. The interior was richly decorated in marble with a continuous entablature above the columned recesses and canopied statue-bases, and an attic panelled in marble, a small section of which has been restored to its original form. The ancient bronze doors of the building still survive. The Pantheon had a long rectangular forecourt in front of it and was masked on the east by the Porticus Argonautaurum and on the south by the Baths of Agrippa.

I. A. R.; D. E. S.

PANTHOUS (Πάνθος, Πάνθους), a Trojan elder (*Iliad* 3. 146). Apollo protects his son, Polydamas (q.v.; *Il.* 15. 521-2), whence some said he was a Delphian (schol. *ibid.*). In Verg. *Aen.* 2. 318 ff. he is a pious priest of Apollo, killed by Aeneas' side at the storming of Troy.

PANTICAPAEUM, a colony of Miletus, on the west side of the Cimmerian Bosphorus (q.v. 2: *Straits of Kerch*), founded in the late seventh century. It thrived on the fisheries of the Straits, on the trade along the river Tanais, and especially on the export of wheat from the Crimea. Dependent foundations in the Straits were at Myrmekion, Tiritaca, and Nymphaeum. It was ruled successively by two dynasties, the Archaeactids (probably a line of Greek tyrants), and the Spartocids (q.v.), who gained power in 438. The gold coinage of Panticapaeum and the magnificently furnished rock tombs of its chief citizens attest its wealth in the fourth and third centuries. It subsequently (c. 115) became the capital of Mithridates VI's territory in south Russia, and was the seat of the local Crimean dynasty founded by his descendants under Roman sovereignty. In the third century A.D. it fell to the Sarmatians and Goths.

E. H. Minns, *Scythians and Greeks* (1913), 503 ff.; M. Dunoff, *PW* Suppl. ix. 1110 ff.; E. B. de Ballu, *L'Histoire des colonies grecques du littoral nord de la mer Noire* (1965), a bibliography of Russian works, 1940-62. M. C.

PANTOMIMUS, a dancer who represented traditional themes in dumb show, supported by instrumental music and a chorus. (The apparent meaning is 'one who imitates everything', but the distinctive quality of pantomime was that the chief performer did everything by imitation.) This type of performance (the Greeks called it the 'Italian dance') was introduced at Rome in 22 B.C. by Pylades of Cilicia and Bathyllus of Alexandria. 'To dance the shepherd Cyclops' in tragic mask and buskins was nothing new (*Hor. Sat.* 1. 5. 64: for other antecedents, in particular a *παιρόμυθος* mentioned in an inscription from Priene of c. 80 B.C., see *PW*, s.v., 834 ff.); Pylades' innovation, according to himself (*Macrob. Sat.* 2. 7), was to add the orchestra and chorus. Bathyllus seems to have specialized in light themes, akin to comedy or satyr drama, with a rustic setting—e.g. Pan revelling with a satyr (*Ath.* 1. 20 d-c; *Plut. Quaest. conv.* 7. 711 f.; *Sen. Com. Ex.* 3. pref. 10 and 16; cf. Lucian, *Salt.* 74 and Libanius iii. 392, Reiske); Pylades' style is said to have been 'high flown, passionate' (*Ath.* 1. 20 c) and more akin to tragedy; but these comparisons with drama look artificial; the immediate origins of pantomime do not appear to have been dramatic; its themes, whether erotic or otherwise, are taken from mythology or (occasionally) remote history as presented by the poets, whether dramatic or epic. It was a highly sophisticated type of entertainment, demanding much from both performers and spectators; though demoralizing, it was not coarse, like the mime.

Performances took place on the public stage or in private houses. The pantomimus, usually a handsome, athletic figure, wore a graceful silk costume (long tunic and cloak, *Suet. Calig.* 54), which allowed of free movement, and a beautiful mask with closed lips (Lucian, *Salt.* 29, A. Baumeister, *Denkmäler der klassischen Altertümer* (1885-8), figs. 1351-2). Behind him stood the chorus, the players of flutes, pipes, cymbals, etc., and the *scabillarii*, who beat time by pressing with the foot on the *scabillum*, a wooden or metal instrument fastened underneath the sandal (see Baumeister, fig. 1350). Beside the pantomimus there sometimes stood an assistant—perhaps an actor with a speaking part (*ὑποκρίτης εὐφρανίας*, Lucian 68). Lucian tells (83) of a pantomimus who overacted the part of 'mad Ajax': he tore the clothes of one of the *scabillarii*, snatched a flute from an instrumentalist and with it

struck the triumphant 'Odysseus' a blow which would have been fatal but for Odysseus' traditional head-dress (the *πίλος*); then, springing down into the body of the theatre, he seated himself between two alarmed ex-consuls—all this to the delight of the rabble, who thought it the perfection of acting. Better performers were more subtle: Pylades, when the chorus uttered the words *τὸν μέγαν Ἀγαμέμνονα*, expressed the monarch's greatness by assuming an air of statesmanlike reflection (Macrob. loc. cit.). The dancer might in one piece have to appear in five different roles, each with its own mask (Lucian 66; change of costume seems unproved; cf. *eodem pallio*, Fronto 157, 3, ed. Naber—but Arnobius, *Adv. Gent.* 7. 33, seems to speak of a special costume for the part of Adonis). To convince an unbeliever, a pantomimus acted single-handed the love-tale of Ares and Aphrodite—Heros bringing his tidings, Hephaestus setting his snare, the gods coming one by one to look at the entrapped lovers, the confusion of Aphrodite, the abject alarm of Ares (Lucian 63; Lucian adds a story of a foreigner from the Pontus on a visit to Rome who, though he could not follow the song of the chorus because of his lack of Greek, found the pantomime's performance so lucid that he wished to take him home as an interpreter). The dancer's power to convey his meaning by steps, postures, and above all gestures (Quint. *Inst.* 11. 3. 88) was aided by certain conventions, e.g. there was a traditional dance for 'Thyestes devouring his children', which one pantomimus unfortunately performed when wishing to represent Kronos devouring his children.

The songs of the chorus were of secondary importance (Labanius 381); such fragments as we possess are in Greek. Lucian and Statius wrote libretti for pantomimes—a degrading (Sen. *Suas.* 2. 19), if lucrative, occupation (Juv. 7. 87). That the chorus also expounded the narrative in recitative, while the dancer was changing for his next role, seems to be merely a guess of Friedländer. The music, like the whole performance, was enervating (Pliny, *Pan.* 54).

For the popularity of the pantomimi (and pantomimae), the faction-fights of their supporters, the effect of their performances on public morality, and the efforts of the government to deal with the problem, see Friedländer, *Roman Life and Manners under the Early Empire* (E.T. 1908-13), II. 100 ff. W. B.

PANYASSIS of Halicarnassus (5th c. B.C.), epic poet, uncle of Herodotus; revived epic poetry; author of a *Heraclea*; classed by some critics second to Homer; discussed by Quintilian (*Inst.* 10. 1. 54); said to have plagiarized a poem of Creophylus.

EGF 253-65.

W. F. J. K.

PAPHLAGONIA, a territory of northern Asia Minor, which included the mountainous coastal region between Bithynia and Pontus and extended inland to the plateau. It was noted for its ship timber and cabinet woods. In social structure it was similar to Pontus. Villages predominated, organized in administrative districts, and temple territories were numerous. Greek settlements dotted the coast from Heraclea to Sinope, but in Persian times the native population remained largely autonomous. After Alexander Paphlagonia was broken up, part falling to Bithynia and part to Pontus; and either then or at the fall of the Pontic kingdom the coastal cities acquired extensive territories. Pompey included the coastal region in the province of Bithynia and Pontus (63-62). From the third century B.C. a portion south of Mt. Olgassys, called Inner Paphlagonia, kept its independence under native kings. Occupied in turn and divided by the kings of Bithynia and Pontus, and entrusted at first by the Romans to various dependent kings, this portion was attached by

Augustus to the province of Galatia (6 B.C.). Diocletian revived Inner Paphlagonia as a province under a *corrector*. The chief town was Gangra-Germanicopolis.

RULERS OF INNER PAPHLAGONIA. Morzius (before 189 to after 179 B.C.). Pylaemenes, c. 132 B.C. (a dynastic name). Pylaemenes, son of Nicomedes III of Bithynia, c. 107 B.C. Attalus Epiphanes, c. 62 B.C. (over a part). Pylaemenes, c. 62 B.C. (over a part). Castor, son of Castor Saecondarius (Tarcondarius), c. 40-37/36 B.C. Deiotarus Philadelphus, son of Castor, 37/36-6/5 B.C. (with the addition of the Amnias valley and Phazimonitis of Pontus).

Strabo 12 542-4. R. Leonhard, *Paphlagonia* (1915), Jones, *Cities E. Rom. Prov.* 148 ff., Magic, *Rom. Rule Asia Min.* 186 ff. and index. T. R. S. B.

PAPHOS, a city of Cyprus, situated a short distance inland from the west coast near the modern village of *Kouklia*. It has yielded rich Mycenaean remains; and seemingly it received a rich settlement in the fourteenth century B.C., numerous colonists from Mycenaean Greece in the thirteenth. These were led according to tradition by the Arcadian Agapenor. It possessed a famous temple of Aphrodite, believed to have risen from the sea off this coast, and was regarded by Homer as her chief resort. The sanctuary was reputed to have been founded by the 'Eteo-Cyprian' Cinyras, a contemporary of Agamemnon; and his descendants combined the priesthood of Aphrodite with the royal authority down to the time of the Ptolemies. Nicoteles, the last of the Cinyrads, transferred his capital to a site with a good natural harbour some 10 miles to the north. This new Paphos became towards the close of the third century B.C. the capital of Ptolemaic Cyprus; and it remained under the Romans the seat of their proconsuls. The name Paphos was reserved for the harbour town; and the upper city, known as Old Paphos (*Παλαιάπολις*), was little more than its sanctuary and a place of pilgrimage for all Cyprus.

D. G. Hogarth, *Deria Cyprica* (1889), ch. 1. For the temple of Aphrodite see M. R. James, *JHS* 1888, 175 ff.; C. Blinkenberg, *Le Temple de Paphos* (1924), T. B. Mitford, *BSA* 1961, 1 ff.

T. B. M.

PAPINIANUS, AEMILIUS (*PW* 105), one of the greatest Roman jurists. His origin (Syria?, Africa?) is uncertain. His official career was brilliant and in A.D. 203 he became *Praefectus praetorio* in which capacity he had both Paulus (q.v. 1) and Ulpianus (q.v. 1) as assessors. He was executed in 212 by order of Caracalla for having disapproved of the murder of the Emperor's brother Geta.

Papinian was highly appreciated by posterity. Imperial constitutions of the later third century cite him with the greatest respect, and in the Law of Citations (426) his pre-eminence was formally recognized by the provision that, failing a majority of jurists cited on one side or the other, Papinian's view should prevail. Justinian said of him: 'acutissimi ingenii vir et merito ante alios excellens' (*Cod.* 6. 42. 30). His high reputation rested on a relatively small literary output. (Justinian's compilers took six times as much from Ulpian and three times as much from Paul). His principal works were: *Quaestiones* (thirty-seven books), completed before 198, and *Responsa* (nineteen books), not completed until after 204. Neither of these works conforms exactly to its title: the *Quaestiones*, though predominantly problematic in character, contain also doctrinal discussions, while the other work reduces *responsa* to their most abstract form, and also includes *responsa* of other jurists, decisions pronounced in the emperors' and prefects' *auditoria* and even in imperial constitutions. *Notae* on both these works are attributed to Paul, and on the *Responsa* alone to Ulpian. Other writings of Papinian: *Definitiones*, *De adulteriis*. He did not publish any comprehensive systematic work.

He is one of the most elegant and instructive of the jurists, though sometimes difficult on account of the conciseness of his style. The independence of his judgement and the sagacity of his mind led him to original solutions which were not governed by technicalities, but left room for equity and for moral considerations. He was capable of changing his opinion when another appeared to him to be right (*Dig.* 18. 7. 6. 1: 'nobis aliquando placebat . . . , sed in contrarium me vocat Sabini sententia').

E. Costa. *Papiniano* (1804-9). On Papinian's language: Leipzig, *Sprache des Juristen Aemilius Papinianus* (1891). And see bibliography B.V. JURISPRUDENCE. A. B., B. N.

PAPIRIANUS (5th c. A.D.), grammarian, from whose *De Orthographia* excerpts are preserved by Cassiodorus (ed. Keil, *Gramm. Lat.* vii. 158-66). Schanz-Hosius, § 1108.

PAPIRIUS (1, *PW* 52) **CURSOR**, LUCIUS, Roman hero of the Second Samnite War, consul in 326, 320, 319, 315, 313 B.C.; dictator in 325, 309. The details of his military career, especially in the years immediately after the Caudine Forks (q.v.) disaster (321), are untrustworthy, although it can hardly be doubted that he was a great general, a fit match for Alexander the Great according to Livy (9. 16; 9. 38 f.). Rhetorical accounts are also given of his eating, drinking, and running abilities, while his alleged attempt to execute the other patrician hero of the age, Fabius (q.v. 3) Rullianus, for fighting against orders illustrates his strictness and severity (Livy, books 8 and 9; [Aur. Vict.] *De Vir. Ill.* 31; Eutrop. 2. 8; Zonar. 7. 26). Possibly Cursor was partly responsible for the law which virtually terminated enslavement for debt (H. Last, *CAH* vii. 545).

E. T. S.

PAPIRIUS (2, *PW* 53) **CURSOR**, LUCIUS, son of (1), twice consul with Spurius Carvilius: in 293 B.C. when he defeated specially consecrated Samnite levies at Aquilonia (Livy 10. 38-42: numbers exaggerated); and in 272 when he ended the Pyrrhic War by subduing Lucani, Bruttii, and Tarentines (Zonar. 8. 6). He erected the first sundial at Rome (Pliny, *IIN* 7. 213).

E. T. S.

PAPIUS (*PW* 12) **MUTILUS**, GAIUS, *imperator*—as a Samnite—of the southern group of rebels in the Social War (see POPPAEDIUS), after some successes in Campania was defeated by Caesar (q.v. 2) in 90 B.C. and again by Sulla in 89. Unmolested during the next few years and apparently enrolled as a citizen, he was proscribed after Sulla's return and killed himself. A descendant of his was consul A.D. 9 (see LEX PAPIA POPPAEA).

E. T. Salmon, *Samnum and the Samnites* (1967), see index. E. B.

PAPPUS of Alexandria (fl. A.D. 320), a distinguished mathematician, wrote commentaries on (1) Euclid's *Elements*, quoted by Proclus and others; the part on book 10 is extant in Arabic translation: it contains interesting historical information about a lost work of Apollonius on unordered irrationals and about Theaetetus (q.v.); (2) some books of Ptolemy's *Almagest*; the part on books 5 and 6 of this survives; (3) Euclid's *Data*, Ptolemy's *Planisphaerium*, and the *Analemma* of Diodorus (q.v. 4); all are lost. He also wrote *χωρογραφία οἰκουμένης*, a work of universal geography based on the world-map of Ptolemy (q.v. 4). The extant geography of 'Moses Chorencai' (early Armenian) is based on it. But his great work is the 'Collection' (*συναγωγή*), a handbook to Greek mathematical sciences. Books iii-viii and part of ii survive. It is invaluable for its accounts of (a) Greek

achievements in higher geometry, notably works (now lost) by Euclid, Aristaeus (2), and Apollonius (2) (qq.v.) belonging to the 'Treasury of Analysis' (*τόπος ἀναλυόμενος*); (b) astronomical works by Autolycus (2), Theodosius (4), and Menelaus (3) (qq.v.), Euclid's *Optics* and *Phaenomena*, and Aristarchus' *On the sizes and distances of the sun and moon*; (c) various solutions of the problem of two mean proportionals, a method of inscribing the five regular solids in a sphere, Archimedes' spiral, Nicomedes' (q.v. 5) 'cochloids', and the *quadratrix*; (d) Archimedes' semi-regular solids, and the subject of *Isoperimetry*, or the comparison of the areas and volumes of different figures with equal contours and equal surfaces respectively, including the volumes of the five regular solids when their surfaces are equal; (e) works on theoretical and practical mechanics by Archimedes, Philon, Heron, and Carpus. *Pappus'* work is primarily of importance for the historical data it contains, but he supplies many lemmas, etc., to the treatises elucidated, and significant additions of his own, e.g. and extension of Euclid i. 47 ('Pythagoras' Theorem') to any triangle, proof of the constancy of anharmonic ratios, measurement of the superficial area bounded by a spiral on a sphere, an anticipation of Guldin's theorem, and 'Pappus' Problem' which was taken up by Descartes.

EDITIONS. *Comm. on Euclid Bk. 10*, ed. Jung and Thomson, with English translation (U.S.A. 1932). *Comm. on Almagest 5 and 6*, ed. A. Rome, Studi e Testi 54 (1931). For the geography see *Geographie de Moïse de Corinthe*, ed. Arsène Soukyr (Armenian text, French translation), Venice, 1881. *Synagoge*, ed. F. Hultsch, 3 vols., Berlin, 1876-8 (with Latin translation) French translation by P. ver Eecke, 2 vols., Bruges-Paris, 1933.

COMMENT. For Pappus' date see Rome, op. cit. x ff. GENERAL. Heath, *Hist. of Greek Maths* ii. 355 ff. PAPPUS' PROBLEM. Descartes, *Geometrie*, ed. and tr. D. E. Smith and M. L. Latham (U.S.A. 1925), 16 ff. T. II, C. J. T.

PAPYROLOGY, GREEK. Papyrus (see BOOKS), a marsh plant that grew abundantly in the Nile valley and elsewhere (though the Egyptian variety alone was manufactured into paper), was the normal writing material of the ancient world from the classical age onwards. Less for this reason than because almost all our papyri come from Egypt south of the Delta, where the rainless climate favours their survival, papyrology is identified with Egypt. The principal exceptions are (a) the Epicurean papyri from Herculaneum; (b) the Hellenistic and Roman documents found, with a few literary texts, at Dura-Europos; (c) the religious and documentary papyri from Qumran and Murabba'at in Palestine, and the Byzantine texts excavated at Aujā-el-Hafir; (d) the single, charred papyrus, Orphic in character, recently found in a burial at Derveni near Salonica. Of the Egyptian papyri a few have been found placed in tombs or buried in jars, some have been extracted from the wrappings of mummies; but the great majority come from the ruined buildings and rubbish heaps of the towns and villages of Upper Egypt, abandoned when the irrigation level receded; hence the fragmentary condition of so many of our texts. From 1788 onwards miscellaneous papyri (including some rolls of Homer and of the lost speeches of Hyperides) were acquired by travellers and made their way into European collections; excavations of Graeco-Roman sites did not begin till a century later. The most successful of these were carried out by B. P. Grenfell and A. S. Hunt, in particular at Oxyrhynchus (q.v.) which, with the Fayûm, the ancient Arsinoite nome, has proved the most fertile source of papyri.

2. We have no papyri certainly anterior to Alexander's conquest of Egypt in 332 B.C., though it is likely that our oldest literary papyrus, the *Persae* of Timotheus, dates from the middle of the fourth century, and the Orphic text from Derveni is only a little later; our earliest dated document is a marriage contract of 311 B.C. from Assuan;

the latest documents extend well beyond the Arab conquest of A.D. 642. Under the first two Ptolemies settlers from all parts of the Greek world flocked into Egypt, and in the first century of Greek rule the country was steadily hellenized. Greek was the official language of the country and remained so throughout the Roman and Byzantine periods; for a large part of the population it was also the language of business and of everyday life. Of this civilization—Hellenistic, Roman, Byzantine—the papyri are the record; of it, thanks to their endless variety, which includes ephemeral matter such as private letters, school exercises, prayers and charms as well as literary texts and public and legal documents, we can form a picture in singular detail. The number of published texts, varying enormously in size, condition, content, and value, is approximately 25,000. The extent of the material as yet unpublished is unknown.

3. Papyrology, which is strictly the decipherment and study of anything written on papyrus, is not a unified subject except in as far as all the papyri represent the different activities of a single civilization. The most obvious division is between literary and documentary texts. We owe the former, over 2,500 in number, but some mere scraps, in part to the fact that a knowledge of the Greek classics, in particular of Homer, was the staple of education throughout the period. Among them the new texts slightly outnumber those already known to us, though in the later centuries new texts become rare; yet the Byzantine papyri have given us a codex of Menander and a poem of Sappho's. The new texts include, besides those mentioned, various fragmentary manuscripts of the lyric poets and Pindar, Bacchylides, much of Callimachus (notably the *Aitia* and the *Iambi*), Herodas, the *Ichnetae* of Sophocles, and many other fragments of the dramatic poets, including Aeschylus, the *Dyskolos* of Menander and much of the *Sikyoni*, Aristotle's *Constitution of Athens*, and the *Hellenica Oxyrhynchia*, an historical work by an unknown continuator of Thucydides.

4. Of the papyri of extant Greek authors more than half are texts of Homer, the *Iliad* appearing more frequently than the *Odyssey*. The later Homeric papyri add very little to what we know from our medieval manuscripts, but the 'eccentric' papyri of the earlier Ptolemaic period, with their numerous additions and omissions and variant readings, even if the text they present is an inferior one, yet enable us to appreciate the work of the Alexandrian scholars in standardizing the text. For the textual criticism of other authors the papyri have often been of great value. They are almost invariably not only older than the medieval manuscripts (in the case, e.g., of Xenophon or Lysias by as much as 1,000 years) but are also older than the families into which the manuscripts are commonly divided. There are not a few instances of new and improved readings contributed by a few of emendations confirmed by the papyri; but on the whole they bear witness to the general soundness of our tradition, by showing that the text as established by Alexandrian scholars and known to the Graeco-Roman world differed little from that we already possess. These papyri are, as a rule, from the standpoint of our medieval manuscripts, 'eccentric'; they agree now with one manuscript, now with another, and not infrequently the readings of the later and less valued manuscripts have been found in papyri. They have thus assisted in dispelling the mirage of an uncontaminated tradition and consequently in undermining the theory that textual criticism should rely, wherever possible, on the testimony of a few ancient MSS. or even on that of a single witness.

5. Besides the strictly literary papyri there are others which may be termed 'quasi-literary'; these include the scientific, in particular the medical, texts, the astrological and the magical; texts of these last two classes are of

value for social and religious history. But more important than any of these are the Christian literary texts. Here the papyri of texts already known are hardly, if at all, less important than the new texts; the Chester Beatty papyri, which consist of extensive portions of eleven papyrus codices, and some of the equally important Bodmer papyri take our knowledge of the text of the Greek Bible back to the second century A.D., while the Rylands Library at Manchester has some fragments of Deuteronomy dating from the second century B.C. Here again, in spite of important modifications in the history of the text at various points for which we are indebted to the papyri, its general soundness is confirmed. Among the new texts may be mentioned the Unknown Gospel in the British Museum of the second century and Origen's *Discourse with Herakleides*; the famous Oxyrhynchus *Sayings of Jesus* can be identified as part of the Greek original of the Gnostic *Gospel of Thomas*, now known from a complete Coptic text. There are many other fragments of apocrypha and of liturgical, theological, and hagiological works—of the last class the lengthy *Acta Pauli* is the best representative. Evidence of Christianity can also be found in some of the documents, notably in the *hbelh* (certificates of sacrifice) of the Decian persecution and in private letters; of the latter the small archive of letters relating to the Meletian schism (A.D. 330–40) is particularly noteworthy.

6. The great mass of the papyri is roughly classified under the heading of documents—official, legal, and private papers of every description. Their value to the historian lies less in the direct information about events of historical importance which they convey (though texts of this character are extant, e.g. decrees of the Ptolemaic kings, the letter of the Emperor Claudius to the Alexandrians, the imperfect text of the *Constitutio Antoniniana* of A.D. 212 announcing the extension of the Roman *civitas* throughout the Empire) than in the indirect evidence about the historical background; such evidence may be all the more valuable because it was not deliberately selected for the benefit of posterity. Their contribution, apart from that to such specialist studies as metrology and numismatics or chronology, belongs to economic and social history in the widest sense and to the history of Greek and Roman law. In the Ptolemaic period, for example, we can observe in detail the nature and methods of Greek colonization of an Eastern Mediterranean country and its adaptation to the local conditions, and the growth of a bureaucracy which set the precedent for that of Rome; in the Roman age we see at close quarters what the Roman system of government meant to the governed and the exploitation of the country in the interests of Rome; in the Byzantine period there is the change-over to a quasi-feudal system, the growth of the great estates, the decay of Greek culture and its final disappearance before the Arab invaders.

7. The history of Greek culture and education in Egypt is partly to be found in the literary texts, their frequency, their geographical distribution, and their contents, partly in the private letters relating to education, and not least in the language of the documents themselves. Of this language, the Egyptian *Koine*, there is not one variety but many in the documents; not only does the clear, straightforward Greek of the Ptolemaic documents differ from the cumbrous, half-understood periphrases of the Byzantine age, but in a given century the language of the official document will differ from that of a business document or that of a private letter of an educated writer, and these again from the illiterate documents closest to the spoken tongue. The language of the documents has been of the greatest value for the study of the contemporary works of the New Testament in both syntax and vocabulary, and provides a link

connecting the language of the classical age with that of Byzantine and modern Greece.

The best introductory works that deal with the whole subject are W. Schubart's *Einführung in die Papyrskunde* (1918) and E. G. Turner, *Greek Papyri* (1968); for the historical and legal documents the *Grundzüge und Christomathie der Papyrskunde* (1912: 4 vols., with briefly annotated editions of 882 texts) of L. Mitteis and U. Wilcken is indispensable; for the legal papyri cf. also P. M. Meyer, *Juristische Papyri* (1917). A complete inventory of the literary papyri, with select bibliography, will be found in R. A. Pack, *The Greek and Latin Literary Texts from Greco-Roman Egypt* (1965); for a survey of the literary texts, new and extant and including the Christian, see J. G. Winter, *Life and Letters in the Papyri* (U.S.A. 1933; includes chapters on social life); text and translation of most of the new verse fragments in Page, *GLP* 1.

The list of published volumes of papyri is too long to give here; a useful list is that in H. I. Bell, *Egypt from Alexander to the Arab Conquest* (1948). Of English publications the Oxyrhynchus series (ed. B. P. Grenfell, A. S. Hunt, and others, vols. I-XXII (1848-1967)) is the most representative. K. Preisendanz, *Papyruskunde u. Papyrusforschung* (1933), has useful information about excavations, collections, and publications. For a selection of the documents see A. S. Hunt and C. C. Edgar, *Select Papyri* (Loeb, 2 vols., 1932-4). For publication of new books, texts, etc., on all branches of the subject see the annual bibliographies in *Aegyptus* (Milan) and *Chronique d'Égypte* (Brussels). C. H. R.

PAPYROLOGY, LATIN. Latin papyri have been found in Herculaneum, Dura-Europos, Palestine (Aujel-Hafir and Murabbu'at) as well as in Egypt, but are comparatively rare; for every Latin papyrus there are well over fifty Greek. For this relative scarcity there were cultural and geographical reasons, and where Egypt was concerned, political as well. One consequence of the peculiar situation of Egypt under the Augustan settlement was that no senator and few other Romans were allowed to enter the country, apart from members of the armed forces; and even these became increasingly hellenized in the later first and second centuries. Not surprisingly, few Latin papyri survive from this period; some military archives and some occasional private letters and legal documents (mostly relating to soldiers or veterans) and a handful of literary texts. This situation changed at the end of the third century when Diocletian both made Egypt equal in status to the rest of the Empire and actively encouraged the use of Latin in the Eastern provinces. A knowledge of Latin, and particularly of Roman law, became essential to a successful public career. Latin appears, e.g., in the preamble and subscriptions to all cases heard in courts in Upper Egypt, and is found more frequently in public correspondence. Most of our literary papyri belong to the two centuries following Diocletian's reform; many of them carry the unmistakable stamp of the school, e.g. texts of Virgil and Cicero with Greek word-for-word translations on facing pages. Among the latest Latin texts from Byzantine Egypt is the Juvenal with Greek scholia from Antinoopolis (Cavenaile 37); the latest dated document is a military text of A.D. 548 (Cavenaile 147).

It is noticeable that among literary papyri from the Roman period the historical texts predominate. Among them are a new fragment of Sallust's *Histories* (Cavenaile 28), the *Építome* of Livy (Cavenaile 33), and a fragment of an antiquarian writer on Servius Tullius (Cavenaile 41). There is a near-contemporary fragment of Cicero's *Verrines* (Cavenaile 20), but, with the exception of a schoolboy's copy of some lines from Virgil, no verse at all. Herculaneum, however, supplies the *Carmen de Bello Aegyptiaco*.

In the Byzantine period, as might be expected, Cicero and Virgil, the favourites of the school, are most frequently found, though by no means all of the MSS. of these authors are scholastic in origin; e.g. the fragments of a splendid *édition de luxe* of the *Georgics* were found in Antinoopolis. These apart, there is a substantial and important text of Terence: *Andria* (POxy. xxiv, 2401), the Juvenal mentioned above, and some fragments of

known works of Sallust. There is no Horace, no Ovid. Egypt has not added one new line to the corpus of Latin poetry. In this period the literary texts proper are outnumbered by those of Roman legal writers, no less than thirty-three in all, a superiority that indicates where the importance of Latin studies in Egypt lay. Some of them are provided with Greek glosses and several of them are important evidence on the vexed question of interpolation. Among individual texts pride of place must go to the *Gatus* (Cavenaile 78) from Antinoopolis and some near contemporary texts of Justinian's *Digest* (Cavenaile 89, 99-101).

Christian texts also make their appearance in the Byzantine period, some of them from the Old Latin version of the Bible. The earliest is a liturgical fragment of about A.D. 300 (Cavenaile 45); the oddest is a trilingual conversation book in Greek, Coptic, and Latin for visitors to the monasteries (Cavenaile 281), the most unexpected a fragment of St. Luke with a Gothic translation *en face* (Cavenaile 53). Pagan religion is represented by an important military calendar of an earlier age from Dura-Europos, the *Feriale Duranum* (Cavenaile 324).

Taken together, the Latin texts represent a chapter in the history of Latin culture about which we should otherwise know little. Literary and documentary alike, they are of particular importance for the history of Latin palaeography. The few new texts apart, the literary papyri are also of value for the tradition of Latin scholarship, particularly the Terence and the Juvenal. The interest of the documents may be less obvious, but they have much to contribute, both as a source for the day-to-day life of the Roman army (in particular the texts from Dura) and as a picture of Roman private law in action.

Texts are referred to above by their number in the useful collection of documents as well as of literary texts made by R. Cavenaile, *Corpus Papyrorum Latinarum* (Wiesbaden, 1958); see also U. Wilcken, *Über den Nutzen der lat. Pap.* (Atti del IV Congresso di Pap., 1936, 101 ff.) with references to earlier literature. Facsimiles of most of the literary texts will be found in E. A. Lowe, *Codices Latini Antiquiores*. For military texts, G. R. Watson, *The Roman Soldier* (1960), 220 ff. C. H. R.

PARADOXOGRAPHERS. Interest in the marvellous and out-of-the-way, as such (*παράδοξα, θαυμάσια*), is prominent in the *Odyssey*, the histories of Herodotus, Theopompus, and Ephorus, and other Greek writings. Paradoxography came into existence, as a distinct literary genre, early in the Alexandrian age, and continued to be practised for many centuries. The Seven Wonders of the World (*τὰ ἑπτὰ θέαματα, or θαύματα*), that is, the temple of Zeus at Olympia, the Colossus of Rhodes, the hanging gardens of Semiramis, the walls of Babylon, the Pyramids, the Mausoleum, and the temple of Artemis at Ephesus (or the Delian altar of Apollo), seem to have been canonized in Alexandrian times. Callimachus' contemporary, Bolus, who wrote *Περὶ τῶν ἐκ τῆς ἀναγνώσεως τῶν ἱστοριῶν εἰς ἐπίστασιν ἡμῶς ἀγόντων*, and Callimachus himself, one of whose *Υπομνήματα* was entitled *Θαυμάτων τῶν εἰς ἀπασαν τὴν γῆν κατὰ τόπους ὅρων συναγωγὴ* (so the *Suda*), may perhaps be regarded as the founders of paradoxography. Archelaus composed *Ἰδιόφυη* (epigrams on 'peculiarities') for Ptolemy Evergetes (247-221 B.C.), and Antigonos (q.v. 4) of Carystus wrote on similar themes at about the same time. Callimachus' pupil, Philostephanus of Cyrene, wrote, like Archelaus in verse, on *Παράδοξοι ποταμοὶ καὶ κρήναι*. Prominent among the paradoxographers of the Roman period are Isigonos and Phlegon (qq.v.). After Phlegon paradoxography seems to have declined in popularity. But as late as the sixth century A.D. Philo of Byzantium wrote *Π. τῶν ἐπὶ θαυμάτων*. The paradoxographers often took some particular country as their field, Sicily, Scythia, etc. Natural phenomena, especially

rivers, attracted them greatly. But zoology, history, and social customs also came within their purview.

A. Westermunn, *Paradoxographi* (1839); O. Keller, *Rerum naturalium scr. gr. minores* (1877). J. D. D.

PARAGRAPHE (παράγραφη) in Athenian law was a procedure for objecting that a prosecution was inadmissible, because it was in some way contrary to law. Before the main trial (εὐθδικία) could proceed, the objection had to be heard at a separate trial, in which the objector (the accused in the original case) spoke first and his opponent replied. If the objector won, the original case was dropped; if he lost, it went to trial. Whoever lost at the hearing of the *paragraphe* had to pay his opponent one-sixth of the sum at stake in the main case (ἐπιβεβελία); this discouraged the use of *paragraphe* as a device for delaying a trial without justification.

The procedure was instituted under a law proposed by Archinus in 403/2 B.C., permitting *paragraphe* against prosecutions which contravened the amnesty of that year. The first *paragraphe* to be heard under this law was the one for which Isocrates wrote his speech *Against Callimachus*, perhaps in 402. Within a few years the procedure was being used also for objections on other grounds to the admissibility of private cases, but it appears not to have been used for public cases (see DIKE).

H. J. Wolff, *Die attische Paragraphe* (1966).

D. M. M.

PARAKLAUSITHURON, a serenade or lover's complaint sung at his mistress's door (Plut. *Aem.* 8). A good example comes from a Tebtunis papyrus (Powell, *Coll. Alex.* 177-80).

PARASITE (παράσιτος), originally 'guest' or 'fellow diner' with no invidious meaning (cf. Pl. *La.* 179 b αὐσαντιοῦμεν . . . καὶ ἡμῖν τὰ μικράκια παρασιτεῖ). Diodorus of Sinope fr. 2 (CAF II. 421) is the *locus classicus*; cf. CIGRO 2, and writers cited by Athenaeus 6. 234 ff. (from Epicharmus onwards).

From contemporary life Comedy early adopted the parasite, 'sponger', or man-about-town, as a regular character. In Eupolis' *Κόλακες*, parasites doubtless form the chorus. Plays of Middle Comedy are entitled *Παράσιτος* (Antiphanes, Alexis; also, later, Diphilus) from their chief character; and in New Comedy the parasite is the satellite of the swaggering soldier, playing upon his vanity (Menander, *Κόλαξ*; Terence, *Eumuchus*).

Notorious parasites in real life are mentioned in Comedy, e.g. Chacrephon (Menander, *Sam.* 258), to whom a prose *δεῖπνον* was attributed.

Outside Comedy, but indebted to it, are the studies of parasites in Lucian, *Περὶ παρασίτου*, and Alciphron, *Epistles*.

See O. Ribbeck, 'Kolax', *Abh. sächs. Ges. Wiss.* 9 (1883).

W. G. W.; K. J. D.

PARENTALIA, Roman feast of All Souls, on the *dies parentales* (13-21 Feb.), the last of which was a public ceremony, the *Feralia* (q.v.), while the rest were days reserved for private celebrations of the rites to the family dead (cf. *di parentum*, or *parentes*). They were *dies religiosi* (cf. *DIES FASTI*) during which the magistrates did not wear the *praetexta*, temples were closed and no weddings celebrated, but not all *nefasti* (Lupercalia, 15th, Quirinalia, 17th, 18th-20th all *comitiales*).

Ov. *Fast.* 2. 532 ff., and Frazer ad loc.

II. J. R.

PARILIA, festival of the god and goddess Pales (cf. *Palibus II, fast.* *Antiaties* on 7 July, and the varying gender of the name in literature), held on 21 Apr. As they were the patrons of flocks and herds, their feast was one of purification of the beasts, herdsmen, and stalls.

The Vestals distributed *februa*, in this case ashes of the calf of the Fordicidia, blood of the October Horse (see *MARS*), and bean-straw. The beasts were sprinkled with water at dawn, the stalls swept out and decked with branches and wreaths; sulphur and other purifying agents were used to fumigate the beasts, and bonfires lighted through which the celebrants jumped three times. A prayer to Pales was recited four times, facing east (Ov. *Fasti* 4. 721 ff., with Frazer's notes). For some unknown reason it was supposed by Cicero's time (*Div.* 2. 98; Varro, *Rust.* 2. 1. 9) that it was the foundation-day of Rome (*natalis urbis*).

Wisniewa, *RK* 199 ff.; J. Heurgon, *Latomus* 1951, 277 f. H. J. R.

PARIS (Πάρις) or **ALEXANDER** (Ἀλέξανδρος), in mythology, son of Priam and Hecuba (qq.v.). The double name is very unusual in epic (cf. Nilsson, *GGR* 12. 476, n. 1). Homer introduces him as a well-known character and merely alludes to his doings before the *Iliad* begins. He had insulted Hera and Athena (24. 28-30), an earlier equivalent of the Judgement (see below); he had carried off Helen from Lacedaemon (3. 443 ff.). He takes part in the fighting with some distinction, especially as an archer, but shrinks from Menelaus (q.v. 1; *Il.* 3. 16 ff.), and though he afterwards challenges him to a duel to decide the war, he gets much the worst of it and is only rescued by Aphrodite (3. 67 ff., 340 ff.). His death is implied but not mentioned in the *Odyssey* (see DELPHOBUS).

The *Cypria* gave a more detailed account (Proclus, in Photius). After the incident of the 'apple of Discord' (see ERIS), Hera, Athena, and Aphrodite are brought by Hermes to Paris to judge which is the most beautiful; bribed with a promise of Helen, he prefers Aphrodite. This incident is not later than the seventh century, see *Artemis Orthia* (JHS supp. vol. v, 223 and pl. cxxvii; cf. Reinhardt, *Das Parisurteil* (1938), 6). An ivory from Sparta shows Paris seated, holding the apple, as the goddesses approach him. It is essentially a folk-tale of choice (which is best, kingship, warlike prowess, or love?), comparable to the Hebrew story of the choice of Solomon (1 Kings iii. 5 ff.; wisdom, long life, riches, destruction of enemies). How it came to be attached to the (possibly) historical Paris is not known. As a result, the *Cypria* continued, he built ships by advice of Aphrodite, went to Sparta, and so carried off Helen (q.v.). He was killed, according to the *Little Iliad* (Proclus), by Philoctetes (q.v.); cf. OENONE.

His early adventures cannot now be traced further back than the tragedians, though they may have been told in some quite lost part of the *Cypria*, or other epic. As the tragedies also are lost (Soph. and Eur., *Alexandros*), our remaining sources are the mythographers. Hyginus, *Fab.* 91, says that he was one of the younger children of his parents, and Hecuba while pregnant dreamed that she brought forth a torch from which serpents issued. The dream-interpreters ordered her child to be destroyed, but the servant charged with killing him exposed him instead; he was rescued by shepherds, grew up, and made a pet of a bull which Priam's servants carried off for a prize at funeral games. Paris, to recover it, entered Troy, took part in the games, won all his events, and was recognized and restored. Something like this must have been the plot of the lost plays, especially that of Euripides, see the frs., Nauck 42-64. Apollodorus (3. 148 ff.) makes him the second son, says he was suckled by a she-bear, and omits the incident of the games.

For his slaying of Achilles see *ACHILLES*. He does not appear to have had any hero-cult (correct Farnell, *Hero-Cults*, 412, n. 97; the passage there cited refers to Alexander (q.v. 13) of Abonuteichos).

The Judgement is a favourite theme in art from the

mid seventh century. The Trojan wedding of Paris to Helen is sometimes shown in the sixth; his return to his father's house, his abduction of Helen, and his combat with Menelaus from the early fifth. Paris and Helen together are popular from the late fifth; and there was a famous statue of him by Euphranor in the early fourth.

Türk's art. 'Paris' in Roscher's *Lexikon*. In art. Brommer, *Vasenlisten*, 298, 326, Clairmont, *Parisurtel* (1951).

H. J. R., C. M. R.

PARISI, a British tribe in east Yorkshire, well known for its I.a Tène cemeteries. The tribe may have become a self-governing *civitas* under Roman rule (Collingwood and Wright, *RIB* 707). Their only centre to be mentioned by Ptolemy (2. 3. 17) is Petuaria (*Brough on Uumber*), where a small town (c. 12 acres within its defences) developed in the second century on the site of a fort, and where an aedile of the *virus* erected a stage-building in the reign of Antoninus Pius (*RIB* 707). Romanization proceeded slowly, villas being late; the mosaic from Rudston is famous for the rustic execution of its classical theme.

A. L. F. Rivet, *Toten and Country in Roman Britain* (1958), 157 f.; J. M. C. Toynbee, *Art in Britain under the Romans* (1964), 287-8; P. Corder and I. A. Richmond, *Journ. Brit. Arch. Assoc.* 1942; J. S. Wacher, *Ant. Journ.* 1960, 58 ff. S. S. F.

PARIUM (τὸ Πάριον), now *Kemer*, a city on the European coast of the Hellespont near its entrance to the Propontis. Founded (Strabo 588) by a team of Milesians, Erythraeans, and Parians, from the last of whom it apparently took its name; the date is given by Eusebius as 710 B.C. Its assessment of one talent in the Delian League places it above Priapos and Sestos, but far below Abydos and Lampsacos. It was taken in 302 B.C. by Demetrius from Lysimachus, and later carried favour with the Attalids of Pergamum, by whose permission it annexed a considerable portion of the territory of Priapos. Augustus gave it the rank of a colony under the title Colonia Gemella Julia Pariana, to which Hadrian added Hadriana. Strabo mentions a family of Ophiogenseis at Parium who were said to have the power of curing snake-bites by their touch. An oracular temple of Apollo Actaeus which stood on the neighbouring plain of Adrasteia was pulled down and transferred to Parium, but the oracle ceased to exist (Strabo loc. cit.). There stood also in Parium a great altar of Apollo, designed by Hermocreon, having a length of one stade (Strabo 487); and the city further possessed a famous statue of Eros by Praxiteles. Both of these works of art are shown on the coins. Little is now to be seen on the site beyond a fragment of a Roman aqueduct and the emplacement of the theatre.

W. Leaf, *Strabo on the Troad* (1923), 80-6.

G. E. B.

PARMA, on the Via Aemilia (q.v.) south of the Padus (q.v.) in Cisalpine Gaul (q.v.), first recorded as a Roman colony (183 B.C.), which Mark Antony later sacked (43 B.C.). Still a *colonia* in imperial times, it has always retained its importance, but has no ancient remains. E. T. S.

PARMENIDES of Elea is said to have been about 65 years old in 450 B.C. (Pl. *Prm.* 127 b) and to have given his city laws (Speusippus fr. 1). His didactic poem in prosaic but trenchant hexameters survives in large fragments. It opens with an allegory describing his chariot-journey through the gate leading from night to daylight, where he is welcomed by a goddess whose address forms the remainder of the poem.

Only three methods in philosophy (ὁδοὶ διζήσιος) are conceivable, viz. (to assume) that (the reality to be studied) necessarily is or that it necessarily is not or that it both is and is not, comes to be and perishes, changes

and moves. The last two methods are excluded by the argument that only what is and cannot not be can be known. The goddess therefore proceeds to a summary deduction of the characteristics of what is; given that it necessarily is whatever it is, it must be ungenerated and imperishable, indivisible, self-identical, unique, motionless, determinate, perfect, and in perfect equilibrium like a solid sphere. It follows that the many things of which mortals speak as being and not being, etc. (i.e. as having a contingent and relative being), exist only in name.

In the remaining and longest part of the poem (of which little remains) the goddess expounds 'mortal beliefs in which there is no true faith'. The cosmology and physics of this section are presented not as a 'way', i.e. as matter of knowledge, but as the most useful analysis of human experience. Expressly rejecting Ionian physical monism Parmenides derives the relativity of the sensible world from its ultimate constitution out of two opposite forms (μορφαί), Light and Dark, which themselves have only a nominal existence. Its speciousness he derives from the possession by each 'form' of characteristics as near as possible to those of the one reality.

Parmenides is the first philosopher to consider the intrinsic meaning of the term 'to be' and to assert that what can be known must 'be' and that nothing else can 'be'. His account of the three ways is the earliest discussion of philosophical method; his rejection of the third way, the earliest formulation of the Law of Contradiction; his notion of a proposition (ὡς ἔστιν) as a way to be followed, the establishment of the method of demonstrative proof in philosophy; his distinction of the object and method of knowledge (νόσος) from those of belief (δόξα), the separation of philosophy from science.

Calogero, *Studi sull'eleatismo* (1912); W. J. Verdenius, *Parmenides* (1942); W. Jaeger, *The Theology of the Early Greek Philosophers* (1947), 89 ff.; G. E. L. Owen, *CQ* 1960, 84 ff.; J. Mansfeld, *Die Offenbarung des Parmenides und die menschliche Welt* (1964); L. Tarán, *Parmenides* (1965); Guthrie, *Hist. Gk. Phil.* ii. 1 ff. A. H. C.

PARMENION (c. 400-330 B.C.), son of Philotas, a Macedonian noble, became the best general of Philip II, though few details are known of his activities at this time. He accompanied Alexander to Asia as second-in-command of the army, and besides holding independent commands was present at all the great engagements of the first three years; at Issus and Gaugamela he commanded the left (defensive) wing. He was left at Ecbatana to guard the Persian treasure and the lengthening communications when Alexander himself moved east (330); but the trial and execution for treason of his son Philotas made him an obvious danger to Alexander, who promptly had him murdered.

Parmenion was certainly no accomplice to the alleged treason of Philotas. But he was not in sympathy with Alexander's bold ideas for the conquest (still less the government) of the Persian Empire: he represented the older school among the Macedonian officers ('Philip's men'), in contrast to Alexander and his intimates. He was certainly a good general, but the view (Beloch, *Gr. Gesch.* iv. 2, 290 ff.) that his was the brain directing Alexander's victories is fantastic.

Arrian, *Anabasis*, bks. 1-3, Berce, *Alexanderreich*, no. 606.

G. T. G.

PARMENISCUS, pupil of Aristarchus and defender of his texts against Crates of Mallos, wrote *Πρὸς Κράτην*, *Περὶ ἀναλογίας* (recognizing eight noun declensions), and some commentaries.

PARMENO, of Byzantium, author of *Iambi*, i.e. choliambi. The fragments exhibit Parmeno as a realist with a

turn for moralizing. He was probably contemporary with Phoenix of Colophon, i.e. first half of third century B.C.

TEXIS Diehl, *Anth. Lyr. Graec.* iii, 136-7, Powell, *Coll. Alex.* 237-8; A. D. Knox, *Herodes, Cercidus, and the Greek Choliambic Poets* (1906, 1929), 272-3.

GENERAL LITERATURE. G. A. Gerhard, *Phoenix von Kolophon* (1909), 211 ff. E. A. B.

PARNASSUS, outlying spur of the Pindus range, running south-east and rising to 8,200 feet. It separates the Cephissus valley from that of Amphisso and runs into the Corinthian Gulf at Cape Opus. Its limestone mass is mostly barren, but its lower slopes are well watered; they carry the Phocian towns on its eastern flank and the plain of Crisa with the high valley of Delphi on the south. The best ascent is from Daulis; the passes, which cross its spurs, run from Cytinium to Amphisso and from Daulis to Delphi via the *σχεστή ὁδός*, where the latter is joined by the route from Lebadea. A sacred mountain especially to the Dorians. N. G. L. H.

PARODY, GREEK (*παρωδία*). A cartoon exaggerates a prominent feature of the subject and presents him in incongruous dress and surroundings. Parody uses the same means, exaggeration and incongruity, either together or singly. Much ancient and modern parody contents itself with describing trivial things in the language of high poetry. The subtler task of bringing into bolder relief, by exaggeration, the salient features of an individual's style was seldom attempted by the Greeks. Aristophanes achieves it brilliantly in the Glyke song in the *Frogs* (1331-63), with a bathetic subject (the stolen cock) to add to the fun; and Plato's parodies, unaided by bathos, are perhaps as near to their originals as Max Beerbohm's Meredith in *Seven Men*. Aristotle (*Poet.* 1448^a12) mentions Hegemon as ὁ τὰς παρωδίας ποιήσας πρῶτος, but Athenaeus (15. 699 a) says, more precisely, that he was the first to enter τοὺς θυμεικοὺς ἀγῶνας and win contests at Athens for parody. (For similar contests cf. an Eretrian inscription of c. 400 B.C., *Ἐφημερίς Ἀρχαιολογική* 1902, 98 ff.). Athenaeus (15. 698 b), following Polemon, regards Hipponax as the real inventor of the genre, and quotes from him four burlesque hexameters on a parasite. In the same vein are some of Simonides' iambs on women (fr. 7. 83-93). But we can go further back than any of these poets. The *Margites*, generally attributed to Homer in antiquity, was known to Archilochus (8th-7th c. B.C.). It described the adventures of a Simple Simon, and had iambs mixed up with its hexameters. Virtually nothing of it or of the *Cercopes* remains. The extant *Batrachomyomachia* (*Battle of the Frogs and Mice*), written perhaps during the Persian Wars, is a mildly amusing piece. Athena, impartially detesting the mice who gnaw holes in her Peplus and the frogs who keep her awake in the small hours (178-96), is entertaining, and the dying mouse (65-81) rather pathetic as well. The tradition of Homeric parody runs through comedy from Cratinus to Diphilus, the gastronomists (Matron, Archestratus, etc.), and the Sillographers (see TIMON 2).

2. Epicharmus' mythological burlesques must have contained much parody, but little of it survives (frs. 42-3. 10-11, 229). In Old Attic Comedy Hermippus seems to have been fond of parody and in Middle Comedy Eubulus had a flair for it. Fr. 10 (a Euripidean epilogue) is excellent; in fr. 64 even the well-worn theme of the 'Lady of Copais in her robe of beet' amuses; and there is freshness in fr. 75. Parody survives sporadically in Diphilus and Menander (Diph. frs. 30, 126; Men. *Pk.* 349 ff., *Sam.* 110 f., 329); but by this time the poet sometimes has to warn his audience that he is parodying.

3. In Aristophanes the rise and fall of style is almost as persistent as in Wodehouse. Noble and ignoble words

rub shoulders, 'guts and glory' at *Eq.* 200, 'poniards and piles' at *Vesp.* 1119. *Lys.* 715 descends precipitately to Rabelaisian frankness, set off (as often in Ar., cf. *Eq.* 1242) by the smoothest of tragic rhythm. Mnesilochus-Palamedes, writing his letter (*Thesm.* 781), momentarily forgets the dignity of his role and curses 'that rotten rho'. Often comic tails are appended to well-known passages. *Ran.* 931 'Oft in the stilly night, ere slumber's chain has bound me, I lie wondering what on earth a brown horse-cock is'. *Eq.* 1250-2 the farewell of Cleon-Alcestis. The apostrophe to the soul (*Eur. Med.* 1057) takes unexpected turnings (*Ach.* 450 ff., *Eq.* 1194, *Vesp.* 756). In other passages the contrast is given by two characters talking in contrasted styles, as in the dialogue between Lamachus and Dicaeopolis at the end of the *Acharmans*. In this vein nothing can beat *Thesm.* 808: 'Why live I still?'—'The crows don't know their job.'

4. Sometimes, again, the parody is concerned, not with poetical or tragic style in general, but with some particular feature of tragedy (a prologue, a messenger's speech, a recognition scene), or of religious, political, or forensic procedure (*Eq.* 1316-34, *Vesp.* 892 1008, *Ran.* 738-55, and passages in *Thesm.* 332-432, *Ecll.* 151-65). Then there are parodies of situation, Odysseus under the ram's belly (*Vesp.* 177 ff.), Bellerophon mounted on Pegasus (*Pax* 76 ff.), Palamedes, Helen, and Andromeda (*Thesm.* 769-1135), which give us an idea of what a mythological burlesque was like (see COMEDY, OLD, § 5 and PILYAKES).

5. Aristophanes also parodies the styles of particular authors, especially Euripides. The tragedian's supposed passion for enigmatical epigram is satirized at *Ach.* 397, *Thesm.* 5-8, *Ran.* 1443-4. In the Glyke song (*Ran.* 1331-63) the points are (over and above metrical and musical considerations which are hard to assess) certain idiosyncrasies of diction, such as ὄρβνα and compounds in -φαής (cf. *Ach.* 460, *Vesp.* 1484, *Thesm.* 881, 1075 κλῆθρα χαλάσθω, ἐξώπιος, ὄχληρός), incessant repetitions of words (often parodied elsewhere), and the 'wings of a dove' motif (1352); in the cento (1309-22), excessive affection for the polyschematist dimeter (see METRE, GREEK, III. 12), a licentious anapaest (1322), the use of melisma (1314), and perhaps the constant references to animal life. In other places Aristophanes takes off the jargon of philosophical and other cliques (see CQ 1927, 113-21, and cf. Damoxenus fr. 2). But many of Aristophanes' poetic flights (cf. *Nub.* 1005-8, *Ran.* 154-7) cannot justly be described as parodistic. They are gay, enchanting lyrics, light as air, which he wrote to delight himself and us. Such parody as they contain consists in the lightest touches, and we are seldom brought down to earth with a bump. Of such a kind are *Eq.* 551-64, 581-94, *Nub.* 563-74, 595-606 (where the Socratic-Euripidean deity *Αἰθέρ* is possibly meant to sound out of place among the Olympians), and many lyrics in the *Birds*. There is gentle irony in the beauty with which the frogs invest their surroundings (*Ran.* 209-69), but the beauty matters more than the irony. At the same time, the style absorbs a word like κραπαλόκιμος without incongruity. Aristophanes resembled Shakespeare more than any Greek tragedian in his power to bring homeliness within the compass of beautiful or passionately serious verse (e.g. *Lys.* 1122-61).

6. Plato's parodies are often on a much larger scale than those of the comic poets, and he shows great subtlety and judgement in sustaining the character of the originals without lapsing into absurdity. Agathon's speech in the *Symposium* (194 e-7 c) is a notable example; it is described as being in the style of Gorgias (198 c), and we can compare it with what survives of Gorgias' work. The epideictic speech of Protagoras in *Prt.* 320 c-8 d is

obviously parody, but our limited acquaintance with Protagoras' own work makes assessment of its success difficult. Eryximachus' speech (*Symp.* 185 e-8 e) parodies the grandiloquent generalizations of a type of quasi-scientific literature current in the age of the sophists. The first part of the funeral speech in the *Menexenus* is certainly parody, but the point (and purpose) of transition from the humorous to the serious in that speech remains an enigma. Whether *Phaedrus* 230 e-4 e, purporting to be an epideictic speech by Lysias, is parody or quotation is disputed. Shorter passages of parody in Plato are sometimes identifiable, e.g. *Prt.* 337 a-c, which we can see to be a skit on Prodicus; some may possibly be quotation, e.g. *Grg.* 448 c (Polus); others, again, suggest parody, but we cannot be sure of the original, e.g. *Resp.* 452 d.

7. Lucian's parodies are not on the level of Aristophanes, but his rollicking humour is irresistible. In the *Timon* (9) Zeus' thunderbolt has gone for repairs; he hurled it at Anaxagoras, but missed, and it hit a temple instead. The *Prometheus* has a good lawcourt speech (7-19). There are some clever touches in the *Deorum Dialogi*: 1. 2 Zeus' ignorance of Caucasian geography; 5. 4 Hephaestus, the grubby waiter; 9. 1 Zeus bears children all over his body; 10. 2 the Sun-god, ordered to arrange a *Nūx Μακρά*, grumbles that 'there weren't goings on like this in old Kronos' time; day was day then, and night night'. Best of all is 20, the Judgement of Paris; Zeus is a benign father, Hermes a charming guide, and the three goddesses admirably catty to each other. *Zeus Τραγωδός* has some amusing passages; *Τραγωδοποδάγρα* and *Ῥέκπους* are pretty dull.

H. Tauber, *De usu parodiarum apud Aristophanem* (Progr. 1849); W. H. S. Ishihara, *De parodia in comediis Aristophanis* (1877); A. T. Murray, *On parody and paratragodia in Aristophanes* (Berlin, 1891); P. Rau, *Paratragodia* (Munich, 1907). J. D. D., K. J. D.

PARODY, LATIN. The two types of literary parody—(a) pastiche, which caricatures the manner of an original without adherence to its actual words, and (b) parody proper, in which an original, usually well known, is distorted, with the minimum of verbal or literal change, to convey a new sense, often incongruous with the form—are both found in Latin, mostly in verse. Examples of (a) occur sporadically in comedy, when the grandiose language of tragedy is burlesqued. This type is sometimes used as a vehicle of literary criticism; so some lines of Lucilius parody the solemnity of Ennius and the tragic bombast of Pacuvius. Some parts of the poem on the Civil War recited, as a model for epic, by Eumolpus in the *Satyricon* of Petronius (119-24) read like a pastiche on Lucan.

The only extant example of sustained parody of type (b) is the tenth poem of the *Catalepton* (see APPENDIX VERGILIANA) in which poem 4 of Catullus, addressed to a yacht, is turned, with remarkable dexterity, into an address to a parvenu magistrate. The *Antibucolica* of Numitorius seem to have been parodies of the 1st and 3rd Eclogues of Virgil, but only the opening lines are preserved by Donatus; in these the point of the parody turns on alleged liberties taken with language by Virgil.

C. J. F.

PAROEMIOPHILERS. The Proverb (*παροιμία*), or concise saying in common and recognized use, often summarizing experience or embodying practical wisdom, is a constant feature in Greek literature, both prose and verse, from Homer onwards. It not only provided an ingredient calculated to please the ordinary hearer, but contributed not a little to the formulation of moral philosophy. It might be in prose or metrical form, and gave its name to the *Paroemiac* (see METRE, GREEK, II (7)). Many quotations from literature, and especially from poetry, enjoyed an independent life as proverbs or
